It is pretty generally known that the most authentic and valuable mass of facts and statistical details ever brought together, in relation to the Ecclesiastical, Educational, and Municipal institutions of Scotland, are to be found in the several extensive series of Reports which have been published, within the last ten years, by the different Parliamentary and Royal Commissions appointed to inquire into these matters. An elaborate and careful digest of the information contained in these Reports forms the principal feature of value in *THE TOPOGRAPHICAL, STATISTICAL, AND HISTORICAL GAZETTEER OF SCOTLAND*, which will be found to contain, in an abstract and condensed yet comprehensive form, not the results only, but also a considerable portion of the details embraced in the voluminous Reports of which the following is a list:

- I. Reports of the Royal Commissioners appointed to inquire into the State of the Universities of Scotland. Published between the years 1830 and 1839, in 5 vols. folio.
- II. Reports upon the Boundaries of the several Cities, Burghs, and Towns in Scotland, in respect to the Election of Members to serve in Parliament. Published in 1832, in folio.
- III. Reports of the Commissioners appointed to inquire into the State of Municipal Corporations in Scotland. Published in 1835, in 2 vols. folio.
- IV. Abstract of the Answers and Returns on the subject of Education in Scotland, made pursuant to an Address of the House of Commons dated 9th July, 1834. Published in 1837, in folio.
- V. Reports of the Commissioners of Religious Instruction in Scotland. Published betwixt the years 1837 and 1839, in 9 vols. folio.
- VI. Reports by the Inspectors of Prisons in Scotland. Published betwixt the years 1836 and 1842, in 6 vols. folio.

The Reports now enumerated have furnished the most valuable materials to the present Work; and in the existence of such documents as

ADVERTISEMENT.

these, the Compilers of this Gazetteer conceive themselves to have enjoyed advantages above all their predecessors in the same department of literature. The following Parliamentary papers have also afforded much interesting and valuable matter, viz. :

- I. The Reports of the Commissioners on Highland Roads and Bridges.
- II. The Reports of the Commissioners under the Act for building additional Places of Worship in the Highlands and Islands of Scotland.
- III. The Reports of the Commissioners for making and maintaining the Caledonian Canal.
- IV. Reports of the Commissioners on the Herring Fishery.
- V. Reports of the Commissioners on Northern Lights.
- VI. Returns on the Small Debt Courts, Prisons, Burgh-Revenues, Electoral Inhabitants, Teinds, Crown-Revenues, &c. of Scotland.

The Publishers feel themselves warranted in claiming for their volumes a superiority over every other existing Gazetteer of Scotland, on the single ground of its presenting a careful digest of these, and of the Old as well as the New Statistical Account of Scotland, arranged in alphabetical order, and of easy consultation as a book of reference. But while the compilers have directed their principal attention to the materials now enumerated, they have not confined themselves to these, nor to what has hitherto been generally understood to be the strict limits of a Gazetteer. In the TOPOGRAPHICAL, STATISTICAL, AND HISTORICAL GAZETTEER OF SCOTLAND—as indeed is implied in the name itself—they have endeavoured to concentrate a variety of details which it has not hitherto been customary to introduce into a mere Gazetteer ; nay, they have not hesitated, wherever they thought such matter would be likely to interest the general reader, to introduce Legendary, Poetical, Antiquarian, and Artistical notices of different localities.

It has not entered into the plan of the present Work to notice every hamlet and name that may have a place in the local history and topography of Scotland ; but it is hoped that no name will be found to have been omitted in the following pages which has acquired any importance or celebrity in the annals of the country ; while a comparison of the number of names introduced, with those of any other Gazetteer, will satisfy any one that it has been drawn up on a more comprehensive plan than has ever before been attempted. An Index has also been supplied to the names of persons and places incidentally mentioned in the course of the Work.

INTRODUCTION.

A view of Scotland, introductory to a copious Gazetteer, must necessarily be very general. Every natural, political, and ecclesiastical division of the country, each great cluster of islands, every chain of heights and remarkable mountain or hill, each lake and river and arm of the sea, every city, town, village, and conspicuous mansion, and every interesting object, be it what it may, a landscape, an antiquity, a natural curiosity, or a work of art, are so fully noticed in their regular places, that a general article has no scope for description, and needs not even to be studded with references. Yet such a rapid geographical outline as shall indicate the mutual relations of the parts,—some details which refer strictly to the country as a whole, and a few particulars which, while belonging to only some localities or to classes of objects, could not, without frequent repetition, be inserted in the body of the work,—will form both suitable and pleasing materials for our Introduction.

POSITION AND EXTENT.

Scotland is bounded on the north by the great North sea ; on the east by the German ocean ; on the south-east by the liberties of Berwick, and by England ; on the south by the Solway frith, and the Irish sea ; and on the west by the Atlantic ocean. The line of its boundary on the south-east, from a point $3\frac{1}{2}$ miles north of Berwick to the head of the Solway frith at the embouchure of the Sark, measures, inclusive of sinuosities, about 97 miles. This line has very numerous but not great windings ; and, over great part of its length, is very capricious, and not physically marked. The curious reader may trace it by reference to our articles on the counties of BERWICK, ROXBURGH, and DUMFRIES, whose southern boundary-lines are identical with this. Popular language is utterly at fault in speaking of Scotland as the part of Britain which lies north of the Tweed ; that river running in the interior till 18 miles before it reaches the sea, and having on its left bank, for the last 4 of these miles, the liberties of Berwick. Scotland, as to its mainland, lies between $54^{\circ} 41'$ and $58^{\circ} 41'$ north latitude, and $1^{\circ} 43'$ and $5^{\circ} 38'$ west longitude ; and including its islands, it extends to $60^{\circ} 49'$ north latitude, and $8^{\circ} 55'$ west longitude. The greatest length of the mainland along the meridian, is from the Mull of Galloway, its most southerly land, or south-west extremity, to Cape-Wrath, and in any possible direction, is from the same point, to Dunnet-head ; and it measures, in the former case, 274 miles,—in the latter, 280. Its breadth, from St. Abb's-head in Berwickshire to the point of Knap in Argyleshire, is 134 miles ; from the mouth of the South Esk in Forfarshire to Ardnamurchan-point in Argyleshire, is 137 miles ; and from Buchanness in Aberdeenshire to the extremity of Applecross in Ross-shire, is 146 miles. North of the Moray frith, the greatest breadth, from Duncansby-head to Cape-Wrath, is only 70 miles ; and the least, from the Dornoch frith to Loch-Broom, is 36. The whole country is so penetrated by friths and inlets of the sea, that it constantly and very widely varies in breadth, and has no spot which is upwards of 40 miles inland. Owing partly to the great irregularity of outline, both in the mainland and in the islands, and partly to the want of accurate surveys, hardly any two statements agree as to the extent of Scotland's area. According to a report made to the Board of Agriculture,—probably the best authority which can be followed,—its cultivated lands amount to 5,043,450 English acres, and those uncultivated to 13,900,550 : jointly, 18,944,000 English acres, or 29,600 square miles. Of this area, about 4,000 square miles belong to the islands ; and, in addition to it, 638 square miles are occupied by lakes and rivers.

COAST.

From the liberties of Berwick, the coast extends along Berwickshire and part of Haddingtonshire, north-westward to near North Berwick; and there, over a commencing width of 11 miles, it yields to the long westward indentation of the frith of Forth. Over the greater part of this distance it is bold and rocky, presenting a firm rampart against the attacks of the sea, and offering few points where even fishing-boats may approach. On the north side of the Forth it makes an almost semicircular sweep round the most easterly land of Fifeshire to St. Andrew's-bay; it thence trends northward to the north-east extremity of Fife; and it there gives place to the indentation of the frith of Tay. Between the Forth and the Tay, and over a considerable part of Forfarshire to the north, it is in general low and sandy; wearing alternately the softest and the tamest aspects. From Buddonness, on the north side of the entrance of the Tay, all the way along Forfarshire, Kincardineshire, and part of Aberdeenshire, to Buchanness, its direction is north-north-eastward, slightly variegated by sinuosities. Over the next 18 miles it trends northward, and north-north-westward, to Kinnaird-head; and between that promontory and Duncansby-head in the extreme north-east, it recedes to the vast extent of between 70 and 80 miles, and admits a triangular gulf or enormous bay, called the Moray frith. On the south side of this gulf it stretches almost direct to the west, and on the other side it extends to the north-east; but at the inner extremity of the gulf, it is confusedly and entirely broken by the friths of Beaulieu, Cromarty, and Dornoch. From Duncansby-head, it undulates 14 miles in a prevailing direction of north-west by west to Dunnet-head in the extreme north; it thence stretches 4 miles south-westward to the indentation of Thurso-bay; and from this bay to Cape-Wrath, in the extreme north-west, and in nearly the same longitude as the entrance of the bay, it describes, over a distance of about 50 miles, a small segment of a circle, the curvature being inland, but, besides having a rugged outline, is broken in three places by the inroads of respectively Loch-Tongue, Loch-Eribole, and Durness-bay. Over nearly all the north it is bold and dangerous, abutted with rocky headlands, crowned with frowning cliffs, torn into fissures, and assailed by very generally a tumbling and chafed sea. From Cape-Wrath to the Mull of Kintyre, a distance of about 30 miles more than from the meridian of the liberties of Berwick to that of Duncansby-head, and comprising the whole west boundary of the mainland, the coast, as to its general direction, diverges very little from the straight line southward, or from a line a point or two westward of south; but over nearly its whole extent, it is so torn and shattered by inroads of the sea, yields to so many large and variform indentations, and, amidst its curious and ever-recurring recesses, leaps so maziily over the inner line of the Hebridean rocks and islets and islands, that it defies description, and bewilders an uninitiated tourist. Its aspect here is throughout wild and Highland, alternately picturesque, grand, sublime, and savage. At the Mull of Kintyre the coast becomes narrowed with the continent, or rather with the long peninsula which projects from it, and runs down to the Mull, into a point or headland; and there, over a commencing width of 35 or 40 miles, measured south-eastward to Ayrshire at Ballantrae, it recedes in the large, many-bayed, and curious gulf, which forms the frith of Clyde. From Ballantrae to the Mull of Galloway, a distance of 37 miles, it describes the segment of an ellipsis, the curvature being toward the sea, but is broken a few miles south of Ballantrae by the entrance of Loch-Ryan. Over this distance it is rocky, beetling, and inhospitable, but not high, and is curiously perforated with large and numerous caverns. From the Mull of Galloway to a point 31 miles north-east by east, it yields successively to the large ingress of Luce-bay, the considerable one of Wigton-bay, and the smaller of the estuary of the Dee, and comes down in the mere headlands by which these friths are separated. After passing the estuary of the Dee, it begins to be confronted with the coast of England; and thence onward it is identified with the shore of the Solway frith.

HEADLANDS.

In enumerating the principal capes, promontories, and other headlands, we shall mark in *italics* those which are the sites of lighthouses, and shall follow the coast-line in the order in which we have just traced it. *St. Abb's-head* is in the middle of the coast-line of Berwickshire, and forms the most projecting, bold, and conspicuous piece of sea-

board between the liberties of Berwick and the frith of Forth. Fast Castle-head is $3\frac{1}{2}$ miles to the north-west. Barness, Whitberry-head, and Gulane-point, are in Haddingtonshire,—the last on the coast of the frith of Forth. Fifeness, a low, sandy, naked headland, is the termination of the peninsula of Fife. *Buddonness*, similar to the former, and Red-head, a beetling and bold promontory, are in Forfarshire. Jodhead, Garron-point, Fimmonness, and *Girdleness*, are in Kincardineshire,—the last at the mouth of the Dee, and at the end of a range of the Grampians. *Buchanness* is the most easterly land in Aberdeenshire, and even in Scotland. Rattray-point, Cairnbulg-head, and *Kinnaird-head*, are in the same county,—the two last at the entrance of the Moray frith. Knockie-head is in Banffshire. Coulard-hill and Burgh-head are in Elginshire. *Tarbetness*, the termination of the long narrow peninsula between the Dornoch and the Beaully friths, belongs to Ross-shire. Ord of Caithness, Clytheness, Noss-head, Duncansby-head, *Dunnet-head*, and Holborn-head, are in Caithness,—the three last looking across the Pentland frith to the Orkney Islands. Strathey-point, Whiten-head, Far-out-head, *Cape-Wrath*, and Assynt-point, are in Sutherlandshire,—the last on its west coast, and the three first on its north. More-head, or Ru-more, is on the west coast of Cromarty. Udrigal-head, and Rhu-Rea-head, are on the west coast of Ross-shire. Ardnarmurchan-point, the most westerly ground on the mainland,—the *Mull of Kintyre*, at the entrance of the Clyde, and of the Irish channel,—and Lamont-point and *Toward-point*, the southern terminations on the east and the west of the district of Cowal, on the Clyde,—are in Argyleshire. *Clough-point*, on the Clyde, is in Renfrewshire. Kirkcolm-point, at the entrance of Loch-Ryan,—*Corsewall-point*, at the north-west extremity of the Rhinns of Galloway,—and the *Mull of Galloway* and Burrow-head, at the southern extremities of Scotland,—are in Wigtonshire. Ross-head, between Wigton and Kirkcudbright bays,—Balcarray-point, at the west side of Auchencairn-bay,—Almerness-point, between that bay and the estuary of the Urr,—and *Southernness-point*, at the extreme south-east of Galloway,—are in Kirkcudbrightshire.

MARINE WATERS.

The German ocean, where it washes the mainland of Scotland, is closed up on the east side by Denmark, the entrance to the Baltic, and Christiansand in Norway. The North sea and the German ocean, where they girdle the northern and western shores, are—as we shall afterwards see—thickly occupied by the archipelagoes of Scotland, and both tamed in the fury of their billows, and to a considerable extent stripped of their superincumbent vapours, by the numerous and boldly screening islands, before they reach the main shore; from just the same circumstance, too, or owing to currents, whirlpools, shoals, rocks, variable winds, and intricacy of channel, among the girdlings of the islands, or between them and the mainland, these seas are not a little difficult and dangerous of navigation; and, owing to the gulleets and narrow sounds, which serve like funnels for the wind between high grounds, and to the great number and magnitude and power of the rocky or mountainous obstructions which are presented to the breeze and the tide, and to the labyrinth of paths, and the positions of successive or alternate propulsion, vexation, opposition, and becalming which have to be traversed by a current, the seas likewise exhibit in the frequent storms of winter, or amidst a gale on the longest and far extending day of the hyperborean summer, scenes of awful sublimity, which would appal almost any sensitive person except a native of the islands or of the mainland sea-board. The Irish channel, where it washes the Mull of Kintyre, looks up the frith of Clyde, and sweeps along the Rhinns of Galloway from Corsewall-point to the Mull of Galloway, is curtained on its west or south-west side by the county of Antrim, the entrance of Belfast loch, and the county of Down in Ireland, is 13 miles broad at the Mull of Kintyre, and 21 at Portpatrick, and may be viewed as having an average breadth along Wigtonshire of 24 or 25 miles. At the point where it expands into the Irish sea, or immediately off the Mull of Galloway, the tides, which come in one slow and majestic current across the Atlantic, which encounter the long, vast obstruction of the island of Ireland, and which, sweeping round the ends of that country, enter the space between Ireland and Great Britain by the opposite inlets at the Mull of Kintyre, and at St. George's-channel, run against each other in a tumult of collision, and produce, even in calm weather, a tumbling, trougy sea, which no landsman loves to traverse. Resulting from the same causes, the tidal currents in the adjacent parts of the Irish sea, and above all in the

SOLWAY FRITH [which see], are the most curious in the world. Some miles southward of the Galloway coast, where the efflux is felt from both the Galloway estuaries, and the Solway frith, or even some miles southward of the extreme land of the Mull of Galloway, where the current is less powerful, a Glasgow and Liverpool steamer of the old build might, in certain stages of the tide, have paddled away northward for a couple of hours, and scarcely preserved herself from being swept toward the Isle of Man. The Irish sea, where it washes Galloway, looks direct southward to the Isle of Man, and the north coast of North Wales; and the Solway frith, from the line 22 miles wide where it commences between Balmae-head at the entrance of Kirkcudbright bay and St. Bees-head in England, to the narrow point where it terminates at the mouth of the Sark, is all the way flanked on the English side by Cumberland, and is overlooked at intervals on its English shore by the towns of Whitehaven, Workington, Maryport, and Bowness.

The penetrations which the great encincturing marine waters of Scotland make in the shape of gulfs, bays, friths, and what are called lochs, are so numerous that a full and minute list of them would task a reader's powers of endurance quite as severely as the continuous perusal of three or four pages of a pocket English dictionary. All the important, and, in any respect interesting ones too, are so fully noticed each in its appropriate place in the *Gazetteer*, that even they can bear enumeration only with the view of indicating their mutual and relative positions. Belhaven-bay, between Dunbar and Whitberry-head in Haddingtonshire, though a comparatively small marine inlet, is the only noticeable one on the east coast south of the Forth. The frith of Forth divides all Fifeshire, a detached part of Perthshire, and part of Clackmannanshire on the north, from all Lothian, East, Mid, and West, and part of Stirlingshire on the south; and it makes several interior indentations, the chief of which are Aberlady-bay in East-Lothian, Musselburgh bay in Mid-Lothian, and Inverkeithing and Largo-bays in Fifeshire. St. Andrew's-bay, at the mouth of the Eden, cuts Fifeshire into two peninsulæ, the larger on the south, and the smaller on the north. The frith of Tay divides Forfarshire on the north from Fifeshire on the south, and afterwards penetrates considerably into Perthshire. Lunan-bay makes but a small and segmentary indentation on the coast of Forfarshire, but is attractive for its beauty, and valuable as anchoring-ground. Montrose basin is a curious landlocked lagoon behind the town which gives it name. The Moray frith is greatly the broadest gulf in Scotland, having part of Aberdeen, all Banff, Elgin, and Nairn, and part of Inverness on one side, and Cromarty, Ross, Sutherland, and Caithness on the other, and measuring in a line, which may be considered its mouth, from Kinnaird's-head to Duncansby-head about 76 miles. Spey-bay makes a comparatively short and slender incision between Banff and Elgin. Burgh-head-bay forms a noticeable expansion between Elgin and Nairn. The Beaully frith, opening from the inner extremity or angle of the Moray frith, penetrates, first south-westward and then westward, between Nairn and Inverness on the one side, and Ross and Cromarty on the other; and it sends off from its south side, near the town of Inverness, the navigation of the Caledonian canal. Cromarty frith, opening with a narrow entrance from the Moray frith a few miles north of the mouth of the Beaully frith, describes a demi-semicircle to the town of Dingwall, and forms the best harbour on the east coast of Great Britain, and one of the finest in the world. The Dornoch frith extends westward between Ross and Sutherland. Wick-bay makes a large semicircular indentation, on the east coast of Caithness, immediately north of Noss-head. The Pentland frith—strictly a strait or sound—intervenes between the mainland and the Orkney archipelago, forms the marine highway, in the extreme north, to vessels going round Scotland; and, on account of its powerful tidal currents, and its rugged and broken coasts, is of difficult and very perilous navigation. Thurso-bay broadly indents the middle of the north coast of Caithness. Lochs Tongue, Eribole, and Durness, make sharp, considerable incisions, at rapid intervals, on the north coast of Sutherland. Lochs Inchard, Laxford, Assynt, Eynard, Broom, Little Broom, Greinord, Ewe, Gair, Torriden, Kishorn, Carron, Ling, and some others, curiously cleave into fragments the west coast of Sutherland and Ross. The Minch, a broad sound or little sea, intervenes between the mainland at Sutherland and Ross, and the archipelago of the Long Island; and the Little Minch, a much narrower sound, intervenes between that archipelago and the group of Skye. The Kyle and the sound of Sleat—the former a confined and winding strait, and the latter gradually expansive—separate Skye from the mainland along the coast of Inverness. Lochs Hourn, Nevish, and Nuagh, opening off from these straits, run eastward into the mainland.

The sound of Mull, a narrow strait, extends south-eastward between Morvern in Argyleshire and the island of Mull. Loch-Linnhe, a large and long sound, stretches north and south between Lorn in Argyleshire and the island of Mull; and is thickly sprinkled with islands and islets belonging to the Mull group of the Hebrides. Lochs Eil, Leven, Crinan, and Etive branch away from it, and run far into the interior,—the first leading the way from the west to the navigation of the Caledonian canal. The sound of Jura, extending north and south, intervenes between the district of Knapdale and the island of Jura; and the sound of Isla, extending in the same direction, forms a narrow stripe between Jura and Isla. The frith of Clyde, previously to its being ramified into a labyrinth of straits and sound and curiously elongated bays, rolls, in its great gulf of waters, its little interior sea, between the long peninsula of Kintyre on the west and the coast of Ayrshire on the east; and, in its higher waters, it encloses the various parts or islands of Buteshire, cleaves southern Argyleshire into a series of wildly Highland and singular peninsulæ, makes a considerable cleft in Dumbartonshire, and, as to its main channel, divides the counties of Argyle and Dumbarton from those of Ayr and Renfrew. Loch-Ryan and Luce-bay invade Wigtonshire on a line with each other, and on opposite sides,—make such a mutual advance as to leave a comparatively narrow isthmus between their inner extremities,—and divide the Rhinns of Galloway from the rest of Wigtonshire. Wigton-bay makes a long inroad between the two great political divisions of Galloway. Fleet, Kirkcudbright, and Auchencairn bays, and the estuary of the Urr, indent the coast of Kirkcudbrightshire. The estuary of the Nith divides, for a considerable distance, the stewardry of Kirkcudbright from the country of Dumfries.

SURFACE.

Hundreds and even thousands of parishes in England so closely or exactly resemble one another in all their features of landscape, that a sufficiently graphic description of one might be superscribed successively with the names of all. But so wondrously diversified is the surface of Scotland, that each of all its parishes, except a few, has some broad distinctive features of its own, each of the great majority might be the subject of a picture replete with individuality, and each of very many offers to the painter entire groups, sometimes multitudinous clusters of scenes which are rich in the peculiarities of their respective elements. Any general description of such a country is in the highest degree susceptible of colouring from the bias of aversion or of favourable predilection. Scotland has spots as lusciously lovely, or as superbly magnificent as ever poet sang, and spots as unutterably dreary or as inhospitably sequestered as ever a dreaming or misanthropic anchorite conceived; and, in respect both to scenery and to climate, can probably exhibit some actual tract of territory to justify, or at least to countenance, on the one hand, each sneer or sarcasm which has been written against her by illiberal prejudice, and, on the other, each of the most impassioned panegyrics which have been sung upon her by patriotic and enthusiastic admiration. To be fully understood, the country must be seen or studied in minute detail: no general description of it can be made the vehicle of very distinct ideas. Only such readers as acquaint themselves with it through some such medium as a copious Gazetteer, can be said to comprehend it,—examining it piece by piece in such large districts as those of counties and grand divisions, and then looking in detail at its parishes, its principal mountains, its lakes, its rivers, and all its various interesting objects. Whoever shall peruse the present work, first in the great and comprehensive articles, and next, in the multitudinous briefer articles which exhibit the individual objects, and describe the minute features of the grand picture, must rise, we should hope, from the perusal with conceptions of the surface of Scotland incomparably clearer than if he had read any conceivable amount of consecutive description. He will be surprised, perhaps bewildered, by the amount of variety; he will be delighted, or even thrilled, by the frequency with which scenery occurs, ever new or peculiar, and addressing itself by turns, or in combinations, to every power of taste, from the love of the calmly beautiful to the sturdiest and sternest capacity for the awfully sublime; he will wonder to discover many a fairy nook or striking *lusus nature* in a district which probably rash satire had pronounced repulsive even to a savage; and when he reflects how spiritedly and copiously Wordsworth and Scott, and many other masters of song, have written upon Scottish landscape, he will conjecture how mighty an impulse they must have felt, and how resistlessly they were hurried along,

and into what a whirl of poetic excitement they were carried, in the career of their descriptive poetry. But he must be aided, in this introductory article, by such a general view of the surface of the country as, though unneeded and useless for the purposes of description, will indicate to him the prevailing characteristic, where there is one of each great district, and assist him to see the mutual connexion of counties, mountain systems, valleys, and the basins of the great rivers.

Scotland, then, as to its mainland, is naturally and very distinguishably separated both into two and into three great divisions. The two great divisions are the Highlands and the Lowlands, so noticed and traced in separate articles in the body of this work, that they need not be further mentioned. The three great divisions are, the Southern, lying south of the friths of Forth and Clyde, and of a great valley which connects them, and now traversed by the Forth and Clyde canal,—the Central, lying north of this line, and south of the Glenmore-nan-albin, or great Glen of Caledonia, occupied by a chain of slender lakes, and now traversed from the Beauuly frith to Loch-Linnhe by the Caledonian canal,—and the Northern, lying north and north-west of the Glenmore-nan-albin.

Though the Southern division is all comprehended in what are called the Lowlands, and contains much champaign country, or many of the districts which obtain in Scotland the name of plains, it contains very little level ground except in the alluvial tracts,—the luxuriant and the richly screened Scottish ‘haughs’ and ‘holms,’—along the courses of the greater rivers. Its southern extremity, comprising all Wigtonshire except a belt on the north, is strictly neither mountainous nor lowland,—a remarkably tumultuated expanse,—a sea of hillocks, very thinly crested with wood, and wearing the changeful hues of constant hesitation between wilderness, green pasture, and arable cultivation. Along the north of Wigtonshire, but chiefly in the adjacent portions of Kirkcudbrightshire and Ayrshire, from the head of Wigton-bay on the east, to the sea at Loch-Ryan, and to the frith of Clyde opposite Ailsa-Craig, commences a very broad and far-stretching system of mountains which are often called the Scottish Southern Highlands, and which form the grandest feature of the southern district of the country. This system extends in a broad phalanx of spurs and ridges cut by gorges and glens, quite across the kingdom in the direction of north-east by east, to the Cheviots on the boundary of Roxburghshire, and there passes on to Northumberland. It attains its highest altitudes about mid-distance in the country, and thence sends off huge spurs northward to the great bend of the Clyde round Tinto, north-north-eastward to the abrupt stoop of the Pentland-hills, a few miles south of Edinburgh, and north-eastward to the termination of the Moorfoot-hills in the vale of Gala-water. From the western end up to the central masses, no regular ridge can be traced; the mountains form an elevated region unmarked by order, and penetrated in various directions by deep long gorges and vales. East of the central heights, a distinctly marked but deeply serrated ridge, constituting an uniform water-shed, and shooting up in a continued series of summits, runs along the northern boundary of Dumfries-shire and Liddesdale, and afterwards bends north-eastward and northward along the boundary with England, to the vicinity of Yetholm. The heights, in a few instances, have sharp and pinnacled outlines, or present a bare and rocky aspect; but, in general, they are soft in feature and in dress, angularities being rounded away from side and summit, and verdure successfully struggling to maintain ascendancy over heath. On their south side they run far down in lateral ridges, and frequently subside with comparative suddenness, allowing the parallel narrow valleys to open boldly and sweepingly out into a great plain. In their main broad line they occupy the northern parts of Kirkcudbrightshire and Dumfries-shire, and the southern parts of the counties of Ayr, Lanark, Peebles, Selkirk, and Roxburgh. Their altitude, in the central masses, averages nearly 3,000 feet above sea-level, and, in other parts, varies from 700 or 800 feet to a little upwards of 2,000. The great plain, or rather champaign country, which lies between them and the Solway frith, exhibits on the east a considerable expanse of level ground,—in the centre, an agreeable variety of flats, and gentle hilly ridges,—and in the west, an irregularly tumultuated surface. Greatly the boldest variety in this quarter, is the ridge of the Criffel-hills, which lifts a grand summit in the immediate flank of the Solway, at the mouth of the estuary of the Nith, and thence runs inland in a considerable ridge of 10 or 12 miles. The broad spurs toward Edinburgh and Gala-water, fill all Peebles-shire and Selkirkshire; they are quite as irregular as the great main line, not so bold, more softly dressed, and forming over a considerable space a

hugely undulated expanse of verdure. As they become identified with the Moorfoot-hills in the south of Mid-Lothian, they lose much of both their greenness and their altitude. After the intervention of the vale of the Gala, they rise suddenly up in a broad and very moorish ridge, which takes the name of the Lammermoor-hills, occupies the northern part of Berwickshire, and the southern part of East-Lothian, and extends in a direction north of east to the German ocean at St. Abb's-head. An irregular triangle, formed by the east end of the main line of the Southern Highlands, and the spurs onward to the coast of the Lammermoors, constitutes the basin of the parent-stream and the affluents of the Tweed. This, over a large part of its extent, is identical with the dells, and glens, and vales of the mountain-territory; but in the eastern and southern divisions of Berwickshire, and a small part of the north-eastern division of Roxburghshire, it forms the largest plain in Scotland, an expanse of very slightly undulated ground, closely resembling many districts in England,—the luxuriant, calmly pretty, garden-looking Merse. Intervening between the South Highlands and the friths of Forth and Clyde, the great champaign grounds of Lothian and Strathclyde extend from sea to sea, the former a hanging plain, declining to the north, and picturesquely variegated with hill and rising ground, and the latter a great valley opening broadly out from among the glens and vales of the Highlands, stretching westward in agreeable undulations, which decline on both sides to a line along the centre, and becoming pent up in the west between the Lennox-hills and a ridge in Renfrewshire. The water-shed between these two great champaign districts is everywhere very slightly marked, and contains less hill, and greatly less boldness and variety, than several ridges or congeries of heights in the interior of Lothian. An insulated range, vacillating in character between hill and mountain, commences behind Greenock, at the west end of the valley of the Clyde, and runs southward near the west coast to the hill of Knockgeorgan, 700 feet high, about 3 miles north of Ardrossan bay. Mistie-Law, near the middle of the range, rises 1,558 feet above sea-level. From the heights north of Ardrossan, the high land or water-shed, makes a circular sweep to the south, with the concave side to the west, enclosing in a sort of amphitheatre the great hanging plain of Ayrshire, frequently, but very slightly, tumulated, containing much level ground, and, in its southern part, several bold heights, and having a prevailing declination to the west. This water-shed, after leaving the insulated chain from Greenock to Ardrossan, is for a long way of very inconsiderable elevation; and where it forms the boundary-line between Strathclyde or the vale of Avon, and the plain of Ayrshire, it is so low as to admit, from some points on the east bank of the Clyde in the centre of Clydesdale, not more than 120 or 160 feet above sea-level, a view of the heights of Arran, distant 50 miles in the frith of Clyde; but over its southern half it becomes identified, for some distance, with the water-shed of the main line of the Southern Highlands, and then sweeps westward to the sea, immediately on the left bank of the outlet of Girvan-water. The extreme north of the southern division of Scotland, or that which forms the middle part of the common boundary between it and the central division, is a strath or belt of low land, stretching along the south base of the Lennox-hills, from the head of the estuary of the Forth between Grangemouth and Stirling, to a point a little above the head of the estuary of the Clyde, between the village of East Kilpatrick and the vicinity of Glasgow. This strath is identical, at its west end, with the valley of the Clyde; in the chief of its central part, it forms a detached district of Dumbartonshire; and in its west end, and the rest of its central part, it constitutes the plain of Stirlingshire. So low and slightly variegated is its surface, that a glance at its appearance and position brings conviction of its having once lain under water, and formed a natural sea communication, or continuous frith, between the eastern and western marine waters of Scotland.

The Lennox-hills, which skirt the central division of the kingdom between the Forth and the Clyde, extend from Stirling to Dumbuck, immediately above Dumbarton, in the direction of west-south-west. Along the north side, a moorish descent terminates, over the western half, in a narrow and richly variegated vale, chiefly traversed by the river Endrick, and partly declining to Loch-Lomond, and the channel of its superfluent stream the level,—and over the eastern half, in a flat broad belt of carse-ground, which is very sinuously watered by the river Forth, and which, after sweeping past a narrowed and pent-up part at Stirling-castle, becomes identified with the plain of Stirlingshire. The mountains beyond extend over a vast region; occupy, with their intervening vales and lakes, the whole of the middle and western portions of the central division of Scotland;

and press closely on the whole flank of the Glenmore-nan-albin. One of the highest summits of the region, as well as of all Scotland, is Bennevis, 4,380 feet above sea-level, situated on the south-east side of Loch-Eil, near the entrance of the Caledonian canal. The boundary of the most mountainous part of the region extends south-westward from this monarch-height to Ben-Cruachan, on the south side of Loch-Etive; it runs thence south-eastward to the mountains of Arroquhar on the east side of Loch-Long, one of the most northerly branches of the frith of Clyde; it extends thence eastward to Benlomond, at the sources of the Forth; it thence passes on in the direction of east-north-east to Benledi, on the west side of the fresh-water lake Loch-Lubnaig; it thence diverges eastward to the enormously-based Beniglo, in latitude $56^{\circ} 50'$, and west longitude $3^{\circ} 40'$; it runs thence due east to the lofty ridge of Lochan-nagar, nearly in latitude 57° , and west longitude 3° ; it extends thence northward, to the water-shed between the sources of the river Deveron and those of the Avon, an affluent of the Spey; it thence passes on westward to the northern extremity of Loch-Ness; and it thence extends south-westward along the flank of the whole of Glenmore-nan-albin to Bennevis. All the country comprehended within these boundaries, excepting Strathspey and a few deep glens, lies probably at a minimum of 1,000 feet above sea-level; it embosoms multitudinous scenes of grand and magnificent beauty, and of alternately savage and picturesque sublimity; it has many tracts which afford rich pasture, and not a few which are finely and productively feathered over with forest; it even contains, in well-sheltered situations, spots, small individually, but considerable in the aggregate, which are available for agriculture; but over by far the greater part of its extent, it either sends up wild and untameable summits to the clouds, or is an impracticable waste and wilderness region of rocky steeps, unproductive moors, and extensive bogs. Large tracts of continuous mountains lie on all sides, except the north-west, immediately beyond the boundaries we have indicated, and form, jointly with the great territory within these boundaries, the upland district of the central division of Scotland; but, though equally inhospitable, they are much inferior in mean height, and, in general, have less boldness, angularity, and rockiness of surface. The greatest range of the whole region cuts it from west to east into not very unequal parts, forms all the way a water-shed between streams respectively on the north and on the south, has a breadth of from 12 to 25 miles, runs at no great distance south of the 57th parallel, and extends from Bennevis by Loch-Ericht, and along the northern boundary of the counties of Perth and Forfar, to Mount-Caerloch in Kincardineshire, 18 miles west by north of Stonehaven, and thence sends off two hilly ridges to the coast, one terminating at Stonehaven, and the other at Girdleness. It thus bristles up as a stupendous rampart from sea to sea, sends up many summits 3,000 feet above sea-level, has probably a mean altitude, west of Caerloch, of 2,500 feet, measures in length from Bennevis to Girdleness about 100 miles, and, besides carrying the great north mail-road over the east end of its forking hilly ridges, is pierced in three places with gorges or passes which admit the transit of military roads. Another range commences in the vicinity of Loch-Lydoch, several miles from the south side of the former range, in west longitude $4^{\circ} 35'$; and runs south-westward to Bendoe, and thence southward, by the mountains of Arroquhar, along the west side of Loch-Long and the frith of Clyde, to a soft and gentle termination at Toward-point, the eastern peninsular headland of the district of Cowal. This range is not more than 50 miles in length, and, in Cowal, not more than 6 in mean breadth, and considerably less than 2,000 feet in the average height of its summits; but, north of Arroquhar, it is from 12 to 15 miles broad, sends up numerous summits to the height of nearly 3,000 feet, and forms a water-shed between the streams which flow respectively to the German and the Atlantic oceans. The section of the mountain or Highland district lying east of this range, and south of the great central range from Bennevis to Caerloch, somewhat nearly resembles in outline the figure of a quadrant, and contains many elevations, such as Benlomond, Benvenu, Benledi, Benvoirlich, Benlawers, and Schihallion, which rise about 3,000 feet or upwards, and in one instance even 4,000 feet, above sea-level. Its mountains are in some cases isolated; but, in general, they run in lateral spurs or offshoots eastward from the south and north range, and more or less parallel with the great central range. These are short in the southern part of the district, but towards the north they gradually increase from 10 to 15 or 18, and even to upwards of 20 miles; they enclose glens which are deep throughout, and in part high above sea-level, which have a contracted narrowness on the west, akin to that of profound gorges, but usually expand into vales toward the

east, and which contain aggregately large pendicles of arable land and forest, and embosom a great proportion of the loveliest and far-famed scenery of the Highlands. Between the most northerly of these flanking screens of the glens, and the great east and west central mountain-range, extends the vale of Rannoch, traversed along the east by the tumultuous river Tummel, and occupied on the west by Loch-Rannoch; and from the west end of this lake, past the northern termination of the north and south great range, away south-westward to the spurs of Bencruachan, extends the moor of Rannoch, an immense level bog lying about 1,000 feet above the level of the sea, a dismal wilderness occupying an area of about 400 square miles. The section of country south and south-west of this, north of the peninsula of Knapdale and Kintyre, and west of the north and south mountain-range, measures about 40 miles by 25, and with the exception of the stupendous mass of Bencruachan and some attendant heights, is a series of tablelands, elevated from 500 to 700 feet above sea-level, separated by narrow and deep glens ploughed up by water-courses, and covered partly with heath and grass, and partly with moorish soil and bog. The glens, though deep, are, in general, open, or expand into vales, and in common with the banks of far-stretching bays and marine lochs, are subject to the plough or luxuriant in wood. The long narrow peninsula of Knapdale and Kintyre, extending nearly 50 miles southward, with a mean breadth of about 7 miles, rises at its southern extremity to an altitude of about 1,000 feet above sea-level, but elsewhere is very moderately and even gently hilly, has many interspersions of plain and valley, and wears an arable, sheltered, and softly picturesque appearance. From the north side of the great central range, at a point north-north-west of Beniglo, a range upwards of 30 miles in length, and about 10 or 11 in mean breadth, goes off in the direction of north by east, to the stupendous mountain-knot of the Cairngorm heights—according to some authorities, the loftiest in Britain—and there forks into two branches, the one extending north-eastward, and lowering in its progress, along the right flank of the upper basin of the Deveron, and the other, under the name of the Braes of Abernethy, running northward between the vale of the Avon and the valley of the Spey, to the terminating and lofty heights of Cromdale. This range, except near the north end of its divergent branches, is unpierced by any road or practicable pass; and, from the Cairngorm group to its junction with the great central range, has a mean altitude of probably about 3,000 feet. In the triangle, the two greater sides of which are formed by the Glenmore-nan-albin, and the western moiety of the great central range, stretches north-eastward, a range 30 miles in length, and considerable in breadth, called the Monadh-Leadh mountains. These heights commence, at their south-west end, in the Corryarrack mountains, 18 miles north-east of Bennevis: they divide in their progress into two branches, which enclose the upper basin of the river Findhorn, and terminate nearly due south-east, from the frith of Beaully entrance of the Caledonian canal; and they possess an extreme altitude above sea-level of not much more than 2,000 feet. The south side of the east end of the great central range from Caerloch to Beniglo, and the ends facing the south-east and east, of the lateral offshoots of the great range north and south, have a broad fringe of shelving upland, which, in a general view, may be described as descending in tiers, or as forming a declination by successive gradients to the Lowlands. This fringe—mountainous on the inner side, and merely hilly in the exterior—varies in breadth from 3 to 8 miles toward the south, and from 6 to 12 miles toward the north: it is everywhere chequered or striped with glens and vales, bringing down the roaring and impetuous streams cradled among the alps to the champaign country below; it exhibits, as seen from a distance, a magnificently varied breastwork thrown round the Highlands; and it encloses in its glens and vales a surpassing rich assemblage of scenery, a vast aggregate area of picturesque and romantic forest, and not a small proportion of excellent arable ground. Along the whole south-east side of this far-stretching and sublime and myriad-featured declivity, from the Forth, between the vicinity of Stirling to the vicinity of Aberfoyle, to the German ocean at Stonehaven, a distance of about 80 miles, extends the plain of Strathmore, or the Great Valley, from 1 mile to 16 miles in breadth, over the most part from 6 to 8, and almost everywhere level, and in fine cultivation. This fine strath sends off to the German ocean at Montrose, a short one of kindred character, and farther north it becomes narrowed, and assumes the name of the Howe of Mearns; and at the point where it is crossed by the river Tay, it looks down a transverse valley watered by that stream; but over nearly all its length it is flanked along its south-east side by ranges of heights which, in some places, almost vie with the Grampians along the

north-west side, and in others wear the aspect of soft and gentle hills. The most considerable range, called the Ochils, extends from a point 2 miles from the river Forth, and about 4 miles from Stirling, in the direction of east-north-east, to the frith of Tay ; it is 24 miles in length, and has a mean breadth of about 12 miles ; and it is loftiest toward the Forth, and attains an extreme altitude of 2,300 feet above sea-level. Another range, called the Sidlaw-hills, is continuous of the Ochils, except for the intervention of the valley of the Tay ; it rises abruptly up a little below Perth, in a surpassingly picturesque height of 632 feet above sea-level, and extends to a point some miles south of Montrose, sending up, over the earlier half of its progress, numerous summits upwards of 1,000 feet in altitude, and afterwards forming naturally moorish terraces, which now are either arable, or, for the most part, clothed with wood. South-eastward of the Ochils, all the way to the German ocean, the surface is singularly rich in the calm and soft beauties of landscape, and exhibits an interminable blending of valley, slope, and gentle hill ; its boldest variety being an isolated table-ridge, a few miles from the Ochils, 4 miles in length, and shooting up at the extremities into beautifully outlined summits, respectively 1,466, and 1,721 feet high. Eastward from the south end of the Sidlaws, and along the north shore of the frith of Tay to the vicinity of Dundee, stretches the Carse of Gowrie, a level expanse of wheat-bearing soil, unsurpassed in strength and richness. The surface elsewhere between the Sidlaws and the sea, is partly diversified with the soft low heights called Laws, and partly consists of sandy downs, but in general is a waving, well-cultivated plain. North of the great central mountain-range from Bennevis to the German ocean, and east of the strictly Highland region, some high hilly ridges run eastward to near the sea, and send aloft numerous summits of mountainous aspect and altitude. The surface of the ridges and the intervening tracts, alternately pleases and tantalizes by incessant change ; it abounds in rocky ruggedness, and steep declivities, and niggard moorlands ; and it admits the dominion of the plough only or chiefly on the low grounds of its glens and valleys. The country lying to the north-east, and terminating in Kinnaird's-head, at the entrance of the Moray frith, has plains which, in some instances, run 10 or 12 miles inland from the sea, and swell into hills, most of which are graceful in outline, and beautifully verdant, while some are ploughed to the summit, and all, with one exception, rise less than 600 feet above the level of the sea. The country lying along the Moray frith to the north-east end of the Glenmore-nan-albin, has a breadth between the Highlands and the sea of only from 12 to 18 miles ; its level ground along the sea-board runs 9 miles inland in the vicinity of the Spey, but elsewhere is seldom more than 2 miles broad ; its interior district is traversed seaward by lofty offshoots of the mountain region beyond ; and its sea-board on the Beaully frith is a barren moor 10 miles by from 2 to 3,—the famous moor of Culloden. The Glenmore-nan-albin extends north-east and south-west, in a straight line from sea to sea ; it is 60 miles in length from Loch-Eil to the Beaully frith ; and it is principally occupied by three long stripes of fresh-water lake, aggregately upwards of 37 miles in length.

The northern or third great division of Scotland, with the exception of two comparatively small portions, is all Highland. One of the low tracts consists of the peninsula respectively north and south of the Cromarty frith, and of a tract round the head of that frith from 2 to about 4 miles in breadth, which unites them. The southern peninsula, seaward from an isthmus which nowhere rises more than 50 feet above sea-level, swells on its west side into a flat-backed height, which, with a mean breadth of 2 miles, extends northward to the coast. The northern peninsula, though much and roughly variegated with high moorish grounds, and lifting up in one place a bold rampart on the coast, is crossed by the fine Plain of Fearn, stretching from Tain to the most northerly bay of the Cromarty frith. The other level, though somewhat variegated district, comprehends about four-fifths of the whole of Caithness, and will be quite understood as to both its character and its relative position, by reference to the article on that county. The mountain region, while vast in area and multitudinous in feature, exhibits such masses and congeries of heights, and is so undisposed in ridges or ranges, that only a longer description than the patience of most readers could endure would serve to depict it. Its greatest elevation extends across nearly its centre, from Ben-Wyvis on the east, to Loch-Torridon on the west, and sends aloft its summits from a base lying at probably 1,500 feet above sea-level. On the north side of this line, or toward Cape-Wrath, the elevation decreases more than on the south, or toward the peninsula of Morvern. On its west side occur most of those long and narrow indentations of the sea noticed in the

sections on the coasts and the marine waters ; remarkable for rendering so desolate a region inhabitable, and especially for their being of a class which occurs elsewhere only on the coasts of Norway, Greenland, Iceland, and the hyperborean country around Hudson's Bay.

RIVERS.

Most of the running waters of Scotland, owing to the prevalence of mountain, and the frequent penetrations of the sea, have small length of course, and, even in the country itself, are not designated rivers. Yet though very numerous, and, for the most part, individually unimportant, they will be found distinctively noticed in the articles on counties, and fully described in the alphabetical arrangement. We can here, without useless repetition, only name the principal streams, and state their locality and direction of course. South of the west end of the Southern Highlands, or in two cases in Wigtonshire, and in the third between that county and Kirkcudbrightshire, the Luce, the Bladenoch, and the Cree, run south-eastward to the Irish sea. South of the main range of the Southern Highlands, the Dee, the Urr, the Nith, the Annan, and the Esk, run southward to the Solway frith. In the large triangular district, two sides of which are formed by the main range of the Southern Highlands, and by the long spur to St. Abb's-head, and whose aggregate basin comprehends about 1,870 square miles, the Tweed, aided chiefly by the affluents of the Gala, the Teviot, and the Whitadder, runs eastward, north-eastward, and northward, to the German ocean. The Lothians and the plain of Stirlingshire, are drained north-eastward or northward to the frith of Forth, principally by the Tyne, the Esk, the Leith, the Almond, the Avon, and the Carron. Ayrshire is drained in a direction more or less westerly to the frith of Clyde, by the Stinchar, the Girvan, the Doon, the Ayr, the Irvine, and the Garnock. The basin of the Clyde, comprehending an area of 1,200 square miles, is drained in a direction north of west to the head of the frith of Clyde, by its cognominal stream, whose chief affluents are the Douglas, the Avon, the Kelvin, and the Leven. The Forth, drawing greatly the majority of its head-waters from the central division of Scotland, fed principally by the Teith, the Allan, and the Devon, and draining an area of 574 square miles, flows eastward to its frith. The streams which, throughout both the central and the northern divisions of Scotland, run westward to the Atlantic, are all individually too inconsiderable to bear separate mention. Those which drain the district east of the Ochil-hills, are chiefly the Leven and the Eden,—the former eastward to Largo-bay, and the latter north-eastward to St. Andrew's-bay. A vast territory lying immediately south of the great central range of mountains, and comprehending large portions of both the Highlands and the Lowlands, is drained to the extent of 2,396 miles, chiefly eastward, and partly southward, by the Tay and its tributaries, the principal of which are the Tummel, the Isla, the Almond, and the Earn. The north-east corner of this territory is drained eastward to the German ocean, chiefly by the South-Esk and the North-Esk. In the district immediately north of the central mountain-range, and east of the Cairngorm mountain-knot, the Dee and the Don run eastward to the sea at Aberdeen. In the district lying between this and the eastern half of the Moray frith, the Deveron runs northward to that frith, and the Ythan and the Ugie eastward to the German ocean. The district enclosed by the great central mountain-range, the north-east branch of the Cairngorm ramification, the Moray frith, and the Glenmore-nan-albin, is drained to the extent of 1,300 square miles, north-eastward to the sea by the Spey, to the extent of 500 miles northward to the frith by the Findhorn, and to a less extent for each stream, northward to the frith by the Nairn, and westward to Loch-Lochy, near the west end of the Glenmore by the Spean. In the great northern division of Scotland, the chief streams eastward are the Beaully to the head of the Beaully frith, the Conan to the head of the Cromarty frith, the Oyke to the head of the Dornoch frith, the Brora, the Helmsdale, the Berriedale, and the Wick ; and the chief streams northward are the Thurso, the Forss, the Halladale, and the Naver. Of all the rivers, the Clyde alone is navigable by sea-craft for any considerable distance above the estuary ; and even it possesses this high property only in consequence of great artificial deepening and embanking, and over a distance of but about 12 miles.

LAKES.

The lakes of Scotland are very numerous, and, in many instances, are large, and singularly rich in scenery. The principal, for extent or scenic attractions, are Ken, drained by a cognominal stream, the chief affluent of the southern Dee; Skene, 1,300 feet above sea-level, drained by a remote tributary of the Annan, forming the magnificent cataract called the Grey-Mare's-Tail; St. Mary's-Loch, and the Loch of the Lows, drained by the classic Yarrow, a remote affluent of the Tweed; Doon, drained by its cognominal stream; Lomond, drained by the western Leven, the tributary of the Clyde; Leven and Glin, drained by the eastern Leven; Conn and Ard, drained by the Forth; Katrine, Achray, Vennachoir, Voil, and Lubnaig, drained by the Teith, the chief affluent of the Forth; Tay, Earn, Lydoch, Ericht, Rannoch, Tummel, Garry, Lows, Cluny, and Quiech, drained by the Tay and its affluents; Loch-Lee, drained by the North-Esk; Awe, Avick, Shiell, and Eck, south of the central mountain-range, and near the west coast; Laggan, Ouchan, and Treag, drained by the Spean; Lochie and Archaig, drained by the Lochie into Loch-Eil; Oich and Garry, drained by the Ness into the Beaully frith; Duntalliack, drained by the Nairn; Ruthven and Ashley, drained into Loch-Ness; Marce, Fuir, Shallag, Fannich, Rusk, Luichart, Monar, Glas, Moir, and Slin, in Ross-shire; and Shin, Naver, Furan, Baden, Loyal, and More, in Sutherland. The area in square miles, of 26 of the principal, is respectively of Lomond, 45; Ness, 30; Awe, 30; Shin, 25; Marce, 24; Tay, 20; Archaig, 18; Shiell, 16; Lochy, 15; Laggan, 12; Morrer, 12; Fannich, 10; Ericht, 10; Naver, 9; Earn, 9; Rannoch, 8; Stennis, 8; Leven, 7; Ken, 6; Lydoch, 6; Fuir, 6; Loyal, 6; Katrine, 5; Glas, 5; Doon, 4½; and Luichart, 3. All are mountain or hill lakes; and all, with very few exceptions, are embosomed in the Highlands.

ISLANDS.

The islands of Scotland are very numerous, and, in many instances, are large and important. The greatest archipelago, that of the Hebrides, extends along nearly the whole west coast of the mainland. It is broadly distinguishable into two divisions, the outer and the inner, but is capable of subdivision into five groups. Three of these press close upon the coast, the group of Isla and Jura on the south, that of Mull in the centre, and that of Skye on the north,—the last separated from the second by the seas which wash the far-projecting Point of Ardnamurchan on the mainland, and the first and second so concatenated as to admit a line of separation chiefly by their geognostic properties. The fourth, largest, most northerly, and far-stretching group, lies quite away from the mainland, and even from the group of Skye, separated from the northern part of the former by the Minch, and from the western skirts of the latter by the Little-Minch. It consists of about 140 islands and islets, about 140 miles in aggregate length, and lying so compactly as to be popularly viewed as one, and conventionally called the Long-Island. The fifth group is very small, lies to the far-west in profound loneliness, amidst a desert of waters, and draws attention chiefly by the romance of its situation and character,—consisting only of St. Kilda, itself more an islet than an island, and a tiny sprinkling on the bosom of the sea around it of dark, coarse gems, which pendulate between the character of islets and that of mere rocks. These groups are all fully treated in the article **HEBRIDES**. Another archipelago, that of Orkney, is separated at its south end by the Pentland frith, 6 miles broad from the north coast of Caithness, or extreme north of the mainland of Scotland. Its islands and islets lie somewhat compactly; but are divisible into two groups, the larger and more compact on the south, the smaller and more dispersed on the north-east,—the two separated by a sound which bears on the east side the name of Stronsa frith, and on the west side that of Westra frith. A full general description of the whole will be found in the article **ORKNEY**. An islet called Stroma, lies in the Pentland frith, 4 miles north-west of Duncansby-head. A third archipelago, that of Shetland, lies 48 miles north-north-east from Orkney. About two-thirds of their whole superficies are amassed in a very long island, of surpassingly irregular outline, and in several places very nearly dissevered, called the Mainland. Yell sound, a winding strait, separates this island on the south from the other chief island on the north, but is, in some places, thickly strewn with islets. One small island, Fowla, lies quite away to the

west from the main group. Another, called Fair-Island, lies about half-way between that group and the Orkneys. All the details of a general description are given in the article SHETLAND. The other principal islands of Scotland are Mugdrum, in the frith of Tay; the Isle of May, Inchkeith, Cramond, Inchcolm, Inchgarvey, Inchmickry, Craig-leith, Lamb, Fidra, and the Bass, in the frith of Forth,—the first and second the sites of lighthouses; and Arran, Bute, Great Cumbrae, Little Cumbrae, Pladda, Lady-Isle, and Ailsa-rock, in the frith of Clyde,—Pladda and Little Cumbrae the sites of lighthouses, and Lady-Isle the site of two beacon-towers. Of seaward rocks and sandbanks, the chief are Car-rock, a beacon-station, $1\frac{1}{2}$ mile north-east of Fifeness; Bell-rock, a dangerous ledge bearing aloft a lighthouse, 12 miles east of Buddonness; Marr's-bank, a shoal, 30 miles east of the Bell-rock; Murray-bank, a sandbank 10 miles east of Montrose; the Long-Forties, a shoal, extending from the exterior side of Murray-bank, in a line nearly parallel with the coast, to within 70 miles of Kinnaird-head; Outer-Montrose-pits, a shoal, 90 miles east of Montrose; the Pentland-skerries, the site of a lighthouse, at the east end of the Pentland frith; Lappoch-rock, between Lady-Isle and Irvine harbour, in the frith of Clyde; and the Big and Little Scaurs, rocks at the middle of the entrance of Luce-bay.

GEOLOGY AND MINERAL PRODUCTIONS.

Without supplying a geological map, and writing twentyfold more copiously than our space will admit, we could not give an adequate view of the distribution of the rocks of Scotland, and of the varieties and structure of its minerals. But from 'Malte Brun's and Balbi's Systems of Geography Abridged: Edinburgh, Adam and Charles Black, 1840,' we shall extract a summary, which will please the scientific by its clearness, and the popular reader by its wealth of information; and then we shall exhibit in a brief summary the names and localities of all the rarer minerals of the country. "In a general point of view," says the work referred to, "Scotland may be separated, geologically as well as geographically, into three portions. By passing a line on the map nearly straight, from Stonehaven, through Dunkeld to the middle of the Isle of Bute, and thence with a slight curve to the Mull of Cantyre, we shall have traced the southern boundary of the primary non-fossiliferous system of rocks. Another line, but more irregular than the former, drawn from St. Abb's-head, passing near Peebles, Abington, Sanquhar, New Cumnock, to about Girvan, will have a general parallelism with the former line, and will have the older greywacke, now named the Cumbrian system, lying to the south, and extending to the borders; while the land included between the two lines comprehends the old red sandstone, and great central coal basin of Scotland.

"I. STRATIFIED ROCKS.—We shall first notice the stratified systems of those three divisions of the country, beginning with the oldest.

"That extensive tract of Scotland which constitutes the northern division, is composed chiefly of Primary Stratified rocks, namely, gneiss, mica slate, chlorite slate, and clay slate, with subordinate masses of hornblende slate, talc slate, and primitive limestone. These, often with granitic centres, rise into magnificent mountains, of which the Grampians form a part. In many of these deposits, particularly in the mica slate, garnets of a brown colour are very abundant. The mountains of the Trossachs, so effectively described by Sir Walter Scott, are chiefly composed of mica slate. In these primary deposits no organic remains have ever been discovered. But these are not the only stratified formations which constitute this extensive district. The old red sandstone fringes the extremities of the land, commencing about Fochabers, on the east side of the Murray frith; extending on both sides of Loch-Ness within a short distance of Fort-Augustus, and then proceeding northwards with a variable breadth through Fortrose, Tain, Dornoch; expanding the whole breadth of Caithness, and constituting the principal formation of the Orkney Isles. On the western side of the mainland, the old red sandstone is deposited in numerous patches on the gneiss formation, as at Lock Broom, Gairloch, and Applecross. The newer secondary rocks have been but very sparingly observed in Scotland; yet it is rather a curious fact, that the few patches which have been discovered, are superimposed generally on the old red sandstone, and have not been seen reposing in their uninterrupted order in the secondary series. Thus, the lias shales, highly micaceous, and some of the upper beds of the Oolitic system, occur at the mouth of the Cromarty frith, from Dunrobin-castle to the Ord of Caithness; Applecross and

other points on the mainland ; and in the Western Isles, on the borders of Mull, the south and east of Skye, and near the Cock of Arran, on a small coal deposit. The equivalent of the fresh-water deposits of the Wealds of Sussex, geologically situate above the oolitic group, and below the chalk, is seen near Elgin in Murray, and Loch-Staffers in Skye. In the central and southern divisions of Scotland, those newer groups of rocks have not been detected. In tracing the geological features of the country in the ascending order of the groups, and confining ourselves to the geographical divisions pointed out, we next come to the Transition or Greywacke system, now divided into two principal sections,—the Lower or Cumbrian, and the Upper or Silurian. So far as is hitherto ascertained, the silurian division is unknown in Scotland, but the Cumbrian rocks, nearly destitute of organic remains, cover the principal part of the great area of the south of Scotland. These greywacke strata stand at high angles of from 60° to 90° from the horizon, and consist chiefly of coarse slaty strata, seldom divisible into thin roofing slates, and often alternating with arenaceous and coarse conglomerates. Amongst these strata limestone is seldom found, and when it is, the quality is inferior. In the division of the island of which we now treat, coal and its accompaniments are known in very few places. Coal is, however, worked at Canoby, and on the borders at the Carter-Fell. The only other rock formation found in connection with the old transition group here (with the exception of igneous rocks), is a red sandstone, ascertained, in some situations, to be the old red, but in some other places, considered to be the new red sandstone, particularly in Dumfries-shire, where the surfaces of the slabs have curious impressions, supposed to be those of the feet of a species of tortoise.

“ *The Old Red Sandstone and the Carboniferous System.*—In the central division is placed the great coal basin of Scotland ; but adhering to our rule of marking the successive formations in the ascending order, we shall first treat of the Old Red Sandstone, the most ancient rock in this subdivision of the country. This rock abuts against the line of the primary rocks, and stretches across the whole country, from the German ocean to the Atlantic, pursuing a south-westerly and north-easterly direction. From the northern line of division it stretches south to the frith of Tay, bearing through Dunning near Stirling, Dumbarton, and thence through the Western Isles, Bute and Arran, and is wrapped nearly round the extremity of the mainland at the Mull of Cantyre. The old red sandstone thus forms a long, uninterrupted, and extensive fertile valley. In the north-western part it rises into hills, in the sides of one of which, Uam Vor, are deep and hideous fissures, the effect of some convulsion. It is more irregularly distributed on the southern boundary of the middle division, commencing on the east about Dunbar, and stretching westerly on the line of the transition range of Moorfoot and Lammermoor-hills beyond Middleton, where it is interrupted by a range of trap, but is again found in the country round Lanark. This formation appears to be of vast thickness, especially in the northern part of the division, and may, it is supposed from recent observation, be divided into three portions, the lower, the middle, and the upper beds. In what is considered the lower strata, the remains of fishes have been found in a high state of preservation, and also large scales and other remnants of a sauroid character, such as those of the holoptychus. The well-known Arbroath pavement belongs to the old red sandstone series. The most important group in the central district is the Coal Formation, consisting of limestone, ironstone, freestone, coal, and clays. Its extent from east to west is bounded only by the extremities of the land. To the north it is cut off from the old red sandstone by a range of trap hills, crossing the country from east to west. On the south it is bounded by the greywacke and old red sandstone. Its breadth averages 40 miles, and is in length about 70. The mountain limestone forms generally the basis of this group, though it is frequently found interstratified with other members of the series, and abounds with countless numbers of organic remains. Below the mountain limestone, however, but belonging to the same group, a bed of limestone is worked at Burdiehouse, near Edinburgh, in which the organic remains differ essentially from those of that just named. These remains consist of many of the plants which distinguish the coal formation ; but it also includes the teeth, scales, and other bones of fish, which partake of the reptile character, some of which must have been of gigantic dimensions. Small fishes (the paleoniscus, &c.) are also found in a fine state of preservation. The same limestone has been found in other parts of the country, and is of superior quality to the common limestone for mortar, plaster, and the smelting of iron. The clay ironstone is found in beds and nodules, the workable kinds containing from 27 to 45 per cent.

of iron. The kind termed black-band is in high request. From this ore a vast quantity of pig-iron is smelted. The coal is found in beds, varying from a few inches to 40 feet in thickness; and one bed in Ayrshire is about 100 feet thick, interrupted only by thin seams of shale from 1 to 3 inches, and is extracted in great quantity, and used as fuel for domestic purposes, the burning of lime, smelting of iron, working of steam-engines on sea and land. One variety, cannel-coal, is of superior quality for the preparation of gas. From the fire-clay are manufactured fire-brick and gas retorts; and the sandstone furnishes an inexhaustible store of substantial and beautiful material for building. These several deposits contain in abundance the impressions of the vegetables which distinguish the carboniferous period; and what is remarkable, the remains of animals, the same as noted as occurring in the Burdiehouse limestone, are found in the shales, and even in the coal itself. In this district, no strata newer than the carboniferous system is known to exist; all is covered over with accumulations of clays, gravels, sands, and soil.

“II. UNSTRATIFIED ROCKS.—Having thus noticed the direction and geographical position of the several stratified formations of Scotland, we now come to treat briefly of the Unstratified System; and in order to bring this department more clearly to the apprehension of the general reader, we must remark, that the unstratified rocks are of igneous origin—they were, in fact, melted volcanic matter, which had burst through the stratified deposits, which were thus elevated into mountain-ranges; the strata being at the same time raised on edge to various angles with the horizon. This being the case, we consequently find that the unstratified follow the same course with the stratified mountains, since the former were the elevating cause of the latter. Now granite, an igneous rock, is more generally found connected with the primary non-fossiliferous, than with the succeeding formations, forming centres in gneiss and mica slate, and rising above them in magnificent pinnacles; it is therefore in the primary region that granitic mountains may be expected to predominate; of this we find an instance in the Grampian chain which stretches in a north-east and south-west direction, intersecting the country. The granite is most largely developed on the north-east side of the country; it there commences about the parallel of Stonehaven, extends northward to Peterhead and Banff; and, in a westerly direction, along the courses of the Dee and the Don; and still continues along the banks of the Tilt, Loch-Ericht, Loch-Lydoch, and terminates in this line near Oban and Fort-William; from the latter rises Ben-Nevis, composed of granitic sienite. But this is not the only range. Another may be traced commencing in the north between Thurso and Portskerry, which passes along, at irregular distances, near Loch-Baden, the neighbourhood of Dornoch, Loch-Oich, on the line of Loch-Ness, and terminates in a lofty mountain at the head of Loch-Sunart, on the west coast. Granite is found in several of the Western Isles, as in Rum, and is magnificently displayed in the Isle of Arran;—Goatfell and the surrounding peaks are of granite. The granitic summits of these mountains form the highest land in Britain. Ben-Nevis is 4,373 feet above the level of the sea, and Ben-Macdui rises about 17 feet higher. Though the granitic formation covers a greater area, and rises to a greater altitude in the north than in the south of Scotland, yet the latter is not deficient in this interesting rock. It rises through the older grevacke (the Cumbrian system) in Dumfries-shire; occupies a great space in New Galloway and in Kirkcudbright; and near Kirkmaiden, in the form of dykes. In some of those mountains, stones fit for the purposes of the jeweller have been found. The mountain Cairngorm, in Inverness-shire, has long been celebrated for its rock crystal, of a smoke-brown colour, and named Cairngorm from its locality, which, when cut by the lapidary, is highly esteemed for its colour and brilliancy, and is employed for seals, brooches, and other ornamental purposes. Topazes of a light blue colour, and sometimes of very large size, have occasionally been found on the same mountain, and also beryl (aqua marine), more rarely. Unstratified rocks of every other kind also prevail in Scotland; including all the varieties of Trap (commonly named whinstone), basalt, greenstone, compact felspar, pitchstone, porphyries, and amygdaloids, which in many parts display ranges of symmetrical columns, sometimes of great extent—as at Arthur-Seat near Edinburgh, in several parts of the coast of Fife, in the islands of Eigg, Arran, Lamlash, and in the incomparable Staffa. But we shall attend to the distribution of these rocks throughout the country. They are connected with the older greywacke and red sandstones of the south of Scotland. Trap forms a great part of the Cheviots on the borders, and passes northwards into the districts of Dunse, Coldstream, Kelso, Melrose, Selkirk, and Roxburghshire, rising into beautiful dome-shaped hills. Hounam-Law, the

Eildons, and Ruberslaw (the last, near 1,500 feet high), may be cited as examples. But in the great central valley of Scotland, beginning at Montrose on the east coast, trap hills appear in patches in the old red sandstone, passing in an irregular line to the frith of Tay, from the south-eastern extremity of which they proceed in a south-westerly course, without interruption, but varying greatly in breadth, through Dunning, Kinross, and Stirling, to Dumbarton. Another line, but less continuous, commences about Cupar, near St. Andrews, along the coasts of Fifeshire, and appears in groups about Linlithgow, Bathgate, near Glasgow, onwards to Paisley, and thence to Greenock, where it is greatly expanded, and turns north to the banks of the Clyde, nearly opposite the Dumbarton range. A third parallel range, also in interrupted masses, commences at Dunbar, is continued in the Pentlands, Tintoc, and other hills in Lanarkshire, and in Ayrshire, about Kilmarnock, Ayr, and New Cumnock. In Galloway, trap is in some parts greatly expanded. A few of those localities may be mentioned, as we are not aware that any public notice has yet been given of its existence in those parts. A dyke of greenstone occurs near Kirkcolumpoint in greywacke, at the western extremity of Loch-Ryan; Cairn-Pat, between Stranraer and Port-Patrick, is also greenstone; and thence, the greywacke of the whole coast to the Mull of Galloway is intersected by dykes and hills of several varieties of trap. On the northern side of Loch-Ryan, it is seen involved amongst the roofing slates of the Cairn; and a range of trap hills extends thence, rising through the greywacke, flanking the edge of the loch, taking a south-easterly direction, passing by Castle-Kennedy to the north, and onwards to New-Luce. Here it expands to an enormous extent in every direction; to the south it approaches Glenluce-bay. At Knocky-bay, a short distance north of New-Luce, a lead mine was at one time worked, but becoming unproductive, was abandoned. It may, however, be observed, that the greatest development of trap is in the great central coal district, where it has fractured the strata, and raised the edges of the coal seams to the surface, an important natural operation, by which coal and its other useful accompaniments, ironstone, limestone, and building materials, have been made known and accessible. In the trap rocks of Scotland many interesting minerals are found. The far-famed Scotch agate or pebble, abounds in nodules included in trap, near Montrose, Perth, and other places; and many of the most beautiful of the zeolites are found among the hills around Dumbarton, the opposite side of the Clyde, and in many other localities.

"The coal-fields constitute the principal mineral treasures of Scotland. The great coal district extends across the island from the eastern corner, or, as the district is termed in Lowland Scotch, the 'East Neuk' of Fife, to the mouth of the Clyde in Dumbartonshire on the west, and into East-Lothian on the east. It is not, however, continuous throughout the whole distance, but consists rather of a succession of large detached coal-fields. Its superficial extent has been estimated at nearly 1,000 square miles; and it has also been calculated that, according to the present consumption, it may be worked with advantage during 3,000 years. The Fife coal-field, north of the Forth, extends from Stirling to St. Andrews, and is in some places 10 miles broad. The richest portion of it lies between Dysart and Alloa. The Lothian coal-field, on the south and east of Edinburgh, is about 25 miles in length, with a breadth of five or six, and covers an area of 80 square miles. To the westward of Edinburgh there is no coal for several miles; but at Bathgate, workable beds are found, which extend westward, with some interruptions, to the neighbourhood of Glasgow, forming the great coal-field of Lanarkshire. The Clyde and the Forth form the boundaries of this field; but beyond Blantyre, the coal extends on the south side of the Clyde to the Cathkin-hills. After passing Glasgow, the coal-field stretches westward from the south bank of the Clyde, and occupies the valley in the line of the Ardrossan canal, extending through Renfrewshire to Dalry in Ayrshire; the most southerly point being at Girvan. Several small fields occur at different parts of the south of Scotland, particularly at Sanquhar, in Dumfries-shire, and Canoby, in the same county, on the borders of England. Coal is found also at Brora in Sutherlandshire, and Campbelton in Cantyre, but in insignificant quantities. Besides the fossil fuel yielded by the coal-fields, ironstone of excellent quality abounds in many of them; and is smelted to a great amount, and manufactured into articles suited for every useful purpose, at the great works of Carron, Shotts, Cleland, Airdrie, Clyde, Wilsontown, Muirkirk, Glenbuck, and some other places. It is the abundance and cheapness of coal in its vicinity that has enabled Glasgow to rival Manchester as a manufacturing emporium. Next to coal and ironstone, the most valuable mineral product of

Scotland is lead, of which there are rich mines at Leadhills and Wanlockhead, in the Lowther-hills, on the borders of Lanarkshire and Dumfries-shire. Lead is also procured at Dollar in Clackmannanshire, Strontian in Argyshire, Belleville in Inverness-shire, and Leadlaw in Peebles-shire. A considerable quantity of silver is extracted from the lead. Particles of gold have frequently been found in the small streams among the Lowther-hills, and also immediately under the vegetable soil which covers the surface of the latter. Scotland abounds in quarries of the finest building materials, particularly sandstone,—hence the beauty of the numerous public edifices which adorn its cities and towns. The principal sandstone quarries are Craigleith, a little to the west of Edinburgh; Binnie, near Uphall, Linlithgowshire; Humber, near South Queensferry, also in Linlithgowshire; Giffneugh, near Glasgow, Lanarkshire; Longannet, near Kincardine, Perthshire; and Milnfield or Kingoodie, near Longforgan, Perthshire. Roofing-slates, only inferior to those procured in Wales, are quarried extensively at Ballachulish, and in the island of Easdale, both in Argyshire. Granite is brought from Aberdeen to pave the streets of London; and the granite of Kirkcudbright has been partly used in the construction of the Liverpool docks. Variegated or veined marble, of a beautiful appearance, is found in Sutherlandshire, at Glentilt in Perthshire, at Tyree in Argyshire, at Muriston in West-Lothian, and in other places.”

Octohedral alum occurs at Hurler near Paisley, at Creetown in Galloway, and in the vicinity of Moffat; rock-butter, at Hurler; compact gypsum, in the Campsie-hills; fibrous gypsum, in Dumbartonshire, in the vicinity of Moffat, and on the banks of the Whitadder; foliated fluor, in various situations, but rarely, though abundant in England; conchoidal apatite, or asparagus stone, near Kincardine, in Ross-shire, and in the Shetland isles; common arragonite, or prismatic limestone, in the lead mines of Leadhills, and in secondary trap-rocks, in various situations; fibrous calc-cinter, the alabaster of the ancients, in Macallister's-cave in Skye; slate-spar, imbedded in marble in Glen-Tilt, and in Assynt; common compact lucillite, or black marble, forms hills in Assynt; stinkstone, or swinestone, occurs in Kirkbean, and the vicinity of North-Berwick; white domolite occurs in beds containing tremolite, in Iona; brachytypous limestone, or rhomb-spar, near Newton-Stewart, and on the banks of Loch-Lomond; foliated brown-spar, in the lead mines of Leadhills and Wanlockhead; columnar brown-spar, on the banks of Loch-Lomond, and near Newton-Stewart; prismatic, or electric calamine, at Wanlockhead; pyramido-prismatic baryte, or strontianite, at Strontian in Argyshire; foliated prismatic baryte, or celestine, at Inverness, and in the Calton-hill of Edinburgh; white lead-spar, and black lead-spar, at Leadhills; indurated, friable, and green earthy lead-spars, prismatic lead-spar, or sulphate of lead, and radiated prismatic blue malachite, or blue copper, at Leadhills and Wanlockhead;—fibrous common malachite, at Sandlodge, in the mainland of Shetland;—radiated cobalt-mica, or cobalt-bloom, at Alva in Stirlingshire, and in the limestone of the coal measures in Linlithgowshire; earthy blue iron, on the surface of peat-mosses in Shetland; scaly graphite, in Strath-Beauly in Inverness-shire, and in the coal formation near Cumnock; foliated chlorite, in Jura; earthy chlorite, along with common chlorite, at Forneth-cottage in Perthshire; other chlorites, variously, and in abundance; common talc, in Perthshire, Aberdeenshire, and Banffshire; indurated talc, or talc-slate, in Perthshire, Banffshire, and Shetland; steatite, or soapstone, in the limestone of Iona, and the trap-rocks of the Lothians, Arran, Skye, and some other places;—diatomous schiller-spar, in the serpentine of Fetlar, and Unst in Shetland, and of Portsoy in Banffshire, in the greenstone of Fifeshire, in the porphyritic rock of Calton-hill, and in the trap of Craig-Lochart, near Edinburgh; hemiprismatic schiller-spar, or bronzite, in Skye, and near Dimnadrochit in Inverness-shire; prismatic schiller-spar, or hypersthene, in Skye and Banffshire; kyanite, in primitive rocks at Boharm in Banffshire, and near Banchory in Aberdeenshire, and in mica-slate near Sandlodge in the mainland of Shetland; fibrous prehnite, in veins and cavities in the trap of Castle-rock, Salisbury-Crag, and Arthur-Seat, Edinburgh, of Bishopton and Hartfield in Renfrewshire, of Cockney-burn and Loch-Humphrey in Dumbartonshire, of the vicinity of Beith in Ayrshire, and of Berwickshire, Mull, and Raasay; rhomboidal zeolite, or chabasite, in crystals in the vesicular cavities of the Mull and Skye trap; mealy zeolite, or mesotype, near Tantallan-castle in Haddingtonshire, and in Mull, Skye, and Canna; pyramidal zeolite, or apophyllite, in the trap-rocks of Skye; some other species of zeolite, variously, and in abundance; adularia, a rare sub-species of prismatic felspar, in the granite of Arran; compact felspar, a more

common sub-species, in the Pentland and the Ochil hills, in Tinto, and in Papa-Stour in Shetland; other sub-species of prismatic felspar, in numerous localities; sahllite, a sub-species of pyramido-prismatic augite, in Unst, Tíree, Harris, Glentilt, Glenelg, and Rannoch; asbestos tremolite, in Glentilt, Glenelg, Iona, Shetland, and other places; common tremolite, in Glentilt, Glenelg, and Shetland; rock-cork, a kind of asbestos, in veins in the serpentine of Portsoy, and in the red sandstone of Kincardineshire, in small quantities at Kildrummie in Aberdeenshire, and in plates in the lead veins of Leadhills and Wanlockhead; flexible asbestos, or amianthus, in the serpentine of Portsoy, Lewis, and Harris, of Mainland, Unst and Fetlar in Shetland, and in some other places; rigid or common asbestos, in the serpentine of Shetland, Long-Island, and Portsoy; epidote, or pistacite, in the syenite of Arran and the Shetland mainland, in the gneiss of Sutherland, in the trap of Mull and Skye, in the quartz of Iona and Rona, and in the porphyry of Glencoe, and other districts; common zoisite, in Shetland, Glenelg, and the banks of Loch-Lomond; common andalusite, in the primitive rocks of Aberdeenshire, Banffshire, and Shetland;—saussurite, between Ballantrae and Girvan; common topaz, in an alluvium in the granite and gneiss districts of Mar and Cairngorm; schorlous topaz, or schorlite, in Mar; beryl, along with topaz and rock-crystal, in an alluvium among the Cairngorm range; common amethyst, in greenstone and amygdaloid, in many localities; rock or mountain crystal—a variety of which is the Scottish Cairngorm stone—in the alluvium of the Cairngorm district, in druse cavities in the granite of Arran, and in various other geognostic and topographical positions; rose or milk quartz, in the primitive rocks of various districts; conchoidal hornstone, in the Pentland-hills; common calcedony, in most of the trap districts; carnelian, in most of the secondary trap districts, solitarily, or in agate; striped jasper, in the clay porphyry of the Pentland-hills; porcelain jasper, among pseudo volcanic rocks in Fifeshire; agate jasper, in the agates of central Scotland; precious and common garnet, variously in primitive rocks; prismatic garnet, or cinnamon-stone, in gneiss near Kincardine in Ross-shire; prismatic garnet, or grenatite, in Aberdeenshire and Shetland; common zircon and hyacinth, in Galloway, Inverness-shire, Sutherland, Shetland, and other districts;—common sphene, or prismatic titanium-ore, in the syenite of Inverary and of Criffel, and other Galloway-hills, and in some other parts of Scotland; rutile, or prismato-pyramidal titanium-ore, in the granite of Cairngorm, and the quartz of Killin and Beniglo; prismatic wolfram, in the island of Rona; iron sand or granular magnetic iron-ore, in the trap-rocks of various districts; micaceous specular iron-ore, at Fitful-head in Shetland, in clay-slate near Dunkeld, and in the mica-slate of Benmore; red hematite, or fibrous red iron-ore, in veins in the secondary greenstone of Salisbury-Crags, and in the sandstone of Cumber-head in Lanarkshire; columnar red clay iron-ore, among other pseudo-volcanic productions in Fifeshire; pea-ore, or pisiform brown-clay iron-ore, in the secondary rocks of Galston; bog iron-ore, in various parts of the Highlands and Islands; scaly brown manganese-ore, near Sandlodge in Shetland; grey manganese-ore, near Aberdeen;—octahedral copper, in the serpentine of Yell, and the sandstone of Mainland in Shetland;—prismatic nickel pyrites, or copper-nickel, at Leadhills and Wanlockhead, and in the coal-field of Linlithgowshire; nickel ochre, in the same localities as the last, and at Alva; prismatic arsenic pyrites, at Alva; magnetic, or rhomboidal iron pyrites, in Criffel, Windyshoulder, and other Galloway hills; yellow, or pyramidal copper pyrites, near Tyndrum in Perthshire, and in the Mainland of Shetland;—grey copper, or tetrahedral copper-glance, at Sandlodge in Shetland, at Airth in Stirlingshire, at Fassneyburn in Haddingtonshire, and in the vicinity of Girvan; vitreous copper, or prismatic copper-glance, in Ayrshire, at Fassney-burn, and in Fair Isle; rhomboidal molybdena, in granite and syenite at Peterhead, in chlorite-slate in Glenelg, and in granite at the head of Loch-Creran; molybdena ochre, along with the last, at the head of Loch-Creran; grey antimony, or prismatoidal antimony-glance, in greywacke at Jamestown in Dumfries-shire, and among primitive rocks, accompanied by green fluor in Banffshire;—yellow zinc-blende, at Clifton near Tyndrum; brown zinc-blende, at Clifton, and in small veins with galena, in the Mid-Lothian coal-field;—amber, or yellow mineral resin, on the sea-beach; petroleum, or mineral oil, at St. Catherine's well in the parish of Liberton, and in Orkney; asphaltum, or slaggy mineral pitch, in secondary limestone in Fifeshire, and in clay ironstone in Haddingtonshire;—indurated lithomarge, in nodular portions, occasionally in secondary trap and porphyry rocks; mountain soap, in secondary trap in Skye; chialstolite, in clay-slate near Balahulish in Argyle-

shire ; iserine, in the sand of the Don and the Dee ; pinites, in porphyry in Beniglo, and near Inverary.

CLIMATE.

The climate of the Hebrides, of the Orkneys, and of Shetland, has, in the case of each, some marked peculiarities, which are noticed in the articles devoted to their description. Even that of the mainland, owing to the bold and singularly varied contour of the country, is so singularly various, as to offer matter for distinctive remark in notices of most counties, and even of not a few parishes. In a general view, the heat, in consequence of the country's insularity, and of its frequent and long indentations by the sea, is much higher in winter, and more moderate in summer, than in the same latitudes on the continent. The temperature, except in moorlands in the interior, and the more mountainous districts, seldom remains long at the freezing-point ; nor, in any part of the country, does it often rise to what is called Indian heat, or to an intensity which incommodes the labour of the field. The extremes, so far as they have been observed, are 92° of Fahrenheit, and 3° below zero ; but, in the case of both, are rarely and very briefly approached. The ordinary greatest range of the thermometer is between 84° and 8° . The mean annual temperature for the whole country is from 45° to 47° ; and at the lowest is $41^{\circ} 11$.—at the highest $50^{\circ} 32$. Nor does the average descend as the observer moves northward, or to the vicinity, or into the interior of the Highlands ; for the mean temperature of Dumfries, deduced from the observation of 9 years, is $42^{\circ} 327$; that of Glasgow, as determined by Professor Thomson, is $47^{\circ} 75$; that of Edinburgh, as determined by Professor Playfair, is $47^{\circ} 7$; that of St. Andrews, deduced from the observation of 8 years, $48^{\circ} 01$; that of Perth, deduced from the observation of 9 years, is $48^{\circ} 131$; that of Aberdeen, deduced from the observation of 10 years, $47^{\circ} 648$; and that of Inverness, deduced from the observation of 13 years, $48^{\circ} 09$. The range of the barometer is often both great and rapid, and averages throughout the mainland, 2.82 inches, or from 36.92 to 28.10. Snow is less copious, though probably more frequent, in its falls than in the south of England ; and rain, on the average, is less than in the west of England. The joint quantity of the two has an annual mean amount for the kingdom of from 30 to 31 inches, but differs widely on the east and on the west coast, —varying, on the former, from 22 to 26 inches, and, on the latter, from 35 to 46 inches. At Dumfries, the mean annual quantity, as deduced from the observation of 7 years, is 33.54 inches ; at Glasgow, from the observation of 31 years, 22.4 inches ; at Perth, from the observation of 9 years, 23.01 inches ; at Aberdeen, from the observation of 4 years, 27.37 inches ; and at Inverness, from the observation of 7 years, 26.21. The average number of days in the year on which rain or snow falls, is variously stated to be, on the east coast, 135 and about 145, and on the west coast, 205 and 200. The least humid district in the Lowlands, is East-Lothian ; and the most humid, Ayrshire. Thick fogs, and small drizzly rains, visit the whole country, chiefly in spring and autumn, and during the prevalence of easterly winds ; and, in many localities, the fogs lie along a champaign country like seas of fleecy vapour, with the hills and loftier uplands appearing like islands on their bosom. Snow, except in the milder districts of the Lowlands, generally begins to fall about the middle of November, and seldom ceases its periodical visits till March or April. The winds are to a high degree variable, both in force and direction ; and, in the Highlands and Southern Highlands, produce not a few curious phenomena in connexion with the peculiar configuration of localities. They often rise to gale and storm, and in some places even to tempest ; and, about the period of the equinoxes, are more violent than in England. Those from the west are, in autumn and the early part of winter, the most prevalent, and, in general, they are the highest ; and those from the north-east prevail from the beginning of March till May or June, and are often keen and severe. At St. Andrews, the winds are westerly, except in the spring and early summer months, when those which are easterly prevail ; at Perth, during 9 years ending with 1833, the winds were from the west and north-west, on 1,197 days, from the east and south-east, on 996, from the south and south-west, on 957, and from the north and north-east, on 137 ; and at Inverness, as the result of 13,800 observations, made during 21 years preceding 1825, the proportions of the winds in parts of 1,000, were westerly and south-westerly, 478, easterly and north-easterly, 237, northerly and north-westerly, 205, and southerly and south-easterly, 80. These instances, however, indicate

in but a general way the comparative prevalence of the different winds throughout Scotland, and afford no index whatever to it in peculiar localities. On the whole, the climate of Scotland, as compared with that of England, is cold, wet, and cloudy, occasions lateness in harvest to the average amount of at least three weeks, and prevents the remunerative cultivation of hops, and several other valuable vegetables, yet over by far the greater part of the area of the country is to the full as healthy.

SOILS AND VEGETABLE PRODUCE.

The soils of Scotland, as might be expected from the peculiarities of its surface and geology, are often very various in even a single field, and much more in extensive districts. Yet they have, in many instances of both the excellent and the inferior, long and broad expanses of uniformity; and, while in aggregate character poorer than those of England, they vie in their rich tracts with the wealthiest in the three kingdoms, and have prompted and tutored, over their penurious tracts, a keenness of georgic skill, and a sturdiness in the arts of husbandry, which have made Scottish farmers the boast of Europe. The carses of Stirling, Falkirk, and Gowrie, most of the three Lothians; the Merse, Clydesdale, and Strathearn, large portions of Fifeshire, Strathmore, Annandale, Nithsdale, Kyle, Cunningham, and of the low grounds along the Moray and the Cromarty friths, and even some straths and very numerous haughs in the mountainous districts, are highly productive, and can bear comparison with the best tracts of land in England. According to Sir John Sinclair's digest of the productive soils, or of those on lands fully or partially cultivated, the loams amount to 1,869,193 English acres, the rich clays to 987,070, the gravelly soils to 681,862, the cold or inferior clays to 510,265, the improved mossy soils to 411,096, the alluvial haugh or carse land to 320,193, and the sandy soils to 263,771,—in all, as we stated at the outset, 5,043,450 English acres. According to the same authority, the extent of plantations and of natural woods which existed at the date of the digest, on lands not included in this classification, was, of the former, 412,226 English acres, of the latter, 501,469,—jointly, 913,695. Plantations, since that period, have been raised to a vast aggregate amount on the waste lands, and disposed in innumerable tiny forests, clumps, belts, and rows, among the cultivated grounds. Pines are the most common trees; but, in later plantations, the hard woods, in many instances, prevail. Though agriculture has, in most districts, attained bold approaches to perfection, the crops, in the aggregate, are inferior in quality to those of England, and considerably more exposed to risk. Grain of the same weight, raised on Scottish and on English soils, differs in the proportion of the most valued elements; and fruit, according to its species, is richer now in Scotland and now in England, and of the same species widely varies as raised in the two ends of the island. A fair view of Scottish agriculture in its palmiest state, may be obtained by perusal of the agricultural section of our article on Haddingtonshire. The grand characteristics of the aggregate agriculture of the country are, in the words of McCulloch, "1st, The nearly universal prevalence of leases of a reasonable endurance, and containing regulations as to management, which, while they do not improperly shackle the tenant, prevent the land from being exhausted previously to the termination of the lease; 2d, The absence of tithes, and in most cases, also, of poor-rates, and of all oppressive public burdens; 3d, The prevention of assignment and sub-letting by tenants, and the descent of the lease to the heir-at-law; and 4th, The general introduction of thrashing-machines, and the universal use of the two-horse plough and one-horse cart." The dairy commands attention principally in the counties of Ayr, Renfrew, and Dumfries. The annual produce of wheat is estimated in value at £1,650,000, or 660,000 quarters at 50s. per quarter; of barley, at £1,470,000, or 980,000 quarters at 30s. per quarter; of oats, at £7,171,875, or 5,737,000 quarters at 25s. per quarter; of potatoes and turnips, at £2,250,000; of flax, at £128,000; of garden and orchard produce, at £416,000; or the total of agricultural and horticultural produce, exclusive of pulse and the grasses, at £13,355,875. Pasture on arable lands is averaged at £2 per acre, and estimated in aggregate value at £4,979,450; and upland pasture, together with plantations and waste lands, is averaged at 3s. per acre, and estimated in aggregate value at £2,100,000. According to these estimates—which we borrow from Malte Brun and Balbi Abridged, as the most recent and a very intelligent publication—the total annual value of the land produce of Scotland amounts to £20,435,325. The gross rental of land, in 1811, was £4,792,243.

It has been estimated by the late Sir John Sinclair, and his calculations were confirmed by many of the parochial clergy, that the rental of estates in Scotland increased at least from two to three fold, from the year 1660 to the year 1750. This increased rental doubled previous to 1770, and in the next twenty years it again doubled. The rental had thus increased from eight to ten fold in one hundred and thirty years; and again, from 1791 to 1841, it had increased two-and-a-half times on the average of ninety-nine parishes taken indiscriminately to illustrate this increase, and of which a list is subjoined; and as Scotland contains only 919 parishes, it may be taken to have been general. The land-rental of parishes in Scotland, it would thus appear, has increased since the Restoration, in 1660, twenty to thirty fold; or about two thousand per cent.!

ANIMALS.

Scotland and England have so freely interchanged their esteemed or approved breeds of domestic animals, that few varieties exist in either except such as, in order to be discriminated, require the nice distinctions of the natural historian. Scotland's most noted peculiar breeds, are the Shetland pony, the Clydesdale horse, the Ayrshire, Galloway, Buchan, and Argyleshire black cattle, the Cheviot and Shetland sheep, and the colley or shepherd's dog. But even some of these now belong more or less to both divisions of the island. The wild animals and birds, if Wales be included, are also, with few exceptions, the same or similar. Game, owing chiefly to the vastness of the extent of waste lands, is exceedingly abundant.

MANUFACTURES.

A fair estimate of the manufactures of Scotland, may be formed by reference to our articles on Glasgow and Dundee. If a view be desired of nearly the whole, reference needs only to be made further to the articles on Paisley, Kilmarnock, Dunfermline, Stirling, Hawick, Galashiels, Montrose, Hamilton, Musselburgh, Irvine, Kirkcaldy, Aberdeen, East Kilpatrick, and Lasswade. Hand-loom weaving—the department most deeply affecting by far the largest class of the population interested in manufactures—was made the subject of commission inquiry in 1838, and of reports returned to the House of Commons in February, 1839. The inquiry was made in two territorial divisions; one over all Scotland south of the Forth and Clyde, including Kilsyth and Campsie on the further side of the connecting canal; the other, over what the report calls the east of Scotland, but over, in point of fact, very nearly every site of a loom not included in the former division. The following table indicates, as exhibited in the report, the number of separate trades or fabrics in the country south of the Forth and Clyde, the locality of each fabric, the number of looms employed in each, and the average rate of nett wages earned in each department, and distributed into two classes,—the first being the average nett amount earned, by adult skilled artisans, on the finer qualities of the fabric,—the second being the average nett amount earned by the less skilled and younger artisans, on the coarser qualities of the fabric.

More than half of the whole number of weavers are employed on the lowest paid fabrics. The number of weaving families, being to that of the looms in the proportion of 5 to 9, amounts to about 28,366; and as this number indicates all the adult male weavers, 22,694 looms must be worked by women and children. "Coupling these facts," says the reporter, "with the great number of old men who come into the class of heads of families, and are unable to work hard, I am decidedly of opinion that not less than two-thirds of the whole number of weavers belong to the second class of wages in the above table; whilst no less than 30,075, out of the 51,060 looms, are employed on the worst paid work." The report on the country north of the Forth, the Clyde, and the connecting canal, distributes the fabrics generally into woollen, linen, and cotton. The weavers are employed on carpets in factories, and on hard and soft tartans, and tartan shawls, in their own cottages; and "are in a condition similar to that of the other labouring classes in the country." The manufacture of tartans is seated chiefly at Stirling and its vicinity, and at Aberdeen, employs probably 2,500 looms, and may be considered as very prosperous, and likely to improve. The linen manufacture employs about 26,000 looms; and may be distributed into harness work, heavy work, and ordinary work. The harness work, as damask table-cloths, table-covers, and napkins, is carried on almost exclusively in and near Dunfermline; has doubled the number of its looms since 1826; employed in 1838 about 3,000; exports nearly half of its produce to the United States; and yields average weekly wages of about 8s. 6d. The heavy work, as sail-cloth, broad-sheetings, floor-cloth, and some kinds of bagging, is seated principally in Dundee, Arbroath, Aberdeen, Montrose, and Kirkcaldy; employs about 4,000 looms,—all in factories; and yields weekly wages, in not rare cases, of 15s., and of not less than 8s. 6d. average. The ordinary work, as dowlas, common sheetings, and osnaburghs, may be considered as the staple linen-manufacture of Scotland, is seated principally in Forfarshire; employs from 17,000 looms in summer, to 22,000 or 23,000 in winter,—nearly all small detached buildings adjacent to the weavers' cottages; and yields average weekly wages of from 6s. to 7s. 6d. to the first class, and from 4s. to 5s. 6d. to the second. The cotton-manufacture employs about 5,000 looms; and, next to Perth, which is its principal seat, is carried on chiefly at Dunblane, Auchterarder, Balfroun, and Kinross. The weavers, except at Perth, and in a few instances at Kirkcaldy and Aberdeen, are employed wholly by Glasgow manufacturers; and at Kinross, Dunblane, and Auchterarder, earn not more than 4s. of average weekly wages.* From returns made to the House of Commons, by Mr. James Stuart, factory-inspector, a clear tabular view is obtained of the statistics of all the factories of Scotland in 1838.

* Originally, hand-loom weaving was in the British islands, as it continues to be in general on the continent of Europe, a domestic occupation. At first, indeed, the weaver was both capitalist and labourer, as the linen-weaver is still in many parts of the north of Ireland. He and his family there cultivate the flax, heckle it, spin it into yarn, weave it, and sell the web in the linen-market. This almost total absence of the division of labour is, however, confined to the material and the district that we have mentioned. In every other branch of weaving, even in Ireland, and in every branch in Great Britain, with the unimportant exception of a small class of weavers called customer-weavers in the north of England and in Scotland, the material is supplied by the capitalist or manufacturer (generally called the putter out of work) to the weaver, and he is paid on returning a given quantity of finished cloth. In most cases the loom belongs to the weaver, or is hired by him. If he has not a loom, he must work either at a loom belonging to some other weaver, or at one belonging to a manufacturer. In the former case he is called a journeyman, and the weaver at whose loom he works a master weaver; the journeyman has no immediate connexion with the manufacturer, and receives from his own immediate employer, the master weaver, a fixed portion, generally two-thirds, of the price which the former receives from the manufacturer. The weaver who works on the looms belonging to a manufacturer is called a factory-weaver, or shop-weaver, a designation arising from the circumstance that the manufacturers' looms are placed in his manufactory, or as it is usually called, his shop. Neither the factory-weavers, nor the journeymen, form large portions of the weaving population. The bulk of the hand-loom weavers own or hire their own looms, keep them in their own cottages, and perform themselves, assisted by their wives and children, both the weaving and the operations which are subsidiary to it.—*Report of the Commissioners on the condition of the Hand-loom Weavers, dated February 19, 1841.*

FEMALES EMPLOYED.—In cotton-mills, 601 between 9 and 13; 10,052 between 13 and 18; and 13,981 above 18; total, 24,634. In woollen-mills, 119 between 9 and 13; 1,354 between 13 and 18; and 1,055 above 18; total, 2,528. In flax-mills, 142 between 9 and 13; 5,105 between 13 and 18; and 7,912 above 18; total, 13,159. In silk-mills, 74 between 9 and 13; 253 between 13 and 18; and 220 above 18; total, 547. No children under 9 were employed in any of the factories.

The soap-manufacture is of large aggregate, and is carried on at Leith, Prestonpans, Aberdeen, Montrose, Glasgow, and Paisley.—The manufacture of kelp, once producing above £200,000 yearly, has nearly ceased since the reduction of the duty on barilla and salt.—The iron trade—which is great and increasing—belongs principally to Lanarkshire, Fifeshire, Carron, and Muirkirk, and will be well understood by reference to the articles on these localities, and to those on Glasgow, and the Monklands. The distillation of spirits produced, in 1708, 50,844 gallons; in 1791, 1,696,000 gallons; in 1831, 6,021,556 imperial gallons for home consumption, and 149,849 for exportation to England; and in 1838, 6,124,035 imperial gallons for home consumption, 2,215,329 for exportation to England, and 861,069 for exportation to Ireland. The following is a return of the proof gallons of spirits distilled in each collection of excise, and within the limits of the head-office of excise in Scotland, in each year, from 10th October 1839 to 10th October 1841, and showing the total proof gallons for each of these years:—

COLLECTIONS.		Years ended Oct. 10,		COLLECTIONS.		Years ended Oct. 10,

COMMERCE.

Scotland's exports consist principally of the produce of her cotton and linen manufactures; and her imports, of the raw materials for her cotton and linen fabrics, and of articles of colonial and foreign produce, which are demanded by the growing taste and luxuriousness of her population. To enumerate subordinate articles, or those included in this general classification, would be to write a list of goods as long, tasteless, and tiresome, as that of a vender of all wares. Till about the year 1755, when the exports amounted in value to £535,576, and the imports to £465,411, Scotland's commerce was almost as unknowing of foreign lands as her own hardy mountaineers, and as cold and cheerless as their climate and their dress. But from that period, and especially from a decade before the close of last century, it has progressively, though not uniformly, moved on to importance. The following is an account of the official and declared value of the imports into and the exports from the different Scottish ports, from 1824 to the latest period at which the accounts are made up:—

OFFICIAL VALUE OF EXPORTS.					OFFICIAL VALUE OF EXPORTS.				
Years.	Imports into Scotland.	British and Irish Produce and Manufactures.	Foreign and Colonial Merchandise.	Total.	Declared Value of Exports.	Years.	Imports into Scotland.	British and Irish Produce and Manufactures.	Foreign and Colonial Merchandise.
1824	£3,145,958	£5,009,324	£159,896	£5,169,220	£2,670,134	1833	£4,638,652	£6,820,381	£130,721
1825	3,719,366	4,937,746	109,811	5,047,557	2,721,186	1834	4,683,985	7,159,102	117,564
1826	3,086,679	4,283,074	147,270	4,430,344	2,167,459	1835	4,659,151	8,372,598	156,735
1827	3,948,205	5,932,550	126,745	6,059,595	2,745,965	1836	6,053,611	8,258,673	131,572
1828	4,023,642	6,148,444	185,138	6,333,652	2,897,525	1837	5,130,371	7,250,554	134,332
1829	3,688,994	6,528,587	127,530	6,656,117	2,787,935	1838	5,878,612	10,012,559	134,790
1830	3,908,784	6,964,392	125,941	7,110,335	2,843,143	1839	4,933,611	11,216,504	105,376
1831	4,157,017	7,943,612	111,066	8,054,698	3,189,318	1840	6,614,446	12,956,241	127,440
1832	4,451,351	7,120,595	155,615	7,276,210	2,640,751	1841	6,476,670	12,240,523	132,451

The distribution of the commerce, if simply remembrance be had that Greenock and Port-Glasgow are dependent on Glasgow, and Leith dependent on Edinburgh, will be understood from a tabular view of the gross customs, paid during the years 1835, 1840, and 1841, at each of the Scottish ports:—

FISHERIES.

The fisheries of Scotland have long formed a valuable and important branch of industry.—The total annual value of the salmon-fisheries has been estimated at £150,000. The Ayr, Beaulay, Clyde, Conon, Dee, Deveron, Don, Earn, Eden, North and South Esks, Findhorn, Langwell, Moy, Ness, Shin, Spey, Tay, Teith, Tweed, and Ythan rivers, are all celebrated for their salmon-fishings.—The total quantity of herrings cured in Scotland within the year ending 5th April, 1840, was 543,945 barrels; the total quantity found entitled to the official brand, under the act 1st Will. IV, c. 54, was 152,231 barrels; and the total quantity exported was 252,522 barrels; being a decrease of 11,614½ barrels in the quantity cured, of 1,428½ in the quantity branded, but an increase of 12,791½ in the quantity exported, as compared with the preceding year. Of cod and ling, 93,560½ cwts. were cured dried, and 6,053 barrels cured in pickle; the quantity found entitled to the official stamp and brand, under the provisions of the said act, was 21,695½ cwts. dried, and 3,205 barrels pickled, and the total quantity exported was 29,656½ cwts. dried, and 24 barrels pickled; being an increase over the preceding year of 8,281 cwts. in the quantity cured dried, but a decrease of 3,998½ barrels pickled, a decrease in the quantity punched and branded of 2,240½ cwts. and 1,888 barrels, but an increase of 2,954½ cwts. in the quantity exported. In catching and curing these fish, 11,893 boats, manned by 52,037 fishermen and boys, were employed in the shore-curing department of the fishery; the number of curers, coopers, gutters, and labourers employed, was 36,681; and the total number of persons employed was 88,718; being an increase over the preceding year of 536 boats, 1,799 fishermen, and of 3,143 in the total number of persons employed.

The following is an account of the total number of barrels of white herrings which have been cured on board vessels cleared out for the fishery, or cured on shore, in the year ended 5th April, 1840; and also of the number of boats and hands which have been employed in the shore-curing, herring, cod, and ling fisheries.

SHIPPING.

The shipping of Scotland, at a comparatively recent period, was inconsiderable; and even so late as 1656, comprised only 137 vessels, of from 250 to 300 tons each; and aggregately, 5,736 tons. In 1760, the vessels employed in the foreign and coasting trade, and in fisheries, were 999 in number, and 53,913 in tonnage. In 1800, the number was 2,415, carrying 171,728 tons, and employing 14,820 seamen. In 1828, the number

carrying more than 100 tons each was 983, the number carrying less than 100 tons each was 2,160, and the aggregate tonnage of both classes was 300,836. Of this gross amount of tonnage, Aberdeen claimed 46,587 tons; Greenock, 37,786; Glasgow, 36,220; Leith, 26,107; Grangemouth, 24,635; Dundee, 24,227; Montrose, 15,778; Irvine, 14,230; Dumfries, 12,283; Kirkcaldy, 11,540; Borrowstounness, 8,740; Port-Glasgow, 7,155; Banff, 6,431; Inverness, 5,092; Anstruther, 4,130; Perth, 4,116; Kirkwall, 3,247; Stornoway, 3,133; Campbeltown, 3,088; Lerwick, 2,622; Thurso, 2,241; and Stranraer, 1,448. A considerable increase has been made in the aggregate amount, and a very material change has occurred in the distribution since 1828; and both will be best seen in a tabular view, of the number of ships belonging to Scottish ports on the 31st of December, 1835, and of the amount of tonnage, and number of hands.

Borrowstounness,.....	121	8,452	488	Total,.....	3,287	335,820	23,924

On the 31st December, 1840, the number of vessels belonging to Scotland was 3,479, of an aggregate tonnage of 429,204 tons, and manned by 28,428 men. The number of vessels built in Scotland, in the year ending 5th January, 1841, was 263, of an aggregate tonnage of 42,322 tons.—Steam navigation, which was introduced, or for the first time successfully experimented, in 1812, and which, for many years, was comparatively tiny and timid, has, for about 14 years past, received rapid increase, undergone great improvements, and singularly enhanced the country's commerce. Steam-vessels of all descriptions, from the superb ship of 400 tons or upwards, to the sturdy tug-boat or the toy-like shallop, almost everywhere smoke along the coast, or athwart the friths, or across the ferries. Their number, in 1838,—their tonnage, exclusive of engine-room,—and their distribution among the several ports, will be best stated in a table.

BANKS.

Five of the Scottish banks—the Bank of Scotland, the Royal bank of Scotland, the British Linen Company, the Commercial bank of Scotland, and the National bank of Scotland, the first of which was established by Act of Parliament, and the other four incorporated by Royal charter—do not require, in pursuance of the act 7th Geo. IV., cap. 67, to lodge lists of partners. All the others involve the responsibility of each partner to the full extent of his possessions; and most are joint-stock establishments, with large constituencies. Their notes, which are permitted to be for twenty shillings, but not less, leave scope for an ample silver currency, but almost entirely exclude from the country coins of gold. Each bank is obliged to have exchequer bills in its possession equal to the average amount of its issues. A system of mutual exchange and security, established and worked by the banks themselves, acts as a check upon over-issues; the exchange is made in the country weekly, and in Edinburgh twice a-week; and whatever surplus remains of one bank's notes over those of another with which the exchange is made, must be bought up with specie, exchequer bills, or an order on the Bank of England. The following table exhibits the names, numbers, dates and statistics, for the years 1837, 1838, and 1839, of all the public banks.

INTERNAL COMMUNICATION.

The roads of Scotland, till about the middle of last century, were so few and bad, that three-fourths of the whole country were inaccessible to a wheeled vehicle. The Highlands, in particular, could be traversed only by their own chamois-moving mountaineers, and, even on their least upland grounds, were sublimely uncognizant of both the motion and the mechanism of a wheel; and at enormous cost and labour—as will be found detailed in our article on the HIGHLANDS—they were literally revolutionized in political, social, and agricultural character, simply by their being pierced and traversed with roads, and brought into acquaintance with the unpoetic cart. Both turnpike and subordinate roads are now ramified through most districts to an amount so nearly co-extensive with the wants of the country, that the absence of them in any locality is, in most instances, evidence of its being a tract of moorish or mountain waste; and as Sir H. Parnell remarks, in his Treatise on Roads, “in consequence of the excellent materials which abound in all parts of Scotland, and of the greater skill and science of Scottish trustees and surveyors, the turnpike roads in Scotland are superior to those in England.” Owing to almost constant, and generally bold, inequality of surface, Scotland offers few facilities for the construction of canals; yet it has seven of these works, two of which connect the eastern and the western seas, while the features of the others combine interest with utility. The Caledonian canal extends from the vicinity of Inverness on the north-east, to Corpach, near Fort-William, on the south-west, a distance of 60½ miles, 37½ of which are through Lochs Ness, Oich, and Lochy; and communicates between the Beaulieu frith and the head of Loch-Eil. The Forth and Clyde canal extends from the frith of Forth, or mouth of the Carron, at Grangemouth, to Bowling-bay on the Clyde, a distance of 35 miles; and sends off a small branch to Glasgow, and a smaller one to the mouth of the Cart, to communicate by that river with Paisley. The Edinburgh and Glasgow union canal extends from Port-Hopetoun at Edinburgh, to the Forth and Clyde canal at Port-Downie, near Falkirk, a distance of 31½ miles. The Monkland canal extends from the basin at the north-east extremity of Glasgow, to Woodhall, about 2 miles south-east of Airdrie, a distance of 12 miles; communicates at its west end by a cut of a mile in length with the basin of the Glasgow branch of the Forth and Clyde

canal : and, in terms of an act obtained in 1837, may send off a branch to the north side of Duke-street, Glasgow. The Crinan canal lies across the northern extremity of the long peninsula of Knapdale and Kintyre, is about 9 miles in length, and connects Loch-Fyne with the Western ocean. The Aberdeenshire canal extends from the harbour of Aberdeen, up the valley of the Don, to Port-Elphinstone, near Inverury, a distance of 18½ miles. The Glasgow, Paisley, and Ardrossan canal, was projected to extend from Port-Eglington, on the south side of Glasgow, to the harbour of Ardrossan, but has been executed only to Johnstone, a distance of 11 miles. A railway to continue the communication of this incompleted work, was projected to extend from Johnstone to Ardrossan, a distance of 22½ miles, but has been constructed only to Kilwinning, about one-third of the distance. The Kilmarnock and Troon railway, extending 9½ miles between the places mentioned in its designation, was the earliest public railway, or rather tram-road, in Scotland. The Monkland and Kirkintilloch railway connects the rich coal districts of Old and New Monkland with the Forth and Clyde canal, in the vicinity of Kirkintilloch, 10 miles from Glasgow. The Ballochney railway extends from the termination of the Monkland and Kirkintilloch railway in the parish of New Monkland, 4 miles eastward : and there forks into two lines, the one of which traverses the ironstone and coal-field lying to the south, and the other that lying to the north, of Airdrie-hill. The Wishaw and Coltness railway extends about 4 miles southward, from the termination of the former line, in the parish of Old Monkland, and is projected to be executed further southward, to the estates of Wishaw, Coltness, and Allanton. The Glasgow and Garnkirk railway extends 8½ miles westward from the vicinity of Gartsherrie bridge, where it joins the western termination of the Ballochney railway, to the junction of the Forth and Clyde and the Monkland canals at Glasgow ; and was the earliest railway in Scotland constructed with double lines, and for the transit of locomotive engines. The Slamannan railway extends from the east end of the Ballochney railway to the Union canal, not far from Linlithgow, a distance of about 12½ miles ; and sends off a branch to Bathgate. The Pollock and Govan railway connects the mineral fields on the south-east of Glasgow with that city ; and terminates at the harbour, on the level of the quay. The Glasgow, Paisley, Kilmarnock, and Ayr railway, extends from the harbour of Glasgow to that of Ayr, a distance of 40 miles ; joins the Ardrossan railway at Kilwinning, and the Kilmarnock and Troon railway at Troon ; and will send off from the vicinity of Dalry a branch about 11 miles long, to Kilmarnock. The Glasgow and Greenock railway is common to the former railway to Paisley, and thence extends to the centre of Greenock, near the harbour, a distance from Glasgow of 22½ miles. The Paisley and Renfrew railway extends from the north side of Paisley to the Clyde at Renfrew, a distance of 3½ miles. The Edinburgh and Glasgow railway connects these cities by way of Linlithgow and Falkirk, is 46 miles in length, and pursues nearly the same course as the Union and the Forth and Clyde canals. The Edinburgh and Dalkeith railway extends from the south side of Edinburgh to the South-Esk at Dalhousie-Mains, a distance of 8½ miles ; sends off branches to Leith, Fisherrow, and Dalkeith, which increase its aggregate length to 15 miles ; and from its south end is continued by private lines to the collieries of Newbattle and Arniston. The Edinburgh and Newhaven extends about 2½ miles from the centre of the metropolis to Trinity-pier at Newhaven. The Dundee and Newtyle railway extends 10½ miles from the north side of Dundee to Newtyle, and sends off branches to Cupar-Angus and Glammis. The Dundee and Arbroath extends from the harbour of Dundee to Arbroath, a distance of 16½ miles. The Arbroath and Forfar railway connects these towns, extending 15½ miles from a point of junction with the Dundee and Arbroath railway. Most of the works thus traced in outline and mutual relation will be found fully and separately described in the alphabetical arrangement.

PUBLIC REVENUE.

The revenue of Scotland, as to both its absolute amount and its relative proportion to that of England, has to the full kept pace with the increasing prosperity of the country. It amounted, at the period of the Union, to £110,694 ; in 1788, to £1,099,148 ; and in 1813, to £4,204,097. Its sources, as well as its gross and nett amount, in the years ending on the 5th of January 1837, 1838, and 1839, will be seen from the following table.

	Year ending Jan. 5, 1837.		Year ending Jan. 5, 1838.		Year ending Jan. 5, 1839.

ADMINISTRATIVE DIVISIONS.

Scotland was anciently divided and subdivided into so many jurisdictions, and underwent such frequent changes in their limits, that any successful attempt to enumerate them would be insufferably irksome, and almost wholly uninstrusive. The names of some of the larger jurisdictions continue to be used, and serve aptly to designate subdivisions of extensive counties; and other ancient names are, in several instances, popularly applied to whole counties in preference to the modern and legal designations. The counties—or, more properly, the sheriffdoms or shires—have, for upwards of half-a-century, been 33 in number. But they are excessively, and even ridiculously, various in extent; and, in many instances, are as grotesquely outlined, and even hewn into detached pieces, as if sheer merry-andrewism had presided over their distribution. An enormous addition, too, is made to the puzzle of their intertracery by *quoad civilia* parishes—which in all parts of Scotland, except in one shire, constitute the only administrative subdivision—being, in a large number of instances, made to overleap the county boundary-line, and to lie, either compactly or detachedly, in two, or even three shires. Lanarkshire is divided into three wards,—upper, middle, and lower; and Kirkcudbrightshire, while just as legally and practically a shire as any of the other of the 32, is nominally a stewardry,—and wins diminishment or aggrandizement from the name, exactly as one thinks of the feudal steward of a limited jurisdiction, or the princely, the royal Stewart of broad Scotland. Two of the counties—Bute and Orkney—consist entirely of islands; the former of those in the frith of Clyde, and the latter of the Orkney and the Shetland archipelagoes. Three—Argyle, Inverness, and Ross—consist chiefly of territory on the mainland, and partly of the islands of the Hebrides. Two counties—Clackmannan and Kinross—comprehend each less than 84 square miles; seven—Linlithgow, Bute, Nairn, Renfrew, Dumbarton, Cromarty, and Selkirk,—comprehend less than 266; four—Inverness, Argyle, Perth, and Ross,—comprehend more than 2,590; and four—Aberdeen, Sutherland, Dumfries, and Ayr,—comprehend more

than 1,040. The following table gives the names of the shires in the order of their size, beginning with the largest, and states the ancient names, whether of subdivisinal or of co-extensive application.

Shires.	Ancient Names.
Inverness,	Lochaber, Badenoch, Moidart, Arisaig, Morer, Knoydart, Glenelg, Strathglass, and parts of Moray, Strathspey, and Ross, besides Skye, and other Hebridean islands.
Argyle,	Cowal, Kintyre, Knapdale, Lorn, including Appin, Kingarloch, Ardnamurchan, Suinart, Lochiel, Glenorchy, Morvern, and Ardgower, besides Mull, Isla, Jura, and other Hebridean islands.
Perth,	Perth, Stormont, Strathearn, Gowrie, Athole, Breadalbane, Monteith, Glenshiel, Rannoch, Balquidder.
Ross,	East-Ross, Ard-Ross, Kintail, Lochalsh, Kishorn, Toridon, Gairloch, Lochbroom, Strathcarron, and Black Isle, besides Lewis, and other Hebridean islands.
Aberdeen,	Mar, Buchan, Garioch, Formartin, Strathbogie.
Sutherland,	Sutherland, Strathnaver, Assynt, Edderachylis, and Lord Reay's country.
Dumfries,	Nithsdale, Annandale, Eskdale, and Ewisdale.
Ayr,	Cunningham, Kyle, and Carrick.
Lanark,	Clydesdale.
Forfar,	Angus, including Glenisla, Glenesk, and Glenprosen.
Orkney,	Orkney Islands and Shetland Islands.
Kirkcudbright,	East-Galloway.
Caithness,	Caithness.
Roxburgh,	Teviotdale and Liddesdale.
Banff,	Strathdeveron, Boyne, Enzie, Balveny, and Strathaven.
Stirling,	Stirling, and part of Lennox.
Fife,	Fife and Forthryfe.
Berwick,	Merse, Lammermoor, and Lauderdale.
Elgin,	Central part of Moray, and part of Strathspey.
Wigton,	West Galloway.
Kincardine,	Mearns.
Edinburgh,	Mid-Lothian.
Peebles,	Tweeddale.
Haddington,	East-Lothian.
Selkirk,	Ettrick Forest.
Cromarty,	Ross.
Dumbarton,	Lennox.
Renfrew,	Strathgryfe, and part of Lennox.
Nairn,	Moray, &c.
Bute,	Bute, Arran, &c.
Linlithgow,	West-Lothian.
Kinross,	Part of Forthryfe, } Fife.
Clackmannan,	Strathdeveron, }

CONSTITUTION.

Till the reign of James I., all persons who held any portion of ground, however small, by military service of the Crown, had seats in the Scottish parliament. The small barons were afterwards excused from attendance, and represented by "two or more wise men, according to the extent of their county." Parliament appointed the time of its own meetings and adjournments; nominated committees to wield its powers during recesses; possessed not only a legislative but an executive character; exercised a commanding power in all matters of government; appropriated the public money, and appointed the treasurers of the exchequer; levied armies, and nominated commanders; sent ambassadors to foreign states, and appointed the judges and courts of judicature; and even assumed power to alienate the regal demesne, to restrain grants from the Crown, and to issue pardons to criminals. The king, even so late as in the person of James IV., was only the first servant of his people, and had his duty prescribed by parliament; he had no veto in the parliament's proceedings; nor could he declare war, make peace, or conduct any important business of either diplomacy or government, without that assembly's concurrence. The constitution of the country partook much more the character of an aristocracy than that of a limited monarchy. The nobility—who were dukes, marquises, earls, viscounts, and barons—were hereditary members of parliament; but they formed one house with the knights and burgesses, and occupied common ground with them in all deliberations and decisive votes. The nobles and other members of parliament were checked in their turn by the common barons, just as they checked the king; and even the common barons, or the landholders, were, to a large

extent, checked in turn by their vassals. A jury of barons, who were not members of parliament, might sit on a lord's case, of even the gravest character, and might decide it without being unanimous in their verdict; and the vassals of a baron so completely involved or concentrated all his available power in their own fidelity and attachment, as to oblige him, in many respects, to act more in the character of the father of his clan than in that of a military despot. The king, too,—while denied nearly all strictly royal prerogatives by the constitution of the country,—was indemnified for most by the accidents of its feudal institutions. He acquired considerable interest among the burgesses and lower ranks in consequence of the abuse of power by the lords and great landowners; and, when he had sufficient address to retain the affections of the people, he was generally able to humble the most powerful and dominant confederacy of the aristocrats; though, when he did not acquire popularity, he might dare to disregard the parliament only at the hazard of his crown or his life. The kings,—aided by the clergy, whose revenues were vast, and who were strongly jealous of the power of the nobility,—eventually succeeded in greatly diminishing, and, at times, entirely neutralizing, the aristocratical power of parliament. A select body of members was established, from among the clergy, the nobility, the knights, and the burgesses, and called “the Lords of the Articles;” it was produced by the bishops choosing 8 peers, and the peers 8 bishops, by the 16 who were elected choosing 8 barons or knights of the shires, and 8 commissioners of royal burghs, and by 8 great officers of state being added to the whole, with the Lord-chancellor as president; its business was to prepare all questions, bills, and other matters, to be brought before parliament; and the clerical part of it being in strict alliance with the king, while the civilian part was not a little influenced by his great powers of patronage, it effectually prevented the introduction to parliament of any affair which was unsuited to his views, and gave him very stringently all the powers of a real veto. This institution seems to have been introduced by stealth, and never brought to a regular plan; and as to its date and early history, it baffles the research, or at least defies the unanimity, of the best informed law writers. Yet “the Lords of the Articles” were far from being wholly subservient to the Crown; for they not only resisted the efforts of Charles I. to make them mere tools of his despotism, but went freely down the current which swept that infatuated monarch to his melancholy fate; and, at the Revolution, they waived all ceremony about getting from the fanatical idiot, James VII., a formal deed of abdication, and promptly united in a summary declaration that he had forfeited his crown. Before the Union there were four great officers of state, the Lord High-chancellor, the High-treasurer, the Privy-seal, and the Secretary,—and four lesser officers, the Lord Clerk-register, the Lord-advocate, the Treasurer-depute, and the Justice-clerk,—all of whom sat, *ex-officio*, in parliament. The officers of state and the law courts which now exist, will be found noticed in our article on EDINBURGH. The privy council of Scotland, previous to the Revolution, assumed inquisitorial powers, even that of torture; but it is now swamped in the privy council of Great Britain. The Scottish nobility return from among their own number 16 peers to represent them in the upper house of the imperial parliament. Between the Union and the date of the Reform bill, the freeholders of the counties, who amounted even at the last to only 3,211 in number, returned to the House of Commons 30 members; the city of Edinburgh returned 1; and the other royal burghs, 65 in number, and classified into districts. The Parliamentary Reform act in 1832, added, at the first impulse, 29,904 to the aggregate constituency of the counties; but it allowed them only the same number of representatives as before,—erecting Kinross, Clackmannan, and some adjoining portions of Perth and Stirling, into one electoral district; conjoining Cromarty with Ross and Nairn with Elgin, and assigning one member to each of the other counties. The same act enfranchised various towns, or erected them into parliamentary burghs, increased the burgh constituency from a pitiful number to upwards of 31,000, and raised the aggregate number of representatives from 14 to 23. The total constituencies of the counties and the burghs in each year, from the passing of the Reform act till 1839, are stated in the following table.

Year.	Counties.	Burghs.	Total.	Year.	Counties.	Burghs.	Total.
1832,	33,115	31,332	64,447	1836,	43,350	40,905	84,255
1833,	34,976	32,750	67,726	1837,	45,083	37,708	82,791
1834,	36,823	36,162	72,985	1838,	46,480	36,381	82,861
1835,	41,658	39,667	81,325	1839,	47,209	35,312	82,521

The constituency of each county and burgh is stated in the article upon it in the alphabetical arrangement. Of the burghs, Edinburgh and Glasgow each return two members; and Aberdeen, Dundee, Paisley, Greenock, and Perth, each return one; while the remainder are distributed, in the following order, into 14 districts, each of which returns one,—Ayr, Campbeltown, Inverary, Irvine, and Oban,—Dumfries, Annan, Kirkcudbright, Lochmaben, and Sanquhar,—Elgin, Banff, Cullen, Inverury, Kintore, and Peterhead,—Falkirk, Hamilton, Airdrie, Lanark, and Linlithgow,—Haddington, North Berwick, Dunbar, Jedburgh, and Lauder,—Inverness, Forres, Fortrose, and Nairn,—Kilmarnock, Port-Glasgow, Dumbarton, Renfrew, and Rutherglen,—Kirkcaldy, Burntisland, Dysart, and Kinghorn,—Leith, Musselburgh, and Portobello,—St. Andrews, East-Anstruther, West-Anstruther, Crail, Cupar, Kilrenny, and Pittenweem,—Montrose, Arbroath, Brechin, Forfar, and Bervie,—Stirling, Culross, Dunfermline, Inverkeithing, and Queensferry,—Wick, Cromarty, Dingwall, Dornoch, Tain, and Kirkwall,—and Wigton, New Galloway, Stranraer, and Whithorn. Some of the principal towns, or towns more populous than many which rank as burghs, share in the franchise only in common with the landward districts, and the villages of the counties in which they lie. The chief are Dalkeith, Maybole, Hawick, Girvan, Alloa, Kelso, Crieff, Dunse, Selkirk, Peebles, Bathgate, Tranent, Dunblane, Rothsay, Cupar-Angus, Saltcoats, Dalry, and Comrie.

CRIME.

The number of public offences in Scotland was, in the year 1834, 2,711; in 1836, 2,922; in 1837, 3,126; in 1838, 3,418; in 1839, 3,409; and in 1840, 3,872. Of those in the year 1838, 787 were offences against the person, 724 by males, and 63 by females; 577 were violent offences against property, 432 by males, and 145 by females; 1,588 were against property, but without violence, 1,078 by males, and 510 by females; 57 were malicious offences against property, 51 by males, and 6 by females; 112 were forgeries and offences against currency, 81 by males, and 31 by females; and 297 were miscellaneous offences, 243 by males, and 54 by females,—aggregately, 2,609 by males, and 809 by females. Fifty-eight of the male offenders were aged 12 years, and under; 368 aged 16 or above 12; 700 aged 21 or above 16; 738 aged 30 or above 21; 407 aged 40 or above 30; 144 aged 50 or above 40; 59 aged 60 or above 50; 8 aged above 60; and 117 whose ages could not be ascertained. Of the 809 female offenders, there were 16 aged 12 years and under; 66 aged 16 and above 12; 199 aged 21 and above 16; 268 aged 30 and above 21; 140 aged 40 and above 30; 67 aged 50 and above 40; 29 aged 60 and above 50; 8 aged above 60; and 16 whose ages could not be ascertained. Of the 2,609 male offenders, 353 could neither read nor write; 1,529 could read, or read and write imperfectly; 569 could read and write well; 91 had received a superior education; and there were 67 whose education could not be ascertained. Of the 809 female offenders, 198 could neither read nor write; 541 could read, or read and write imperfectly; 61 could read and write well; 2 had received a superior education; and there were 7 whose education could not be ascertained. Of the 3,418 offenders, 356 were discharged by the Lord-advocate and his deputies, 177 were discharged from other causes, and there were tried 2,885, namely, by the High-court of Justiciary 309; by the Circuit-court of Justiciary 560; by Sheriffs with a jury 733; by Sheriffs without a jury 646; by burgh-magistrates 558; by justices or other court 79. Of the 2,885 persons tried, 56 were outlawed, 6 were found insane, 58 were found not guilty, 162 not proven, and there were convicted 2,623, including 578 who were convicted under the aggravation of previous convictions, and 54 who were convicted of other offences at the same trial. Of the 2,623 persons convicted, 3 received sentence of death, of whom 1 was executed, and the punishment of 2 was commuted into transportation for life; 6 were sentenced to transportation for life, 83 for 14 years, 379 for 7 years, and 15 for other periods; 75 were sentenced to imprisonment (with, in some cases, whipping, fine, &c.,) for 2 years or above 1 year, 245 for 1 year or above 6 months, 1,607 for 6 months or under; 195 were punished by fine; 3 were discharged on sureties; 12 received no sentence.—Of the 3,872 persons committed for trial in 1840, 2,945 were convicted or outlawed, and of these 4 received sentence of death for murder; 520 were convicted of assaults; 296 of theft by housebreaking; and 1,392 of acts of simple theft. The

following table shows the distribution and sex of the 3,872 persons committed for trial in 1840.

The average increase for all Scotland being 11·1 per cent., it appears that the increase is above the average in 10 counties, and below it in 22, including those in which there is a positive diminution.

The increase in the population of England and Wales has been greater than in that of Scotland, at every decennial period since the first census was taken; but the difference is greater in the last ten years than in any preceding period. The number of houses building affords one of the best criterions of a country's progress in wealth and

industry. At the same time it must be kept in mind, that we get merely the number building in one particular year out of the ten, and not the average number building yearly. In the first census this element was wanting, in the others it stands thus :—

RELIGION.

The National Established church of Scotland is strictly Presbyterian. Its parochial divisions, sanctioned by the civil authority, embracing the whole of Scotland, and furnished by law with churches and temporalities, are 919. But included in these, which bear the distinctive name of *quoad civilia* parishes, there are territories annexed ecclesiastically, or by authority of the General Assembly and of presbyteries, to 40 Government churches, an account of which is given in our article on the HIGHLANDS, and to chapels built by voluntary subscription, the number of which amounted, in 1839, to 180; and these territories, except in the case of a very few of the chapelries, are called *quoad sacra* parishes, and—though destitute both of civil sanction and of temporalities—are under the same ecclesiastical government, and hold the same relation to the church courts, as the ecclesiastico-civil divisions. Each parish, whether *quoad civilia* or *quoad sacra*, is governed by a kirk-session, consisting of the minister, and one or more lay elders. Several parishes send each its minister and a ruling elder to form a presbytery, and are, on a common footing, under its authority. Several presbyteries contribute or amass all their members to form a synod, and are individually subject to its review or revision of their proceedings. All the presbyteries, in concert with the royal burghs, the four universities, and the Crown, elect representatives, who jointly constitute the General Assembly. This is the supreme court; and will be found noticed in our article on EDINBURGH. The synods, 16 in number, are exceedingly dissimilar in the extent of their territory, and the amount of their population; and the presbyteries, 82 in number, have also a very various extent, and are distributed among the synods in groups of from 2 to 8.—The synod of Lothian and Tweeddale, the first on the list, comprehends all the counties of Linlithgow, Haddington, and Peebles, all the county of Edinburgh, except one parish, and small parts of the counties of Stirling and Lanark; it contained, in 1831, a population of 313,733; and, in 1839, it had 108 *quoad civilia* parishes, 27 chapelries, and 143 ministers. Its presbyteries are Edinburgh, comprehending the metropolis and its vicinity, with 26 *quoad civilia*, and 17 *quoad sacra* parishes, and a population, in 1831, of 180,392; Linlithgow, comprehending Linlithgowshire, and a small part of Stirlingshire, with 19 *quoad civilia*, and 2 *quoad sacra* parishes, and a population of 45,452; Biggar, comprising parts of Lanarkshire and Peeblesshire, with 11 *quoad civilia* parishes, and a population of 6,862; Peebles, comprising most of Peeblesshire, with 12 *quoad civilia* parishes, and a population of 9,373; Dalkeith, chiefly in Edinburghshire, and partly in Haddingtonshire, with 16 *quoad civilia*, and 2 *quoad sacra* parishes, and a population of 35,133; Haddington, comprising the major part of Haddingtonshire, with 15 *quoad civilia*, and 2 *quoad sacra* parishes, and a population of 24,049; and Dunbar, comprising the south-east of Haddingtonshire, and a parish in Berwickshire, and distributed into 9 *quoad civilia* parishes, with a population of 12,472.—The synod of Merse and Teviotdale comprehends nearly all Berwickshire, and most of Roxburghshire; contained, in 1831, a population of 82,366; and, in 1839, had 66 parishes, 5 chapelries, and 71 ministers. Its presbyteries are Dunse, in the Merse and Lammermoor, with 10 *quoad civilia* parishes, and a population of 9,391; Chirnside, in the Merse, with 12 parishes *quoad civilia*, and 1 *quoad sacra*, and a population of 14,975; Kelso, in the Merse, and the east of Roxburghshire, with 10 parishes *quoad civilia*, and 1 *quoad sacra*, and a population of 12,264; Jedburgh, in Teviotdale, with 14 *quoad civilia* parishes, 2 subordinate chapelries, and a population of 20,978; Lauder, in Lauderdale, Lammermoor, and the southern corner of Edinburghshire, with 9 *quoad civilia* parishes, and a population of 9,964; and Selkirk, in Selkirkshire, and the northern part of Roxburghshire, with 11 *quoad civilia* parishes, and a population of 14,788.—The synod of Dumfries comprehends

all Dumfries-shire, Liddesdale, and the eastern part of Kirkcudbrightshire; contained, in 1831, a population of 91,287; and, in 1839, had 55 parishes, 4 chapelries, and 59 ministers. Its presbyteries are Lochmaben, in central and northern Annandale, with 13 *quoad civilia* parishes, and a population of 16,016; Langholm, in Eskdale and Liddesdale, with 7 *quoad civilia* parishes, and a population of 10,173; Annan, in southern Annandale, with 8 *quoad civilia*, and 2 *quoad sacra* parishes, and a population of 15,672; Dumfries, in southern Nithsdale and eastern Kirkcudbrightshire, with 18 parishes *quoad civilia*, and 2 *quoad sacra*, and a population of 34,862; and Penpont, in central and northern Nithsdale, with 9 parishes, and a population of 14,564.—The synod of Galloway comprehends all Wigtonshire, all the central and the western divisions of Kirkcudbrightshire, and southern corner of Ayrshire; contained, in 1831, a population of 65,276; and, in 1839, had 37 parishes, all *quoad civilia*, and 37 ministers. Its presbyteries are Stranraer, in the western half of Wigtonshire, and the southern corner of Ayrshire, with 11 parishes, and a population of 24,164; Wigton, in the eastern half of Wigtonshire, and a small part of Kirkcudbrightshire, with 10 parishes, and a population of 19,446; and Kirkcudbright, all in Kirkcudbrightshire, with 16 parishes, and a population of 21,666.—The synod of Glasgow and Ayr comprehends all the counties of Renfrew and Dumbarton, nearly all those of Lanark and Ayr, and a part of that of Stirling; contained, in 1831, a population of 635,011; and, in 1839, had 130 parishes, 72 chapelries, and 205 ministers. Its presbyteries are Ayr, in Kyle and most part of Carrick, with 28 *quoad civilia*, and 3 *quoad sacra* parishes, and a population of 77,884; Irvine, in Cunningham, with 16 *quoad civilia*, and 4 *quoad sacra* parishes, and a population of 56,226; Paisley in eastern Renfrewshire, with 12 *quoad civilia*, and 6 *quoad sacra* parishes, and a population of 90,721; Greenock, in western Renfrewshire, and a small part of Cunningham, and a population of 41,179; Hamilton, in central Lanarkshire, with 15 *quoad civilia*, and 8 *quoad sacra* parishes, and a population of 64,745; Lanark, in northern Lanarkshire, with 11 *quoad civilia* parishes, and a population of 29,595; Dumbarton, in the main body of Dumbartonshire, and part of Stirlingshire, with 17 parishes *quoad civilia*, and 1 *quoad sacra*, and a population of 34,287; and Glasgow, in southern Lanarkshire, the detached part of Dumbartonshire, and small parts of Stirlingshire and Renfrewshire, with 21 *quoad civilia*, and 31 *quoad sacra* parishes, and a population of 240,374.—The synod of Argyre comprehends Buteshire, and continental and insular Argyleshire; contained, in 1831, a population of 109,348; and, in 1839, had 39 parishes, 12 parliament churches, 4 chapelries, and 57 ministers. Its presbyteries are Inverary, in continental Argyleshire, with 8 *quoad civilia* parishes, and a population of 13,335; Dunoon, the eastern part of Argyleshire, and the northern isles of Buteshire, with 8 *quoad civilia*, and 2 *quoad sacra* parishes, and a population of 13,712; Kintyre, in Arran, Kintyre and Gigha, with 9 *quoad civilia* parishes, and a population of 26,959; Isla and Jura, in the southern Hebrides, with 4 *quoad civilia* parishes, and 3 parliamentary churches, and a population of 17,197; Lorn, partly in the Hebrides, but chiefly in the western part of continental Argyleshire, with 7 *quoad civilia* parishes, 2 parliamentary churches, and 1 chapelry, and a population of 15,348; and Mull, chiefly in the Mull group of the Hebrides and in Morvern, with 6 parishes and 7 parliamentary churches, and a population of 22,797.—The synod of Perth and Stirling comprehends nearly all Perthshire and Clackmannanshire, parts of Stirlingshire and Kinross-shire; contained, in 1831, a population of 178,657; and, in 1839, had 80 parishes, 3 parliamentary churches, 19 chapelries, and 107 ministers. Its presbyteries are Dunkeld, in the north-east part of Perthshire, with 12 parishes and 1 chapelry, and a population of 22,130; Weem, in the north-east part of Perthshire, with 6 parishes, 3 parliamentary churches, 1 chapelry, and a population of 17,132; Perth, in the central part of Perthshire, with 24 *quoad civilia*, and 3 *quoad sacra* parishes, and a population of 45,237; Auchterarder, in the valley and vicinity of Strathearn, and in the western part of Kinross-shire, with 15 *quoad civilia*, and 3 *quoad sacra* parishes, and a population of 25,339; Stirling, in Clackmannanshire, and part of Stirlingshire, with 13 *quoad civilia*, and 2 *quoad sacra* parishes, and a population of 44,603; and Dunblane, in the junction district of the counties of Perth, Stirling, and Clackmannan, with 12 *quoad civilia*, and 3 *quoad sacra* parishes, and a population of 24,213.—The synod of Fife comprehends all Fifeshire, the greater part of Kinross-shire, and a small part of Perthshire; contained, in 1831, a population of 138,124; and, in 1839, had 67 *quoad civilia*, and 10 *quoad sacra* parishes, and 81 ministers. Its presbyteries are Dunfermline, in the south-west of Fifeshire, and in parts of

Perthshire and Kinross-shire, with 12 parishes *quoad civilia*, and 1 *quoad sacra*, and a population of 36,097; Kirkealdy, in the south-east of Fifeshire, and part of Kinross-shire, with 15 *quoad civilia*, and 4 *quoad sacra* parishes, and a population of 43,314; Cupar, in the north-west of Fifeshire, with 20 *quoad civilia* parishes, and a population of 29,832; and St. Andrews, in the north-east of Fifeshire, with 20 parishes *quoad civilia*, and 1 *quoad sacra*, and a population of 28,881.—The synod of Angus and Mearns comprehends all Forfarshire, the greater part of Kincardineshire, and a small part of Perthshire; contained, in 1831, a population of 164,017; and, in 1839, had 80 *quoad civilia*, and 17 *quoad sacra* parishes, and 99 ministers. Its presbyteries are Meigle, in the west of Forfarshire, and part of Perthshire, with 13 parishes, and a population of 16,345; Forfar, in the central district of Forfarshire, with 11 *quoad civilia*, and 2 *quoad sacra* parishes, and a population of 24,225; Dundee, in the southern district of Forfarshire, and a small part of Perthshire, with 18 *quoad civilia*, and 6 *quoad sacra* parishes, and a population of 60,510; Brechin, in the north of Forfarshire, with 14 *quoad civilia*, and 2 *quoad sacra* parishes, and a population of 27,057; Arbroath, in the east of Forfarshire, with 11 *quoad civilia*, and 5 *quoad sacra* parishes, and a population of 23,270; and Fordoun, in Kincardineshire, with 13 *quoad civilia* parishes, and a population of 22,601.—The synod of Aberdeen comprehends nearly all Aberdeenshire, most part of Banffshire, and a considerable part of Kincardineshire; contained, in 1831, a population of 206,226; and, in 1839, had 101 *quoad civilia*, and 17 *quoad sacra* parishes, and 119 ministers. Its presbyteries are Aberdeen, in the south-east of Aberdeenshire, and part of Kincardineshire, with 20 *quoad civilia*, and 8 *quoad sacra* parishes, and a population of 75,524; Kincardine-O'Neil, in the south-west of Aberdeenshire, and part of Kincardineshire, with 14 *quoad civilia* parishes, and a population of 18,426; Alford, in the west of Aberdeenshire, and part of Banffshire, with 13 parishes, and a population of 11,471; Garioch, in the central district of Aberdeenshire, with 15 parishes, and a population of 15,787; Ellon, in the east of Aberdeenshire, with 8 parishes, and a population of 12,831; Deer, in the north-east of Aberdeenshire, with 14 *quoad civilia*, and 3 *quoad sacra* parishes, and a population of 32,276; Turriff, in the north-west of Aberdeenshire, and the north-east of Banffshire, with 11 parishes, and a population of 21,775; and Fordyce, in the north of Banffshire, with 7 *quoad civilia*, and 3 *quoad sacra* parishes, and a population of 18,136.—The synod of Moray comprehends all Elginshire and Nairnshire, considerable parts of Inverness-shire and Banffshire, and a small part of Aberdeenshire; contained, in 1831, a population of 105,610; and, in 1839, had 51 *quoad civilia* parishes, 2 parliamentary churches, 3 chapelries, and 59 ministers. Its presbyteries are Strathbogie, in the counties of Elgin, Banff, and Aberdeen, with 12 parishes, and a population of 23,814; Abernethy, in the counties of Banff, Elgin, and Inverness, with 6 parishes, and 3 parliamentary churches, and a population of 12,134; Aberlour, in Banffshire and Elginshire, with 5 parishes, and a population of 8,515; Forres, in the west of Elginshire, with 6 parishes, and a population of 9,809; Elgin, in the north-east of Elginshire, with 9 parishes, and a population of 15,790; Inverness, in the north-east of Inverness-shire, and the adjacent part of Nairnshire, with 9 *quoad civilia*, and 2 *quoad sacra* parishes, and a population of 25,193; and Nairn, in the centre and north of Nairnshire, and the adjacent part of Inverness-shire, with 6 parishes, and a population of 10,265.—The synod of Ross comprehends all Cromartyshire, most part of continental Ross-shire, and small parts of Inverness-shire and Nairnshire; contained, in 1831, a population of 45,803; and, in 1839, had 23 parishes, 3 parliamentary churches, 1 chapelry, and 27 ministers. Its presbyteries are Chanonby, in the peninsula between the Beaully and the Cromarty friths, with 6 parishes, 1 chapel, and a population of 11,744; Dingwall, in southern Ross-shire, and parts of Inverness and Nairn, with 8 parishes, 2 parliamentary churches, and a population of 17,762; and Tain, in northern Ross-shire, and part of Cromarty, with 9 parishes, 1 parliamentary church, and a population of 16,297.—The synod of Sutherland and Caithness is commensurate with its cognominal counties; contained, in 1831, a population of 60,057; and, in 1839, had 23 parishes, 5 parliamentary churches, 1 chapelry, and 29 ministers. Its presbyteries are Dornoch, in southern Sutherlandshire, with 9 parishes, 1 parliamentary church, and a population of 17,284; Tongue, in northern Sutherlandshire, with 4 parishes, 2 parliamentary churches, and a population of 7,221; and Caithness, in the cognominal county, with 10 parishes, 2 parliamentary churches, 1 chapel, and a population of 35,542.—The synod of Glenelg comprehends the Skye and Long Island groups of the Hebrides, and parts of the mainland

of Ross-shire and Inverness-shire ; contained, in 1831, a population of 91,584 ; and, in 1839, had 29 parishes, 11 parliamentary churches, and 40 ministers. Its presbyteries are Lochcarron, on the mainland, with 8 parishes, 4 parliamentary churches, and a population of 21,350 ; Abertarff, in the west of continental Inverness-shire, with 5 parishes, 1 parliamentary church, and a population of 14,402 ; Skye, in the Skye islands, with 8 parishes, 2 parliamentary churches, and a population of 23,801 ; Uist, in the southern district of Long Island, with 4 parishes, 2 parliamentary churches, and a population of 17,490 ; and Lewis, in the northern district of Long Island, with 4 parishes, 2 parliamentary churches, and a population of 14,541.—The synod of Orkney is commensurate with the Orkney Islands ; contained, in 1831, a population of 26,716 ; and, in 1839, had 18 parishes, 2 parliamentary churches, and 21 ministers. Its presbyteries are Kirkwall, in the south-eastern district of Orkney, with 6 parishes, 1 parliamentary church, and a population of 8,650 ; Cairston, in the south-western district of Orkney, with 7 parishes, and a population of 10,149 ; and North Isles, in the northern district of Orkney, with 6 parishes, 1 parliamentary church, and a population of 7,917.—The synod of Shetland is commensurate with the Shetland Islands ; contained, in 1831, a population of 29,392 ; and, in 1839, had 12 parishes, 2 parliamentary churches, and 14 ministers. Its presbyteries are Lerwick, in the south, with 6 parishes, 2 parliamentary churches, and a population of 16,432 ; and Burravoe, in the north, with 6 parishes, and a population of 12,960.

The religious body next in bulk to the Established Church, is the church of the United Secession. Its government is strictly presbyterian ; and its supreme court, called the United Associate Synod, consists of the minister or ministers and an elder of each congregation. The presbyteries are constituted in the same way as the synod ; and, in 1840, they were Aberdeen, with 8 congregations ; Annan and Carlisle, with 14, 7 of which are in England ; Coldstream and Berwick, with 21, only 14 of which are in Scotland ; Cupar, with 19 ; Dumfries, with 12 ; Dunfermline, with 13 ; Edinburgh, with 38 ; Elgin, with 15 ; Forfar, with 20 ; Glasgow, with 47, 1 of which is in Liverpool ; Kilmarnock, with 24 ; Kirkcaldy, with 8 ; Lanark, with 10 ; Lancashire, London, and Newcastle, with respectively 6, 5, and 19, all of which are in England ; Orkney, with 11 ; Perth, with 25 ; Selkirk, with 12 ; Stewartfield, with 11 ; Stirling and Falkirk, with 22 ; and Wigton, with 8.—The Relief synod is constituted similarly to the United Associate. Its presbyteries, in 1840, were Dumfries, with 8 congregations ; Dundee, with 6 ; Dysart, with 11 ; Edinburgh, with 13 ; Glasgow, with 20 ; Hamilton, with 13 ; Kelso, with 15, 6 of which are out of Scotland ; Newton-Stewart, with 4 ; Paisley, with 12 ; Perth, with 7 ; and St. Ninians, with 7.—The Reformed Presbyterian church is governed, like each of the two former bodies, by a synod. Its presbyteries, in 1840, were Edinburgh, with 7 congregations ; Glasgow, with 6 ; Kilmarnock, with 6 ; Dumfries, with 6 ; Newton-Stewart, with 4 ; and Paisley, with 6.—The Associate synod of Original Seceders comprehended, in 1840, the presbyteries of Aberdeen, with 6 congregations ; Ayr, with 7 ; Edinburgh, with 13 ; and Perth, with 8.—The Original Burgher Associate Synod,—a majority of which had just joined the Established church,—comprehended, in 1840, the presbyteries of Edinburgh, with 4 congregations ; Glasgow, with 5 ; and Perth and Dunfermline, with 2.—The congregations of the Independents, understood to be in connexion with the Congregational Union of Scotland, an association of the Independent churches for purposes of missionary effort and mutual recognition, amounted, in 1840, to 98 ; of which 7 were in the Orkney and the Shetland Islands ; 26 in the counties north of the Aberdeen Dee ; 20 in the counties of Kincardine, Forfar, Perth, Fife, Kinross, and Clackmannan ; 12 in the Lothians and Stirlingshire ; and 33 in the south-western and southern counties.—The Scottish Episcopal communion comprehended, in 1840, the dioceses of Edinburgh, with 13 congregations ; Glasgow, with 12 ; Aberdeen, with 20 ; Moray, Ross, and Argyll, with 15 ; Dunkeld, Dunblane, and Fife, with 9 ; and Brechin, with 9. The number of the clergy, including the bishops, was 88.—The Roman Catholic clergy in Scotland, in 1840, amounted to 5 bishops and 68 priests, were located in 49 places, and distributed into three districts,—the eastern, with 2 bishops and 14 priests for its clergy, and Edinburgh for its centre of influence,—the western, with 2 bishops and 29 priests for its clergy, and Glasgow for its episcopal seat,—and the northern, with 1 bishop and 25 priests for its clergy, and Aberdeen as its ecclesiastical metropolis.

The Reports of a Commission, who were appointed to inquire into the opportunities of

religious worship, the means of religious instruction, and the pastoral superintendence afforded to the people of Scotland, who made inquiries by correspondence and research into various matters affecting every parish in the country, and who made personal and minute investigation in all the parishes in which any deficiency of ecclesiastical appliances was alleged to exist,—the Reports of this Commission, published in 1837 and 1838, and extending to 9 folio volumes, have enabled us to intersperse through every part of the alphabetical arrangement important information in ecclesiastical statistics, and now furnish us with materials for a rapid and luminous summary view of the ecclesiastical condition of the country. The parishes personally visited, and specially reported on by the Commissioners, were 552 in number; and, except in the broad feature of alleged deficiency in the amount of their moral mechanism, they may be regarded as fairly representing the whole country.—The first and the second Reports are so almost exclusively occupied with matter respecting Edinburgh, Leith, and Glasgow, that to borrow from them here would only be to repeat what is stated in our articles on these towns.—The fourth Report is devoted to 74 parishes in the Highlands and Islands, 22 of which are in the synod of Argyle, 26 in that of Glenelg, 19 in that of Sutherland and Caithness, and 7 in that of Ross. Ecclesiastical surveys of these parishes exhibited their population to be about 180,538, and classified them into about 159,150 churchmen, 14,680 dissenters, and 146 persons not known to belong to any religious denomination. Alleged deficiency in their means of pastoral instruction was ascribed in most instances to various causes,—in 10, to excess of population; in 61, to excess of territory; in 61, to obstructed access; in 10, to inconvenient distribution of territory; in 12, to a minister having to officiate in more than one church; in 5, to the church's occupying an inconvenient site; in 28, to its being of incompetent size; in 5, to its being in a ruinous condition; in 3, to its unequal allotment of sittings; in 4, to the exaction of seat-rents; and in 3, to the want of endowments. Sittings in the parish churches amounted to 40,672, and in dissenting churches to 8,078,—in all, 48,750. In some of the parishes, religious instruction, additional to that connected with the regular ministry, is afforded by means of missionaries, catechists, Sunday schools, and week-day religious schools.—The fifth Report is devoted to 103 parishes in the northern counties; 5 of which are in the synod of Glenelg, 29 in that of Moray, 55 in that of Aberdeen, and 14 in that of Angus and Mearns. Their ecclesiastically stated population consisted of about 210,137 churchmen, about 41,959 dissenters, and about 6,520 nondescripts,—in all, 284,727 persons. Sittings in the Establishment, about 86,304; in dissenting churches, about 51,300. Alleged deficiency was ascribed in 34 instances, to excess of population; in 44, to excess of territory; in 30, to obstructed access; in 24, to inconvenience in the form of parishes; in 4, to plurality in the churches of a minister; in 9, to a church's inconvenience of site; in 31, to its inadequacy of size; in 23, to its unequal allotment of sittings; in 6, to the badness of its condition; in 24, to the exaction of seat-rents; and in 24, to the want of endowments.—The sixth Report treats of 99 parishes, in the counties of Forfar, Perth, Stirling, and Fife; 27 of which are in the synod of Angus and Mearns, 50 in that of Perth and Stirling, and 22 in that of Fife. Population, about 306,563; consisting of about 180,341 churchmen, about 72,297 dissenters, and about 10,936 nondescripts. Sittings in the Establishment, about 84,679; in dissenting churches, about 72,892. Alleged deficiency was ascribed, in 29 instances, to excess of population; in 30, to excess of parochial territory; in 20, to obstructed access; in 24, to inconvenience in the form of parishes; in 5, to plurality of a minister's churches; in 15, to a church's inconvenience of site; in 39, to its inadequacy of accommodation; in 12, to the unequal allotment of its sittings; in 3, to the badness of its condition; in 25, to the exaction of seat-rents; and in 26, to the want of endowments.—The seventh Report treats of 99 parishes in the Lothians, and the southern counties; 29 of which are in the synod of Lothian and Tweeddale, 23 in that of Merse and Teviotdale, 15 in that of Dumfries, 19 in that of Galloway, and 13 in that of Glasgow and Ayr. Ecclesiastically stated population, about 167,363 churchmen, about 64,066 dissenters, and about 6,738 nondescripts,—in all, about 255,874. Sittings in the Establishment, about 67,319; in dissenting churches, about 57,812. Alleged deficiency was ascribed, in 32 instances, to excess of population; in 34, to largeness of territory; in 9, to obstructed access; in 18, to inconvenience in the form of parishes; in 2, to a minister's plurality of churches; in 11, to a church's inconvenience of site; in 61, to its inadequacy of accommodation; in 55, to the unequal allotment of its sittings; in 17, to the badness of its condition; in 3, to the exaction of

seat-rents ; and in 20, to the want of endowments.—The eighth Report is devoted to 106 parishes, in the counties of Ayr, Lanark, Renfrew, Dumbarton, Argyle, and Orkney ; 65 of which are in the synod of Glasgow and Ayr, 18 in that of Argyle, 11 in that of Orkney, and 12 in that of Shetland. Population, about 192,864 churchmen, 94,772 dissenters, and 16,459 nondescripts,—in all, about 376,452. Sittings in the Establishment, about 98,746 ; in dissenting churches, about 83,549. Alleged deficiency was ascribed, in 55 instances, to excess of population ; in 61, to excess of territory ; in 32, to obstructed access ; in 17, to inconvenience in the form of parishes ; in 27, to a minister's plurality of churches ; in 10, to a church's inconvenience of site ; in 60, to its inadequacy of accommodation ; in 19, to the unequal allotment of its sittings ; in 8, to the badness of its condition ; in 30, to the exaction of seat-rents ; and in 31, to the want of endowments.—The third Report relates wholly to teinds. Scottish teinds are all predial, and are divided into parsonage or the greater teinds, consisting of the tithe of victual or grain, and vicarage or the lesser teinds, consisting of the tithe of grass, flax, hemp, butter, cattle, eggs, and some other articles. The tithes of fish are, in a few places, exigible ; but, along with all the vicarage teinds, they are so inconsiderable as not to be included in the Commissioners' arithmetical calculations. The parsonage teinds are held by the Crown, by universities, by pious foundations, by lay titulars, or by the proprietors of the lands from which they are due ; and, with the limitation that those of one parish cannot, to any amount, be transferred to another parish, they are, in all cases, exigible as payment of the stipends which have been provided by law, or which may, in future, be awarded by the court of teinds. Those now belonging to the Crown are in value £38,051 0s. 4d., which formerly belonged to the bishops ; £5,323 3s. 11d., which formerly belonged to the chapel royal ; and £2,523 5s. 10d., which formerly belonged to the abbacy of Dunfermline,—in all, £45,897 10s. 1d. Of this sum, £30,155 17s. 8d., are appropriated to ministers' stipends. Of the unappropriated amount, the free yearly surplus, after necessary deductions, is only £10,182 4s. 8d., and the actual receipt, in consequence of mismanagement, is a pitiful trifle. Teinds belonging to other parties than the Crown, amount to £281,384 14s. Of this sum, £146,942, are appropriated to ministers' stipends, leaving £138,186 17s. 6d. unappropriated. In 872 parishes, payment of the stipends is made from the teinds ; in each of 196 of these, the teinds are less in value than £158 6s. 8d. ; and in each of 206, while amounting to £158 6s. 8d. and upwards, they are so low as to have been all appropriated.—The ninth and last Report, relates to revenues and endowments. In those parishes whose teinds are less in value than £158 6s. 8d., the stipend is raised to that amount or upwards, by payment from the exchequer. In *quoad civilia* burgh parishes, stipend is for the most part paid from the burgh funds ; and in Edinburgh, and a few other towns, it is paid from funds specially levied under act of parliament. In *quoad sacra* parliamentary parishes, the stipend is a fixed allowance for each of £120 from the exchequer ; and in other *quoad sacra* parishes, it is paid chiefly from seat-rents, and, in some instances, partly from the church-door collections. Except in a few peculiar cases, the ministers of *quoad civilia* parishes, either altogether or partly landward, are entitled to manses and glebes ; and, in a few instances, they receive a money allowance in lieu of one or both. In parishes which, while the teinds are low, confer no right to either manse or glebe, an allowance is made from the exchequer, to raise the stipend to £200 ; and in those which, in the circumstances, confer a right only to a manse, or to a glebe, but not to both, an allowance from the same source makes the stipend £180. Ministers of the parliamentary churches are entitled by law each to a house and half-an-acre of garden ground ; and, in the majority of instances, they have been provided by the heritors with glebes. In numerous parishes, the ministers have rights of grazing, or cutting turf and peats, and several other privileges, of aggregately little value. In *quoad civilia* country parishes, the area of the churches belongs to the heritors, and is generally divided by them among the tenants and cottagers on their estates ; and when a surplus, or disposable number, of the seats is let, the proceeds are, in some instances, appropriated by the heritors for their private use, and, in others, given to the poor. In *quoad civilia* burgh parishes, seat-rents are, in general, exacted for all, or nearly all, the pews ; and are either employed for stipend, or drawn as common burgh revenue. In the parliamentary churches, seat-rents were originally designed to be generally exigible, and to be applied in maintaining the repair of the churches and manses ; but they are, in every case, collected with difficulty, and, in some instances, have been entirely abandoned. In other *quoad*

sacra churches, and in all but a very small number of the churches of the dissenters, seat-rents are generally, and, for the most part, easily levied, and are employed in payment of stipend, of the interest and principal of debt, and of other necessary congregational expenses. Ordinary collections, or those made every Sabbath, at the doors of the Establishment's places of worship, are, in the case of most of the *quoad civilia* parishes, wholly applied, after the deduction of certain small parochial charges, to the relief of the poor; and, in the case of the *quoad sacra* parishes, and, by consent of the heritors, in the case of a few of the *quoad civilia*, they are applied in the same manner as the seat-rents. Extraordinary collections, or those made only at considerable intervals, and on special occasions, are known but partially in the Establishment, and more generally among the dissenters; and are applied, for the most part, to missionary, educational, and philanthropic, and, in a majority of instances, to ultra-congregational purposes.—The number of ministers of the Establishment, as exhibited in the Commissioners' Report, excludes all missionaries, and also, with one exception, all assistants, and amounts to 1,072. The aggregate amount of their stipends, on an average of 7 years preceding 1836, is, from parson teinds, £179,393 10s. 3d.,—from vicarage teinds, so far as they are paid in money, or have been valued, £712 19s. 8d.,—and from other sources, £51,345 5s. 0d.,—making a total of £231,451 4s. 11d. The aggregate annual value of glebes, exclusive of a few not valued by the ministers, is £19,168 15s. 3d. The amount of seat-rents in all the Establishment's places of worship, during the year 1835, was £38,901 9s. 7d.; and of the ordinary and the extraordinary collections, so far as ascertained for the same year, respectively £44,394 2s. 3d., and £13,726 8s. 9d.

A satisfactory outline of the ecclesiastical history of Scotland, would occupy twenty or fifty times more space than we can spare. Its greatest elements would be critical remark on the date of the introduction of Christianity to Scotland; a view—partly given in our article on ICOLMKILL—of the character, discipline, and history of the Culdees; an examination of the rise and expansion of diocesan episcopacy; an exhibition of the inroads, methods of conquest, early condition, successive development, history, institutions, and corruptions of Romanism; a careful tracery of the multitudinous and engrossing events and changes of the Reformation, and of the struggles which presbyterianism maintained against popery, and especially against protestant prelacy, till the Revolution; and a rapid sketch of the rise and early history of each of the Scottish dissenting sects. Much of the most interesting parts of each of these elements, excepting the first, will be found interspersed with the body of our work; and wherever it occurs, will be clearly understood without the aid of connecting links of narrative. Very frequently, however, in connexion with the monastic class of the Romish institutions, allusions and names occur which, as the institutions were in some instances peculiar to Scotland, will not be intelligible except with the aid of some explanatory statements.—The conventual orders, or different bodies of the regular clergy of the Romish church in Scotland, were very various, and were early introduced. The friars, while they lived in convents, were professed strolling mendicants; and, in consequence of their astutely watching every opportunity of visiting the sick in their clerical character, and sedulously improving it, in their mendicant capacity, for drawing largesses and bequests from the wealthy, they amassed an incredible amount of property, and eventually made themselves the envy of the nobility, who could not cope with them in opulence and influence,—of the secular or parochial clergy, who were ostensibly provided for, and saw the friars superseding them.—and of the monks, or second great class of the conventual orders, who were forbidden, by most of their rules, to go out of their monasteries, and could receive only such donations as excessive fanatics carried to their cells. Yet all the other great classes—which were canons-regular, monks, nuns, and canons-secular,—made acquisitions of property which were exceedingly, and even monstrously great, in their circumstances, and which appeared moderate only when compared with those of the friars.—The canons-regular of St. Augustine had 28 monasteries in Scotland, and were first established at Scone, in the year 1114, by Atewalpus, prior of St. Oswald of Hostel, in Yorkshire, and introduced at the desire of Alexander I.—The canons-regular of St. Anthony, wore neither an almuce nor a rochet, both of which were used by the other canons-regular, and they called their houses hospitals, and their governors preceptors; but they had in Scotland only one monastery, noticed in our article on LEITH.—The red friars pretended to be canons-regular, but were denied the title by many of their adversaries; and they variously bore the names of Matharines, from their house at Paris, which was dedicated to

St. Matharine, of Trinity friars, and of friars 'De Redemptione Captivorum,' from their professing to redeem Christian captives from the Turks. Their houses were called hospitals or ministries, and their superiors 'ministri;' their mode of living was similar to that of the canons of St. Victor at Paris; their habit was white, with a red and blue cross patée upon their scapular; and one-third of their revenues was expended in ransoming captives. They were established by St. John of Malta, and Felix de Valois; their first Scottish foundation was erected in Aberdeen, by William the Lion; and they had in Scotland 6 monasteries in 1209, and 13 at the Reformation.—The Premonstratenses had their name from their principal monastery, Premonstratum, in the diocese of Laon in France; and were also called Candidus Ordo, because their garb was entirely white. They followed the rule of St. Augustine, a copy of which they fabled to have been delivered to them in golden letters by himself; and were founded by St. Norbert, an archbishop of Magdeburg, who procured for himself, and his successors in the see, the title of primate of Germany. Their monasteries in Scotland were six.—The Benedictines, or Black monks, had their names respectively from that of their founder, and from the colour of their habit. St. Benedict, or Bennet, was born at Nursi, a town of Italy, about the year 480, and was the first who brought monachism into estimation in the west. Five orders who followed his rule had monasteries in Scotland.—The Black monks of Fleury had 3 Scottish monasteries; and took their name and origin from the abbacy of Fleury la Riviere, on the river Loire, in France.—The Tyronenses, the second order of Benedictines, had 6 Scottish monasteries; and took their name from their first abbey, Tyronium, or Tyron, in the diocese of Chartres in France, where they were settled in 1109, under the auspices of Retrou, Earl of Perche and Montagne.—The Cluniacenses, the third order of Benedictines, had 4 monasteries in Scotland, and originated with Berno, who began to reform the Benedictines, or to frame some new constitutions, about the year 940, and who built a new abbey near Cluny, or Cluniacum, in Burgundy, 4 leagues from Macon.—The Cisterrians, or Bernardines, the fourth order of Benedictines, had their names respectively from their first house and chief monastery at Cistercium, in Burgundy, and from St. Bernard, one of their earliest chief abbots, whose zeal succeeded in founding upwards of 160 monasteries. They originated in 1098, with Robert, abbot of Molesme, in the diocese of Langres in France; and were called White monks, in contradistinction to the other orders of Benedictines, and in consequence of retaining only the black cowl and scapular of St. Bennet, and having all the rest of their habit white. Of 30 provinces into which they were divided, Scotland was one, and it contained 13 of their monasteries.—The monks of Vallis-caulium, Vallis-olerum, or Val-des-cheux, were established in 1193, by Virard, at the place which gave them name, in the diocese of Langres, between Dijon and Autun; they were a professed reform of the Cisterrians, and very austere; and they were introduced to Scotland, in 1230, by Malvoisin, bishop of St. Andrews, and had here 3 monasteries.—The Carthusian monks were established, in 1086, by Bruno, a doctor of Paris, and a canon of Rheims, in the wild mountains of Grenoble in France; they originated professedly in miracle, and manifestly in excessive superstition, and were characterized by very great austerities; they were introduced to England in 1180, but they had in Scotland only one monastery, founded near Perth, in 1429, by James I., after his captivity in England.—The Gilbertines were, in the first instance, all nuns; but they afterwards had accessions from the canons-regular, who were domiciled under the same roofs as the nuns, but in separate apartments. Gilbert, their founder, was born in the reign of William the Conqueror, and was the son of a gentleman of Normandy, and lord of Sempringham and Tynnington in Lincolnshire; and he is said to have spent all his substance and patrimony in such acts of charity as were dictated by his diseased religion, and particularly in converting distressed and poor young women into nuns of his order. The nuns were bound to observe constant silence in the cloister; and they were not admitted to their novitiate till they were 15 years of age, and could not be professed before having fully on their memory the psalms, hymns, and antiphona used in the Romish ritual. Though the Gilbertines had 21 houses in England, they had only one in Scotland, situated on the river Ayr, founded by Walter III., Lord High-steward of Scotland, and supplied with its nuns and canons from Syxle in Yorkshire.—The Templars, or Red friars, were an order of religious knights, and followed the rule of St. Augustine, and the constitution of the canons-regular of Jerusalem. They were established at Jerusalem in 1118, by Hugo de Paganis, and Gaufridus de Sancto Aldemaro; they professed to defend the

temple and city of Jerusalem, to entertain Christian strangers and pilgrims, and to protect them while in Palestine; and they received from Baldwin II., king of Jerusalem, a residence in the vicinity of the temple, or its site, and thence had their name of Templars. To a white habit which, in every particular, distinguished their exterior, Pope Eugenius III. added a red cross of stuff sewed upon their cloaks; and from this they were called Red friars. They had enormous possessions, and numbered, throughout Christendom, upwards of 9,000 houses. In Scotland, they had houses, farms, or lands, in almost every parish; and, in particular, they possessed very many buildings in Edinburgh and Leith, and had upwards of 8 capital mansions in the country. They are believed to have been introduced to Scotland by David I.; those in this country and in England were under the government of one general prior; and, in common with all the other communities of their order, they were, in the year 1312, condemned for certain great crimes, by a general council held at Vienne in France, and were formally suppressed by Pope Clement V.—The Knights of St. John of Jerusalem closely resembled the Templars in professed character, and were a sort of noble military monks. Certain merchants of the city of Melphi, in the kingdom of Naples, who traded to Palestine, built, under permission of the Caliph of Egypt, a monastery and a church for the reception of Christian pilgrims, and paid the Caliph tribute for his protection; and they subsequently added two churches, dedicated respectively to the Virgin Mary and Mary Magdalene, and used them for the pompously charitable reception, the one of women, and the other of men. When Jerusalem was taken by Godfrey of Bouillon, Gerard of Martiques, a native of Provence in France, built, in 1104, a still larger church, and an hospital for pilgrims and the sick, and dedicated them to St. John. The soldier-monks of the original erections were put in possession of these buildings, and took from them the names of Knights of St. John of Jerusalem, Knights-Hospitallers, and Johannites. After being expelled from Jerusalem by Saladin, they retired to the fortress of Margat in Phenicia, and subsequently settled, at successive epochs, at Acre or Ptolemais, and in the islands of Cyprus, Rhodes, and Malta; and in the last of these they continued, and from it took the name of the Knights of Malta, till their power was broken, and the island captured, during the last European war. They were inveterate and sturdy foemen of the Turks, and figure largely in the military history of the Ottoman empire. Their members, excepting some illegitimate sons of kings and princes, were all gentlemen, who proved by charters, or other authentic documents, their nobility of descent by both father and mother, for four generations. They took the three ordinary monastic vows, and wore a black habit, with a cross of gold, which had eight points. Their houses were called preceptories, and the principal officers in them preceptors. On the suppression of the order of Templars, the Knights of St. John got many of their Scottish lands and tenements, and, in consequence, are frequently confounded with them in Scottish history. Their chief dwelling in Scotland was at Torphichen in Linlithgowshire. When buildings belonging to them were feued out to seculars, they used great care that the cross of their order should constantly surmount the houses, in evidence that the possessors were subject to them, and were amenable only to their courts. The same practice was previously observed by the Templars; and it accounts for the great number of crosses which, till a late date, might have been seen, and which, in some instances, still exist, on the tops of old buildings in Edinburgh, Leith, and Linlithgow.—The Dominicans, or Black friars, have, for six centuries, been one of the most considerable of the Romish orders of regular clergy. They are often called Preaching friars, from the circumstance of their having longer attended to preaching than any of the other orders. They may preach anywhere without obtaining the permission of the bishops; they are allowed to confess all noblemen and ladies without the consent of their curates; and they everywhere administer the sacraments, and are exempted from all ecclesiastical censures. Their habit is a white gown and scapular. Their founder was St. Dominic, the infamous projector or institutor of the inquisition. This monster devoted himself and his followers to what he and his fellow-Romanists called the conversion of heretics; and he preached and conducted the earliest of the sanguinary crusades against the good and amiable Waldenses. The order was divided into 45 provinces; of which Scotland was the 18th, and contained 15 convents. Though they were professedly mendicants, they were found, at the breaking up of their Scottish communities, to have amassed in this country a shameful amount of property.—The Franciscans, or Grey friars, also professed mendicants, had their two leading names from their founder, and from the colour

of their habit; and affected to assume the title of Friars Minors, or Minorites, as if deeming themselves the least or meanest of their function. Their founder was St. Francis of Assize in Italy, a merchant, and a consummately frantic fanatic, who flourished at the commencement of the 13th century; and their superiors were called Custodes or Wardens. They were divided into Conventuals and Observantines; the latter of whom were a reform, in 1419, by Bernardine of Sienna, and had their name from professing to observe St. Francis' rule more strictly than the Conventuals, by always walking bare-footed, and not wearing any linen. The Conventuals were introduced to Scotland in 1219, and had 8 convents in the country. The Observantines were introduced by James I., in a colony from their vicar-general at Cologne, and had here 9 convents.—The Carmelites, or White friars, were the third order of wandering mendicants; and absurdly pretend to trace up their origin to the schools of the prophets in the age of Elijah. They have their second name from the colour of their outer garment; and their first from Mount Carmel in Syria, which abounds in dens, caves, and other sorts of hiding-places, and was a favourite retreat both of some of the earliest anchorites under the Christian dispensation, and of numerous pilgrims during the period of the crusades. St. Louis, king of France, when returning from Palestine, brought some of the Mount Carmel ascetics to Europe, and gave them an abode in the outskirts of Paris. The Carmelites were divided into 32 provinces, of which Scotland was the 13th; and they were introduced to the country in the reign of Alexander III., and had here 9 convents.—The nuns of Scotland were few compared either with the Scottish male regulars, or with their own proportionate numbers in other lands. Those who followed the rule of Augustine had only two convents in this country, the one of Canonesses, and the other of Dominican nuns. The Benedictine, or Black nuns, followed the rule of Benedict, were founded by his sister St. Scholastica, and had in Scotland 5 convents. The Bernardine, or Cistercian nuns, likewise followed the rule of St. Benedict, and had 13 convents. The nuns of St. Francis, or Claresses, were founded by Clara, a lady of Assize in Italy, who received from St. Francis himself a particular modification of his rule, full of rigour and austerity; and they had in Scotland only two houses.—The Secular canons, or conventual bodies of the secular clergy, formed communities which were called *Præposituræ*, or Collegiate churches; and were governed by a dean or provost. Each collegiate church was instituted for performing religious service, and singing masses for the souls of the founder and patrons, or their friends; it was fitted up with several degrees or stalls which the officiates occupied for an orderly or systematic singing of the canonical hours; it had for its chapter, the governing dean or provost, and the other canons who bore the name of prebendaries; and, in general, it was erected either by the union and concentration in it of several parish churches, or by the union and concentration of several chaplainries instituted under one roof. The number of Collegiate churches in Scotland was 33.—Hospitals, for receiving strangers and travellers, or maintaining the poor and the infirm, were the lowest order of ecclesiastical establishments, and had the accompaniment of a church or chapel. Keith gives a list of 28 which existed in Scotland; but says he is convinced the list might be vastly augmented.

EDUCATION.

The Universities of Scotland are, in most particulars, sufficiently noticed in our articles on ST. ANDREWS, GLASGOW, ABERDEEN, and EDINBURGH, the cities in which they are situated. All, except that of Edinburgh, existed before the Reformation; and that of St. Andrews is illustriously associated with the name of Melville, and makes an honourable figure in the history of the revival of literature. A *Senatus Academicus*, consisting of the several professors, wields, in each of the Universities, the power of conferring degrees, of determining or modifying the academical curriculum, of controlling all matters of academical interest, and of enforcing or correcting the disciplinarian proceedings of each individual professor. In Edinburgh, the patronage of nearly all the chairs is vested in the Town-council of the city; but in the other Universities, it is possessed by the *Senatus Academicus*. Power, in general exterior matters, is in Edinburgh wielded by the Town-council, either in their own name, or in that of a nominal Lord-rector of the University, who is always *ex-officio* the Lord-provost of the city; and, in St. Andrews, Glasgow, and Aberdeen, it is wielded chiefly and substantially by a Lord-rector annually chosen by the students, and subordinately or in an honorary way, by a chancellor chosen

for life by the Senatus. The professors in all the Universities are required by law to be members of the Established church, and to subscribe her standards. The students, on the contrary, are admitted to the classes, carried through the curriculum, and held eligible for every academical honour, without reference to creeds or sects. Exclusive of some medical and other lectureships, so constituted as to be rather appendages than integral parts, the number of professorships in all Scotland is 71; and, exclusive of the attendance on the lectureships, the entire number of students may be estimated at about 4,000,—three-sevenths of the whole belonging to Edinburgh, seven-eighths to Glasgow, and the proportion of 23 in 126 jointly to St. Andrews and Aberdeen.—The parochial school system of Scotland theoretically requires that there should be at least one school in each parish. When, toward the close of the 17th century, the system was legislated by act of parliament, it became, except in the remote Highland parishes, very promptly and generally adopted; and from its general prevalence, and its apparently high adaptation to bring out results in every part of the kingdom, it long earned for Scotland's population the fame of being the best educated people in the world. The system, however, was slowly and reluctantly discovered to possess many defects, both intrinsic and extrinsic; it has been eked out in the sequestered districts by many and vigorous ultraneous appliances, and superseded in the large towns by burgh-schools and association-academies; and though continuing to confer important advantages, has confessedly allowed other and younger countries silently to overtop Scotland in the laurel of her peculiar boast. At present, considerably the majority of the *quoad civilia* parishes have each one parochial school; some have two; a few have three; and those in the large towns, or in nearly all towns of more than 3,000 or 4,000 population, either have none, or impose upon burgh or subscription schools the misnomer of parochial. The schoolmasters of the *bona fide* parochial schools are appointed by the landholders and clergy; they require to be members of the Established church, and they are under the superintendence of the presbytery of their bounds. Their remuneration as a body is shamefully disproportioned to the required amount and value of their qualifications, to the high importance of their profession, or to the laboriousness and deeply influential nature of their duties; and, in consequence of the illiberal or blundering of the last act of parliament on the subject, and of the niggard rigidity with which the act's provisions are for the most part executed, it, in many instances, fails, even with all aids from fees and from the emoluments of attached or superinduced offices, to raise the outward condition of a schoolmaster above that of a peasant. Exclusive of assistants, and of the teachers of all or most of the third, and a considerable proportion of those of the second schools, in parishes which have more schools than one, the schoolmasters have each a salary not exceeding £34 4s. 4½d., and not less than between £25 and £26, a free dwelling-house and a school-room, and fees per quarter which may be stated rather above than below the average for all Scotland, at from 1s. 6d. to 2s. 6d. for English reading, from 2s. to 3s. 6d. for English reading and writing, from 2s. 6d. to 4s. for English reading, writing, and arithmetic, from 3s. to 10s. 6d. for mathematics, from 2s. to 7s. 6d. for Latin, from 5s. to 10s. 6d. for Latin and Greek, and from 5s. to 10s. 6d. for French. The average incomes, from salaries, fees, and additional emoluments, exclusive of house and garden, or money in lieu of them, of all the parochial teachers, not including assistants, was ascertained by a late return to be £52 17s.; a sum so small as to bring down the average for at least one-half of their number to probably not more than £30 or £35. Among the augmentations to the means of education which have been made to help out the utter inadequacy of the parochial system, are several classes of endowed or extraneously supported schools, noticed in our article on the HIGHLANDS,—the General Assembly's subscription schools, commenced in 1824, and numbering 20 in the Lowlands,—the high-schools and grammar-schools of the larger burghs, generally under the patronage of the local magistrates, and, in the majority of instances, well provided with a plurality of teachers, and not scurried over with the leprous touch of the niggard,—some proprietary, or public association-academies, erected in a style of literary splendour, conducted on expansive, liberal, and reforming principles, and exerting a powerful influence for the rapid demolition of antiquated mechanician modes of tuition,—a few schools supported by a munificent bequest of the late Dr. Bell of Madras,—and many well-appointed, and somewhat fairly supported, congregational schools, connected with individual congregations among the dissenters. A prodigious amount, however, or by far the greater part of the non-parochial schools,—an amount considerably greater

than the aggregate one of even the parochial schools themselves,—consists of schools begun and conducted wholly by the private adventure of their teachers. Many of these are of highly creditable character, and bring, from mere fees, a much greater revenue than the average income of the parochial schoolmasters; many, also, are checked by the supervision of a competent, though altogether voluntary and conventional sanction; but most are altogether pitiful imitations, some of them even hideous or farcical caricatures, of elementary schools, in all respects irresponsible, in many respects deleterious; and while, in a painful mass of instances, the schools are presided over only by pedantic ignorance, or industrious penury, they yield, often even when merit superintends them, so very scanty an income, that one wonders how it should tempt the labours of even the pedant or the enfeebled peasant. Non-parochial schools are to the parochial as 41 to 12; and if probably about one-tenth of their whole number be deducted, they almost certainly—though we have no precise data for a calculation—yield an average income at least one-third less than that of the parochial schoolmasters. When the exceedingly motley character, and the disgracefully low revenues of the schools of Scotland are duly adverted to, the most superficial fair thinker, while aware that multitudes of excellent or superior scholars must be produced, will be at no loss to see that the Scottish people as a whole are at the mercy of great blundering and incompetence, and possess in many instances few, and in some instances none, of the advantages which would result from some general, well-constructed, competent and liberal system of education. The proportions in which the higher departments of tuition are appreciated and patronized in Scotland, may probably be inferred from a return made to the General Assembly of the results of presbyterial examination of schools in 1839. The schools examined were in 237 instances non-parochial; and, including these, they were aggregately attended by 152,281 scholars,—of whom 524 were learning Greek, 1,053 French, 3,201 Latin, 2,301 mathematics, and 13,120 geography. The following table shows, from a parliamentary report published in 1837, and founded on returns made by the parochial clergy, the number and the county distribution of schools and teachers in Scotland, and the aggregate amount of the parish schoolmaster's salaries.

COUNTIES.	No. of Parochial Schools.	No. of Instruc- tors.	Salaries.	Total Incomes, including Salaries, Fees, and other Emoluments.	No. of Schools Non-paro- chial.	No. of Instruc- tors.

While these pages are passing through the press, an additional document has reached us, in a thick volume, ordered by the House of Commons to be printed, which contains the answers made by schoolmasters in Scotland to returns circulated in 1838, by order of the Select Committee on Education. Of parochial schools, the number which returned answers is 924; and the number which did not return answers is 129; being 1,053 in all. Of the 924 which returned answers, there are 231 privately endowed, and 693 unendowed; and the average number of scholars stood thus:—In 1836, 36,808 males, 20,524 females; total, 57,332. In 1837, 39,604 males, 22,317 females; total, 61,921. The number of teachers—of whom a few are only occasional assistants—is 1,054; and of these 206 have other occupation or employment. Of the 944 schools, there are 445 in which Greek is taught; Latin is taught in 664; and Mathematics in 689. Of schools not parochial, 2,329 returned answers, and 1,025 did not; making altogether 3,354 schools not parochial. Of the number which returned answers, 753 are stated to have endowments, and 1,318 are supported exclusively by school-fees. The number of scholars was:—In 1836, 68,771 males, 50,579 females; total, 119,350. In 1837, 78,867 males, 54,451 females; total, 128,318. Greek is taught in 191 of these schools; Latin in 501; and Mathematics in 683. The number of teachers is 2,940, of whom 703 are females. There are only 12 of the parochial schools which returned answers in which Gaelic is taught, but it is taught in 239 of the non-parochial.

The attendance on these schools, exclusive of that on private boarding-schools, and of children under the care of domestic tutors, amounts, at the maximum rate, and on the average for all Scotland, to one-ninth of the population. The greatest number of scholars at the parochial schools, was between the 25th of March and the 29th of September, and, allowing a proportion for defective returns, was 71,426; and the least, at any period of the year, was 50,029. The greatest number at non-parochial schools was 189,427; and the least was 139,327. The entire community of parochial and burgh schoolmasters, was established, by act of parliament in 1807, into a sort of corporate body, and have a fund for the benefit of their widows and children, compulsorily supported by a small annual contribution from each of the members.—Sabbath-schools in Scotland are educational only in the highest or the purely religious sense, and are, in all instances, voluntary, or conducted without any reference to State influence or support. In 1825, they amounted throughout the country to 1,577 in number, and were attended by 80,190 scholars; and, though their statistics since that period have been imperfect and confused, they seem to have everywhere increased at least proportionately with the population, and to have been introduced or greatly multiplied in Highland or other sequestered districts.

LITERATURE.

The literature of Scotland, as to standard and periodical publication, great or national literary institutions, and even minor appliances of production and diffusion, is, with unimportant exceptions, concentrated in Edinburgh and Glasgow, particularly the former; and will be found sufficiently noticed in our accounts of these cities. The Lowland Scotch are eminently a reading people, and, in proportion to their bulk, have probably a very considerably larger number of public libraries than any other in the world. Subscription libraries—sometimes two or more in number, and generally large, select, and comparatively rich in literature—exist in most of the large towns; parochial and congregational libraries, for the most part pervaded by religiousness of character, exist in villages, hamlets, and in rooms attached to the crowded chapel of the city, or the solitary rural church or meeting-house; private circulating libraries, or libraries on private adventure, for letting out books to promiscuous readers, are usually of a light character, and abound in city, town, watering-place, and every locale or resort of the intellectually frivolous; circumambulating libraries, or such as keep detachments of a very large and excellent library in garrison throughout the country, and periodically move them from post to post, are in full and benign possession of extensive territories; Sabbath-school, and other juvenile libraries, exist in great numbers, for the use of the young; and a public news-room, for blending literature with commerce, and with mental recreation, is to be found even in many a village, and in almost everything which can fairly be called a town.—The number of stamped newspapers in Scotland, in the year ending September, 1836, was 54; the number of stamps issued to them, was 2,654,438;

and the amount of stamp duty received from them was £35,392. In the year ending 15th September, 1837, the newspapers were 65; the stamps 4,123,330; and the duty £17,180. In the year ending 5th January, 1839, the newspapers were 64; the stamps 4,228,370; and the duty £17,386 1s. 4d. In the half-year ending 30th June, 1839, the newspapers were 63; the stamps 1,908,780; and the duty £7,876 5s. 5d. At the last of these dates, 3 of the newspapers were published in Aberdeen, 2 in Arbroath, 2 in Ayr, 2 in Berwick, 2 in Cupar-Fife, 3 in Dumfries, 3 in Dundee, 12 in Edinburgh, 1 in Elgin, 1 in Forres, 12 in Glasgow, 2 in Greenock, 3 in Inverness, 2 in Kelso, 1 in Kilmarnock, 1 in Leith, 2 in Montrose, 1 in Paisley, 4 in Perth, 2 in Stirling, 1 in Stranraer, and 1 in Wick. Of the whole 63, no fewer than 46 were weekly; while 5 were published thrice a-week, and belonged to Edinburgh, Glasgow, and Greenock; and 12 were published twice a-week, and belonged to Edinburgh, Glasgow, Greenock, Kelso, and Leith.

COINS, WEIGHTS AND MEASURES.

Scottish coinage cannot be traced higher than the twelfth century. Silver pennies were coined by William the Lion and his immediate successors; and this and other silver coins continued to be the only currency till the reign of David II. During the whole of the Scoto-Saxon period, Scottish money was of the same fashion, weight, and fineness, as the English, bore the same denominations, and was, in all respects, coequal with it in value. David II., amid the feebleness and the wretched circumstances of his reign, coined groats, half-groats, pennies, and half-pennies, of silver, but so debased the coinage, that it was, for the first time, prohibited in England, or rated at a depreciated standard. The amount of deterioration was one-fifth of the whole value; and was estimated nearly at that proportion in the calculations of the English. David's successors not only followed his example, but carried out the principle of it with a boldness and a rapidity of expansion which excite surprise. Three, two, and one of the English pennies successively, and in speediness of change, became equal to four of the Scottish. The money of Scotland was at length carried so far along the career of deterioration, as, about the year 1600, to become only one-twelfth of the English in value; and, at this miserably depreciated rate, it has ever since stood in abstract or comparative reckoning. Robert II., who ascended the throne in 1371, introduced gold pieces, and coined £17 12s. out of one pound of gold. Mary coined royals of 10, 20, and 30 shillings, generally known under the name of Crookston dollars. James VI. coined merks, half merks, quarter merks, and half-quarter merks, and nobles and half nobles. Charles II. coined pieces of 4 merks and 2 merks, dollars of 56 shillings each in value, half-dollars, quarter dollars, half-quarter dollars, and sixteenths of dollars. James VII. coined 40 and 10 shilling pieces; and William and Mary pieces of 60, 40, 20, 10, and 5 shillings. At the epoch of the Union, nearly £900,000 existed in Scotland in the different coins of various nations; and the whole specie was recoined in uniformity with the English standard, and, with very little addition of paper currency, put into circulation, to the permanent exclusion of the old and wofully depreciated coins.—Copper money, or billon, generally known by the name of black money, was introduced to Scotland a century and a-half before it appeared in England. The copper coins of James II., III., IV., and V.,—the largest of which is about the size of a modern shilling, but very thin,—were probably intended to pass for groats and half-groats. Mary coined placks, or fourpenny pieces; James VI. coined bodles, or twopenny pieces, and hardheads, or threepenny pieces; and Charles II., and William and Mary, besides repeating parts of the former coinage, coined bawbees.—The early weights and measures of Scotland were derived chiefly from England, during the 12th century; and, whatever may have been their variety, they long continued to serve every practical end among an uncommercial people. The parliament, desirous to maintain fairness and uniformity, appointed standards in the several departments; and, probably with a reference to the respective manufactures of the burghs, assigned the keeping of the standard ell to Edinburgh, that of the reel to Perth, that of the pound to Lanark, that of the firlot to Linlithgow, and that of the jug to Stirling. Yet these standards seem to have been very carelessly kept,—so much so, that one of them was, for a long period, actually lost; and they did not prevent the usages of Scotland from becoming discrepant with those of England, or even from assuming various and perplexing local peculiarities. An uniformity of weights and

measures was, from time to time, desiderated and attempted as a great social benefit; it was decreed by the act of Union to extend over both divisions of the United Kingdom; and it was pleaded and abstractly exhibited in numerous elaborate pamphlets, which were fruitlessly lauded by the learned, and coolly neglected or stolidly gazed at by the ignorant. In spite of both laws and logic, the people remained so wedded to their practices, that, till the recent introduction of Imperial weights and measures, dissimilarities which arose during the torpidity and ignorance of the feudal times, continued, with many of the properties of an intricate puzzle, to perplex our theorists and embarrass our dealers.

ANTIQUITIES.

The number and variety of Druidical remains in Scotland are very great; and they abound most in the recesses of Perthshire among the spurs of the Grampians, indicating these deep seclusions to have been the principal Scottish seat of the aboriginal superstition. Druidical altars are of two sorts,—flat stones, which are either upright or recumbent,—and cromlechs, which consist each of several stones usually placed upon their respective edges, and always supporting a large broad stone, so as to possess, jointly with it, a rude resemblance to a massive modern table; and the altars of both sorts are numerous, and, for the most part, are connected with Druidical circles, or other Druidical works,—though the cromlechs occasionally appear in some deep solitude without any accompaniment. Druidical cairns differ from the better known sepulchral cairns, and may be distinguished from them by their connexion with other Druidical works, by their being usually fenced round the base with a circle of stones, by their being approached along an avenue of upright stones, and by their having each on its summit a large flat stone, on which the Druid fires were lighted. Rocking stones, which are huge blocks so poised as to be easily moved, or made to oscillate, and which excite the wonder of the vulgar, and have provoked controversies among the learned, are, in some instances, supposed to be natural curiosities, but on the whole are generally allowed—whether of natural or of artificial origin—to have been made the tools of the degenerate Druidical priesthood, for imposing on the savage and the superstitious; and though not numerous, they occur with sufficient frequency to occupy a commanding place among the country's earliest antiquities. Druidical circles have, to a very great amount, been removed, since the epoch of georgical improvement, to make way for the plough; yet they continue to exist in such wondrous plenty, and such great variety, as to render continued notices of them in accounts of parishes, monotonous and tiresome.—Sepulchral remains of the earliest inhabitants of Scotland, though they have to an enormous amount been swept away by the same cause which has thinned the Druidical circles, are still very numerously traceable in almost every part of both the continent and the islands, and may be considered under the several distinctions of barrows, cairns, cistvaens, and urns,—the two former constituting tumuli, and the two latter their most remarkable contents. The tumuli, in most instances, are circular heaps, resembling flat cones; and, in many instances, are oblong ridges, resembling the upturned or inverted hull of a ship. Most of them are composed of stones; many of a mixture of stones and earth; some wholly of earth; and a few wholly or chiefly of sand. Cairns and barrows are mutually distinguished by the former being of stones and the latter of earth; and both, when they are conical and covered with green sward, are vulgarly called hillocks. The tumuli are of uniform general character in all parts of Scotland and in England, the cairn prevailing in the northern division of the island, and the barrow in the southern, owing simply, as would seem, to the respective abundance on the surface of the countries of lapidose and of earthy substances; and, in the very numerous instances in which they have been opened and explored, they have been found to contain the ashes, the hair, or the bones, of human bodies, either nakedly interred, or carefully shut up in cistvaens and urns. The cistvaen, in strict accordance with the meaning of the word in the British language, is a stone chest; it is very various in size, and even in form; it contains, for the most part, ashes and bones, and occasionally an urn; and it very generally, among both the vulgar and the learned, bears the name of a stone-coffin. Urns are found generally in tumuli unenclosed in cistvaens, but occur also beneath the surface of level ground; they are composed usually of pottery, and sometimes of stones; and they are of different shapes and sizes, and according to the taste of the times or the ability of the parties concerned

with them, are variously ornamented.—An occasional connexion, dictated apparently by policy, exists between the sepulchral tumuli and the Druidical circles; and a connexion, both more frequent and more natural, exists between these tumuli and the British strengths.—Akin to the simple and more common and plenteous sepulchral tumuli, are some large sepulchral cairns, which denote the fields of ancient conflicts. Besides being of comparatively large bulk, and having a comparative multiplicity of contents, these cairns are characterized by the vicinity of fragments of swords, of bows, and of flint-pointed arrows; they have, on the whole, thrown a faint light on the remote martial history of Scotland; and by the plurality of their occurrences among the bases of the mountain-rampart of the Highlands, they have contributed, along with some cognate antiquities, to evoke much controversy on the *questio vexata* as to the scene of the celebrated battle of the Grampians. Some of these cairns, which still remain, are called Cat-stanes; and the same name—which seems plainly to be derived from the British Cad, or the Scoto-Irish Cath, ‘a battle’—is applied, in various instances, to single stones.—Numerous stones of memorial, or rude pillars, apparently very ancient, and raised by the same people as the Cat-stanes, exist in every district, and, in allusion to their upright position, are traditionally called standing-stones; they are in their natural state, without the mark of any tool, and, of course, are very various in form; they frequently appear single, and frequently, also, in groups of two, three, four, and even a greater number; and, in general, from their wanting inscriptions and sculpturings, they have failed to transmit the events which they were reared to commemorate. Another class of standing-stones are of a later date, and are of two species,—the one triumphal, and set up to commemorate some happy national event, such as a victory over the Danes; the other Romishly monumental, and erected with the double design of noting the scene of a disaster, and of bespeaking the prayers of passengers for the souls of persons who, in the course of the disaster, were slain or otherwise perished: both kinds have sculptured on them the figure of a cross, with various knots of grotesque scroll-work, vulgarly denominated Danish Tangles; and, in some instances, they are charged with a kind of hieroglyphics.—British strengths, consisting of circular and oval hill-forts, and other safeguards, are surprisingly numerous. Their situation in reference to the districts they command, their mutual or relative positions, and the accommodations attached to them, all indicate that they were constructed rather for the purpose of protection against the attacks of neighbouring and consanguineous tribes, than for that of repelling or checking an invading enemy. They occupy eminences in districts which, even in the earliest ages of Scottish population, must have been the most habitable and fructiferous; they frequently appear in compact or not far dispersed groups of three, four, and even a larger number; and they are so disposed in their groupings, that a view of all is obtained from the site of each, and that a larger and stronger one commands the rest from the centre, and seems to have been the distinguished post of the chief. The larger strengths were in many instances converted, at the Roman invasion, into Roman posts; and the groups have often intruded among them Roman camps, which seem to have been constructed in astute perception of the nature of the ground, with the evident purpose of watching and overawing them. The forts are exceedingly various in area, strength, and details of construction; but, in general, they consist of an interior central building, one, two, or three concentric ramparts, and one or two exterior ditches. Two ranges of small forts, each, in general, perched on the summit of a dome-like hill, or conical rising ground, extend along the north side of Antoninus’ wall,—the one between the friths of Forth and Clyde, and the other along the face of the country on the north bank of the Forth; both, in the case of each of their forts, bear the name of Keir, evidently a corruption of the British Caer, ‘a fort;’ and they appear, from local and comparative circumstances, as well as from an intimation by Tacitus, to have been the only Caledonian posts erected with the design of opposing the Roman progress. The ramparts of all the British forts were composed of dry stones and earth, without any appearance of mortar or cement; and they varied in outline, from the circular or oval, to the wavingly irregular, according to the figure of the hills whose summits they crowned. Connected with some of the forts, were outworks on the declivity of the hills below, which were probably designed to shelter the cattle belonging to the defenders of the fort.—Subterranean safeguards, or hiding-holes, have been discovered in many parts of Scotland, and seem, in most instances, to have been constructed, or improved and adopted, by the pristine people during a rude age. A few of them are entirely artificial; consist of one, two, or three apartments

of various dimensions, but generally very small; constructed entirely underground of large rude stones, without any cement; and containing, in most cases, unequivocal relics of having been human abodes. Natural caves, which abound on the rocky coasts, and among the cliffy dells and ravines of Scotland, have very numerous been improved by artificial means into places of great strength; and, in some instances, they are of large capacity, and retain distinct vestiges of enlargement or modelling within, and especially of fortification by various contrivances without. Other caves, chiefly of small capacity, and in very sequestered situations, are replete with interest as the known or reputed hiding-holes of the patriotic Scots during the Baliol usurpation, and especially of the sturdy and noble Covenanters during the Stuart tyranny and persecution.

Scottish antiquities of Roman origin are so well known and understood, and, in all their great instances, are so fully described in the body of our work, that they require no particular illustration. Any separate and consecutive notice of them which could fling light on their interesting features, would be a sketch—necessarily too expansive for our available space—of the history and the scenes of Agricola's campaigns, and of the actions of Lucius Urbicus. The chief of them are Antoninus' wall, separately noticed in the alphabetical arrangement; roads or causeways, which intersected the whole territory south of Antoninus' wall, and ran up in decreasing ramifications to the Moray frith, and are noticed in our articles on counties and districts; and quadrangular camps, fortified stations, bridges, and innumerable minor antiquities, profusely noticed in probably two-thirds of all the considerable articles in our work.—Pictish antiquities are curious rather for their obscurity and singularity, than for either their number or their imposing character. The most magnificent—if, indeed, they be of Pictish origin—are vast artificial terraces cut in parallel rows along or around the face of hills, and literally, with their base and back-ground, resembling stupendous amphitheatres. They occur, in instances singular for either boldness or beauty, in Glenroy, Glen-Spean, Glen-Guy, Markinch in Fifeshire, Glammis in Forfarshire, and various places in Peeblesshire. In the last of these counties, they are unhesitatingly ascribed to the Picts; in the Highland districts, they are traditionally said to have been cut for the accommodation of royal and baronial hunting parties; and, as a whole, they have been regarded by some antiquarians as made by the Romans for itinerary encampments. Whoever constructed them must have been a people of singular laboriousness, skill, and perseverance; and, at the same time, so eccentric in character, or so wasteful in energy, as effectually to have left their design an enigma to future observers. Pictish houses, as they are vulgarly called, are antiquities peculiar to Scotland, and not infrequently occur on the north coast: they are conical towers, all built without cement, open in the centre, with two or three rows of galleries for lodgings constructed in the body of the walls, and, in some instances, square repositories for warlike arms. Vitified forts are also peculiar to Scotland, and are ascribed to the Picts almost solely for the doubtful reason of their having hitherto been discovered chiefly in the north. Vitification is their distinguishing and very remarkable feature; it has clearly been effected by the action of fire upon vitrifiable materials, either accidentally or designedly employed in the construction of the walls; and it exists to such a degree, that the numerous ingrediental parts of the wall are either run or compacted together, or in some places so divested of their lapidose properties, as to appear like vast masses of coarse glass or slugs. Except for their vitrification, and that some of their ramparts appear to have had a mixture of earth and rubbish with the stones, the vitrified forts are, in all respects, or as to at once peculiarity of site, form, mode of construction, and accompaniments, similar to the hill-forts of the Britons. They were introduced to public notice only so late as 1777; and have been the subject of considerable philosophic controversy as to the cause of their vitrification,—the discoverer of them and his followers maintaining that they were designedly vitrified by their builders, and display great astuteness in the practice of a remarkably singular, and, at the same time, puissant, mode of architecture; while two other classes—the latter probably with truth—allege respectively that their present form is the effect of extinct volcanic agency, and that they were vitrified by the accidental effects of artificial fire upon materials selected without design, and naturally of an easily vitrifiable character. Another species of building attributed, though doubtfully, to the Picts, is very common in Ireland, but exhibits only two specimens in Scotland, respectively at Abernethy and at Brechin: it is a tall, slender, cylindrical tower, coned at the top, very curious as a piece of architecture, but the subject of mazy and manifold disputations as

to its designed use. Inaugural stones are a class of monuments intimately associated with the most distinguished archæology of the Scoto-Irish and the Irish, and were used in the inauguration of the chieftains of the Irish clans. The chief Scottish antiquity of this class is the famous coronation-stone, now in Westminster, but anciently located successively at Dunstaffnage and at Scone, and noticed in our article on the former of these places.—Earthen works, additional to the barrows of the Britons, are a miscellaneous class of antiquities, and of various date and origin. Small circular intrenchments are not infrequent, and are supposed to be Danish forts. Elongated, flattened mounds, occur in a few instances, bear the name of Bow-butts, and are believed to have been constructed and used for the exercise of archery. Moats, or large artificial moundish hillocks, platformed on the summit, and ascending at a regular gradient on the sides, were places for the administration, over considerable districts, of public justice; and court-hills, not very dissimilar to them in appearance, were the sites of the baronial courts previous to the demolition of the feudal system. Both are very common in Scotland; and sometimes, or even very generally—according to the belief, at least, of local antiquaries—the characters and uses of the two are concentrated in one object,—the same mound being both moat and court-hill. “These moat and court-hills,” says Grose, “serve to explain the use of those high mounts still remaining near our ancient castles, which were probably judgment-seats, but have been mistaken for military works, a sort of ancient cavaliers, raised to command the moveable towers, so commonly used for the attacks of fortresses. I, among others, for want of having seen and considered these moat and court-hills, was led to adopt that idea.”—The ecclesiastical antiquities of Scotland consist of monasteries, collegiate churches, and a few chapels, parish-churches, and hospitals; and appear all to be of not higher date than the 12th century. The religious buildings of the Culdees seem, for a considerable time, at least, to have been plain, fragile, and of very primitive workmanship; and, even toward the close of the Culdee epoch, they probably were, in no instance, of a kind either to resist the influences of time by their durability, or to woo the cares of the conservator by their architectural attractions. Our ecclesiastical antiquities are, in consequence, all Romish; and, considered as works of art and magnificence, they are by no means inferior in point of execution to those of England. The most exquisite specimens are the abbeys of Melrose, Kelso, and Jedburgh, and the church of Elgin; specimens of great beauty are the abbeys of Dunfermline and Paisley; very handsome specimens are the abbeys of Dundrennan and Newabbey; the grandest specimens—those which best combine architecture with amplitude—are the abbeys of Holyrood and Arbroath; and the specimens in the highest state of repair are the cathedral of St. Mungo in Glasgow, the church of St. Magnus in Kirkwall, and the church of St. Giles and Trinity College church in Edinburgh. Each of these, as well as of every other, whether extant or extinct, which presents in landscape or in history any feature of interest, our work fully notices and describes in its appropriate place.—The ancient border-houses, fortalices, and castles of Scotland, though small, seem to have been very numerous. Major says there were two in every league. Most of them are remarkably similar to one another; and, in general, each is a high square tower, surmounting a beetling rock or other abrupt eminence, and, in the case of many, overhanging some stream, or the sea. The towers are, for the most part, extremely strong, often from 13 to 15 feet thick in the walls; and they rise in height to 3 or 4 stories, each story vaulted, and the whole covered with a vaulted roof. At every angle, re-entering as well as salient, is a turret, supported like the guerites at the salient angles of modern bastions; at each end of the tower, adjoining the roof, is commonly a triangular gable, the sides diminishing by a series of steps called crow steps; and near the top of the tower usually runs a cornice of brackets, like those which support machicollations. At the bottom of most of the towers was the prison or pit, a deep, dark, noisome dungeon, to which the miserable prisoners were let down by ropes; and an iron door to the chief entrance to the tower was also no infrequent means of security. In some instances, a tower was double,—two being built together at right angles with each other, constituting a figure somewhat like that of the letter L or T, and forming a kind of mutual defence or partial flank. As luxury and security increased, both these towers, and the single or more common one, were enlarged with additional buildings for lodgings, frequently surrounded by walls, and, in some instances, as in those of Linlithgow-palace and Loudoun-castle, eventually made the mere nucleus of modern, magnificent, princely mansions. The old towers were often the abodes of an

almost incredibly large number of inmates ; and as they were sparingly lighted through very small windows, they must have been as gloomy as unwholesome. When any of them were taken by an enemy, they were usually burned ; but as they were little else than mere masses of stone, they suffered no damage except a little besooting or singeing ; and, immediately afterwards, undergoing repair, and receiving a boastful though rude emblazoury of their owners' arms, and the date of their own disaster and renovation, they, in some instances, exhibit to the eye a curious tracery and surprising profusion of inscriptions, armorial bearings, and miscellaneous devices.

EARLY HISTORY.

The aborigines of Scotland seem, beyond any reasonable doubt, to have been clans of the same Gaelic origin as those who, in the most early ages, settled in England. Scotland, at the epoch of Agricola's invasion, may be viewed as a mirror which reflects back the condition of England at the earlier era when Julius Cæsar introduced the Roman arms to Britain, and also that of Gaul at the still remoter period when Roman ambition subdued the common parent of the British nations. Caledonia, in its largest extent, from the Tweed and the Eden on the south, to Dunnet-head in Caithness on the north, was distributed among twenty-one tribes of Britons. Those on the east coast, or Lowlands, owing to the greater fertility of the soil, must have been more numerous and potent than those of the western or Highland districts ; and all, accordantly with ancient Celtic usage, were mutually independent, and could be brought into union or co-operation only by the pressure of danger. The Ottadini—whose name seems to have been derived from the Tyne or Tina—occupied the whole coast-district between the southern Tyne and the frith of Forth, comprehending the half of Northumberland, the whole of Berwickshire and East-Lothian, and the eastern part of Roxburghshire ; and had their chief town at Bremenium, on Reed-water, in Northumberland. The Gadeni—whose name alludes to the numerous groves which adorned and fortified their territory—inhabited the interior country immediately west of that of the Ottadini, comprehending the western part of Northumberland, a small part of Cumberland, the western part of Roxburgh, all Selkirk and Tweeddale, much of Mid-Lothian, and nearly all West-Lothian ; and they had Curia, on Gore-water, for their capital. The Selgovæ—whose country lay upon “ a dividing water,” and who gave name to the Solway—inhabited the whole of Dumfries-shire, and the eastern part of Galloway, as far as the Dee ; and had, as their chief towns, Trimontium at Brunswark-hill in Annandale, Uxellum at Wardlaw-hill in Caerlaverock, and Caerbantorigum at Drummorie, in the parish of Kirkcudbright. The Novantes—who are supposed to have taken their name from the abundance of streams in their country—possessed all central and western Galloway, between the Dee and the Irish sea ; and had, as their principal towns, Lucopibia on the site of the present Whit horn, and Rerigonium on the north shore of Loch-Ryan. The Damnii inhabited all the expanse of country from the mountain-ridge which divides Galloway and Ayrshire on the south, to the river Earn on the north, comprehending all the shires of Ayr, Renfrew, and Stirling, all Strathclyde, and a small part of the shires of Dumbarton and Perth ; and had the towns of Vanduarina on the site of Paisley, Colonia in the south-eastern extremity of Strathclyde, Coria in Carstairs, Alauna on the river Allan, Lindun near the present Ardoch, and Victoria on Ruchil-water in Comrie. The Horestii inhabited the country between the Forth and the Tay, comprehending all Fife, Kinross, and Clackmannan, the eastern part of Strathearn, and the district west of the upper Tay, as far as the river Brand. The Venricones possessed the territory between the Tay and the Kincardineshire Carron, comprehending the Gowrie, Stormont, Strathmore, and Strathardle, sections of Perthshire, all Forfarshire, and the larger part of Kincardineshire ; and had their chief town, Or, or Orrea, on the margin of the Tay. The Taixali inhabited the northern part of Kincardineshire, and all Aberdeenshire to the Deveron ; and had Devana, at the present Normandykes on the Dee, for their capital. The Vacomagi possessed the country between the Deveron and the Beaully, comprehending Braemar, nearly all Banffshire, the whole of Elginshire and Nairnshire, and the eastern part of Inverness-shire ; and had the towns of Ptoroton or Alata Castra at the mouth of the Beaully, Tuessis on the east bank of the Spey, and Tamea and Banatia in the interior. The Albani—whose name seems to allude to the height and ruggedness of their mountains, and who, in consequence of their becoming subjugated by the Damnii,

were afterwards called *Damnii-Albani*—inhabited the interior districts between the southern mountain-screen of the loch and river Tay, and the mountain-chain along the southern limit of Inverness-shire, comprehending Breadalbane, Athole, Appin, Glenorchy, and a small part of Lochaber. The *Attacotti* possessed the country between Loch-Fyne and the commencement of the Lennox or Kilpatrick hills, comprehending Cowal and the greater part of Dumbartonshire. The *Caledonii Proper* inhabited the interior country between the mountain-range along the north of Perthshire, and the range of hills which forms the forest of Balnagowan in Ross, comprehending all the middle parts of Ross and Inverness. A vast forest, which extended northward of the Forth and the Clyde, and which covered all the territory of this tribe, gave to them their name, originally *Celyddoni* and *Celyddoniaid*, 'the people of the coverts,' and, owing to the greatness of the area which it occupied, occasioned its Romanized designation of *Caledonia* to be afterwards applied strictly to all the country north of the Forth and the Clyde, and loosely, but at a later date, to the whole kingdom. The *Cantæ*—so named from the British *Caint*, which signifies an open country—possessed Easter Ross and Cromarty, or the district lying between the Beaully and the Dornoch friths. The *Logi*—who probably drew their name from the British *Lygi*, a word which was naturally applied to the inhabitants of a sea-coast—possessed the eastern part of Sutherland, or the country between the Dornoch frith and the river Helmsdale. The *Carnabii*, who, like a cognominal tribe in Cornwall, derived their name from their residence on remarkable promontories, occupied the country north of the Helmsdale, or a small part of Sutherland, and all Caithness, except the north-west corner. The *Catini*, a small but warlike tribe, from whom the Gaelic inhabitants of Caithness and Sutherland at the present day are ambitious of proving their remote descent, inhabited the narrow territory, partly in Caithness and partly in Sutherland, between the Forse and the Naver. The *Mertæ* possessed the interior of Sutherland. The *Carnonacæ* possessed the north and west coast of Sutherland, and the west coast of Cromarty, from the Naver round to Loch-Broom. The *Creones*—whose name was expressive of their fierceness—possessed the coast between Loch-Broom and Loch-Duich. The *Cerones* inhabited the whole west coast of Inverness, and the Argyleshire districts of Ardnamurchan, Morven, Sunart, and Ardgower, or the coast between Loch-Duich and Loch-Linnhe. The *Epidii*—who derived their appellation from the British *Ebyd*, 'a peninsula,' and from whom the Mull of Kintyre anciently had the name of the *Epidian* promontory—occupied the whole country enclosed by Loch-Linnhe, the territory of the *Albani*, Loch-Fyne, the lower frith of Clyde, the Irish sea, and the Atlantic ocean.

The Caledonian tribes, at the epoch when history introduces them to notice, appear to have been little raised, in their social connexions, above the condition of rude savages, who live on the milk of their flocks, or the produce of the chase. According to the doubtful and darkly-tinted intimations of Dio, indeed, they possessed wives and reared their children in common, they lived in the most miserable hovels, they chose to live in a state of almost entire nudity, and they practised, like the heroes of more ancient times, a system of mutual plunder and professional robbery. Herodian concurs in exhibiting them in these sombre and repulsive hues at even so late a period as the 3d century. Yet, according to all testimony, they were brave, alert, and acquainted with various arts; they had remarkable capacity for enduring fatigue, cold, and famine: they were famous alike for speed in conducting an onset, and for firmness in sustaining an attack. Their vast stone monuments, too, which still remain, their hill-forts of such ingenious and elaborate construction as could not even now be taken by storm, and the gallant stand which they systematically opposed to the disciplined valour of the Roman armies, exhibit them in lights quite incompatible with an alleged state of unmitigated barbarism. But though advanced in civilization very little beyond the first stage, they had scarcely any political union. They are said by Dio to have been literal democrats, acting as clans, and adopting any public measure only by common consent, and an universally and equally diffused authority; but they may be allowed, on the one hand, to have rejected the coercion of any chieftainship, or autocracy, or monarchic power, and, on the other, to have placed themselves, like the American Indians, under the aristocratic sway of their old men. Their armouries were generally furnished with helmets, shields, and chariots, and with spears, daggers, swords, battle-axes, and bows. The chiefs in command, or in bravery, alone used the helmet and the chariot; and the common men fought always on foot, with shields for defence, and with all sorts of the offensive weapons

for attack. Their chariots were sometimes aggregated for making a vehicular onslaught, and were drawn by horses which are said to have been small, swift, and spirited. Their vessels for navigating the inland lakes, and even the seas which surround and so singularly indent the country, consisted only of canoes and currachs. The canoe seems to have belonged to a period preceding the epoch of record; it was the stock of a single tree, hollowed out with fire, and put into motion by a paddle; and it has frequently been found in marches and drained lakes, and occasionally of a construction remarkably skilful and polished. The currach was certainly in use among the Britons of the south, and very probably was in use also among the Britons of Caledonia, in the days of Julius Caesar; and is described by him as having its body of wicker-work covered with leather, and as accommodated with a keel, and with masts of the lightest wood. The currachs are even called little ships; they were pushed boldly out into the far-spreading sea; and were frequently, or rather currently, employed in invasions from the wooded north or 'the Emerald Isle' upon the shores which became seized and fortified by the Romans. Adamnan, in his *Life of St. Columba*, describes the currach which that apostle of Scotland employed in his voyages, as possessing all the parts of a ship, with sails and oars, and with a capacity for passengers; and he adds, that in this roomy, though seemingly fragile vessel, he sailed into the north sea, and, during fourteen days, remained there in perfect safety.

In the year 78, Agricola, at the age of 38, commenced his skilful soldierly career in Britain. His first and second campaigns were employed in subduing and Romanizing Lancashire, and the territory adjacent to it on the south and the east. His third campaign, conducted in the year 80, carried the Roman arms to the *Taw*, 'an expanded water,' 'an estuary,' probably the Solway frith. In his fourth campaign, or that of 81, he overran all the eastern and central Lowlands, to the Forth and the Clyde. In his fifth, or in 82, he invaded "that part of Britain which is opposite to Ireland," or lower Nithsdale and the whole extent of Galloway. In the summer of 83, he crossed the Forth at what is now called Queensferry, and almost immediately experienced alarms from learning both that the tribes in his rear had dared to act offensively, by attacking the strengths he had erected for protecting of his conquests, and that the tribes in his front menaced him with confederation and a vigorous resistance; but he pushed forward among the Horestii, found the clans for the first time in mutual co-operation, was assailed by them at Loch-Orr in Fife, in the very gates of his camp, repelled and broke them after a furious engagement, and, without much further trouble, brought all the Horestii under his yoke. In 84, he passed up Glendevon, through the opening of the Ochil-hills, and defiling toward "Mons Grampus," or the Grampian-hill, which he saw before him, he found the Caledonians, to the number of 30,000, confederated, and under the command of Galgacus, already encamped at its base; and he there fought with them a battle so obstinate, that only night forced it to a termination, so discouraging to the aborigines that they retired to the most distant recesses of their impervious country, and so curious in archæology as to have occasioned a thousand disputes, and no small expenditure of learning and research, in attempts to fix its precise theatre. The Lowlands south of the lower Tay, and the Earn, being now all in his possession, and a powerful body of the tribes of the conquered district enrolled with him as auxiliaries, a voyage of discovery and of intimidation was ordered by him round the island, and was achieved by the safe return of the Roman fleet to the Forth. Agricola was now recalled, through the envy of the Emperor Domitian; and the silence of history during the 35 years which followed, at once intimates the absence of any events of interest, and evinces the power of Agricola's victories as a general, and the wisdom of his measures as a statesman.

In 120, the Emperor Adrian built the celebrated wall between the Tyne and the Solway; and, though he did not relinquish the conquered territory north of these waters, he practically acknowledged himself to hold it by a partial and comparatively insecure tenure. The Ottadini, the Gadeni, the Selgovæ, and the Novantes, had neither domestic tumult nor devastation from invaders to engage their attention; they had learned the arts of confederation, and were strong in numbers and in union; they began to feel neither overawed nor restrained by the Roman stations which were continued in their territory; and they broke out into insurrections, and ran southward in ravaging incursions, which the Romans had not leisure to chastise, or even effectually to check. In 139, the year after Antoninus Pius assumed the purple, Lollius Urbicus was deputed as the Proprætor of Britain, to quell a general revolt, and reduce the inhabitants to

obedience; and, in 140, he marched northward to the friths, tranquillized the tribes beyond them, and even began successfully to bring under the power of his arms the whole Lowland country northward, as far as the Beaully frith. With the view of over-awing the tribes to the south, as well as of repelling the wild clans who ranged among the mountain-fastnesses on the north, he constructed the great work from Carriden on the Forth, to Dunglass on the Clyde, which is described in our alphabetical arrangement under the title ANTONINUS' WALL. Iters, or highways, were carried in many ramifications through the country south of the wall, and in several lines along or athwart the conquered country to the north; and stations were established in multitudinous commanding positions, for garrisoning the Roman forces, and maintaining the natives under a continual pressure. Scotland was now divided into three great sections,—the district south of Antoninus' wall, which was incorporated with the Roman government of South Britain,—the Lowland country, between Antoninus' wall and the Beaully frith, which is said to have been now erected into a Roman province, under the name of Vespasiana,—and nearly all the Highland district, north of Loch-Fyne, or the most northerly indentation of the Clyde, which still retained its pristine state of independence, and began to wear distinctly the name of Caledonia. The tranquillity of the subjugated tribes till the death of Antoninus, in 161, about which time probably Lollius Urbicus ceased to be proprætor, sufficiently indicates the vigour of the administration throughout all the Roman territory. Disturbances which broke out immediately on the accession of Marcus Aurelius to the empire, were speedily quelled by Calphurnius Agricola, the successor of Lollius Urbicus; yet they were followed by the evacuation, on the part of the Romans, of the whole province of Vespasiana. The tribes beyond Antoninus' wall, thrown back into a state of independence, slowly nursed their energies for invasion,—made, in 183, predatory incursions beyond the wall,—regularly, toward the close of the century, over-ran the Roman territory,—entered, in 200, into a treaty with the Lieutenant of Severus,—and, in 207, renewed their hostilities, and provoked the emperor to attempt a re-conquest of their country. Early in 209, Severus, after making imposing preparations, marched at the head of a vast force into North Britain, found no obstruction south of Antoninus' wall, and even penetrated into the territories of the Caledonians without encountering much resistance. The tribes, unable to oppose him, sued peace from his clemency, surrendered some of their arms, and relinquished part of their country. He is said to have felled woods, drained marshes, constructed roads, and built bridges, in order to seize them in their fastnesses,—to have lost 50,000 men in destroying forests, and attempting to subdue the physical difficulties of the country,—to have subjected his army to such incredible toils as were sufficient to have brought a still greater number of them to the grave without feeling the stroke of an enemy. Caracalla, his son and successor, is supposed by some to have faintly, while Severus lived, followed up his policy, and to have fought with the Caledonians on the banks of the Carron; but early in 211, after Severus' decease, he relinquished to them the territories which they had surrendered to his father, secured to them by treaty independent possession of all the country beyond the wall, and took hostages from them for their conservation of the international peace. The Caledonians, henceforth for nearly a century, cease to mingle in Roman story: they appear not to have interested themselves in the affairs of the Romanized Britons; and they were little affected by the elevation of Cæsars or the fall of tyrants, by Carausius' usurpation of Romanic Britain, or by its recovery at his assassination as a province of the empire. But the five Romanized tribes south of the northern wall, though too inconsiderable to figure as a part of the Roman world, and for a time too poor and abject to draw the notice of their own quondam brethren, eventually became sufficiently Romanized, and carried onward in social improvement, and surrounded with the results of incipient civilization and industry, to be objects of envy to the poorer and more barbarous clans who retained their independence. In 306, the earliest date at which the Picts are mentioned, or any native names than those of the aboriginal British tribes are introduced, "the Caledonians and other Picts," after appearing to have made frequent predatory irruptions, and to have been menacing the south with a general invasion, provoked a chastisement from the Roman legionaries, and were compelled by Constantius, at the head of an army, to burrow anew behind the vast natural rampart of their Highland territory. In 343, the Picts are said, on doubtful authority, to have made another inroad, and to have been repelled by a short campaign of the Emperor Constans. In 364, the Picts, who in that age were divided into two

tribes by the names of Dicaledones and Vecturiones,—the Attacotti, who still retained their ancient British name and position on the shores of Dumbarton,—and the Scots, who are first noticed in history in 360, who were a transmarine and erratic people from Ireland, and who appear to have made frequent predatory invasions of the Roman provincials from the sea, and to have formed forced settlements on the coast,—all three simultaneously made an incursion more general and destructive than any which had yet defied the Roman arms in Britain. Theodosius was sent, in 367, into Britain, to restore tranquillity, and is said, though erroneously, to have found the Picts and the Scots in the act of plundering Augusta, the predecessor-city of the modern London. In two campaigns of 368 and 369, he drove the invaders, wherever he really found them, back to the northern mountains, repaired the wall of Antoninus, and erected the country lying between that wall and the southern one into a Roman province, under the name of Valentia, additional to four which already existed in South Britain. The Picts and the Scots, forgetting, in the effluxion of a quarter of a century the punishment inflicted on them, and emboldened by the peril with which the empire was menaced by the continental hordes, again, in 398, burst forth like a torrent upon Lowland Britain, but, by the energy of Stilicho, the Roman general, were again stemmed, driven back, and flung behind another renovation of the great northern wall. But early next century they trod down every barrier, and began a system of incessant and harassing incursion, which amounted, on each occasion, to little or nothing less than temporary conquest. In 408, the British provincials were so awed and alarmed by them, that they assumed a sort of independence in self-defence, called earnestly to Rome for help, and were told by their masters to rule and defend themselves; in 422, aided by a legion which was sent in compliance with a renewed and wailing cry for assistance, they are said to have repelled the invaders, to have repaired, for the last time, the fortifications by which the Picts had been overawed, and to have, in consequence, won a respite of some years from the disasters of invasion; and, in 446, pressed anew by the Pictish foe, and abjectly acknowledging themselves for the first time to be Roman citizens, they made a vain appeal to their ruined masters for protection, and were despondingly told that Rome could no longer claim them as her subjects, or render them assistance as their citizens.

At the period of the Roman abdication, the sixteen tribes who ranged unsubdued beyond the wall of Antoninus, and then bore the denomination of the Picts, were the only genuine descendants in North Britain of the Caledonian clans. They acquired, from their independence, paramount importance, when the country ceased to be overawed by the Roman power; and during the four succeeding centuries of the North-British annals, they figured as the dominating nation. The five Romanized tribes of Valentia, who had long enjoyed the privilege of Roman citizenship, speedily assumed independence, and organized for themselves a separate and national government. Early after the Roman abdication, the Angles, or Anglo-Saxons, on the one hand, settled on the Tweed, and began gradually to oblige the Ottadini to relinquish for ever their beautiful domains; and the Scots from Ireland, on the other, colonized Argyle, commenced to spread themselves over all the circumjacent districts, and entered a course of tilting with the Pictish government, which, after the bloody struggles of 340 years, ended in its destruction. The history of all these four parties, between the years 446 and 843, belongs to what, with reference to the power which predominated, may distinctively and appropriately be called the Pictish period, and is briefly sketched in our article PICTS.

The fate of the eastern ones of the five Romanized tribes of the province of Valentia after the Roman abdication, differed widely from that of those in the west. The Ottadini and the Gadeni, left in possession of the country from the Forth to the Tweed, and between the sea and the midland mountains, seem not to have erected themselves into an independent and dominant community, but to have resumed the habits and the policy of the early British clans, and when they saw their country early invaded by the Anglo-Saxons, more as settlers than as plunderers, they, with some bravery, but with little skill and less concert, made resistance when attacked, till, through disunion, ebriety, and unmilitary conduct, they speedily became subdued and utterly dispersed. The Selgovæ, the Novantes, and the Damnii, with the fugitive children of the other two tribes, erected their paternal territories into a compact and regular dominion, appropriately called Cumbria, or Regnum Cambrensi, or Cumbrensi. This Cumbrian kingdom extended from the Irthing, the Eden, and the Solway, on the south, to the upper Forth and Loch-Lomond on the north, and from the Irish sea and the frith of Clyde, eastward

to the limits of the Merse and Lothian ; and, with the usual inaccuracy of the Middle ages, it was frequently and almost currently made to bear the name of the kingdom of Strathclyd or Strathclyde. Its metropolis was *Alcluyd*, or Aldclyde, 'the rocky height on the Clyde,' to which the Scoto-Irish subsequently gave the name of *Dun-Briton*, 'the fortress of the Britons,' a name easily recognisable in the modernized word Dumbarton. On the south-east, where the open country of Teviotdale invited easy ingress from the Merse, the kingdom suffered speedy encroachments from the Saxons, and, along that quarter, though inland from the original frontier, and screened interiorly by a vast natural rampart of mountain-range, an artificial safeguard, called the Catrail, 'the partition of defence,' was constructed : see article CATRAIL. From 508 to 542, Cumbria, or Strathclyde, acknowledged the authority, and exulted in the fame of some extraordinary original, who figures as the redoubtable King Arthur of romance, who imposed the name of *Castrum Arthuri* upon Alcluyd, or Dumbarton, and has bequeathed a tenfold greater number of enduring names to Scottish topographical nomenclature than any other ancient prince, and who, whatever may have been the real facts of his history, seems to have achieved many feats, to have received a treacherous death-wound on the field of battle, and to have altogether bewildered by his character and fate the rude and romancing age in which he figured. In 577, Rydderech, another noted king of Strathclyde, but noted for his munificence, defeated Aidan of Kintyre on the height of Arderyth. In years between 584 and 603, the Cumbrians, aided by the confederacy of the Scoto-Irish, fought four battles against the intrusive and invading Saxons, and were twice victorious, and twice and concludingly the vanquished. On many occasions, they had to fight with the Picts attacking them from the north ; on some, with their occasional allies, the Scots, attacking them from the west ; and, on a few, with the Cruithne of Ulster, and other Irish tribes, attacking them on the south-west and south. In 750, the Northumbrian Eadbert seems to have traversed Nithsdale and seized Kyle ; and, in 756, that prince, jointly with the Pictish Ungus, seized the metropolis, though not the castle, of Alcluyd. Yet the descendants of the Romanized Britons were not conquered. Their reguli, or chiefs, indeed, often ceased from civil broil or foreign conflict, to succeed in unbroken series ; but, when the storm of war had passed away, they long ceased not to reappear, and wield anew the seemingly extinct power. The Cumbrians, though unable to prevent considerable encroachments on all sides within their ancient frontiers, and though slowly diminishing in the bulk and the power of their independence, remained a distinct people within their paternal domains long after the Pictish government had for ever fallen.

A body of Saxons, a people of Gothic origin, the confederates of those Angles who first set foot on South Britain in 449, debarked on the Ottadinian shore of the Forth immediately after the Roman abdication. Amid the consternation and the disunitedness of the Ottadini, the new settlers rather overran the country than subdued it ; and, though they seem to have directed neither their attacks nor their views northward of the Forth, they are said to have formed settlements along the coast of its frith, almost as far as the east end of Antoninus' wall. In 547, Ida, consanguineous with the new settlers, one of the most vigorous children of the fictitious Woden, and the founder of the Northumbrian monarchy, landed, without opposition, at Flamborough, and, acting on a previous design, pointed his keen-edged sword to the north, carried victory with him over all the paternal domains of the Ottadini, and paused not in a career of conquest, and of compelling subjugation, till he had established a consolidated monarchy from the Humber to the Forth. After the defeat of the Cumbrians in 603, Ethelfrid, the second successor of Ida, took possession of the borders of the Selgovæ, and compelled the western Romanized Britons in general to acknowledge the superior energy and union of the Saxons. Edwin, the most potent of the Northumbrian kings, assumed the sceptre in 617 ; he acquired a fame of which tradition has spoken with awe ; he struck respect or awe into the hearts of Cumbrians, Picts, Scots, and English ; he appears to have, in some points, pushed his conquests from sea, and to have made large accessions to his kingdom on the south and west ; and he strengthened or occupied in some new form in the north, that notable "burgh" or fortification which, as *par excellence* his, survives in the castle of Edinburgh, the magnificent metropolis of all modern Caledonia. Edfrid, who was the third in subsequent succession, and ascended the throne in 671, was successful in several enterprises, particularly in an expedition in 684, against the unoffending Irish ; but at his overthrow and death in 685, at Dunnichen, by the Picts, he bequeathed destruction to his govern-

ment inward from the Solway, and downward to the south of the Tweed, and effectually relieved the Scots and the Strathclyde Britons from the terror of the Northumbria-Saxon name. The quondam subjects of the diminished kingdom remained in Lothian and the Merse, but probably did not distinctly acknowledge any particular sovereign. The Northumbrian rulers had, for several successions after Egfrid, little connexion with the territory of modern Scotland; but, though they never reacquired all the ascendancy which he lost, they began, about the year 725, to be again strong along the Solway and in Southern Galloway, and, before the close of 756, they had formed settlements in Kyle and Cunningham, and disputed with the Strathclyde Britons the possession of the central Clyde. From the moment of the sceptre beginning to possess its ancient burnished brilliance, it was wielded, for several reigns, by feeble and careless hands, and it speedily became lustreless, rusted, and broken. Ethelred, the last of these dowdy monarchs, having been slain during an insurrection in 794, Northumbria, during the 33 following years, became the wasted and distracted victim of anarchy, and was thenceforth governed by earls, under the sovereign authority of the English kings. The Cruithne of Ulster, who had made frequent incursions on the shores of the lower Clyde, took advantage of the Northumbrian weakness to form at length a lasting settlement on the coast of Galloway. The Anglo-Saxons, during the Pictish period, left, in the Gothic names of some places on the Solway, and of many between the Tweed and the Forth, indubitable traces of their conquests, their settlements, and their national origin.

The history of the Scots, or Scoto-Irish, from the date of their definitive settlement in the country of the ancient British Epidii, in 503, to that of their being united to the Picts, and becoming the ascendant section in North Britain, is more perplexed and obscure than almost any passage of equal interest in the records of nations. They were too rude to possess the art of writing, and too restless to endure the repose of study; and when they found a bard able and willing to speak of them to posterity, they were permitted by their narrow views of social order to show him only the names and the personal nobleness of their reguli and chieftains as the elements of their fame. Even the genealogy and the series of their kings have been flung into nearly inextricable confusion by the contests of the Scottish and of the Irish antiquaries for pre-eminence in antiquity. Of their origin, and of their colonizing the ancient Epidia, or the territory of the present Kintyre and Lorn, as clear an account as can be furnished will be found in our article DALRIADS. They probably obtained original footing in Argyle from silent sufferance; and by natural increase, and frequent accessions of new immigrants from the Irish Dalriada, they may have become nursed into strength in the strong recesses of the west, before the Picts were refined enough to suspect any danger from their vicinity. The vast natural power of all their frontiers, the thinness of the hostile population on the sides where they were unprotected by the sea, the facility for slow and insensible, but steady and secure encroachment among the mountain districts on the east and the north, the great distance of the seat of the Pictish power, and the intervention of the stupendous rampart of the Highland frontier between the operations of that power and the aggressions of settlement or slow invasion half-way across the continent,—these must have been the grand causes of the Scots eventually acquiring energy and numbers, and a theatre of action, great and ample enough to enable them to cope with the dominant nation of North Britain, and to conduct negotiations and achieve enterprises, which resulted in their own ascendancy.

Kenneth, who succeeded to the throne of the Scots in 836, was the grandson by his mother of the Pictish kings Constantine and Ungus II., who died respectively in 821 and 833. On the death of Uven, the son and the last male heir of Ungus, in 839, Kenneth claimed the Pictish crown as his by right of inheritance. Two successive and successful competitors kept it five years from his grasp; but both wore it amid disturbance and in misery; and the last met a violent death at Forteviot, the seat of his power. Kenneth could dexterously take advantage of such confusions as arose from the loss of a battle or the death of a king, to achieve an important revolution; and finding no man bold enough again to contest his claim, he easily stepped into the vacant throne. In his person a new dynasty, and a consolidation of popular interests among two great people who had hitherto been at variance, began. The Scots and the Picts were congenial races of a common origin, and of cognate tongues; and they readily coalesced. Their union augmented the power of both, and, by the ascendancy of the Scots, gave at length their name to all Pictavia and Dalriada, and to the accessions which afterwards were

made by the two great united territories. The Scottish period, or that of Scottish ascendancy previous to Saxon intermixture, extended from the union of the Scottish and the Pictish crowns in 843, to the demise of Donald Bane, in 1097. During this period, the ancient territories of the Selgovæ, the Novantes, and the Damnii, became colonized by successive hordes of immigrants from Ireland, who gave their settlements the name of Galloway ; and who, by a strange fortune, became known under the appellation of the ancient Picts. The kingdom of Cumbria, or Strathclyde, was crushed, distorted, and dismembered, the northern part passing completely under the Scottish dominion, and the southern part asserting a rude, subordinate independence, and existing as an appendage of the Scottish crown by the doubtful ties of an obscure title ; and Caledonian Northumbria, or the beautiful district of Lothian and the Merse, after a series of bloody struggles for upwards of two centuries and a half, became integrated with Scotland by the lasting connection of rightful cession and mutual advantage.

The next great period is the Scoto-Saxon, extending from 1097 to 1306. In the former period, the Gaelic Scots predominated ; in this, the Saxon-English, or Anglo-Saxon. A new people now came in upon the old ; a new dynasty ascended the throne ; a new jurisprudence gradually prevailed ; new ecclesiastical establishments were settled ; and new manners and a new speech overspread the land. Malcolm Canmore, the last but two of the strictly Scottish kings, married an Anglo-Saxon princess, and became the father of Edgar, who, by means of an Anglo-Norman army, and after a fierce contest, enforced his title to a disputed crown, and commenced the Scoto-Saxon dynasty. Under Malcolm Canmore, the domestics and relations of his queen aided her powerful influence round the royal seat in introducing Saxon notions ; some Saxon barons fled, with their dependants, into Scotland, from the violence of the Norman conquest ; numerous fugitives were afforded an asylum by the king, from insurrections which he fomented in the north of England ; vast numbers of young men and women were forcibly driven northward by him during his incursions into Northumberland and Durham ; and preliminary movements, to a great aggregate amount, and with a great cumulative influence, were made toward a moral and social revolution. When Edgar, aided by the results of these movements, brought in a force from without altogether foreign in speech and character to the Scots, and entirely competent in power to overawe them, and perfunctorily to settle their disputes by placing their leader on the throne, he rendered the revolution virtually complete—introducing in a mass a commanding number of foreign followers to mix with the native population, and treat them as inferiors, and throwing open a broad ingress for a general Anglo-Saxon, Anglo-Norman, and Anglo-Belgic colonization. So great and rapid was the influx of the new people, that, in the reign of David I., the second in succession after Edgar, men and women of them are said—somewhat hyperbolically, no doubt—to have been found, not only in every village, but in every house, of the Scottish, or Scoto-Saxon, dominions. So powerful though peaceful an invasion, was necessarily a moral conquest, a social subjugation ; and its speedy aggregate result was to suppress the Celtic tongue and customs, or coop them up within the fastnesses of the Highlands,—to substitute an Anglo-Norman jurisprudence for the Celtic modes of government,—and to erect the pompous and flaunting fabrics and ritual of Roman Catholicity upon the ruins of the simple though eventually vitiated Culdeeism which had so long been the glory at once of Pict, of Dalriadic Scot, of Romanized Briton, and of Galloway Cruithne.

At the accession of Edgar, or the commencement of the Scoto-Saxon period, Scotland, with the exception of its not claiming the western and the northern islands, possessed nearly its present limits,—the Solway, the Kershope, the Tweed, and the intervening heights forming the boundary-line with England. Northumberland and Cumberland were added as conquered territories by David I. ; but they were demanded back, or rather forcibly resumed, by Henry II., during the minority of Malcolm IV. All Scotland may be viewed as temporarily belonging to England, when Henry II. made captive William I., the successor of Malcolm IV., and obliged him to surrender the independence of his kingdom ; but, in 1189, it was restored to its national status by the generosity of Richard I., and settled within the same limits as previous to William's captivity ; and throughout the remainder of the Scoto-Saxon period, it retained an undisturbed boundary with England, conducive to the general interests of both kingdoms. Lothian on the east, and Galloway on the south-west, were, at this epoch, regarded by foreign powers as two considerable integral parts of Scotland ; and though so far consolidated

with the rest of the country as to afford but slight appearance of having been settled by dissimilar people and governed by different laws, yet they were so far considered and treated by the kings as separate territories, that they were placed under distinct jurisdictions. In 1266, the policy of Alexander III. acquired by treaty the kingdom of Man, and the isles of the Hebridean seas, and permanently annexed the latter to the Scottish crown. When the great barons were assembled in 1284, dolefully to settle the dubious succession to the throne, they declared that the territories belonging to Scotland, and lying beyond the boundaries which existed at the accession of Edgar, were the Isle of Man, the Hebrides, Tynedale, and Penrith. In 1290, the Isle of Man passed under the protection of Edward I. Even essential Scotland, the main territory of the kingdom, was so deeply imperilled at the close of the Anglo-Saxon period, that she could be preserved from the usurping and permanent grasp of insidious ambition only by a persevering and intensely patriotic struggle; and she was at length re-exhibited and settled down in her independence, and reinstamped, but in brighter hues, with the colourings of nationality, by the magnanimity and the indomitableness of her people supporting all the fortune and all the valour of Robert Bruce, the founder of a new dynasty of her kings, and the introducer of a new epoch in her history. An outline of her annals from the days of Bruce downward, sufficiently full to be in keeping with that which we have now sketched of the earlier periods, will be found in the historical section of our article on EDINBURGH.

"Little more than a century ago," says an elegant writer, "Scotland was considered by her southern neighbours as only partially civilized: the violence of the early reformers was still remembered as more allied to savage than to social morality. Latterly, however, if it has not received adequate respect from others—which we are far from affirming—it has done ample justice to itself, in the number, merit, and universal influence of the great characters which it has produced, and is still producing. In this respect—considering its very limited population—it may freely challenge comparison with any other nation. Scotchmen—whether invidiously designated as adventurers, or, more justly, as practical moralists—by their intrepid spirit of adventure—perseverance—suavity—and inflexible integrity, have extended the influence of civilization and humanity over the vast empire of Russia—have imparted to the Americans much of what they possess of moral honesty and civil refinement—and, in almost every country on earth, given examples of probity, industry, and knowledge; while their poets, historians, and philosophers, have amused, instructed, and enlightened the higher ranks in every civilized nation of Europe." It is pleasing to add to the above high testimony on the score of moral and chivalrous characteristics, the following elegant tribute from an English poet:

"Breathe there a race that from the approving hand
Of nature more deserve, or less demand?
So skilled to wake the lyre or wield the sword—
To achieve great actions, or, achieved, record?
Victorious in the conflict as the truce,
Triumphant in a BURNS as in a BRUCE!
Where'er the bay—where'er the laurel grows,
Their wild notes warble, and their life-blood flows!
There truth courts access, and would all engage,
Lavish as youth, experienced as age;
Proud science there, with purest nature twined,
In firmest thralldom holds the freest mind:
While Courage rears his limbs of giant form—
Mocks the rude blast, and strengthens in the storm!
Rome felt—and Freedom to their craggy glen
Transferred that title proud—the Nurse of *Men*!
By deeds of hazard, high and bold emprise,
Trained, like their native eagle, for the skies!
"Long, Scotia stern! thy bugle note resume—
Grasp thy claymore—thy plaided bonnet plume!
From hill and dale—from hamlet, heath, and wood,
Peal the wild pibroch—pour the battle flood!
'In Egypt, India, Belgium, Gaul, and Spain,'
Walls in the trenches—whirlwinds on the plain!—
This meed accept from Albion's grateful breath—
Brothers in arms—in victory—in death!"

The Topographical, Statistical, and Historical GAZETTEER OF SCOTLAND.

ABB

ABBEY, a name frequently given in Scottish topography to a village or hamlet which has been founded upon or near the site of some ancient monastic establishment. Thus we have a village called **THE ABBEY** in the neighbourhood of the abbey of Cambuskenneth; and another of the same name upon the banks of the Tyne, about a mile below the town of Haddington, marking the site of a once flourishing abbey, but of which scarcely a trace now remains. The palace of Holyrood is also known throughout Scotland, and most significantly in Scottish law, as **THE ABBEY, par excellence**: having been reared within the precincts of a famous monastery, the liberty or sanctuary of which, being recognised by law, affords a retreat for insolvent debtors within which they cannot be arrested.

ABBEY PARISH. See **PAISLEY**.

ABBEY ST BATHAN'S, a parish in the northern part of Berwickshire; bounded on the north by the parish of Innerwick in Haddingtonshire, and Cockburnspath in Berwickshire; on the east by that detached portion of Oldhamstocks which lies in Berwickshire, and by Coldingham; on the south by Buncle; detached portion of Longformacus parish, and Dunse; and on the west by Longformacus, and another detached portion of the parish of Oldhamstocks. It is skirted on the east by the head-stream of the Eye, and is intersected by the Whiteadder, and some of its smaller tributaries. It is of a very irregular outline; and measures nearly 6 miles in its greatest length from north-west to south-east; and 4 miles in its greatest length from north-east to south-west. It contains about 5,000 acres, of which nearly 2,000 are arable; the remainder is covered with barren heath or the coarse moorland pasture common to the Lammermoor district within which this parish lies. The best soil is that of the haugh-
ground stretching along both sides of the Whiteadder, which flows through the southern part of this parish from west to east, passing to the north of the kirk-town, which is about 7 miles north by west of Dunse. Population, in 1801, 138; in 1831, 122, of whom nearly all were employed in agriculture. Houses 23. A. P. £1,238.—This parish is in the presbytery of Dunse, and synod of Merse and Teviotdale. Stipend, £155 9s. 3d., of which £61 12s. 11d. from tithes. Glebe £13. Patron, the Crown. Schoolmaster's salary £36 8s. Fees £12. The church is a very ancient structure. Of the abbey or priory, which stood between the church and the river, no vestige now exists. It was founded and dedicated to St Bathan or Bothan, by one of the countesses of March, in

ABB

1170, for nuns of the Cistercian order; and soon acquired large revenues. About two furlongs east from the church, and on the same side of the river, in a field called the Chapel-field, were the now obliterated remains of a small chapel; and about a mile to the north-west were the remains, now likewise obliterated, of the parish-church of Strafontane—probably a corruption of Trois Fontaines—united at the Reformation to St Bathan's, and originally an hospital founded by David I.—A little to the north-west of Strafontane, near the banks of the Monynut, a tributary of the Whiteadder, is Gadscroft, once the demesne of David Hume, the friend of Melville, who died in 1620.

ABBEY-CRAIG, a hill in the parish of Logie, in the vicinity of Cambuskenneth abbey, on which the Scottish army was posted under Wallace, when the Earl of Surrey and Hugh Cressingham advanced to the battle of Stirling, on 12th September, 1297.

ABBEY-GREEN. See **LESMAHAGO**.

ABBOTSRULE, formerly a parish in Roxburghshire, now divided between Hobkirk and Southdean parishes. It stretched about 3 miles along the eastern side of the upper part of the Rule, from Blackcleugh Mouth to Fultonhaugh. The barony of Abbotrule contains 2,343 English acres.

ABBOTSFORD, the far-famed country-seat of our great national Novelist. It is situated in the south-western part of the parish of Melrose, in the county of Roxburgh, on the southern bank of the Tweed, a little above the junction of the Gala Water; 2 miles south-east of the town of Galashiels, 34 south of Edinburgh. The road from Melrose to Selkirk passes close to it. With the exception of the site itself, which looks out upon the river flowing immediately beneath, and a beautiful haugh on the opposite bank backed with the green hills of Ettrick forest, Abbotsford owes its name and all its attractions to its late illustrious proprietor. Before his genius began to transform the place to what it now is—a fairy scene, 'a romance in stone and lime'—a mean farmstead called Cartley-Hole occupied this spot. Sir Walter, on becoming proprietor of the demesne, changed its name to Abbotsford, reared by slow degrees his elegant and picturesque mansion upon it, and laid out and planted the surrounding grounds with singular taste and effect:

"Well might we deem that wizard wand
Had set us down in fairy land."

Descriptions of Abbotsford are so rife that we shall not add to their number; but content ourselves with referring our readers to the pages of the Anniversary

for 1829, where they will find a most graphic and interesting description of this hallowed spot, from the pen of one whose genius enabled him exquisitely to sympathize with the taste of the gifted owner. The master-spirit has departed; but his memory will continue to cast a consecrating radiance around Abbotsford as long as the visions of our fancy shall be peopled with the creatures of his inexhaustible imagination.

ABBOTSHALL, a parish of Fifeshire, touching on its south coast; bounded on the north by Auchterderran; on the east by Kirkcaldy; on the south by the frith of Forth, and Kinghorn; and on the west by Kinghorn, and Auchtertool. Its greatest length, measured from Kirkcaldy links to near Shawsmill in Auchterderran parish, in a line from south-east to north-west, is nearly 4 miles; its greatest breadth about $2\frac{1}{2}$ miles. The area is nearly 3,166 Scotch acres, of which about a sixth part is in wood, chiefly around the seat of Mr Ferguson of Raith, the principal proprietor. The soil is light, but fertile and well-cultivated. The face of the country rises gradually as we proceed northwards; but dips again towards Auchterderran and Auchtertool. The principal stream is the Tiel, which rises a little to the north-west of Auchtertool, and flows in a south-east direction, forming the boundary between the parishes of Abbotshall and Kinghorn. Raith loch is an artificial sheet of water formed by damming up the streamlet which issues from Camilla loch in Auchtertool; it covers about 20 acres, and discharges itself into the Tiel. The kirk-town may be considered as a prolongation to the westwards of the long straggling town of Kirkcaldy. It is called Linktown; is a burgh of regality under Ferguson of Raith; and has two annual fairs, viz., on the 3d Friday of April, and of October. A more recently built portion is called the Newtown. Population of the parish, in 1801, 2,501; in 1831, 4,206. Houses 494. A. P. £65 32s. The population of this parish increased by 939 betwixt the years 1821 and 1831, chiefly in consequence of the introduction of flax-spinners from Ireland. About 60 hands are employed in fishing, and 100 in agriculture. There were 709 hand-loom weavers in the parish in 1838.—This parish was disjoined from Kirkcaldy in 1650. It is in the presbytery of Kirkcaldy, and synod of Fife. Stipend £199 11s. 11d. Glebe £36. Patron, the laird of Raith. Church built in 1788. Sittings 825. Schoolmaster's salary £34 4s. 4 $\frac{1}{2}$ d., with about £35 fees, and £25 from other sources: he has also a house and garden. About 140 children attend the parish-school; and about 300 attend other schools. A new church and parish has been recently erected at Invertiel, in the parish of Kinghorn; and a portion of Abbotshall, with a population of nearly 900, annexed to the new *quoad sacra* parish. There is a United Secession church at Bethelfield, which was established 100 years ago. The present place of worship was built in 1836. Sittings 1,096.—This parish is said to have derived its name from an abbot of Dunfermline having built a country house near the site of the present church. A fine yew-tree within the gardens of Raith is thought to mark the locality of the abbot's hall, which was for some time the property of the Scotts of Balwearie, whose family, according to Sibbald, had held their paternal domain within this parish for a period of at least 500 years. This parish has, therefore, the honour of being the reputed birth-place of that arch-magician, Sir Michael Scott; yet, strange to say, tradition is here nearly silent regarding him. The mansion-house of Raith is a handsome edifice, surrounded by beautifully laid-out grounds. See **BALWEARIE**.

ABB'S HEAD (St), a bold promontory on the coast of Berwickshire, in N. lat. $55^{\circ} 56'$; and W. long. $1^{\circ} 56'$: 2 miles north-north-east from Colding-

ham, and 4 miles north-west from the port of Eyemouth. It consists of a huge isolated mass of trap rock, opposing a perpendicular front of nearly 300 feet in height to the billows of the German ocean; on two other sides the point of the headland is nearly equally precipitous; on the fourth it is divided from the mainland by a deep fosse. Tradition relates that, early in the 9th century, Ebba, daughter of Ethelfred, king of Northumberland, fleeing from the amorous suit of Penda, the Pagan king of Mercia, was shipwrecked on this coast, and built a nunnery on this headland in token of gratitude for her preservation. Of this building no remains are now discernible; but within the memory of man there were some relics of the chapel and cemetery attached to it on an eminence about a mile to the east.

ABDIE, a parish in the north of Fife. It is not altogether contiguous; but the larger portion is bounded on the north by part of Newburgh, and the estuary of the Tay; on the east by Flisk, Dunbog, and Monimail; on the south by Collessie; and on the west by Collessie, part of Newburgh, Auchtermuchty, and Abernethy. Measured from the Tay, near Lindores abbey, to near Pathecondie in Collessie, it is 5 miles in length; measured from its extreme eastern to its extreme western point, it is about 6; but its outline is very irregular; one section of it is separated on the west, by the parish of Dunbog, from the main portion; and another portion is cut off, on the east, by the intervention of Newburgh parish. The area is nearly 7,624 imperial acres, of which about 6,000 are under cultivation. The finest land lies along the Tay; here it is a rich alluvial deposit; but the high grounds inland are to a considerable extent covered only with furze and heath. The surface of this parish presents a varied succession of hill and dale. The highest elevation is Norman's Law, in the eastern isolated portion, which rises to the height of 850 feet, with a bold precipitous front, and commands a fine view of the frith of Tay, and the cascade of Govrie on the opposite shore, and the vale of the Eden on the south and east. Clatchard Craig, near Newburgh, is also a remarkable basaltic rock, presenting a precipitous front towards the east. The loch of Lindores, near the centre of the parish, is a beautiful sheet of water nearly a mile in length, covering about 70 acres, fed by a small stream called Priest's Burn, and discharging its waters in the Tay at Lindores. It abounds in perch, pike, eels, and aquatic fowl. At this latter place are the remains of an old castle, which is noticed in Harry the Minstrel's History of Wallace, and near to which, Balfour relates, a battle was fought in June 1300, between the Scots, under that puissant leader, and the English, in which the latter was routed with a loss of 3,000 slain. This engagement is known as the battle of Blackearnside. The finest mansion in the parish is that of Inchrye, the seat of David Wilson, Esq., a little to the west of the loch of Lindores. The old mansion-house of Lindores, near the loch, was the seat of the ancient and noble family of Leslie. The most extensive proprietor is D. Maitland McGill, Esq., of Nether Bankeilour and Lindores; but Lord Dundas, now Earl of Zetland, has the highest rental. Population, in 1801, 723; in 1831, 870, of which about one-third were employed in agriculture. A. P. £7,904. Houses 169.—This parish is in the presbytery of Cupar, and synod of Fife. Stipend £233 9s. Glebe £23. Patron, the Earl of Mansfield. Church built in 1827. Sittings 550. Schoolmaster's salary £34 4s. 4 $\frac{1}{2}$ d., with about £17 fees. Average number of scholars 35. The old church was a narrow ill-lighted building; its ruins on the western shore of the loch of Lindores show some vestiges of antiquity, and several

monuments of the family of Balfour of Denmiln, now represented by Lord Belhaven.—Among the names of eminence connected with this parish is that of Sir James Balfour, Lyon-king-at-arms, under Charles I., and a well-known writer on antiquities and heraldry. He resided at Kinnaird house; and died in 1657.

ABERBROTHWICK. See **ABERROATH.**

ABERCORN, a parish of Linlithgowshire, stretching 4 miles along the south side of the frith of Forth; and bounded on the east by Dalmeny; on the south by Kirkliston, a detached portion of Dalmeny, and Ecclesmachan; and on the west by Lillithgow, and Carriden. Its average breadth is 2 miles. The surface is undulating, and finely wooded; but the only considerable elevations are Binns hill in the western, and Priestinch in the south-eastern quarter of the parish. The principal stream is the Nethermill or Midhope burn which falls into the sea near the kirk. The Union canal runs about $1\frac{1}{2}$ mile through the south-west corner of this parish. The principal proprietor is the Earl of Hopetoun, whose seat—a truly princely mansion, and the last visited by royalty in Scotland—occupies a fine situation on the coast, a little to the east of the kirk. Population, in 1801, 814; in 1831, 1,013. Houses 172. A. P. £7,722.—This parish is in the presbytery of Linlithgow, and synod of Lothian and Tweeddale. Stipend £188 15s. 2d. Glebe £16. Patron, the Earl of Hopetoun. Schoolmaster's salary £34. School fees £36. There are two or three private schools. Bede notices the monastery of Abercorn as the residence of a bishop. No remains of it now exist; nor of Abercorn castle, which was dismantled in 1455, during the rebellion of one of the doughty Douglasses. The estate of Abercorn, in this parish, which gives title to the Marquis of Abercorn, belonged to Sir John Graham, the 'fidus Achates' of Wallace, who fell in the battle of Falkirk, in 1298. Binns was the family-seat of 'the bloody Dalzell,' and is still in the possession of his descendants.

ABERCROMBIE, or **ST MONANCE**, a small parish of Fife, on the northern shore of the frith of Forth, nearly opposite North Berwick law in East Lothian. It is bounded on the north by Carnbee; on the east by Carnbee, and Pittenweem, from which it is divided by the Dreel burn; and on the west by Elie, and Kilconquhar, from both of which it is divided by the Inweary rivulet. It is about $1\frac{1}{2}$ mile in length from north to south, by 1 in breadth. The area is about 800 acres, of which nearly the whole are arable and cultivated. The surface is flat. The principal proprietors are Sir Ralph Abercromby Anstruther, Bart., of Balcaskie, and Sir Wyndham Carmichael Anstruther, Bart., of Anstruther. The village of St Monance is situated close upon the coast, about $1\frac{1}{2}$ mile west of Pittenweem. It is a burgh of barony held under the laird of Newark. It has a small harbour, now resorted to only by one or two barks of small burden and some fishing-boats. Population, in 1801, 852; in 1831, 1,140. A. P. £2,616. Houses 161. In 1831, 69 men belonging to this parish were employed in fishing, and 21 in coal-mines; and 30 families in agricultural operations.—This parish is in the presbytery of St Andrews, and synod of Fife. Stipend £162 0. 11d., of which £32 19s. 4d. is received from the Exchequer. Glebe not valued. Patron, the Crown. Schoolmasters salary £34 4s. 4½d. Fees £44 10s. Average number of scholars 100. There is a private school with about an equal attendance. The old kirk of Abercromby is in ruins, and has not been used as a place of worship for two centuries. It is in the northern part of the parish, and is the burying-place of the Balcaskie family. The church now in use is situated at the west end of the village of St Monance, close upon the beach. It is

a Gothic edifice, originally founded in the 14th century, and, till recently renovated, presenting a singularly antique appearance in its interior furnishings as well as externally. It is now a very handsome place of worship, seated for 528, and preserving as much of its ancient outline as was found consistent with modern ideas of comfort. It is related that David II. having been grievously wounded by a barbed arrow, and miraculously cured at the tomb of St Monance at Inverray, dedicated this chapel to him, and granted thereto the lands of Easter Birnie. Keith says: "This chapel, which was a large and stately building of hewn stone, in form of a cross, with a steeple in the centre, was given to the Black friars, by James III., in 1460-80. The wall of the south and north branches of this monastery"—he adds—"are still standing, but want the roof; and the east end and steeple serve for a church to the parishioners." This parish was known by the name of Abercrombie so far back as 1174. In 1646 the lands of Newark constituting the barony of St Monance were disjoined from Kilconquhar, and annexed *quoad sacra* to Abercrombie. The parish thus enlarged received the designation of Abercrombie with St Monance. In the course of years, and with the decline of the village of Abercrombie and rise of that of Monance, the old title disappeared altogether, and the parish came to be known as that of St Monance, as it is still pretty generally designated, although the old title of Abercrombie has been revived for the last thirty years at the wish of the principal heritor.

ABERDALGIE, a landward parish of Perthshire, bounded on the north by Tippermuir; on the east by Perth, and part of Forteviot; on the south by Forgandenny and the western detached portion of Forteviot; and on the west by Forteviot and Tippermuir. Its average length from east to west is $2\frac{1}{2}$ miles; its breadth 2; area about 2,800 acres. The surface rises gradually from the Erne river which runs along its southern boundary. The soil is in general fertile, but in some districts very thin. The whole parish is the property of the Earl of Kinnoul, whose ancestors acquired it in 1625 from the Earl of Morton. Duplin castle, the seat of the Earl, was burnt down in 1827; but has been rebuilt in a style of great magnificence. Population, in 1801, 542; in 1831, 434. Houses 68. The decrease in population is attributable to the enlargement of farms and the demolition of cottages. A. P. £4,893.—This parish is in the presbytery of Perth, and synod of Perth and Stirling. Stipend £157 19s. 4d. Glebe £24. Patron, the Earl of Kinnoul. Schoolmaster's salary £34 4s. 4½d., with about £14 fees. Scholars about 60. The parish of Duplin was united to this parish in 1618. The present church was built in 1773. A vault at the east end is the burying-place of the Kinnoul family. The battle of Duplin was fought in this parish, August 12th, 1832; see **DUPLIN**.

ABERDEEN, the capital of Aberdeenshire, and the third town in importance in Scotland, consists, strictly speaking, of two distinct towns, the Old and the New, situated at the distance of about a mile from each other, in different parishes, and having distinct charters and privileges, but included within the same parliamentary boundary, and uniting in returning one member to parliament. The population of the united towns, in 1707, was 6,500; in 1801, 27,608; in 1831, 58,019; in 1841, 63,262.

OLD ABERDEEN is a burgh of barony, the seat of a university, and formerly of a bishop's see. It is situated on the right or south bank of the river Don, to the north of New Aberdeen, in the parish of Old Machar. The population of the city, as distinct from the parish, is about 2,000. It is a place of great antiquity, and was of considerable importance towards

the end of the 9th century. David I., in 1154, translated the episcopal see from Mortlach to this place, and granted "to God and the blessed Mary, St Machar, and Nectarius, bishop of Aberdeen, the hail village of Old Aberdeen." Malcolm IV., William the Lion, and James IV., successively confirmed and enlarged the original charter, and conferred extensive grants of lands and teinds on the bishop of Aberdeen. On the abolition of Episcopacy, the right of appointing magistrates fell to the Crown; and, in 1723, a warrant of the Privy council authorized the then magistrates to elect their successors in office in future. Previous to the late municipal alterations, the council, including the provost, four bailies, and a treasurer, consisted of 19 members. The limits of the burgh are ill-defined. In 1834, there were 64 inhabitants of the burgh whose rents were £10 and upwards; and 94 whose rents were £5 and under £10. The revenue of the burgh, in 1832, was £43 5s; the expenditure £14 16s. 6d. The burgh has no debts, and little property: the latter consisting only of a right of common in a moss, and a freedom hill lying north of the Don, the Town-house, feu-duties, customs, and a sum of £310. The magistrates are trustees of £2,791 13s. 4d., three per cent. consols, being a proportion of a bequest left by Dr. Bell to found a school upon the Madras plan; and also of Mitchell's hospital, endowed in 1801, for maintaining five widows and five unmarried daughters of burghesses. There are seven incorporated crafts, but no guildry. Old Aberdeen is a place of little trade. The market is on Thursday; and there are fairs on the last Thursday of April, and the third Tuesday of October.

The Town-house is a neat building, erected towards the close of last century. The Trades' hospital, built on the site of the Mathurine convent, was founded in 1533 by Bishop Dunbar. There are no remains of the Bishop's palace. The Cathedral was originally founded in 1154; but having become ruinous, it was demolished, and a splendid new one founded by Bishop Kinnimonth in 1357. It is said to have been seventy years in progress, but it does not appear to have ever been completed. The nave is used as the parish-church. It underwent some repairs in 1832. It is 135 feet in length, by 64 in breadth. The western window is a very fine one; and the ceiling is of oak beautifully carved. Grose has given a view of this building. It is said to have contained a valuable library which was destroyed at the Reformation. There are some curious and splendid monuments in the interior.

The King's college, the chief ornament of the place, is a large and stately fabric, situated at a little distance from the town on the east side. It appears that there existed, so long ago as the reign of Malcolm IV., a "*Studium generale in collegio canonico-rum Aberdoniensium*," which subsisted till the foundation of this college by Bishop Elphinstone. In 1494, Pope Alexander VI., by a bull dated February 10th, instituted, in the city of Old Aberdeen, or Aberdeen, an university, or "*Studium generale et Universitas studii generalis*," for theology, canon and civil law, medicine, the liberal arts, and every lawful faculty; and privileged to grant degrees. James IV. applied for this bull on the supplication of Bishop Elphinstone, who is considered as the founder. But though the bull was granted in 1494, the college was not founded till the year 1505. It was dedicated to St Mary; but, being taken under the immediate protection of the king, it was denominated King's college. James IV. and Bishop Elphinstone endowed it with large revenues; which were still further increased by James VI. who endowed it with the parsonage and vicarage of St. Machar, and various other

possessions; and Charles I. attempted to unite it with Marischal college, and gifted the bishop's house to the principal. The income of King's college in 1836, derived from endowments, was £1,215; from Crown grants £1,148. In 1840 this college received the munificent bequest of £11,000 from the estate of the late Dr. Simpson of Worcester. Upon the abolition of Episcopacy, the patronage became vested in the Crown. The building is ancient, and contains a chapel, in which the body of the founder is deposited, a library, museum, common hall, rooms for the lectures, and a long uniform range of modern houses for the accommodation of the professors. Considerable additions and repairs were made on the buildings in 1827. The library contains about 30,000 volumes; and is entitled to a copy of all the books entered at Stationers' hall. The chapel is open during the session for the accommodation of the professors and students. It seats from 300 to 350. Behind is the garden of the college, and the principal's house and garden. The session lasts twenty-one weeks, beginning in November. The officers are, a chancellor, who is generally a nobleman, a rector, a principal, a sub-principal, and a procurator who has charge of the funds. The Senatus Academicus elect to all the offices of the university, with the exception of the professorship of oriental languages appointed by the Crown, and that of divinity, which is in the patronage of the synod of Aberdeen. The senate also assumes the power of expulsion. There are nine professorships—humanity, Greek, mathematics, natural philosophy, logic and moral philosophy, oriental languages, civil law, medicine, and divinity. The number of students, exclusive of medical students, attending King's college annually, on an average of the last ten years, has been 365. There are 128 bursaries of from £5 to £50 per annum. The annual amount paid under this head is £1,643. Hector Boethius was the first principal of this college, and was sent for from Paris for that purpose, on a salary of 40 merks Scots, equal about to £2 3s. 4d. In the first report of the University commissioners, published in 1838, it is recommended that the two universities of Aberdeen shall be united into one university, to be called 'The United University of Aberdeen;' but that King's college and Marischal college shall continue separate as colleges for the administration of their respective property and funds.

The parish of Old Aberdeen, or Old Machar, was originally a deanery, called the deanery of St Machar; and comprehended the parishes of Old Machar, New Machar, and Newhills. In ancient times, however, these districts do not seem to have been so many separate parishes, but only chapelries, in each of which divine worship was regularly performed, as the inhabitants of so extensive a district could not conveniently meet in one place for public worship. New Machar seems to have been erected into a separate parish about the time of the Reformation; and Newhills about the year 1663. The parish of Old Machar, or Old Aberdeen, or the Old Town parish, is in the presbytery and synod of Aberdeen. It has been recently divided into four other *quoad sacra* parishes: viz., Holburn, Gilcomston, Bon Accord, and Woodside.

1st. OLD MACHAR. The boundaries of this parish are somewhat uncertain. It includes an extensive landward district, besides the burgh of Old Aberdeen, and part of New Aberdeen. The population, in 1836-7, was estimated at 10,716, of whom 8,064 belonged to the established church, and 2,436 were dissenters. The cathedral of St Machar—as already stated—is the parish church. It has 1,594 sittings. The charge is collegiate. Stipend of the 1st minister, £273 1s. 3d, without a manse or glebe; of the 2d minister, £282 19s. 9d, with a manse and

a glebe of the yearly value of £31 10s.—Schoolmaster's salary £30, with £32 fees, and about £30 emoluments. There were 62 private schools throughout the old parish, which were attended by 2,160 children, in 1833.

2d. HOLBURN. The extent of this *quoad sacra* parish is about 2½ square miles. It is partly a landward, partly a town-district. Population estimated, in 1836-7, at 3,370, of whom 2,658 were churchmen. The church was built by subscription in 1836, at a cost of £1,858, and seats 1,332. The sum of £100 is secured by bond to the incumbent, besides what may be derived from seat-rents after paying the interest on the debt affecting the church.

3d. GILCOMSTON. This is a compact town-parish. It was formerly a chapel-of-ease to Old Machar, and was erected into a *quoad sacra* parish, in May, 1834. Population, in 1836-7, 4,950, of whom about two-thirds belonged to the establishment. The church was erected by subscription, in 1769-71; and enlarged in 1796. It has 1,522 sittings. Stipend £230, entirely derived from seat-rents. There is no manse or glebe. The dissenting congregations in this parish are: 1st, St John's, Episcopalian. Established in 1812. Sittings 386. Average attendance 300. Stipend from £120 to £130. 2d, Original Seceders. Established in 1810. Sittings 500. Average attendance 200. The minister has a house adjoining the chapel. Stipend £115.

4th. BON ACCORD. This parish is wholly a town-parish. It was created in 1834. Population, in 1836-7, 4,387, of whom 2,557 belonged to the establishment, and 1,206 to other denominations. Church built in 1823, by Scotch Baptists; bought for a chapel-of-ease in 1828. Sittings 840. Stipend £150, wholly derived from seat-rents. There is a Baptist congregation in this parish, renting a hall with 180 sittings, of which about one-half are usually occupied.

5th. WOODSIDE. This parish was erected in 1835. It is without the royalty, but within the parliamentary boundary, and consists of four villages. Population, in 1835, 4,238, chiefly residing in the three contiguous villages of Cotton, Tanfield, and Woodside. The latter, which is the principal village, is distant about 1½ mile from Old Aberdeen, and 2 miles from New Aberdeen. Church built in 1829-30, at a cost of £1,890. Sittings 1,420. Stipend £150, without manse or glebe. There are four sabbath-schools, but no parochial school. There is an Independent congregation at Cotton. Established in 1819. Stipend £50, with a house and garden. Sittings 480.

The extent of the parish of Old Aberdeen is 16½ square miles; its form irregular. Its south-east corner forms the north and west boundaries of New Aberdeen, or the parish of St Nicholas. It extends about 2½ miles up the Dee; by which river it is bounded on the south, and divided from the parish of Nigg, in the county of Kincardine. The western boundary stretches in a crooked line from a point 100 yards above the bridge of Dee to the Scatter burn, and thence along its course to its junction with the Don. By this line it is divided from the parishes of Banchory-Davenick and Newhills. Joining the Don, the boundary line follows the course of that river to a point about 6 miles from its mouth. In this quarter, the Don divides it from the parishes of Newhills and Dyce; the northern boundary divides it from the parishes of New Machar and Belhelvie, and meets the sea at the Black Dog, a solitary rock of a black colour, in the sands of Belhelvie, within high water mark. On the east, the parish is bounded by the sea, from the Black Dog to the mouth of the Dee: the extent of coast being about 6 miles, and in

general flat and sandy. The greatest length of the parish from north to south may be 7½ miles, and its greatest breadth 4. It rises in a gentle slope from the sea, and though there is no eminence in it that deserves the name of a mountain, yet its surface is beautifully diversified by rising grounds. The windings of the Dee and the Don, the number of gentlemen's seats and villas, together with the varied prospects of the sea, the rivers, the cities of Old and New Aberdeen, and the villages of Gilcomston and Hardgate, give a pleasant variety to the general appearance of this district. The steep and rugged banks of the Don, from the house of Seaton to below the old bridge, are truly romantic. On the south side of the parish, near to Ferryhills, are many curious little sandhills, lying in all directions, and moulded into various forms seemingly by the retiring of some immense quantity of water. The soil is in some places naturally fertile, but many parts of it have been forced into fertility by labour and expense. Where it has not been meliorated by art, it is in general shallow and sandy. The population of the entire district was, in 1821, 18,312; in 1831, 25,017. Assessed property, in 1815, £19,125.—In 1281, Henry Cheyne (nephew of John Comyn, who was killed by Bruce at Dumfries in 1305) succeeded to the bishopric of Aberdeen. After Comyn's death, the bishop openly espoused the interest and party of the Comyns; but was obliged to fly into England, and remain there for several years, during which time the revenues of his bishopric remained unapplied. King Robert having been afterwards reconciled to Cheyne, allowed him to return, and possess the see of Aberdeen as formerly. Whereupon the bishop, with the concurrence, or more probably by the command of his sovereign, applied the accumulated rents of his bishopric towards building a bridge over the Don, about 1,200 yards from its mouth, upon the great high road leading northward from Aberdeen. Cheyne died in 1329; the bridge was probably erected about the year 1320. This is the well known 'Brig o' Balgownie,' and consists of one large pointed Gothic arch of 72 feet span. Sir Alexander Hay bequeathed an annual sum of £2 5s. 8d. to the support of this bridge, which having accumulated to upwards of £20,000, the town-council of New Aberdeen, in 1825, obtained an act authorizing them to apply part of the savings in building a new bridge in a more convenient situation. The new bridge, 500 feet in length, was completed in 1830. It is of five arches, and crosses the river at a point 450 yards lower down than the old bridge.—Bishop William Elphinstone left a considerable legacy to build a bridge over the river Dee, near Aberdeen, but died in 1514, before any thing was done towards it. Gavin Dunbar, son of Sir James Dunbar of Cumnock, by Elizabeth daughter of the earl of Sutherland, having succeeded to the bishopric of Aberdeen in 1518, fulfilled his predecessor's intentions, and erected the greatest part of the bridge where it now stands, about the year 1530. This bridge having gone into decay, was restored out of the funds belonging to itself, between the years 1720 and 1724. A new suspension bridge has been thrown across the Dee 2,600 yards lower down the river. Both the bridges of Dee and Don are under the sole management of the magistrates of New Aberdeen; and it appears that a large portion of their funds has been directed to other purposes.

NEW ABERDEEN, the capital of Aberdeenshire, and the third Scottish town in importance, is situated on a rising ground on the northern bank of the river Dee, near the mouth of that river, and about 1½ mile to the south of the river Don; 108 miles north-north-east of Edinburgh, 115 south-east of Inverness, and 425 north by west of London; in

N. lat. $57^{\circ} 9'$, and W. long. $2^{\circ} 6'$. Population, in 1801, 17,597; in 1821, 26,484; in 1831, 32,912. The number of houses, in 1831, was 2,588; the number of houses of £10 and upwards yearly value 1,195, exclusive of Old Aberdeen. Assessed rental £55,000. The name has assumed various orthographies; thus we have Aberdoen, Abyrdeyn, Aberden, and Habyrdine. To the Norsemen this town was known by the name Apardion.

All historical accounts agree that Aberdeen was erected into a royal burgh towards the end of the 9th century. But the original charter of erection, and all the more ancient title-deeds and records of the burgh, have perished. The oldest municipal document extant is a charter by William the Lion in favour of his burgesses of Aberdeen, and others, "ex aquilonali parte de Munth manentibus." It is supposed this alludes to the Month, a high ridge of hills near Fettercairn in Kincardineshire, through which the high road, called the Cairn-of-Month road, passes from Brechin towards the Dee. This charter was granted at Perth, but is without date or year, though it must have been towards the end of the 12th century. By a second charter the same monarch granted to the burgesses of Aberdeen exemption from tolls and customs for their chattels throughout the whole kingdom. King William's successors frequently resided here, and had a palace which stood upon the site of the present Trinity church and Trades hospital in the Shiprow. On the 14th of July, 1296, Edward I. of England entered Aberdeen, where he remained five days and received the homage of the bishop and dean, and of the burgesses and community. In the 14th year of his reign, King Robert Bruce made a gift and conveyance to the community of Aberdeen of the royal forest of Stocket. Besides this, he granted various other privileges and immunities to the citizens and burgh of Aberdeen, and in particular the valuable fishings in the Dee and Don. In 1333, Edward III. of England having sent a fleet of ships to ravage the east coast of Scotland, a body of English landed and attacked by night the town of Aberdeen, which they burnt and destroyed. In 1336, Edward III. invaded Scotland, and led his army as far north as Inverness, during which time the citizens of Aberdeen attacked a party of the English forces which had landed at Dunnotar, and killed their general. In revenge, Edward, on his return from Inverness, made a fierce attack upon Aberdeen, put the greater part of the inhabitants to the sword, and again burnt and destroyed the town. Some years after this, the town was rebuilt, and considerably enlarged, particularly towards the rising grounds upon which the principal part of it now stands, viz., the Woolman-hill, St Catharine's-hill, the Port-hill, and the Castle-hill; the old town having lain more towards the east along the Green and Shiprow. In the re-edification of their town, the citizens were greatly assisted by King David Bruce, in acknowledgment of their steady loyalty and attachment both to himself and to his father. King David II. resided for some time at Aberdeen, and erected a mint here, as appears from some coins still extant. It was after being rebuilt as above, that the town was called the New Town, or New Aberdeen, in contradistinction to the Old, which had been burnt down. In 1411, at the battle of Harlaw, the citizens of Aberdeen turned the fortunes of the day against Donald of the Isles; and, in 1547, they fought with equal gallantry but less success at Pinky. In the early part of the year 1560, the Reformation obtained a permanent footing in Aberdeen. Adam Heriott was the "first minister of the true word of God in Aberdene." He died in 1574. Dur-

ing the civil wars of the 17th century, Aberdeen suffered much between the two contending parties; it being common for whatever party happened to be in possession of the town to levy heavy subsidies from the unfortunate Aberdonians. In September 1644, the Marquis of Montrose, with an army of about 2,000 men, approached the town of Aberdeen, and summoned it to surrender; but the magistrates, after advising with Lord Burley—who then commanded in the town a force nearly equal in number to the assailants—refused to obey the summons; upon which a battle ensued within half-a-mile of the town, at a place called the Crabstone, near the Justice-mills, in which Montrose prevailed, and many of the principal inhabitants were killed. "There was little slaughter in the fight," says Spalding, "but horrible was the slaughter in the fight fleeing back to the town." "Here it is to be remarked," adds the worthy Commissary-clerk, "that the night before this field was foughten, our people saw the moon rise red as blood, two hours before her time!" Charles II. landed at Speymouth, July 4, 1650, and visited Aberdeen a few days after. He revisited the city in February 1651, after the defeat of his hopes at Worcester and Dunbar, and in September 1651, General Monk's army took possession of Aberdeen. On Sept. 20, 1715, the Chevalier was proclaimed at the cross of Aberdeen; and on Sept. 27, 1745, the chamberlain of the ducal family of Gordon proclaimed the Pretender on the same spot. Aberdeen has been repeatedly visited by the plague. It raged here in 1401, 1498, 1506, 1514, 1530, 1538, 1546, 1549, 1608, and last in 1647, when it carried off 1,760 of the inhabitants out of a population of about 9,000. The city of Aberdeen has received various grants from different sovereigns of Scotland, from William the Lion, downward to James VI. inclusive; and, in Sept. 1638, the whole of the former charters and grants were ratified and confirmed by charter from Charles I. From 1336, when the town was last burnt, to 1398, it does not appear that any public records were regularly kept here. But from the last-mentioned period to the present time, (except for about twelve years in the beginning of the 15th century,) there is a regular and uninterrupted series of records in the town's chartulary. The county records do not reach a more remote date than 1503.

Aberdeen is a large and handsome city, having many spacious streets, lined on each side by elegant houses, generally four floors in height, which are built of a very fine granite from the neighbouring quarries. Union street is upwards of a mile in length, and of great beauty. It is intersected by a ravine through which the Den burn flows, and across which a beautiful arch is thrown,—of 130 feet span, and only 35 feet of rise. The Market-place, in the centre of the city, is a large oblong square, called Castle street, or gate, from a fortress built by Oliver Cromwell, which formerly occupied a rising ground on its eastern side. On the north side of it is the Town-house, and adjoining to it the Court-houses and Prison, forming a connected range of buildings, of two wings, with a central tower surmounted by a spire 120 feet high. Opposite to the Town-house, the Aberdeen Banking company, established in 1766, have a handsome office. On the west side is the Athenæum, or News room, an elegant structure, erected in 1822. Near the western extremity of Castlegate is the Cross, the most complete structure perhaps of the kind in the kingdom. It is an hexagonal stone building, highly ornamented with bas-reliefs of the kings of Scotland, from James I. to James VII. with a Corinthian column in the centre, on the top of which is a unicorn bear-

ing on its breast a scutcheon charged with the Scottish lion. This building was originally erected in 1686, on the site of a more ancient cross; it was thoroughly repaired in 1821. Leading off to the north from Castlegate is King-street, which is little inferior in splendour to Union-street. It was formed in 1801. It has several handsome public buildings, among which are the County Record-office, the Medico-chirurgical Society's hall, St. Andrew's Episcopal chapel, and the North church. Broad-street, in which Marischal college—to be afterwards described—is situated, is celebrated as having been the residence of Lord Byron while under his mother's care. The finest of the modern public buildings is the County-rooms, erected in 1820, at an expense of £11,500, which was defrayed by the counties of Aberdeen and Banff. The Infirmary is a large plain building. It was established in 1742, and is supported by subscriptions, collections, and donations; the number of patients annually relieved is about 900. The Lunatic hospital was built by subscription in 1800. It is about half-a-mile to the north-west of the town. The Bridewell, a large castellated building, was erected at an expense of £10,000. The Jail was erected in 1828-31. It is 129 feet in length, by 93 in breadth, enclosing a court divided into six compartments, and having the turnkey's lodge in the centre.—The first buildings of Aberdeen were probably a few rude huts near the spot where Trinity church now stands. The ground next occupied was probably in the neighbourhood of the castle and the green; and the town gradually extended in the direction of the Shiprow, the Exchequer row, and the south side of Castlegate. In 1545 a stone edifice was considered a mark of great opulence; and so late as 1741 the houses on the west side of the Broadgate were constructed of wood. Westwards of the Gallowgate, there was, till the latter end of last century, a large fenny marsh, called the Loch, which must have occupied a large portion of the north-west quarter of the present city. The early site of the fishing-village of Footdee is now covered with streets and warehouses, extending along the Waterloo-quay. The banks in Aberdeen are: the Aberdeen banking company, already mentioned; the Aberdeen Town and County bank, established in 1825; and the North of Scotland banking company, established in 1836. There are also branches of the Bank of Scotland, the British Linen company, the Commercial bank of Scotland, and the National bank of Scotland. A new post-office is about to be built, towards the erection of which government has granted £2,000.

The principal manufacture of Aberdeen, prior to the year 1745, was knitted stockings, which were mostly exported to Holland, and thence dispersed through Germany. The linen manufacture was subsequently introduced, and now employs about 4,000 hands. The articles chiefly manufactured are thread, sailcloth, Osnaburghs, brown linens, and sacking. The manufacture of sailcloth only commenced in 1795. In the beginning of last century, the woollen manufactures of Aberdeenshire were chiefly coarse slight cloths, called plaidens and fingroms, which were sold from 5d. to 8d. per ell, and stockings from 8d. to 2s. 3d. per pair. These were manufactured by the farmers and cottagers from the wool of their own sheep, and by the citizens from wool brought to the market from the higher parts of the country. These goods were mostly exported to Hamburg. Blankets, serges, stockings, twisted yarns, and carpets, are now manufactured. There were, in 1838, 1,000 looms employed on linen, of which four-fifths were in factories; 130 on cotton; and 300 on woollen carpets. The number of linen and cotton looms was

diminishing, the manufacturers having generally turned their attention to power-loom weaving and spinning; but the woollen or carpet manufacture was on the increase. A first class linen weaver made about 11s. per week; one of the second class, 8s. 6d.; and an old or inferior hand, 4s. 6d.; working on an average about 69 hours a-week. A first class cotton weaver made about 6s. 3d. of weekly wages. Besides small cotton works, three large establishments—in one of which the moving power is water from the Don, and in the other steam-engines—are in constant operation, and employ at least 2,000 people. Some of these companies import their own cotton from America. There are several breweries; and porter and ales in considerable quantities are annually exported to America and the West Indies; there are also many distilleries, some of them on a large scale. Of late years extensive iron-works have been established, at which steam-engines, anchors, chains, cables, and spinning machinery are manufactured: and at one of them several steam-vessels of between 500 and 600 tons per register have been fitted out. The rope manufacture and ship-building, the leather trade, the making of paper, and manufacturing of quills, soap and candles, are also carried on: and a large and increasing trade in the exportation of corn, butter, and eggs, to London, gives employment to a considerable tonnage. Salmon-fishing is also carried on to a great extent, and the fish are principally sent to London packed in ice. Aberdeen salmon appear to have been exported to England so early as 1281. Towards the end of the 17th century Aberdeen annually exported 360 barrels of 250 lbs. each to the continent. From 1822 to 1828, inclusive, being a period of seven years, 42,654 boxes of salmon, chiefly the produce of the Dee and the Don rivers, but including some Spey salmon, were shipped at Aberdeen; and from 1829 to 1835, inclusive, 65,260 boxes. Whittings, or finnockes, are also taken in the Dee, and made an article of trade to the London market. See articles *DEE* and *DON*. In 1819 the feu-duties of the whole fishings amounted to £27 7s. sterling, and it was stated in the House of Commons committee that they were then worth £10,000 per annum. The granite quarries near Aberdeen, which have contributed so much to the decoration of the town, afford also a staple commodity for exportation. The freight to London is about 8s. per ton;* and the vessels in returning generally bring coals from Sunderland. In 1636, when Tucker visited Scotland, there were 9 vessels belonging to Aberdeen, of a total burden of 440 tons. The vessels belonging to the port of Aberdeen, as distinct from those of Peterhead, Stonehaven, and Newburgh, amounted, in 1839, to 254, or 30,032 tons. The total tonnage within the limits of the port was 43,584. The vessels are employed principally in the East India, American, Baltic, Mediterranean, and coasting-trades. Some years ago 14 vessels, averaging 320 tons each, and navigated by upwards of 500 men, were employed in the whale-fishing; but in 1837 there were only 2 vessels employed in this trade. Powerful steam vessels sail regularly once a-week between Aberdeen and London; and steam-vessels sail every alternate day to Leith during eight months of the year.—The harbour of Aberdeen was originally nothing more than an expanse of water communicating with the sea by a narrow and shallow mouth; and the earliest artificial erection within the port was a

* The bulk of a ton of granite is about 15 cubic feet. The prices of Aberdeen granite delivered in London are as follows: A stone of 15 tons weight, 10s. per cubic foot; of 12 tons, 9s.; of 9 tons, 8s.; of 6 tons, 6s.; of 2 tons, 4s. In 1831, 36,353 tons of granite were shipped at Aberdeen. Cubes for paving are delivered in London at about 20s. per ton. This branch of export trade commenced about the year 1769.

bulwark extending from the Shiprow southward. In 1607 the erection of a pier on the south side of the channel was begun; and in 1623 the extension of the wharf to near the present canal was commenced. In 1775 the New pier was begun under the direction of the celebrated Smeaton. It cost £18,000; and proved very useful in lowering the bar at the mouth of the harbour, and preventing future accumulations of sand and gravel. In 1810 an act was passed authorising the corporation to borrow £140,000 for the further improvement of the harbour. At that time the greatest depth of water was 19 feet; it is now, at average stream-tides, 21 feet; the extent of wharfage is 5,000 feet in length; and the harbour must be regarded as one of the most commodious in Scotland. This advantage has, however, been attained at an expenditure of £270,000 within the last 26 years. During the year ending June 30, 1836, shore-dues were levied on 202,043 tons of shipping. The customs levied here in 1368 amounted to £1,960 Scots; in 1656 to £82; in 1839, to £71,892 sterling. The harbour is under the joint management of the magistrates and council, and six trustees.—A canal has been made from the harbour into the interior which joins the river Don, at Inverury, at the distance of 18½ miles north-west from Aberdeen. It was begun in 1795, and finished in 1807, at an expense of £44,000. It has an ascent of 168 feet, and 17 locks.—There is a regular ferry from the harbour to the village of Torrie on the southern shore of the estuary.—The Girdleness lighthouse is built on a conspicuous promontory on the larboard hand in entering the port, in N. lat. 57° 8', and W. long. 2° 3'. It has two lights—a higher and lower—the former visible at 19, the latter at 16 miles.

The following tables exhibit the principal imports and exports of the city of Aberdeen, during each of the years ending June 30, 1834, and 1836:

IMPORTS.

	1834.	1836.
English coals	244,239 bolls	296,619
Scottish coals	56,337 bolls	75,295
Lime	64,433 bolls	76,412
Cotton	1,276 tons	1,223
Flax	2,679 tons	3,350
Hemp	529 tons	536
Wool	1,154 tons	1,483
American wood	1,919 loads	3,358
East Country wo	1,500 loads	2,387
Wheat	10,516 quarters	15,635
Flour	6,596 sacks	8,263
Salt	62,654 bushels	70,092
Iron	2,521 tons	2,928
Whale blubber	1,125 tons	240
Whalebone	63 tons	12

EXPORTS.

	1834.	1836.
Manufactured flax	31,940 b.b.	30,482
Manufactured cotton	14,222 b.b.	16,336
Manufactured wool	17,115 b.b.	20,043
Oats, barley, & bear	75,512 qrs.	69,239
Meal	10,994 bolls	19,375
Cattle	2,405 number	8,048
Horses	29 number	84
Sheep & lambs	940 number	1,407
Pigs	1,001 number	3,034
Dogs	57 number	149
Butter	9,426 cwt.	9,261
Eggs	8,691 b.b.	8,120
Pork	4,597 cwt.	6,006
Porter	2,924 b.b.	3,970
Granite stones	24,158 tons	17,338
Salmon	10,372 b.b.	7,757

Three weekly newspapers are published in Aberdeen. The Journal, which is the oldest, was established in 1748. Aberdeen almanacks have long been celebrated. It appears that these useful manuals were printed here so early as 1626—and probably some years earlier—by Edward Raban, a printer originally from St. Andrews. In 1617 a regular post was established between Aberdeen and Edinburgh.

So early as 1418 a grammar-school existed here; and a school for teaching music, in the 15th century. Several very ample mortifications and donations for pious and charitable purposes have been made by different persons belonging to Aberdeen for the welfare of the community. Robert Gordon, merchant in Aberdeen, by deed of mortification, of date 13th December 1729, and 19th September 1730, founded an hospital for the maintenance and education of indigent boys, being the sons and grandsons of burghesses of guild of Aberdeen, or the sons and grandsons of tradesmen of the said burgh, being freemen or burghesses thereof; and for the purposes of it he assigned his whole estate, personal and real, to the magistrates and the four ministers of Aberdeen, whom he appointed perpetual patrons and governors of the hospital. There are at present 112 boys maintained and educated in this hospital. The branches of education taught, are English, grammar, writing, arithmetic, book-keeping, the elements of geometry, navigation, geography, French, and church-music. Boys must not be under 9 years of age when admitted; and must leave at 16, when they are put to proper trades, under the direction of the governors. The funds have been enlarged by a bequest from a Mr. Simpson, and amount to about £50,000. A club for printing the historical and literary remains of the North-east of Scotland, in imitation of the Bannatyne and similar clubs, has been very recently formed in Aberdeen under the title of 'The Spalding club.'

The Marischal college of Aberdeen was founded by George Keith, fifth Earl-Marischal, in April 1593. According to the deed of foundation, it was to consist of a principal, three teachers denominated regents, six alumni, and two inferior persons, viz., an economist, and a cook. The principal was required to be well-instructed in sacred literature, and to be skilled in Hebrew and Syriac; he was also to be able to give anatomical and physiological prelections. The first regent was specially to teach ethics and mathematics; the second, logic; the third, Latin, and Greek. The Earl reserved to himself and his heirs the nomination to professorships; the examination and admission of the persons so named being vested in the chancellor, the rector, the dean of faculty, and the principal of King's college, the minister of New Aberdeen, and the ministers of Deer and Fetteresso. The foundation was confirmed by the General Assembly which met in the same month in which it was framed; and a few months after, a confirmation was given by parliament. A charter of confirmation was granted by William, Earl-Marischal, in 1623; and a new confirmation by Charles II. in 1661. In all these charters, however, it was specially declared that the masters, members, students, and bursars, of the said college, should be subject to the jurisdiction of the burgh-magistrates. An additional regent was appointed within a few years after the institution of the college; a professorship of divinity was founded in 1616; and a mathematical professorship about three years before. In 1753, the Senatus academicus directed that the students, after being instructed in classical learning, should be made acquainted with natural and civil history, geography, chronology, and the elements of mathematics; that they should then proceed to natural philosophy, and terminate their curriculum by studying moral philosophy. This plan of study, with a few alterations, has since been continued. The office-bearers in Marischal college are a chancellor, rector, and dean-of-faculty. The chancellor is chosen for life by the senate. The rector is elected annually by all the students; as are also his assessors, four in number. The dean is elected by the senate and the senior minister of Aberdeen. The

Senatus academicus consists of the chancellor, rector, dean, principal, four professors termed regents, and the professors of divinity, oriental languages, mathematics, medicine, and chemistry. Besides the regular professors, there are lecturers on anatomy, physiology, surgery, *materia medica*, and Scotch law and conveyancing. These lecturers derive their appointment from both universities. The philosophy session commences on the Wednesday immediately following the last Monday of October, and ends on the first Friday of April. The principal was usually, though not of necessity, professor of divinity. His salary is on an average £345, exclusive of the emoluments of the divinity chair, which averages £114. In 1833, a chair of church-history was founded by the Crown, which is at present held by the principal, and the average emoluments of which are £102. He is appointed by the Crown, in consequence of the forfeiture of the Marischal family. The professor of divinity is appointed by the magistrates and town-council of the burgh. The average salary of each of the four regents is about £179; that of the professor of natural history, £330; of natural philosophy, £331; of moral philosophy, £310; of Greek, £373; of mathematics, £336; of oriental languages, £78; of medicine, £100; of chemistry, £133. There are 40 foundations for bursaries, for the benefit of 106 bursars: 4 of these are of the annual value of £26; and 10 of £25; but the greater part are from £10 to £5; 36 are in the presentation of the council. The average number of students is about 250, exclusive of the divinity and medical students who belong to both King's college and Marischal college. None of the students reside in college. Honorary degrees, in all the faculties, are occasionally conferred by the university. The library of Marischal college, in 1827, contained 11,000 volumes; and the principal and professors had a right, under a decision of the court of session in 1738, to the use of the books transmitted from Stationer's hall to the library of King's college. The only building belonging to the college is the present fabric, on the site of what was the Franciscan convent. It was rebuilt between 1684-1700, and 1739-40; and is again rebuilding on an extensive plan, a royal grant of £25,000 having been made for the purpose. The senate of Marischal college, unlike that of King's college, are favourable to the leading principle of the plan of union of the two universities which has been recommended by the royal commission. Among the most eminent alumni of Marischal college were Gilbert Burnett, afterwards bishop of Salisbury, who took his degree of M.A. here in 1657; James Gregory, the inventor of the reflecting telescope; George Jamesone, the father of painting in Scotland, and who has been called the Scottish Vandyke; Dr Arbuthnot, the friend of Pope; Colin Maclaurin, the mathematician; and Dr Reid, the metaphysician.

By act of 3^d and 4^o William IV. the number of the council is fixed at 19, including the dean of guild. The chief magistrates are a provost and four bailies. Six councillors retire from office annually, and two are chosen by the electors of each of the three wards to supply their places. The jurisdiction of the magistrates extends over the whole city and freedom, but they hold no small debt court. The magistrates and council appoint the city-assessor, town-clerk and depute, city-chamberlain, collector of cess, procurator-fiscal, superintendent of works, quarter-master, gaoler, town-housekeeper, and six town-serjeants. There are two classes of old burgesses: viz., guild-burgesses, and freemen of the seven incorporated trades, consisting of hammermen, bakers, wrights and coopers, tailors, shoemakers, weavers, and flesh-

ers. All of these incorporations possess considerable funds, but the trades are not represented in the council. The lighting and watching of the city are under the charge of commissioners; and the general police is regulated by an act passed in 1829. In 1817 the corporation of Aberdeen became bankrupt, chiefly in consequence of the enormous expenditure incurred in opening two new streets or approaches to the town, under the authority of an act of parliament dated April 5, 1800. The engineer employed had estimated the whole expense at about £42,000, but the total expenditure, up to Whitsunday 1816, amounted to £171,280. The parliamentary commissioners also reported, that while the total average annual revenue of the city for the five years preceding Michaelmas 1832, was £15,184, the total average annual expenditure was £17,528; but this excess arose upon casual expenditure, chiefly in building churches. The town's affairs are now rapidly retrieving under the management of a popularly elected magistracy. The total property of the city was valued in 1832 at £223,979. The taxes levied by the magistrates are petty customs on goods brought into the city producing about £800 per annum; weighhouse dues producing £200; rogue-money, officer's dues, and king's cess annuity to £256 10s. annually. There is also a large sum of statute-labour money levied within the town; but there is no assessment for the support of the poor. Aberdeen formerly sent one member to parliament in connexion with Montrose, Brechin, Arbroath, and Inverberrie. It now returns one for itself and suburbs, including Old Aberdeen. It has been represented since 1832 by Alexander Bannerman, Esq., a gentleman of Whig principles. The number of voters, in 1835, was 2,166.—Aberdeen gives the title of earl to a branch of the ancient family of Gordon. Sir George Gordon of Haddo was executed, in 1644, at Edinburgh, for his adherence to the cause of Charles I. Sir John, his eldest son, who was restored to the baronetage and estates after the Restoration, was succeeded by his brother George, who was created chancellor of Scotland, and earl of Aberdeen, in 1682. He died in 1720.

Originally, the town of New Aberdeen constituted one parish, called the parish of St Nicholas, which, in the time of episcopacy, was a rectory and vicarage. It was divided, in 1828, by the authority of the court of teinds, into six parishes, viz., East Kirk, West Kirk, North Kirk, South Kirk, Greyfriars, and St Clement's; all in the presbytery and synod of Aberdeen; and under the patronage of the town-council. In 1834, a new arrangement of the whole into nine *quoad sacra* parishes was made under the authority of the General Assembly. Another *quoad sacra* parish was created in 1836.

1st, EAST KIRK. This parish is in the very centre of the city. Population, in 1835, 4,512, of whom 2,623 belonged to the establishment. The old church was lately taken down, and a new one opened in May 1837. Sittings 1,705. Cost £5,000. Stipend £300, paid by the corporation.—The United Secession congregation, in St Nicholas Lane, was established in 1794. This church was built in 1801; cost £850; and accommodates 624. Stipend, £150, and a house.—The United Secession congregation in George street has been established about 16 years. Chapel built in 1821; cost £1,170; sittings 747. Stipend £150.—St Paul's Episcopal chapel was erected in 1722, at an expense of £1,000; number of sittings 900. Stipend £213. It is not subject to the jurisdiction of any bishop, but is managed by eleven managers elected for life by the congregation.—The Original Burgher congregation, in the Netherkirkgate, was established in 1757. Church

built in 1772, and exteriorly repaired in 1827. Sittings 700. Stipend £100, and £20 for a house.—A congregation calling itself the Holy Catholic Apostolic congregation, established in 1836, meets in St John street. It is ministered to by an angel or chief-minister, and three evangelists.—There is a Unitarian congregation, which was established in 1836.—A Wesleyan Methodist congregation was established many years ago. This chapel has 900 sittings. Stipend £115, and £15 for a house. The minister has two colleagues, with incomes of about £50 each.—There is no parish-school; but there are fifteen private schools within this parish.

2d, WEST KIRK. This is wholly a town-parish. The population of the *quoad civilia* parish, in 1831, was 8,930; of the *quoad sacra* parish—which is exclusive of the whole of Spring-Gardens, and portions of the East and South parishes—in 1836, 2,024, of whom 1,277 belonged to the establishment. Church built about 1744, and enlarged in 1836. Sittings 1,454. Stipend £300; paid by the corporation.—An Independent congregation was established here in 1798. Chapel cost £1,000. Sittings 870. Stipend £150.—A Relief congregation was formed in 1804. Chapel cost £1,000. Sittings 900.—Here is a parish-school. Average attendance 80. Salary and school fees £142; emoluments £60. There are eight other schools, attended by about 1,200 pupils.

3d, NORTH KIRK. This is wholly a town-parish. A portion of St Clement's was annexed to it, and a portion of it given to East parish, *quoad sacra*, in 1834. In 1831 the population of the *quoad civilia* parish was 4,616, of whom 2,864 belonged to the establishment. The church was opened in 1831. It is in the Grecian style, and cost £10,500. Sittings 1,486. Minister's stipend £300; paid by the corporation.—St Andrews Episcopal church has existed here since 1688. The total number of communicants is 1,200, of whom the greater part reside in Old Machar parish. The church is a handsome Gothic building erected in 1817 at an expense of £8,000. It is 90 feet in length by 65 in breadth; and contains a fine statue of Bishop John Skinner by Flaxman. Sittings 1,100. Stipend of senior minister, in 1836-7, £328; Stipend of junior minister £220.—There is an Independent congregation in Frederick street, occupying a chapel built in 1807, at an expense of £900. Sittings 580. Stipend £110.—St Peter's Roman Catholic chapel was built in 1803-4; cost £2,500. Sittings 650. Stipend about £90. A handsome school, erected in 1832, is attached to this chapel, and attended by about 120 children.—The school founded by that portion of Dr Bell of Calcutta's bequest which was assigned to New Aberdeen, is in this parish. It is attended by 400 boys and 200 girls, under a male and female teacher; the branches taught are English, writing, arithmetic, grammar, and geography. There is also an Infant school.

4th, SOUTH KIRK. In the *quoad sacra* arrangement of 1834, the parish of Trinity was disjoined from South parish, and part of West parish annexed to it. The population of the parish *quoad civilia*, in 1831, was 4,313, of whom 1,876 belonged to the establishment. Before this parish was first erected in 1828, the church in it was a chapel-of-ease. The heads of families in this parish are entitled to recommend two candidates, one of whom the council is bound to present to the living. The old chapel was taken down, and the present church erected in 1830-1, at an expense of £4,544. Sittings 1,562. Stipend £300.—The United Secession church in St Nicholas street was built in 1779-80, at a cost of about £1,000. Sittings 800. Stipend of senior minister £100; of junior £100.—The Independent chapel in Blackfriars street was erected in 1821, at

an expense of £1,276. Sittings 950. Stipend £100.—In 1834, there were twelve schools in this parish, attended by about 1,100 children.

5th, GREYFRIARS. In the new arrangement of 1834, part of West parish was annexed to this parish, and the whole of the parish of John Knox disjoined from it, *quoad sacra*. The population of the *quoad civilia* parish, in 1831, was 4,706, of whom 1,661 belonged to the establishment. The parish church is what was formerly called the College church. It is the oldest parish church now in Aberdeen. Sittings 1,042. Stipend £250; paid by the corporation.—The Society of Friends have a Meeting-house in this parish, with 350 sittings. The earliest record of the Society in Aberdeen is dated 1762; it consisted of 21 individuals in 1837. This sect was numerous in Aberdeen between the year 1664 and 1679, when many of them suffered imprisonment here, and amongst others the famous Robert Barclay. The parish minister reported that, in 1834, there were six "adventure schools" in this parish, attended by about 200 children; and that he had established one "of the nature of a parochial school" attended by 240 children.

6th, ST CLEMENT'S. In the new arrangement of 1834, portions of this parish were annexed *quoad sacra* to Union and North parishes. The population of the *quoad civilia* parish, in 1831, was 6,501, of whom 3,044 belonged to the establishment. The parish church, a neat structure in the Gothic style, was erected in 1828 on the site of what was once Foot-dee church, and where a chapel had stood previous to the Reformation. Cost £2,600; sittings 800. Stipend, in 1835, £279 11s. 10½d, derived from the half-barony of Torrie, the glebe of Foot-dee, and seat-rents.—There is no parochial school, but there are from eight to ten schools not parochial, attended by about 400 children. One of these is patronized by the magistrates; and another is an endowed free school.

7th, UNION. This is a *quoad sacra* parish, disjoined from East parish and St Clement's, in 1834. In 1835-6, the population amounted to 3,693, of whom 2,407 belonged to the establishment. The church was built in 1822, at a cost of about £2,600. Sittings 1,238. Stipend £150, paid from the seat-rents.—A seamen's chapel was erected in this parish in 1822, at an expense of £800. Sittings 570.

8th, SPRING GARDENS.—This parish was divided from the West parish, and annexed as a parish *quoad sacra* to the Gaelic church in 1834. Its population, in 1835, was 1,486, chiefly labourers and operatives. The church was built in 1795, at a cost of about £800. Sittings 700. The service is conducted in Gaelic in the forenoon, and in English in the afternoon and evening. Stipend £150; paid by the congregation.

9th, TRINITY. This parish was divided *quoad sacra* from the South parish in 1834. The population, in 1835, was 2,252, of whom 1,425 belonged to the establishment. The church was erected in 1794 as a chapel-of-ease, at a cost of about £1,700. Sittings 1,247. Stipend £200; paid from seat-rents; with a manse.—The United Christian congregation was established in 1779. It assembles in a chapel which is private property. Sittings 990. Stipend about £115.

10th, JOHN KNOX. This parish was disjoined *quoad sacra* from Greyfriars parish, in 1836. Its population in that year was estimated at 2,710. The church was erected in 1835, at a cost of about £1,000, and seats 1,054 persons. Stipend £130, derived from seat-rents.

Before the Reformation, there were several chapels within the burgh and royalty annexed to and depen-

dent upon the parish-church, particularly St Mary's chapel, under the East church; St Catharine's chapel, founded in 1242, which stood upon the hill of that name; St Ninian's chapel on the Castlehill; and St Clement's chapel at Footdee. There were likewise monasteries of several different orders of friars established in Aberdeen. The Black friars had their establishment on the School-hill where Gordon's hospital and the Grammar-school now stand. The Carmelite, or White friars monastery, was on the south-side of the Green, near Carmelite street; and the Grey friars in the Broadgate, where the Marischal college and church are now situated. The Trinity or Maturine friars also had a rich establishment in Aberdeen.

ABERDEENSHIRE, an extensive county on the north-east coast of Scotland; bounded on the north and east by the German ocean; on the south by the counties of Kincardine, Forfar, and Perth; and on the west by Inverness-shire, and Banffshire. Its outline is very irregular. It extends about 86 miles in length, from Cairneilar, or Scarscoch, the south-west point of Braemar, where the counties of Inverness, Perth, and Aberdeen meet; to Cairnbulg, a promontory forming the eastern point of the bay of Fraserburgh on the north-east; and about 47 miles in breadth, from the mouth of the Dee on the east, to the head-springs of the Don, on the skirts of Banffshire, on the west. Aberdeenshire is the fifth Scottish county in point of area. The extent of sea-coast is about 70 miles. Its circumference is about 280 miles; its extent has been estimated at 1,970 square miles, or 1,260,800 square acres. It comprehends the districts of **ABERDEEN**, **ALFORD**, the greater part of **DEER** or **BUCHAN**, **ELLON**, **GARIOCH**, **KINCARDINE O'NEIL**, **STRATHBOGIE**, and **TURREFF**: which see. In ancient times its recognised divisions were Buchan on the north; Mar on the south-west; and Fromartin, Garioch, and Strathbogie in the middle. The Farquhars, Forbeses, and Gordons, are the principal septs of this district of country. The Taihal were the possessors of the soil in Roman times.

The south-western parts of this county are extremely rugged and mountainous; towards the east and north-east the country is more level. About two-thirds of the entire surface are covered with hills, moors, and mosses. The principal mountains are Ben-Macduh, 4,390 feet; Cairntoul, 4,245; Ben-Aven, 3,967; Loch-nagarr, 3,777; Ben-Uarn, 3,589; Scarscoch, 3,402. Cairngorm is not in Aberdeenshire, though frequently described as belonging to this county.—The soil is of various qualities. In the lower parts of the county towards the coast, clay and sand prevail; but, in the higher districts, moor and till are predominant. The finest districts lie along the courses of the Don and the Ythan. The state of agriculture in the interior parishes is still rude, and must long continue so from the rugged nature of the country in these districts. The general character of this county is bleak and uninviting, but there are many marked exceptions from this prevailing cast of scenery, especially in the neighbourhood of Aberdeen, and the larger towns, and along the courses of the large rivers. The shores are generally bold and rugged, occasionally rising into lofty precipices, and scooped out into extensive caverns; immediately to the north of Aberdeen, however, there are extensive sand-flats. Large forests of natural wood occur in some of the interior districts, especially in Braemar, Glentanner, and Mortlach. In these regions, "the mountains seem to be divided by a dark sea of firs, whose uniformity of hue and appearance affords inexpressible solemnity to the scene, and carries back the mind to those primeval ages when the

axe had not yet invaded the boundless region of the forest." The grain chiefly cultivated is oats; about 200,000 acres are annually sown with oats. There is little wheat raised. A prodigious number of cattle and sheep of different kinds are reared; and the annual export of butter from Aberdeen and Peterhead exceeds in value £100,000. The average rent of land, in 1810, was 3s. 8d. per acre.—The structure and relations of the vast groups of mountains scattered over this county have as yet been imperfectly investigated. The climate is mild, considering its northern situation; the winters are not so cold, nor the summers so warm or so long, as in the southern counties.—With regard to mineralogy, this county is not peculiarly rich. The granite quarries are its most valuable mineral treasures. See preceding article, **NEW ABERDEEN**. The ordinary granite of Aberdeenshire is a small grained stone of the common ternary compound of quartz, felspar, and mica. Sometimes it passes into greenstone of the trap family; and sometimes into basalt. It forms the great mass of the Grampian chain. There are several quarries in the parish of Aberdour which yield excellent millstones; a quarry of blue slate is wrought in the parish of Culsalmond; and a vein of grey manganese exists in the neighbourhood of Old Aberdeen. In the parish of Huntly there are indications of metallic ores; and plumbago, or black lead, has been discovered here. Aberdeenshire abounds with limestone; but, owing to the scarcity of coal, it cannot be wrought to much advantage, except near a sea-port. Some kelp is made on the coast. Small pieces of amber have been found on the Buchan coast; Camden has an apocryphal story of a piece the size of a horse having been found on that coast! In the parish of Leslie, a beautiful green amianthus, with white and grey spots, is found in considerable quantities. It is easily wrought into snuff-boxes and other ornaments. Amethysts, beryls, emeralds, and other precious stones, particularly that species of rock-crystal called Cairngorm stones, are found in the Crathie mountains; and agates of a fine polish and beautiful variety, on the shore near Peterhead. From Ben-y-bourd, on the estate of Invercauld, large specimens of rock-crystals have been obtained; one of these, in the possession of the proprietor of Invercauld, is nearly two feet in length. Besides these, asbestos, talc, cyanite, mica, and schistus, occur. Several of the mountains in the district of Marr show signs of volcanic origin. The mineral waters of Peterhead in the north, and Pannanich in the south, are celebrated.—About 6,400 acres of the superficial extent of this county are occupied with lakes. The rivers of Aberdeenshire are: the **DEE**, the **DON**, the **YTHAN**, the **BOGIE**, the **URIE**, the **UGIE**, and the **CRUDEN**: the **DEVERON** also rises in Aberdeenshire, though it has its embouchure in the county of Banff: See separate articles under these heads. All these rivers flow into the German ocean; and have long been celebrated—especially the first two—for the excellence of the salmon with which they abound. Besides the fishings in the rivers, the sea-coast of Aberdeenshire abounds with excellent fish, and a number of fishing-vessels are fitted out from the sea-ports of this county, particularly from Peterhead and Fraserburgh.—There is one canal, extending up the valley of the Don from New Aberdeen harbour to Inverury. It has been described in the preceding article.

Aberdeenshire has been long noted for its woollen manufactures, particularly the knitting of stockings and hose, in which numbers of the common people are constantly employed. The cotton, linen, and sail-cloth manufactures have been successfully introduced, particularly in Aberdeen, Peterhead, and

Huntly. In 1831, there were about 1,600 hands employed in the linen, woollen, and cloth manufactures, in Old and New Aberdeen, and about 700 in other districts of the county.

Aberdeenshire contains three royal boroughs, viz. ABERDEEN, KINTORE, and INVERURY; and several handsome towns, as PETERHEAD, FRASERBURGH, HUNTLY, TURRIFF, and OLD MELDRUM: See these articles. The chief seats are, Huntly-lodge, the seat of the Marquis of Huntly; Slain's castle, Earl of Errol; Keithhall, Earl of Kintore; Aboyne castle, Earl of Aboyne; Marr lodge, Earl of Fife; Philorth house, Lord Saltoun; Putachie, Lord Forbes; Fyvie castle, General Gordon; and Ellon castle, Earl of Aberdeen. Besides these, Monymusk, Fintry house, Invercauld, Pitfour, Logie-Elphinstone, Leith-hall, Freefield, Abergeldie, Skene house, and Cluny, are elegant residences.—Aberdeenshire is divided into 85 *quoad civilia* parishes, and one chapelry. It sends one member to parliament. The Hon. William Gordon, a brother of the Earl of Aberdeen, and a Conservative, has represented this county since 1820. In the last contested election, he polled 1,175 votes; and Sir Thomas Burnett 707 votes. The total number of electors, in 1838, was 3,142. The valued rent of the whole county in Scottish money, is £241,931 8s. 11d.; the annual value of the real property as assessed in 1815, £325,218. In 1811 there were three estates in this county valued at above £10,000 Scotch; six above £4,000; and fifty-one from £400 to 800. The population, in 1800, was 123,082; in 1811, 135,075; in 1821, 155,387; in 1831, 177,657. The population in 1831 was employed as follows:—Occupiers of land employing labourers 3,591; occupiers not employing labourers 6,012; agricultural labourers 9,018; labourers not agricultural 5,107; manufacturing operatives 2,294; employed in retail trades and handicrafts 11,642; capitalists, 1,750; male servants 450; female servants 10,759. The total number of families, in 1831, was 39,930; of inhabited houses, 29,502.

The three principal lines of road in this county are: 1st, from Aberdeen, running west and south-west by Midmar, Tarland, and Crathie, to Castleton of Braemar, and then turning south and entering Perthshire by the Spital. 2d, From Aberdeen north-west by Old Meldrum, to Banff. 3d, From Aberdeen north-westwards to Alford, and thence south, through Strathbogie, to Portsoy.

Previous to the late act for the equalization of weights and measures, the Aberdeenshire boll was equal to $1\frac{1}{2}$ boll of the Linlithgow standard. The boll of barley, bear, or oats, was 4 Aberdeen firloths of 136 pints of 60 $\frac{3}{4}$ oz. each. The brass standard bushel of Queen Anne, 1707, used in Aberdeen, contained 13 cubic inches less than the Winchester standard; and a bushel used in the county contained 40 cubic inches less. The peck of potatoes was 32 lb. Dutch; the pound of butter or cheese, from 20 to 26 oz. Dutch; of malt, meal, or corn, 24 oz. Dutch.

ABERDOUR, a parish in the north of Aberdeenshire; bounded on the north by the German ocean, or Moray frith, along which it extends about 6 $\frac{1}{2}$ miles; on the east by the parishes of Pitsligo and Tyrie; on the south by Tyrie, New-Deer, and King-Edward parishes; and on the west by the latter parish, and that of Gamrie. This parish takes its name from a rivulet, about 3 miles in length, which rises in the high grounds near Glenhouse, and discharges itself into the sea about 200 paces below the church. The form of the parish is irregular. Its extent from north-east to south-west is about 11 miles. Its breadth, measuring from the church on

the north coast southward, is 6 $\frac{1}{2}$ miles; but, on the south-east, a portion of the parish is detached from the rest by the parish of Tyrie, which, for about a mile of breadth, intervenes, and cuts off three farm towns, extending to about 800 acres. This detached part of the parish is believed to have been formerly grazing-places attached to the barony of Aberdour. The face of the country is rugged, and the soil of very different qualities: on the sea-coast it is partly clay, or red loam; in the moors it is black, cold, and watery. On the west side of the parish are three deep hollows, or glens, with a rivulet in each, called the den of Aberdour, the den of Auchmedden, and the den of Troup. Each of these dens, as they advance from the sea-coast, branch out on either side into lesser ones, which lose themselves in mosses and moors, at a distance of about 3 miles from the sea. The eastern side of the parish is more level, and presents corn-fields, interspersed with heaths, and, near the sea, with large tracts of ground producing a coarse kind of grass called reesk. In the southern part of the parish is the den of Glasby, in which the northern branch of the Ugie flowing to the south-east rises. The greater part of this side of the parish consists of mosses and moors, sprinkled here and there with corn-fields; the western border of the parish, along its whole breadth, presents continued mosses and moors.—The sea-coast, especially to the west of the church, is bold and precipitous: so much so that in the whole length of the parish there are only three openings where boats can land,—one in the north-east corner; one immediately below the church; and a third where the burns of Troup and Auchmedden discharge themselves into the sea, near the small fishing-village of Pennan, and where, about a century ago, a small harbour existed, now totally destroyed. Along the coast are numerous caves, entering from the sea. The most remarkable of these, near the borders of Pitsligo parish, called Cows-haven, runs up into the country, “nobody knows how far.” About half-a-mile east of the church, are the remains of the ancient castle of Dundargue, upon a rock of red free-stone which rises to the height of 64 feet from the beach immediately below. It is surrounded by the sea when the tide flows, save where a narrow neck of rock and earth joins the castle to the main-land. When Mr Youngson wrote his account of this parish for the first Statistical survey of Scotland, the only part of the castle standing was the entry. The whole breadth of the front was only 12 feet, and the height of the walls 12 feet 7 inches; there were no other remains of the castle-walls, except the inside of the foundation, the outside having fallen down owing to the mouldering away of the rock on which it was built. Henry de Beaumont, the English earl of Buchan, was besieged in this castle by Andrew Murray, regent of Scotland, during the captivity of King David Bruce, in 1336. Mill-stones are quarried on the coast. Population, in 1801, 1,304; in 1831, 1,548. Assessed property, in 1815, £2,839. Houses 325. In 1831, 28 hands were employed in fishing, and 151 as agricultural labourers.—This parish is in the presbytery of Deer, and synod of Aberdeen. Stipend £204 7s. 10d. Glebe £12. Patron, Gordon of Aberdour. Schoolmaster's salary £32; school-fees £8 5s. 6d. Scholars average 40; about an equal number are taught at two private schools.

ABERDOUR, a parish on the south-coast of Fife. The name—signifying ‘the mouth of the Dour’—is taken from a rivulet which empties itself into the Forth, a little below the village of Aberdour. It is bounded by Dalgety on the west; by Auchtertoul on the north; by Kinghorn and Burntisland on the east; and by the frith of Forth on the south. It is about 3 miles in length from east to west; and as

much from north to south. A small part of the parish, called Kilrie-Yetts, is detached from the rest, by the intervening parish of Burntisland. The number of acres is about 5,000. The northern part is cold, being considerably above the level of the sea. On the south of a ridge, which runs across the parish from east to west, the soil and climate are much more kindly. The south part is well-cultivated, and inclosed. The valued rent is £7,015 10s. Scots. The parish abounds with coal, lime, and free stone.

The limestone on the coast is shipped at a commodious harbour which the Earl of Morton built for the purpose. The parish stretches along the shore above two miles. From the eastern boundary at Starlyburn, the coast is rugged and steep. On the west of the town of Aberdour, there is a beautiful white sandy bay, surrounded with trees. The small harbour of Aberdour is well-sheltered from all winds. The shipping at present consists of a few small vessels. There is a steam-boat to Newhaven. The village is a favourite bathing-resort from Edinburgh during the summer. It is $2\frac{1}{2}$ miles west of Burntisland; and 8 north by west of Edinburgh. The prospect across the frith is very beautiful. On the right lies the island of Inchcolm, with the ruins of its monastery; on the left appears the town of Burntisland, which here seems to be seated on the sea. The islands of Inchkeith, Cramond, Mickry, and Carcary, are also seen, and the coast of Lothian is just distant enough to be seen with advantage. The city of Edinburgh rises in view, and the Pentland hills terminate the prospect. The village of Aberdour is about a quarter of a mile from the sea. It is surrounded by rising grounds, except towards the south. Between the village and the sea are a number of fine old spreading trees. The venerable old castle of Aberdour stands on the eastern bank of the rivulet, which, taking a winding course below it, falls into the frith in front. To the north of this ruin stands the house of Hillside, surrounded with fine shrubberies. Between this and the village, the rivulet runs in the bottom of a little rich strath. Population, in 1801, 1,260; in 1831, 1,751, of whom about 70 were employed in the freestone quarries and coal pits recently opened, and 63 families in agriculture. Houses 262. A. P. £3,964. The parish of Aberdour belonged to the monastery of Inchcolm, founded, about the beginning of the 12th century, by Alexander I. Sibbald says, that the western part of Aberdour was given by one of the Mortimers to this monastery, for the privilege of burying in the church. It had come by marriage to the Mortimers from the Viponts, who held it in the 12th century. This western part of Aberdour, together with the lands and barony of Beath, is said to have been acquired from an abbot of Inchcolm, by James, afterwards Sir James Stuart. See INCHCOLM.—The parish itself was formed by disjunction from the parishes of Beath and Dalgety about the year 1640. It is in the presbytery of Dunfermline, and synod of Fife. Church built in 1790; repaired in 1826; sittings 579. The Earl of Morton is patron. Stipend £207 14s. 6d.; with glebe of $4\frac{1}{2}$ acres, valued at £13. The schoolmaster's salary is £100 Scots, or £34 4s. 4d.; his other fees amount to above £50. The ordinary number of scholars is about 120. There is a day-school at the collieries in the northern part of the parish, and a female-school in the village of Aberdour. There is an hospital in the village for four widows, founded by Anne, countess of Moray. The earl of Moray presents three of the inmates, and the Writers to the signet the fourth. The sisterhood of the Poor Clares had a nunnery here.—Not far from the village of Aberdour, on the top of a hill, there is one of those cairns or tumuli so frequently met

with in Scotland.—The old ballad of Sir Patrick Spens represents that gallant seaman as having perished with his fair charge, Margaret of Norway,—

“Half ower, half ower, to Aberdour;”

that is, we conceive, midway between Norway and this little port. Sir Walter Scott, however, prefers the reading of some copies,—

“O forty miles off Aberdeen;”

remarking that in a voyage from Norway, a shipwreck on the north coast seems as probable as either in the frith of Forth or Tay. But as Aberdour was the nearest port to Dunfermline, where the royal court held seat, and as the commissioners, whom graver though by no means well-accredited history relates were sent to escort the queen, namely, Wemyss of Wemyss, and Scott of Balwearie, belonged to this neighbourhood, we think there is a greater weight of probability for the common reading:

“Half ower, half ower, to Aberdour,

’Tis fifty fathoms deep,

And there lies gude Sir Patrick Spens

Wi’ the Scotch lords at his feet.”

ABERFELDIE, a considerable village in the parish of Dull, Perthshire, on the southern banks of the Tay, at the junction of the Glencofield road from the south, with the great road up the Tay from Taymouth, from which latter place it is distant about 5 miles. The Tay is crossed by a bridge opposite Aberfeldie built by General Wade. The Central bank of Scotland has a branch in this village. The scenery of this district is among the most interesting on the whole course of the Tay.—The lowest and finest fall on the burn of Moness is about 1 mile, and the upper fall $1\frac{1}{2}$ mile to the south of this village. The burn of Moness, a little above the village of Aberfeldie, is “bounded by high impending rocks, from whose chasms and crevices,” says a tasteful observer, “fine trees and matted underwood seem to start, deepening the gloom below; while a narrow and dangerous path at their base leads you, with the effect of gradual initiatory preparation, to the cascades themselves. These form a retiring succession (they are three in number) of brilliant gushing torrents, gradually veiled, as they recede from the eye, by the thin leafy screen of the over-arching woods, which render it one of the completest specimens of the secluded waterfall that I have ever seen.”

ABERFOYLE,* a parish in the south-west corner of Perthshire; bounded on the north by Loch Katrine and Loch Achray, which separate it from Callander parish; on the east by the parish of Port-of-Menteith; on the south and west by Stirlingshire. Its greatest admeasurement is from the east end of Loch Arclet, on the north-west, to the bridge across the Forth, on the road from Gartmore, in the south eastern extremity, a distance of about 11 miles; its greatest breadth from north to south is towards the centre of the parish, and about 6 miles. The general aspect of this district is extremely picturesque. It is a narrow tract of country, bounded on every side by lofty hills and mountains. The bottom of the valley is occupied by a series of beautiful lakes, skirted with woods of oak, ash, and birch; and their banks are occasionally diversified with scanty portions of cultivated ground, the soil of which has, in the course of ages, been washed down from the mountains, and deposited by the streams. The mountains are in some instances clothed with oak-woods more than half-way up; the lower eminences are, for the most part, covered to their summits; the higher re-

* This parish derives its name from the term *aber*, and a small river, called, in Gaelic, the Poll, or ‘the stagnating water,’ which falls into the Forth near the kirk-town. “In that language,” says Mr. Graham, “*poll* is in the genitive case, and pronounced *foil* or *foyle*; whence *Aberfoyle*.”

gions are overgrown with heath, and sometimes present only the bare rugged rock. None of the mountains are of the first class in height. 'Huge Benvenue' and Benchochan are far-overshadowed by Benlomond, in the parish of Buchanan, which, with its pyramidal mass, terminates the prospect to the west. The rocks are chiefly micaceous granite. Many of the rarer Alpine plants are to be found upon the mountains. The black eagle builds in some of the more inaccessible rocks; but it is now very rare. The falcon is also found here. The most considerable lakes are LOCH KATRINE, LOCH ACHRAY, LOCH CHON, and LOCH ARD: which see. One head-branch of the river Forth has its rise in the western extremity of the parish, at the eastern foot of Ben-Awe. After flowing through Loch Chon, and the upper and lower Loch Ard, it bursts forth, at the eastern extremity of the latter; and, a few hundred yards to the east of it, flings itself over a rock nearly 30 feet high. After having formed a junction with the other head-branch of the Forth, called the Duchray, coming from the south-west, the united stream receives the name of the Forth, and enters by a narrow opening—the famous pass of Aberfoyle—into Strathmore. In winter, the lakes are covered with water-fowl; among which swans, and some of the rarer species of divers, are occasionally met with. The soil is light. It is generally remarked, that the harvest is earlier in Aberfoyle than any where in the vicinity towards the south, where the flat country begins. The air is healthy. When Mr Graham wrote his excellent account of this parish for the first edition of the Statistical account of Scotland, (1796) there were seven or eight persons above eighty years of age, alive in the district; one man had recently died at the age of 97; and the acting grave-digger was 101.—The property of this parish was anciently vested in the Grahams, Earls of Menteith; but, on the failure of heirs-male of that family, in 1694, their estate came to the family of Montrose; and the Duke of Montrose is now sole heritor in this parish, being at the same time patron, proprietor, and superior of the whole, excepting a single farm (Drumlane) which holds blench of the Duke of Argyre. Population, in 1801, 711; in 1821, 730; in 1831, 660, in 132 families, of whom only 15 were employed in agriculture. The decrease in the population is attributed to the enlargement of farms, and the consequent demolition of cottages, in this parish of late years.—This parish is in the presbytery of Dunblane, and synod of Perth and Stirling. Stipend £158 6s. 8d., and a glebe and manse. There is a parochial school, which is well-attended. The churchyard of Aberfoyle is the usual burying-place for the inhabitants of Port-of-Menteith, Drymen, and Buchanan. "In ancient times," says Mr Graham, "the Gaelic language alone was spoken in this parish; and, even in the memory of man, it extended many miles farther down the country than it now does. The limits of this ancient tongue, however, are daily narrowed here as everywhere else, by the increasing intercourse with the low country. At present, every body understands English, though the Gaelic is chiefly in use. The service in church is performed in English in the forenoon, and in Gaelic in the afternoon."—The village of Aberfoyle is 22 miles distant from Dumbarton, by Gartmore and Drymen. The road is wild but interesting. The principal line of road through the parish follows the vale of the Forth, or of its fountain-lochs rather, and enters the parish of Buchanan, between Lochs Arclet and Katrine, from which point it passes through a wild moor to Inversnaid on the eastern side of Loch Lomond. This is a road of great beauty and variety of scenery.—On a rising ground, in the neighbourhood of the manse,

and facing the south, there is a circle of stones, which, there is room to believe, may be a relic of Druidism. It consists of ten large stones placed circularly, with a larger one in the middle.—The scenery of this parish has been immortalized by Sir Walter Scott in his poem of *The Lady of the Lake*, and his novel of *Rob Roy*. Perhaps it owes its chief power and beauty to the mighty minstrel's inspiration. Nature herself is indeed a poet here,—yet a "something more exquisite still,"—a nameless charm, flung around us by the hand of one whose genius glorifies every thing it touches, is everywhere resting on this elf and fairy realm. See articles ACHRAY (LOCH), BENVENUE, and FORTH.

ABERLADY, a small parish on the north-west coast of the county of Haddington; bounded on the north by the frith of Forth, which here forms Aberlady bay, and by the parish of Dirleton; on the east by Dirleton and Haddington parishes; and on the south by Gladsmuir parish. Its greatest dimension is about 4 miles, in a line running north-east and south-west from the Pefferburn, near Saltcoats, to Coteburn in Gladsmuir; and its greatest extent from east to west is nearly the same. The Pefferburn—supposed to have been once called the Leddie, whence the name of the parish—rises in the parish of Athelstaneford, and after a winding course of 7 miles, falls into Aberlady bay, at Luffness point. From this point the whole bay between the Aberlady and the Goolan or Dirleton shore is left dry at low water, so that it may be crossed by foot-passengers at a point where the sands are above a mile in breadth. At spring-tides, vessels of 60 or 70 tons may come up the channel of the Peffer to within a few hundred yards of the village of Aberlady. This anchorage-ground belongs to the town of Haddington, and forms its port. The sands covered by the tide abound in cockles, and some other kinds of shell-fish. Along the shore, from near Gosford house to the eastern point of the parish, runs a tract of sandy links, of considerable breadth, abounding with rabbits, and which is continued and spreads out into greater breadth along the Goolan shore. From this flat tract, the ground rises gradually as we proceed inland, but in no part attains any considerable elevation. The village of Gosford no longer exists; but the Earl of Wemyss has built a splendid mansion here, close on the links, and commanding a fine view of the frith towards Edinburgh. His lordship has here a splendid collection of paintings. The village of Aberlady, 5 miles north-west of Haddington, consists of one long street of a mean appearance. It is occasionally resorted to by the inhabitants of Haddington as a bathing-place, but the surrounding country presents little that is attractive to the stranger. Population, in 1801, 875; in 1831, 973. Houses 200. Assessed property, in 1815, £8,569.—This parish is in the presbytery of Haddington, and synod of Lothian and Tweeddale. Patron, the Earl of Wemyss. Stipend £280 11s. 11d.; with a manse and glebe of the value of £27 10s. Gross amount of tithes £876 9s. 8d. There is a good parochial school, and a private school, with two sewing-schools. Salary of parish-schoolmaster £34 4s. 4½d.; fees £34; scholars about 60. The church was built in 1773. Adjoining to it are two aisles, in one of which is a monument to the memory of Lady North and Grey, wife of Patrick, Lord Elibank, with an inscription composed by his lordship.—A little to the west of Luffness-house are the remains of a conventual building, once belonging to the Carmelites. An hospital is said to have been founded at Ballencrief in the 12th century. This parish formerly belonged, in virtue of a grant from David I., to the bishop of Dunkeld, and was a vicarage in that diocese.

It has been conjectured that the Culdees had a seat at or near Aberlady, called Kilspindie.

ABERLEMNO, an inland parish in Forfarshire; bounded on the north by the parishes of Tannadice and Caraldston; on the east by Brechin and Guthrie parishes; on the south by Rescobie; and on the west by Oathlaw parish. Its extreme length from south-west to north-east, in the line of the road from Forfar to Brechin, is $6\frac{1}{2}$ miles; its average breadth $3\frac{1}{2}$. The surface is gently undulating, with a general declination towards the South Esk river, which runs along the northern boundary of the parish, and along the course of which the land is so level as to be occasionally extensively inundated by that river. The principal stream is the Lemno, which rises on the south-east side of the Finhaven ridge of hills in this parish; passes the kirk-town; sweeps in a circuitous direction around the base of the ridge; and, entering Oathlaw parish, turns north-eastwards, and flows into the Esk, in the latter parish, at a point within one mile of its original source.* There are two curious stone pillars or obelisks in this parish, supposed to have been erected in commemoration of a victory obtained over the Danes. They are covered with unintelligible hieroglyphics. About a mile to the north-east of the kirk-town are the ruins of Melgund castle, which was built by Cardinal Beaton for a natural son, who married a lady of the Panmure family. Population of the parish in 1801, 945; in 1831, 1,079, of whom 100 were labourers employed in agriculture, and 70 employed as quarriers. Houses 197. Assessed property, £8,407.—This parish is in the presbytery of Forfar, and synod of Angus and Mearns. Stipend £228 6s. 6d.; with a glebe valued at £15, a manse, and fuel and faggage. Unappropriated teinds £469 14s. 11d. Salary of schoolmaster £34 4s. 4½d.; school-fees and other emoluments about £20; average number of scholars, 70. There is also a private school. This parish was formerly a vicarage, with the parish of Auld Barr united; and the patrons are, Smyth of Methven in right of Auld Barr, and the Crown, alternately.

ABERLOUR, a parish on the south-west of Banffshire; bounded on the north-west and north by the river Spey, by which it is separated from the parishes of Knockando and Rothes in Morayshire; on the north-east by the Fiddich, which separates it from Boharm parish; on the east and south-east by Mortlach parish, from which it is separated by the Conval hills, and the Dullan burn; and on the south and west by Inveraven parish. It extends along the southern bank of the Spey, 5 miles in direct distance, or about 8 miles including the windings. Its greatest admeasurement is from the point of confluence of the Fiddich and the Spey, on the north, to the head of the Dullan on the south, a distance of 9 miles. The general outline of this parish is triangular; about one-half of the surface is under cultivation, but the whole is hilly, and towards the south and east completely wild and mountainous. The loftiest mountain is Benrinnes on the south-west, whose enormous base lies partly and chiefly in this parish, but extends also into Inveraven parish. It rises to the height of 2,747 feet above the sea-level, and 1,876 feet above the adjoining country. From its summit, the mountains of Caithness on the north are visible in a clear day; and the Grampians in the opposite direction. The deep pass of Glackharnis separates this mountain, on the east, from the Con-

vals, which are of much less elevation. Three small streams intersect this parish in a north-west direction, and discharge themselves into the Spey. The latter river is here deep and rapid, and, in the great floods of 1829, rose 19 feet 6 inches above its ordinary level. The main line of road follows its course, and is carried across the Fiddich by a bridge at a point near its junction with the Spey. A little above this confluence, and 12 miles above Fochabers, there is a fine iron bridge, of 160 feet span, thrown across the Spey, at a point where, rushing obliquely against the lofty rock of Craigellachie, it has cut for itself a deep channel of about 50 yards in breadth. The scattered birches and firs on the side of the impending mountain, the meadows stretching along the valley of the Spey, and the western road of access to the bridge cut deeply into the face of the rock, combine with the slender appearance of the arch to render this spot highly interesting. The course of the river for 4 miles below this bridge is very beautiful. This bridge, known as that of Craigellachie, was erected in 1815, at an expense of £8,200, and greatly facilitates communication with Elgin and Garmouth. There is good salmon and trout fishing in the Spey and the Fiddich; and the streamlets also of this parish afford good sport to the angler. The new village of Aberlour was founded in 1812, by Grant of Wester Elchies. It now contains 250 inhabitants. It is about $1\frac{1}{2}$ mile above Craigellachie bridge, and 5 miles west-north-west of Mortlach. Population of the parish, in 1801, 815; in 1831, 1,276, of whom 56 were agriculturists employing labourers. Houses 255. Assessed property, £2,210.—This parish is in the presbytery of Aberlour, and synod of Moray. Patron, the Earl of Fife, who is also the principal land-owner. It was formerly a prebend, with the ancient parish of Skirdustan united. Stipend £287 8s. 2d., arising from parsonage teinds; with a glebe valued at £5, and a manse and peat-cutting. Schoolmaster's salary £34 4s. 4½d., with a house and garden, and £10 12s. of fees. Scholars average 30. Church erected in 1812; sittings 700. There is a Missionary station and chapel in Glenrinnes.

ABERLUTHNET. See **MARYKIRK**.

ABERNETHY, a parish partly and chiefly in Perthshire, and partly in Fifeshire; bounded on the north by the Earn river, which separates it from the parishes of Dunbarn and Rhynd, and by the estuary of the Tay; on the east and south by Fifeshire; and on the west by the parishes of Dron and Dunbarn. This parish is of an irregular figure. It extends from east to west about 4 miles; and from north to south, in some places, nearly 5. The surface is uneven; a considerable part is hilly, and belongs to that ridge of hills called the Ochills. The low ground, betwixt the rivers Tay and Earn on the north, and the hills on the south, forms nearly an oblong square of about 4 miles in length by $1\frac{1}{2}$ in breadth. About 25 feet below the surface of this flat, and 4 feet below the highest spring-tide mark in the Tay and Earn, there is uniformly found a stratum of moss from 1 to 3 feet thick. This moss is composed of remains of oak, alder, hazle, birch, &c. The soil above this bed is composed of strata of clay and sand. The Earn, by breaking down the opposing banks in its serpentine turning, has formed beautiful links or haughs on each side of its stream, which are secured from being overflowed, by embankments. The Tay, which washes the eastern part or the northern boundary, is here navigable, and affords salmon and sea-trout. The proprietor of Carpow has valuable fishings upon it. In the middle of this river, opposite to Mugdrum, in the parish of Newburgh, is an island called Mugdrum island, belonging to this

* Dr Jamieson instances the name of this parish as a case in which the word *uber* cannot signify a confluence of waters—as Chalmers contends it always does; but must be regarded as equivalent to the German *ober*, or *uber*, signifying upper, or a higher relative situation: for the name of the parish is undoubtedly derived from the Lemno.

parish. It is nearly 1 mile in length; its greatest breadth is 198 yards; area 31 acres. The Earn, which bounds the northern part of the parish till it falls into the Tay, a little below the mansion-house of Carpow, is navigable for several miles. It also produces salmon and trout, which are chiefly sent to Perth, and thence to the English market. There are two passage-boats on the Earn: one at Cary, which is seldom employed; another at Ferryfield, upon the estate of Carpow, near the junction of the Earn and the Tay. The Farg, a rivulet rising on the borders of Kinross-shire and flowing into the Earn about $1\frac{1}{2}$ mile west from Abernethy, also abounds with small trout. There is another small rivulet, the Ballo burn, anciently called the Trent, which flows through what is called the glen of Abernethy. Population of the entire parish, in 1801, 1,488; in 1831, 1,776. Houses 324. Assessed property, £7,976.—The population of that portion of the parish which is in Fifeshire was, in 1801, 133; and in 1831, 164. Number of houses 28. Assessed property £1,496. The valued rent is £884 15s. 1d. Scots. The real rent about £8,000 sterling. The town of Abernethy is nearly in the centre of the parish, 3 miles west by south from Newburgh. It is a burgh of barony under Lord Douglas, coming in place of the earls of Angus. It has a charter from Archibald, Earl of Angus, Lord of Abernethy, dated August 23, 1476; which was confirmed by charter of William, Earl of Angus, dated November 29, 1628. There is a cattle fair here on the 12th of February; also on the fourth Wednesday in May, and second Thursday in November. Population, 800.—This place, though “now a mean village,” says Dr Jamieson, “once boasted high honours, and had very considerable extent. It would appear that it was a royal residence in the reign of one of the Pictish princes who bore the name of Nethan or Nectan. The Pictish chronicle has ascribed the foundation of Abernethy to Nethan I., in the third year of his reign, corresponding with A.D. 458. The Register of St Andrews, with greater probability, gives it to Nethan II., about the year 600. Fordun and Wyntoun agree in assigning it to Garnat, or Garnard, the predecessor of the second Nethan. Abernethy had existed as a royal seat perhaps before the building of any conspicuous place of worship. For we learn, that the Nethan referred to ‘sacrificed to God and St Bridget at Aburnethige;’ and that the same Nethan, ‘king of all the provinces of the Picts, gave as an offering to St Bridget, Apurnethige, till the day of judgment.’ Fordun expressly asserts, that, when this donation was made, Abernethy was ‘the chief seat, both regal and pontifical, of the whole kingdom of the Picts.’ He afterwards relates, that, in the year 1072, Malcolm Canmore did homage, in the place called Abernethy, to William the Bastard, for the lands which he held in England. I have elsewhere thrown out a conjecture that this place may have been denominated from the name of Nethan the founder. It has been said, indeed, that ‘the name which Highlanders give to Abernethy, is *Obair* or *Abair Neachtain*, that is, the work of Nectan. But it seems preferable to derive it from Nethy, the name of the brook on which it stands.”

This parish is in the presbytery of Perth, and synod of Perth and Stirling. Stipend £256 5s. 7d.; with a glebe of the value of £12, and a manse. Patron, the Earl of Mansfield. There are about £270 unappropriated teinds. The schoolmaster has the maximum salary, with the interest of a mortification of £190, and some other small fees. There are two private schools. The church is remarkable for nothing but its antiquity; there are no records, nor so much as a tradition when it was built. The

Secession have a church here. Abernethy was in ancient times the seat of an episcopal see. When Kenneth III. had subdued the Picts, he translated the see to St Andrews; but long before this Abernethy was known as a principal seat of the Culdees. While they held it, there was an university here for the education of youth, as appears from the Priory book of St Andrews. In the year 1273—by which time the Culdees were much discouraged—it was turned into a priory of canons-regular of St Augustine, who were brought, it is said, from the abbey of Inchaffray.

In the church-yard stands a tower of an extraordinary construction. South-west from the kirk-town there is a hill, called Castle-law. Dr Jamieson says: “Although the round tower of Abernethy has attracted the attention of many travellers and writers, and been the subject of various hypotheses, no one has ever thought of viewing it as connected with the royal residence; as it was undoubtedly used for some ecclesiastical purpose. That good-humoured old writer, Adamson, assigns a singular reason for the erection of this building; while he seems not to have known that there was another of the same description at Brechin, considerably higher than this. He pretends that this was built by the Picts to prevent the Scots from trampling on the body of their king after his death:—

Passing the river Earne, on th’ other side,—
Thence to the Pights great Metropolitan,
Where stands a steeple, the like in all Britaine
Not to be found againe, a work of wonder,
So tall and round in frame, a just cylinder,
Built by the Pights in honour of their king,
That of the Scots none should attempt such thing,
As over his bellic big to walk or ride,
But this strong hold should make him to abide.

MUSE’S THRENODIE, p. 172.

This tower is hollow, but without any staircase. At the bottom are two rows of stones, projecting as a sort of pedestal. It is 75 feet in height, and consists of 64 regular courses of hewn stones. At the base it measures 48 feet in circumference, but diminishes somewhat towards the top; the thickness of the wall being $3\frac{1}{2}$ feet at the bottom, and 3 at the top. It has only one door, facing the north; 8 feet in height, 3 wide, and arched. Towards the top are four windows; they are equidistant; 5 feet 9 inches in height, and 2 feet 2 inches in breadth; each being supported by two small pillars. Some intelligent visitors assert, that, whatever may have been the original design of this work, it has at one time been used as a cemetery. Where the earth has been dug up, to the depth of three feet, a number of human bones have been found in the exact position in which they must have been interred; which, it is urged, would not have been the case, had they been thrown in from the adjoining ground. It stands at the corner of the present churchyard. ‘South-west from the town,’ we are told in the ‘Statistical Account,’ ‘there is a hill, called Castle-law. Tradition says, that there was a fort upon the top of it.’ ‘This,’ it is subjoined, ‘probably served for one of those watch-towers on which the Picts used to kindle fires, on sudden invasions, insurrections, or the approach of the enemy.’ But if any place bids fair to have been the site of a royal residence, this seems to have a principal claim. It follows, however: ‘About a mile and a half east from Abernethy, a little below the mansion-house of Carpow, stood the ancient castle which belonged to the lords of Abernethy; part of its foundation may be still seen.’ Now, it might be supposed that here, as in other instances, the person who obtained the grant of royal domains would prefer the occupation of the ancient residence to the erection of a new one. The distance would be no objection. For I have else-

where proved, from the most ancient authority, that, during the Pictish era, Abernethy was far more extensive than it now is; as the king, in his donation to St Brigid, extends its limits to a stone near Carpow. I acknowledge, however, that the place called Castle-law seems to claim the preference. For, from the most minute inquiry, I learn that there is a tradition, perfectly familiar to every one in the vicinity, that this was the residence of the ancient Pictish kings. In confirmation of this article of traditionary belief, an appeal is made, not only to the vast quantity of stones still remaining on this hill, but to the description of those that have been carried off in successive ages. Unlike the materials of the cairns, which are so commonly met with in our country, these have, in a great measure, been hewn stones. A house in the neighbourhood has, of late, been entirely built of dressed stones carried off from the Law. There seems, therefore, to be no reason to doubt that this has been the site of very extensive and superb buildings. The remains of a surrounding moat are yet to be traced on the west side. At the bottom of this hill, an eminence is called the Quarrel-know, i. e. knoll, where, according to tradition, the Picts were wont to celebrate their military games. This may have been its original appropriation, whence in later ages it might continue to be employed for similar purposes. But the name itself can hardly claim so early an origin; having most probably been given to it, in an age in which the use of the cross-bow was common, from the designation of the arrow shot from it, which was called a *quarrel*; unless the term should be traced to our old Scottish word *quarrell*, or *querell*, denoting a quarry. The view from this elevation has been deemed worthy of its ancient royal honours, as scarcely excelled by any in Scotland,—a country so rich in beautiful and picturesque prospects. While the classic Earn unites with the noble Tay at your feet, the eye is delighted with the richness of the carse of Gowrie; and the prosperous town of Dundee is seen in the distance, with the numerous sails that enliven the expanding river in its course to what was anciently denominated the Scythic sea.—In the south-west corner of the parish, among the hills, stands Balvaird castle, which belonged to the Murrays of Balvaird, in the reign of Robert II. It is now the property of the Earl of Mansfield, the lineal descendant of that ancient house.

ABERNETHY, a parish partly in the shire of Elgin, partly in that of Inverness; bounded on the north by Duthill and Inverallan parishes; on the east by Banffshire; on the south by Braemar; and on the west by the river Spey. The parish of Kincardine, or Kinchardine, which belongs exclusively to Inverness-shire, having been united to this parish about the time of the Reformation, it is sometimes known as the united parish of Abernethy and Kinchardine. The name is descriptive of the situation of the kirk-town with respect to the Nethy, being within a mile of the fall of that stream into the Spey. The meaning of the name Nethy, or Neich, is not known; that of Kinchardine, or Kinie-chardin, is 'the Clan of Friends.' It is 15 miles in length, measured from Cromdale on the north to Rothiemurchus on the south; and from 10 to 12 in breadth. The surface is highly diversified with haughs, woods, and mountains. A stretch of about 3 miles of low land and meadow, along the bank of the Spey, is often overflowed by that river, which here runs smooth and slow. The arable ground bears but a small proportion to the uncultivated. A great proportion of the surface is covered with woods: on the Grant estate alone there are 7,000 acres of natural fir-wood.—The

only river of any note, besides the Spey, is the Nethy, which, rising on the northern side of the hills to the east of Cairngorm, known as the Braes of Abernethy, flows in a north-west direction through the forests, and empties itself into the Spey, 4 miles above Grantown. It is about 12 miles in length, and is a rapid running stream; after rains, or thaws, it swells so as to bring down the timber that has been cut in the forests of Grant to the Spey, whence it is sent in rafts to Garmouth. There is a bridge over the Nethy about a mile above its confluence with the Spey, having a water-way of 84 feet. A little to the east of the Nethy is the burn of Cultmore. The Dualg burn flows into the Spey about 4 miles above the Nethy. There are several small lakes in Kincardine, the most considerable of which is Loch Morlach, in Glenmore; it is of an oval form, and nearly two miles in diameter. It is in the bottom of the glen, and surrounded with aged fir woods, which rise gradually towards the mountains. It discharges itself into the Spey by the Morlach burn, which is about 4 miles in length. In Glenmore there is another small loch, in extent about one acre, which abounds with small fat green trout. At the foot of Cairngorm, about a mile from its base, is Loch Avon, whence the river of that name issues. At one end of this loch is a large natural cave, called Chlachdhan, or 'the Sheltering stone.' Of the mountains of this parish, Cairngorm, or 'the Blue mountain,' is the most remarkable. It commands an extensive view. The shires of Ross, Sutherland, and Caithness, are seen from its summit. See CAIRNGORM.—Besides a great deal of birch and alder, there are two very large fir forests in this parish. The fir-wood of Abernethy, now belonging to the earl of Seafield, is of great extent, and very thriving. "It is not a very long time back," says the writer of the old statistical account of this parish, "since the laird of Grant got only a merk a-year for what a man choosed to cut and manufacture with his axe and saw; people now alive remember it at 1s. 8d. a-year, afterwards it came to 3s. 4d. and then the laird of Rothiemurchus, commonly called Maccalpin, brought it up to 5s. a-year, and 1 lb. of tobacco. Brigadier Alexander Grant—who died in 1719—attempted to bring some masts from his woods of Abernethy to London; but though a man of great enterprize in his military profession, did not persevere in this, owing to the many difficulties he had to encounter, such as the want of roads in the woods, skill in the country-people, and all kinds of necessary implements. About the year 1730, a branch of the York-building company, purchased to the amount of about £7,000 of these woods of Abernethy, and continued till about the year 1737; the most profuse and profligate set that ever were heard of then in this corner. This was said to be a stock-jobbing business. Their extravagancies of every kind ruined themselves, and corrupted others. But yet their coming to the country was beneficial in many respects; for, besides the knowledge and skill which was acquired from them, they made many useful and lasting improvements; they cut roads through the woods; they erected proper saw-mills; they invented the construction of the raft, as it is at present, and cut a passage through a rock in the Spey, without which, floating to any extent could never be attempted. Before their time, some small trifling rafts were sent down Spey in a very awkward and hazardous manner: 10 or 12 dozen of deals, huddled together, conducted by a man, sitting in what was called a *currach*, made of a hide, in the shape and about the size of a small brewing-kettle, broader above than below, with ribs or hoops of wood in the inside, and a cross-stick for the man to sit on; who, with a paddle in his hand, went before

the raft, to which his currach was tied with a rope. These currachs were so light, that the men carried them on their backs home from Speymouth.* The duke of Richmond is proprietor of the fir-woods of Glenmore, in the barony of Kincardine. See GLENMORE. Population, in 1801, 927; in 1831, 2,092, in 445 families, of whom 204 families were employed in agriculture. Houses 436. The valued rent is £1,553 16s. Scots; the gross land-rent of the two parishes, exclusive of the woods, is about £2,500 sterling.

This parish, formerly a vicarage, is in the presbytery of Abernethy, and synod of Moray. Patron, the Earl of Seafield. Stipend £234 2s. 1d., with a glebe valued at £7, and a manse. Unappropriated tithes £98. Schoolmaster's salary £25 13s. 3½d., with about £20 fees; scholars average 75. There is a small private school. The church of Kincardine is 8 miles distant from the village of Abernethy. The parish-minister officiates two successive sabbaths in Abernethy church, and every third sabbath in that of Kincardine. The latter church has sittings for 600; the former, for 1,000. Both are well-built.—There is a large oblong square building near the church, called Castle-Roy, or the Red castle; one side measures 30, the other 20 yards; the height is about 10. It never was roofed, had no loop-holes, and only one entrance to the inside. Neither history nor tradition give any account of it.—The Hon. John Grant, Chief-justice of Jamaica, was a native of this parish; and Francis Grant, Lord Cullen, and Patrick Grant, Lord Prestongrange, both eminent juriconsults, and lords of session, were connected with this parish. At Knock of Kincardine was born, in 1700, John Stuart, commonly called John Roy Stuart. He was a good Gaelic poet.

ABERNYTE, a small parish in Perthshire; bounded on the north by the parishes of Cargill and Longforgan; on the east by Longforgan; on the south by Inchture; and on the west by Kinnaird and Collace parishes. It is nearly 3 miles in length, by 2 at its greatest breadth; area about 2,600 acres, of which nearly 1,700 are under cultivation. The kirk-town, near the centre of the parish, is situated 11 miles north-east of Perth; it stands in a fine valley intersected by a stream flowing south-east into the estuary of the Tay. The highest point in the parish is the King's seat, on the northern extremity, which rises to the height of 1155 feet, and commands a fine view southwards to the frith of Forth. The general declination of the country is towards the south-east. Population, in 1801, 271; in 1831, 254. Houses 46. Assessed property, £2,359. Old valuation, £1,126 13s. 4d. Scots.—This parish, formerly a vicarage in the deanery of Dunkeld, is in the presbytery of Dundee, and synod of Angus and Mearns. Patron, the Crown. Stipend £159 11s. 3d. with a manse, and a glebe valued at £14. Church rebuilt in 1736. There is a Burgher congregation, and a parochial school.—Upon the top of a hill called Glenly-law in this parish, are two cairns supposed to cover the remains of the slain in a feud between the Grays of Fowlis, and the Boyds of Pitkindie.

ABERRUTHVEN. See AUCHTERARDER, Perthshire.

ABERTARFF. See BOLESKINE.

ABINGTON, a village in the parish of Crawford-John, Lanarkshire, 3 miles north of Crawford, and at the junction of the road to Leadhills and Sanquhar, with the post-road from Dumfries, by Elvanfoot, to Glasgow. Gold is said to have been obtained from mines wrought in this neighbourhood during the reign of James VI. See CRAWFORD.

* This description of the Spey currach is exactly that given by Herodotus of the vessels used by the natives in navigating the Euphrates between Armenia and Babylon.

ABOYNE, an extensive parish in Aberdeenshire, called, since its union with Glentanner, 'the united Parish of Aboyne.' What formed the old parish of Aboyne lies principally on the north side of the Dee, extending from east to west about 7 miles, between the burn of Dess which separates it from the parish of Kincardine O'Neil on the east, and the burn of Dinot which forms the boundary with the parish of Tullich on the west. The parishes of Lumphanan, Coull, and Coldstone close in this part on the north. From the junction of the burn of Dess with the Dee, this river forms the continuation of the boundary on the north, from west to east, about 3½ miles to near the bridge of Potarch; it then extends nearly due west to the junction of the old Dinnie burn with the Dee. From this point Aboyne extends nearly due south along the course of this burn to near its rise, having Birse on the east till it joins Forfarshire, which now forms the south boundary of Glentanner, along the ridge of the Grampians, till it meets the parish of Glenmuick, which closes it in on the west till met by the Dee at Dee-castle,—the Dee forming the north boundary from this to the entrance of the burn of Dinot, where it again joins Aboyne and completes the circuit of the great body of the united parish. A detached part, lying to the south and east of Finzean, in the parish of Birse, is of small extent.—The entire area of the united parish is about 29,000 acres, of which nearly 3,000 acres are arable. By far the greater part of the rest is covered with heath. The extensive forest of Glentanner, composed of Scotch fir, once the finest in the county, is now all sold, and nearly all cut; and the splendid plantations of the same wood about Aboyne-castle are also nearly all exposed to the same fate. There is little or any hard wood in the parish, and none of great size. About five-sixths of the parish are held under entail; four-fifths of it is the property of the Marquis of Huntly; and the rest belongs principally to Mr. Farquharson of Finzean, and the proprietors of Balnacraig, Lord Aberdeen having only a very small portion.—The valued rent is £2,005 8s. 10d. Scots, and the real rent about £3,500.—Farms are generally very small, the soil light and early, and chiefly adapted for turnip husbandry. The principal mansion in the parish is Aboyne-castle, a large massive building which has been enlarged and improved by the Marquis of Huntly. The site is rather low, but is finely sheltered and surrounded by well-laid out and extensive enclosures. The neat village of Charlestown is partially seen about half-a-mile to the south.—About a mile to the south and west the Dee is crossed by an elegant suspension-bridge, from which a good road across the Grampians, in the direction of Forfar, would be of the utmost consequence to this and a great part of the surrounding country, there being at present no direct access to the south from this but by the Firmount or the forest of Birse, but both roads are at present nearly impassable even for a person on horseback. The Cairn O'mount road is a bad line, and very steep. The turnpike from Aberdeen to Braemar runs through part of the parish; and various lines of commutation road also pass through it.—The Dee runs about 15 miles through and along the parish, and receives in its course a few tributary streams, the principal of which is the Tanner from the south.—The parish is very hilly, particularly in Glentanner, where some of the hills attain a considerable altitude. Tumuli abound in various parts in the parish, but most in the north part. Some urns with calcined bones have been dug up in Glentanner, which indicate that the Romans had visited this part of Scotland at some time.—There are three burying-grounds in the parish, one in Glentanner and two in Aboyne.

—Tradition has it that the pest or plague had at one time raged with great violence here; and that it was first observed to abate on the Mondays and Fridays, after which the people should have immediately abstained from breaking ground in the churchyard of Glentanner on those days of the week, out of gratitude for the appearance of deliverance from such an awful enemy to the human race. The observance, which is still most scrupulously adhered to, has more likely had its origin in the dark days of ignorance and popish superstition. The title of Earl of Aboyne merged, in 1836, in that of Marquis of Huntly. It was created by James VI. in 1599. Population, in 1801, 916; in 1831, 1,163. Houses 247. Assessed property, £2,069.—This parish is in the presbytery of Kincardine O'Neil, and synod of Aberdeen.—The Marquis of Huntly is patron. Stipend £160 15s. 1d., with manse and glebe. Schoolmaster's salary £26; school-fees £12, with share of the Dick bequest. The scholars average 60.—There is another school in the parish supported by the Society for propagating Christian knowledge, with about 50 scholars.

ACHAISTAL. See LATHERON.

ACHALL (LOCH), a finely wooded loch in the Aird of Coigach, parish of Lochbroom, Ross-shire.

ACHANDUIM. See LISMORE.

ACHARAINERY. See HALKIRK.

ACHARN. See KENMORE.

ACHESON'S HAVEN, a small harbour near Prestonpans, in the county of East Lothian. It was constructed by the monks of Newbottle, on their range of Preston. It is often named Morrison's haven from one of its later proprietors.

ACHILTY LOCH. See CONTIN.

ACHINDAVY, or AUCHENDAVIE, a hamlet on the Kelvin, in the shire of Dumbarton and parish of Kirkintilloch; 2 miles east of Kirkintilloch. This was a Roman station, on Antoninus's wall, vulgarly called Gryme's dyke; and, in May 1771, as the workmen were carrying on the great Forth and Clyde canal near this place, they discovered four altars, a mutilated bust, and two great iron mallets, in the tract of the canal, about nine feet below the surface of the earth; in a pit which appeared to be about seven feet diameter at the top, and three at the bottom. The inscriptions upon the altars inform us that they were erected by a centurion of the Second legion. General Roy has given a plan of this station in plate 35 of his 'Military Antiquities,' and engravings of the several antiquities in plate 38 of that work.

ACHNACRAIG, or AUCHNACRAIG, a small harbour on the east coast of the island of Mull, at the entrance of Loch-Don, in the parish of Torosay; 18 miles south-east from Aros; and 132 west by north from Edinburgh. A post-office is established here. This is the principal ferry of Mull, first to the opposite isle of Kerrera, a distance of 7 miles; and thence to the main-land near Oban, a distance of 4 miles; and from hence vast numbers of horses and black cattle are annually transported for the lowland markets. There is a good road from hence to Aros. See MULL.

ACHRAY (LOCH), a beautiful sheet of water in Perthshire, between Loch-Katrine and Loch-Vennachar, and at a nearly equal distance from both. With these lakes it is connected by two small streams,—one of which flows into its western extremity from Loch-Katrine, while the other, issuing from its eastern end, carries its waters into Loch-Vennachar. The lake receives its name from the farm of Achray, situated on its south-western shore; the term in Gaelic signifies 'the level field.' Loch-Achray, therefore, means 'the lake of the level field.' Compared with either of its sister-lochs,

Loch-Achray is but of small dimensions; its utmost length being about a mile, and its breadth scarcely half-a-mile; but the epithet 'lovely' has been, with peculiar propriety, applied to this lake by Sir Walter Scott, as it is hardly possible to conceive any natural scenery more lovely than that presented by the shores of Loch-Achray. The northern shore is bold and rocky, but its harsher features are softened by a rich covering of wood and 'bosky thickets' to the water's edge,—

—"the copsewood grey,
That waves and weeps on Loch-Achray."

On the south, the ground rises more gradually from the lake, but it is mostly clad with heath. This soft and gentle character, however, can only be applied to the lake, its bays and shores, and their immediate vicinity; for beyond this we have lofty mountains rearing their rugged and often cloud-capp'd heads in awful majesty, and deep and silent glens and ravines through which the upland streams seek their way to the lakes. On the shores of Loch-Achray we are still within the power of the magician's spell; and so thoroughly has he peopled the visions of our fancy with the creations of his own imagination that we look for the localities of his poem, as we did at Loch-Katrine, with as perfect a faith, and gaze on them when found with as much devotion, as we should on the scenes of some of the most important transactions in our national annals. Along these shores the messenger of Roderic Dhu carried the fiery cross, to alarm and call to the rendezvous the sons of Alpine; and he who, giving himself up to the magic influence of the minstrel's strain, delights to blend together the real truth and the ideal in his conceptions, will remember how

"Fast as the fatal symbol flies,
In arms the huts and hamlets rise;
From winding glen, from upland brown,
They pour'd each hardy tenant down."

Near the east end of Loch-Achray, and before the traveller from Callander approaches it, he passes over 'the Brigg of Turk,' one of the localities of the poem. See GLENFINLASS.

ADD (THE), a river in Argyleshire, which has its source in some marshes in the north-western extremity of the parish of Kilmichael; and in its winding course southward, by the junction of several tributary rivulets, forms a considerable body of water. It flows through the moss of Crinan, and falls into the sea at Inner Loch-Crinan, on the west coast of Argyleshire. There is a salmon-fishery at its mouth; and the stream itself abounds with trout.

ADVIE, an ancient vicarage and district, partly in Elgin, partly in Inverness-shire, now comprehended in the parish of Cromdale; 8 miles north-east from Granton. This district contains the barony of Advie on the eastern, and the barony of Tulchen on the western side of the Spey: these baronies, anciently a part of the estate of the earl of Fife, came to the family of Ballendalloch in the 15th century, with whom they continued, until sold to Brigadier Alexander Grant.

AE (THE), or WATER OF AE, a small river in Dumfriesshire, which has its rise at the southern foot of Queensberry-hill, runs south for some miles to Glencross in Kirkmahoe, forming the boundary between Closeburn and Kirkmichael parishes; then bending its course south-eastward, forms a junction at Esby with the Kinnel, a branch of the Annan. Its tributaries are the Deer burn, the Branet burn, Capple water, and Glenkill burn. Its length of course, including windings, is about 16 miles.

ÆBUDÆ, and ÆMODÆ. See HEBRIDES.

AFTON, a small river in Ayrshire, a tributary to

the Nith. It rises in the south-eastern extremity of New Cumnock parish, and flows north-west through Glen-Afton, to New Cumnock, a little below which it falls into the Nith, after a course of 6 miles.

AIGASH, or EALAN-AIGAS, a beautiful island, 5½ miles south-west from Beaulieu, formed by the river Beaulieu, which here divides into two branches. It is of an oval figure, about 1½ mile in circumference; and contains about 50 acres. It is principally composed of a mass of pudding-stone rising in an abrupt manner about 100 feet above the level of the water, but communicating with the mainland by a bridge. It is covered with natural wood of birch and oak, and is much frequented by roes, and occasionally by red deer. To this island Simon, Lord Lovat, conducted the dowager Lady Lovat, when letters of fire and sword were issued against him in 1697; and here, in a crow-stepped building in the old Scottish style, erected by Lord Lovat, reside the only descendants of Prince Charles Edward Stuart. See KILMORACK.

AILSA CRAIG, sometimes called THE PERCH OF CLYDE, a stupendous insulated rock, or rather mountain, in the mouth of the frith of Clyde, between the coasts of Ayrshire and Kintyre; in N. lat. 55° 15' 13"; W. long. 5° 7', according to Galbraith, but according to Norie, in N. lat. 55° 17' 0"; W. long. 5° 8' 0". From the islet of Pladda it is distant 10' 20" direct south. It is a mass of columnar syenetic trap, shooting up in a conical form, to an altitude of 1,100 feet according to Macculloch, from an elliptical base of 3,300 feet in the major axis, by 2,200 in the minor. Its formation is distinctly columnar, especially on the western side in which the rock rises quite perpendicularly from the sea. Dr Macculloch says, that "if a single pillar be examined near at hand it will be found far less decided in shape than those of Staffa or Skye, while the whole mass appears as if blended together, not as if each column could be separated; but, when viewed in the mass, the general effect of a columnar and regular structure is as perfect as on the north coast of Skye," while the diameter of the columns far exceed those of Skye, ranging from 6 to 9 feet, and, in one place, attaining an unbroken altitude of nearly 400 feet.* The only landing-place is on the east side, where there is a small beach formed by fallen fragments of the rock. From this, an easy ascent of 200 feet conducts us to the ruins of a square building of which nothing is known, though Macculloch conjectures it may have been an heremitical establishment dependent on Lamash in Arran. Beyond this building the ascent is extremely laborious, the visitor having to force his way over fragments of rock, and through a forest of gigantic nettles. Not far from the summit are two copious springs; the summit itself is covered with fine herbage, but affords only a scanty and somewhat perilous footing. The rock is inhabited by a few rabbits and goats, and myriads of solan geese, puffins, cormorants, auks, and gulls. It is the property of the Earl of Cassillis, who draws an annual rent of about £30 for it, and who takes the title of Marquis from it. The aspect of this vast and 'craggy ocean pyramid' "from any distance, and in every direction," says Macculloch, "is very grand, and conveys an idea of a mountain of far greater magnitude; since, as its beautiful cone rises suddenly out of the sea, there is no object with which it can be compared. From its solitary and detached position also, it frequently arrests the flight of the clouds, hence deriving a misty hue which more than doubles its altitude to the imagination; while the cap of

cloud which so often covers its summit, helps to produce, by concealing its height, the effect—invariable in such cases—of causing it to appear far higher than it really is; adding that appearance of mystery to which mountains owe so much of their consequence. What Ailsa promises at a distance, it far more than performs on an intimate acquaintance. If it has not the regularity of Staffa, it exceeds that island as much in grandeur and variety as it does in absolute bulk. There is indeed nothing, even in the columnar scenery of Skye or in the Shiant isles, superior as these are to Staffa, which exceeds, if it even equals, that of Ailsa. In point of colouring, these cliffs have an infinite advantage; the sobriety of their pale grey stone, not only harmonizing with the subdued tints of green, and with the colours of the sea and the sky, but setting off to advantage all the intricacies of the columnar structure; while, in all the Western islands where this kind of scenery occurs, the blackness of the rocks is, not only often inharmonious and harsh, but a frequent source of obscurity and confusion. Those who are only desirous of viewing one example of that romantic and wonderful scenery which forms the chief attraction of the more distant islands, will be pleased to know that, within a day's sail of Greenock, and without trouble, they may see what cannot be eclipsed by Staffa, or Mull, or Skye, if even it can be equalled by any of them."

AIRD. See COIGACH.

AIRD (CASTLE OF), an extensive ruin, supposed to be the remains of a Danish fortification, situated on a rocky promontory a little to the north of Caradell point, on the eastern side of Kintyre, opposite Machry bay in the island of Arran.

AIRD, (THE), a fertile district of Inverness-shire, in the vale of the Beaulieu, chiefly the property of different branches of the clan Fraser.

AIRD (THE), a small peninsula on the east coast of the island of Lewis, with which it is connected by the isthmus of Stornoway. It measures 5 miles in extreme length from Tuimpan-head on the north-east, to Chicken-head on the south-west; its average breadth is about 2½ miles. It is in the parish of Stornoway, to which, in ancient times, it formed a chapelry called Ui or Uy. The old chapel is in ruins, but the inhabitants attend a government chapel at Knock. See articles LEWIS and STORNOWAY.

AIRD OR AIRDS† (THE), a beautiful district of Appin in Argyleshire, lying between the Linnhe loch on the west, and Loch Creran on the south and east. "I do not know a place," says Macculloch, "where all the elements—often incongruous ones—of mountains, lakes, wood, rocks, castles, sea, shipping, and cultivation, are so strangely intermixed,—where they are so wildly picturesque,—and where they produce a greater variety of the most singular and unexpected scenes." The promontory of Ardmucknish, richly clothed with oak-coppice, is a remarkably fine object here.

AIRDNAMURCHAN. See ARDNAMURCHAN.

AIRD POINT, the north-east extremity of the isle of Skye, nearly opposite the mouth of the Gairloch in Ross-shire.

AIRDLE (THE), a considerable tributary of the Erroch river, in the north-east quarter of Perthshire. It is formed by the union of two streams,—one descending from the Grampians, in the East Forest of Athole, through Glen Fernal,—and the other flowing from the west through Glen Brerachan. These

* If this be correct, they are the largest specimens of columnar basalt yet known. Those of the Fairhead, at the Giant's causeway, measure only 317 feet in altitude, according to the Ordnance trigonometrical Survey.

† From the instances above enumerated it may be conjectured that the general signification of this word *aird*, or *ard*, in Gaelic, is that of a point, or promontory, or rising ground; and in this sense it usually occurs in Gaelic and Irish topography. The form *ard* is, however, the more common of the two.

streams unite at Tulloch, and assume the name of the Airdle, which flows south-east through Strath-Airdle in the parish of Kirkmichael, and unites with the Shee a little below Nether Claquhair. The two united streams form the ERROCH: which see. The total course of the Airdle is about 13 miles.

AIRDRIE, a market-town, burgh of barony, and municipal borough, *quoad civilia* in the parish of New Monkland, and county of Lanark; on the principal line of road between Glasgow and Edinburgh; 11 miles east by north from the former, and 32 west by south from the latter. It occupies a slightly rising ground sloping westwards, but presenting no marked or interesting features. A little more than a century ago, a solitary farm-hamlet occupied the site of this large, well-built, manufacturing town. It now numbers 6,000 inhabitants, 174 of whom, in 1835, rented property within borough of an yearly rental of £10, and 171, property of an yearly rent of £5. The total rental is about £6,700. Its owes its rapid growth chiefly to the extensive and rich beds of ironstone and coal which surround it, and the consequent opening of iron-works and collieries in the neighbourhood; its proximity to Glasgow has also given it a large share in the weaving-orders of the western manufacturers; while it enjoys frequent daily intercourse by coaches, with Edinburgh, and by coaches, canal, and railroad with Glasgow. By the **MONKLAND CANAL** alone (see that article) upwards of 50,000 passengers were conveyed between Airdrie and Glasgow in the year 1837. See also **GLASGOW AND GARNKIRK RAILWAY**. The streets are lighted with gas, and well-paved; a market for grain is held in the town every Thursday; and fairs are held on the last Tuesday in May and third Tuesday of November. The National bank, the Bank of Scotland, and the Western bank of Scotland, have branches here. This town was erected into a free burgh of barony in 1821, by act of 1^o and 2^o Geo. IV. c. 60. Under the late Municipal act the magistracy consists of a provost, three bailies, a treasurer, and seven councillors. The property of the town, in 1834, amounted to £1,670; its revenue, in 1833, was £324, of which £188 consisted of road-money levied in 1832 and 1833. The magistrates are patrons of the town's school, at which about 120 pupils in summer, and 80 in winter, attend. A neat town-house has been recently built. Airdrie unites with Lanark, Hamilton, Falkirk, and Linlithgow, in returning a member to parliament. There is a mineral well of a sulphurous quality, called Monkland well, near Airdrie.—Chalmers is of opinion that Airdrie is the Arderyth of the British Triads, on the heights of which Rydderech the Bountiful, king of Strathclyud, in 577, defeated Aidan the Perfidious, king of Kintyre, and slew Givenddolan the patron of Merlin, who was also engaged in the battle. [See Welsh *Archæol.* vol. I. p. 151.] This town has recently been divided into two *quoad sacra* parishes, viz.:

EAST AIRDRIE.—This parish was divided *quoad sacra* from the parish of New Monkland, by the General Assembly, in 1834.—Its population was estimated in 1836 at 3,389, of whom 1,496 belonged to the establishment. Its parish-church is the old chapel-of-ease which was built in 1797; sittings 588. Stipend £120, derived solely from seat-rents. The Reformed Presbyterian church was built in 1795; sittings 450. Stipend £80, with a manse and garden.

WEST AIRDRIE.—This parish was divided *quoad sacra*, by the presbytery of Hamilton, from the parish of New Monkland, in 1835. Population, in 1836, 3,685, of whom 1,479 belonged to the established church. Church opened in 1835; sittings 1,200; cost £2,370. Stipend £105.—The United Secession congregation church was built in

1790; sittings 650. Stipend £120, with manse and garden.—The Original Burgher congregation was established in 1804. Church cost £500; sittings 504. Stipend £80, with manse and garden.—An Independent chapel was opened here in August 1839.

AIRDS MOSS, a large tract of elevated muir-land in the district of Kyle, Ayrshire; lying between the water of Ayr on the north, and Lugar water on the south. The road from Cumnock to Muirkirk may be regarded as its extreme eastern boundary, and that from Cumnock to Catrine as its extreme western. It is chiefly in the parish of Auchinleck; but the uncultivated tract of moss does not exceed 5 miles in length, by 2 in breadth; the declination is towards the south-west. At its head, or eastern extremity, about half-a-mile to the west of the road from Cumnock to Muirkirk, is a monument to the memory of Richard Cameron of famous memory in the annals of Scottish martyrology, who, with eight of his adherents, fell here in a skirmish with a detachment of dragoons under Earlshall. The original monument was a large flat stone simply inscribed with the name of Cameron and his fellow-martyrs, and familiarly known as Cameron's stone; but by the pious care of a few individuals the present monument was erected a few years ago. The skirmish in which these worthies perished took place about 3 or 4 o'clock in the afternoon, on the 20th of July, 1680. Cameron's party—who had been on the moors all the preceding night—amounted to 23 horsemen, and 40 foot, all very ill-armed. The king's party amounted to about 112, all well-armed and mounted.

AIRLIE, a parish in Forfarshire; bounded on the north by Kingoldrum parish; on the east by Kirriemuir and Glamis; on the south by Essey parish and Perthshire; and on the west by Perthshire, Ruthven parish, and Linlithgow. Its greatest length is 6 miles; greatest breadth 4. The superficial area is about 6,000 acres, of which nearly five-sixths are in a state of high cultivation. The general declination is towards the Isla river, which skirts the parish on the western side, and receives two small tributary streams rising in the parish. The Dean river, a sluggish stream flowing from the loch of Forfar, forms its southern boundary. There are extensive plantations on the northern side; and on the western side was an extensive moss, called Baikie moss, covering 128 acres, now drained and under cultivation. Of Baikie castle, the property of the last Viscount Fenton, few traces now exist. In the north-west point of the parish, where the river Melgam, flowing south-west through a deep ravine, joins the Isla river, 5 miles north of Meikle, stood the ancient castle of Airlie, 'the bonnie house of Airlie,' of Scottish song,—once the residence of the Ogilvies, earls of that name, but destroyed, along with Furtour house, another seat of the earls, by the Marquis of Argyll, by order of the Committee of Estates, in 1640. The place had been regarded as an almost impregnable strength by nature, and had already, under Lord Ogilvie, who had been left in command by his father the earl, resisted a party under Montrose and Kinghorn; but on Argyll's approach with 5,000 men, the garrison fled. The modern house of Airlie is a beautiful mansion, most picturesquely situated. Population of the parish in 1801, 1,041; in 1831, 1,860. Houses 160. Assessed property, £5,772. This parish is in the presbytery of Meikle, and synod of Angus and Mearns. Patron, the Earl of Strathmore. Church built in 1791; sittings 411. Stipend £219 1s. 5d., with a glebe valued at £12, and a manse. Schoolmaster's salary £34 4s. 4½d., with £13 fees; average number of pupils 30. There is a private school with about the same attendance.

AIRTH, a parish in Stirlingshire; bounded on the north and east by the frith of Forth, along which it extends about 6 miles; on the south by Bothkenner and Larbert parishes; and on the west by St Ninians. Its greatest breadth is about 3 miles. The general declination is towards the Forth. A small stream, which rises near the centre of St Ninians parish, flows eastwards with a meandering course through this parish, and discharges itself into the Forth at Higgin's Neuck. Stream-tides flow above a mile up this rivulet, which is liable to sudden and extensive floods. On the western side of the parish were formerly two extensive mosses,—one of nearly 500 acres, called the Moss of Dunmore; and the other, to the south of it, called the Moss of Letham. These—which might be remains of the great Caledonian forest—have almost disappeared before the progress of cultivation; and on the side of the frith also a considerable quantity of rich land has been reclaimed from the sea, which in ancient times certainly covered a great portion of the lowlands in this parish. The hills of Dunmore and Airth are very beautiful wooded eminences, towards the centre of the parish, both commanding a fine view of the frith. Coal is extensively wrought in their neighbourhood. There are three small harbours on the coast: viz., Airth, Dunmore, and Newmiln; and two ferries across the frith; one at Kersie, where the frith is about half-a-mile in breadth; and the other at Higgin's Neuck, where the breadth is nearly a mile. The town of Airth is near the coast, about 5 miles direct north of Falkirk; on the coast-road to and from Stirling and the East country. The writer of the first Statistical account of the parish, says: "The trade in Airth, prior to the year 1745, was very considerable, but has since been on the decline, owing to a number of vessels being burnt at that period. The occasion of this was, that the rebels, having seized a small vessel at a narrow part of the river called Fallin, by means of it transported a number of small brass cannon to the harbours of Airth and Dunmore, near each of which they erected batteries and placed their cannon. Upon the king's vessels coming from Leith to dislodge them, a reciprocal firing took place. The commanders of the king's vessels, finding their efforts ineffectual, sailed down the river with the tide, and gave orders to burn all the vessels lying on the river-side, to prevent them falling into the hands of the rebels, who might have used them as transports, and harassed the people on both sides of the river. The loss of these vessels was severely felt by the trading-people in Airth, and trade has since removed to Carronshore and Grangemouth." Population, in 1801, 1,855; in 1831, 1,825, of whom 152 families were chiefly employed in agriculture, and 110 in trades. Houses 232. Assessed property, £11,159. Valued Scots rent, £8,638.—This parish, formerly a vicarage belonging to the bishop of Edinburgh, is in the presbytery of Stirling, and synod of Perth and Stirling. The church is a very handsome Gothic building of recent erection. Patron, Graham of Airth. Stipend £281 12s., with a glebe valued at £27, and a manse. Unappropriated tithes £1,489 3s. 2d. Schoolmaster's stipend £34, with £40 fees; average number of scholars 90. There are two private schools.—There are three ancient castles or towers in this parish: viz., that of Airth, known as Wallace's castle, from that hero having surprised and cut off an English garrison in it, and now forming a part of the modern building called by the same name; that of Dunmore; and that of Powfouls. The principal seats are Airth castle, Dunmore house, and Higgin's Neuck, or according to more modern orthography, Nook.

AIRTHRIE, a small hamlet of Stirlingshire, which may now be regarded as forming part of the picturesque village called the **BRIDGE OF ALLAN**: see that article. It is here that the wells resorted to by the visitors at Bridge of Allan are situated. The Airthrie mineral spring holds upwards of one-third more of the mineral salts in solution than the waters of Dunblane, and one-half more than those of Pitcaithley. The following is Dr Thomson's analysis of this spring:—

	In 1,000 grains.	In one pint.
Common salt,	5.1	37.45
Muriate of lime,	4.674	34.32
Sulphate of lime,	0.26	1.91
	10.034	73.68

Pitcaithley water, according to Dr Murray's analysis, contains 34.3 grains salts in one pint; and Dunblane water 45.9. The specific gravity of Airthrie water is 1.00714.

AITHSTING, a parish in the Mainland of Shetland, united with that of Sandsting about the time of the Reformation. It is a hilly moorland district. The minister of the united parishes preaches every third Sunday at the old parish church of Aithsting, which is still upheld by the people for that purpose. It is about 2½ miles distant from the parish-church of Sandsting, with a sound intervening. See **SANDSTING**. The bay of Aith affords good anchorage.

ALBANY, **ALBION**, or **ALBINN**, the ancient Gaelic name of Scotland, and, until Cæsar's time, the original appellation of the whole island. The Scottish Celts denominate themselves *Gael Albinn* or *Albinnich*, in distinction from those of Ireland whom they call *Gael Eirinnich*; and the Irish themselves call the Scottish Gaels *Albannaich*; while their writers, so late as the 12th century, call the country of the Scottish Gael *Alban*. With respect to the etymology of the name Albinn or Albion, it is to be observed, in the first place, that it is compounded of two syllables, the last of which, *inn*, signifies in Celtic a large island. Thus far the etymology is clear, but the meaning of the adjective part, *alb*, is not so apparent. Dr John Macpherson thinks it folly to search for a Hebrew or Phœnician etymon of Albion, and he considers the prefix *alb* as denoting a high country, the word being, in his opinion, synonymous with the Celtic vocable *alp* or *alba*, which signifies *high*. "Of the Alpes Graeæ, Alpes Pœninae or Penninae, and the Alpes Bastarnicae, every man of letters has read. In the ancient language of Scotland, *alp* signifies invariably an eminence. The Albani, near the Caspian sea, the Albani of Macedon, the Albani of Italy, and the Albanich of Britain, had all the same right to a name founded on the same characteristic reason, the height or roughness of their respective countries. The same thing may be said of the Gaulish Albici, near Massilia." Deriving *alb* from the Latin word *albus*, the appellation of Albinn would denote an island distinguished by some peculiarity either in the whiteness of its appearance or in the productions of its soil, and hence Pliny derives the etymon of *Albion* from its white rocks washed by the sea, or from the abundance of white roses which the island produced. His words are, "*Albion insula sic dicta ab albis rupibus*, quas mare alluit, vel ob *rosas albas* quibus abundat." But although the whitish appearance of the English cliffs, as seen from the channel and the opposite coast of Gaul, certainly appears to support the supposition of Pliny, yet it is evidently contrary to philological analogy to seek for the etymon of Albion in the Latin. Amongst the various opinions given on this subject, that of Dr Macpherson seems to be the most rational. The term *Albany*,

or *Alban*, became ultimately the peculiar appellation of an extensive Highland district comprehending Breadalbane, Athole, part of Lochaber, Appin, and Glenorchy. The title Duke of Albany was first created for a younger son of Robert II. It became extinct in his son Murdoch, who was beheaded by James I. James II. renewed it for his second son Alexander; in whose son it again became extinct. Since the Union it has always been borne by the king's second son.

ALBION parish. See GLASGOW.

ALDCLUUD. See DUMBARTON.

ALD CAMUS, or OLD CAMBUS, an ancient vicarage in Berwickshire, annexed at an unknown but early date to the parish of Cockburnspath. The church has long been in ruins; but its remains, known by the name of St Helen's chapel, are still visible on the summit of a lofty precipice overhanging the sea, $1\frac{1}{2}$ mile south-east of Dunglass. It is stated in the last Statistical account of Cockburnspath parish, published in 1835, that a number of silver coins of Athelstan the Great were recently found here. See COCKBURNSPATH.

ALDCATHIE, or ALCATHY, an ancient parish in Linlithgowshire, now annexed to DALMENY: which see.

ALDHAM, an ancient parish on the north-east coast of the shire of Haddington, now annexed to the parish of WHITEKIRK: which see. The ruins of the chapel may still be traced, on the summit of the lofty sea-beach a little to the eastwards of Tantallon castle.

ALDIE, an ancient barony in the parish of Fossaway, Perthshire, originally belonging to the earls of Tullibardine, but which came by marriage into the family of Mercer of Meiklour, and is now the property of Lady Keith, Countess Flahault. The hamlet of Aldie is about 2 miles south by east of the Crook of Devon. Aldie castle, once the family-seat of the Mercers, is now in ruins.

ALE (THE), a small stream of Berwickshire, which rises in the north-east of the parish of Coldingham, and runs south-east, skirting the East coast post-road, till its junction with the Eye, after a course of about 7 miles, at a point about 1 mile above Eyemouth.

ALEMOOR LOCH, a small sheet of water in the parish of Robertson, Selkirkshire, fed by a number of streamlets descending from the high grounds towards the west and south, and discharging its waters by the Ale, which, emerging from the north-east point of the loch, flows south-eastwards, and falls into the Teviot, a little below ANCRUM: which see. This lake, Leyden informs us, is regarded with superstitious horror by the common people, as being the residence of the water-cow, an imaginary amphibious monster. A tradition also prevails in the district that an infant was once seized, while disporting on the 'willow shore' of this loch, by an erna, a species of eagle, which, on being pursued, dropped its 'hapless prey' into the waters. Leyden has introduced this incident with thrilling effect in his *Scenes of Infancy*, in the lines commencing

"Sad is the wail that floats o'er Alemoor's lake,
And nightly bids her gulfs unbottomed quake,
While moonbeams, sailing o'er the waters blue,
Reveal the frequent tinge of blood-red hue."

ALEXANDRIA, a pleasantly situated village in the parish of Bonhill, Dumbartonshire; on the western bank of the Leven, on the road from Dumbarton to the Balloch ferry; $3\frac{1}{2}$ miles north from Dumbarton, and a little more than 1 south of the ferry. The population is considerable, and chiefly engaged in the neighbouring cotton-printing works. There

are a handsome extension church, with about 1,000 sittings; and a neat Independent chapel here.

ALFORD, a district in the south-west of Aberdeenshire, comprehending the parishes of Alford, Auchindoir, Clatt, Glenbucket, Keig, Kildrummy, Kinnethmont, Lochell-cushnie, Rhyne and Essie, Strathdon, Tullynessle with Forbes, Tough, Towie, and part of Cabrach, which is mostly in the shire of Banff. The entire population of this district, in 1831, was 11,923, of whom 1,291 families were engaged in agriculture. The number of inhabited houses was 2,321. This district is nearly surrounded on every side by hills and mountains, and there is no entrance to the greater part of it but by ascending considerable heights to gain the passes between them. The climate is good. Its distance from the ocean occasions more intense frosts and longer lying snows; but, on the other hand, the surrounding mountains protect and cover the country from the north-east fogs and winds which are so unfavourable to vegetation in less-sheltered situations and places upon the coast. Besides several inferior streams, Alford is watered by the Don, which, rushing through a narrow gullet amongst the mountains on the west, winds its course, in a direction from west to east, through the whole length of the district; and flows out through a narrow valley encompassed on the north by Bennochie, which here rises into high and magnificent Alpine tops. See BENNOCHIE.

ALFORD PARISH is in length, from south-west to north-east, about 7 or 8 miles; and is from 3 to 5 in breadth. It contains nearly 8,000 Scotch acres; of which there were, in 1796, nearly 3,600 arable, 3,700 of hill, muir, moss, and pasture-grounds, and about 700 of wood. Population, in 1801, 644; in 1831, 894. Assessed property, £2,616. The soil on the banks of the Don is generally a good light loam. In the eastern part of the parish, the soil is in some places a deep loam; in others, a strong clay; and sometimes a mixture of both. In this quarter, and the adjoining parish of Tough, there was formerly a large marsh, now called the Strath of Tough or Kincraigie, which was partially drained in the end of the 17th century. There were anciently weekly markets held at Meiklendovie in this parish, and great yearly fairs at that place, and the kirk-town of Alford. Those at Meiklendovie have been discontinued for many years; but there are still monthly fairs at the kirk-town, for the sale of cattle, horses, sheep, and small wares. Two roads cross each other, in this parish, a little to the north-east of the kirk-town: viz. the Great Northern road, which leads from Fettercairn, over the Cairn of Month, to Huntly; and the road which goes from Aberdeen to Corgarrif, a military station on the sources of Don. On the former of these lines is the bridge of Alford over the Don, a little below its junction with the Lochel, built in 1811. It is of 3 arches, having a water-way of 128 feet, and cost £2,000. It is 14 miles distant from the bridge of Potarch over the Dee, on the same line of road.—There are two old fortalices in this parish; one of them, Astoune, seems to have been a place of some strength. The river Don here abounds with trout, and, after high floods, with salmon. Besides the Don, there are several inferior streams well-stocked with trout, &c. Upon one of them, the Lochel, a bridge was built by Mr Melvine, then clergyman of the parish, in the end of the 17th century; and it is still kept in good repair, by a mortification of 100 merks, which he left in the charge of the minister and kirk-session for that purpose.—This parish is in the presbytery of Alford, and synod of Aberdeen. Patron, the Crown. Stipend £206 17s. 4d., with a manse, glebe, and fuel. Schoolmaster's salary £34 4s. 4½d., with about £10 fees. Average number of scholars

54. The church is old, and bears date 1603. The manse was built in 1718.—In this parish, the Marquis of Montrose, upon the 2d July 1645, signally defeated Baillie, one of the generals of the Covenant; but his cause sustained an irreparable loss in the death of Lord Gordon, eldest son of the Marquis of Huntly, who fell by a random shot, in the pursuit, near a large stone which is still pointed out by the country people. About 90 years ago, some men, while casting peats, dug up the body of a man on horseback and in complete armour, who had probably perished either in the pursuit or flight from this engagement. Upon the top of a hill in this parish, there is an immense cairn, 120 yards in circumference, and of a proportionable height. Of this monument, there is no very distinct tradition, though some legends represent it as marking the burial-place of a brother of one of the kings of Scotland. Nor can any more certain account be given of a large cairn which stood at a place called Cairnballoch.

ALINE (LOCH) a beautiful little arm of the sound of Mull, connected with the sound by a very narrow channel, and penetrating about 2 miles into the most interesting district of Morven. The sides are steep and woody, and towards the head assume a rugged and picturesque appearance. Two streams flow into it at the head, at opposite angles; the one descends from Loch-na-Cuirn, through Loch Ternate, and falls into the north-east corner of the loch; the other, and larger stream, flows through Glen-Dow, skirting the western base of Ben-Mean, receives at Claggan a tributary from Glen-Gell, on the eastern side of Ben-Mean, and discharges itself into Loch Aline on the north-west point. Loch Arienas flows into the latter stream, by a small rivulet. At the head of Loch Aline is a fine old square fortalice, picturesquely situated on a bold rock overhanging the loch.

ALLAN (THE), a tributary of the Teviot, rising on the southern skirts of Cavers parish, and flowing in a north-east direction, through a lovely pastoral vale, till its junction with the Teviot at Allammouth peel, a mile above Branhholm.

ALLAN (THE), a river of Perthshire, and tributary of the Forth, famed for its picturesque scenery, and giving name to the fertile district of Strathallan. Its head-springs descend in a south-eastern direction from the Braes of Ogilvie; the united stream first runs west; and then turns south-west, and enters the parish of Dunblane. At Stockbrigs it bends suddenly towards the south-east, till it reaches Dunblane, whence it assumes a direction nearly south, till its junction with the Forth, about 2 miles above Stirling. Its entire course is about 18 miles. It is a fine trouting-stream, and is a familiar name to the lovers of Scottish song. It is the opinion of Chalmers, that the Alauna of Ptolemy, and of Richard, was situated on the Allan, about a mile above its confluence with the Forth.

ALLAN (BRIDGE OF), a beautiful village, on the banks of the above stream, at the point where the post-road from Stirling to Callander crosses it; 3 miles north of Stirling. The beauty and salubrity of the place, and its proximity to the celebrated mineral well of Airthrie (which see) have rendered it a favourite watering-place. Nature assumes a mild and cheerful aspect here. The banks of the Allan are clothed with soft green verdure; the cottages are irregularly scattered, as in some villages of the South, amid

Gardens stored with peas and mint and thyme,
And rose and lily for the sabbath-morn."

bespeaking a high degree of comfort and even of rural luxury. To the native of England, or of the Scottish lowlands, returning from the classic regions

of Highland chivalry, fatigued and overpowered with their monotonous immensity,—their unutterable loneliness,—their ferocious precipices,—their sun-scorched rocks, and roads with never a tree to shade them, the rich and agreeable diversity of sylvan scenery of the Bridge-of-Allan and its neighbourhood is inexpressibly delightful. He here finds himself transported to a district of fertile and cultivated beauty,—a country rich in verdant pastures, sprinkled with the comfortable habitations of men, and awakening more of a home-feeling in his bosom than nature in her free, wild, unadorned loveliness.

ALLANTON, a village in the parish of Edrom, Berwickshire, situated at the point of confluence of the Blackadder and Whitadder, on the road from Ladykirk to Chirside, $1\frac{1}{2}$ mile south of Chirside. There is a private school in this village; and a new bridge is now erecting over the Whitadder.

ALLEN (THE), a small stream in Roxburghshire. It rises on the north-western boundary of the parish of Melrose, near Allenshaws; flows southward, skirting the western base of Colmslie hill, and passing the ruins of Hillslap, Colmslie, and Langshaw; and falls into the Tweed, about a quarter of a mile above the bridge near Lord Somerville's hunting-seat called the Pavilion, after traversing a romantic ravine called the Fairy dean, or the Nameless dean. The vale of the Allen is the prototype of the imaginary Glendearg in 'The Monastery'; although, as Sir Walter himself informs us, the resemblance of the real and fanciful scene "is far from being minute, nor did the author aim at identifying them."

ALLOA, a parish in the shire of Clackmannan, anciently a chapelry to the vicarage of Tullibody. Its average length, from east to west, is about 4 miles, and its breadth 2. On the south it is bounded by the Forth, whose course is here so winding that its banks measure above $5\frac{1}{2}$ miles within the boundaries of the parish. On the north it is bounded by the Devon, which separates it from the parishes of Alva on the north, and Logie on the west. On the east it is continuous with the parishes of Tillycultry and Clackmannan. The soil is rich and fertile along the Devon and the Forth; betwixt these rivers, the country rises considerably and is much less fertile. The parish is intersected by the road from Clackmannan to Tullibody, and thence northward to Menstrie. On the coast, after passing the ferry of Craigward, the river becomes narrower; and here presents some beautiful islands, or inches, which, though covered at spring-tides, furnish excellent pasture for cattle during summer, and are frequented by quantities of water-fowl. The stormy petterels, or what the sailors usually call Mother Cary's chickens, have been occasionally seen here. Proceeding up the links of the river, we come to the mansion-house and barony of Tullibody. Behind it, on the north, there is a wooded bank; and on either side, almost at equal distances from the house, are two prominences, jutting out into the carse, which protect and shelter the lower grounds. In the front of the house is the river, with two of the inches formerly mentioned. Within a mile to the west of the house of Tullibody, the Devon discharges itself into the Forth; and vessels of tolerable burden can load and unload at a pier built at the mouth of that river; while sloops and large boats loaded with grain come up near to the village of Cambus. On the other side of the Devon there is a rich flat piece of ground, called West Cambus, formerly belonging to Lord Alva. In the north-east extremity of the parish is Shaw Park, formerly the seat of Lord Cathcart, now of Lord Mansfield. From the drawing-room windows, there is in view a fine reach of the river, with the towers of Alloa and Clackmannan, and the castle of Stirling, in the dis-

tance; even the hill of Tinto, in Clydesdale, and Ben-Lomond, are distinctly seen. Upon the eastern extremity of the parish, there is a large artificial piece of water, made about the beginning of the 17th century for the use of the Alloa coal-works. It is called Gartmorn dam. When the dam is full, it covers 160 English acres of ground. There are two collieries in the barony of Alloa, the oldest of them, called the Alloa pits, is about $1\frac{1}{2}$ mile distant from the shore; the other is the Collyland, and is about double that distance. There are various seams in each colliery; some of 3, 4, 5, and 9 feet in thickness. The pits are free of all noxious damp, and have in general a good roof and pavement, although there is iron stone over some of the seams. While the coals of the barony of Alloa were brought to the shore in small carts by the tenants, the quantity was uncertain, and often not very considerable. In 1768, a waggon-way was made to the Alloa pits, which proved to be so great an advantage that it induced the proprietor to extend it to the Collyland, in 1771. Formerly this parish was famous for manufacturing tobacco; the merchants of Glasgow having warehouses here for that article and other colonial produce, which they re-exported to the continent; but it is long since it lost its reputation for this manufacture. For a time the camblet branch took the lead in the manufactures of this parish. "It is in the neighbourhood of the wool of the Ochils," says the Statistical reporter in 1798; "and the young people were bred to the employment. Early education in this branch gave them superiority; and this pre-eminence opened up a variety of markets both at home and abroad. Great quantities were sent to England; which, after being dressed and finished-off with a peculiar neatness, were returned and sold in our markets at a very advanced price." Till near that period, about 100 looms had been employed in this manufacture, but it no longer exists. A good deal of cotton and linen, however, is woven. The principal heritor of the parish is the earl of Mar. Next to him, in valuation, is Abercromby of Tullibody. The valued rent is £7,492 19s. 2d. Scotch. The real rent is probably about £4,000 Sterling. There are no families of any consequence now existing, which were originally of this parish. The branch of the Abercrombies which settled at Tullibody towards the end of the 16th century, were descended from the family of Birkenboig in Banffshire. The Cathcart family only made Shaw Park the seat of their residence, on parting with the estate of Auchincruive which they had possessed for ages in Ayrshire. Their possessions in this, and the adjoining parishes, descended to the late Lord Cathcart from his grandmother Lady Shaw; whose husband had purchased them, in the beginning of the 18th century, at a judicial sale, from the Bruces of Clackmannan. Neither can even the Erskines be said to be originally of this parish, although they got the lands which they now possess here, in the reign of King Robert Bruce. They were originally settled in Renfrewshire. They succeeded by a female, in 1457, to the earldom of Mar; but it was not until the year 1561 that they got possession of it. It was at that time declared in parliament, that the earldom of Mar belonged to John, Lord Erskine, who, in the year 1571, was elected regent of Scotland, on the death of the Earl of Lennox. The title was forfeited by John, the 11th earl, taking part in the rebellion of 1715; but was restored in 1824, in the person of John Francis, Earl of Mar.

The parish of Alloa is in the presbytery of Stirling, and synod of Perth and Stirling. Patron, the Crown. Stipend £299 3s. 2d., with a manse, and a glebe of the annual value of £63. Unappropriated tithes

£101 9s. 7d. Church built in 1819, in the Gothic style, at a cost of £8,000. It stands on a rising ground, and has a steeple, 200 feet high. Sittings 1,561. The old church at Tullibody is still in good repair, and there is sermon here on Sunday evenings during summer. The minister has an assistant who is nominated by the earl of Mar, and paid partly from the interest of £800 mortified by Lady Charlotte, widow of Thomas, Lord Erskine. Population, in 1801, 5,214; in 1831, 6,377; being an increase of 800, since 1821, which was attributed to the flourishing state of the trade. Of these 111, labourers were employed in agriculture, 194 in the collieries, 110 in distilleries, 55 in breweries, and 25 in brick and tile works. Houses 976, of which 561, inhabited by 1,128 families, belonged to the town of Alloa. Assessed property, including that of the town of Alloa, £11,245. The population of the parish, in 1836, amounted to 6,867, of whom 3,548 belonged to the establishment, and about 1,800 were inhabitants of the landward part of the parish.—There are two United Secession congregations: the first of these was established in 1746. Church built in 1792; sittings 722. Stipend £160, with manse and garden. The second was established in 1765, at which time the church was built, but it was reseated in 1811. Sittings 640. Stipend £125, besides taxes, manse, and garden.—There is an Original Burgher congregation, the minister of which has a stipend of £110; and an Independent congregation. The other religious bodies in this parish are an Episcopalian congregation revived in 1837, and for which a new chapel was consecrated in May, 1840, by Bishop Russell; a New Jerusalem congregation established in 1831; and a Methodist Mission congregation established in 1837.—The parochial schoolmaster has a salary of £34 4s. 4d., with £16 in lieu of a house and garden, £18 10s. school fees, and about £20 of other annual emoluments. Average number of scholars 50. The parochial school is that of the town of Alloa. There are 11 private schools, attended by about 600 children.—Of the old parish and church of Tullibody, we have the following notice in the first Statistical account of the parish of Alloa: "There are the remains of an old church in Tullibody; the lands of which, with the inches and fishings, are narrated in a charter by David I., who founded the abbey of Cambuskenneth, in the year 1147; and are made over to that abbacy, together with the church of Tullibody, and its chapel of Alloa. There are no records of the union of these two churches of Alloa and Tullibody. It seems probable, that it was about the beginning of the Reformation. It appears from John Knox, that, in the year 1559, when Monsieur d'Oysel commanded the French troops on the coast of Fife, they were alarmed with the arrival of the English fleet, and thought of nothing but a hasty retreat. It was in the month of January, and at the breaking up of a great storm. William Kirkcaldy of Grange, attentive to the circumstances in which the French were caught, took advantage of their situation, marched with great expedition towards Stirling, and cut the bridge of Tullibody, which is over the Devon, to prevent their retreat. The French, finding no other means of escape, took the roof off the church, and laid it along the bridge where it was cut, and got safe to Stirling. It is generally believed, that this church remained in the same dismantled state till some years ago, that George Abercromby, Esq. of Tullibody, covered it with a new roof, and erected within it a tomb for his family. There is still a large burying-ground around this church; and on the north side of it, where there had been formerly an entry, there is a stone coffin, with a niche for the

head, and two for the arms, covered with a thick hollowed lid, like a tureen. The lid is a good deal broken; but a curious tradition is preserved of the coffin, viz.: That a certain young lady of the neighbourhood had declared her affection for the minister, who, either from his station, or want of inclination, made no return; that the lady sickened and died, but gave orders not to bury her in the ground, but to put her body in the stone coffin, and place it at the entry to the church. Thus was the poor vicar punished: and the stone retains the name of the Maiden stone."

ALLOA, a burgh of barony, in the above parish, and a port on the frith of Forth, is about 27 $\frac{1}{4}$ miles higher up the frith than Leith, and 17 below Stirling; in W. long. 3° 46', N. lat. 56° 7'. The name has been variously written. In the charter granted by King Robert, in 1315, to Thomas de Erskyne, it is spelled Alway; and, in some subsequent ones, Aulway, Auleway, and sometimes Alloway. Camden, in his 'Britannia,' seems to think it the Alauna of the Romans. He says, "Ptolemy places Alauna somewhere about Stirling; and it was either upon Alon, a little river, that runs here into the Forth, [See ALLAN,] or at Alway, a seat of the Erskines." The windings of the Forth between Stirling and Alloa are very remarkable; the distance, from the quay of Alloa to the quay of Stirling, measured in the centre of the river, is 17 miles, and to the bridge of Stirling 19 $\frac{1}{2}$ miles; whereas the distance, by land, from Alloa to the bridge of Stirling, does not exceed 7 miles, though the turnings in the road are numerous. The situation of the town is pleasant. Some strata of rock run a considerable way between the carse and the high grounds, and break off about the ferry, a little above the harbour. On part of this rock is built the tower and the ancient part of the town of Alloa. The tower marks the ancient residence of the family of Mar. It was built prior to the year 1315; but the entire building, with the exception of the square tower still standing, was accidentally burnt to the ground in the year 1800.* The highest turret is 89 feet; and the thickness of the walls is 11 feet. There is a fine rich prospect from the summit: no fewer than nine counties can be discerned from it. The gardens were laid out by John, Earl of Mar, in 1706, in the old French taste of long avenues and clipped hedges, with statues and ornaments. The town formerly almost surrounded the tower, and in rude ages they afforded mutual benefits to each other. Most of the streets are narrow and irregular; there is one, however, on a regular plan, in a line parallel to the gardens of the tower, called John's street, which is between 76 and 80 feet broad. A row of lime-trees, on each side, affords an agreeable shade in summer, and a comfortable shelter in winter. At the end of this walk is the harbour of Alloa, where, at neap-tides, the water rises from 14 to 16 feet, and at spring-tides from 22 to 24; yet it has been ascertained that the bottom of Alloa harbour is nearly on a level with the top of the pier of Leith. There is a double tide at each flowing and ebbing. The quay is built of rough hewn stone,

and forms a pow, or small creek, where the rivulet that runs through the north-east end of the town falls into the river. A little above the harbour there is a dry dock. Above the dry dock there is a ferry, sometimes called the Craigward, and sometimes the King's ferry. The breadth of the river here, at high tide, is above half-a-mile; and there are good piers carried down to low water-mark on each side, and two large steamers are employed; but the rapidity of the tide sometimes renders the passage tedious. The scheme of building a bridge across the Forth here has often been talked of. To the west of the ferry stands a glass-house, for making bottles, which is thought to be the most conveniently situated of any in Britain. The extent to which the manufactory of glass has been carried here, is amazing. "It is not half-a-century," says the writer of the first Statistical account of Alloa, "since one glass-house at Leith, and one at Glasgow, supplied all Scotland, while the company wrought the one half-year at the one place, and the next at the other." In 1825 a joint-stock company was formed for carrying on these works, but it has not proved a very prosperous concern. The Glasgow Union bank, and the Western bank of Scotland, have branches here. Fairs are held here on the second Wednesday in February, May, August, and November; those in May and November are for cattle. The public revenue, and matters of trade, are managed by a custom-house, which was established here a short time after the Union. The ships and vessels belonging to this port, in the end of last century, amounted to 115; of a tonnage of 7,241 tons; and employing 500 men; the present tonnage belonging to this port is about 8,000 tons. The greater number of the vessels are employed in the coast-trade. About 50,000 tons of coal are annually sent from this port to places within the frith of Forth, and to the east and north of Scotland; the foreign trade is also considerable with the ports of Denmark, Norway, Germany, and Holland. Coals are the great article of exportation: 65,000 tons are annually exported. The importations generally consist of flax, lintseed, and other articles from Holland; and grain, wood of all kinds, and iron. There are several breweries in the town of Alloa, which is famed for its excellent strong ale; and three extensive distilleries. There are also two woollen manufactories; and a large iron foundry. The good of the place, and the administration of justice, are in the hands of his majesty's justices of the peace, and the sheriff-depute. There is only one sheriff-depute for this and the neighbouring county of Stirling. He appoints substitutes; one of whom constantly resides here, and holds the sheriff-court for Clackmannanshire. There is a baron-bailie named by Lord Mar. He regulates the stents and cesses; he has also jurisdiction in debts not exceeding 40s., but few or no actions of debt are ever brought before him. The town obtained a police act in 1803, which was amended and enlarged in 1822. An admiralty court was formerly held here, in virtue of a commission from the Lord vice-admiral of Scotland. The jurisdiction of this court extended from the bridge of Stirling to Petty-cur near Kinghorn, on the north side of the Forth; and from Stirling bridge to Higgin's Neuck on the south. The town, as such, has no property or revenue, and no debts; but under the police-acts there is a debt of £5,000. The burgh pays county-burdens, and rates corresponding to a valuation of £601 1s. 10d. Scotch; and, for the privilege of participating with the royal burghs in foreign trade, £11 6s. sterling as its share of royal burgh cess. Until the passing of the police act of 1822, Alloa was ill supplied with water, but it has since been brought from the river at a considerable expense, and is

* Among the valuable relics of antiquity which perished in this unfortunate conflagration was the only indubitably authentic portrait of Queen Mary, who herself bequeathed it to one of her personal attendants shortly before her execution. "The painter," says Dr Stoddart, who saw this picture a few months before its destruction, "was no mean artist; and the piece, though hard, was highly finished. The features were probably drawn with accuracy; but what little character they possessed was unpleasant, and might better have suited the cold and artful Elizabeth, than the tender, animated Mary. It appeared, however, to have been painted at an age when she had been long written 'in sour Misfortune's book;' and had perhaps lost that warmth of feeling which was at once the bane of her happiness, and the charm of her manners."

filtered through an artificial bed of sand. Alloa has frequent communication in the course of each day with Stirling and Edinburgh by means of the steamers plying betwixt these places. It is 7 miles from Dollar, 20 from Kinross, and 37 from Perth. Population, in 1831, 4,417. Assessed property, £4,662.

ALLOWAY, an ancient parish in the district of Kyle, in Ayrshire, which was united, towards the end of the 17th century, with the parish of Ayr, from which it is divided by Glengaw burn. 'Alloway's auld haunted kirk,'—a little roofless ruin,—long known only as marking the obscure resting-place of the rustic dead, is now an object of veneration, and many an enthusiastic pilgrimage, on account of its having been chosen by Burns as the scene of the grotesque demon revelry, at once ludicrous and horrible, described with such graphic and tremendous power in his tale of Tam o' Shanter; for it would seem that imagination is not restricted in her flight here by the actual and real. It is situated on the east bank of the Doon, a little below the point where the road from Ayr to Maybole is carried across that river by the new bridge, and a quarter of a mile from the cottage on Doon side in which the peasant-bard was born on the 25th of January, 1759. The poet's father was interred here at his own request; and the bard himself expressed a wish to be laid in the same grave, which would have been complied with had not the citizens of Dumfries claimed the honour of the guardianship of his ashes. It is now—such is the interest which the genius of the bard has thrown over the spot—a crowded and fashionable place of sepulture. Betwixt the kirk and the 'Auld brig o' Doune,' by which a road now disused is carried over 'Doon's classic stream,' about 100 yards south-east of the kirk, and on the summit of the eastern bank, which here rises boldly from the river, stands a splendid monument to the poet, designed by Hamilton of Edinburgh, and consisting of a triangular base, supporting nine Corinthian columns, which are surrounded by a cupola terminating in a gilt tripod. It is upwards of 60 feet in height; and cost above £2,000. The whole is enclosed, and ornamented with shrubbery; and the clever figures of Tam o' Shanter and Souter Johnny, executed by the ingenious self-taught sculptor, Tom, are placed in a small building within the enclosure.—Alloway kirk is $3\frac{1}{2}$ miles distant from Glasgow; $5\frac{1}{2}$ from Maybole; and $2\frac{1}{2}$ from Ayr. Mr. Cathcart of Blairston, one of the lords of session, on his promotion to the bench, took the title of Lord Alloway from this place. He died in 1829, and was interred within the ruins of the kirk. See article, THE DOON.

ALMOND (THE), a river chiefly belonging to Edinburghshire. It rises in the muir of Shotts, about a mile south-east of the kirk of Shotts, near the Cant hills; and flows eastward in a line nearly parallel with the post-road from Glasgow to Edinburgh, by Whitburn, which crosses it at Blackburn, and recrosses it again near to Mid-Calder. From a little beyond Mid-Calder, it flows in a north-easterly direction and forms the boundary betwixt the shires of Linlithgow and Edinburgh, passing Ammondell, Bliston, Kirkliston, Carlowrie, and Craigiehall, and falling into the sea at Cromond, where it forms a small estuary navigable by boats for a few hundred yards. The Edinburgh and Glasgow Union canal is carried across this river near Clifton hall, in the parish of Kirkliston, by a noble aqueduct. The Edinburgh and Glasgow railroad is also carried across it lower down the river near Kirkliston, by an immense viaduct of 43 arches of 50 feet span each, and varying from 60 to 85 feet in height. [See cut, vol. II. p. 737.]—Its principal tributary is the Baxoburn, which is wholly a Linlithgowshire stream, and flows into it from the west a little above Kirkliston.

ALMOND (THE), or ALMON, a river of Perthshire, rising in the south-east corner of Killin parish, on the north side of the range of hills at the head of Glen Lednock, and flowing eastwards to Newtown in the parish of Monzie, where it turns south-east, and skirts the road from Amulrie to Buchandy; at Dallick it again turns eastwards, and flows in that direction to Logie-Almond; beyond which it bends towards the south-east, and finally discharges itself into the Tay, a little above the town of Perth, and nearly opposite to Scone, after a course of about 20 miles. There are numerous remains of Roman and Caledonian antiquity in Glen Almond, particularly in the neighbourhood of the bridge of Buchandy, 10 miles from Perth. The glen itself is dreary, desolate, and wild. In one part of it, where lofty and impending cliffs on either hand make a solemn and perpetual gloom, in the line of the military road from Stirling to Inverness, is the Clach-na-Ossian, or Stone of Ossian, supposed to mark the burial-place of the gifted son of Fingal. About 3 miles from this, in the Corriarlich or Glen of Thieves, is a large cave known by the name of Fian's or Fingal's cave. Selma in Morven, which is said to have been Fingal's chief residence, is about 60 miles distant from Glen Almond. Newte, who travelled through this district in 1791, says: "I have learned that when Ossian's stone was moved, and the coffin containing his supposed remains discovered, it was intended by the officer commanding the party of soldiers employed on the military road, to let the bones remain within the stone sepulchre, in the same position in which they were found, until General Wade should come and see them, or his mind be known on the subject. But the people of the country, for several miles around, to the number of three or four score of men, venerating the memory of the bard, rose with one consent, and carried away the bones, with bagpipes playing, and other funeral rites, and deposited them with much solemnity within a circle of large stones, on the lofty summit of a rock, sequestered, and of difficult access, where they might never more be disturbed by mortal feet or hands, in the wild recesses of the western Glen Almon. One Christie, who is considered as the Cicerone and antiquarian of Glen Almon, and many other persons yet alive, attest the truth of this fact, and point out the second sepulchre of the son of Fingal." Macculloch, ever at war with 'old poetic feeling,' discredits the whole story of Ossian's supposed connexion with this place. With a better faith has Wordsworth thus expressed himself on this dim tradition:—

"Does then the Bard sleep here indeed?
Or is it but a groundless creed?
What matters it?—I blame them not
Whose fancy in this lonely spot
Was moved; and in such way expressed
Their notion of its perfect rest.
A convent, even a hermit's cell,
Would break the silence of this dell:
It is not quiet, is not ease,—
But something deeper far than those:
The separation that is here
Is of the grave,—and of austere
Yet happy feelings of the dead:
And, therefore, was it rightly said
That Ossian, last of all his race,
Lies buried in this lonely place."

A secluded spot called the Dronach-haugh, on the banks of this river, and about half-a-mile west of Lynedoch, is said to be the burying-place of Bessie Bell and Mary Gray, famed in pathetic ballad story. The road through Glen Almond communicates between Stirling and Dalnacardoch, by Tay bridge, passing through Amulrie.

ALNESS, a parish, formerly a vicarage, in the shire and synod of Ross, and presbytery of Dingwall. It is bounded on the south by the frith of Cromarty,

and on the east by the parish of Rosskeen; and stretches 12 miles inland, in a north-west direction, along the course of the water of Ness and the Alt. The kirk-town is situated near the coast, at the junction of the road running along the north side of the frith of Cromarty—whose undulating waters almost bathe the road—with that running north, by Altdarg; to the frith of Tain. In the higher part of the parish, surrounded by wild and uncultivated hills, are two fine fresh water lochs, Loch Moir, and Loch Glass, both of which are fed by tributaries descending from Rama-Cruinach, and the former of which discharges itself by the water of Ness, and the other by the Alt burn, both running south-east into the frith of Cromarty. The former stream is crossed by the bridge of Alness, and the ferry of Alness is near its mouth. Navar, the seat of Sir Hector Munro, is a fine building, 2 miles south-west from the bridge of Alness. Patron of the parish, the Hon. Wm. Mackenzie. Stipend £230 19s. 11d., with a manse, and a glebe valued at £10. Schoolmaster's salary £28, with £20 fees, and some other small emoluments. Scholars 60. There are three private schools attended by about 90 scholars. In July 1834, there were 200 persons in the parish who could not read. The language generally spoken is an unclassical dialect of the Gaelic. Population, in 1801, 1,072; in 1831, 1,437. Houses 309. Assessed property £4,277. Iron and silver ores have been found in this parish. Miss Spence, while residing at the manse of Alness, in the month of July, thus describes the effect of twilight: "You can imagine nothing half so beautiful as the summer-evenings in Scotland. The dark curtain of night is scarcely spread in this northern hemisphere, before

—' Juncud day
Stands tiptoe on the misty mountain's top.'

The firmament retains a glow of light, often brilliantly heightened by the aurora borealis—here called the merry dancers—which has a grand effect; and, when the softer shades of evening prevail, and throw into partial gloom the sleeping landscape, it is even at midnight, during the months of May, June, and July, only like our evening-twilight, when every object is indistinctly visible. The grandeur of the mountains, the pellucid tranquillity of the rivers, and the deep gloom of the dark fir woods, altogether form a scene no person who has not beheld it can picture."

ALSH (Loch), a narrow and irregularly-shaped arm of the sea, stretching between the south-east point of Skye and the mainland; and penetrating inland into the district of Kintail in Ross-shire by two arms,—the one running 4 miles north-north-east under the name of Loch Loung; and the other one, called Loch Duich, stretching about 6 miles south-east. The entrance to Loch Alsh, from the west, is by the Kyle Haken, or Kyle Akin; that from the south, by the Kyle Rhee, or Kyle Rich. The latter strait is considerably narrower than the former, and its scenery is very beautiful. Macculloch thus describes it: "Profound and shadowy ravines, rude, broken, and diversified by rocks, mark the passage of waters that are scarcely seen till they have reached the shore; their banks being sprinkled with wood, which, dense below, gradually diminishes in ascending, till a single tree is at last seen perched high aloft, the last outpost of the rude forest. These declivities often terminate in the sea by precipices, in which the oak and the birch are seen starting from every crevice; sometimes nearly trailing their leaves and branches in the water which they overhang, and almost deceiving us into the feeling that we are navigating a fresh-water lake,—a deception maintained by the

manner in which the land closes in on all sides."

As the strait narrows, the sides become more rocky and precipitous, seeming to oppose an impenetrable barrier to the navigator, while the tide rushes through it with great rapidity. But, the kyle once cleared, all tide is at an end for a time, and we instantaneously find ourselves in the calm wide basin of Loch Alsh. The Kyle Haken is remarkable for its irregular tides. At its mouth there is an excellent ferry. A good road leads to this point from Broadford in the isle of Skye; and there is a road leading from the other side of the ferry, northwards, to the ferry of Strone on Loch Carron, a distance of 14 miles; and another branching off from it, and running eastwards to the Dornie ferry on Loch Loung. Kyle Haken or Moil castle is a small ruined fortalice on the shore of Skye, at the eastern end of the kyle. Balmacarra, the seat of the late Sir Hugh Innes, is a fine mansion on the northern shore of Loch Alsh. On the small rocky islet of Donan, at the point of confluence of Loch Loung and Loch Duich, stands Ellandonan castle, once the manor-place of the 'high chiefs of Kintail.' It is a magnificent ivy-clad ruin, backed by a noble range of hills. This castle was originally conferred on Colin Fitzgerald, son to the earl of Desmond, in 1266, by Alexander III. In 1331 it was the scene of a severe act of retributive justice by Randolph, Earl of Murray, then warden of Scotland, who executed fifty delinquents here, and placed their heads on the walls of the castle. In 1537, Donald, fifth baron of Slate, lost his life in an attack on Ellandonan castle, then belonging to John Mackenzie, ninth baron of Kintail, and was buried by his followers on the lands of Ardelve, on the western side of Loch Loung. William, fifth earl of Seaforth, having joined the Stuart cause in 1715, his estate and honours were forfeited to the Crown, and his castle burnt. The attack on Ellandonan castle, by the baron of Slate, is the subject of a ballad by Sir Walter Scott's friend, Colin Mackenzie, Esq. of Portmore, published in the 'Scottish Minstrelsy,' [Vol. IV. pp. 351—361, last edition.] In the introduction to this ballad it is erroneously stated that Haco, king of Norway, after his defeat at Largs in 1263, was overtaken in the narrow passage which divides the island of Skye from the coasts of Inverness and Ross, and slain, along with many of his followers, in attempting his escape through the western kyle; and that these straits bear to this day appellations commemorating these events; the one being called Kyle Rhee, or the King's Kyle, and the other Kyle Haken. It is matter of familiar history, that Haco's fleet, in its flight from the Clyde, succeeded in doubling Cape Wrath, and reached Orkney on the 29th of October; and that here, Haco, overcome by the feeling of his disgrace, and the incessant fatigues of his unfortunate campaign, fell sick, and died on the 15th of December.*

ALTAVIG, or ALTBHEIG, the southernmost of a group of flat islets—to which it usually gives name—on the north-east coast of Skye, between the point of Aird and Ru-na-braddan. Martin says there is a little old chapel on it dedicated to St Turos; and that herrings are sometimes so plentiful around a small rock at the north end of the isle, that "the fisher-boats are sometimes as it were entangled among the shoals of them!"

* Macculloch, who notices this historical error, asserts that the proper name of the southern kyle is Kyle Rich, that is, 'the swift strait;' while the name of the western kyle is frequently written Kyle Akin. The orthography, however, of names throughout this district appears very uncertain. There we have *Loch Long, Loch Loung, and Loch Ling; Ellandonan, and Ellandonnan*, and in the journal of a recent traveller, Lord Teignmouth, *Ennan-dowan; Glen Shiel, and Glen Sheal; Sleat, and Slate*. Native authorities afford us little aid here, each Gaelic writer having an orthography of his own.

ALTMORE (THE), a small stream of Banffshire, rising betwixt the parishes of Ruthven and Deskford, receiving several small tributaries from Altmore ridge in the former parish, flowing southwards betwixt the parishes of Keith and Grange, and falling into the Isla, about $1\frac{1}{2}$ mile east of the town of Keith, after a rapid course of 6 miles.

ALTYRE, formerly a distinct parish belonging to the parsonage of Dallas, but annexed to the parish of Rafford, in the shire of Elgin, by act of parliament in 1661. The walls of the old church remain. The Cummings of Logie, and most of the ancient residents, still continue to bury here. The soil is generally thin, but sharp and productive; the extent of hill and pasturage is very great; and the peat-mosses are inexhaustible. See **RAFFORD**.

ALVA, anciently **ALVATH**, or **ALVETH**, a parish and barony, politically in the county of Stirling, although disjoined from it: being surrounded by the shire of Clackmannan on the east, south, and west; while on the north, it is bounded by Blackford parish in the county of Perth. It is in length, from east to west, somewhat more than $2\frac{1}{2}$ miles; and from south to north, 4 miles. The river Devon gently glides along the southern boundary of the parish, dividing it from the parishes of Alloa and Clackmannan. See article, **THE DEVON**. The parish of Logie bounds it on the west; that of Tillicoultry on the east. This parish extends over a considerable portion of the Ochills; and over part of the valley—here commonly called ‘the hill-foot’—between these hills and the Devon. The mean breadth, from the banks of the river to the rise of the Ochills, is about two-thirds of a mile. That portion of the Ochills which belongs to this parish, when seen from the south, at the distance of a mile or two, appears to be one continued range, presenting little variation in height; but the range slopes towards the south, and is intersected by deep and narrow glens, through most of which flow streams which discharge themselves into the Devon, and by these, the foreground of this part of the Ochills is divided into three separate hills, distinguished by the names of Wood-hill, Middle-hill, and West-hill of Alva. On the brow of this last hill is a very high perpendicular rock, called Craig-Leith, long remarkable as the residence of that species of hawk which is used in hunting. The house of Alva stands on an eminence projecting from the base of Wood-hill, near the east end of the parish. The height of this part of the hill is about 220 feet above the Devon, which runs in the valley below; but immediately behind the house, the hill rises to the height of 1,400 feet, making the whole height 1,620 feet. The range continues to rise gradually for about 2 miles farther north, until it reaches in Ben-Cloch, the highest point of the Alva range, and the summit of the Ochills; being, according to Mr Udney, about 2,420 feet above the level of the Devon. The view from the top of Ben-Cloch is extensive and beautiful. The village of Alva is situated near the foot of the West-hill. A small rivulet, issuing from the glen which separates the West from the Middle hill, runs along the east side of the village. In the first Statistical report on this parish, it is stated that woollen manufactures had been carried on in the village of Alva for more than a century. They consisted chiefly of Scots blankets and serges. The former were made from 9d. to 1s. the Scots yard; and the latter from 10d. to 15d., and a few from 16d. to 18d. per yard. “It is more than probable,” the reporter adds, “that this species of manufacture flourished a great many years ago in the neighbouring village of Tillicoultry; as an evidence of this, it is at this day known among the shopkeepers of the Lawn-market of Edinburgh, by the name of Tillicoultry serges.

The number of looms constantly employed at present in this village is 67. The length of each web may be reckoned at 80 yards, and taking the average value at 10d. or 11d. per yard, the gross produce will amount to from £7,000 to £8,000 sterling, annually. The manufacturers make use chiefly of English wool in their serges and blankets, and this partly short, and partly combed wool. That which is produced from the sheep that pasture on the Ochills is commonly manufactured by the people of the country for their own private use. These serges are sold not only in Edinburgh, but likewise in Stirling, Glasgow, Greenock, Perth, and Dundee. The finest kinds of serges are sometimes dressed and dyed by the traders in Stirling, and sold as coarse shalloons. A considerable quantity of the coarser sizes has of late years been purchased by saddlers as a necessary article in their business.” We have inserted the notice of this manufacture, though it no longer exists here, as helping the reader to trace the progress of Scottish manufactures. A rich vein of silver ore is said to have been wrought in this parish early in the beginning of the 17th century. An unsuccessful attempt was made to renew the workings in the year 1759. Population, in 1801, 787; in 1831, 1,300. Assessed property £2,445. Inhabited houses 218.—The parish of Alva was, before the Reformation, in the diocese of Dunkeld. From the chartulary of Cambuskenneth it appears that the church of Alva was a mensal church, as it is called, belonging to that abbacy; and that the monks of Cambuskenneth performed duty here, from the want of a sufficient fund for the maintenance of a regular clergyman. By the same chartulary, it appears that Alexander, styled Dominus de Striveling, Miles, in 1276, made a grant of one acre of land to the church of St Servanus de Alveth, describing it particularly as lying near the well of St Servanus, “et inter ipsum fontem et ecclesiam.” This well is still within the limits of the minister’s glebe; and although its consecrated name has been long forgotten, it continues to send forth a copious stream of the purest and sweetest water. Until the year 1632, the parish of Alva appears to have been united with the neighbouring one of Tillicoultry; the minister of Alva officiating in both. The fabric of the present church was built in the year 1631, by Alexander Bruce of Alva, who procured a disjunction from the parish of Tillicoultry. It is in the presbytery of Stirling, and synod of Perth and Stirling. Patron, Johnstone of Alva. Stipend £157 5s. 4d., with a manse, and a glebe of the annual value of £27. Schoolmaster’s salary £29 18s. 10d., with £28 school-fees. Average number of scholars 55. There are two private schools in the parish, attended by about 120 pupils.

ALVAH, a parish in the county of Banff, extending in length about 6 miles, and at its greatest breadth to nearly the same measurement, but in other places to only 2 miles. On the north-west and north it is bounded by the parish of Banff; on the north-east and east by the parishes of King-Edward and Gamery; on the south-east by Turriff; on the south by Forglen; and on the south-west by Marnoch. The Doveron enters the parish about a mile below Forglen house, which is on its northern bank, and, after winding through a fertile valley, leaves it at a point about 2 miles from the sea. It here abounds with salmon, trout, and eel; and is frequented by wild ducks, widgeons, teals, and herons. About half-a-mile below the church, the river is contracted by two steep and rugged precipices, commonly denominated the Craigs of Alvah, between which it is about 50 feet in depth. The scenery, naturally bold and picturesque, has been greatly embellished here by its noble proprietor, the Earl of Fife, who has thrown a mag-

nificent arch over the river, which forms an easy communication between the opposite parts of his lordship's extensive park. The haughs along the banks of the river are subject to inundations, especially in the neighbourhood of the Craigs of Alvah, which check the rapidity of the stream, and throw the water backward. As we recede from the Doveron towards the west, the country becomes more hilly and barren. In this quarter one of the most conspicuous hills is the Hill of Alvah, which rises from the bed of the river to a great height, and serves as a landmark to mariners on their approaching the coast. At the Bog of Mountblairie are the remains of an old castle, situated in a swamp now overgrown with alder, and said to have been built by an earl of Buchan; and on an eminence above it, are the ruins of a chapel, adjoining to which is a well, famed of old for its sovereign charms, but now fallen into disrepute. "Within these few years," says the Statistical reporter in 1792, "there was an iron laddle; and many still alive remember to have seen the impending boughs adorned with rags of linen and woollen garments, and the cistern enriched with farthings and boddles, the offerings and testimonies of grateful votaries who came from afar to this fountain of health. At the foot of the hill of Alvah, towards the north, is another spring, which passes by the name of Com's or Colm's well, in honour, probably, of the renowned saint of Icolmkil." Population, in 1801, 1,037; in 1831, 1,278. Assessed property £3,695. Houses 246.—This parish is in the presbytery of Turriff, and synod of Aberdeen. Patron, the Earl of Fife. Minister's stipend £178 15s. 5d., with a manse, and a glebe of the yearly value of £25. Unappropriated tithes £221 16s. 6d. Schoolmaster's salary £30, with about £10 school-fees. Average number of scholars 40.

ALVES, a parish in the shire of Elgin; bounded on the north by the Moray frith, along which it extends about one mile; on the east by the parishes of Duffuss and New Spynie; on the south by Elgin, from which it is separated by Pluscardine hill; and on the west by Kinloss and Rafford parishes. Its outline is very irregular; and its surface varied with hill and dale. The soil is in general a deep fat loam incumbent on clay. There are six land-owners; the total rental is about £6,000. At the south-eastern extremity of the parish is a conical hill called the Knock of Alves, which yields a good free-stone for building. The only relic of feudal times is the castle of Asleisk, on the Earl of Fife's property. There is no river, or even considerable stream, in this parish; but it is conjectured by some that the river Findhorn may, in remote ages, have winded among the dales of Alves, and flowed through the lake of Spynie into the sea. Population, in 1801, 1,049; in 1831, 945. Houses 196.—This parish is in the presbytery of Elgin, and synod of Moray. Patron, the Earl of Moray. Minister's stipend £215 1s. 8d., with a manse and glebe. Unappropriated tithes £130 13s. 1d. The church was built in 1769; sittings 590. Schoolmaster's salary £34 4s. 4½d., with about £25 of various fees. The parish-school has a small endowment. Average number of scholars 45. There were three small private schools in this parish in 1835. The turnpike road between Elgin and Forres passes through the parish.

ALVIE,* in some old charters called Alloway, a

* The writer of the first Statistical account of this parish conjectures that the name *Alvie* is probably derived from the Gaelic *Alleibh*, i. e. 'Cold island,' the place being formed into a peninsula by a lake; and, though a delightful situation in summer, extremely cold in winter. "All the names of places here," the same writer adds, "are Gaelic, and descriptive of their local situation." This etymology is, however, pronounced not in the least probable by the writer of the second Statistical

parish in the district of Inverness-shire called Badenoch. Its form is very irregular. The principal inhabited division lies along the northern side of the river Spey, here running from south-west to north-east; and is from north-east to south-west about 10 miles long, and from 1 to 2 broad. It is bounded by the parish of Kingussie on the south-west: Moy on the north-west; and Duthel on the north-east. On the southern side of the river, *Alvie* parish extends, along the course of the Feshie, about 10 miles by 3; and is bounded on the east by Rothiemurchus; on the south by Blair; and on the west by Kingussie. Its total extent from north to south is upwards of 20 miles; and it has an area of above 90 square miles. The mountains are in general extremely barren, covered with heath, and frequently rocky; those to the south of the Spey, belonging to the Grampian chain, are much higher than those to the north; some points here rising to 4,500 feet above the sea-level. The interjacent valleys afford a plentiful and rich pasture in summer, but are for the most part inaccessible in winter. The lower or arable part of the parish, intersected by the Spey for the space of 2 miles, consists of a light, stony soil, lying on sandy gravel, and producing heavy crops of corn in a wet season, but exceedingly parched in dry weather. There are some extensive plantations of firs and larches; and natural coppices of birch, alder, and mountain-ash. The first Statistical reporter represented that the inferior tenants in this district were very poor, owing to their small holdings. "They pay," he says, "from £2 to £6 rent, which may be from 5s. to 10s. the acre arable, affording a scanty subsistence to a family. They have no idea of trade or manufactures, and consequently no desire to leave their native land; they prefer living on the smallest pendicle of land, as tenants, to the best service, and are extremely averse to the military. They procure their little necessities from the market-towns, by the sale of small parcels of wood." This state of things, with regard to the holders of small pendicles, seems little changed to the better; but the larger tenants have adopted a vigorous and judicious system of farming with the appropriate results. The average rent is from 15s. to 20s. per Scotch acre. The nearest market is Inverness, which is 35 miles distant from the northern extremity of the parish. The last Statistical reporter states that a village has been founded, called *Lynchat*, on the *Belleville* property, near the south-west extremity of the parish. The valued rent of the parish is £1,394 Scots; the real rent is above £2,000 sterling. The river Spey here abounds with salmon, trout, and pike. The Feshie affords trout and salmon. It rises on the northern side of the Grampian range, in the southern extremity of the parish, and flows at first north-east, till it approaches the road from Castleton of Braemar, where it bends north-west, and then north, pursuing the course of the narrow valley through which also the only road intersecting the parish is led, and falling into the Spey, a little above that enlargement of the river called Loch Insch, and near Invershie. The only detached loch in the parish is that of *Alvie*. It is a beautiful sheet of water, about a mile long, and half-a-mile broad. It has a communication with the Spey, but it is not supposed that its trout visit the Spey; pike are also found in it of from 1 lb. to 7 lb. weight. An elegant mansion was built here, named *Belleville*, by the late James Macpherson, Esq., translator of the poems attributed to Ossian, who was a native of Badenoch, and died here

account, published in 1835, who says, that "the name is in Gaelic pronounced *Ealabhi*, sounding *oh* like *o* in English; a word compounded of *ealabh*, swans, and *i*, an island, which correctly translated signifies 'the Island of Swans.'

on the 17th of February, 1796, but was buried, at his own desire, in Westminster abbey. At no great distance from Loch Alvie is the burial-place of the chief of the Macphersons. The finest mansion in the parish is Kinrara house, long celebrated in fashionable and literary circles as being the favourite seat of the accomplished duchess of Gordon. The Spey, flowing under a long wall of mountain-crags and fir-plantations, embraces in its sweep a verdant plain which is close shut in on the opposite side by the hill of Tor-Alvie; in this spot, on a knoll commanding the small plain, and itself sheltered by the loftier Tor, is the far-famed cottage of the duchess. Dr Macculloch thus describes the scenery of Kinrara: "A succession of continuous birch-forest, covering its rocky hill and its lower grounds, intermixed with open glades, irregular clumps, and scattered trees, produces a scene at once alpine and dressed,—combining the discordant characters of wild mountain-landscape and of ornamental park-scenery. To this it adds an air of perpetual spring, and a feeling of comfort and of seclusion, which can no where be seen in such perfection: while the range of scenery is, at the same time, such as is only found in the most extended domains. If the home-grounds are thus full of beauties, not less varied and beautiful is the prospect around: the Spey, here a quick and clear stream, being ornamented by trees in every possible combination, and the banks beyond, rising into irregular, rocky, and wooded hills, every where rich with an endless profusion of objects, and, as they gradually ascend, displaying the dark sweeping forests of fir that skirt the bases of the farther mountains, which terminate the view by their bold outlines on the sky." The swan, a variety of fishing-ducks or duckers, and the woodcock, live here in winter, but retire in summer. Population, in 1801, 1,058; in 1831, 1,092, of whom about two-thirds were engaged in agriculture.—This parish is in the presbytery of Abernethy, and synod of Moray. Patron, the duke of Richmond. Minister's stipend £158 4s. 6d., with manse and glebe. Church built in 1798, and repaired in 1831; sittings 500. There is a government-church at Insch, which is within 4 miles of the parish-church, and with which a small *quoad sacra* parish, originally part of the old parish of Insch, was connected in 1828. See *INSCH*. Schoolmaster's salary £29 18s. 9d.; with £18 school-fees, and £4 10s. emoluments. Average number of pupils 70. There are two private schools in the parish attended by about 70 children.

ALYTH, a parish on the northern side of Strathmore, in the counties of Perth and Forfar; but chiefly in the former. It is about 15 miles long, and 3 broad, at an average; and stretches from south to north towards the Grampian mountains. It is bounded by Kirkmichael and Glen-Isla parishes on the north; by Glen-Isla, Lentrathen, Airly, and a detached portion of Ruthven on the east; by the Isla on the south, which separates it from the parishes of Meigle and Cupar-Angus; and by detached portions of the parishes of Bendochy, Blairgowrie, Kepet, and Rattray, on the west. It is divided into two districts, Loyal and Barry, by the hills of Alyth. The southern district, which lies in the strath, is about 4 miles long, and 3 broad. The lower part along the Isla is extremely fertile, producing excellent crops of barley, oats, and wheat; but the frequent inundations of the Isla—which sometimes rises suddenly in harvest to a great height—is often attended with great disappointment and loss to the husbandman. The village of Alyth is situated in this district. It is 15 miles north of Dundee; and 12 west of Forfar. Population, in 1774, 555; in 1836, 1,700. Its name is of Gaelic extraction, and

is expressive of its situation, being built on a flat near the foot of a hill. It was made a burgh of barony by charter from James III. The situation of the village is healthy: it is well-supplied with water; a small stream, which rises near Drumdevich in the northern part of the parish, runs through the lower part of the town, and thence north-east to the Isla. There is a weekly market in the village on Tuesdays; and several for black cattle and sheep are annually held here. The chief articles manufactured in this district, towards the end of last century, were yarn and brown linens, of which a great quantity was spun and wove in the town of Alyth, and the district around it. The quantity of cloth stamped from the first November 1787, to the 1st November 1791, at an average, was 258,639 yards yearly, and the medium price £6,939 10s. 3½d. This branch of manufacture still exists, but has not thriven so much as might have been anticipated. On the northern side of the hill of Alyth there is an open country of considerable extent, and capable of great improvement. Beyond the hill of Banff—which is 2 miles north-west of the village of Alyth—is the forest of Alyth, a large tract of heathy ground, of more than 6,000 acres, which formerly belonged to four proprietors who possessed it in common, but it is now divided among them. The forest, which is skirted on the west with arable ground, affords pasture for a considerable number of sheep and black cattle; it abounds in game, especially muirfowl, and is much frequented in the shooting-season. At the north-western extremity of the parish there is a beautiful little district surrounded with hills, and intersected by the Erich, which in summer has a delightful appearance. That part of it connected with this parish, called the Blacklunnans, lies in the county of Angus. Mount Blair, the most considerable hill in this parish, is a very conspicuous point of land. The base is not less than five miles in circumference; but its exact altitude is not ascertained. It affords good pasture for a great number of sheep, and abounds in lime-stone. About 3 miles south-west of Mount Blair, on the west side of the forest of Alyth, is the King's-seat, rising to the height of 1,179 feet above the level of the sea. The situation is romantic; the water of Erich runs at its foot on the west, and the side of the hill for a considerable way up is covered with a beautiful natural wood. Barry-hill, to the north-east of Alyth, is about a mile in circumference at the base, and 676 feet high. On the summit there is an area about 60 yards long and 24 broad, surrounded with a mound of earth, 7 feet high, and 10 broad at the top. On the west and north borders of this area are seen the marks of something like huts built of dry stones, which may have served to shelter the besieged from the weapons of the assailants, and the inclemency of the air. The northern and western sides of the hill are steep and almost inaccessible; on the south and east, where the declivity is more gentle, there is a broad and deep fosse, over which, at the southern extremity, is a narrow bridge built of unpolished stones and vitrified. It evidently appears to have been designed for a temporary retreat in time of war, and is well-adapted for that purpose. The traditional account is that Barry-hill was the place where Queen Guinevra, the wife of the British king, Arthur, who was taken prisoner in a battle between the forces of that monarch and those of the Scots and Picts, was confined by her captors. The area of the parish is 34,160 acres; valued rent £8,233 17s. 4d. Scotch. Population, in 1801, 2,536; in 1831, 2,888, chiefly agricultural labourers and weavers; and of whom about 2,383 belong to the establishment.—This parish is in the presbytery of Meigle, and synod of Angus and Mearns. The church is an old Gothic

structure; it has been frequently repaired, and is in tolerable good order.' In times of Episcopacy it was a prebendary belonging to the Bishop of Dunkeld. Minister's stipend £229 19s. 6d., with a manse, and a glebe of the annual value of £14. Unappropriated Crown teinds £134 1s. 11d. Patron, the Crown. Schoolmaster's salary £34, with about £20 of fees and £24 of emoluments. Pupils about 100. There are seven private schools, with an average attendance at each of 45 scholars. The schoolmaster has likewise the interest of £40 sterling, bequeathed by the late Rev. Mr Robertson for the education of a few children of his name. The north-western district of the parish is connected with Persie chapel in the parish of Bendochy.—An Episcopalian congregation has existed here since the Revolution.—A United Secession congregation was established in 1781; and an Original Seceder congregation in 1808.

AMISFIELD, a seat of the Earl of Wemyss, in the parish and shire of Haddington, on the banks of the Tyne, about 1 mile east of Haddington. It is a handsome edifice of red-coloured sandstone, situated in the midst of an extensive park, and fronting towards the river and the great post-road from Dunbar to Haddington. It contains some fine paintings. It was built by the famous Colonel Charteris, who named it from the ancient seat of his family in Nithsdale, the subject of the next article. His only daughter conveyed it by marriage to the noble family of Wemyss.

AMISFIELD CASTLE, anciently EMSFIELD, an old, tall, square, stubborn-looking fortalice, 5 miles north-east of Dumfries, a little to the left of the post-road to Edinburgh, between the two head-streams of the Lochar. This was long the family-seat of the Anglo-Norman family of Charteris, or Chartres, who migrated northwards during the reign of David I., but seem to have first settled at Kinfauns in Perthshire. The apartments are placed one above another, and communicate by a narrow stair. There is a curiously carved door on one of them, of which Mr Chambers, in his 'Picture of Scotland,' [Vol. I. 228, edition 1824,] has given an amusing account; and which door alone, he avers, "makes Amisfield castle worth going twenty miles to see."

AMULRIE, or AMULREE, a small village of Perthshire, on the road from Crieff to Inverness, 11½ miles distant from the former town, and 10½ from Aberfeldy, the next stage. The district of Amulrie is in the parish of Dull, but is annexed *quoad sacra* to the mission of Amulrie. There are a church and manse here.

ANCRUM, a parish situated nearly in the centre of the county of Roxburgh; bounded on the north by the parishes of St Boswell and Maxtown; on the east by those of Maxtown, Roxburgh, Crailing, and Jedburgh; on the south by Jedburgh, Bedrule, and Minto; and on the west by Minto, Lilliesleaf, and Bowden. The river Teviot, along which it stretches 5 miles, divides it from the parishes of Jedburgh and Bedrule. The extreme length of this district is not less than 6 miles; its breadth does not exceed 4. Its area is about 8,400 acres. The name of the village—Alncromb, or Alneclumb, as it was anciently written—signifies the crook of the Aln; and is exactly descriptive of its situation on a rising ground on the south side of the Ale, where that stream fetches a curve before falling into the Teviot. The parish of Long Newton, forming the north-west and north part of the parish, was annexed to that of Ancrum in 1684. The Ale rises on the western skirts of Robertson parish, and flowing north-east, passes through the loch of that name in the county of Selkirk, to Drydean, where it bends east to Sinton mill; it

then intersects Lilliesleaf parish from south-west to north-east, and after fetching 'many a loop and link' on the borders of Ancrum parish, flows through it to the village of Ancrum, where—as already noticed—it fetches another circuit, and falls into the Teviot, at the distance of half-a-mile below the village, and a quarter of a mile above Ancrum bridge on the great road to Jedburgh. This river abounds with excellent trout; and its banks are in many places finely wooded with tall trees,—in others 'o'erhung with birk or odorous broom,' or frowning with precipitous cliffs,—presenting a varied succession of romantic scenery. The soil, in the lower grounds of the parish on Teviot side, is rich, consisting of a mixture of sand and clay, and, in some places, of a loam. On the higher ground, or ridge which pervades the parish from east to west, and, on the declivities exposed to the north, the surface is heath on a bottom of cold clay; but the flat ground, on both the Ancrum and Long Newton side of the Ale, is a naturally rich though stiff clay. The Statistical report on this parish, published in 1837, states that 7,496 acres are under cultivation, and above 800 in wood. There was formerly a greater extent of wood in this parish; but none of long-standing remains, except upon the banks of the Ale, near the village of Ancrum, and in the environs of Ancrum-house. The Duke of Roxburgh, the Earl of Minto, Sir William Scott, Bart., Sir George Douglas, Mr Ogilvie of Chesters, and Mr Richardson of Kirklands, are considerable heritors. The valued rent of the united parishes of Ancrum and Long Newton amounts to £12,332 2s. Scotch; the real rent was stated, in 1796, to exceed £4,000 sterling; and is now nearly £9,000. Population, in 1801, 1,222; in 1831, 1,454; of whom about 550 belonged to the village of Ancrum. Houses 245. Assessed property £9,707. There are several freestone quarries in this parish. The stone is of two colours, red and white; it is easily wrought and of a durable quality. The situation of Ancrum-house, where the village of Over-Ancrum formerly stood, is picturesque and attractive. Spots of verdant lawn, craggy knolls, scattered trees, and, on the verge of the river, steep banks, in some places naked and of broken surface, and in others clothed with wood, here exhibit a fine assemblage of romantic objects. The trees surrounding Ancrum-house are the oldest and most beautiful in the district: they consist of oaks, beech, elms, planes, and limes. The prospect from the house down the vale of Teviot, of the junction of the Ale and Teviot, and towards the lofty mountains of Cheviot, is extensive and striking. Chesters house is a fine building, picturesquely situated farther up the Teviot; and Kirklands, on the Ale, is deservedly admired both for its architecture and situation.—The parish of Ancrum is in the presbytery of Jedburgh, and synod of Merse and Teviotdale. Sir William Scott is patron of the united parishes, and titular of Ancrum. Minister's stipend £223 16s. 6d., with a manse, and a glebe of the annual value of £30. Unappropriated teinds £738 16s. 6d. Church built in 1762; sittings 520. Schoolmaster's salary £34 4s. 4½d., with £29 fees. Average number of pupils 85. There are three private schools attended by about 130 children. One of these is endowed with £11 2s. 2½d. annually, having been the parish-school of Long Newton.

The Roman road from York to the frith of Forth, after passing through the north-east part of the parish of Jedburgh, cuts a small part of the north corner of Ancrum; and upon the top and declivity of the hill to the eastward, on the border of Maxtown parish, vestiges of a Roman camp may still be traced.—There is a ridge in this parish, over which the road

to Edinburgh passes, about a quarter or half-a-mile west of the line of the Roman road, called Lylliard's, or Lilyard's edge, from a lady of that name, who, on an invasion of the English under Sir Ralph Evre, Sir Brian Latoun, in 1544, during the distracted reignty of the Earl of Arran, fought with masculine bravery, and fell here under many wounds. The old people point out her monument, now broken and defaced. It is said to have borne an inscription—recastr from the well-known lines on a Chevy-Chase hero—running thus :

“Fair maiden Lylliard lies upon this stane;
Little was her stature, but great was her fame;
Upon the English louns she laid many thurnps, [stumps].”
And, when her legs were cutted off, she fought upon her

Sir Walter Scott, in a note on the ballad of ‘The Eve of St John,’ gives the following account of the battle of Ancrum moor. “In 1545, [1544?] Lord Evers and Latoun again entered Scotland, with an army consisting of 3,000 mercenaries, 1,500 English borderers, and 700 assured Scottish-men, chiefly Armstrongs, Turnbulls, and other broken clans. In this second incursion, the English generals even exceeded their former cruelty. Evers burned the tower of Broomhouse, with its lady, (a noble and aged woman, says Lesley,) and her whole family. The English penetrated as far as Melrose, which they had destroyed last year, and which they now again pillaged. As they returned towards Jedburgh, they were followed by Angus, at the head of 1,000 horse, who was shortly after joined by the famous Norman Lesley, with a body of Fife-men. The English, being probably unwilling to cross the Teviot, while the Scots hung upon their rear, halted upon Ancrum moor, above the village of that name; and the Scottish general was deliberating whether to advance or retire, when Sir Walter Scott of Buccleuch came up at full speed, with a small but chosen body of his retainers, the rest of whom were near at hand. By the advice of this experienced warrior—to whose conduct Pitscottie and Buchanan ascribe the success of the engagement—Angus withdrew from the height which he occupied, and drew up his forces behind it, upon a piece of low flat ground, called Panier-heugh, or Paniel-heugh. The spare horses being sent to an eminence in their rear, appeared to the English to be the main body of the Scots, in the act of flight. Under this persuasion, Evers and Latoun hurried precipitately forward, and, having ascended the hill, which their foes had abandoned, were no less dismayed than astonished, to find the phalanx of Scottish spearmen drawn up, in firm array, upon the flat ground below. The Scots in their turn became the assailants. A heron, roused from the marshes by the tumult, soared away betwixt the encountering armies: ‘O!’ exclaimed Angus, ‘that I had here my white goss-hawk, that we might all yoke at once!’ [Godscroft.]—The English, breathless and fatigued, having the setting sun and wind full in their faces, were unable to withstand the resolute and desperate charge of the Scottish lances. No sooner had they begun to waver, than their own allies, the assured Borderers, who had been waiting the event, threw aside their red crosses, and, joining their countrymen, made a most merciless slaughter among the English fugitives, the pursuers calling upon each other to ‘remember Broomhouse!’—[Lesley, p. 478.]” The English had 800 men slain, and 1,000 made prisoners, in this battle. Their leaders, Evre and Latoun, were also left on the field,

“where Ancrum moor
Ran red with English blood;
Where the Douglas true, and the bold Buccleuch,
‘Gainst keen Lord Evers stood.”

The most venerable fragment of antiquity in the

parish is the Malton walls, on a rising ground at the bottom of the village of Ancrum, close to the side of the Ale, where it turns its course towards the south-east. “These walls,” says the Statistical reporter in 1796, “were strongly built of stone and lime, in the figure of a parallelogram; and, ascending on one side from the plain adjacent to the river, were considerably higher than the summit of the hill which they inclose; but are now levelled with its surface, and small part of them remains. Vaults or subterraneous arches have been discovered in the neighbouring ground, and underneath the area inclosed by the building. Human bones are still found by persons ploughing or digging in the plain at the side of the river, which is an evidence of its having been formerly occupied as burying-ground. The name, which these walls still retain, gives the colour of authenticity to a tradition generally received in this part of the country, that the building, and surrounding fields had been vested in the knights of Malta, or Knights Hospitallers of St John of Jerusalem, who, upon account of their splendid achievements and meritorious services in the holy wars, acquired property even in the most remote kingdoms of Christendom.—On the banks of the Ale, below the house of Ancrum, there were several caves or recesses, and not less than fifteen may be still pointed out. In some of them there are also vestiges of chimneys or fire-places, and holes for the passage of smoke from the back part of the cave to the outside of the bank. From these appearances, it is natural to conclude, that, though these caves—so frequently found on the banks of rivers in border-counties—were originally intended for places of concealment and shelter, yet, after the happy event which put an end to interior violence and depredation, they were probably assumed by the poorer classes for places of habitation, and improved by such farther accommodations as the rude or simple taste of the times required.”—In the centre of the village-green is an ancient cross.

ANDERSTON. See GLASGOW.

ST ANDREWS, a parish on the east coast of Fifeshire; bounded on the north by the Eden river, and its estuary, which separates it from Leuchars parish; on the north-east by the German ocean; on the south-east by the Kenly burn, which separates it from Kingsbarn and Denino parishes; and on the south and west by the parishes of Denino, Cameron, Ceres, and Kembuck. Its greatest length is about 10½ miles from north-west to south-east; its average breadth does not exceed 1½ mile; though in the north-western part it exceeds 4 miles, measuring from St Andrews links to the western boundary of the parish at Chalderhills. Its area somewhat exceeds 17 square miles, and may be stated at 11,000 acres. The ascent of the surface is from the north to the south and east. From the Eden to the city of St Andrews, the coast presents a flat firm sandy beach, skirted by the links so famous in the annals of golfing. From the city to the south-eastern extremity of the parish, the shore outwards from high water-mark is lined with rough and ragged shelving rocks covered with sea-weed, while the coast inwards is very rocky and bold, in some places presenting perpendicular rocks of the height of 30 or 40 feet, yet the plough here comes to the very brink, having a sufficiency of soil. The boundaries of the parish to the south and west terminate in moors covered with short heath and furze. In common with all the eastern part of the island, this district is well-acquainted with the cold damp easterly winds, or *haars* of April and May; the south-west wind, however, is the prevailing wind. There are no considerable lakes or rivers within the parish. In the

embouchure of the Eden—up which the tide flows 4 miles—is a flat sandy bay abounding with large flounders, cockles, and mussels. In the course of the river, for about a mile from its mouth, salmon are caught, but in no great quantity. Towards the east end of the parish are some small creeks among the rocks, where vessels of inferior size occasionally deliver lime and coals. St Andrews bay is proverbially dangerous to navigators. Vessels driven into it by an easterly wind, being unable to weather the opposite points of Fifeness and the Redhead, are compelled to run into the mouth of the Tay, which presents an intricate navigation amid its sand-banks. On the lands of Brownhills and Kinkell—which form the first rising ground eastward from St Andrews harbour—there are a few insulated rocks, from 20 to 40 feet high, and of nearly equal breadth; one about half-a-mile from the harbour, is called the Maiden stone; and about half-a-mile farther, is the Rock and Spindle. The chief land-marks in this parish are the steeples of St Andrews, and a small obelisk of stones on the highest part of the farm of Bahymont, about 2 miles south-east of the town. The principal hills are the East and West Bahymonts, which rise to the altitude of about 360 feet above sea-level; and the hill of Clatto which has an elevation of 548 feet. On Strathkinness moor, about 3 miles west from the town, and on Nydie hill—which is a more elevated and westerly portion of the same moor—are quarries of excellent freestone, of which most of the houses in St Andrews are built. In Denhead moor, in the south-west corner of the parish, coal exists, but it is not wrought. About a mile east from the harbour, there is a natural cave, called Kinkell cave. The mouth is to the north; the direction of the cave is southwards, and it penetrates about 80 feet; the shelving of the freestone roof presents a triangular cross section, and there is a continual dropping from the roof and sides which are covered with hanging plants. There are no very old or extensive plantations of wood in this parish. The number of acres under cultivation is about 10,000; the average rent per acre did not exceed 25s. in 1794, and does not exceed 30s. now. The highways through this parish are such only as diverge from St Andrews as a centre, viz. to Crail south-east; south to Anstruther; south-west to Ely; west to Cupar; and north-west to Dundee. On the road to Dundee, over the Eden, is a bridge of six arches, called the Gair or Guard-bridge, originally built at the expense of Bishop Wardlaw, who died in 1444, and who established a family of the name of Wan as hereditary keepers of this bridge, for which they have a perpetual fee of about 10 acres of land adjoining to it. The language of the parish of St Andrews is the common dialect of the Scotch Lowlands. The Fifans, it has been alleged, use a drawing pronunciation, but they have very few provincial words; and if they are at all worthy of so high a character as the first Statistical reporter on St Andrews bestows on the people of his charge, they must be such a very amiable set of people that one can easily overlook in them so trivial a fault as that of a drawing speech. “The people of this parish,” says the reporter, “are sober, temperate, and industrious; more addicted to the arts of tranquil life than to military service; kind and hospitable to strangers; benevolent and friendly to one another; very ready to all the offices and duties of society; not very forward in making new discoveries, but willing to improve by the experiments elsewhere made; peaceable in their demeanour; candid and liberal in their judgments; respectful to their superiors, without servility; compassionate to the distressed, and charitable to the poor; contented and thankful in their situation; attached

to their religion, without bigotry or enthusiasm; regular in their attendance on Christian institutions, and pious without ostentation; loyal to the king; obedient to the laws; enemies to sedition, faction, or tumult, and deeply sensible of the blessings they enjoy as British subjects. In no corner of the kingdom,” adds the worthy reporter—and who will gainsay him if such be the character of one’s neighbours here—“is it more comfortable to live, as neighbours, magistrates, or ministers.” Population, in 1801, 4,203; in 1831, 5,621; of whom 3,767 were inhabitants of the city of St Andrews. Houses 863. Assessed property £21,723. The population consists chiefly of shopkeepers, handicraftsmen, and labourers. The parish of St Andrews is in the presbytery of St Andrews and synod of Fife. It is a collegiate charge; the Crown appointing the first minister; and the magistrates of St Andrews the second. Stipend of the first minister £439 9s. 4d., with a glebe of the annual value of £23; of the second £161 18s. 2d., with a glebe of the value of £16 5s. 2d.; both ministers have an additional allowance for a manse. Unappropriated teinds £791 9s. 10d. The parish-church, within the city of St Andrews, was erected in the 12th century, and thoroughly repaired in 1798.ittings 2,128.—There is a chapel at Strathkinness where public worship is performed every Sabbath.—An Episcopalian congregation has existed here since Episcopacy was the established religion of Scotland. The chapel was erected in 1825; cost £1,400; sittings 170. Minister’s stipend £90.—The United Secession congregation was established in 1748; chapel built in 1826; cost £940; sittings 440. Stipend £100, with manse and garden.—An Original Burgher congregation was established at Strathkinness in 1823. Stipend £96, with manse and garden.—The Independent chapel was built in 1807; cost £700; sittings 336. Stipend £70.

The parish of St LEONARD consists of a few districts in different quarters of the town and suburbs of St Andrews, and three farms in the country, about 3 miles distant from the town, all originally belonging to the priory, afterwards to the college of St Leonard, and now to the United college of St Salvador and St Leonard. Its total extent is 820 acres; and population 482, of whom 62 reside in the country. It is probable that the erection of the parish is of the same date with the foundation of the college whose name it bears. Although the principal of St Leonards did not always officiate as minister of the parish—and in the instance of Mr George Buchanan, was not even a clergyman—it is certain, that for some time before the Revolution, the two offices were held by the same person; and ever since that period the principal of the college has been a clergyman, and the minister of this parish. The chapel of St Salvador’s college is used as the parish-church; the old parish-church having been long in ruins; sittings 312. Minister’s stipend £152 1s. 9d.; with a glebe of the annual value of £25. There is no parochial school. Population of this parish, as distinct from that of St Andrews, in 1801, 363; in 1831, 482. Houses 77.

The city of ST ANDREWS is situated in N. lat. 56° 19’ 33”, and W. long. 2° 50’; 39 miles north-north-east of Edinburgh, upon a rocky ridge projecting into the sea, at the bottom of the bay to which it gives name. This ridge, washed by the waves on the east and north, and terminating towards the sea in an abrupt and high precipice, gives the city, to a traveller approaching from the west, an appearance of elevation and grandeur. Approaching along the road from Cupar and Dundee, by the Gair-bridge, we have a fine prospect of the city at the distance of some miles. On the left the

eye ranges over the vast sweep of the bay of St Andrews, and the coast of Angus as far as the Red-head; on the right rises the richly wooded bank of Strathtyrum; while the venerably majestic towers and numerous spires of St Andrews, shooting into the air, over the horizon line, directly before us, combine to form a finely varied and imposing scene, especially at that fair hour

“ When morning runs along the sea
In a gold path.”

The city commands a fine and open prospect of the German ocean towards the north-east; and the view on the opposite quarter is bounded by a curvilinear range of hills running from north to south-east, and cultivated to their summits. The road from Crail—or the coast-road, as it is called—conducts us to a view greatly admired by some, and indeed perhaps preferable to any other of St Andrews, for the scenery is here softened and improved by gardens and fruit-trees, amid which the houses lie half-concealed, seeming to retire as it were into the shade: we have, at the same time, a fine prospect of the harbour, and of the ruins of the monastery and the cathedral. Some, however, prefer the view of St Andrews from the side of Mount-Melvil, or the south-west prospect of it, on the road from Anstruther, to either of the two we have just described. From this point the city appears still more closely embosomed in gardens and plantations, above which numerous spires and pinnacles shoot up, conferring on it “a kind of metropolitan look.” The city is a mile in circuit, and contains three principal streets,—South-street, Market-street, and North-street,—which are lighted with gas, and intersected by others of less dimensions. These principal streets do not lie exactly parallel to one another, but diverge in a westerly direction from the cathedral, like spokes from the centre of a wheel. There was formerly another street, called Swallow-street, which lay farther to the north, now converted into a public walk, and known by the name of the Scores. The castle stood on the north of Swallow-street, 300 yards distant from the cathedral. St Salvator's, called also the Old or the United college, is on the northern side of the town, between North-street and the Scores; St Mary's, or the New college, directly opposite to it, on the south side of South-street. The buildings belonging formerly to the third college, or St Leonard's, are towards the east near the ruins of the monastery. On the site of the Blackfriars monastery a splendid range of buildings has been erected for the Madras college, to be afterwards noticed. The population of the city, in 1801, was 3,263; in 1831, 4,462. St Andrews was created a royal borough in 1140; and a city or archbishop's see in 1471. As a royal borough, it is now classed with Cupar, Easter and Wester Anstruther, Crail, Kiltrenny, and Pittenweem, in returning one member. The parliamentary constituency, in 1837, was 250; the municipal, 180. The total parliamentary constituency of the St Andrews district of burghs, in 1837, was 707. The first member elected under the Reform act was Andrew Johnston, Esq. of Rennyhill, who continued to represent the burghs till 1837, when Edward Ellice, Esq., a well-known reformer, was elected by 290 votes; his opponent, T. Maegill, Esq., polling 261 votes. The city of St Andrews is governed by a provost, dean of guild, four bailies, and 23 councillors. The revenue of the borough, in 1832, was £1,030, of which £384 arose from rents, and £210 from feu-duties. The expenditure, in the same year, was £1,021. The amount of debt then due by the town was £4,662. In 1837-8, the revenue was £1,466. The magistrates and council have the patronage of the second charge in St An-

draws parish-church; they were also patrons of the town-schools, but have transferred this right to Bell's trustees. The number of burgesses, in 1832, was 213, of whom 25 were non-resident. In 1832, there were 313 houses of £10 and upwards rental in the burgh. Assessed taxes £824. St Andrews has no manufactures worth notice with the exception of that of golf-balls. The bank of Scotland has a branch here. There is a fair for lintseed and general business held here on the 2d Thursday in April; and for cattle and hiring on the 1st of August, and 30th of November; all O. S.

St Andrews was in the meridian of its glory in the 15th and beginning of the 16th centuries. Merchant-vessels were then accustomed to resort to it, not only from the opposite ports of Holland, Flanders, and of France, but from all the other trading-kingdoms of Europe. At the great annual fair, called the Senzie market—which was held within the priory in the month of April—no fewer than from 200 to 300 vessels were generally in the port. In 1656, Tucker describes this town as “a pretty neat thing, which hath formerly been bigger, and, although sufficiently humbled in the time of the intestine troubles, continues still proud in the ruins of her former magnificence, and in being yett a seate for the muses.” At this period only one vessel of 20 tons burden belonged to the port; and at present it possesses only two small vessels. It appears by the tax-roll of the royal burghs, that in 1556 the land-tax of St Andrews amounted to £410; but in 1695 only to £72. In 1805, it was fixed at £27 6s., at which it still remains. After the Reformation, this city fell gradually into decay; and the description given of it by Dr Johnson—in 1773, at the period perhaps of its greatest depression—is still, we are sorry to say, but too applicable, although of late years a considerable number of new and elegant houses have been erected. “The city of St Andrews,” says the learned doctor, “when it had lost its archiepiscopal pre-eminence, gradually decayed: one of its streets is now lost, and in those that remain, there is the silence and solitude of inactive indigence and gloomy depopulation.” A recent learned and noble traveller, however, assures us that “no one can pretend to have seen Scotland, in the sense in which the expression is commonly used by travellers, who has not visited St Andrews. Yet few, of the myriads of tourists who flock to that country, have enjoyed this gratification. The picturesque situation of the city; the extent, diversity, and grandeur of the remains of its ancient secular and ecclesiastical establishments; the importance of the events which they attest; the celebrity which it has derived from the records of historians, and the descriptions of topographical writers, in vain allure them from the more beaten tracks. So rarely are they seen within the deserted streets of St Andrews, that no coach runs directly to it; and the only public accommodation provided for them on their arrival, is a miserable little inn, or rather pot-house. [This was written, be it remembered, in 1829.] This want of curiosity or of good taste is easily explained,—St Andrews affords no thoroughfare: its inhabitants do not attract strangers by their industry, wealth, or gaiety: and the monuments of its former greatness, from which it derives its importance, have not borrowed adventitious and imaginary interest from the illusions of genius. Whilst a tale of grammar, or love, will draw thousands to Melrose or Loch Katrine, few are willing to read the history of Popish ascendancy, or Protestant reformation, amidst the ruins of St Andrews. Yet what expectation can be more unfounded, than that of realizing more completely a fictitious transaction, by repairing to

the supposed scene of its occurrence? A visit, even by moonlight, to Melrose, instead of bringing more fully before us the vision which the very mention of this storied pile suggests to the fancy, dissolves it at once, by subjecting it to the touchstone of truth; while the scene of real events, whether domestic, heroic, or sacred, awakens all the emotions which belong to it. 'That man is little to be envied whose patriotism would not gain force on the plain of Marathon, or whose piety would not grow warmer amid the ruins of Iona.'"^{*}—[See Lord Teignmouth's Sketches, Vol. II. pp. 130, 131.]

The original name of this city was Mucross, *i. e.* 'the Promontory of boars'; from *muc*, a sow or boar, and *ross*, a point, promontory, or peninsula.[†] But St Regulus, or St Rule, a monk of Patras, a city in Achaia, where the bones of St Andrew were kept, having been warned in a vision to take some of these precious relics, and carry them with him to a distant region in the west, obeyed the command, and about the year 365 landed in this neighbourhood, and having been successful in converting the Picts, Hengustus, or Hungus, the king of the country, changed the name of Mucross into that of Kilrymont, *i. e.* Cella regis in monte, or 'the Chapel of the King on the Mount;' having given to Regulus and his companions a piece of ground adjoining the harbour, on which he also erected a chapel and tower in honour of the monk, and bearing his name. The exemplary virtues of Regulus and his companions—legendary history goes on to say—drew a great resort of people to his chapel; and the name of the city was soon changed from Kilrymont to Kilrule, *i. e.* 'the Cell or Church of Regulus,' which name is still retained in Gaelic. Dr Jamieson thinks it highly probable that such a gift was made by Hungus. "For," says he, "it appears indisputable, that, about the year 825, he founded a church at Kilrymont; which henceforth received the name of the apostle to whom it was dedicated. Sibbald views this gift of the Pictish king as meant for the benefit of the Culdees. But we have more direct evidence. For, as Martine speaks of 'Baronia Caladaiorum infra Cursum Apri,' or 'the Barony of the Culdees below the Boar's raik,' the extracts bear, that this was given by King Hungus to St Rule. Yet we learn, from the same source of information, that this tract was afterwards taken from the Culdees; and given, first to the bishop, and then to the prior and canons regular of St Andrews: 'so that,' as Sir James Dalrymple observes, 'this place appeareth to have been one of the ancient seats of the Culdees.' In the tenth century, such was their celebrity at St Andrews, that King Constantine III. took up his resi-

dence among them, and A. 943, died a member of their society; or, as Wyntown says, abbot of their monastery:

Nyne hundyr wyntyr and aucht yhere,
Quhen gayne all Donaldis dayis were,
Heddis sowne cald Constantine
Kyng wes thretty yhere: and syne
Kyng he essayd for to be,
And in Sanct Andrews a Kyldie.
And there he lyvyd yheris fyve,
And Abbot mad, enayd his lyve.

Cronykil, B. vi. c. x.

It is also believed that an Irish king attached himself to this religious body. For we learn from the Ulster Annals, that A. 1033, Hugh Mac Flavertai O'Neill, king of Ailech, and heir of Ireland, 'post penitential mort. in St Andrews eccl.'"[†] [History of the Culdees, p. 148.] The walls of St Rule's chapel, and a tower, still remain: though these are not probably the relics of the original building. The tower is a square of 20 feet on the side, and about 108 feet high, without any spire; the outside, from top to bottom, is of thin ashler work; the arches of the doors and windows are semicircular. The tower was covered with a flat roof and parapet, at the expense of the Exchequer, towards the end of last century; and a turnpike stair reared within leading to the top, from which there is a fine prospect. The name, Kilrule, continued in use till the 9th century, when the Picts were finally vanquished by the Scots, who changed the name to St Andrews.

The cathedral of St Andrews is supposed to have been founded in the year 1159; but a period of 160 years elapsed before its completion, in 1318. It was demolished in June, 1559, by a mob, inflamed by a sermon of John Knox's, wherein "he did intreat (treat of) the ejectione of the byers and the sellers furthe of the temple of Jerusalem, as it is written in the evangelists Matthew and Johne; and so applied the corruptione that was then to the corruptione in the papistrie; and Christ's fact to the devote (duty) of thoise to quhome God giveth the power and zeill thereto, that as weil the magistrates, the proveist and baillies, as the commonalty, did agree to remove all monuments of idolatry: quhilk also they did with expeditione." Such indeed was their expedition, that this noble edifice, the labour of ages, was demolished in a single day.[‡] "While entire, the cathedral church," says Mr Grierson, "had five pinnacles or towers, and a great steeple. Of the towers, two stood on the west gable, two on the east, and one on the south end of the transept or cross-church. Two of these towers, with the great steeple over the centre of the church, have long since disappeared. Three of the towers yet remain, the two on the east gable, which is still entire, and one of those on the west. The other, it is said, fell about two hundred years ago, immediately after a crowd of people had passed from under it in returning from an interment. Large fragments of it still remain, which show the goodness of the cement with which the stones have been joined together. The towers are each 100 feet high from the ground to the summit, and they rose considerably above the roof of the church. The two eastern ones are joined by an arch or pend,

^{*} His lordship seems here labouring a point to little purpose. No one will feel disposed to deny that St Andrews is a most interesting and venerable locality, or envy the man who can find little pleasure in musing on its past glories and magnificence,—the story of centuries dead and gone,—though there may be little in its external scenery, with the exception of its crumbling ruins, to take a strong hold of the imagination or the feelings. But why attempt to decry the charms of other scenery, founded as well on poetical associations as on the fine features of Nature,—scenes redolent not merely of grandeur and beauty, but—thanks to our unmatched minstrel—of deep thought and rich imagination? It seems but an ungrateful return to one who has, in so many instances, rendered every portion of a glorious landscape doubly glorious and eloquent,—who has added to the highest poetry of the material world, a something higher still, in

"the gleam,
The light that never dies on sea or land,"

to insinuate that with respect to the scenery of his matchless poems and romances the real truth and the ideal do not easily blend together in our conceptions.

[†] The village of Boarhills, in what was originally called the Boarchase, a tract of country stretching from Fifeness to the neighbourhood of St Andrews, retains the original name of the district, as translated into the dialect of later inhabitants; and the arms of the city are a boar leaning against a tree.

[‡] Tennant, the author of 'Anster Fair,' in a clever though less-pleasing and less-successful poem, entitled 'Papistry Storm'd,' [Edin. 1827, 12mo.] has sung in quaintest dialect, and with all the facetious strength, fluency, and vivacity, which he attributes to the vernacular idiom of Scotland:

"the steir, strabush, and strife,
Whan, bickerin' frae the towns o' Fife,
Great bangs of bodies, thick and rife,
Gaed to Sanct Androis town,
And, wi' John Calvin i' their heads,
And hammers i' their hands and spades,
Enrag'd at idols, mass, and beads,
Dang the Cathedral downa.

forming the great east light of the church, till they rise above the height of the roof; and it is evident that the western ones have been in the same state when entire. From each of these towers, to within the church, opened three several doors into so many galleries along the walls; which galleries were supported by pillars, 16 in number on each side, and at the distance of 16 feet from the wall. All that now remains of this once magnificent pile, is the eastern gable entire, as has been said, half of the western, the south side-wall from the western gable till it join the transept, a length of 200 feet, and the west wall of the transept itself on the south side of the church. The rest is entirely gone, 'every man,' as Dr Johnson expresses it, 'having carried away the stones who imagined he had need of them.' From the length of time which elapsed during its erection, and the varying tastes of the ages in which it was built, we might be led to conclude beforehand that there would be found in it different styles of architecture, and the conjecture is confirmed by the appearance of what remains. For on the east gable there is to be seen the Gothic mixed with the Saxon; and in the part of the south side-wall which still subsists, we have ten windows, six of which, namely, those toward the west, are Gothic, and the other four Saxon. The Barons of exchequer, in 1826, caused the interior of the cathedral to be cleared out, and various repairs to be executed with the view of preserving this venerable relic of long-past centuries, which

"But for that care, ere this had past away."

The Crown lands are now the property of the university, having been very recently purchased by that body from the Crown for £2,600, with the view of forming a botanical garden and observatory, and preserving the venerable ruins from further dilapidation.

In the vicinity of the cathedral stood the priory, or Augustine monastery, founded by Bishop Robert in 1144. John Hepburn, prior of St Andrews, about the year 1516, surrounded the monastery on the north, east, and south sides with a magnificent wall, which is still pretty entire, and is nearly half-a-mile in extent. It is about 22 feet high, and 4 feet thick; and incloses a space of about 18 acres. But of all the various buildings which once occupied this sacred inclosure, only a few vestiges now remain. Near the present grammar-school stood a monastery, which Grose, in his *Antiquities*, assigns to the Dominicans; but Keith informs us that it was a convent of Observantines. A Dominican convent, we know, was founded in St Andrews by Bishop Wishart in 1274, and an Observantine establishment by Bishop Kennedy, 150 years later. "The only part which now remains of the buildings of the convent beside the grammar-school," says Mr Grierson, writing in 1807, "is a fragment, with an arched roof in the Gothic style, extremely elegant in appearance, and supposed to have been the chapel. It strikes one as decidedly the most beautiful specimen of Gothic architecture now to be seen at St Andrews." This fragment is now enclosed within the grounds of Madras college, and its preservation will, we doubt not, be an object of solicitude to the trustees of that noble institution. Besides St Rule's, and the cathedral, Martine, in his '*Reliquæ Divi Andree*,' written in 1685, mentions, as having been in some sort discernible in his time, fourteen different buildings: among which were the prior's house, commonly called the Old inn, which stood to the south-east of the cathedral; the cloisters, which lay west from the prior's house, separated from it only by the dormitory. In this quadrangle was held the great fair called the Senzie market, which began in the 2d week after

Easter, and continued for 15 days. The refectory or dining-room, was in length 108 feet, and in breadth 28. It is now a garden; in Martine's time it was a bowling-green. Fordun relates, that Edward I., in 1304, stripped all the lead off this building to supply his battering-machines in a projected siege of Stirling. The New inn, the latest built of all the edifices in the monastery before the Reformation, is said to have been erected on the following occasion. James V. having married the Princess Magdalene, the only and lovely daughter of Francis I. of France, in 1537, the young queen, being of a delicate constitution, was advised by her physicians to reside here for the benefit of her health. The New inn was, in consequence, built for the purpose of accommodating her majesty; and was erected, we are told, with such rapidity, that it was begun and finished in a single month! The queen, however, never enjoyed it, for she died at Holyroodhouse, on the 7th of July, six weeks after her arrival in Scotland. The New inn was the residence of the archbishops after the annexation of the priory to the archbishopric in 1635.—The Kirkkeugh, or St Mary's church, no longer exists. Martine says, that in his time the manse of the provost of Kirkkeugh was still standing, "on a little height above the shore of St Andrews, now in no good repair;" and that "a little north from it were to be seen the ruins of old buildings, which were the chapel itself." Upon this his editor, in the year 1797, has the following note: "Very little now remains of these buildings, viz., a single gable with a door in it. But whether these are the ruins of the manse or of other houses cannot now be known."

The castle of St Andrews was founded towards the conclusion of the 12th century, by Roger, bishop of the diocese, and son of Robert, third earl of Leicester. It stood upon a point of land projecting towards the sea, on the north side of the town, about 250 yards to the north-west of the cathedral. It was enlarged and repaired betwixt the years 1318 and 1328. In 1336, Edward III. placed a garrison in it to command the town and neighbouring country. On his return into England, however, a few months after, the regent, Sir Andrew Moray of Bothwell, in conjunction with the earls of March and Fife, besieged this stronghold, reduced it in the space of three weeks, and entirely demolished it a short time after. Bishop Trail repaired the castle towards the end of the 14th century, and died in it in 1401. James III. was born in the castle, as appears by the golden charter of the see granted to Bishop Kennedy; and it continued to be the episcopal palace till the murder of Beaton in 1545. Detached from the town, and bounded on two sides by the sea, the ruins of the castle now serve as a useful land-mark to mariners. The sea washes the rock on which it is built on the north and east sides, and has in some places undermined its walls, a considerable part of which fell in consequence of this in December 1801. Martine says, that in his time there were people living in St Andrews who remembered to have seen bowls played on the flat ground to the east and north of the castle; the ocean, therefore, must have made great encroachments on this part of the coast. It has recently swept away the curious cave known as Lady Buchan's cave, on the shore between the harbour and the castle. Every winter huge masses of the promontory are broken down and carried away by the tide.

The University of St. Andrews is the oldest in Scotland, having been founded in 1411 by Henry Wardlaw, bishop of the diocese, who obtained the sanction of papal confirmation from Benedict XIII., in 1413. The success of the original institution led to the foundation of St. Salvator's college, about the year 1455, by James Kennedy, Bishop of St. An-

drews; St Leonard's college, founded by Prior Hepburn, 1512; and St Mary's, founded by Archbishop Beaton, in 1537. In each of these colleges were lecturers in theology, as well as in philosophy, languages, &c. In the reign of James VI. 1579, under the direction of George Buchanan, these establishments were new modelled, and St Mary's college appropriated to the exclusive study of theology; it is therefore distinguished by the name of the Divinity college, or the New college. In 1621, an act was passed re-establishing, in all their articles, the first foundations of the colleges, but still assigning to St Mary's the department of theology. In 1747, on a petition from the masters of St Salvator's and St Leonard's, these two colleges were united into one society, under the designation of the United college. "The statute ordained, among other things less worthy special notice, that the United colleges shall consist of one principal, one professor of Greek; three professors of philosophy; whereof one is to be professor of logic, rhetoric, and metaphysics, another to be professor of ethics and pneumatics, and the third to be professor of natural and experimental philosophy; one professor of humanity; one professor of civil history, in place of the suppressed humanity professorship of St Salvator's college; one professor of mathematics, and a professor of medicine; 16 bursars on the original foundations; together with such as have been since or may hereafter be added, and the necessary servants: that the whole funds already or to be appropriated for the payment of the salaries of the principal and professors (all specially fixed by the act), shall be joined into one common stock, and be levied and received for their use, by such factor or steward as they shall from time to time appoint: that the patronage of the principalship and of the professorship of mathematics shall belong to the Crown; of the professorship of civil history to the Earl of Cassillis; of the professorship of humanity to Scott of Scotstarvet; of the professorship of medicine to the university, to be exercised as formerly; of the remanent professorships to the principal and professors of the United college, to be determined by comparative trial, in such form and manner as was usually observed in former times; of the bursaries to the same body, to be bestowed as before the Union; the whole being a well-timed and judicious piece of legislation; which by raising the condition of the collegiate body, secured to it in some degree superior qualifications, and which, though bestowing, after all, only a very moderate endowment on the chairs of the seminary, has in fact filled them, since the date of it, with talents and attainments of the most respectable order, and the highest usefulness." The university commissioners, whose report we are now quoting, add: "It is pleasant to be enabled to state, that the members of the Senatus Academicus themselves have, on every occasion on which they could act with effect, manifested the utmost zeal in the cause of literature and science, and for the efficiency and fame of their university. In 1811, their medical chair, which it would appear had never become effective, engaged their attention; and in consequence of authority vested in them by its munificent founder, the Duke of Chandos, to form such regulations and statutes as might tend to the promotion of its object, they resolved that it should be a chair for instruction in the principles of medicine, anatomy, and chemistry, and that the holder of it should be an efficient professor, teaching two very important branches of medical science, chemistry and chemical pharmacy. They made at the same time certain arrangements for creating a fund, to meet the expense of a chemical apparatus and class experiments; and ever since that time, the prescribed

branches have been taught every session with great ability, and to a respectable class. About 1818-19, a class for political economy was opened by the professor of moral philosophy, and the lectures on the subject have been so attended of late, as to show that the science is growing at St Andrews, as elsewhere, into estimation and request. In the session of 1825-6, the United college originated a lectureship for natural history, and to promote the permanency and success of the measure, they voted 25 guineas from their revenue, as an annual salary to the lecturer. Some bequests of specimens have given a beginning to a museum, and the subjects of the science, having excited great interest among the students, there is a fair prospect that the lectureship will, in the hands of able and zealous lecturers, become a popular and useful institution, and thus exalt the reputation, and augment the attendance of the seminary to which it belongs." The revenue of the university, as distinct from the two colleges, does not exceed £300, and is chiefly appropriated to the support of the university library. The income of the United college, in 1774, was £1,727; in 1823, £3,020. The salary of the principal, in 1824, was £342; of each of the four foundation-professors, £254; of each of the professors of humanity, civil history, and medicine, £140; of mathematics £245. The number of bursaries belonging to the United college is 55, of which 7 are between £20 and £25 each, being the highest in value. The annual amount of grants from the Crown is £297. The United college holds the patronage of Denino, Kemback, Kilmeny, and Cults, and alternately with another patron, Forteviot. The number of students attending the United college averages about 200. The buildings of St Salvator's college form a magnificent square, ornamented by a handsome spire 156 feet high. Through a portal directly under this spire we enter a quadrangular court, 230 feet long, and 180 broad, decorated by piazzas on the opposite side. On the right, as we enter, stands the chapel, a handsome edifice, with a Gothic front. In the chapel is an elegant tomb, erected by Bishop Kennedy, the founder, for himself. "It is a piece of exquisite Gothic workmanship; and though much injured by time and accidents, is still sufficiently entire to show the fine taste of the designer. It stands on the north side of the church, opposite to where the altar formerly stood, and where the pulpit now stands. An epitaph is easily discernible upon it, consisting of two lines, but so much defaced as to be altogether illegible. The top was ornamented by a representation of our Saviour, with angels around, and the instruments of the passion. The bishop died in 1466, and was embalmed with spices and buried in this tomb. Within it, and according to tradition about the year 1683, were discovered six magnificent maces, which had been concealed there in troublesome times. Three of these maces are kept in this college, and shown as curiosities to strangers; and one was presented to each of the other three Scottish universities, Aberdeen, Glasgow, and Edinburgh. One of the maces is very superior in elegance and value to the rest, and is the original, of which the others are only copies. It is of beautiful Gothic workmanship. The bishop seems to have copied it in the architecture of his tomb." The roof of the church, which was of beautiful Gothic architecture, having become apparently insufficient, it was judged necessary to pull it down, and to substitute another in its place. In doing this, the architect unfortunately suffered the beautiful tomb of Kennedy to be greatly injured and defaced.

St Leonard's college obtained its name from its vicinity to St Leonard's church. "It appears"

says a modern author, "from the foundation-charter, that there had been an hospital in the same place for the reception and entertainment of pilgrims of different nations, who crowded to St Andrews to pay their devotions to the arm of St Andrew which wrought a great many miracles. At length, however, the saint's arm being tired with such laborious sort of work, or thinking he had done enough, the miracles and the conflux of pilgrims ceased, and the hospital was deserted. The prior and convent, who had been the founders and were the patrons of the hospital, then filled it with old women; but these old women produced little or no fruit of devotion, and were turned out. The prior and convent, having repaired the church and hospital of St Leonard, next resolved to convert them into a college, to consist of a master or principal, four chaplains, two of whom were to be regents, and twenty scholars, who were first to be taught the languages and then the liberal arts and sciences; six of them, who were thought most fit, were also to apply, with great ardour and vehement reading,—*'continuo studio et lecturâ, vehementi opera,'*—to the study of theology under the principal. Such of these scholars as were found fittest for it, were also to be taught music, both plain song and descant. The foundation-charter to this purpose, was executed by the archbishop, the prior, and chapter, at St Andrews, August 20, 1512. By another charter, the prior and chapter endowed this college with all the houses, lands, and revenues which had belonged to St Leonard's hospital." Both these charters received the royal confirmation in the year. On the union of this college with St Salvador's, the buildings of it were sold and converted into dwelling-houses, to which purpose such of them as now remain are still applied. It stood on the south-east side of the town, adjoining to the monastery. The ruins of the church of St Leonard are accounted a fine specimen of Gothic architecture. Into this church, it seems, Dr Johnson could obtain no admission. He was always, he says, prevented by some civil excuse or other; and he loudly complains of its having been applied to the profane purpose of a green-house. It is now entirely unroofed. A little way to the east of it, and on the right, as we proceed from the principal gate of the abbey to the shore, stands an aged sycamore, which, the same traveller informs us, was the only tree he had been able to discover in the county "older than himself." It is now commonly known by the name of Dr Johnson's Tree.

St Mary's college was originally projected by Archbishop James Beaton, uncle and immediate predecessor to the famous cardinal of that name. We are informed, that in the year 1537, "he augmented the seminary called the Pedagogy, by a variety of endowments, and afterwards converted it into St Mary's college: that he had determined to pull down the buildings of the above-mentioned seminary, which were become old and infirm, and inconvenient for the studies of the youth, and to erect from the foundation others in a more magnificent style, but was prevented by death. He built, however," says our authority, "several parts, and completed some that had been begun by others. His successor and nephew, the cardinal, proposed to follow out his uncle's plans, and had made some progress in the undertaking when he was assassinated in the castle. Having demolished a set of old buildings, he laid the foundation of what was intended to be a handsome church, within the college, but this was never finished." In 1553, Archbishop Hamilton gave a new establishment to this college, according to which it was to consist of 36 persons: viz., a prefect, a licentiate, a bachelor, a canonist, 8 students

of theology, 3 professors of philosophy, 2 of rhetoric and grammar, 16 philosophy students, a provisor, a janitor, and a cook. The income of this college on an average of 7 years preceding 1826, was £1,076. The principal has a salary of £238; the professor of divinity, of £231; the church-history professor, £286; and the Hebrew professor, £211. By the charters of foundation, the right of patronage of the parishes of Tynningham, Tannadice, Inchbroyack or Craig, Pert and Laurencekirk, was vested in St Mary's college. Pert is now united to Logie, and the crown and college present to that united parish alternately. The patronage of Tynningham was sold by the college to the Earl of Haddington, in the year 1760, but the college is still in possession of the other patronages. In the year 1803, the college obtained the right of patronage to the church of Tweedsmuir; and it would appear from the evidence, that it was granted to the college by the late Mr Scott, of Dunninald. There are 17 bursaries, the total annual income of which averages £199. The average number of students is about 80. The buildings of this college stand on the south side of South-street, forming two sides of a quadrangle. On the west are the teaching and dining-halls, both upon the first floor; and immediately below is the prayer hall, in which the students used to assemble twice every day, viz., at nine in the morning, and at eight at night, for public prayers. The evening-service was abolished some years ago. The north side of the quadrangle is formed by the principal's house, and other buildings formerly laid out in lodging-rooms for students, with the porter's house over the gateway. Contiguous, towards the east, is the University library, containing 35,000 volumes, and forming in continuation with these buildings, part of the south side of South-street.

The Madras college was founded by the Rev. Dr Andrew Bell, one of the prebendaries of Westminster, and the founder of the Madras system of tuition, who died at Cheltenham, in January, 1832. Dr Bell was a native of St Andrews, and, among other splendid bequests for the purposes of education in Scotland, left a sum of £50,000 in trust, for the purpose of founding a seminary within the city of St Andrews, with which the English and grammar-schools are now incorporated. The buildings are in the Elizabethan style, and form a handsome quadrangle, with a court within. In May, 1836, the number of pupils attending the Madras college was 798. The branches taught are English, Greek, and Latin, arithmetic, mathematics, geography, writing, drawing, French, German, and Italian, and church-music. The trustees are the provost of the city, the two parish-ministers, and the sheriff-depute of Fife. The lord-lieutenant of Fife, the lord-justice-clerk of Scotland, and the episcopal bishop of Edinburgh, are patrons and visitors of the college.

St Andrews is a place of great antiquity, and has been the scene of some of the most memorable events recorded in Scottish history. We have already noticed several of the most memorable facts in its early annals; and will now supply a few additional historical notices to complete our sketch of the civil and the ecclesiastical history of this city. In 1298, Edward I., after defeating Wallace at Falkirk, sent a division of his army across the Forth to punish the men of Fife for the aid they had given Wallace. They found St Andrews deserted of its inhabitants, and "wasted it full plaine." In March 1309, Robert Bruce convened his first parliament here, who recognised his title to the crown, by a solemn declaration. In the 15th and 16th centuries the sanguinary temper of its ecclesiastics was often fearfully displayed. In 1407, John Resby, an Englishman, was

burnt alive in this "town of monks and bones," for disseminating the doctrines of Wickliffe; and about twenty-four years afterwards, Paul Craw, a Bohemian, suffered the same fate, for propagating the tenets of Jerome and Huss. On March 1st, 1527, Patrick Hamilton, abbot of Ferne in Ross-shire, a young man of great accomplishments, and related to some powerful families, being the son of Sir Patrick Hamilton of Kincavil, and Catherine, daughter of the Duke of Albany, and a nephew of the Earl of Arran, was burnt before the gate of St Salvator's college. Not many months after, a man of the name of Forrest was led to the stake for asserting that Hamilton died a martyr. On the 28th of March, 1545, the sainted Wishart was burnt before the castle, then the archiepiscopal palace of the ferocious Cardinal Beaton, under circumstances of peculiar barbarity. The front of the great tower was hung, as for a festival, with rich tapestry; and cushions of velvet were laid in the windows for the cardinal and prelates to repose on, while they feasted their eyes and glutted their fury with this most inhuman spectacle. The cardinal was so infuriated against the noble confessor that he forbade, by proclamation, the inhabitants of St Andrews to pray for him, under pain of the severest ecclesiastical censures; and, in his haste to get his victim put out of the way, the civil power was not consulted at the trial. But the avenger of blood was nigh at hand. By his unbounded ambition, relentless cruelty, and insupportable arrogance, Beaton had raised up against himself a host of enemies, who had even before Wishart's arrest and execution determined on his destruction. A conspiracy was formed against his life, at the head of which was Norman Lesley, Master of Rothes, his uncle John Lesley, and Kirkaldy of Grange. With fourteen associates, they assembled in the church-yard, on Saturday the 29th of May 1545, at 3 o'clock in the morning; and having gained admittance into the castle—which was then repairing—by small parties at a time, they turned the servants out, to the number of 150; and then proceeding to the cardinal's room, forced open the door, which their wretched victim had barricaded from the inside, and rushing upon him, stabbed him repeatedly with their daggers. But Melville, a milder fanatic, who professed to murder, not from passion, but religious duty, reproved their violence: "This judgment of God," said he, "ought to be executed with gravity, although in secret;" and presenting the point of his sword to the bleeding prelate, he called on him to repent of his wicked courses, and especially of the death of the holy Wishart, to avenge whose innocent blood they were now sent by God. "Remember," said he, "that the mortal stroke I am now about to deal, is not the mercenary blow of a hired assassin, but the just vengeance which hath fallen on an obstinate and cruel enemy of Christ and the Holy Gospel." On his saying this, he repeatedly passed his sword through the body of his unresisting victim, who sunk down from the chair to which he had retreated, and instantly expired. The conspirators then brought the body to the very window in which Beaton had a little ago sat with so much unfeeling pride to witness the burning of Wishart, and exposed it to the view of the people with every mark of contempt and ignominy. Balfour says, that the cardinal's corpse, "after he had lyne salted in the bottom of the sea-tower within the castell, was some 9 months thereafter taken from thence, and obscurely interred in the convent of the Black friars of St Andrews, in anno 1547." John Knox, after having, as he expresses himself, "written merrily" upon the subject, informs us, that "as his funeral could not be suddenly prepared, it was thought best to keep him from spoiling, to give him great salt enough, a

cope of lead, and a corner in the sea-tower, (a place where many of God's children had been imprisoned before) to wait what exequies his brethren the bishops would prepare for him." Language such as this can hardly fail to inspire disgust; but the following lines of Sir David Lindsay of the Mount, express, perhaps with tolerable accuracy, the sentiments with which the most judicious individuals amongst the reformers at that time regarded the cardinal's murder:

'As for the cardinal, I grant,
He was the man we well might want;
God will forgive it soon.
But of a truth, the sooth to say,
Although the loun be well away,
The deed was foully done."

The conspirators were shortly after joined by 120 of their friends, and held out the castle for more than a year; but at last capitulated to Leo Strozzi, prior of Capua, a knight of Rhodes, who entered the bay with a squadron of 16 galleons, and speedily effected a breach in the walls. In April, 1558, Walter Mylne, priest of Lunan, near Montrose, an infirm old man, above 80 years of age, was burnt at St Andrews for the crime of heresy. So strongly was the resentment of the populace expressed on this occasion, that he was the last victim of popish cruelty in Scotland. It was at St Andrews, in June 1583, that James VI. found means to make his escape from the state of captivity into which he had been brought at Ruthven, and detained for nearly a twelvemonth by the Earls of Mar, Gowrie, Glencairn, and others. The king having got permission from these noblemen, who then attended him at Falkland, to pay a visit to his uncle the Earl of March, who resided in the monastery of St Andrews, went to view the works of the castle a short time after his arrival. He entered the fortress accompanied by the governor, to whom he had confided his intentions; but was no sooner in than he commanded the gates to be shut, and admission refused to the party who had attended him from Falkland. Having thus recovered his liberty, he was soon joined by the well-affected part of his nobility; and a proclamation was forthwith issued by him, "commanding all the lieges to remain quiet, and discharging any nobleman or gentleman from coming to court accompanied by more than the following number of attendants: viz. fifteen for an earl, fifteen for a bishop, ten for a lord, ten for an abbot or prior, and six for a baron, and these to come peaceably under the highest penalties." In 1609, St Andrews was the scene of a state-trial: that of Lord Balmerinoch, secretary of state to James VI. His crime was the having surreptitiously procured the king's signature to a letter addressed to the pope; and being found guilty by a jury of fifteen of his peers, he was sentenced to have his hands and feet cut off, and his lands and titles forfeited. The first part of the sentence was remitted by the intercession of the queen; but he died a short time after, in his own house, of a broken heart. In 1617, James VI. having, from what he himself calls "a salmon-like instinct to see the place of his breeding," paid a visit to Scotland, and convened an assembly of the clergy, both ministers and bishops, at St Andrews. He addressed them in a speech of considerable length, in which he proposed the introduction of episcopacy, and upbraided them with what he called "having mutinously assembled themselves, and formed a protestation to cross his just desires." James was the last monarch who ever honoured St Andrews with his presence. During the troublesome times which followed his death in 1625, while his son and grandsons successively filled the throne, and endeavoured to follow out his plans in the establishment of the episcopal religion in Scotland, this city, as being the seat

of the chief ecclesiastical power, was frequently involved in trouble. The murder of Archbishop Sharp, in the neighbourhood of St Andrews in 1679, will be found detailed in our article, *MAGUS MOOR*. The history of the city of St Andrews since that period presents nothing sufficiently remarkable for notice in this brief chronicle. We shall now sketch the history of the see.

Kenneth III. translated the metropolitan episcopal see of Scotland from Abernethy to St Andrews. Malcolm III. styled the bishop of St Andrews 'Episcopus Maximus,' or Chief Bishop, and assigned to him the oversight of Fife, Lothian, Stirlingshire, the Merse, Angus, and the Mearns. He also conferred upon him the lordship of Monymusk. Alexander I. bestowed upon the see of St Andrews the famous track of land called the *Cursus Apri*, or Boar's chase, of which it is not now possible for us to assign the exact limits; but "so called," says Boece, "from a boar of uncommon size, which, after having made prodigious havoc of men and cattle, and having been frequently attacked by the huntsmen unsuccessfully, and to the imminent peril of their lives, was at last set upon by the whole country up in arms against him, and killed while endeavouring to make his escape across this track of ground." The historian farther adds, that there were extant in his time manifest proofs of the existence of this huge beast; its two tusks, each sixteen inches long and four thick, being fixed with iron chains to the great altar of St Andrews. According to the best authorities, there were thirty-three successive prelates in St Andrews before the see was elevated to the dignity of an archbishopric, in 1471. Nevill, archbishop of York, having revived a claim of superiority over the Scottish clergy, which had already been productive of much ill-will betwixt the two countries, the pope, to silence the pretensions of York for ever, granted a bull erecting the bishopric of St Andrews into an archbishopric, and subjecting to it the other dioceses of the church of Scotland. The prelate, in whose favour this bull was obtained, was Patrick Graham, formerly bishop of Brechin, and brother, by the mother's side, to the celebrated James Kennedy his immediate predecessor. Graham, along with the primacy, obtained the power of a legate from the pope, for the reformation of abuses, and correcting the vices of the clergy. But he does not appear to have been aware of the difficulties he had to encounter here, for the clergy, with one consent, set themselves in opposition to him, and had influence enough to destroy his credit even with the pope himself. They accused him to his holiness of schism, and other enormous crimes, and prevailed so completely as to get him degraded from his office. "The nobility and courtiers also," says Spottiswood, "became his most violent opponents, inasmuch that he was suspended by the king, excommunicated by the pope, expelled from his see, and, at the end of thirteen years from the date of his election, died in a state of imprisonment in the castle of Lochleven." The dioceses subject to the archbishop of St Andrews, after the advancement of the see of Glasgow to the same dignity, were the following nine: Dunkeld, Dumblane, Brechin, Aberdeen, Moray, Ross, Caithness, Orkney, and, after its erection in the reign of Charles I., Edinburgh. The province of the see of Glasgow included the three dioceses of Galloway, Argyll, and the Isles. The following is a list of the successive bishops and archbishops of St Andrews:

Malisius II. died 1031.
Alwinus, from 1031—1034.
Maldwin, 1034—1061.
Tuthalus, 1061—1065.
Fothaldus, 1065—1077.
Gregorius, bishop-elect.
Catharus.
Edmarus.
Godricus.
Turgot, died 1115.
Eadmerus, elected in 1120.
Robert, founder of the priory, elected in 1122, died in 1159.
Arnold, founder of the Cathedral, died in 1162.
Richard, chaplain to Malcolm IV., died in 1177.
John and Hugh, a double election.
Roger, who built the castle, died in 1202.
William Malvoisine, chancellor of the kingdom, died 1233.
David Bernham.
Abel.
Gameline, chancellor.
William Wishart, died 1279.
William Fraser, chancellor.
William Lambertson, died 1328.
James Bene, died 1332.
Vacancy of nine years.
William Landal, died in 1385.
Stephen de Pay.
Walter Trail, repaired the castle, died 1401.
Thomas Stewart.

Henry Wardlaw, founder of the university, consecrated in 1403, died 1440.
James Kennedy, founder of St Salvador's college, died 1466.
Patrick Graham, the first archbishop, died 1478.
William Shives, died 1496.
James Stuart, chancellor, died in 1503.
Alexander Stuart, chancellor, killed at Flodden 1513.
Andrew Foreman, died 1522.
James Beaton, chancellor, died in 1539.
David Beaton, cardinal and chancellor, assassinated in 1545.
John Hamilton, hanged at Stirling in 1570.
John Douglas, the first Protestant bishop, consecrated in 1571, died 1576.
Patrick Adamson, died 1591.
Vacancy of fifteen years.
George Gladstones, died 1615.
John Spottiswood, chancellor, the historian, died 1639.
James Sharp, assassinated in 1679.
Magus-muir in 1679.
Alexander Burnet, died in 1684.
Arthur Ross, deprived of his office at the Revolution in 1689, died in 1704.

It appears that the bishops of St Andrews had the power of coining money. But "the tradition goes," says Martine, "that they could not coin above a groat-piece; but this," continues he, "may be allowed to be a mere conjecture, for the German bishops, who coin, are not so restricted and limited. For proof that sometimes this privilege has been in use, I have seen copper coins bearing the same *mond*, chapleted about and adorned with a cross on the top, just in all things like the *mond* set by Bishop Kennedy in sundry places of St Salvador's college, both in stone and timber, and the same way adorned, with a common St George's cross on the reverse. The circumscriptions are not legible. And some think that the magistrates of St Andrews, keeping in their charter-chest some of these pennies, have done it in honour of their Overlord, and for an instance and remembrance of his royal privilege, which no subject in Britain has beside." As the city of St Andrews lay wholly within the archbishop's regality, he was superior of all its property in land. He was 'Conservator privilegiorum Ecclesiæ Scotticæ,' guardian of the privileges of the church of Scotland, and constant chancellor of the university *ex officio*; but he was in many cases also promoted to the dignity of lord-high-chancellor of Scotland; and it was his privilege, in general, to officiate at the coronation of the kings. Godricus, bishop of this place, crowned King Edgar, son of Malcolm Canmore; and Charles I. was crowned by Spottiswood in 1633. The archbishop was, by act of parliament, in the time of Charles II. constituted perpetual president of the general assembly of the church of Scotland; and he sat in parliament as a temporal lord in all the following capacities: "As Lord-Archbishop of St Andrews; Primate of the Kingdom; first of both states, Spiritual and Temporal; Lord of the Lordship and Priory of St Andrews; Lord Keig and Monymusk; Lord Byrehills and Polduff; Lord Kirkliston, Lord Bishopshire, Lord Muckhartshire, Lord Scotsraig, Lord Stow, Lord Monymail, Lord Dairsie, Lord Angus, Lord Tynningham, and Lord Little Preston;" he also took precedence of all noblemen whatever in the kingdom. When the privy council, in 1561, passed the famous act enjoining all beneficed persons to give in an exact account of the rental of their benefices, Hamilton, archbishop of St Andrews, gave in the following account of his:

Fergusus 721.
Hadrianus, or Adrian, elected 840, killed by the Danes 872.
Kellach I.

Malisius, or Malvesius I., died in 970.
Kellach II. died 996.
Malmore.

In money	Chald.	Boll.	£2,904 7 2
Wheat	30	9	
Bear	41	10	
Oats	67	0	

Mr Grierson estimates this revenue at £4,784 present currency. "And if," he says, "we add to this sum the value of the priory, and other alienations which had before this time taken place, we shall be led to think that the income of the prelates of St Andrews, when in their most flourishing condition, could not be much less in value than £10,000, that is, than that sum would have been in 1805. The first great alienation of the revenues of this see was the foundation of the priory in 1120; the second, the erection of the hospital of Lochleven, or Scotland Well, in 1230; the third, the foundation and endowment of St Salvador's college by Bishop Kennedy in 1455; the fourth, the disposing of Muckartshire by Schives to the Earl of Argyll, to engage that earl to assist him in his dispute with the bishop of Glasgow; the fifth, the erection of St Mary's college by the archbishops Stuart and the two Beaton; and the sixth, the act of annexation in 1587, by which this see, with all the other church-benefices in the kingdom, was annexed to the Crown, and the rents and revenues of it disposed to the Duke of Lennox by James VI., excepting only a small pittance, reserved as barely sufficient for the subsistence of Archbishop Adamson. It is true, this act of annexation was repealed in 1606; but in the act repealing it, and restoring the revenues of the see, there were a number of important reservations made which prevented it from attaining its former riches. The erection of the bishopric of Edinburgh, in 1633, was another great loss; for all the lands and churches, south of the Forth, belonging to the archbishopric, were now disunited from it, and conferred upon the new see. Yet the loss of these was in some measure compensated by the bounty of Charles I., who having, two years after, purchased the priory from the Duke of Lennox, to whom it had been gifted by James VI., disposed this benefice to the archbishopric in lieu of the loss it had sustained. Such were the most important changes, losses, and revolutions, which this see, in the course of five centuries, from time to time underwent." The number of monks in the priory at the Reformation was, according to Martine, thirty-four, besides inferior servants; and of these thirty-four, "fourteen," says he, "turned preachers, at certain kirks of the priory, and some continued about the monastery till their death." The priories of May, Pittenweem, Lochleven, and Monymusk—of all which monasteries the monks were also Augustinians—were dependent on the priory of St Andrews. The revenues of it in Martine's time, consisted, he tells us, in "silver, feu-duties, rentall teind-bolls, tack teind-duties, capons, poultry, and small sums in the name of kain; the houses and yards within the precincts of the monastery; the teinds of the 480 acres of land on the south side of the town, now called the Prior acres, formerly the convent's glebe; and the privilege of having the teind sheaves led into the priory barn by the heritors and tenants themselves. The yearly rent," he continues, "of the priory is at present as good as that of the archbishopric, if not better; and within a few years, at the falling of some tacks, it will be much better." When the act of council, in 1561, passed for the assumption of the revenues of all the church-benefices, that a third part of their value might be applied to the maintenance of the ministers of religion, and the remaining two-thirds to defray the expenses of the

king's household, the rental of the priory of St Andrews was found to be as follows:

In money	Chald.	Boll.	£2,237 18 1
Wheat	38	1	
Bear	132	7	
Meal	114	3	
Oats	151	10	
Beans and pease	5	7	

The following parish churches belonged to the priory and paid tithes to it: viz., the Trinity church of St Andrews, now the town-church, Leuchars, Forgan, Cupar, Dairsie, Lathrisk, Kilgour, Scoonie, Kennoway, Markinch, Eglesgreig, Fordun in the Mearns, Bourthie, Nigvie and Tarlane, Dull in Athole, Longforgan, Rossie in Gowrie, Inchture, Fowlis, Portmoak, Abercrombie, Linlithgow, Haddington, Binning, and Preston. The vicarage was annexed to the archbishopric in 1606; but was assigned afterwards by the archbishop to the newly erected parish of Cameron, that parish having been detached from the too extensive parish of St Andrews, and having no legal maintenance belonging to it.—The provosty of Kirkheugh was a convent of seculars, governed by a prefectus, or provost, and unquestionably the most ancient religious establishment of any in this place. It is believed by some to have been founded by St Regulus himself, and to be the same with the institution which went by the name of 'Ecclesia Sanctæ Mariæ de rupe,' or St Mary's church on the rock, and of which the chapel stood on a rock now covered by the sea at high water, and which still goes by the name of the Lady-craig, situated near the extremity of the present pier. There was also a chapel, called 'Ecclesia Sanctæ Mariæ,' on the hill above the harbour.—In June, 1841, her Majesty's Attorney-general, Sir John Campbell, Knt., on succeeding Lord Plunkett as Lord-chancellor of Ireland, was elevated to the dignity of a Baron of the United Kingdom, by the title of Baron Campbell of St. Andrews.

ST ANDREWS. See DEERNES, DUNDEE, DUNFERMLINE, EDINBURGH, GLASGOW, GREENOCK, LHANBRIDE.

ANGUS, the ancient name of FORFARSHIRE: which see. At a very early period the name Angus was given to the district of country lying between the North Esk on the north, and the Tay and Isla on the south. It is thought by some antiquaries to have been so called from Angus, a brother of Kenneth II., on whom this district was bestowed by Kenneth after his conquest of the Picts. Others think that the hill of Angus, a little to the eastward of Aberlemno church, was, in ancient times, a noted place of rendezvous on occasions of great public gatherings; and that the name was ultimately extended to the surrounding country. It seems more probable that the hill itself derived its name from the district.—The How or Hollow of Angus is a finely diversified valley in the northern part of Forfarshire, extending above 30 miles in length, from the western boundary of the parish of Kettins to the mouth of the North Esk; its breadth varies from 4 to 6 miles.—The earldom of Angus now belongs in title to the Duke of Hamilton. It was in the line of Douglas previous to 1329; and it has been ascertained by Mr Riddell that it again came into the old line of Douglas by a natural son of William, first Earl of Douglas.—The synod of Angus and Mearns comprehends the presbyteries of Meigle, Forfar, Dundee, Brechin, Arbrogath, and Fordoun.

ANN'S (ST). See GLASGOW.

ANNAN, a parish in the district of Annandale, Dumfriesshire, on the northern shore of the Solway frith, along which it extends above 3 miles. It is about 8 miles in length, and from 1 to 4½ in breadth,

containing 11,100 imperial acres; bounded on the north by Hoddam and Middlebie parishes; on the east by Kirkpatrick-Fleming, and Dornock; on the south by the frith of Solway; and on the west by Cummertrees. The surface is comparatively level, with a declination towards the south. Woodcock-air is the highest elevation. It is a conical shaped hill, clothed with wood, and rising to an altitude of 320 feet above sea-level. The shores are flat and sandy. The soil is generally a rich clay. There are extensive tracts of heath-covered moorland towards the east of the town of Annan. The banks of the Annan, and the elevated parts of the parish, are ornamented with belts of planting. There is a salmon fishery at the mouth of the river. The turnpike roads from Dumfries to Carlisle, and from Annan to Edinburgh, intersect the parish. Population of the parish and town, in 1801, 3,341; in 1831, 5,033. By a survey of the parish-minister in 1835, the population was then estimated at 5,613, of whom 3,951 belonged to the established church. Houses 808. Assessed property £12,800. In 1836, a portion of this parish, comprehending the village of Bridekirk, and a population of 765 souls, was annexed to the new *quoad sacra* parish of BRIDEKIRK: which see. Minister's stipend £279 2s. 4d., with a manse, and a glebe of the annual value of £30. Unappropriated teinds £191 15s. Church built in 1790, and recently repaired; sittings 1,200. Patron, Mr Hope Johnstone.—An United Secession congregation was established in Annan in 1805. Church built in 1834-5; sittings 746. Minister's stipend £110, with manse and garden.—A Relief congregation was established in 1833. Church built in 1834-5; sittings 639. Stipend £100.—A Roman Catholic chapel was opened in 1839.—There are 3 parochial schools; and 19 schools not parochial. The master of the burgh parish-school has a salary of £32 10s.; with about £40 school-fees, and £12 other emoluments: the salaries of the other two parish schoolmasters are £10 each, with about £20 of fees. Annan parish is in the presbytery of Annan and synod of Dumfries. It was formerly a rectory.

ANNAN, a royal burgh in the above parish, and the capital of Annandale, is $15\frac{1}{2}$ miles east by south of Dumfries; $8\frac{1}{2}$ west of Gretna-green; 12 south of Lockerby; and 79 from Edinburgh. It is situated on the left bank of the river Annan, near its discharge into the frith of Solway. It is one of the most ancient towns in Scotland, having received its first charter from Robert Bruce. The subsisting charter was granted by James VI., in 1612; but it had previously been erected into a burgh by James V., in 1538. The houses are neat and well-built of good freestone, and the town has been considerably improved of late years; several new streets having been opened, and a number of new houses built. At the east end of the town is the parish-church; and at the other extremity are the town-house and markets. There is a bridge of 3 arches over the river at the west end of the High-street; from this bridge, a street conducts to the New quay, about 1,000 yards lower down the river. The academy, erected in 1820, in Ednam-street, is a large building, with apartments for the rector. Annan formerly carried on a considerable trade in wine, and exported nearly 15,000 bolls of corn; ship-building is carried on to a considerable extent; and there is a small cotton-mill and rope-works. A considerable quantity of coarse gingham are manufactured for Carlisle. Hand-loom weavers make about 6s. per week; 35 years ago they might make 35s. Bacon and hams are extensively cured here and exported to Newcastle and London; and fat cattle are exported to Liverpool. The Commercial bank, the British Linen company, and the Southern bank of Scotland,

have branches in Annan. Hiring-markets are held on the 1st Thursday in May, and 3d Thursday in October. The weekly market-day is Thursday. The mouth of the river forms a good natural harbour, having from 12 to 13 feet water in the lowest tides, and from 18 to 20 in the lowest spring-tides. In 1833, there were 33 vessels, measuring 2,264 tons, belonging to this port. Annan is governed by a provost, 3 bailies, a treasurer, a dean-of-guild, and 15 councillors. It possesses extensive burgh-roads and commonies, the latter of which have been divided, and are in a state of improvement. Its revenue, arising from rents, fisheries, tolls, and feu-duties, amounted, in 1833, to £670; its debts to £4,500; its expenditure in ordinary to £437. In 1837, the corporation revenue was £644. The real rent of the old royalty was, in 1833, about £11,861; and of that part of the burghal property within the parliamentary bounds £3,000. The ancient royalty comprehends a district of above 5 miles in length; the parliamentary line has greatly limited the burgh. The magistrates hold no patronage; and there is no guild or incorporation. The parliamentary constituency, in 1832, consisted of 170. The amount of assessed taxes payable from the burgh is £381 9s. 6d. Annan joins with Dumfries, Lochmaben, Sanquhar, and Kirkcudbright, in sending a member to parliament. The municipal and the parliamentary constituency, in 1837-8, was 176. The population of the town is about 4,500. Annan was the birth-place of the late Rev. Edward Irving.

ANNAN (THE), a river of Dumfries-shire, flowing through the centre of the county from north to south. It rises among the high mountains and fells in which the shires of Dumfries, Lanark, and Peebles, touch each other; but its chief feeders flow from the southern and western base of the mountain which gives name to the Hartfell group, which is in the parish of Moffat, on the borders of Peebles-shire, and has an elevation of 2,635 feet. These feeders flow south-west, and successively discharge themselves into a stream holding a course nearly direct south from Corehead to Bridgend. At the latter place, the stream, now of considerable volume, inclines a little towards the east, and forming the boundary betwixt the parishes of Kirkpatrick-Juxta and Moffat, passes the village of Moffat, below which it receives in succession, a stream descending from Snawfell, and the Frenchland burn, both coming from the north-east; and about $2\frac{1}{2}$ miles below, is joined by Moffat water coming from the north-eastern, and Evan water descending from the north-western, extremity of the parish. These two tributaries unite with the Annan on opposite sides, at one point, at an elevation of about 350 feet above sea-level. Its next important tributary is Wamphray water, coming from the north-east, soon after receiving which, its course becomes very meandering, though still bearing southwards. A little below Applegirth kirk it receives an important tributary from the north-west, in Kinnel water; at the southern extremity of Dryfesdale parish, of which it forms the western boundary, it bends eastwards to St Mungo kirk. At the south-eastern extremity of St Mungo parish, it receives the Milke water, from its junction with which its course is south-east, to its junction with the Mein water, in the parish of Hoddam. From this latter point its course is nearly south to the town of Annan, whence its estuary sweeps in a south-west and then south-east direction into the upper part of the Solway frith. Its total length of course is about 30 miles. Its general character, in the lower part of its course, is that of a gently flowing pastoral stream, which is perhaps indicated in its name *Amhann* in

Gaelic, signifying the slow-running water. Allan Cunningham styles it 'the silver Annan.' In the ballad of 'Annan Water,' [Minstrelsy of the Scottish Border, Vol. III. p. 284, Cadell's edn.] it is styled 'a drumlie river;' but this was during a spate, the tragical consequences of which are commemorated in the ballad; and the editor informs us that when

'Annan water's wading deep,'

that river and the frith into which it falls are the frequent scenes of tragical accidents.

ANNANDALE, the vale or basin of the above river, and a stewardry or district of Dumfries-shire. Professor Jamieson is of opinion that Annandale must have been, in ancient times, the bed of an inland lake. It is a fertile tract of country, about 30 miles long, and from 15 to 18 broad. It is bounded on the west by Nithsdale; and on the east by Eskdale, and includes 20 parishes. From its vicinity to the borders, and the continual predatory excursions to which it was exposed, the greater part was long uncultivated and common; but it has assumed a very different appearance since the beginning of last century. There are several lakes in this district. Coal and lime are wrought in it. Annandale was anciently a part of the Roman province of Valentia; it afterwards, by a grant from David I., soon after his accession to the throne, in 1124, to Robert de Brus, son of one of William the Conqueror's Norman barons, with whom David had formed a friendship while at the court of Henry I. of England, became a lordship under the Bruces, who took their title from it.* About the year 1371, upon the demise of David II., it fell into the hands of Randolph, Earl of Moray, regent during the minority of David; and, with the hand of his sister Agnes, it went to the Dunbars, Earls of March. After their forfeiture, it fell to the Douglasses, who lost it by the same fate. It now belongs chiefly to the Earl of Hopetoun. It formerly gave the title of Marquis to the gallant border-family of Johnstone. The lineal heirship of this title became extinct, on the death of George, 3d marquis, in 1792. There are now several claimants for the title. Lochmaben castle was the principal fort in this district; and was deemed almost impregnable. From having been a Roman province it abounds with Roman stations and antiquities. Part of Severus's wall,

* Much confusion prevailed among our historical writers as to the genealogical relations of the family of Bruce, until Chalmers, in his 'Caledonia,' and Kerr, in his 'History of Scotland during the reign of Robert I.' pointed out the existing discrepancies, and traced the descent of this illustrious line. Robert de Brus entered England with William, duke of Normandy, in 1066; his son, of the same name, who is frequently confounded with him, received a grant of the lordship of Annandale as above mentioned; but immediately before the battle of the Standard, in 1138, he renounced his allegiance to David I., on finding himself unable to persuade the Scottish king to enter into terms of peace with England. He died on his paternal English estate of Gysburn in Yorkshire, in 1141, and was succeeded in his English estates by his elder son, the ancestor of the English Bruces of Skelton. Robert Brus, his younger son, is said to have received the transfer of Annandale from his father immediately before the battle of the Standard, and to have borne arms against the English in that engagement. This 3d Robert lived in the reigns of David I., Malcolm IV., and William the Lion. His son, the 4th Robert, married Isabel, a natural daughter of William the Lion. He died in 1191, and was succeeded in the lordship of Annandale by his son William, who died in 1215. Robert the 5th of the name, married Isabel, second daughter of David, Earl of Huntingdon, who was the younger brother of William the Lion, thus introducing the legitimate royal blood of Scotland into the family of Bruce. The 5th Robert Bruce died in 1245, and was succeeded by the 6th of the name, who married a daughter of Gilbert de Clare, Earl of Gloucester. He opposed the Cumyn influence in the affairs of Scotland; and at the age of 81 engaged in the competition for the Crown of Scotland; but ultimately resigned his rights in favour of his son Robert, Earl of Carrick. He died in 1295. His son accompanied Edward of England to Palestine in 1269, and soon after his return, married Margaret, Countess of Carrick in her own right, by whom he had five sons and seven daughters. The eldest son of this marriage was THE BRUCE.

the camps of Birrens and Brunswark, and the remains of a great military road, are still visible in this district. The ruins of the large quadrangular fortress of Auchincass, on Evan water, once the seat of the regent, Randolph, cover an acre of ground, and still convey an idea of the strength and extent of the building. The castles of Hoddam and of Comlongan are also in tolerable preservation. See DUMFRIES-SHIRE, and LOCHMABEN.

ANNAT (THE), or CAMBUS, a rivulet in the parish of Kilmadock, Perthshire, which rises in a hill in the north-west corner of the parish, and runs into the Teith about a mile above Doune. It is remarkable for numerous cascades.

ANNOCK (THE), a small river in Ayrshire, which rises in the parish of Stewarston, and falls into the Irvine, a little above that town, after a course of about 12 miles.

ANSTRUTHER-EASTER, a parish and royal burgh, in the county and synod of Fife, and presbytery of St Andrews, on the coast of the frith of Forth, between Kilrenny on the east, and Anstruther-Wester—from which it is divided by a small rivulet, called the Drill or Dreel burn, descending from the high lands of Carnbee—on the west. The three burghs form as it were one narrow town stretching along the shore of the frith. Previous to the year 1634, the town and barony of Anstruther was in the parish of Kilrenny; but though the church was at Kilrenny, the minister resided at Anstruther, and was styled the minister of that town. In the above-mentioned year, the town of Easter Anstruther was erected into a separate charge, and a church built, which was thoroughly repaired in 1834. Stipend £131 15s., from the tithes of fish, a grant of part of the bishop's rents, and some money mortified for that purpose, with a manse, and a glebe of the value of £25. The manse is a singular old building. Sir W. C. Anstruther, Bart., is the patron. There are a Burgher, an Independent, and a Baptist congregation in the parish.—The parish-school is attended by about 120 children. Master's salary £5 6s. 8d., with from £40 to £50 fees. In 1744, the population was 1,000; in 1801, 969; in 1831, 1,007. Houses 179. Assessed property, £2,410. Anstruther-Easter was erected into a royal burgh by James VI., in 1583; but holds feu of the family of Anstruther. It is governed by a council of 19, including 3 bailies, and a treasurer. The revenue, in 1833, was £78; expenditure £93; debt £485. The only taxes levied are the government cess, and the customs and shore-dues. There is a good harbour here, which, by an outlay of £2,000, might be made capable of admitting vessels drawing 16 feet water. In 1710, Anstruther, which formerly was a creek of Kirkcaldy, was made a port, and a custom-house established here. In 1753, a new quay was built; and, to defray the expense, an act of parliament was procured laying a tax of two pennies Scots upon every pint of ale brewed or sold in the burgh. In 1768, the tonnage belonging to Anstruther-Easter was 80 tons; in 1793, it was 1,400; in 1837, it was only 964 tons. There is some coasting-trade. The principal articles of export are grain and potatoes, and salted cod. A weekly corn-market is held on Saturday. The National bank has a branch here. Anstruther-Easter and Wester join with Crail, Cupar, Kilrenny, Pittenweem, and St Andrews, in returning a member to parliament. The parliamentary and the municipal constituency, in 1837-8, was 48. Anstruther-Easter is the birth-place of the Rev. Dr Chalmers, and of Professor Tennant of St Andrews, who has sung the humours of 'Anster Fair' with excellent jocularity, and a genius worthy of a higher subject.

ANSTRUTHER-WESTER, a small parish and

royal burgh in the county and synod of Fife, and presbytery of St Andrews. The parish is of a very irregular form. It contains about 600 acres of arable land, and about 9 or 10 acres of common, on which the burgesses have the privileges of pasturage and of casting turf. It is bounded on the south by the frith of Forth, along which it extends for about half-a-mile; on the east by Anstruther-Easter; on the north by Carnbee and Kilrenny; and on the west by Pittenweem. In the rivulet which divides the two Anstruthers, it is said there was once a considerable salmon-fishery, whence the arms of the town, bearing three salmon crossed, are supposed to be derived. The parish-church appears to be a very ancient building, from the remains of a large choir, and the Gothic structure of the steeple. Sir W. C. Anstruther of Anstruther, Bart., is patron of the parish, which was formerly a vicarage belonging to the priory of Pittenweem. Stipend £142 5s. 6d., with a manse, and a glebe of the value of £22 10s. The valued rent of the parish is £1,185 Scots. The rent of land towards the end of last century was from 21s. to 30s. per acre; in the Statistical report of 1838, it is stated that the average rent per acre is 70s. Population in 1801, 296; in 1831, 430. Houses 65; number rented at £10 and upwards, 24. Anstruther-Wester was created a royal burgh by James VI., in 1587. The affairs of the burgh are managed by a council of 15, including 3 bailies, and a treasurer. The burgh-property consists of the town's common, customs, and shore-dues, teinds of the white-fish and herrings brought into the harbour, and the iron-stone and sea-ware found on the shore. Revenue, in 1832, £69. Expenditure £79. There is no debt due by the burgh. The magistrates and minister have the presentation of a bursar to the United college of St Andrews. There is no burgh-school, but the parish-school is situated within the burgh, and is attended by about 130 children. Schoolmaster's salary £34 4s. 4½d., with about £75 of fees. "The town of Anstruther, and many others on this coast," says the Rev. James Forrester, in the first Statistical account of the parish, in 1793, "suffered much in the civil wars, in the reign of Charles I., both by sea and land. They were zealous covenanters, and there are few old inhabitants of the parish who do not talk of some relations that went to the battle of Kilsyth, in 1645, and were never afterwards heard of. Anstruther shared the fate of its neighbours, about the year 1670, by an inundation of the sea, which destroyed or choked up the harbour, washed away the bulwarks, and rendered many of the houses unsafe to dwell in. An inundation of a similar kind happened about the end of last century, when about a third of the town seems to have been destroyed. A long street, called the Fore-street, was totally destroyed; scarce a vestige of it now remains. The rock on which the town-house once stood, is covered by the sea every spring-tide, and every tide the sea washes the street, where the principal houses of the borough were situated. The old people date the decay of the towns on this coast to the Union with England. It is evident that that event did undoubtedly give a great shock to the trade of these towns. Their staple commodities were malt, herrings, and cod. Before the Union, there were 24 ships belonging to Easter and Wester Anstruther, and 30 boats employed in the fishery; in 1764, there were only two ships, each 40 tons burden, and three fishing-boats belonging to Anstruther-Easter, and one of 20 tons, and two fishing-boats to Anstruther-Wester." Anstruther-Wester is united to Anstruther-Easter by a good bridge over the Dreel burn. At the west end of the town, there is a large mound, called the Chesterhill, in the middle of which is a fine well.—South-east

from Anstruther-Wester, and 6 miles distant from it, in the mouth of the frith of Forth, is the isle of May; which, after the desolation of the abbey of Pittenweem, was generally supposed to belong to the parish of Anstruther-Wester, and in consequence was annually visited by the minister of Anstruther-Wester, while it was inhabited by 14 or 15 families. But it is also claimed as belonging to Crail parish. See ISLE OF MAY.

ANTONINUS'S WALL. In the year 78 of the Christian era, Agricola took the command in Britain, but he did not enter North Britain till the year 81. The years 79 and 80 were spent in subduing the tribes to the south of the Solway frith hitherto unconquered, and in the year 81 Agricola entered on his fourth campaign by marching into North Britain along the shores of the Solway frith, and overrunning the mountainous region which extends from that estuary to the friths of Clyde and Forth, the Glotta and Bodotria of Tacitus. He finished this campaign by raising a line of forts on the narrow isthmus between these friths, so that, as Tacitus observes, "the enemies being removed as into another island" the country to the south might be regarded as a quiet province. The future operations of this general will be found detailed in the articles GALLOWAY, CARNOCK, LOCH ORE, and ANDOCH. Little is known of the history of North Britain from the time of Agricola's recal till the year 138, when Antoninus Pius assumed the imperial purple. That good and sagacious emperor was distinguished by the care which he took in selecting the fittest officers for the government of the Roman provinces; and his choice, for that of Britain, fell on Lollius Urbicus, a man who united talents for peace with a genius in war. After putting down a revolt of the Brigantes in South Britain in the year 139, this able general marched northward the following year to the friths, between which he built a wall of earth on the line of Agricola's forts. Capitolinus, who flourished during the third century, is the first writer who notices this wall, and states that it was built in the reign of Antoninus Pius, but he gives no exact description of it. The wall or rampart extended from Caeridden on the frith of Forth to Dunglass on the Clyde. Taking the length of this wall from Old-Kilpatrick, on the Clyde, to Caeridden on the Forth, its extent would be 39,726 Roman paces, which agree exactly with the modern measurement of 36 English miles, and 620 yards. This rampart, which was of earth, and rested on a stone foundation, was upwards of 20 feet high, and 24 feet thick. Along the whole extent of the wall there was a vast ditch or *pratentura* on the outward or north side, which was generally 20 feet deep, and 40 feet wide, and which, there is reason to believe, might be filled with water when occasion required. This ditch and rampart were strengthened at both ends, and throughout its whole extent, by one and twenty forts, three being at each extremity, and the remainder placed between, at the distance of 3,554½ yards, or something more than 2 English miles from one another; and it has been clearly ascertained that these stations were designedly placed on the previous fortifications of Agricola. Its necessary appendage, a military road, ran behind the rampart from end to end, for the use of the troops and for keeping up the usual communication between the stations or forts. From inscriptions on some of the foundation-stones, which have been dug up, it appears that the second legion, with detachments from the sixth and the twentieth legions, and some auxiliaries, executed these vast military works, equally creditable to their skill and perseverance. Dunglass near the western extremity, and Blackness near the eastern extremity of

the rampart, afforded the Romans commodious harbours for their shipping, such as they enjoyed, while they remained in North Britain, at Cramond. This wall is called in the popular language of the country Grime's Dyke, the etymology of which has confounded antiquarians and puzzled philologists. In British speech and in the Welsh language of the present day the word *grym* signifies strength; but whether the appellation which the wall now receives is derived from such a root seems doubtful. Certain it is, that the absurd fiction of Fordun, Boyce, and Buchanan, who derive the name from a supposititious person of the name of Grime and his Scots having broke through this wall, has long been exploded, with many other fictions of the same authors.

ANWOTH, a parish in the county and presbytery of Kirkcudbright, and synod of Galloway. It is about $6\frac{1}{2}$ miles long, from north-east to south-west; and $3\frac{1}{2}$ broad. It is bounded on the north and east by the parish of Girthon, from which it is divided by the river Fleet; and on the west by the parish of Kirkmabreck. The sea-shore, which bounds the parish on the south, for about $2\frac{1}{2}$ miles from the mouth of the Fleet to the confines of the parish of Kirkmabreck, is generally flat and rocky, though in one place it is bold and elevated. Towards the northern part of the parish, the surface becomes broken and barren, rising into numerous hills of small elevation. Along the banks of the Fleet, and to some distance from it, there is a considerable quantity of natural and planted wood. The total area is about 9,000 acres, of which about one-third is arable. The Fleet is navigable for small vessels as far as Gatehouse: see article FLEET. The most remarkable hill in this parish is Cairnbarrah, which is situated partly in this parish, and partly in Kirkmabreck. It is elevated above the sea about 1,100 feet; and is the highest ground in this part of the country, Cairnsmuir excepted. It commands an extensive view of the adjacent country, the shire of Wigton, the Isle of Man, a part of Cumberland, and even of the high land on the coast of Ireland. Population, in 1801, 637; in 1831, 830, of whom about 40 were dissenters. Houses 126. Assessed property £4,748. About 450 of the inhabitants live in the country part of the parish, and the rest in the village of Anwoth, which is built on the Fleet, opposite to Gatehouse, and being connected with it by a bridge is considered as part of the same village. Minister's stipend £247 10s. 7d., with a manse, and a glebe of the value of £10. Unappropriated teinds £41 18s. 1d. Church built in 1826; sittings 400. Patron, Sir David Maxwell, Bart. Schoolmaster's salary £34 4s. 4½d., with £20 fees. Average number of scholars 80. There are two small private schools.—There are two old buildings in the parish, the tower of Rusco, and castle of Cardoness. Both these fortalices stand on the banks of the Fleet; the former about $2\frac{1}{2}$ miles above where the river ceases to be navigable, and the latter 1 mile below that point, on a tongue of land, looking towards the bay at the mouth of the river.—The Rev. Samuel Rutherford, author of a valuable volume of Letters on Practical religion, and various popular devotional pieces, was minister of this parish; and a monument, in the form of an Egyptian obelisk, 55 feet in height, and wholly composed of granite, is about to be erected to his memory by his admirers, on a hill a little to the north-east of the farm-house of Boreland, whence it will be distinctly seen from the military road betwixt Gatehouse and Portpatrick.

APPIN, an extensive district of Argyleshire, above 50 miles in length, and from 10 to 15 broad; comprehending the Airds, the strath of Appin, Glen Duror, Glen Creran, Kingerloch, and Glencoe; ex-

tending along the eastern side of Loch Linnhe, and belonging ecclesiastically to the parish of Lismore and Appin. See LISMORE. Appin is one of the most interesting districts in the Highlands; presenting a deeply indented and finely diversified coast sprinkled with islands; while the interior is intersected with deep glens and rushing streams, and rich in the most magnificent varieties of mountain and lake scenery. Appin was the country of the Stuarts, "the unconquered foes of the Campbell," in feudal times. The Ettrick Shepherd, in a fine ballad entitled 'The Stuarts o' Appin,' thus alludes to its departed glories:

"I sing of a land that was famous of yore,
The land of Green Appin, the ward of the flood;
Where every grey cairn that broods over the shore,
Marks grave of the royal, the valiant, or good;
The land where the strains of grey Ossian were framed,—
The land of fair Seima, and reign of Fingal,—
And late of a race, that with tears must be named,
The Noble Clan Stuart, the bravest of all.
Oh-hon, an Rei! and the Stuarts of Appin!
The gallant, devoted, old Stuarts of Appin!
Their glory is o'er,
For the clan is no more,
And the Sassenach sings on the hills of green Appin."

APPLECROSS,* a very extensive parish in the county of Ross, lying between Loch Torriden and Loch Carron. Its outline is irregular, being frequently intersected by arms of the sea, the principal of which, besides the two lochs already mentioned, are Loch Achraikin, Applecross bay, Loch Toskig, and Loch Kishorn. In the centre of one of its most populous districts are a few farms belonging ecclesiastically to the parish of Loch Carron. The extent of sea-coast, in a direct line, is upwards of 20 miles; but following the shore in all its curves and windings, it cannot be under 90 miles. Though the coast is in some places high and rocky, yet, in many parts, it is flat and sandy; and the general character of the whole—as of most districts of old red sandstone formation, which is the prevalent geological character of the parish—is monotonous and dreary. The course of the tides is all along from the north. The general appearance of the parish is rocky and mountainous: yet amidst these hills, covered only with wild coarse grasses and heath, and indescribably dreary to the sight, occur valleys, both beautiful and fertile, but in many instances almost inaccessible. When the first Statistical account of this parish was written towards the close of last century, it was stated that there was neither public road nor bridge from one extremity of it to the other; and that the traveller was guided by the season of the year, in determining what course to take over the rugged hills, rapid waters, and deep and marshy moors of this district. This state of things is now greatly amended. A good and direct road runs between Applecross and Shieldag on Loch Torriden, a distance of 13 miles; and there are also good roads from the village of Loch Carron, at the head of Loch Carron both to Applecross, a distance of 20 miles, and to Shieldag, a distance of 15. Grazing-farms are numerous but small. The number of acres under cultivation does not exceed 2,000, while nearly 300 square miles are unfit for cultivation. Black cattle is the great article from which the farmer principally derives his emolument and the landlord his rent. Herring shoals occa-

* Applecross is a fanciful designation given to this parish by the proprietor of the Comaracha estate, at the time of its erection into a separate charge. In commemoration of this event five apple trees were planted cross ways in the proprietor's garden; and they have since been perpetuated by his successors. The ancient and only name by which this parish is known in the language of the country is *Comrich*, or *Comaracha*, a Gaelic word signifying 'a place of protection'; a designation implying the immunity of the place in ancient times, this having been the seat of a cloister, and, as such, an asylum for all who fled to it for protection.

sionally frequent the bays, creeks, and harbours, of this district. The rivers, though small, are very rapid, and abound with trout; the stream of Firdon, and the river of Applecross, contain salmon; there are salmon-fishings at Torriden and Balgie; and fishing is much pursued on the coasts of this parish. Kelp, prior to the American war, was extensively manufactured here, and sold at £3 10s. the ton; the price afterwards fluctuated between £5 5s. and £4 15s., and there were about 50 tons annually brought to market. This manufacture, however, no longer exists. In the district of Kishorn there is a copper-mine, which Williams, in his 'Mineral Kingdom,' considered as equally rich with any in Great Britain. On the south side of the bay of Applecross, close by the shore, there is a lime-stone quarry of an excellent quality. There are some natural woods of fir, birch, and hazel, in different parts of the parish. The ordinary fuel is peat. There are three proprietors: viz. Mackenzie of Applecross, the principal heritor; Mackenzie of Seaforth, and Sir F. Mackenzie of Gairloch, Bart. "Every man," says the Statistical reporter in 1792, "is the architect of his own house; and though there be a few nominal shoemakers, scarcely a boy of fifteen but makes his own brogues. There are several boat-wrights and weavers; the former are generally maintained by their employers, and paid by the piece; the latter make their demand in money, but are paid in meal, at the conversion of half-a-merk Scotch the peck. There are three smiths—when no private stipulation takes place—for the farm-work; they are paid in meal, by an immemorial assessment on the different farms. Anciently they had the head of every cow that was slaughtered in the parish,—a privilege they still claim, but it is rarely complied with." We should suppose this claim is never even advanced now; but it is a curious relic of days less-acquainted with the marvellous properties of a circulating medium than our own. The wages of domestic servants, for the year, at the last mentioned period, were from £2 to £3 sterling, for men; and from 10s. to £1 sterling for women; the Statistical reporter of 1836 states, that they are usually £8 for ploughmen, and from £2 10s. to £3 for female servants. The population of the parish, in 1801, was 1,896; in 1831, 2,892. Houses 542. Assessed property £3,050.—The parish is in the presbytery of Loch Carron, and synod of Glenelg. It is divided into three districts, each of which is separated from the others by a ridge of hills. In the districts of Lochs and Tirdon, the minister officiates once a quarter; and the minister of Shieldag officiates in the district of Kishorn once a month. The parish-church stands in the district of Applecross; it was built in 1817; sittings 600. Stipend £158 6s. 5d., with a manse, and a small glebe. The patronage is in the Crown. A government-church was erected at Shieldag in 1827: the parochial school is fixed at Applecross. The schoolmaster's salary is £25, with £4 10s. fees. There are also schools at Shieldag, Torriden, Kishorn, and Badanvougie, each attended by about 50 scholars. "There are trunks of trees found at a considerable depth under ground, where there is no vestige of any kind of wood remaining; many of them have visibly suffered by fire, which the traditional history of the country reports to have been occasioned by the Danes burning the forests. Close by the parish-church, are the remains of an old religious house, where the standard and soles of crucifixes are still to be seen. It was richly endowed with landed property, which tradition relates to have been conveyed, by the last popish missionary in the place—known by the designation of the Red Priest of Applecross—to his daughter." [Statistical Report, 1792.]

APPLEGARTH, or APPLEGIRTH, a parish in

the stewartry of Annandale, Dumfriesshire. The Annan divides it, on the west, from the parishes of Lochmaben and Johnston; on the north it is bounded by Wamphray; on the north-east and east by Hutton; and on the south by Dryfesdale parish. Its greatest length, from south to north, is about 6 miles; its greatest breadth, from west to east, in the southern part of the parish, is about 5 miles. The distance of the kirk-town from Dumfries is about 11, and from Annan about 12 miles. The great turnpike road from Carlisle to Glasgow and Edinburgh passes through the parish, from south to north. Dr. Singer estimates the superficial area of this parish at 17½ square miles, or 11,500 acres; of which about 400 are under wood, and 7,400 are cultivated. The soil in this parish, in general, is good, especially upon the banks of the Annan and the Dryfe. The highest elevation in the parish is Dinwoodie hill, 736 feet above sea-level. The manse of Applegarth, in the south-west extremity of the parish, on the east bank of the Annan, is 180 feet above sea-level. [Statistical report, 1834.] There are six heritors in the parish. The valued rent is 6,725 merks; the real rent was estimated, at the end of last century, at between £2,800 and £3,000 sterling. Population, in 1801, 795; in 1831, 999. Houses 151. Assessed property £8,595.—This parish is in the synod of Dumfries, and presbytery of Lochmaben. Stipend £250 5s., with a manse, and a glebe valued at £10 10s. Unappropriated teinds £244. The manse is an old house, built upwards of 60 years ago. The church was built in 1761. It is generally supposed that there have been two old parishes successively annexed to Applegarth, viz. Sibbaldie and Dinwoodie, or Dinwiddie. It is not certain, however, whether Dinwoodie was ever a distinct parish or not; it rather appears to have been a chapelry to Applegarth. Sibbaldie was a distinct parish, and was annexed in 1609. There are still some remains of its church. Sir William Jardine, Bart., and Johnstone of Annandale, are the patrons. There are two parochial schools, attended by about 100 children. Chalmers, in his Caledonia, informs us that on the 7th July, 1300, Edward I, who was then at Applegarth, on his way to the siege of Caerlaverock, made an oblation at the altars of St. Nicholas and Thomas à Becket, in Applegarth church. There are no authentic traces of this church now visible. There is a noble ash-tree in the church-yard of Applegarth, upwards of 14 feet in circumference near the root.

ARASAIG, or ARISAIG, a district in the parish of Ardnamurchan, on the western coast of Inverness-shire, and the name especially of a promontory in the district, lying between the two inlets of the sea, Lochnanuagh on the south, and Lochnagaul on the north, immediately opposite the southern extremity of the Isle of Eig, from which it is distant 6½ miles. There is an excellent and beautiful road from the village of Arasaig, on the northern shore of Lochnagaul, to Fort William, passing the head of Loch Aylort, and Loch Shiel, and running along the northern shore of Loch Eil, a total distance of 40 miles. There is a ferry from Arasaig to Skye, which however is now little used, that of Kyle Rhea being generally preferred. There is a Roman Catholic chapel at the village of Arasaig.

ARAY (THE), or ARY, in Gaelic ACREIDH, a small but beautiful stream flowing into Loch Fyne, between the town of Inverary and the neighbouring hill of Dunyqueaich. It rises near Loch Awe, and flows south. Its course is about 9 miles in length, over a rocky bed, and frequently under rugged cliffs, or between banks finely wooded with oak and birch. The road from Inverary to Oban skirts its course, throughout its whole length; and

the road around the head of Loch Fyne to Cairndow is carried over the stream, at its confluence with the loch, by a bridge. The first striking scene upon this stream, tracing its course upwards, is the romantic fall of Carlonan linn, which occurs at a point where the river is shut in by thick woods and rocky banks. About $2\frac{1}{2}$ miles from Inverary is another considerable fall; and half-a-mile farther is the finest cascade in the river, the fall of Lenach-Gluthin, where the stream rushes, "with many a shock," over a broken and precipitous rock. It is supposed that the Aray takes its name from these falls, *Aoreidh*, in Gaelic, signifying 'unsmooth.' Skrine calls it 'the furious Aray.' As we ascend the glen of the Aray, the stream "changes temper" and dwindles into a burn flowing between bare mountain-ridges. Gilpin, who passed through Glen Aray in 1776, was greatly delighted with the forest-scenery here.

ARBIRLOT, in old writings, ARBRELIOT, a parish in the county of Forfar, presbytery of Arbroath, and synod of Angus and Mearns. It is about 4 miles in length, and 3 in breadth; and is bounded on the north by the parishes of St. Vigeans and Carmylie; on the east by Arbroath; on the south by the sea; and on the west by Panbride parish. The extent of sea-coast is about 3 miles; for the most part flat and sandy. The greater part of this parish is gently undulated; yet the hills are neither very high nor rocky, but are in general green, and capable of cultivation. Estimating the superficial area of the parish at 5,000 acres, about one-fifth is uncultivated, and the average rent of the cultivated land is 18s. per acre. The principal crops raised in this parish are oats and barley; but a considerable quantity of wheat is also grown. In the year 1790, there were 97 acres of ground within the bounds of this parish sown with linseed, which in general succeeded well. This branch of farming does not now attract much attention. The yearly wages of men-servants, in the different branches of husbandry, in the year 1793, were from £7 to £8; and of women-servants, from £3 to £4; the wages of a day-labourer were 6d. when the employer furnished him with provisions; and when he victualled himself, from 1s. to 15d. Farm-servants now obtain about £20 per annum; day-labourers 1s. 6d. per day; and female-labourers 8d. The return to the inquiry made by Dr. Webster, in 1755, respecting the population of this parish, was 865. In 1801, the population was returned at 945; and in 1831, at 1,026. Houses 215. Assessed property £1,092. The water of Elliot, which runs through this parish, from north to south, has its source in the parish of Carmylie, about 3 miles from the town of Arbirlot. It was once noted for trout of a peculiar relish. Kelly castle, which is built upon a rock on the side of this stream, is seen to great advantage on the road betwixt Arbroath and Arbirlot. Neither the period when the castle of Kelly was built, nor its proprietors, through a long series of ages, can now be traced; tradition, however, relates that one Ouchterlony, laird of Kelly, as active in demolishing the abbey at Aberbrothock. The modern house of Kelly, in the vicinity of the castle, was razed about seven years ago. The whole parish is the property of Earl Panmure. The valued rent is £4,266 13s. 4d. Scotch: the real rent is about £15,000. The stipend of the parish-minister is £184 4s. 5d., with the addition of a manse, a garden, and a glebe of 4 acres. The Crown is patron. The kirk was rebuilt in 1832; sittings 639. There are only a few seceders in the parish. The parochial schoolmaster has a salary of £34 4s., with £14 fees. In 1628, 8 bolls of meal were mortified by Alexander Irvine of Drum, then proprietor of Kelly, in favour of the

schoolmaster of Arbirlot. There are two private schools.—About half-a-mile from Arbirlot is a mineral spring, called Wormy-hills well. "It is deservedly esteemed," says the Statistical reporter of 1791, "on account of its medicinal virtue; and being within 200 yards of the sea, persons attending it have the benefit of sea-bathing, which, of late years, has been much recommended by our best physicians." It is reported that a road was made through part of this parish by Hector Boethius, the Scottish historian, which still bears his name, though somewhat corrupted, in the name Heckenbois-path. The turnpike road from Arbroath to Dundee runs 4 miles through this parish.

ARBROATH, or ABERBROTHWICK, a partly landward, partly town-parish, in the county of Forfar; being, it is supposed, an erection out of the parish of St. Vigeans, of the town and royalty of Arbroath, into a separate parish about the year 1560. In 1836, the Abbey parish of Arbroath was disjoined *quoad sacra* from that of Arbroath. In 1838, a similar disjunction or erection of Ladyloan parish took place. Both these parishes are almost wholly urban. The old parish is bounded on the north by St. Vigeans parish; on the east by the German ocean; on the south and west by Arbirlot parish. The extent of sea-coast is about $1\frac{1}{2}$ mile; the superficial area is 1,820 English acres. Average rent of land 55s. per acre. Around the town the soil is rich and fertile; but towards the north-west there is a considerable extent of what was formerly moor-ground, the property of the community, and once covered with fir-plantations, but which having being ficed out as now in a state of cultivation, and interspersed with villas. The Brothock, or Brothwick, a small stream rising in the parish of Kirkden, near the north-west boundary of St. Vigeans parish, flowing south-east through that parish, and the town of Arbroath, and falling into the German ocean after a course of about 6 miles, gives name to the parish. The water-power furnished by this stream, and its application in creating steam-power, has led to the establishment of numerous manufactures for weaving, spinning, flax-dressing, and bleaching. About a mile westward of the town is a strong chalybeate spring. Population of the parish, as distinct from the town, in 1801, 4,943; in 1831, 6,943; in 1841, 8,707.—The parish of Arbroath is in the presbytery of Arbroath, and synod of Angus and Mearns. Patron, since 1715, the Crown. Minister's stipend £219 12s. 6d., with an allowance of £4 8s. 11d. for manse and glebe. Unappropriated teinds £125 12s. 11d. Church enlarged in 1764; sittings 1,389. The minister has an assistant who receives a salary of £75.—The United Secession congregation was established in 1782. Church built in 1791, and enlarged in 1824; sittings 714. Minister's stipend £105, with manse and garden.—The Independent congregation was established about the year 1,800; church built in 1816; sittings 500.—A Baptist congregation, established in 1806; meets in the Mechanics' reading-room.—An Episcopalian congregation has long existed here; chapel built in 1791, and enlarged in 1841; sittings 390; minister's stipend £122, with a garden and £11 for a house.

The parish of ABBEY, erected under the authority of the General Assembly in February, 1836, has a population of about 1,960. The church was built in 1796-7, and originally formed a chapel-of-ease within the town of Arbroath; sittings 1,281; minister's stipend £100.—The Relief congregation in this parish, formerly connected with the Relief Methodists, has a place of worship, built in 1826; sittings 572; stipend £120.—The United Secession congregation in this district of the town was formed in 1815;

church erected in 1812; sittings 630.—There is a Borean congregation, originally formed in 1780, in this parish.

The royal borough of ARBROATH is chiefly situated in the parish of Arbroath, but the town now extends considerably beyond the royalty into the parish of St. Vigeans; and a part of the parish, on the north side, termed the Abbey lands, is without the royalty. The town is 17 miles east by north of Dundee; 12½ west by south of Montrose; 15 south-east of Forfar; 13½ south of Brechin; and 56 north-north-east of Edinburgh. It is on the estuary of the Brothock, in a small plain surrounded on the west, north, and east sides by eminences in the form of an amphitheatre, which command an extensive prospect of the friths of Tay and Forth, the Lothian hills, and the elevated parts of Fifeshire. The town has greatly extended of late years. Formerly it consisted of one street, nearly a mile in length, running north and south from the sea, and another on the west side of smaller extent: both these being intersected by cross streets. To the eastward, and within that part of the parish called the Abbey lands, there are two handsome streets. On the west side of the Brothock, and locally in the parish of St. Vigeans, there are also several neat streets, forming a suburb of considerable size. The town was lighted with gas in 1826. The town-house, containing a town-hall, town clerk's office, register-rooms, &c., is a handsome edifice, erected in 1808-9. The academy was built in 1821 at a cost of £1,600. A handsome building, to the westward of the town-house, was erected in 1842 for a prison and police office. In 1797 a public library was established, which now contains a collection amounting to above 7,000 volumes. There is a signal tower here which communicates with the Bell-rock lighthouse, at the distance of 12 miles. [See article BELL-ROCK.] The port of Arbroath is of great antiquity; but its situation was, in ancient times, more to the eastward than at present. The site of the ancient harbour is still named the Old Shore-head; and an agreement is extant between the abbot and burghers, in 1194, concerning the making of the harbour. Both parties were bound to contribute their proportion; but the largest fell to the share of the abbot, for which he was to receive an annual tax payable out of the borough-roads. A new harbour was built about the year 1725. It is small, but can be taken by vessels in a storm, when they cannot enter any of the neighbouring ports. It is entirely artificial, but well-sheltered from the sea by a long pier erected in 1788; the inner harbour is secured by wooden gates. It admits vessels of 200 tons at spring-tides; but, at ordinary tides, only vessels of 100 tons can enter. It was formerly defended by a battery erected in 1783, but the fortification is now dilapidated, and the guns have been removed. A new harbour and break water, under the authority of an act of parliament, 2^o Victoria, cap. 16, was commenced in 1841. The administration of this harbour is vested in commissioners, to whom the property of the old harbour, and the shore-dues, have been transferred on payment to the community of £10,000 in name of compensation. The works are expected to be completed in 1843-4, and the expense is estimated at £40,000. These improvements will enable vessels of 400 tons to enter the harbour at spring-tides. The shore-dues for the year 1841, exceeded £3,300. The tonnage of the vessels belonging to the port is now about 9,000 tons; in 1791, it was 4,000 tons.

The town of Arbroath shared the fate of its abbey—as afterwards related—till about 1736, when its commerce began to revive. At that time a few gentlemen of property engaged here in the manu-

facture of osnaburghs and brown linens, which succeeded well, and is still the principal branch of manufacture. There are about 2,000 hand-loomers employed on linen. Canvass weavers earn from 8s. 6d. to 11s. per week. The principal market for these goods is England. In 1806, there were stamped 1,484,425½ yards of cloth, valued at £83,454 15s. 9d. sterling. There are now 16 mills for spinning yarn in the town and suburbs. Arbroath is undoubtedly a royalty of very ancient erection. It was probably erected into a royal borough by William the Lion, about the year 1186; but this cannot exactly be ascertained owing to the loss of the original charter, which was taken by force out of the abbey—where it was lodged in the time of the civil wars, during the minority of James VI.—by George, Bishop of Moray. It was, however, confirmed in its privileges by a charter of *novodamus* from James VI. in 1599. It was formerly governed by a provost, 2 bailies, a treasurer, and 15 councillors, and has 7 incorporated trades. The magistrates and council are now elected according to the provisions of 3^o and 4^o William IV. The council consists of 17 members. In 1834, about 6,650 of the population were within the royalty, and 4,587 persons inhabited houses in streets without the royalty. The property of the town, consisting of common lands, houses, mills, harbour, feu-duties, entries, customs, and imposts, was recently valued at £35,874; but the parliamentary commissioners were of opinion that this was too high. The revenue, in 1788, was £864; in 1832, £2,922; the average annual expenditure for 20 years preceding 1832, had been £2,940; and the debt was £17,967. The revenue, in 1837-8, was £3,859; in 1840-41, £2,586; in 1841-2, £1,692. In 1811, the population, including that part of the town situated in the parish of St. Vigeans, was 9,000; in 1831, 13,795; in 1841, 14,576. In 1821, the number of houses within burgh was 1,739; in 1831, 2,360; in 1841, 3,380. Assessed property, in 1815, £22,858. The government cess, levied in 1832, was £105 2s. 6d. Its fairs are on the 31st January, 3d Wednesday of June, and 18th July. Arbroath unites with the boroughs of Forfar, Montrose, Inverbervie, and Brechin, in sending a representative to parliament. The population of this parliamentary district, in 1841, was 43,172; houses 8,762. The parliamentary constituency of Arbroath, in 1837, was 452; the municipal 245. In 1842, the parliamentary constituency had decreased to 411; the municipal was 263.

The glory of Arbroath, in former times, was its abbey, the venerable ruins of which are still much admired by travellers. It was founded about 1178 by William I., and dedicated to the memory of Thomas à Becket. Its founder was interred within it; but there are no authentic remains of his tomb. It is probable, however, that it was near the great altar, in a spot now walled in as a private burial-place. The monastery of Arbroath was one of the richest in Scotland, and its abbots were frequently the first churchmen of the kingdom. Cardinal Beaton was the last abbot of this establishment, at the same time that he was archbishop of St. Andrews. The monks were of the Tyronensian order, and were first brought from Kelso. A charter is still extant from John of England, under the great seal of that kingdom, by which the monastery and citizens of Aberbrothock are exempted “a teloniis et consuetudine,” in every part of England, except London and Oxford. This abbey was also of considerable note in Scottish history, particularly as the seat of that parliament which, during the reign of King Robert Bruce, addressed the celebrated manifesto to the Pope. After the death of Beaton, the abbey felt the destructive rage of the Reformers. The last commendatory abbot of

Aberbrothock was John Hamilton, second son to the duke of Chatelherault, who was afterwards created Marquis of Hamilton. The abbey was erected into a temporal lordship, in favour of James, Marquis of Hamilton, son to the former, upon the 5th May, 1608. It afterwards belonged to the Earl of Dysart, from whom Patrick Maule of Panmure, gentleman of the bed-chamber to James VI., purchased it, with the right of patronage of all the parishes thereto belonging, thirty-four in number. The abbots of this place had several special privileges. They were exempted from assisting at the yearly synods; and Pope Bennet, by his bull, dated at Avignon, grants to John, Abbot of Arbroath, the privilege of wearing a mitre and other pontifical ornaments. The ruins of the abbey are "most deliciously situated," and strikingly picturesque. Pennant, who visited Arbroath in 1772, thus describes them: "The abbey was once enclosed with a strong and lofty wall, which surrounded a very considerable tract. On the south-west corner is a tower, at present the steeple of the parish-church; at the south-east corner was another tower, with a gate beneath, called the Darn-gate, which, from the word *darn*, or private, appears to have been the retired way to the abbey. The magnificent church stands on the north side of the square, and was built in the form of a cross. On the side are three rows of false arches, one above the other, which have a fine effect, and above them are very high windows, with a circular one above. In April last, a part adjoining to the west end fell suddenly down, and destroyed much of the beauty of the place. The length of the whole church is about 275 feet; the breadth of the body and side-aisles, from wall to wall, 67; the length of the transept 165 feet, the breadth 27. It seems as if there had been three towers; one in the centre, and two others on each side of the west end, part of which still remains. On the south side, adjoining the church, are the ruins of the chapter-house. The lower part, which is vaulted, is a spacious room well-lighted with Gothic windows. Above is another good apartment. The great gate to the abbey fronts the north. Above the arch had been a large gallery, with a window at each end. At the north-west corner of the monastery stand the walls of the regality prison, of great strength and thickness. Within are two vaults, and over them some light apartments. The prison did belong to the convent, which resigned this part of its jurisdiction to a layman, whom the religious elected to judge in criminal affairs. The family of Airly had this office before the Reformation, and continued possessed of it till the year 1747, when it was sold and vested in the Crown with the other heritable jurisdictions. In the year 1445, the election of this officer proved fatal to the chieftains of two noble families." The convent had that year chosen Alexander Lindsay, eldest son of the Earl of Crawford, and commonly known by the appellation of The Tiger, or Earl Beardy, to be the baillie, or chief-justiciar of their regality; but he proved so expensive by his number of followers and high way of living, that they were obliged to remove him, and appoint in his place Alexander Ogilvie of Innerquharity, nephew to John Ogilvie of Airly, who had an hereditary claim to the place. This occasioned a cruel feud between the families; each assembled their vassals; and "there can be little doubt," says Mr. Fraser Tytler, "that the Ogilvies must have sunk under this threatened attack, but accident gave them a powerful ally in Sir Alexander Seton of Gordon, afterwards Earl of Huntly, who, as he returned from court, happened to lodge for the night at the castle of Ogilvie, at the very moment when this baron was mustering his forces against the meditated assault of Crawford,

Seton, although in no way personally interested in the quarrel, found himself, it is said, compelled to assist the Ogilvies, by a rude but ancient custom, which bound the guest to take common part with his host in all dangers which might occur so long as the food eaten under his roof remained in his stomach. With the small train of attendants and friends who accompanied him, he instantly joined the forces of Innerquharity, and proceeding to the town of Arbroath, found the opposite party drawn up in great strength on the outside of the gates." As the two lines approached each other, and spears were placing in the rest, the Earl of Crawford, anxious to avert it, suddenly appeared on the field, and galloping up between the two armies, was accidentally slain by a soldier. The Crawfords, assisted by a large party of the vassals of Douglas, and infuriated at the loss of their chief, thereupon attacked the Ogilvies with a desperation which soon broke their ranks, and reduced them to irreclaimable disorder. Such, however, was the gallantry of their resistance, that they were almost entirely cut to pieces. Nor was the loss which the Ogilvies sustained in the field their worst misfortune; for Lindsay, with his characteristic ferocity, and protected by the authority of Douglas, let loose his army upon their estates, and the flames of their castles, the slaughter of their vassals, the plunder of their property, and the captivity of their wives and children, instructed the remotest adherents of the justiciar of Arbroath, how terrible was the vengeance which they had provoked.—The revenues of this abbey at the Reformation were as follow: money £2,553 14s.; wheat 30 ch. 3 bolls, 3 fir. 2 pecks; bear 143 ch. 9 bolls, 2 pecks; meal 196 ch. 9 bolls, 2 fir.; oats 27 ch. 11 bolls; salmon 37 bar. and 2 bar. grilses: omitted capons, poultry, grassums, dawiks, and all other services and duties: to this is also to be added the teinds of the kirks of Abernethy, Tannadice, and Monifieth. While some workmen were employed in 1835, in clearing out the rubbish from the ruins of the abbey, they came upon a stone coffin containing the skeleton of a female which had been carefully enveloped in a covering of leather. This must have been some lady of rank in her day, and the good folks set it down as the remains of the Queen of William the Lion, who, as well as her husband, the founder of the abbey, was interred here.

During the war, in 1781, this coast was annoyed by a French privateer, named the Fearnought of Dunkirk, commanded by one Fall. On the evening of the 23d of May, he came to anchor in the bay of Arbroath, and fired a few shot into the town; after which he sent a flag of truce on shore, with the following letter:

"At sea, May twenty-third.

"Gentlemen, I send these two words to inform you, that I will have you to bring to the French colour, in less than a quarter of an hour, or I set the town on fire directly: such is the order of my master the King of France I am sent by. Send directly the mair and chiefs of the town to make some agreement with me, or I'll make my duty. It is the will of yours.

"To Messieurs Mair of the town called }
Arbrought, or in his absence, to the }
chief man after him, in Scotland."

The worthy magistrates, with a view to gain time to arm the inhabitants, and send expresses for military aid, in the true spirit of subtle diplomacy, gave an evasive answer to Monsieur Fall's letter, reminding him that he had mentioned no terms of ransom, and begging he would do no injury to the town till he should hear from them again. Upon this Fall wrote a second letter to them in the following terms:

"At sea, eight o'clock in the afternoon.

"Gentlemen, I received just now your answer, by which you say I ask no terms. I thought it was useless, since I asked you to come aboard for agreement. But here are my terms; I will have £30,000 sterling at least, and 6 of the chiefs men of the town for otage. Be speedy, or I shoot your town away

directly, and I set fire to it. I am, gentlemen, your servant. I sent some of my crew to you; but if some harm happens to them, you'll be sure will hang up the main-yard all the prisoners we have aboard.

"To Monsieurs the chiefs men of}
Arbrought in Scotland."

The magistrates having now got some of the inhabitants armed, and their courage further supported by the arrival of some military from Montrose, set Fall at defiance, and "ordered him to do his worst, for they would not give him a farthing." Whereupon, says the worthy historian of this memorable transaction in the annals of Arbroath, terribly enraged, and no doubt greatly disappointed, he began a heavy fire upon the town, and continued it for a long time; but happily it did no harm, except knocking down some chimney-tops, and burning the fingers of those who took up his balls, which were heated.

ARBROATH AND FORFAR RAILWAY.

This railway commences at the harbour of Arbroath, and, passing through the valley of the Brothock, and the upper part of the valley of the Leman, and skirting the lochs of Balgavies and Rescobie, terminates in the Playfield of Forfar. Its length is $15\frac{1}{2}$ miles, with a rise of 220 feet. Expense £136,000. It is merely a single line, but with frequent passing-places. The act of parliament for this undertaking, 6^o William IV., cap. 34, was obtained in May 1836. A supplementary act was obtained in April 1840, 3^o Victoria, cap. 14. Under these acts the railway company have a fixed capital of £120,000, with power to borrow £40,000 in addition. About five miles of the railway were opened for traffic on 3d September, 1838; and the whole line on the 2d of January, 1839. There are six intermediate stations between the terminal stations: viz., Colliston, Leysmill, Friockheim, Guthrie, Auldbar road, and Clocksbriggs. The population of the eight parishes through which the railway passes, including the towns of Arbroath and Forfar, is about 35,000. The effects on the district of this cheap and speedy means of communication have been remarkable, and furnish a striking example of the utility of railways, and the great comfort and accommodation they afford to the public. Previous to 1839 there was not a stage-coach or conveyance of any kind for passengers between Arbroath and Forfar. The first year the railway was opened, there were conveyed upon it 98,513 passengers; and from the 2d of January, 1839, to the 5th of November, 1842, the number conveyed upon it amounted to 376,167. The goods conveyed during the same period amounted to 207,806 tons. The trains, which are drawn by locomotive engines, make four trips daily in summer, and three in winter. They are composed of passenger-carriages and waggons with goods. Passengers' fares, in 1842, were as follows: 1st class, 2s. 3d.;—2d class, 1s. 9d.;—3d class, 1s. 3d. The charges for goods are equally moderate.—There are extensive stone and pavement quarries on the line, especially at Leysmill, on the property of William T. Lindsay Carnegie, Esq. of Spynie and Boysack, to whose public spirit and energy of character the establishment of the Arbroath and Forfar railway in a great degree owes its existence. There is, also, a railway from Arbroath to Dundee, $16\frac{1}{4}$ miles in length: see article DUNDEE AND ARBROATH RAILWAY. These railways connect together, and may be considered as one railway extending from Dundee to Forfar.

ARBUTHNOT, a parish in the south-east part of the county of Kincardine. It is nearly of a triangular form, with the exception of a small district on the south-west side, which forms a projection southward of the water of Bervie, which, except at this point, divides it from the parishes of Bervie and

Garvock. Upon the west it is bounded by the parishes of Fordoun and Glenbervie, or the great hollow of the Mearns, the Bervie and the Forth forming the dividing line on this side; and on the north-east and east it is bounded by the parishes of Dunottar and Kinneff. The surface presents two rising grounds or ridges, with hollows or valleys betwixt them and the boundaries of the parish on each side, where the ground again rises to still greater height, but in no quarter does the rise much exceed 600 feet. The narrow valley in which the Bervie runs is highly picturesque and beautiful, containing the mansions of Arbuthnot and Allardyce, with the church situated between them. Within this parish there are several freestone quarries of excellent quality. In one spot there is a trap-rock full of pebbles, with some green jasper of considerable beauty; on the south side of the Bervie, nearly opposite the church, a vein of manganese occurs. No coal nor limestone have been discovered; but some chalybeate springs indicate the presence of iron. The proprietors are five in number. By a map of the county, executed in 1774, it appears that there are in this parish 7,785 Scotch, or 9,893 English acres, of which about two-thirds are cultivated; and about 300 acres are under wood. The Statistical reporter, in 1838, states that the average rent of the arable lands is only 18s. per acre; and that the real rental is about £6,200. The ordinary wages of a farm-servant, or ploughman, was, in 1796, from £8 to £10 per annum; they now receive from £11 to £13. The wages of female farm-servants was, in 1796, from £3 10s. to £4; they are now from £4 to £5 10s. Tradesmen's wages, such as masons and carpenters, was, at the former date, 1s. 6d. or 1s. 8d. per day; they now receive 2s. Population, in 1801, 942; in 1831, 944. Houses 187. Assessed property, in 1815, £5,772.—This parish is in the presbytery of Fordoun, and synod of Angus and Mearns. Viscount Arbuthnot is patron. Minister's stipend £225 0s. 9d.; with a manse, and a glebe of the annual value of £9. The church, which is on the northern bank of the Bervie, about 2 miles north-east of the town of Bervie, is a very ancient fabric, but in good repair; sittings 440. Adjoining to the church is an aisle of beautiful workmanship, which was built by Alexander Arbuthnot, designed, in the appendix to Spottiswood's History, brother to the baron of Arbuthnot, and parson of Arbuthnot and Logie-Buchan. He was elected the first Protestant principal of King's college, Aberdeen, in 1569. The lower part of this aisle was intended and has been used as a burial-place for the family of Arbuthnot. In the upper part was a well-finished apartment filled with books chiefly in divinity, bequeathed by the Rev. John Sibbald, one of the ministers of Arbuthnot, for the use of his successors, but which have all disappeared.—The schoolmaster's salary is £34 4s. 4d., with about £10 fees; pupils average 40. There are three small private schools in the parish.—The family of Sibbalds of Kair, one of the most ancient in the county, possessed very extensive property here. Among the last of this family was Dr. David Sibbald, who having been preceptor to the duke of Gloucester, son to Charles I., suffered much on account of his loyalty in the civil wars, was imprisoned in London, and had his estate forfeited. He lived, however, to witness the restoration of Charles II., and died in his own house of Kair, in 1661. The celebrated Dr. Arbuthnot, physician to Queen Anne, had his birth and early education in this parish. He was son to Alexander Arbuthnot, minister here, who was deprived for nonconformity in the year 1689. Dr. Arbuthnot received the first part of his education at the parish-

school of Arbuthnot, whence he and his elder brother Robert, afterwards a banker at Paris, removed to Marischal college of Aberdeen, about the year 1680. This parish gives the title of viscount to the ancient family of Arbuthnot. The principal mansions in the parish are the modern house of Kair in the south-west corner of the parish; Arbuthnot house about 2 miles further down the course of the Bervie; and Allardyce house, near the church.

ARCHAIG (Loch), a beautiful sheet of water in the parish of Kilmallie, Inverness-shire, about 16 or 17 miles in length, and from 1 to $1\frac{1}{2}$ in breadth. It is only about 2 miles distant from the south-west extremity of Loch-Lochy, and about 10 miles from the Neptune inn at the western end of the Caledonian canal. This loch presents one of those many spots of surpassing beauty which are so numerous in Scotland, and yet so little known: hundreds of tourists pass within a very short distance of this loch every season without one paying it a visit; and if the masters of the steam-boats which ply on the canal are aware of its existence at all, they are utterly ignorant of its picturesque and romantic beauty. Even Macculloch, indefatigable as he was in his researches, omitted visiting this enchanting spot. "It is said," he tells us, "that Loch-Arkeg is a picturesque lake, though unknown; which seems probable from the forms of the hills, and the nature of the country. But on this I must confess ignorance, and plead misfortune, not guilt; the flight of what never ceases any where to fly—time; and the fall of what seldom ceases here to fall—rain." The opening of the glen of Archaig is divided by a ridge of hills into two valleys of unequal breadth. This ridge commences near the farm of Clunes, rising in little round knolls crowned with wood, which gradually increase in height as they penetrate the glen, till they terminate abruptly in a lofty wooded precipice, the base of which is washed by the waters of the lake. In the southern—which is the broadest of these divisions—are situated the pleasure-grounds and house of Achnacary, the family-mansion of Cameron of Lochiel. Through the other, which is called Mil-dubh, or 'the dark mile,' there is a road to the shores of the lake. The lake may be approached by either of these openings, but the scenery of the latter is the most picturesque and romantic. Indeed, we know of hardly any place which can be put in competition with the Mil-dubh. It is a narrow, wooded pass, bounded on the one hand by the ridge already mentioned, which separates it from Achnacary; and on the other by a lofty barrier of almost perpendicular rocks. Great masses of these immense rocks have fallen down in various places, and now form small hills at the base of the precipices from which they have been detached. The whole pass is covered with trees—chiefly pine and birch—from its very bottom to the top of the mountains on both sides. Even the perpendicular barrier of rock on the north is covered with wood to the summit. Every interstice or opening in the rock seems to give root to a tree; and so much is this the case, that in many places the rocks are completely hid by the leafy screen which covers and ornaments them; yet a great deal of the wood which once occupied this pass has been cut down, and it has consequently lost something of the dark look which it formerly had, and which gave rise to its name. Indeed, it may be questioned whether the effect has not been increased by removing part of the wood. The numerous partial and varied lights which have thus been let in upon the scene, the exposure of the rocks which has been made in various places, and the shadowy gloom preserved on others, give a life and character to the pass of the Mil-dubh which is inexpressibly enchant-

ing. The glen of Achnacary is also fine, though of a different style of beauty. The scenery is here of a more open character,—but still beautifully wooded, and more cultivated. The tourist will do well to visit both places, but he should most certainly approach Loch-Archaig by the pass of the Mil-dubh. By this road the lake is entirely hid till the traveller is close upon it. After penetrating through the pass, and just before entering on the lake, a small stream, falling over the rocks to the north, forms a pleasing cascade finely fringed with trees and under-wood which overhang and almost dip into its waters. Immediately afterwards the lake begins to appear, small apparently at first, but gradually enlarging as we advance. Ascending a small hill a short way up its northern shore, its whole extent is opened up, stretching far to the west, and surrounded with dark and lofty mountains,—its shores richly wooded, and indented by winding bays and jutting promontories. Two or three small islands speck its bosom, and immediately opposite, on the southern shore, a dark forest of natural pine trees of great size frowns over it. Looking to the east, across the lower portion of the lake, we have the opening of Achnacary, with its house and pleasure-grounds; and in the distance, the waters of Loch-Lochy, with the mountain-barrier on its opposite shore. Altogether, Loch-Archaig affords scenery of the finest description, and it is questionable if it is excelled, or even equalled, by any of our Scottish lakes. The shores of this romantic lake more than once gave shelter to Prince Charles after his discomfiture at Culloden. A few days after that fatal encounter, he lodged at the house of Donald Cameron of Glenpean, on this lake. After his return from the islands, he and Donald Cameron slept for some hours on the top of a mountain called Mamnan-Callum, on the shores of this lake, within sight of the encampment of his pursuers, which was not above a mile distant. Here they arrived in the morning, and remained till evening watching the motions of their enemies; at night-fall they betook themselves to Corrie-nan-gaul, in Knoidart, in which latter district he wandered for some time. Again, however, he was hunted by his ruthless pursuers towards Lochaber; and again the shores of Loch-Archaig afforded him shelter. Cameron of Clunes, the ancestor of the present possessor of that farm, being himself in peril, had erected a hut on a hill, called Tor-a-muilt, or 'the Wedder's hill,' at the bottom of Loch-Archaig. To this place the prince was taken by Clunes, and here he lurked securely, though in the immediate neighbourhood of his foes, for several days. At this period Charles is described as wearing a shirt extremely soiled, an old tartan coat, a plaid, and a philabeg. He was bare-footed, and had a long beard. In his hand he usually carried a musket, and he had a dirk and pistol by his side. A few years ago, an ancient claymore, much injured with rust, was found near the site of this hut, which, in all probability, had belonged to Charles, or some of his friends. It was on the shores of Loch-Archaig that Munro of Culcairn was shot by an exasperated Highlander, shortly after the suppression of the Rebellion; and it reflects infinite credit on this people, that notwithstanding all the calamities they suffered, this is the only instance of assassination which can be brought against them. Mr. Chambers [History of the Rebellion in 1745, vol. ii. p. 139.] has erred in several particulars in his account of this affair. The perpetrator was not a servant of Glengarry, but one of the clan Cameron, who resided on Loch-Archaig; his name was Dugald Roy Cameron, or, as he is still styled in tradition, Du Rhu. It is well-known that an order was issued to the Highlanders to deliver up their arms after the Rebellion. Dugald willing to make

his peace with the government, sent his son to Fort-William with his arms, to be delivered up. The young man when coming down Loch-Archaig was met by an officer of the name of Grant, who was conducting a party of military into Knoidart. This monster immediately seized the young man, and notwithstanding his statement as to the object of his going to Fort-William, ordered him to be shot on the spot. His father, fired at this savage deed, swore to be revenged, and learning that the officer rode a white horse, watched his return behind a rock, on a height above Loch-Archaig. Major Munro had unfortunately borrowed the white horse on which Grant rode, and he met the fate which was intended for another. Dugald Roy escaped at the time, and afterwards became a soldier in the British service.

ARCLET (Loch), a small gloomy-looking sheet of water in the north-west corner of the parish of Buchanan in Stirlingshire, and bordering on Aberfoyle parish. A stream flows out of its western side into Loch Lomond at Inversnaid; while the sources of the Forth are within half-a-mile of it on the south; so that it appears to lie on the dividing ridge betwixt the waters of the two friths. The road from Inversnaid to Loch Katherine passes on the southern side of the loch, which is wholly destitute of picturesque features.

ARD (Loch), a beautiful sheet of water in the parish of Aberfoyle, at the eastern base of Ben-Lomond. By a mountain-road, which is often travelled, it is about 7 miles distant from the Trosachs. The distance from Glasgow to Aberfoyle is about 30 miles, and from the parish-church to the entrance of the lake, a mile. There are in fact two lakes, which are separated from each other by a stream about 200 yards in length; but the lower lake is of small extent, its length being scarcely a mile, and its breadth about half-a-mile. The upper lake is 5 miles in length, and 2 miles broad. The valley of Aberfoyle, with its varied rocks and precipices, and its river winding amid pleasant meadows and richly wooded hills, is very beautiful; but Loch-Ard, with its adjoining scenery, is the object of greatest interest in the district, and yields to none of the Scottish lakes in picturesque beauty and effect. The traveller, leaving Aberfoyle, after a walk of about a mile, arrives at the opening of the lower lake, the view of which is uncommonly grand. Far in the west Ben-Lomond raises his huge and lofty form amid the clouds; while in nearer prospect are beheld gentle rising grounds covered to their summits with oak trees and waving birch. In front, are the smooth waters of the lower lake; its right banks skirted with extensive woods which cover the adjoining mountains up to half their height. This, with the nearly inaccessible tract which lies to the westward, is what is called the Pass of Aberfoyle, and anciently formed one of the barriers between the Highlands and the Lowlands. This pass has been the scene of many fierce encounters in former times; in particular, one took place here between the Highlanders and the troops of Cromwell, in which the English soldiers were defeated. Advancing up the pass, the traveller arrives at the upper-portion of the lake. A fine view of it is obtained from a rising ground near its lower end, where a footpath strikes off the road into the wood that overhangs the stream, connecting the upper with the lower lake; or a still finer, perhaps, from a height about 2 miles up the eastern side of the lake, a little way below what is called the Priest's point, or craig. Here the lake is seen almost in its whole expanse,—its shores beautifully skirted with woods, and its northern and western extremities finely diversified with meadows, corn fields, and farm-houses. On

the opposite shore, Ben-Lomond towers aloft in form like a cone, its sides presenting gentle slopes towards the north-west and south-east. A cluster of rocky islets, near the opposite shore, lend their aid in ornamenting the surface of the waters of the lake; and numerous rocky promontories and sheltered bays with their waving woods increase the effect of the scene. A small wooded island, seen near the opposite shore, on the right side, is Duke Murdoch's isle. On this islet Murdoch, Duke of Albany, Regent of Scotland during the captivity of James I. in England, erected a tower or castle, the ruins of which still remain; and tradition reports, that it was from hence he was taken previous to his execution at Stirling. On the shores of Loch-Ard, near a ledge, or rather wall of rock, about 30 feet in height, there is a singular echo which repeats a few words twice over.

ARDARGIE, a small village in the shire of Perth, and parish of Forgandenny, situate upon an eminence above the river May, among the Ochills.

ARDAVASAR BAY. See **SLEAT**.

ARDBLAIR, an ancient mansion in the parish of Blair-Gowrie. It is one of those ancient massive-looking structures which partake, in a nearly equal degree, of the gloomy, frowning, suspicious-looking style of the olden time, and the more open and commodious fashion of our own days. The castle is one of the family-seats of Mr. Blair Oliphant of Gask and Ardblair, but it is now occupied by the tenant of the adjoining farm. On the south side of the house lies the moss of Ardblair, a tract of some 20 or 30 acres, covered with reeds and pools.

ARDCHATTAN, a district of Argyle, consisting *quoad civilia* of the two united parishes of Ardcattan and Muckairn, anciently called Ballebhodan and Kilespickarro, —the latter denoting the burial-place of Bishop Cerylus or Cerullus, and the former signifying St. Bede's town or place of residence. The walls of a small church, supposed to have been built by St. Bede, still remain entire, having withstood the storms and tempests of several centuries. The united parish is an immense district extending above 30 miles in length, and being from 15 to 20 in breadth at an average. It stretches along the southern shore of Loch Creran, and on both sides of Loch Etive; but the parish of Muckairn, on the southern side of Loch Etive, was again disjoined from it *quoad sacra* in 1829. See **MUCKAIRN**. The surface is for the most part mountainous, intersected with streams of water, and highly diversified with heights and hollows. There are several rivers abounding with excellent trout in the district; the most considerable are the Awe, the Kinloss, and the Etive. Near the mouth of the former is a valuable salmon-fishing. The most remarkable hill is Ben-Cruachan, which is in the centre of the parish, and 13 or 14 miles in circuit at the base. See article **BEN-CRUACHAN**. The district abounds with natural wood; and there are a few plantations of pines and Scotch firs. Every cutting of the woods is supposed to yield the proprietors no less than £15,000 or £16,000 sterling. They consist of ash, birch, hazel, and alder, but chiefly oak. Roes and fallow-deer run wild in the woods; and there is a forest in Glenetive pretty well-stocked with red deer. Foxes, hares, wild-cats, pole-cats, martins, weazels, otters, badgers, black-cocks, moorfowl, ptarmigans, partridges, plovers, eagles, and hawks, are found here. The soil is generally light and dry, and when properly cultivated, and allowed time to rest, produces excellent crops of oats, barley, and potatoes. About 1753, a company from Lancashire erected a furnace for casting pig-iron at Lorn-Quarnan in Muckairn, and obtained a long lease of several farms for rearing wood and grazing their work-horses. In 1831, this com-

pany employed 68 men in cutting and charring wood for their works. The number of horses, including breeding-mares, in the district, in 1792, amounted, at the lowest computation, to 450. Their price, it was then stated, had advanced considerably within these few years, as they then cost from £10 to £12. The number of black cattle in the parish, at the same date, was from 2,600 to 2,800; and they generally brought from £4 to £6 per head. The sheep amounted to between 28,000 and 30,000, and sold from 10s. to 40s. per head. "All kinds of provisions," says the Statistical reporter in 1792, "are considerably increased in price. As there is no public market, every family must provide their own necessities. A fat cow for slaughter, which 30 years ago could be bought at £2 10s., now costs £6; wethers, butter, cheese, geese, and hens, in proportion. Meal, at an average, is 16s., barley 21s. per boll, at least. The day-wages of men-labourers are 1s. without victuals; of masons 1s. 6d., and of wrights 1s. 6d. Men-servants get from £6 to £8 per annum; and female ditto, from £3 to £3 10s." The valued rent is £587 7s. 4d. Scots. The real rent was supposed, in 1792, to be between £4,000 and £5,000 sterling, exclusive of the cutting of the woods and the kelp-shores. The largest estate, that of Balcaldine, is about 12 miles north-east from Oban, 28 miles south-west from Fort-William, and the like distance north-west from Inverary. It is situated on Loch Creran, and comprehends the whole of the southern banks of Loch Creran, a stretch of about 12 miles of coast, while at one point on the south it nearly reaches Loch Etive. This estate contains 10,741 acres Scots, or 13,546 imperial; but a large addition may be made on account of the great inequality of surface throughout, particularly on the hills and woods, so that the true extent of surface-measure may fairly be taken at upwards of 15,000 imperial acres. The rental, including the value of the sheep-farms and the wood-cuttings, was estimated, in 1835, at nearly £2,700. According to Dr. Webster, the number of inhabitants in the united parishes amounted, in 1755, to 2,195; in 1801, it was 2,371; and in 1831, 2,420, of whom 1,650 belonged to Ardochattan, and 770 to the district of Muckairn. Houses 442, of which 155 were in Muckairn. Assessed property £12,593.—The parish of Ardochattan is in the presbytery of Lorn, and synod of Argyre. By decret of locality, in 1817, the whole valued teinds of Ardochattan and Muckairn were granted to the minister of Ardochattan. Stipend £283 3s. 2d., with a manse, and glebe of the annual value of £8. There are three places of worship, Ardochattan, Muckairn, and Invergueschan in Glenetive: at the last place there is a missionary, who preaches alternately with the missionary of Glenco and Glencran. Campbell of Lochnell is patron. A new and more centrally situated church was opened in Ardochattan parish, in July 1836; sittings 450; both the old and new churches are situated close upon the northern shore of Loch Etive, the former 10 miles, and the latter 8 from the western boundary, and 30 and 32 miles respectively from the north-eastern boundary. There are two parochial schools, one in Ardochattan and the other in Muckairn. The salary of the schoolmaster of Ardochattan is £29 16s. 7½d., with about £11 school-fees. Number of pupils average 40. There are also two schools in this district supported by the General Assembly, and attended by about 180 children. There are a parish-library, and two itinerating libraries. A school is established in the lower part of Ardochattan parish by the society for propagating Christian knowledge, with a salary of £13 sterling; and the schoolmaster's wife has from the society £3 sterling, for teaching young girls to spin, and knit

stockings. There are, besides, 3 or 4 private schools in remote parts of this district, supported by the neighbouring tenants whose children have not access to the public schools. The number of scholars at all these, at the lowest calculation, amounts to 200 in winter. On the north side of Loch Etive, 10 miles distant from Dunstaffnage, was a priory of the monks of Valliscaulium, founded in the year 1230, by Duncan Mackoul—ancestor to the Macdougals of Lorn. Some of the walls of the old priory are still standing. "The proprietor's dwelling-house," we are told, "was formerly a part of the monastery, and his offices occupy great part of the ground on which it stood. What now remains of the priory is converted into burying-ground." In the walls are two stone coffins in niches, one of which is ornamented "with a font, and an inscription in the Runic character." [Statistical account, 1792.] We are informed by some of our writers, that Robert Bruce held a parliament here, when he retired into this district after his defeat in the battle of Methven. But, as Pennant has remarked, it was "more probably a council," as "he remained long master of this country, before he got entire possession of Scotland." The common language is the Celtic: the names of all the farms are derived from it, and are in general descriptive of their situations. Loch Etive, which divides Ardochattan from Muckairn and two other parishes, is a navigable inlet of the sea, 15 miles in length, but of unequal breadth. See article ETIVE (LOCH). The valley of Età is famous as having been the residence of Usnath, father of Nathos, Althos, and Ardan; the first of whom carried off Dartula, wife of Conquhan, King of Ulster, which is the subject of a beautiful poem of Ossian. There is a small island, with some vestiges of a house upon it in Loch Etive, which goes by the name of *Elain Usnich*, or 'the island of Usnath;' and on the farm of Dulness, in Glenetive, is a rock rising in the form of a cone, and commanding a romantic prospect, which to this day retains the name of *Grianan Dearduil*, 'the basking-place of Dartula.' See, in addition to articles above referred to, articles BEREGONIUM, and CONNAL.

ARDCLACH, a parish in the county of Nairn, bounded by Auldearn, Nairn, Cawdor, Moy, Duthil, and Edinkelly parishes; about 10 or 12 miles long, and between 7 and 8 broad. It is intersected by the Findhorn river, which is here rapid, and frequently impassable, excepting at the bridges. In 1809 the parliamentary commissioners authorized the execution of a road from Relugas, along the eastern side of the Findhorn, to join the old military road from Fort George to Edinburgh, through Strathspey and Braemar, near Dulsie bridge, and thus connect Forres with the Aviemore road and the south of Scotland. A branch-road falls into this at Tominarroch, half-way between the bridge at Relugas and Dulsie bridge, connecting it with Nairn. The distance of the kirk of Ardclach from Nairn by this branch-road is about 9 miles. The valley of the Findhorn here presents very beautiful scenery. "The whole country for several miles eastward is composed of a highly crystalline porphyritic granite, displaying, in some instances, faces of a hard columnar rock, which confine the waters of the Findhorn to a deep, narrow, and irregular channel; and in other places giving rise—from a tendency in their masses to exfoliate and decompose—to open holms and smooth grassy banks. All the varieties of hardwood characteristic of the course of Scottish rivers are seen in rich profusion on both sides of the stream; while the adjoining hills also exhibit a few scattered remnants of the ancient pine forests which formerly covered the country. Towards the east, the eye is attracted by the bright light green masses of the oak and birchen copes of

Tarnaway and Relugas, which form the outer fringes of the more sombre pine woods. About a mile below Dulsie, a beautiful sequestered holm greets the traveller, encircled with terraced banks and birchen bowers; and in the centre of which rises a small cairn, with an ancient sculptured tablet, about eight feet high, and half as broad, standing at one end of it, and having a rude cross and many Runic knots still discernible on its surface. Tradition calls it the stone of memorial of a Celtic princess, who perished in the adjoining river, while attempting to ford it on horseback with her lover, a Dane. Immediately behind this spot, the high promontory of Farness rises nearly 200 feet above the river, the direct course of which it has shifted, and confined to a deep winding chasm of at least 3 miles' circuit." [Anderson's Guide, pp. 132, 133: edn. 1834.] See article **DULSIE**. This parish is a mountainous district, covered with heath, and furnishes little of any other kind of pasture. There is a considerable quantity of wood in it, chiefly consisting of firs, birch, alder, hazel, ash, and some oaks. The woods and hills abound with moor-fowl, wood-cocks, partridges, hares, and foxes, and some deer are found. The otter and wild cat are sometimes seen. The Statistical reporter of 1792, stated that the method of labouring pursued here seemed to have undergone "little alteration for centuries back. The farmers use the small Scotch plough drawn by four or six black cattle and two small horses, or by four horses and four black cattle." This mode of ploughing is now disused, and the agriculture of the district greatly improved. The rental produced before the court of teinds, in 1786, was 283 bolls victual, and £543 8s. 5d. in money. Since that period, there has been a great increase of rent in the parish. There are about 2,000 acres of arable land, and 4,000 acres of moss and moor, a very small part of which seems to be improvable for corn-lands, in this parish. Population, in 1801, 1,256; in 1831, 1,270. Houses 295. Assessed property £2,566.—This parish is in the presbytery of Nairn, and synod of Moray. Patron, Brodie of Letham. Stipend £248 1s. 1d. The church is said to have been built in 1626, and was rebuilt about 1760. Schoolmaster's salary £36 7s. 2d., with £4 10s. fees. Average number of scholars 20. There are two private schools in the parish attended by about 30 children each.

ARDEONAIG, or **LOCH TAYSIDE**, a mission under the Society for propagating Christian knowledge, which was divided as a separate charge from the parishes of Killin and Kenmore, in Perthshire, by authority of the presbytery of Dunkeld, about 1786, and consists of portions of these two parishes. Its greatest length is 7 miles; greatest breadth, 4. Population, in 1831, 650. Church built by the Marquis of Breadalbane, in 1822; sittings 650. Minister's stipend £60, with a manse, and a glebe of the value of £12.

ARDERSIER, written **ARDNASEER** in some charters, a parish of Inverness-shire. According to tradition, it obtained its name from a number of carpenters having been drowned in the ferry opposite Ardersier point, in the year in which the cathedral at Elgin, and that at Fortrose, were built.* The parish is 2½ miles in length, and its breadth is nearly the same. It is bounded by the parish of Petty on the west and south; by the parish of Nairn on the

east, and by the Moray frith on the north. Population, in 1801, 1,041; in 1831, 1,268. Houses 271. Assessed property £1,275. The district in general is very fertile. The shore is sandy and flat, which is the character of the whole of this side of the Moray frith from Inverness to Nairn. The rental of the parish, including the farm sold to government when the garrison of Fort-George was built, was £365 in 1792; the rent of the garrison-farm was £50. At that period nearly the whole parish was in the possession of one farmer, but the greater part was sublet by him in small farms of from 20 to 30 acres. There were scarcely any enclosing-walls known except a few rudely constructed of feal or earth.—This parish is in the presbytery of Nairn, and synod of Moray. Patron, the Earl of Cawdor. The church and manse were represented, in the first Statistical report, as having been built with clay in 1769. The stipend is £158 6s. 7d. Schoolmaster's salary £36, with £20 fees. There are two private schools. The Gaelic and English languages are spoken here equally well. The roads are exceedingly good. Where this parish is divided from that of Nairn, there is a stone about 6 feet high, and 3 broad, called the Cabbac stone, which, tradition says, was erected over a chieftain who fell in an affray about a cheese, in the town of Inverness. The whole parish is the property of the Earl of Cawdor, and was a part of the lands of the Bishop of Ross, with some temple-lands formerly belonging to the knights of St. John of Jerusalem. The territory which constitutes the precinct of the Fort, was purchased by government about the year 1746. See article **FORT-GEORGE**. Near to Ardersier—which is situate on the southern shore of the Varar—a very curious Roman sword and the head of a spear were discovered.

ARDGOUR, or **ARDGOWER**, a district in the shires of Argyre and Inverness; bounded on the north-west by Loch Shiel, and on the north and east by Loch Eil. There is an excellent road from Loch Moidart to the Corran of Ardgour; and from the latter place there is a ferry across Loch Eil to the military road from Fort-William to the Low country. See articles **LOCH SHEL** and **LOCH EIL**. In 1829 a church was erected here by the parliamentary commissioners. See article **BALLACHULISH**.

ARDINTENNY, a pleasant little hamlet, in the parish of Strachur, Argyre-shire, on the west side of Loch Long, 4 miles from Strone ferry, and about 3 from Loch Eek, to which there is a road by Cuills and Tainforlin.

ARDLAMONT, a headland of Argyre-shire, between the kyles of Bute and the mouth of Loch Fyne. It is 6 miles north-east from Skipnish, the opposite point on the western side of the loch.

ARDMADDY, in Nether Lorn, at the southern entrance of the singularly intricate and narrow channel, or kyle, between the island of Seil and the mainland of Argyre-shire. There is a small bay here, the shores of which are bold, and finely wooded. Pennant was hospitably received at Ardmaddy house, and has thrown his reflections on the condition of the Highland peasantry into the form of a vision with which he represents himself as having been favoured here. [See Second Tour, in Kerr's Collection of Voyages and Travels, vol. iii. pp. 357—360.] A quarry of white marble veined with red exists here.

ARDMEANACH, or **THE BLACK ISLE**, a peninsular district of Cromartyshire, bounded on the north-west and north by the Cromarty frith; on the east by the Moray frith; on the south by Loch Beaul; and on the west by the vale of the Conan. It comprises 8 parishes; and receives its English name from its bleak, moorland character. It is now, however well-intersected by roads.

* In the Gaelic language, *saor* signifies 'a carpenter,' and *ard*, 'high.' That part of the parish approaching the coast is high, rising in some places to 300 feet; and it may therefore have received its name from such an accident; "but it is fully as natural to conclude," says the first Statistical reporter, "that it obtained its name from its high situation, and that *Ard-na-saor* is a corruption of *ard'n Fhaobhair*, which signifies 'the high edge,' or 'height of the edge,' &c. of the hill."

ARDMHERIGIE. See LAGGAN (LOCH).

ARDNAMURCHAN, a bold promontory in the district of Morvern, Argyleshire; the most western point of the mainland of Scotland, in N. lat. 56° 45', W. long. 6° 8' 30". It forms the northern point of the mouth of Loch Sunart; and is 10 miles distant from the north-eastern extremity of the island of Coll, and 7 from the island of Muck. The shores here are rugged and uninteresting; and the interior from the Point to Strontian, a distance of about 25 miles, mountainous, bare, and wild.

ARDNAMURCHAN, or AIRD-NA-MOR-CHUAN, *i. e.* 'The Point of the Great Seas,' a parish partly in the shire of Argyle, and partly in that of Inverness. It is in the presbytery of Mull, and synod of Argyle. Patron, the Duke of Argyle. The population of this parish, chiefly composed of small tenants and poor crofters, was as follows:

	1801.	1811.	1831.
That part, which is in the shire of Argyle	2664	2827	3311
That part, which is in the shire of Inverness	2165	2324	2358
	4829	5151	5669

The labourers not agricultural are employed in making kelp, fishing, and in driving black cattle to the South country markets. Houses in Argyleshire 589; in Inverness-shire 397. The headland above described gives name to the parish. It appears, that, in the year 1630, the western or peninsular portion of the district formed a separate parish called Kill-Choan, from a church of that name dedicated to St. Coan; the remaining districts of the present parish of Ardnamurchan formed a second parish, under the name of Eileinfinnan or Island Finan, from a beautiful little island in Loch Sheil, then the residence of the minister, and site of the principal church. In still more ancient times, the two most northern districts probably formed a third parish, named Kill-Maria, or Kilmarie, after a church—some vestiges of which still remain at Keppoch in Arisaig—dedicated to the Virgin Mary. It has again been divided into three parishes by the erection of the Government-church districts of Acharacle and Strontian into *quoad sacra* parishes. Within the limits of this extensive parish are comprehended five several districts, or countries, as they are here called, *viz.*: 1st, ARDNAMURCHAN PROPER, or the parish of Kill-Choan, which is 16 miles in length, and $4\frac{1}{2}$ miles in its mean breadth;—2d, SUNART, which is 12 miles by 6;—3d, MOIDART, which is 18 miles by 7;—4th, ARISAIG;—and, 5th, SOUTH MOR'AR. The two first of these districts are in the shire of Argyle; they join at Tarbert in an isthmus of about 2 miles in breadth, extending from Salen, a creek on the north side of Loch Sunart, to Kinira bay; and extend in one range from east to west. The others are in the shire of Inverness, and lie parallel to each other and to Sunart, from which Moidart is separated by Loch Sheil; the river Sheil being the boundary between the north-east corner of Ardnamurchan Proper, and the south-west of Moidart, for about 3 miles, to its fall into the sea at Castle Tioram. The greatest length of the entire parish, calculating by the nearest road, is not less than 70 miles; its greatest breadth 40. It is calculated to contain 273,280 acres of land and water; of which, it is believed, about 200,000 acres are land. It consists, principally, of moors, and mountains, and hills, in general more rugged and precipitous than of great elevation, the highest not exceeding 3,000 feet. There is a considerable extent of oak-coppice on the shores of Loch Sunart. Ardnamurchan and Sunart belong to Sir James Milles Riddell, Bart.:—great part of Moidart, and all Arisaig, belong to Macdonald of Clanranald. Mingary castle, now Castle

Riddell, is ruinous. Castle Tioram was burned in 1715, since which time it has been in ruins. The houses of Kinloch-Moidart (since rebuilt in an elegant style by Colonel Donald Macdonald), and Mor'ar, together with every hut which they could discover, were burned by the king's troops in 1746, who also destroyed all the stock of cattle. The annual produce of the fisheries on the coast was computed, in 1800, at £240. This huge parish is now separated into two divisions,—northern and southern,—by *quoad sacra* parishes, which interpose between each division a space of fully 20 miles. The southern division contains the parish-church, and is 12 miles long by 6 broad; the northern, or Arisaig, is 24 miles by 15, and is chiefly inhabited by Roman Catholics. See ARISAIG. The present parish-church was built in 1830; sittings 600. Stipend £228 4s. 4d., with a manse and glebe, and fuel. The salary of the parochial schoolmaster in Ardnamurchan is £16 13s. 4d. The Society for propagating Christian knowledge allow to a schoolmaster in Sunart £12 10s., and to a sewing-mistress there £2; and also to a schoolmaster in Arisaig, and South Mor'ar £16: the perquisites of the masters are inconsiderable. The lead mines at Strontian are carried on by an English company, and annually produce about £4,000; a new mineral was discovered here, which is distinguished by the title of Strontites; its chemical qualities are ably described by Mr. Kirwan, in the 5th volume of the Transactions of The Royal Irish Academy. An excellent road has been made through this extensive district, from Loch Moidart to the Corran of Ardgour, under the auspices of The Parliamentary commissioners and the several great landed proprietors; but communication is still much impeded by bridgeless rivers, marshy ground, and want of roads. Fairs are held on the 19th of May, and 15th of October.

ARDOCH, a village in the parish of Muthill, Perthshire; $4\frac{1}{2}$ miles south-west of Muthill; now more commonly called Braco, from the estate off which it is feued. Population about 400. A chapel-of-ease was erected here in 1780; and the district, including some portions of the parishes of Dunblane and Blackford, has been erected into a *quoad sacra* parish, with a population of 1,535. There are also a United Secession church, situated about $1\frac{1}{2}$ mile south of Ardoch, and two schools, in this district.—Ardoch is celebrated for its Roman camp, which is regarded by antiquaries as the most perfect specimen of the kind now extant in Britain. It is situated on an eminence close on the north side of—or rather intersected by—the high road from Crieff or Muthill, to Stirling; and is thus described in the first Statistical report: "The situation of the camp at Ardoch gave it many advantages; being on the north-west side of a deep moss that runs a long way eastward. On the west side, it is partly defended by the steep banks of the water of Knaick; which bank rises perpendicularly between forty and fifty feet. The north and east sides were most exposed; and there we find very particular care was taken to secure them. The ground on the east is pretty regular, and descends by a gentle slope from the lines of fortification, which, on that side, consist of five rows of ditches, perfectly entire, and running parallel to one another. These altogether are about fifty-five yards in breadth. On the north side, there is an equal number of lines and ditches, but twenty yards broader than the former. On the west, besides the steep precipices above mentioned, it was defended by at least two ditches. One is still visible; the others have probably been filled up, in making the great military road from Stirling to the North. The side of the camp, lying to the southward, exhibits to

the antiquary a less pleasing prospect. Here the peasant's rugged hand has laid in ruins a great part of the lines; so that it may be with propriety said, in the words of a Latin poet, 'Jam seges est, ubi Troja fuit.' However, from the remains yet to be traced, it appears there were also three or four ditches, which, with its natural advantages, rendered this side as strong and as secure as any of the others. The four entries, crossing the lines at right angles, are still distinctly to be seen. The area of the camp is an oblong of 140 yards, by 125 within the lines. The general's quarter rises above the level of the camp, but is not in the centre. It is a regular square, each side being exactly twenty yards. At present it exhibits evident marks of having been enclosed with a stone wall, and contains the foundation of a house, ten yards by seven. That a place of worship has been erected here, is not improbable, as it has obtained the name of Chapel hill from time immemorial. Besides the camp above mentioned, so completely fortified both by nature and art, (and which is supposed to have been formed by Agricola, for the Roman legions under his command,) there are other two encampments adjoining to it, and having a communication with one another, containing above 130 acres of ground. These seem to have been defended by only a single ditch and rampart, and probably were intended for the cavalry and auxiliaries. Here was room for all the forces that fought under Agricola near the Grampian mountains, notwithstanding what has been said by Mr. Gordon, in his 'Itinerarium Septentrionale,' to the contrary; who probably imagined, as others have done since, that the whole ground at Ardoch, fortified by the Romans, lay within the small camp above mentioned. It has already been observed, that the two large encampments had a communication with one another; and that there was a subterraneous passage from the small one under the bed of the river, is more than probable, from a circumstance now to be mentioned. There was a hole near the side of the prætorium, that went in a sloping direction for many fathoms; in which, it was generally believed, treasures, as well as Roman antiquities, might be found. In order to ascertain this fact, a man, who had been condemned by the baron-court of a neighbouring lord, upon obtaining a pardon, agreed to be let down by a rope into this hole. He at first brought up with him, from a great depth, Roman spears, helmets, fragments of bridles, and several other articles: but upon being let down a second time, was killed by foul air. No attempt has been made since that time. The articles, above mentioned, lay at the house of Ardoch for many years, but were all carried off, by some soldiers in the Duke of Argyle's army, in 1715, after the battle of Sheriffmuir, and could never afterwards be recovered. The mouth of the hole was covered up with a millstone, by an old gentleman who lived at the house of Ardoch, while the family were in Russia, about the year 1720, to prevent hares from running into it when pursued by his dogs; and as earth, to a considerable depth, was laid over the millstone, the place cannot now be found, although diligent search has been made for it."

ARROSSAN, a parish in the district of Cunningham, on the coast of Ayrshire; bounded on the north-west by West Kilbride parish; on the north-east by Dalry; on the east and south-east by Kilwinning and Stevenston; and on the south-west by the frith of Clyde. Its greatest length is 6 miles; and greatest breadth, 3½. Population, in 1755, 1,297; in 1801, 1,846; in 1831, 3,494. Houses 401. The extent of sea-coast is about 4 miles. The north-west quarter of the parish, between Ardrossan and Kilbride, is hilly; the highest hill in this quarter is

Knockgeorgan, or Knockgargon, which rises to about 700 feet above sea-level. The principal streams are the Munnock or Caddel burn, which rises in Kilbride, and flows eastwards into the Gaaf; and the Stanley and Monfode burns which flow southwards into the sea near Ardrossan. The soil is in general light and fertile. Aiton estimates the area of the parish at 9,000 Scots acres, and the real rent, in 1809, at £6,098. The Statistical reporter, in 1837, estimates the area at only 5,520 Scots acres; and the real rent at £7,800, being an average of 30s per acre. The parish is intersected by three main lines of road; two of which run between Dalry and Ardrossan, and Dalry and Saltcoats, while the third, or coast-line, connects Saltcoats and Ardrossan. A railway from Ardrossan to Kilwinning was opened in 1832. The Glasgow and Ayr railway now joins this railway at Kilwinning, by a branch leading off at Dalry. Saltcoats is the post-town.—The parish of Ardrossan is in the presbytery of Irvine, and synod of Glasgow and Ayr. Patron, the Earl of Eglinton. It is a landward parish, comprising part of the towns of Saltcoats and Ardrossan, and including *quoad sacra* the estate of Boydstone in Kilbride. By a census, taken in 1836, the population was returned at 3,834, of whom 2,170 belonged to the established church; 2,330 resided in the town of Saltcoats, and 885 in that of Ardrossan. The parish-church was formerly at Ardrossan, but is now at Saltcoats. It was built in 1773; sittings 840. Minister's stipend £261 1s. 3d.; with a manse and glebe. Unappropriated teinds £676 11s. 11d. A Gaelic church has been erected at Saltcoats for the benefit of the Gaelic population of Ardrossan and Stevenston, whose number, in 1835, amounted to 748, most of whom were natives of Arran. This church cost £946, and has 720 sittings.—There are two Secession churches in the town of Saltcoats, of which the 2d is in the parish of Ardrossan. There are 9 schools in the parish, 6 of which are in Saltcoats, 2 in Ardrossan, and one in the country. The salary of the parish-schoolmaster is £34 4s. 4½d., with school-fees to the amount of £25, and a house and garden. Average number of pupils 60; at the other eight schools, about 450.

The town of **SALTCOATS** will be described in a separate article. The sea-port of Ardrossan was founded by the late Earl of Eglinton, but a fishing-village had existed here from time immemorial. A circular pier, 900 yards in length, covers the harbour on the south and west, while the Horse isle—a rock presenting about 12 acres of good pasture—shelters it on the north-west; and the isthmus of Kintyre, and the island of Arran, protect the channel from the violence of the Atlantic storms. According to the original plan, the basin or wet dock was to be of dimensions sufficient to contain from 70 to 100 large vessels, and the pier was to be extended to the Grinan rock. On the death of the late Earl of Eglinton, the works were suspended, after the earl had expended above £100,000 on them; and, in 1815, Messrs. Telford and Rennie reported that it would require a further expenditure of £300,000 to complete them. "The position which this harbour occupies is very favourable, being situated at the mouth of the Clyde, and within thirty miles by railway of Glasgow. Parties requiring to travel from Glasgow or Edinburgh, and the north of Ireland or Liverpool, when this railway is executed, will be able to accomplish the journey in at least eight hours and a-half from Edinburgh, and five hours from Glasgow, less time than what is required in sailing at present from Ardrossan to Belfast. In most instances a night passage will be avoided. The time required to proceed at present from Glasgow to Belfast by water conveyance, is from fourteen to fifteen

hours, while from Edinburgh at least twenty hours are required. The passage from Ardrossan to Belfast is from six to six and a-half hours, so that the whole time required to travel from Edinburgh and Glasgow to Belfast would not exceed seven and a-half hours from Glasgow, and nine and a-half from Edinburgh. Ardrossan is one of the most fashionable watering-places on the west coast of Scotland, and would be rendered by a railway the nearest and most accessible." [Mining Gazette, Dec. 31, 1836.] It may be doubted, however, whether Ardrossan is fitted to become the post-office packet-station between Scotland and Ireland. The limited improvements suggested by Mr. James Walker will incur an outlay of £40,000, while the total revenue of the harbour during the year ending July 1, 1838, was only £880; and the expenses, since 1820, have exceeded the income by £14,000. The length, too, of the passage from Belfast to Ardrossan, is sufficient for itself to unfit it for a packet-station; but there is another insuperable objection, viz. were it to be adopted, and even the north of England supplied *via* Liverpool, the whole line of road from Ardrossan by Ayr, Girvan, Stranraer, and Port Patrick, and from Port Patrick to Dumfries, including a portion of Wigtownshire, would be excluded from mail-accommodation. There is little doubt, however, that a great impulse will be given to this port by the completion of the line of railway between it and Glasgow, as above noticed. On the 20th of August, 1840, a steamer began to ply between Ardrossan and Liverpool, in connexion with the Glasgow and Ayr railway. By this line of conveyance passengers may leave London at 10 o'clock in the morning, and find themselves in Glasgow about the same hour of next day. The attractions of Ardrossan as a bathing-place are very considerable. An elegant crescent has been partially executed, and several very handsome villas have been erected in front of the bay. The hotel is a handsome building. The distance of Ardrossan from Glasgow by land, is 28 miles; and there are daily steamers to Glasgow and the intervening coast-towns, and also to Arran. Fairs are held here on the Tuesday before Ayr July fair, and on the fourth Thursday in November.

ARDSHIEL, the seat of a chief cadet of the Stewarts of Appin, on the southern shore of the Linnhe loch, near Kentallen bay, and about 3 miles from Ballahulish ferry at the mouth of Loch Leven. "Stewart of Ardsheel was among the foremost who espoused the cause of Prince Charles in 1745; and, like many of his brother-outlaws, had to consult his safety by retiring to a remarkable cave in this neighbourhood. The mouth of the cavern is singularly protected by a waterfall which descends like a crystal curtain in front of it, but through which no traces of such an excavation are perceptible. After the defeat of the Highland army at Culloden, the vigilance of the conquering party was a constant source of terror and distress to the inhabitants. By some unknown means, one of the Duke's officers stationed at Castle Stalker—the subject of many curious traditions—got notice that a cave existed in this quarter, and started with the resolution to subject the locality to a minute investigation. It happened that a poor idiot boy, a hanger-on about the family, had observed them approaching; but, not being in sufficient time to give the alarm, he ran after the party, expressing by his words and gestures a degree of ridiculous astonishment that was highly diverting to the soldiers. The drum, in particular, was viewed by him as an object of the greatest curiosity; and to gratify this, he kept close to the drummer, whom he affected to regard as a person of the highest consequence. 'After using much importunity in order to get the drum to carry, he took out all the wealth

he possessed, amounting to sixpence, and offered it to the drummer, provided he would let him hear a sample of the music.' For the sake of diversion his request was complied with; but, at the first 'tuck' on the parchment, the cunning youth, affecting the greatest terror, pretended to run off, while the drummer, in order to increase the speed of the fugitive and the laughter of his comrades, thundered away with all his force. The poor idiot was soon out of sight; but, on looking towards the cave, the soldiers beheld Ardsheel and a few of his companions, who had been roused by the ominous drum, making their escape in different directions among the rocks." [Beattie's Scotland, vol. II. pp. 88, 89.] The idiot-boy of Ardsheel will remind the reader of Davie Gellatley, and the good service that poor witting and his mother contrived between them to render the Baron of Bradwardine while under hiding. "When the lands of Ardsheel," adds the same writer in a note, "were confiscated, Campbell of Glenure was appointed steward of the forfeited estate, and under him was James Stewart of Acharn, brother of the unfortunate proprietor. Much dissatisfaction, however, arose among the tenants, who could not regard Campbell but as a government-spy and interloper. Piqued at this, and willing to retaliate, the latter set about removing the old tenants, and introducing those of his own party in their stead. To accomplish this impolitic measure, he had recourse to legal ejections, which greatly exasperated the people, and he was finally waylaid and shot by an outlaw named Donald Breck. The assassin immediately absconded; but suspicion falling upon Stewart as the author or instigator of the deed, the unfortunate gentleman was tried, condemned, and hung in chains on the spot where Campbell was shot. It was confidently believed, however, that he was sacrificed to the violence of party-rage, and was innocent of the crime for which he suffered."

ARDSTINCHAR (THE), or STINCHAR, a river of Ayrshire of considerable size, which takes its rise in the moorish parts of Carrick, in the parish of Barr, about 12 miles above the village of Colmonell. It has a very rapid south-west course, through a fine glen, or strath rather, for 26 or 27 miles, till it falls into the Atlantic, at Ballantrae, near which village and close upon the river are the remains of the castle of Ard-Stinchar, once the seat of the Kennedies of that ilk. From its situation in a narrow pass commanding two entrances into Carrick,—that along the shore, and that which leads up the river and across the country to Girvan,—this fortalice must have been of considerable importance in remoter ages. Several streams or rivulets fall into the Ardstinchar, particularly the Ashill, the Dusk, the Muick, the Fioch, the Tig, and the burn of Lagan, near Ballantrae.

ARUVOIRLICH. See LOCH EARN.

ARGYLE, or ARGYLL, an extensive shire, on the western coast of Scotland. It comprehends several large islands, as well as a considerable portion of the mainland. The latter part is of a very irregular figure; and is bounded on the north by Inverness-shire; on the east by the counties of Perth and Dumbarton, and the frith of Clyde; on the south and west by the Irish sea and the Atlantic ocean. According to Playfair, it lies between 55° 15' and 56° 55' N. latitude; and 4° 32' and 6° 6' W. longitude; and extends 90 miles from north to south; and, in some places, upwards of 40 miles from west to east. Its area, according to the same authority, is about 2,400 square miles, or 1,536,000 English acres, exclusive of its islands. But this county is intersected by so many inlets of the sea, and has as yet been so imperfectly surveyed, that no correct estimate can be

formed of its extent. Dr. Smith, in his 'Agricultural Survey of Argyleshire,' estimates its utmost length, viz., from Loch Eil to the mull of Kintyre, at 115 miles; and its breadth from Ardnamurchan to the source of the Urchay, or Orchy, at 68 miles. He also estimates the superficial area, exclusive of the islands, at 2,735 square miles; while Sir John Sinclair has calculated it at only 2,260 square miles. The islands belonging to this shire have a joint superficial area, according to Dr. Smith, of 1,063 square miles; and, according to Sir John Sinclair, of 929 square miles; making a total area, according to the former, of 3,798; and, according to the latter, of 3,189 square miles, or 2,002,560 English acres, being one-tenth of the whole surface of Scotland. These admeasurements must be regarded of course as mere approximations to the actual area both of mainland and islands; nor until the Trigonometrical Survey of Scotland is published is it worth while to attempt their rectification from existing materials.

The surface of this highly romantic region consists alternately of bleak barren moorlands, rugged chains of mountains, deep glens, winding inlets of the sea, and extensive sheets of inland water. The north-east division is peculiarly bleak, rugged, and mountainous, but interspersed with narrow and sheltered glens; the western section is very irregular in its outline, and deeply indented by large bays or lochs. The greater proportion of what may be called arable land is composed of the level tracts along the coasts. About one-eighth part of the surface is under cultivation.—The soil, according to Playfair, consists of the following varieties: "1. Gravel mixed with vegetable mould, occurring chiefly in the more lofty mountains, and along the banks of the rivers which have their sources in these mountains. 2. Peat-moss, occupying the extensive moors and low grounds, from which the water does not flow freely. 3. Decayed limestone. 4. Decayed slate mixed with coarse limestone. Of the two last, the former is a light soil, the latter more stiff; but both are fertile, and found in tracts not greatly elevated above the level of the sea. They form the great mass of the soil in the fertile districts of Mid-Lorn, Nether-Lorn, Craignish, &c. 5. A barren sandy soil, originating from freestone, or micaceous schistus, prevalent in the westerly parts of the mainland, and in some of the islands. Besides these, other kind of soil are found in this county; and sometimes several species graduate insensibly into one another. In general a light loam mixed with sand, on a bottom of clay or gravel, prevails. On the acclivities of the hills, the most common soil is a light gravel on till. In the lower grounds, there is sometimes a mixture of clay and moss, and sometimes a coat of black mossy earth. The soil appropriated to pasture is partly dry, and partly wet and spongy; a considerable proportion of what is either flat or hilly is covered with heath. The summits of the highest hills are generally bare and barren rocks."—Lime is found in every part of the county. In Lismore, the lime forms a durable cement under water. In Easdale and Balahulish are quarries of excellent blue slate. Marble exists in various quarters; and granite is quarried near Inverary. Veins of lead are frequent in the limestone and other strata; mines of this metal are wrought at Strontian, at Tyndrum, and in Isla; in the latter island a vein of copper is also wrought, and the same mineral has been found at Kilmartin. There is abundance of plum-pudding stone at Oban, Dunstaffnage, and northwards along the coast. The species of earth, called strontites, or strontian, was first discovered in the district of Ardnamurchan in 1791. Coal is wrought near Campbelton, and also in the island of Mull. Granite forms the great moun-

tain-masses in the north-east part of the county; but mica-slate predominates in the geological features both of the mainland and isles. An extensive tract of porphyry occurs on the north side of Loch Fyne; float-trap prevails in a few districts.

The principal mountains are Ben-Cruachan, 3,669 feet; Ben-More in Mull, 3,168 feet; Cruach-Lussa, 3,000 feet; Beden-na-Bean, near Loch Etive, 2,720 feet; the Paps of Jura, 2,580 feet; Buachaille, 2,537; Ben-na-hua, 2,515 feet; Ben-Arthur, or the Cobbler, 2,389 feet; Ben-More in Rum, 2,310 feet; and Ben-Tarn, 2,306 feet.—The principal streams are the Urchay or Orchy, and the Awe; the former flowing into, the latter flowing from, Loch Awe. Besides these, there are a multitude of minor streams, more distinguished by the romantic beauty of their course, than the volume of their water or their length.—Loch Awe is the principal inland lake. See separate articles AWE (LOCH), and ORCHY. The total area of the fresh water lakes in Argyleshire is about 52,000 square acres. The extent of marshy and mossy ground must be very great. Natural woods and plantations cover about 50,000 acres.

The climate of this district is upon the whole mild, but excessively humid. In the north-eastern quarter, where the general elevation is greatest, it is often very cold. The principal branch of rural industry is that of rearing cattle and sheep. The quantity of grain produced bears a small proportion to the area. Oats are the principal grain raised, but a large import of meal is required for the home-consumption. Potatoes are very extensively cultivated, the poorest shieling having uniformly attached to it a small patch of potatoe-ground. The cattle reared here are of a small size, but highly esteemed in the markets of the South, to which they are exported in immense numbers. The sheep are chiefly of the Linton or black-faced breed; and have on the mainland displaced the horned cattle in most farms. Red deer are still found in some of the forests; and grouse and ptarmigans are plentiful.

The principal lines of road in this county are: 1st, the road from Balahulish to Tyndrum, commonly called the Glencoe road, 31 miles in extent; 2d, the road from Tyndrum to Inverary, called the Dalmally road, 27 miles in extent; and, 3d, the road from Inverary to Tarbert, or the Glencroe road, 22 miles.—The principal canal, within the county, is the CRINAN canal: which see.

The manufacturing industry of this county is unimportant. A large quantity of kelp used formerly to be annually manufactured along the shores, but it has been driven out of the market by foreign barilla. The fisheries, however, on the coast, and particularly in the lochs, are productive and improving. The two principal fishing-stations are Inverary and Campbelton; but considerable quantities of herrings are caught, which are cured at various stations along the coasts, and on the shores of the different lochs. Some leather is manufactured in the county, and coarse woollen yarns, stuffs, and stockings, are still made to a considerable extent. The establishment of steam-packets between various points on the coast of Argyle and along the shores of its lochs, and the larger towns on the frith of Clyde up to Glasgow, has given a great impulse to industry. On this point we have pleasure in quoting the language of a cotemporary: "It is evident, from the peculiar form of Argyleshire, that it will always owe as much of the benefit arising from a ready communication between its near and distant parts, to improvements in water carriage, as to any extension of that by land. The difficulty, indeed, of forming roads in a district so serrated by the sea, and so blocked up by chains of hills, is almost insurmountable; hitherto there have

been only two or three roads in the county, skirting along the banks of the lochs. The very barrier, however, which mainly prevented communication in the days of our fathers, has turned out to be the highway in our own. By the never-to-be-sufficiently-admired spirit of the city of Glasgow, about 20 [there are now above 40] steam-vessels are constantly employed in conveying passengers and goods to and fro, throughout the country, and in transporting the country-produce to market at that city. The effect of this grand engine, even after so brief a period, is incalculable. It happens that, notwithstanding the immense extent of the country, there is not a single dwelling-place more than ten miles from the sea, nor a gentleman's seat, (excepting those on the banks of Loch Awe,) more than ten minutes walk from it. Every farmer, therefore, every gentleman, finds occasion to employ steam-navigation. When this mode of conveyance was in its infancy, it was generally supposed that the little wealth, bold shores, and scattered population of the county, kept it without the circle in which its adoption was to become beneficial. It came, however, to be attempted; and there is not now a loch, bay, or inlet, but holds a daily, or at least commands a weekly, communication with the lowlands and the several districts of the country. By this means, the farmers—even upon the smallest scale—are encouraged to fatten stock which they would never otherwise think of fattening; the fattening of stock, again, causes them to improve their arable land; the extra-profits enable them to buy luxuries which, in their turn, communicate sentiments of taste, and open the mind to liberal ideas. The comparative frequency, moreover, of their visits to the lowlands causes the speedier introduction of modern and improved systems of agriculture. Steam-boats are, in short, at once the heralds and the causes of every kind of improvement in Argyleshire; it is no hyperbole to say, that they have in ten years raised the value of land within the county twenty per cent. Every thing connected with this invention, so far as Argyleshire is concerned, bears a degree of romantic wonder strangely in contrast with its mechanical and common-place character. It accomplishes, in this district, transitions and juxtapositions almost as astonishing as those of an Arabian tale. The Highlander, for instance, who spends his general life amidst the wilds of Cowal, or upon the hills of Appin, can descend in the morning from his lonely home, and setting his foot about breakfast-time on board a steam-boat at some neighbouring promontory, suddenly finds himself in company, it may be, with tourists from all parts of the earth; he sits at dinner between a Russian and an American; and, in the evening, he who slept last night amidst the blue mists of Lorn, is traversing the gas-lighted streets of Glasgow, or may, perhaps, have advanced to Edinburgh itself, the polished, the enlightened, the temple of modern intelligence. Reversing this wonder, he who has all his life trod the beaten ways of men, and never but in dreams seen that land of hill and cloud whence of yore the blue-bonneted Gael went to descend, to sweep folds or change dynasties, can stand in the light of dawn amidst the refined objects of a capital, and when the shades of night have descended, finds himself in the very country of Ossian, with the black lake lying in imperturbable serenity at his feet, and over his head the grey hills that have never been touched by human foot. Steam-boats, it may be said, bring the most dissimilar ideas into conjunction,—make the rude Gael shake hands with the most refined Lowlander,—and cause the nineteenth and the first centuries to meet together. No such lever was ever introduced to raise and revolutionize the manners of a people, or the

resources of a country." [Chambers' Gazetteer of Scotland, 1832.] Previous to the abolition of the feudal system, in 1745, the obstacles to improvement either in agriculture or manufactures were quite insuperable in this district of Scotland. The abolition of that system,—the conversion of corn rents, or rents in kind and services, into money rents,—the suppression of smuggling,—the execution of the Caledonian and Crinan canals,—the formation of excellent lines of road throughout the county under the auspices of the parliamentary commissioners,—the more general diffusion of education,—and the introduction of a system of farming better adapted to the character and capabilities of the soil and country,—have all contributed to the improvement of this interesting district. But the main impulse has undoubtedly been given to industry in this quarter of the country by the introduction of steam-navigation, and the reciprocal intercourse which has consequently taken place between all parts of Argyleshire and the manufacturing districts of the west of Scotland. The average rate of wages is from 1s. 6d. to 2s. a-day. Argyleshire is divided into six districts: viz.

	Houses.	Population in 1831.
1. ARGYLE PROPER	3,116	17,668
2. COWAL	1,394	7,943
3. ISLAY	3,432	19,780
4. KINTYRE	3,131	20,632
5. LORN	2,909	15,963
6. MULL	3,244	18,307
	17,146	100,973

The above population composed 19,252 families, of whom 9,116 were engaged in agriculture; 3,241 in trade, manufactures, and handicraft; and 6,895 were not comprised in either of the preceding classes. The total population of the islands amounted to 35,065; that of the mainland to 66,335. In 1801, the total population of this county was 71,859; in 1811, 85,585; in 1821, 97,316. It would thus appear that the rate of increase of population has been falling off since the commencement of this century; and that during the ten years preceding 1831, it amounted to only 4 per cent, while the decennial ratio of increase on the population of England and Wales, since the commencement of the century, has been somewhat more than 16 per cent. The slow increase of population in this shire may be attributed partly to the limited nature of its territorial resources; partly to the extensive emigration which has taken place from this county chiefly to Canada; and partly to the system so generally pursued by the large proprietors of throwing several small farms into the hands of one tenant, and discountenancing any attempt at minute subdivision of the soil.

The number of parishes, in 1831, was 50, besides several mission-stations and chapelries. The synod of Argyle comprehends the presbyteries of Argyle, Dunoon, Kintyre, Islay, Jura, Lorn, and Mull. The number of parochial schools, in 1834, was 70; and of schools not parochial 194. The total number of children at these schools was about 15,000. The Gaelic language still predominates here; but the English is almost universally understood by the natives.

A number of islands are attached to this county, of which the chief are MUCK, TYREE, COLL, MULL, LISMORE, ISLAY, JURA, COLONSAY, STAFFA, ICOLM-KILL, &c., which will be severally described under their respective articles. The principal towns are INVERARY, which is the county-town, CAMPBELTON, and OBAN: See these articles. These three burghs unite with Ayr and Irvine, in Ayrshire, in returning one member to parliament; the county returns another, and has been represented by Campbell of Shawfield and Islay since 1835. The parliamentary con-

stituency, in 1838, was 1,589. Argyle gives the title of Duke and Earl to the chief of the family of Campbell, one of the most powerful of the Scottish nobility. The county is mostly peopled with this clan; and its principal proprietors are of it. The valued rent of the county, in 1674, was £149,595 10s. Scots; the real rent, as assessed in 1815, £227,493 sterling. Previous to the late equalization of weights and measures, the Inverary boll of grain contained 4 fir-lots $7\frac{1}{2}$ per cent. above the standard, or 6 bushels, 1 peck, 9 pints, 10 cubic inches English; and the boll of meal, at Inverary, 8 stone; at some other parts 9 stone; and at Campbelton 10 stone. The Campbelton potatoe peck weighed 56 lbs. avoird., and measured 9 English wine gallons; while the Inverary peck measured only $6\frac{1}{2}$ gallons. The customary pint contained 109.87 cubic inches; the pound at Campbelton 16 oz., and at Inverary, 24; the stone of butter, cheese, hay, lint, tallow, and wool, was 24 lbs. avoird.; and the barrel of herrings 32 gallons English.

Argyleshire is said to derive its name from *Earra Ghaidheal*, 'the country of the western Gael.' It was much infested, in ancient times, by predatory intruders, and has been in consequence the scene of numerous battles and heroic achievements. The deeds of Fingal and his heroes—if we may repose any confidence in the voice of Tradition—were mostly performed in this district; and numerous monuments of the remotest antiquity still remain to demonstrate the warlike spirit of its former inhabitants. In the middle ages the Macdougals of Lorn held sway over Argyle and Mull; while the Macdonalds, Lords of the Isles, were supreme in Islay, Kintyre, and the southern islands. These two chiefs were almost independent thanes, until their power was broken by James III., and by the transference of Lorn to the Stuart family by marriage. The erection of the earldom of Argyle in favour of Campbell of Loch Awe, in 1457, also greatly contributed to check the discords of the petty chieftains throughout this territory. The dukedom of Argyle was created in 1701.

ARIENAS (LOCH), a small inland sheet of water in the district of Morvern, Argyleshire. See **ALINE (LOCH)**.

ARISAIG. See **ARASAIG**.

ARKEG. See **ARCHAIG**.

ARMADALE, a hamlet in the parish of Sleat, on the southern shore of the isle of Skye, opposite the mouth of Loch Nevis on the mainland. Lord Macdonald has an unfinished seat here, in the castellated style. It commands a noble view, and is surrounded by thriving plantations. There is a road from hence to the Point of Sleat.

ARMADALE, or **ARMIDALE**, a village and herding fishing-station in the parish of Farr, Sutherlandshire. This is one of the safest landing-points on the coast.

ARMADALE, a hamlet in the parish of Bathgate, Linlithgowshire, $2\frac{1}{2}$ miles west of Bathgate, on the road from Edinburgh to Glasgow.

ARNGASK, a parish lying in the three counties of Perth, Kinross, and Fife. It is nearly of a circular form, and about 4 miles in diameter; and is bounded by the parishes of Strathmiglo, Abernethy, Dron, Forgandenny, Forteviot, and Orwel. Population, in 1801, 564; in 1831, 712.—This parish is in the presbytery of Perth, and synod of Perth and Stirling. Patrons, Mrs. Wardlaw, and the laird of Fordells. Minister's stipend £178 19s. 10d., with a manse and glebe. Schoolmaster's salary £34, with about £20 fees. There is a private school in the parish. The church was originally a chapel built for the accommodation of the family of Balvaird, and their dependents. It was granted, in 1282, to

the abbey of Cambuskenneth by Gilbert de Frisley to whom the barony of Arngask, or Forgie, belonged. Real value, in 1815, of that part of the parish which is in Perthshire, £1,164; in Fifehire, £895; in Kinross-shire, £875. Total, £2,934.

ARNISDALE. See **GLENELG**.

ARNTULLY, or **ARNTILLY**, a little irregularly built village in the south-western part of the parish of Kinclaven, 8 miles north of Perth.

AROS, a hamlet in the island of Mull, and parish of Killninian, at the confluence of the water of Aros with the sound of Mull, 18 miles north-west of Achnacraig ferry, and 4 miles from the head of Loch-na-Keal, to which there is a road from this place. The massive remains of Aros castle, an ancient stronghold of the Lords of the Isles, crowns the summit of a high rocky peninsula here.

ARRAN,* an island in the frith of Clyde, forming part of the shire of Bute. It lies in the mouth of the frith, or in the centre of the large bay of the Northern channel formed by the peninsula of Kintyre on the west, and the Ayrshire coast on the east; from the former it is distant about 6 miles, and is separated by the sound of Kilbrannan; from the latter, the average distance is about 13 miles, and the channel betwixt them is distinguished from the sound on the west of the island as being the frith of Clyde. From the island of Bute on the north, the least distance is 5 miles. Its greatest length, from the Cock of Arran, on the north, to the Struey rocks on the south, is about 26 miles; and the greatest breadth, from Clachland's point on the east, to Drimodune point on the west, is 12 miles.† The general outline is that of an irregular ellipse, little indented by bays or inlets. The largest indentation is that of Lam-lash bay betwixt Clachland's point and King's cross point, on the east coast. Loch Ranza, near the Cock, or northern extremity of the island, is a very small inlet. Brodick bay, a little to the north of Lam-lash bay, between Corriegill point on the south, and Merklund point on the north, affords good anchorage in about 5 fathoms water, but little shelter to vessels, especially in a north-east gale. Including the islet of Pladda on the south, and Holy isle in the mouth of Lam-lash bay, the area of Arran is about 100,000 Scots acres, of which 11,179 are arable, and 613 are under plantations. There is also a considerable extent of natural coppice-wood on the north-west and north-east coast. The south end of the island is remarkably destitute of any thing approaching to plantation, and even of copsewood.

The island of Arran is divided into five principal districts: viz., Brodick, Lam-lash, Southead, Shiskin, and Loch Ranza.

The Brodick district is that portion of the island most frequently visited by tourists, and most generally resorted to for sea-bathing. It lies around the bay of the same name, and extends northwards to

* Pronounced in Gaelic *Arrinn*. Dr. Macleod deduces this name from *Ar*, 'a land' or 'country,' and *rinn*, 'sharp points.' Hence *Arrinn* will signify 'the island of sharp pinnacles.' An etymology far more satisfactory than that of *Ar-rhin*, 'the Land' or the Field of Fion, i. e. Fingal; or from *Aran*, 'bread,' as denoting extraordinary fertility, which is by no means a characteristic of this island.

† Headrick estimates the length of this island, measuring from N. E. to S. W., at 34 or 35 miles; and its breadth as varying from 15 to 20 miles. Mr. Jardine states its length to be only 21 miles, and its breadth 9. Professor Jamieson, in his 'Outline of the Mineralogy of Arran,' estimates its length at 32, and breadth at 12 miles. The writer of the article Arran, in the 'Penny Cyclopædia,' vaguely estimates its length from near Loch Ranza, in the N. N. W., to Kildonan, in the S. S. E., at "somewhat more than 20 miles; and its greatest breadth at 12." The Rev. Angus Macmillan, minister of Kilmorie, in his evidence before the Commissioners of Religious Instruction, [Report VII. p. 470.] states the greatest length of his parish to be upwards of 30 miles. The measurements in our text have been given after a careful examination and comparison of the best maps and reports on the island.

South Sannox. Its northern part is composed of the towering Goatfell, and its brother-mountains; and the beautiful glens or mountain-ravines called Glen Rosa or Rossie, Glen Sherrig, Glen Shant, and Glen Cloy, occur here. The base of the mountains here approaches close to the sea, so that the full effect of their altitude—which in Goatfell is 2,865 feet—imposes itself on the eye of the spectator from the sea or beach, while they are constantly varying their appearance, as seen from any quarter, under the accidents of weather, light, and shade. The lower part of Goatfell is composed of red sandstone; then follows mica-slate, which is surmounted by a pyramidal mass of granite. The view from the summit embraces the coast of Ireland from Fairhead to Belfast loch; and the mountains of Isla, Jura, and Mull. The ascent may be accomplished, with the aid of a guide, in about two hours; and is best achieved from the inn at Brodick. The natives call this mountain *Gaoth Bhein*, or *Ben-Ghaoil*, that is 'the Mountain of Winds.' To the eye of a spectator on the summit of Goatfell—which is the loftiest peak in this granitic district—the neighbouring mountains present a wild assemblage of bare ridges, yawning chasms, abrupt precipices, and every fantastic form of outline, while the profound gulfs between them are darkened by eternal shadow.—On the north side of Brodick bay, adjoining the village, is the castle of Brodick, one of the seats of the duke of Hamilton. It is an old irregular pile of building, of secluded aspect, but in good repair. Mr. Galbraith has recently ascertained its position to be in N. lat. $55^{\circ} 35' 45''$; W. long. $5^{\circ} 10' 42''$. The grounds around it are well-wooded; and the majestic heights of Goatfell, and Bemmish [2,598 feet], rise in the immediate background. This stronghold was surprised by James Lord Douglas, Sir Robert Boyd, and other partizans of Bruce in 1306, demolished in 1456, rebuilt by James V., and garrisoned by Cromwell. Cromwell's garrison, to the number of 80 men, it is traditionally related, were surprised and cut off by the natives.—On the opposite side of the bay, and at about one mile's distance from the sea, in Glen Cloy, is Kilmichael, the seat of John Fullarton, Esq., whose immediate ancestors received this estate, and a farm on the west side of the island, from Robert Bruce, for services rendered to him while in concealment in this island. Martin says: "If tradition be true, this little family is said to be of seven hundred years standing. The present possessor obliged me with the sight of his old and new charters, by which he is one of the king's coroners within this island, and as such, he hath a halbert peculiar to his office; he has his right of late from the family of Hamilton, wherein his title and perquisites of coroner are confirmed to him and his heirs. He is obliged to have three men to attend him upon all public emergencies, and he is bound by his office to pursue all malefactors, and to deliver them to the steward, or in his absence to the next judge. And if any of the inhabitants refuse to pay their rents at the usual term, the coroner is bound to take him personally, or to seize his goods. And if it should happen that the coroner with his retinue of three men is not sufficient to put his office in execution, then he summons all the inhabitants to concur with him; and immediately they rendezvous to the place, where he fixes his coroner's staff. The perquisites due to the coroner are a firloft or bushel of oats, and a lamb from every village in the isle; both which are punctually paid him at the ordinary terms." ['Description of the Western Islands.'] Fergus Mac-Louis, or Fullarton's, charter is dated Nov. 26, 1307.

A number of cottages and villas are scattered along Brodick bay, which is becoming a favourite watering-place during the summer. Dr. Macculloch speaks of it in terms of unwonted rapture. "Every variety of landscape," he says, "is united in this extraordinary spot. The rural charms of the ancient English village, unrestricted in space and profuse of unoccupied land, are joined to the richness of cultivation, and contrasted with the wildness of moorland and rocky pasture. On one hand is the wild mountain torrent, and on another, the tranquil river meanders through the rich plain. Here the sea curls on the smooth beach, and there it foams against a rocky shore, or washes the foot of the high and rugged cliffs, or the skirts of the wooded hill. The white sails of boats are seen passing and repassing among trees,—the battlements of the castle, just visible, throw an air of ancient grandeur over the woods, and, united to this variety, is all the sublimity and all the rudeness of the Alpine landscape which surrounds and involves the whole." ['Highlands and Western Isles,' vol. ii. p. 29.] There is regular steam-communication between Brodick and the port of Ardrossan in Ayrshire daily during summer; but this route to Glasgow is circuitous, and there is a want of direct daily communication with that city, steamers proceeding to Arran twice a week. These latter boats generally make Brodick bay in about 6 or 7 hours, and, after discharging passengers, proceed round to Lam-lash bay, where they lie during the night, returning to Brodick for passengers at an early hour next morning.

Lamlash district, to the south of Brodick district, has but a small extent of plantation within it, and no hills exceeding 1,200 feet in altitude. The village is in the form of a crescent facing the bay and the Holy isle, and backed by wooded heights, beyond which the green and rounded summits of the hills in this district are seen. The church is at the southern extremity of the village, which is $4\frac{1}{2}$ miles distant from Brodick, and 4 miles north of Whiting bay. See article KILBRIDE.—"The bay of Lamlash," says Headrick, "may be about 3 miles, in a right line, from its northern to its southern entrance; and at its centre it forms a sort of semicircle of nearly 2 miles across, having the Holy isle on one side, and the vale of Lamlash on the other. The northern wing projects nearly towards north-east, while the southern projects nearly towards south-east, giving to the whole a figure approaching to that of a horse-shoe, which prevents the waves of the ocean from getting into the interior bay. The two inlets may be about a quarter of a mile in breadth at their mouths, and widen gradually as they approach the central bay. The southern inlet is preferred by mariners, because here there is no danger but what is seen. The northern inlet is equally safe to those who know it: but the tails of rocks we have described as projected from Dun-Fioun, and the gradual decrease of altitude of the rocks on the opposite point of Holy isle, cause them to extend a considerable way below the sea, before they sink out of the reach of vessels drawing a great depth of water. But to those who know the channel, there is sufficient depth, at both entrances, for the largest ships of the line. Within, there is good holding-ground; sufficient depth for the largest ships; and room enough for the greatest navy to ride at anchor. In fact, this is one of the best harbours in the frith of Clyde,—if not in the world. In front of the village, dutchess Ann—who seems to have been a woman of superior capacity—caused a harbour to be built of large quadrangular blocks of sandstone. We may form some idea of the magnitude and solidity of this work, when informed that it cost £2,913 10s. 5 $\frac{1}{2}$ d.

* This is Dr. Macculloch's admeasurement. Professor Playfair estimates its height at 2,915; Mr. Galbraith at 2,863 feet.

sterling, at a time when masons' wages are said to have been 8d., and labourers' wages 4d. per day. It is a great pity this building was allowed to be demolished; because its ruins render the village of more difficult access from the sea, than if it had never been constructed.' ['View,' pp. 88—91.] This harbour has now nearly disappeared; a great part of the stones have been carried off to build the new quay a few hundred yards to the north, and the sand has buried a part. 'The Holy isle is interesting,' says Macculloch, "as well for the beauty of its conical form, rising to 1,000* feet, as for the view from its summit, and the striking character of its columnar cliffs. The ascent is rendered peculiarly laborious; no less from the steepness and irregularity of the ground, than from the tangled growth of the *Arbutus uva ursi* by which it is covered. The whole surface scarcely bears any other plant than this beautiful trailing shrub; peculiarly beautiful when its bright scarlet berries are present to contrast with the rich dark green of its elegant foliage. The columnar cliffs, which lie on the east side, though having no pretensions to the regularity of Staffa, are still picturesque, and are free from the stiffness too common in this class of rock; consisting of various irregular stages piled on each other, broken, and intermixed with ruder masses of irregular rocks, and with verdure and shrubs of humble growth. Beneath, a smooth and curved recess in a mass of sandstone, produces that species of echo which occurs in the whispering gallery of St. Paul's, and in other similar situations. There are no ruins now to be traced in Lamlash; but Dean Monro says that it had 'ane monastery of friars, founded by John, Lord of the Isles, 'which is decayit.' That was in 1594; and what was then decayed, has now disappeared. He calls the island Molass; and it is pretended that there was a cave,† or hermitage, inhabited by a Saint Maol Jos, who is buried at Shiskin, on the south side of Arran. It is further said that there was once a castle here, built by Somerlid."—King's Cross, in this district, which forms the dividing headland between Lamlash bay and Whiting bay, is said by some to have been the point from whence Robert Bruce watched for the lighting-up of the 'signal-flame' at Turnberry point, on the opposite coast of Ayrshire, which was to intimate to him that the way was clear for his making a descent on the Carrick coast. Other traditions—which are followed by Sir Walter Scott in his 'Lord of the Isles.' [See Canto V. st. 7 and 17.]—represent Bruce as first hailing the supposed signal, 'so flickering, fierce, and bright,' from the battlements of Brodick castle. See TURNBERRY.

Southend district stretching from Largybeg point, the southern extremity of Whiting bay, to Kilpatrick on Drimodune bay, is the most valuable district of the island in agricultural respects. There is here a belt of cultivated land, in some places of considerable breadth, between the shore and the secondary hills of the interior. The scenery is of a milder character than that of any other quarter of the island; but there is no accommodation for bathers in this direction, the only houses being a few farm-hamlets and scattered shielings, and the beach being rocky. This district is intersected by two main rivulets, viz. the Torlin or Torrylin, towards the east, and the water of Slidery towards the west. These streams run nearly parallel to each other, from north-east to south-west, and receive numerous tributary streams in their progress from the secondary mountains towards the sea. Most of the other burns which flow into the sea are

merely mountain-torrents, the beds of which are nearly dry except when they are swelled by excessive rains. These burns have cut deep chasms or ravines in the strata; and the main streams have frequently formed delightful valleys, though sometimes of small extent. Towards the head of Glen Scordel, from which the main branch of the water of Slidery flows, and in several other places, there are vast veins of whinstone, interspersed with innumerable particles of pyrites, which retain their full brilliancy, in spite of exposure to air and the astringent moss-water to the action of which they are subjected. "These," says Headrick, "the people are confident in the belief of being gold; and I confess I was a little staggered, until my ingenious friend, Dr. Thomson, by analyzing a specimen, assured me that the gold was neither more nor less than pyrites of iron!"—The islet of Pladda lies opposite Kildonan point in this division. See PLADDA. The ruins of Kildonan castle, a small square fortalice, surmount the sea-bank here, but present no historical associations of interest. A large portion of the walls fell about 10 years ago.—Auchinhew burn, in this quarter, presents, according to Headrick, in the upper part of its wild ravine course, a fall or cascade, called Essiemore.—The Struey rocks, further to the west, or Bennan head, are precipitous cliffs of black basalt rising to an altitude of from 300 to 400 feet above a beach thickly strewn with their dissevered fragments. A little to the west of these rocks is a vast cave called the Black cave.—The kirk and manse of Kilmorie are situated in this district, on the Torrylin, where its mouth forms a small harbour for boats. See KILMORIE.

Shiskin district, so called from the little village or hamlet of Shiskin, or Shedog, is chiefly remarkable for the extensive natural caves which occur here in the sandstone rocks close upon the beach. One of these, called the King's cove, is supposed to have given shelter to 'the royal Bruce.' It is situated opposite Portree in Higher Cardel of Kintyre. It is also universally reputed to have been the occasional residence of Fioun,† or Fingal, when he resorted to Arran for the purpose of hunting. "The old people here," says Headrick, "have many ridiculous stories about Fioun and his heroes, which have been transmitted, from a remote period, by father to son,—in their progress becoming more and more extravagant. They believe Fioun and his heroes to have been giants of extraordinary size. They say that Fioun made a bridge from Kintyre to this place, over which he could pass, by a few steps, from the one land to the other. But, what is esteemed ocular demonstration of the gigantic size of Fioun, and sufficient to overwhelm the most obstinate scepticism, the hero is said to have had a son born to him in the cave; and a straight groove, cut on the side of the cave, is shown, which is firmly believed to have been the exact length of the child's foot the day after he was born. The groove is more than 2 feet in length; and, taking the human foot to be one sixth of a man's height, it follows, the child must have been more than 12 feet high the day after he was born! The cave is scooped out of fine-grained white sandstone. A perpendicular vein of the same sandstone has stood in the centre, from which the strata dip rapidly on each side, forming the roof into a sort of Gothic arch, to which the vein above serves the purpose of a key-stone. At the back part of the cave, this vein comes down to the bottom, and forms a perpendicular column with a recess on each side. The northern

* Mr. Burrell's barometrical admeasurement gave only 801 feet.

† Headrick affirms the existence of and describes this cave. See 'View,' p. 80.

† *Fioun* means fair-haired; *Gael* was added to denote his race or nation. Highlanders seldom apply the epithet *Gael* to Fioun, unless you express doubts concerning his extraction. But they often characterize him by the surname of *MacCoul*, the name of his father.—*Headrick*.

recess is only a few feet. The southern is of uncertain extent, being gradually contracted in breadth, and nearly closed by rounded stones. The length of this recess is about 30 feet. From the pillar in the back-ground, to the mouth of the cave, exceeds 100 feet. The greatest breadth may be about 49 feet; and the greatest height the same. The mouth has been defended by a rampart of loose stones; and stones are scattered through the cave which seem to have been used as seats. On the column there is a figure cut resembling a two-handed sword. Some think this was an exact representation of the sword of Fionn; others of that of Robert Bruce. To me it appears to be neither one nor other, but a representation of the cross. It stands upon a rude outline representing a mountain, probably Mount Calvary. On each side there is a figure kneeling and praying towards the cross. The sides of the cave exhibit innumerable small figures equally rude, representing dogs chasing stags, and men shooting arrows at them. They also represent goats, sheep, cattle, and various other animals, though the figures are so rude, that it is seldom possible to ascertain what they represent." Mr Jamieson, [p. 125,] thinks these scratches were "made by idle fishermen, or smugglers." Macculloch calls them "casual scratches by idle boys." North of this cave are several smaller caves, which communicate with each other. One of these is called the King's kitchen, another his cellar, his larder, &c. On the south side there is a cave called the King's stable, presenting a larger area than the palace, as the cave of residence is called. The scene from the mouth of these caves, in a fine summer-day, is very beautiful. And sweet it were to sit here—

"When still and dim

The beauty-breathing hues of eve expand;
When day's last roses fade on Ocean's brim,
And Nature veils her brow, and chants her vesper-hymn."

The Blackwater, a considerable stream, here falls into Drimodune bay. A small harbour has been constructed at its mouth, which is the ferrying-place to Campbellton, and from which there is a road across the island, by Shedog, the western side of Craigvore, Corbie's craig, Glen Ture, and Glen Sherrig, to Brodick.—The Mauchry burn is another considerable stream descending from Glen Ture, and falling into Mauchry bay to the north of the King's cove. Pennant tells us that this river flows through a rocky channel, which, in one part has worn through a rock, and left so contracted a gap at the top as to form a very easy step across. "Yet not long ago," he adds, "a poor woman in the attempt, after getting one foot over, was struck with such horror at the tremendous torrent beneath, that she remained for some hours in that attitude, not daring to bring her other foot over, till some kind passenger luckily came by and assisted her out of her distress!"

The remaining or northern portion of the island forms the Loch Ranza district, extending from Auchnagallen, a little to the north of the Mauchry burn, round, by the Cock of Arran, to Corrie point on the east coast. This is a highly interesting district in point of scenery. The road by the shore presents a succession of beautiful views; and the village or namlet of Loch Ranza itself is one of the most picturesque spots any where to be found in the western islands. It has a safe harbour formed by a natural inlet of the sea in the mouth of the valley or glen. Pennant, who crossed over to this bay from the Argyle coast, says: "The approach was magnificent; a fine bay in front, about a mile deep, having a ruined castle near the lower end, on a low far projecting neck of land, that forms another harbour, with a narrow passage; but within has three fathom of water, even at the lowest ebb. Beyond is a little

plain watered by a stream, and inhabited by the people of a small village. The whole is environed with a theatre of mountains; and in the back-ground the serrated crags of Grianan-Athol soar above."—[Tour to the Western Isles, p. 191-2.] Lord Teignmouth, who saw Loch Ranza under its winter-aspect, says: "In point of gloomy grandeur no British bay surpasses Loch Ranza. Dark ridges hem it in." We are quite sure that gloomy grandeur is not the common impression left by this scene on the eye and mind of the visitor. While residing here in summer we have often felt the beauty and truth of the sentiment conveyed in the bard's description of the approach of Bruce's little armament to this point of 'Arran's isle:'—

"The sun, ere yet he sunk behind
Ben-Gholl, 'the Mountain of the Wind,'
Gave his grim peaks a greeting kind,
And bade Loch Ranza smile
Thither their destined course they drew;
It seem'd the isle her monarch knew,
So brilliant was the landward view,
The ocean so serene;
Each puny wave in diamonds roll'd
O'er the calm deep, where hues of gold
With azure strove and green.
The hill, the vale, the tree, the tower,
Glow'd with the tints of evening's hour;
The beach was silver sheen;
The wind breathed soft as lover's sigh,
And, oft renew'd, seem'd oft to die,
With breathless pause between,
O who, with speech of war and woes,
Would wish to break the soft repose
Of such enchanting scene!"

Glen Sannox in this district has been compared to the celebrated Glencoe. "It is," says Macculloch, "the sublime of magnitude, and simplicity, and obscurity, and silence. Possessing no water, except the mountain torrents, it is far inferior to Coruisk in variety; equally also falling short of it in grandeur and diversity of outline. It is inferior too in dimensions, since that part of it which admits of a comparison, does not much exceed a mile in length. But, to the eye, that difference of dimension is scarcely sensible: since here, as in that valley, there is no scale by which the magnitude can be determined. The effect of vacancy united to vastness of dimension is the same in both: there is the same deception, at first, as to the space; which is only rendered sensible by the suddenness with which we lose sight of our companions, and by the sight of unheard torrents. Perpetual twilight appears to reign here, even at mid-day; a gloomy and grey atmosphere uniting, into one visible sort of obscurity, the only lights which the objects ever receive, reflected from rock to rock, and from the clouds which so often involve the lofty boundaries of this valley." No one should visit Arran without attempting to make themselves acquainted with the beauty of the coast-scenery from Brodick to Glen Sannox; and, if time permits, to travel from Sannox to Loch Ranza, through Glen Halmidel, the excursion will not be regretted.—There is a small chapel at Loch Ranza, built about 60 years ago at the expense of the duke of Hamilton, on the boundary between Kilmore and Kilbride parishes, but within the former parish. It is distant, by the road, about 24 miles from Kilmore church, and about 12 from the boundary of Shiskin district. The salary of the minister is £41, secured by a deed of mortification executed by Ann, Duchess of Hamilton, bearing date, 1st April, 1710.

The climate of Arran is moist, but is considered mild and healthy. Sudden and heavy falls of rain in summer and autumn are its greatest disadvantages. Many greenhouse-plants stand the winter in the open air at Brodick castle, and at different villas along the coast.—There are no foxes, badgers, or weasels, in Arran; but the brown rat is very destructive. Red

deer exist in the northern part of the island. Black and red grouse are abundant; and there are a few pheasants. Eagles are frequently seen here; we have ourselves in the course of a single day seen no less than four of these noble birds. Trout are numerous; and fine sea-trout are occasionally taken in the Jorsa, and Loch Jorsa. Adders and snakes are said by Headrich to be very numerous, but we have seldom seen either species of reptile on this island. The botany of Arran is considered rich.—The geognostic structure of this island has been elaborately examined by Professor Jamieson, in his 'Outline of the Mineralogy of the Shetland islands, and the island of Arran.' The greater portion of the northern part of the island consists of primitive rocks; floetz rock constitutes the southern half. The Goatfell group is of granite. Holy isle consists of a mass of basalt. Porphyritic rocks are found at Lamash, Drimodune, and some other places; and pitch-stone frequently occurs both in beds and veins.

The ecclesiastical statistics of Arran will be detailed under the articles KILBRIDE and KILMORIE. There are six parochial schools in the island. The population, in 1801, was 5,179; in 1821, 6,541; in 1831, 6,427; and in 1841, 6,181. The decrease in the last decennial periods has been chiefly occasioned by the emigration of people, principally from Sannox district, to Lower Canada.—The proprietors of this island are the Duke of Hamilton, the Hon. Mrs. Westra, and Fullarton of Kilmichael and Whitefarlane. The duke is by far the greatest proprietor. His grace's arable land, in 1813, was 10,228 Scots acres; and his present rental £10,000, arising from 458 farms or possessions. [See a valuable paper, by Mr. John Paterson, in the 'Prize-essays of the Highland Society,' vol. v. pp. 125—154.]

We have already, in the course of this article, had occasion to notice the various traditions which exist in Arran respecting Fingal; and may now suggest that some of these may owe their origin to the early presence of the Norwegians, called Fiongall, or 'white foreigners,' by the Irish annalists. Somerled,thane of Argyle in the 12th century—whose name has also occurred in this article—appears to have been of Scoto-Irish descent. His father Gillibred had possessions on the mainland of Argyle, probably in the district of Morvern. When yet a youth, Somerled signally defeated a band of Norse pirates; and, having obtained high reputation for his prowess and skill in arms, was enabled ultimately to assume the title of Lord or Regulus of Argyle, and to compel Godred of Norway to cede to him what were then called the South isles, namely, Bute, Arran, Islay, Jura, Mull, and the peninsula of Kintyre. On the death of Somerled, in 1164, Mr. Gregory conjectures that Arran was probably divided between his sons Reginald and Angus, and may have been the cause of the deadly feud which existed between them. ['History of the Western Highlands and Isles,' Edin. 1836. Svo. p. 17.] Angus, with his sons, fell in an engagement with the men of Skye in 1210; whereupon Dugall, another son of Somerled, and the ancestor of the house of Argyle and Lorn, patronymically called Macdougall, succeeded to his possessions. It appears, however, that the kings of Norway continued to be acknowledged as the sovereigns of the Isles, until their final cession to the Scottish crown by Magnus of Norway, in July, 1266. Somerled's descendants now became vassals of the king of Scotland for all their possessions; but the islands of Man, Arran, and Bute, were annexed to the Crown. After the unfortunate battle of Methven, Robert Bruce lay for some time concealed, it is said, in Arran; and afterwards in the little island of Rachrin on the northern coast of Ireland, whence he again

passed over to Arran with a fleet of 33 galleys, and 300 men, and joined Sir James Douglas, who, with a band of Bruce's devoted adherents, had contrived to maintain themselves in Arran, and to seize the castle of Brodick, then held by Sir John Hastings, an English knight; and here he projected his descent on the Carrick coast. On the marriage of the Princess Mary, eldest sister of James III., to Sir Thomas Boyd, eldest son of Lord Boyd, in 1466, the island of Arran was erected into an earldom in favour of Boyd; but upon the forfeiture of that family, the house of Hamilton rose upon its ruins; and, a divorce having been obtained, the Countess of Arran gave her hand to Lord Hamilton—to whom it had been promised in 1454—and conveyed with it the earldom of Arran. [Tytler's History of Scotland, vol. iv. p. 227]

ARROQUHAR, more commonly ARROCHAR, a parish in the north-west corner of Dumbartonshire; bounded on the north by Strathfillan in Perthshire; on the east by Perthshire and Loch Lomond to Nether Inveruglass; on the south by the parish of Luss, from which it is separated by the Douglass burn; and on the west by the upper part of Loch Long, and Argyshire. The extent of the parish is nearly 15 miles, exclusive of the farms of Ardlleish and Doune, which lie on the east side of Loch Lomond, at the northern end of it. The mean breadth may be computed at 3 miles. Population, in 1801, 470; in 1831, 559. Assessed property, in 1815, £2,838. Houses 73. The Statistical report of 1839 states the area of the parish at 31,011 acres, of which scarcely one-fiftieth are arable. A large portion is covered with oak-coppice. This is a very picturesque region; it is mountainous throughout, and presents some fine lake-scenery. The principal mountain within the parish is Ben-Voirlich which, according to Bouë, has an altitude of 3,300 feet; or, according to the writer of the article Dumbartonshire, in the Penny Cyclopædia, of 3,330 feet, "that is," the writer adds, "above 100 feet higher than the adjacent Ben-Lomond." But, according to the Ordnance survey, its altitude is only 3,180 feet; while that of Ben-Lomond is stated at 3,195 feet. It forms a noble object in the landscape to the tourist ascending either Loch Lomond or Loch Long. Its position is about 6 miles to the north of the head of Loch Long, and 3 west of Ardvorlich on Loch Lomond. The principal streams within the parish are the Falloch, descending from Glen Falloch into the head of Loch Lomond; the Inveruglass from Loch-Sloy; and the Douglass, which falls into Loch Lomond opposite Rowardennan. The streams which fall into Loch Long have a comparatively short course.—The scenery of the upper part of Loch Lomond, in this parish, is neither so extensive nor so magnificent as towards the middle and lower end; it is, however, of a wilder and more romantic character. The lake is here narrow and river-like, as most of the Scottish lakes are; and the adjoining hills, broken and rugged in their outlines, rise up at once abruptly and precipitously from the water. Still, however, the scenery is such as must afford high gratification to every lover of the picturesque. The romantic and varied shores,—the bold projecting headlands and retiring bays,—the rugged and serrated hills,—and

* Arroquhar is a Celtic word which signifies a high or hilly country. It is generally pronounced, in the Gaelic language, *Arrar*, which is a contraction of *Arathir*, *ard* signifying high, and *chiar* a country. The name is very descriptive of the place, which is high and mountainous, having very little flat or arable ground in it. [Old Statistical Account.]—Arrochar, Chalmers says, appears as the name of this district in the charters of the 13th century. It was called the Arachor of Luss, or the Upper carucate of Land of Luss. "*Arachor*," he adds, "seems to have been a Gaelic term which was applied to a certain division of land." [Caledonia, vol. iii. p. 908.]

the numerous openings of the deep and lonely glens,—form together a picture of peculiar and enchanting interest; the effect of which is heightened in a surprising degree, when all the magic tints of its varied surface are awakened by the brightness of a summer's sun. Then, and then only, can it be seen in its full effect.—In ancient times, the land forming the western shore of Loch Lomond, from Tarbet upwards, and the greater part of this parish, was inhabited by

'The wild Macfarlane's' plaided clan.'

From Loch-Sloy, a small lake near the base of Ben-Voirlich, which formed the gathering-place of the clan, they took their slughorn or war-cry of 'Loch Sloy! Loch Sloy!' Loch Sluai, in Gaelic, signifying 'the Lake of the Host or Army.' Their badge was a sprig of the Cloudberry bush. The remote ancestor of this clan is said to have been Farlan, a son of one of the early Earls of Lennox; and from him they adopted their patronymic of M'Farlane. Though the M'Gregors appear to have enjoyed a pre-eminence in disturbing the Lowland districts, the M'Farlanes were also in the practice of doing so as far as their more limited numbers allowed. In 1587, they were declared to be one of the clans for whom the chief was made responsible. [Acta Parl. iii. 467.] In 1594, they were denounced as being in the habit of committing theft, robbery, and oppression. [Ibid. iv. 71.] And, in July, 1624, many of the clan were tried, and convicted of theft and robbery. Some of them were punished, some were pardoned, while others were removed to the highlands of Aberdeenshire, and to Strathaven in Banffshire, where they assumed the names of Stewart, M'Caudy, Greisock, M'James, and M'Innes. The lands have now passed entirely from the chiefs of this clan; and the house which they at one time inhabited, was, for a considerable time, an inn rented by the Duke of Argyll for the accommodation of travellers proceeding from Tarbet, by Glencroe, to Inverary. A new inn has, however, been built a little further up the loch and the old inn is now, we believe, a private residence. The inn commands a fine view of the head of Loch Long which Gilpin characterises as exhibiting "a simple and very sublime piece of lake scenery." Immediately opposite rises Ben Arthur, a huge mountain at the opening of Glencroe, the naked rocky summit of which being thought to bear some resemblance to the figure of a shoemaker seated at work on his stool, has procured for it the less-dignified appellation of The Cobler. See GLENCROE. Toward the lower part of the loch, as seen from this point, the mountains decline in gentle perspective, and, though not much varied in form, are pleasing from their verdant covering and the coppice which sprinkles their sides. Those portions of the parish which lie along the western bank of Loch Lomond, from Tarbet inn upwards to the head, and around the upper part of Loch Long, are best known to tourists. Arrochar inn is 17½ miles from Helensburgh; 22 from Dumbarton by way of Luss; 14 from Cairndow; and 23½ from Inverary. Its distance from Tarbet on Loch Lomond is 2 miles. The scenery of the road across the isthmus between the two lochs is very striking and beautiful. See TARBET. During the summer season there is a steamer daily from and to Glasgow, both by way of Loch Lomond and Loch Long. The village is rapidly increasing by the building of bathing-villas, which are also rising in various directions around the head of Loch Long.—The parish of Arrochar is in the synod of Glasgow and Ayr, and presbytery of Dumbarton. It was originally an appendage of the parish of Luss, and was disjoined from it in the year 1658. The stipend, including the glebe, is £253 19s. 7d. The church was built in 1733; the manse, in 1837.

Sir James Colquhoun of Luss, Bart., is patron, and almost sole proprietor. There are two schools in this parish, one parochial, the other endowed by Mr. M'Murich of Stuckgown, whose beautiful mansion graces the banks of Loch Lomond in this parish.—See articles LOCH LOMOND, and LOCH LONG.

ARTHUR, a name of frequent occurrence in Scottish as well as Welsh and English topography, and generally traced by the voice of Tradition to the far-famed Arthur of romance. "It is amusing to remark," says Chalmers, in his elaborate 'Caledonia,' [vol. i. p. 244,] "how many notices the North-British topography furnishes, with regard to Arthur, whose fame seems to brighten, as inquiry dispels the doubts of scepticism, and archæology establishes the certainties of truth.—In Clydesdale, within the parish of Crawford, there is Arthur's fountain: in 1239, there was a grant of David de Lindsay to the monks of Newbotle, of the lands of Brothralwyn, in that district, which were bounded, on the west part, 'a fonte Arthuri usque ad summitate montis.' Chart. Newbotle, N. 148.—The Welsh poets assign a palace to Arthur, among the Northern Britons, at Penryn-ryoneth. In Lhuyd's Cornish vocabulary, p. 238, Penryn-ryoneth is called, the seat of the Prince of Cumbria: and see also Richard's Welsh Dictionary. The British *Penryn* supposes a promontory, with some circumstance which reduplicates its height; and this intimation points to Alclud, the well-known metropolis of the Romanized Britons, in Strathclyde. Now a parliamentary record of the reign of David II., in 1367, giving a curious detail of the king's rents and profits in Dunbartonshire, states the 'redditus assize Castri Arthuri.' MSS. Reg. House; Paper-Office. The castle of Dunbarton, therefore, was the Castrum Arthuri, long before the age of David II. See the site of Dunbarton, in Ainslie's Map of Renfrewshire. The Point of Cardross was the Rhyn-ryoneth; the castle of Dunbarton was the Penrhyn-ryoneth. According to the British Triads, Kentigern, the well-known founder of the church of Glasgow, had his episcopal seat at Pen-rhyn-ryoneth.—The romantic castle of Stirling was equally supposed, during the middle ages, to have been the festive scene of the round-table of Arthur. 'Rex Arthurus,' says William of Worcester, in his Itinerary, p. 311. 'Custodiebat le round-table in castro de Styr-lyng, aliter, Snowdon-vest-castell.' The name of Snowdon castle is nothing more than the Snuà-dun of the Scoto-Irish people, signifying the fort, or fortified hill on the river, as we may learn from O'Brien, and Shaw; and the Snuà-dun has been converted to Snow-dun, by the Scoto-Saxon people, from a retrospection to the Snow-don of Wales, which is itself a mere translation from the Welsh.—In Neilston parish, in Renfrewshire, there still remain Arthur-lee, Low Arthur-lee, and West Arthur-lee.—Arthur's-oven, on the Carron, was known by that name, as early, if not earlier, than the reign of Alexander III. In 1293, William Gurlay granted to the monks of Newbotle 'firmationem unius stagni ad opus molendini sui del Stanhus quod juxta furnum Arthuri infra baronium de Dunypas est.' Chart. Newbotle, No. 239.—The name of Arthur's Seat, at Edinburgh, is said, by a late inquirer, 'to be only a name of yesterday.' Yet, that remarkable height had that distinguished name before the publication of Camden's Britannia, in 1585, as we may see in p. 478; and before the publication of Major, in 1521, as appears in fo. 28; and even before the end of the 15th century, as Kennedy, in his flying with Dunbar, mentions 'Arthur Sate or ony higher hill.' Ramsay's Evergreen, v. ii. p. 65.—This is not the only hill which bears the celebrated name of Arthur. Not far from the top of Loch-Long, which separates

Argyle and Dunbarton, there is a conical hill that is called Arthur's Seat. Guide to Loch Lomond, pl. iii.—A rock, on the north side of the hill of Dunbarrow, in Dunnichen parish, Forfarshire, has long bore, in the tradition of the country, the distinguished name of Arthur's Seat. Stat. Acco. v. i. p. 419.—In the parish of Cupar-Angus, in Perthshire, there is a standing stone, called the Stone of Arthur; near it is a gentleman's seat, called Arthur-stone; and not far from it is a farm, named Arthur's fold.—But, it is at Meikle, in the same vicinity, that the celebrity of Arthur, and the evil fame of his queen Venora, are most distinctly remembered. Pennant's Tour, v. ii. p. 177-8; and Stat. Acco. v. i. p. 506: and above all, see Bellenden's Boece, fo. lxxviii, for the origin of the popular fictions at Meikle, about Arthur and Venora.—The Scottish chroniclers, Barbour and Wyntown, were perfectly acquainted with the Arthur of romance. We may easily infer, from the local facts, that his story must have been equally known to Thomas of Ercildun, a century sooner. In 1293, the monks of Newbotle knew how to make a mill-dam, with the materials which they found on the banks of the Carron. Sir Michael Bruce of Stanhus thought it necessary, in 1743, to pull down Arthur's Oon, one of the most curious remains of antiquity, for the stones which it furnished, for building a mill-dam. The enraged antiquaries consigned Sir Michael to eternal ridicule. See the Antiquary Repertory, v. iii. p. 74-5. Sir David Lindsay, in his 'Complaynt' of the Papingo, makes her take leave of Stirling castle thus:—

Adew fair Snawdoun, with thy towris hie,
Thy chapell royall, park, and tabill round.'

And, in his 'Dreme,' he mentions his having diverted James V., when young, with 'antique storeis and deidis martiall,

'Of Hector, Arthur, and gentile Julius,
Of Alexander, and worthy Pompeius.'

This shows that the stories of Arthur were then ranked among those of the most celebrated heroes of antiquity." See article MEIGLE.

ARTHUR'S SEAT, the most eminent object, perhaps, in the above numerous list, is a hill in the immediate vicinity of Edinburgh, which rises to the height of 822 feet above the level of the sea. It commands a beautiful prospect on all sides, and forms a principal and imposing object from every point of approach to the capital of Scotland. The ascent is usually made from the precincts of Holyrood, or, on the opposite side, from Duddingstone village. Taking the former route, after crossing the boundary walls of the lower park, we leave the ruins of St. Anthony's chapel a little to the left. "A better site for such a building," says Sir Walter Scott, "could hardly have been selected; for the chapel, situated among the rude and pathless cliffs, lies in a desert, even in the immediate vicinity of a rich, populous, and tumultuous capital; and the hum of the city might mingle with the orisons of the recluses, conveying as little of worldly interest as if it had been the roar of the distant ocean. Beneath the steep ascent on which these ruins are still visible, was, and perhaps is, still pointed out, the place where the wretch Nicol Muschat had closed a long scene of cruelty towards his unfortunate wife, by murdering her with circumstances of uncommon barbarity. The execration in which the man's crime was held, extended itself to the place where it was perpetrated, which was marked by a small cairn or heap of stones, composed of those which each passenger had thrown there in testimony of abhorrence, and on the principle, it would seem, of the ancient British malediction—"May you have a cairn for your burial-place."

['Heart of Mid-Lothian.'] In Maitland's 'History of Edinburgh,' [1753,] these ruins are described as being 43½ feet long, 18 broad, and as many high, with a tower 19 feet square.—By striking off to the right, and pursuing an easy ascent over the green sward, we may gain the summit of the fine bold basaltic range called Salisbury crags, of which, says our immortal novelist, "If I were to choose a spot from which the rising or setting sun could be seen to the greatest possible advantage, it would be that wild path winding around the foot of the high belt of semicircular rocks, called Salisbury crags, and marking the verge of the steep descent which slopes down into the glen on the south-eastern side of the city of Edinburgh. The prospect, in its general outline, commands a close-built, high-piled city, stretching itself out in a form which, to a romantic imagination, may be supposed to represent that of a dragon; now a noble arm of the sea, with its rocks, isles, distant shores, and boundary of mountains; and now a fair and fertile champaign country, varied with hill, dale, and rock, and skirted by the picturesque ridge of the Pentland mountains. But as the path gently circles around the base of the cliffs, the prospect, composed as it is of these enchanting and sublime objects, changes at every step, and presents them blended with, or divided from, each other in every possible variety which can gratify the eye and the imagination. When a piece of scenery so beautiful, yet so varied,—so exciting by its intricacy, and yet so sublime,—is lighted up by the tints of morning or of evening, and displays all that variety of shadowy depth, exchanged with partial brilliancy, which gives character even to the tamest of landscapes, the effect approaches near to enchantment. This path used to be my favourite evening and morning resort, when engaged with a favourite author, or new subject of study." ['Heart of Mid-Lothian.']—If the visitor's object be to accomplish the ascent of the Seat, by pursuing the path formerly mentioned, he will gain the summit of the hill with little difficulty. We have heard of the ascent being accomplished from the turnstile in twenty minutes; but may well presume that few will be disposed to try whether they can rival such a feat. To depict the scene from the summit, we must employ the same living pencil that has traced the landscape from the chapel and the crags. "A nobler contrast there can hardly exist than that of the huge city, dark with the smoke of ages, and groaning with the various sounds of active industry or idle revel, and the lofty and craggy hill, silent and solitary as the grave; one exhibiting the full tide of existence, pressing and precipitating itself forward with the force of an inundation; the other resembling some time-worn anchorite, whose life passes as silent and unobserved as the slender rill which escapes unheard, and scarce seen from the fountain of his patron-saint. The city resembles the busy temple, where the modern Comus and Mammon held their court, and thousands sacrifice ease, independence, and virtue itself, at their shrine; the misty and lonely mountain seems as a throne to the majestic but terrible genius of feudal times, where the same divinities dispensed coronets and domains to those who had heads to devise, and arms to execute bold enterprises." ['Introduction to the Chronicles of the Canongate.']—The rocky summit of this hill is strongly magnetic. Mr. William Galbraith first called the attention of scientific men to this fact, in 1831, in a paper communicated by him to the 'Edinburgh New Philosophical Journal' [No. XXII. p. 285.] He found the needle at some points completely reversed.

ARTORNISH, a castle, and, in ancient times, one of the principal strongholds of the Lords of the

Isles, in the district of Morvern, and nearly opposite the bay of Aros in Mull. The ruins are now considerable, but the situation is wild and romantic in the highest degree. From this castle, John de Yle, designing himself Earl of Ross, and Lord of the Isles, in 1461, granted, in the style of an independent sovereign, a commission to certain parties to enter into a treaty with Edward IV. Sir Walter Scott has given the articles of this treaty in his Appendix to 'The Lord of the Isles,' [Note A.]—the opening scene of which poem is laid in "Artornish hall," where

"the noble and the bold
of Island chivalry"

were assembled to do honour to the nuptials of the hapless "Maid of Lorn;" and

"met from mainland and from isle,
Ross, Arran, Islay, and Argyll,
Each minstrel's tributary lay
Paid homage to the festal day."

ASHKIRK, a parish in the counties of Roxburgh and Selkirk; the greater part of it, however, in that of Roxburgh. It is bounded on the north by Selkirk; on the east by Minto and Lilliesleaf; on the south by Robertson and Wilton; and on the west by Yarrow. It is about 7 miles long, and 3 broad. The district may be called hilly, but most of the hills are free from heath. The soil in general is light, and in several parts spongy. A good deal has been done here of late years in draining and planting. The cultivated land amounts to about 2,800 acres; about 400 acres are under wood. The only river in the parish is the Ale, which runs through it, in a narrow valley, from west to east. But there are several small lochs—none of them exceeding a mile in circumference—which discharge their waters into the Ale, and contain trout, perch, and pike. See **ALE-MOOR** (Loch). Population, in 1801, 574; in 1831, 565, of whom about 100 were dissenters, and 192 were resident in that portion of the parish which is in Selkirkshire. Houses, 97. Assessed property, £4,501. The land-rent, in 1796, was about £2,000; in 1838, £4,479 7s.—This parish is in the presbytery of Selkirk, and synod of Merse and Teviotdale. It was formerly a vicarage belonging to the chapter of Glasgow; and the greater number of the present proprietors still hold of the college of Glasgow. The bishop of Glasgow had a palace here, of which the last relics have disappeared within the memory of man. The parish itself was in early times wholly divided amongst the family of Scot. The church was built in 1791; sittings, 200; stipend, £205 12s. 9d., with a manse, and a glebe of the value of £27. Unappropriated teinds, £636 11s. 4d. Patron, the Earl of Minto. The parochial schoolmaster has a salary of £30, with about £10 of school-fees, and some other emoluments, and a house and garden. The average attendance on his tuition is about 40.

ASKAIG (PORT), a small haven on the north-east coast of Islay, 11 miles distant from Bowmore, and 35 from East Tarbert. There is a good inn here, and the vicinity is well-wooded. Lead-mines were at one time wrought a little to the north-west of this place.

ASSYNT, or **ASSINT**, a very extensive district and parish in the county of Sutherland, including the *quoad sacra* parish of Stoer. The name is a contraction of *agus-int*, literally 'in and out;' and is supposed to have been originally applied to it as descriptive of its extraordinarily rugged surface and broken outline. Its area is estimated at 100,000 acres; and its circumference at 90 miles. On the north it is bounded by that arm of the sea called the Minch, and by Loch Assynt, the Kylecuigh or Kyle Skou, "across which a stone may be slung," and its ex-

tremities Loch Dow and Loch Coul. From the eastern end of Loch Coul, an imaginary line, drawn in a south-east direction across the summits of the mountains to Glashben, completes the boundary betwixt Assynt and Eddrachillis parish. The boundary line then turns south-west, for a distance of about 10 miles, dividing Assynt from Creech parish, and from Ross-shire; it then assumes a north-west direction, and passes by Loch Vattie, and Loch Faun or Loch Fane, to Inverkirkraig, where it meets the sea, dividing Assynt, in this direction, from the shire of Cromarty. The Kirkaig flows out of Loch Fane, and forms a fine cascade at a point in its course about 2 miles from the sea. The general course of the coast-line, from the mouth of the Kirkaig to Ru-Stoer,—a distance of 20 miles,—is from south-south-east to north-north-west, and presents "islands, bays, and headlands, without end, but not a feature to distinguish one from another, nor a cliff nor a promontory to tempt a moment's stay;" all is dreary, desolate, and mountainous. Loch Inver is a fishing-station, and presents a pretty good harbour. The Inver flows into its head from Loch Assynt. The point of Stoer, or the Ru-Stoer, is a remarkable detached mass of sandstone, rising to the height of about 200 feet. A little to the south of the Ru is Soay island, measuring about 4 furlongs in length, by 3 in breadth. It is flat, and covered with heather and coarse grass. About a mile to the south of Soay, is the islet of Klett.—The principal island belonging to Assynt is that of Oldney or Oldernay, at the mouth of Loch Assynt, which is divided from the mainland by a channel in some parts not exceeding 20 yards in width. It is about a mile in length, by 2 furlongs in breadth; and was inhabited, in 1836, by twelve families.

The main line of road through this district enters the parish, from the south, at Aultnacalgeich burn, 10 miles from the bridge of Oyckell, at the upper end of Loch Boarlan. A little beyond this, a road branches off to the west towards Crockan, whence there is a road to Ullapool, on Loch Broom, 16 miles distant. Pursuing the main line, we arrive at Ledbeg, whence a detour may be made by the south side of Suilbhein to Inverkirkraig, provided the traveller dare encounter a very rugged journey, presenting only one habitable shieling in its whole course, namely Brackloch at the western end of Loch Caum, a very fine fresh water loch. There is another, and a more dangerous route in winter, between the Suilbhein and its mountain-brother Cannishb or Canisp. After leaving Ledbeg we enter the glen of Assynt. This glen is very narrow, and has various windings, so that one is quite near the lake before being aware of it. Immediately before arriving at it, a very singular ridge of rock bounds the glen and the road on the right. This ridge rises to a perpendicular height of 300 feet: it is of blue limestone, and its mural surface has been worn away in many places in such a manner as to present the appearance of the windows, tracery, and fret-work of an ancient cathedral. Alpine plants and creeping-shrubs ornament with their graceful drapery every crevice and opening of these lofty rocks, and altogether create a scene of most picturesque though fantastic beauty. At length on turning round the edge of this ridge, the traveller finds himself at the village of Inch-na-damph, or Innesin-damff, and the head of Loch Assynt. This lake is about 16½ miles in length, and 1 mile in greatest breadth. It receives the waters of many mountain-streams, and empties itself into Loch Inver, an arm of the sea of which mention has already been made. On the shores of Loch Assynt, near the village of Inch-na-damph, there are quarries of white marble, which were at one time wrought by an Englishman;

but since his death they seem to be entirely neglected and given up. If one may judge from the blocks lying about, the marble seems to be pure and capable of receiving a high polish; but, from whatever cause, it is now only used for building dry stone-dykes and highland-cottages. "At Leadbeg," says Dr. Macculloch, "I found the cottages built of bright white marble: the walls forming a strange contrast with the smoke and dirt inside, the black thatch, the dubs, the midden, and the peat-stacks. This marble has not succeeded in attaining a higher dignity." We may mention having seen marble cottages at other places besides Ledbeg, presenting the same strange contrast which the Doctor here points out. Loch-Assynt lies in a very pleasing green valley, though it does not—except at its head and beyond the village of Inch-na-damph—afford much of the picturesque or the romantic. The mountain of Cunaig, however, on the north side of the lake, and Ben-mhor or Benmore, with the other mountains which terminate the glen to the east, present scenes of much grandeur and magnificence.—The ancient castle of Ard-vraick, and the ruined house of the Earls of Seaforth, with the village and churchyard at the head of the lake, give an interest to Loch-Assynt not often to be felt among the inland waters of these northern regions. Pursuing our route along the northern side of the loch, we pass the ruins of Ard-vraick castle, situated on a rocky peninsula which projects a considerable way into the lake. This castle was long the residence of the Macleods, and in particular that of Donald Bane More; it was built in the year 1597, or 1591, and must have been a place of strength in ancient times. When the estate came into the Seaforth family, they erected a new mansion near the shore of the lake. This mansion is also now in ruins. "It was built," says the first Statistical reporter, "in a modern manner, of an elegant figure, and great accommodation. It had fourteen bed-chambers, with the convenience of chimneys or fire-places." The osprey (*Pandion haliaetus*) frequents Assynt; and a pair have long built on the ruins of Ard-vraick castle.—Adjoining to the present parish-church, and within the burying-ground, near the village of Inch-na-damph, are the remains of an ancient Popish chapel, said to be the oldest place of worship existing in this district. The occasion of its erection is alleged to have been as follows. One Æneas or Angus Macleod, an early laird of Assynt, had gone to Rome, and had had the honour of an interview with the Pope from whom he received various favours; on account of which he vowed that on his return he would build and endow a chapel. This he did, and extended his endowment in its favour to the fifth part of his then yearly rental. At one time this chapel consisted of two stories; the ground one being used for worship, and having an arched or vaulted roof. Above was a cell or chamber, which tradition reports was a place set apart for private devotion. This upper cell, however, was removed several years ago; and the lower repaired for a burial vault, for which purpose it is still used. It is the property of Macleod of Geanies, the lineal descendant of the ancient lairds of Assynt. On the farm of Clachtoll are the remains of an ancient Druidical temple. At Ledbeg a pruning-hook was found under the moss several years since, the use of which puzzled the natives of the place not a little. But a late Earl of Bristol, then Bishop of Derry, happening to pass a few days here, pronounced it to be a pruning-hook used by the Druids, with which they yearly cut the sacred mistletoe from the oak. This relic of ancient superstition was presented by Mrs. McKenzie of Ardlach to his lordship.—On reaching the northern end of Loch Assynt, one branch

of the road turns westward to Loch Inver, following the northern bank of the river Inver; while another branch runs north to Unapool on the Kylecuigh, beyond which there is a ferry to Grinan, in Eddrachillis, whence it proceeds along the coast to Scourie bay.

In the southern part of Assynt are several detached mountains of singular form. Dr. Macculloch has written of them so correctly, and described them so graphically, that although at some length, we must furnish the reader with his remarks. In talking of sandstone mountains, in his Geological work, he says: "The independence of many of these hills forms one of the most remarkable parts of the character of this rock. In many places, they rise suddenly from a hilly land of moderate elevation composed of gneiss; attaining at once to an height above it of 1,000 or 2,000 feet. They are often separated by miles. In other cases, they are grouped, but still distinct at their base. Where insulated, they have a very striking effect, of which examples occur in Sul-bhein, and Coul-bheg. Similarly powerful effects result from the suddenness of their rise,—the summit, with the whole declivity, being visible from the base." Farther on, in the same work, he says, "It might be expected that the pinnacled summits and detached hills had resulted from the waste of the erect varieties, but in Coul-bheg, Coul-more, Sul-bhein, &c., they are produced by the wearing down of strata nearly horizontal; the harder portions, in the former case, remaining like pillars of masonry or artificial cairns. The west side of Sutherland and Ross consists of a basis of gneiss, forming an irregular and hilly surface, varying, in extreme cases, from 100 to 1,500 feet in height, but often presenting a considerable extent of table-land. On this base, are placed various mountains, either far detached, or collected in groupes; and all rising to an average altitude of about 3,000 feet above the sea. The stratification of these is horizontal or slightly inclined. It follows that the whole of this country has been once covered with a body of sandstone, equal in thickness—in certain points at least—to the present remaining portions."

In his letters on the Highlands [Vol. ii. p. 345.] again, he thus describes Suilbhein. "It loses no part of its strangely incongruous character on a near approach. It remains as lofty, as independent, and as much like a sugar-loaf, (really not metaphorically,) when at its foot as when far off at sea. In one respect it gains, or rather the spectator does, by a more intimate acquaintance. It might have been covered with grass to the imagination; but the eye sees and the hand feels that it is rock above, below, and round about. The narrow front, that which possesses the conical outline, has the appearance of a precipice, although not rigidly so; since it consists of a series of rocky cliffs piled in terraced succession above each other; the grassy surfaces of which being invisible from beneath, the whole seems one rude and broken cliff, rising suddenly and abruptly from the irregular table-land below to the height of a thousand feet. The effect of a mountain thus seen, is always striking; because, towering aloft into the sky, it fills the eye and the imagination. Here, it is doubly impressive from the wide and open range around, in the midst of which this gigantic mass stands alone and unrivalled,—a solitary and enormous beacon, rising to the clouds from the far-extended ocean-like waste of rocks and rudeness. Combining in some positions, with the distant and elegant forms of Canasp, Coul-bheg, and Ben-More, it also offers more variety than could be expected; while even the general landscape is varied by the multiplicity of rocks and small lakes with which the whole country

is interspersed. The total altitude from the sea line is probably about 2,500 feet; the table-land whence this and most other of the mountains of this coast rise, appearing to have an extreme elevation of 1,500. To almost all but the shepherds, Sul-bhein is inaccessible: one of our sailors, well-used to climbing, reached the summit with difficulty, and had much more in descending. Sheep scramble about it in search of the grass that grows in the intervals of the rocks: but so perilous is this trade to them, that this mountain with its pasture—which, notwithstanding its rocky aspect, is considerable—is a negative possession; causing a deduction of fifteen or twenty pounds a-year from the value of the farm to which it belongs, instead of adding to its rent." Notwithstanding the difficulty of climbing Sullbhein which the Doctor here mentions, we were told, when in the country, by a highland gentleman residing near Loch-Inver, that a young lady from Glasgow had ascended with him the year previous. We must confess, however, that we should have had some hesitation in making even the attempt.—At page 354 of the same work, the Doctor gives the following description of Coul-bheg: "The whole of this coast, from Coycraig in Assynt, as far as Ben-More at Loch-Broom, presents a most singular mountain outline; but Coul-bheg is even more remarkable than Sul-bhein, while its form is more elegant and versatile. In every view, it is as graceful and majestic as it is singular; and, like the other mountains of this extraordinary shore, it has every advantage that can rise from independence of position; rising a huge and solitary cone, from the high land beneath, and lifting its dark precipice in unattended majesty to the clouds. The ascent from the shore to the base of the rocky cone is long and tedious, over a land of lakes and rocks; but beyond that there is no access. All around is barrenness and desert; except where some lake, glittering bright in the sunshine, gives life,—a still life,—to the scene: and the eye ranges far and wide over the land, seeing nothing but the white quartz summits of Canasp, Coycraig, and Ben-More,—the long streams of stones that descend from their sides,—and the brown waste of heath around, interspersed with grey protruding rocks that would elsewhere be hills, and with numerous lakes that seem but pools amid the spacious desert." In spite, however, of the many difficulties which must attend a close examination of this land of mountains and floods, the traveller who chooses to undergo the fatigue, and to encounter the difficulties of attempting to penetrate its recesses, will find much to please, and still more to astonish him amidst its gigantic and awful mountains and lonely valleys. To those

"who love the pathless solitude
Where, in wild grandeur, Nature dwells alone
On the bleak mountain, and the unsculptured stone,
Mid torrents, and dark range of forests wide,"

the solemn and sublime scenery of Assynt will afford moments of exquisite pleasure. One oft feels in wandering through its superb solitudes as if the next step would conduct him into the ideal and supernatural. To the geologist, nothing further need be said, to incite him to investigate this district most minutely, than a reference to the quotations from Dr. Macculloch already given.

The population of Assynt, in 1801, was 2,395; in 1831, 3,161, of whom 1,401 were resident in the *quoad sacra* district of Stoer. Above two-thirds of the population are resident on the sea-shore. In the district around Loch Inver there was, in 1831, a population of about 659; in the Kyleside district 456; in each of the two hamlets of Knockan and Elphine, 250; and at Unapool 8 or 9 families. The number

of houses, in 1831, was 573; of families, 575. Assessed property, in 1815, £3,859. Real rental, in 1795, £1,000.

This parish is in the presbytery of Dornoch, and synod of Sutherland and Caithness. Patron, the Duke of Sutherland. The parish-church was built about 1770, and repaired in 1816; sittings 240. There are no dissenting places of worship. Stipend £158 6s. 7d., with manse, and a glebe of the value of £27 10s. There is a preaching-station at Loch Inver, and another at Kyleside, which are supplied by the parish-minister.—The *quoad sacra* parish of Stoer is about 11 miles in length by 10 in breadth. It was divided from Assynt by authority of the General Assembly, in 1834. A church was built here by the Parliamentary commissioners in 1828. The minister's stipend is £120, which is paid by the Exchequer. A catechist is employed for the whole civil parish, besides three teachers, by the Society for propagating Christian knowledge. There are burial-grounds at the kirktown, at Gedavolich at the west end of Loch Nedd, at Ardvare, Oldney island, Stoer, and Loch Inver.

The district of Assynt is said to have been in early times a forest belonging to the ancient thanes of Sutherland, the ancestors of the present Duchess of Sutherland. In the reign of David II., Torquil Macleod, chief of the Macleods of Lewis, had a royal grant of Assynt. In 1506, on the forfeiture of Macleod of Lewis, Y Mackay of Strathnaver received a life-rent grant of Assynt. About the year 1660, both the property and superiority of Assynt passed from the Macleods to the Earl of Seaforth. He made it over to one of his younger sons, whose heirs held it for three or four generations. It was afterwards purchased by Lady Strathnaver, who presented it to her grandson, the late William Earl of Sutherland; and it is now the property of his daughter, the present Duchess of Sutherland. It was in this district that the great Marquis of Montrose was taken prisoner, and delivered up to the Covenanters. After his defeat, and the ruin of all his hopes, at Carbisdale, "Montrose, accompanied by the earl of Kinnoul, who had lately succeeded to the title on the death of his brother, and six or seven companions, having dismounted from his horse and thrown away his cloak and sword, and having, by the advice of his friends, to avoid detection, exchanged his clothes for the more homely attire of a common highlander, wandered all night and the two following days among bleak and solitary regions, without knowing where to proceed, and ready to perish under the accumulated distresses of hunger, fatigue, and anxiety of mind. The Earl of Kinnoul, unable, from exhaustion, to follow Montrose any farther, was left among the mountains, where it is supposed he perished. When upon the point of starvation, Montrose was fortunate to light upon a small cottage, where he obtained a supply of milk and bread, on receiving which he continued his lonely and dangerous course among the mountains of Sutherland, at the risk of being seized every hour, and dragged as a felon before the very man whom, only a few days before, he had threatened with his vengeance. In the meantime, active search was made after Montrose. As it was conjectured that he might attempt to reach Caithness, where his natural brother, Henry Graham, still remained with some troops in possession of the castle of Dunbeath, and as it appeared probable, from the direction Montrose was supposed to have taken, that he meant to go through Assynt, Captain Andrew Munro sent instructions to Neil Macleod, the laird of Assynt, his brother-in-law, to apprehend every stranger that might enter his bounds, in the hope of catching Montrose, for whose apprehension

a splendid reward was offered. In consequence of these instructions, Macleod sent out various parties in quest of Montrose, but they could not fall in with him. 'At last (says Bishop Wishart) the laird of Assynt being abroad in arms with some of his tenants in search of him, lighted on him in a place where he had continued three or four days without meat or drink, and only one man in his company.' The bishop then states, that 'Assynt had formerly been one of Montrose's own followers; who immediately knowing him, and believing to find friendship at his hands, willingly discovered himself; but Assynt not daring to conceal him, and being greedy of the reward which was promised to the person who should apprehend him by the council of the estates, immediately seized and disarmed him.' This account differs a little from that of the author of the continuation of Sir Robert Gordon's history, who says, that it was one of Macleod's parties that apprehended Montrose, but is altogether silent to Assynt's having been a follower of Montrose, but both writers inform us that Montrose offered Macleod a large sum of money for his liberty, which he refused to grant. Macleod kept Montrose and his companion, Major Sinclair, an Orkney gentleman, prisoners in the castle of Ardvraick, his principal residence. By order of Leslie, Montrose was thence removed to Skibo castle, where he was kept two nights, thereafter to the castle of Braan, and thence again to Edinburgh. [Browne's 'History of the Highlands,' vol. ii. pp. 35, 36.] It has been attempted to clear the laird of Assynt from any participation in the death of this unfortunate nobleman. We do not intend to enter into the discussion, but have only to add that it is still the current tradition of the country, and superstition has connected the alleged treachery with the ruin of Macleod and his family. The loss of his property did follow the seizure and execution of Montrose; and, in the eyes of the simple inhabitants of this district, the former was the just punishment of Heaven for his connexion with the enemies of a favourite hero.

ATHELSTANEFORD, a central parish, in the shire of Haddington. The parish is denominated from the village; and the village—according to Buchanan and Camden—owes its name to the following incident. In one of his predatory incursions, Athelstane, a Danish chief, who had received a grant of Northumberland from King Alured, arrived in this part of the country; and, engaging in battle with Hungus, king of the Picts, was pulled with violence from his horse and here slain. The rivulet where the battle was fought is in the immediate neighbourhood of the village, and is still called Lug Down burn, supposed to be a corruption of Rug Down. Buchanan adds, that Hungus was encouraged to hazard this battle by a vision of St. Andrew the apostle, who appeared to him the preceding night and promised him success; and that the victory was facilitated by the miraculous appearance of a cross in the air, in the form of the letter X, over a farmhamlet which still retains the name of Martle, a supposed contraction of *miracle*. Achaus, king of the Scots, by whose assistance Hungus obtained this victory, in commemoration of the event is said to have instituted the order of St. Andrew.* The lands on which the battle was fought were bestowed on the Culdee priory of St. Andrews, and are now held in perpetual lease by Kinloch of Gilmerton. Athelstaneford is divided from the parish of Haddington

on the south and south-west by the rivulet formerly mentioned, the Lug Down burn. This rivulet rises in the Garleton hills, and falls into the frith of Forth on the north side of Tynningham bay, after a course of about 5 miles. On the north this parish is separated from that of Dirleton by another small rivulet called the Peffer. This rivulet rises in the north-east corner of the parish in two streams, which unite near their sources. The country is here so level that one of these streams runs in an easterly direction, and joins the Lug Down burn, while the other runs due west into the frith of Forth at Aberlady bay: see article ABERLADY. The whole strath of the Peffer was in early times a wild morass covered with wood, and the abode of wild boars, and other rapacious animals. The ground rises gradually from this rivulet to the southern extremity of the parish, where the village of Athelstaneford and the church stand. The parish is about 4 miles in length, from west to east; and between 2 and 3 in breadth, from south to north. Previous to 1658 it did not contain above 800 or 1,000 acres; and the Earl of Wintoun was the sole proprietor of all the lands. At that period it was considerably enlarged by annexations from the parishes of Haddington and Prestonkirk; so that the whole extent of the parish is now above 4,000 acres, of which 3,750 are arable. Population, in 1801, 897; in 1831, 971. Houses 200. Assessed property, in 1815, £9,344. The valued rent of the parish is £4,154 1s. Scotch. About one-third of this valuation is the property of Sir David Kinloch of Gilmerton, Baronet; another third belongs to the Earl of Hopetoun and Sir Alexander Hope; the remaining third is divided among the Earl of Wemyss, Sir Francis W. Drummond, Baronet, Lord Elibank, and Miss Grant of Congleton. In the Statistical report of 1794, it is stated that a woollen manufacture of striped variegated cloth had been carried on in the village of Athelstaneford for some years past, on a small scale. The cloth sold from 4s. 6d. to 5s. 6d. per yard; was made of the best materials; esteemed a light, genteel, and comfortable dress; and known in Edinburgh by the name of the Gilmerton livery. "The demand for it," it is added, "increases, and the manufacturer has both spirit and stock to carry it on to greater extent, but finds great difficulty in procuring female hands to prepare the materials. Accustomed from their early years to work in the fields in weeding the corn, hoeing, &c. they prefer what they call outwork in summer to any domestic employment." This manufacture no longer exists here.—This parish is in the presbytery of Haddington, and synod of Lothian and Tweeddale. Patron, Sir David Kinloch, Baronet. Minister's stipend, £262 0s. 7d., with a manse, and a glebe of the value of £15. Unappropriated teinds, £372 16s. 11d. The church was built in 1780; sittings, 500. The old church—of which there are still some remains—was built by Ada, wife of Henry of Scotland, who annexed it to her abbey in the neighbourhood of Haddington. There are three schools in the parish. The parish-schoolmaster has a salary of £35 10s., with £48 school-fees, and other emoluments. Average number of scholars 70.—The only antiquities in this parish are the vestiges of a camp, or perhaps of a Pictish town, concerning which there is no tradition, and history is silent; and the remains of a chapel, in the village of Drem, called St. John's chapel, which belonged to the Knights Templars. These are both on the property of the Earl of Hopetoun. The house of Garleton, too, may be mentioned under this head. It appears to have once been a place of magnificence, but is now a complete ruin. It is beautifully situated at the foot of the Garleton hills.—Towards the end of the 16th, and

* Thus far tradition. Etymology, however, would give a simpler account of the matter. *Ath-ail* means, in Gaelic, 'a stone ford'; and there is such a ford,—a narrow, deep, stony path,—across the Lug Down rivulet. Saxon settlers, finding the *Ath-ail* already in existence, superadded to it, in their own language, *stone ford*. See Chalmers's 'Caledonia,' Vol. II. p. 516.

beginning of the 17th century, a great part of the lower lands of East Lothian was possessed by the Hepburns, collateral branches of the Earls of Bothwell. A gentleman of that name was proprietor of the lands of Athelstaneford. A second son of his went into the Swedish service, and afterwards into the French service, and died a field-marshal of France. The Rev. Robert Blair, author of a small poem entitled, 'The Grave,' much admired for its elegance and poetical merit, was minister of this parish; and his son Robert, a native of this parish, rose to the high judicial office of Lord-president of the court of session. The fine tragedy of Douglas was written by the celebrated John Home, when minister of Athelstaneford. Mr. Home was ordained here, in 1747, and was ten years minister of this parish. Upon demitting his charge, in June 1757, he built a villa in the parish, called Kilduff, and laid out the grounds around it with considerable taste. "Painting, too, the sister-art of poetry," adds the Statistical reporter of 1794, "has been cultivated here with taste and advantage. The son of a respectable farmer in this parish, from his earliest years, discovered a remarkable genius for drawing and painting. As he advanced in life, he applied chiefly to miniatures, in which he excelled. For these several years past, he has been in Italy; and there is good reason to believe that he ranks among the first artists in that country." The individual here alluded to was the celebrated Archibald Skirving, who amply redeemed the expectations of his early friends, and rose to the very first rank as a portrait-painter. He died in his 70th year, and is buried in the church-yard of Athelstaneford. His father was tenant of the farm of Garleton, and the author of the celebrated ballad upon the battle of Prestonpans,

The Chevalier, being void of fear,
Did march up Birsley brae, man;
And through Tranent, &c.

ATHOLE, a mountainous district in the north of Perthshire; bounded on the north by Badenoch in Inverness-shire; on the north-east by Mar in Aberdeenshire; on the east by Forfarshire; on the south by the districts of Stormont and Breadalbane in Perthshire; and on the west and north-west by Lochaber in Inverness-shire. Sir John Sinclair estimates its superficial area at 450 square miles. The face of the country is highly picturesque, everywhere presenting lofty mountains, extensive lakes, deep glens, solemn forests, and all the finer features of Highland scenery: it is, moreover, "a land praised in song, richly wooded, yet highly cultivated and thickly inhabited." The loftiest mountain is Cairn Gower, one of the Ben-y-Gloe ridge, on the east of Glen Tilt, which rises to the height of 3,690 feet. The Scarcock, at the point of junction with Aberdeenshire, is assigned by some topographers to this district of Perthshire. Its altitude is stated by some at 3,402; by others at 3,390 feet. The Blair, or Field of Athole, is an open fertile vale, intersected by the Garry, and generally presenting only low and rounded eminences. See article **BLAIR-ATHOLE**. The other streams in this district are the Edendon, the Bruar, and the Tilt, which are all tributaries of the Garry; the Airdle, a tributary of the Erich; and the Tumel, into which the Garry flows. All these streams belong to the basin of the Tay, and are described, in this work, in separate articles. The principal lakes are Loch Erich, Loch Rannoch, Loch Tumel, and Loch Garry, to which separate articles are also devoted. The Forest of Athole, the property of the Duke of Athole, contains upwards of 100,000 acres, stocked with red deer, moor-game, and ptarmigans, which are also preserved in

the adjoining forests of the Earl of Fife, the Marquis of Huntly, and Farquharson of Invercauld. Athole gives the title of duke to a branch of the Murray family. Sir John Murray was created a baron in 1604, and Earl of Tullibardine in 1606. The sixth earl was created Marquis of Athole in 1676; and the second marquis, Duke of Athole in 1703. The Athole-men have always been found, to use the language of old Froissart, "good chivalry, strong on limb and stout of heart, and in great abundance;" and their feuds with the followers of Argyle form a bloody chapter in Highland history. Stoddart says, that many of the Athole-men are good performers on the Great Highland bagpipe. He also notices the once-famed 'Athole-brose,' a composition of whiskey, honey, and eggs, as forming "an indispensable dainty in the feast, and no unimportant addition to the *Materia Medica*." [Remarks, Vol. II. p. 182.] This was written in 1800: probably Athole-brose is now banished from the feast, as it certainly is from the *Materia Medica* of all wise people in Athole. Claverhouse, Viscount Dundee, ended his fierce career, in the battle of Killiecrankie, a celebrated pass in Athole. See articles **KILLIECRANKIE** and **PERTHSHIRE**.

AUCHENAIRN, (OLD AND NEW,) a village in the under ward and shire of Lanark, parish of Cadder, 3 miles north by east of Glasgow. In 1745, the Rev. James Warden, a native of this village, and minister of the parish, bequeathed 1,000 merks to the session, the interest of which is allotted to the support of a school here. In 1764, William Leechman, D.D., principal of the university of Glasgow, disposed to the session of Cadder about half-an-acre of ground, for a house and garden for the benefit of this school, of which the minister and elders are patrons. A new school-house was erected in 1826. Population, in 1831, 284.

AUCHENCAIRN, a village in the stewartry of Kirkcudbright, and parish of Rerrick; 7 miles east by south of Kirkcudbright. It is situate at the north-west extremity of a beautiful bay—to which it gives name—about 2 miles long, and 1 broad. At low water this bay presents an uninterrupted bed of smooth sand, which is so dry and firm that horse-races have been holden upon it; small craft may load and unload in any part of it; and on the west side is a capacious natural basin, where vessels of burden may lie in safety from every storm.

AUCHINBLAE, a village in the parish of Fording, Kincardineshire; 16 miles from Montrose. It has a flax spinning-mill, erected about 40 years ago, and at which about 40 hands are now employed. Population, in 1791, 100; in 1831, 487. It is a neat thriving place, and is governed by a baillie appointed by the Earl of Kintore. Two fairs are held here, viz., Pasch market in April, and May-day on 22d May. There are also hiring-markets held May 26th and November 22d. In the month of July, a cattle-fair is held at Paldy moor, about 2 miles north from this place.

AUCHINDOIR AND KEARN, a mountainous parish in the western part of Aberdeenshire; bounded on the north by the parish of Rhynie; on the east by the parish of Tullynessle; on the south and west by Kildrummy and Cabrach parishes. The etymology of the name, *Auchindoir*, is uncertain. It is supposed to signify 'The Field of the Chase or Pursuit.' "Buchanan tells us, that Luthlac, son to the usurper Macbeth, having been pursued northward by Malcolm, was slain 'in the valley of Bogie.' The spot where he was slain is thought to be about 2 miles to the north of the church of Auchindoir, but in the parish of Rhynie, in a place where a large stone, with some warlike figures on it has been set up. If

so, it is not improbable that Luthlac was overtaken about a mile to the south of the church, in the place where a number of cairns now are; that being defeated, he has been pursued through the valley of Auchindoir, which lies between the cairns and the figured stone; and that from this pursuit, the parish of Auchindoir has taken its name." [Statistical report of 1792.] Its greatest length is 9 miles; and greatest breadth 8. Its outline is very irregular. The larger part of the surface consists of hills and moors. Some of the mountains attain a great elevation. The Buck of Cabrach, over which the western boundary line of the parish runs, has, according to Ainslie, an altitude of 2,377 feet, or, according to the map of the Society for the diffusion of Useful Knowledge, of 2,286 feet, above sea-level; and though more than 30 miles distant from the sea, is visible 10 leagues from shore. The principal river is the Bogie. It is formed by two rivulets, the burn of Craig, and the burn of Corchinnan, both of which, flowing from the west, meet at the manse. This beautiful little river, after having run through a rich strath or valley, to which it gives name, and having supplied the bleachfields at Huntly with very soft and pure water, falls into the Deveron a little below that village, and 12 miles from the place where it first took its name, without reckoning the windings of the river. There is plenty of fine trout in it; but scarcely any salmon, except in the spawning-season. The Don touches the south-east corner of the parish, and there receives the Moffat, which divides Auchindoir from Kildrummy. If we include a part of Kearn and Kildrummy, the valley of Auchindoir is nearly surrounded by a range of hills. From these, several less hills shoot forward into this valley; and the hills are indented by gullies, and deep narrow hollows, some of which run a great way back into the mountains; the whole presenting a prospect, which, though confined, and in most places bleak, to the admirers of wild and romantic scenery is by no means unpleasant. Freestone is quarried here in great abundance; and that rare mineral, asbestos, has been found in the bed of a streamlet flowing from a hill called Towanreef. It is said that one of the proprietors of the estate of Craig, on which Towanreef is situated, had a hat-band made from the asbestos obtained here. Serpentine of a dull dark green colour, and chromate of iron, are also found on this hill. The valued rent of the parish is £1,322 11s. 4d. Scots; the real rent, in 1792, was about £650; assessed property, in 1815, £1,345. Population, in 1801, 739, in 1831, 1,030. Houses 218.—This parish is in the presbytery of Alford and synod of Aberdeen. In 1791, by a decret of the court of teinds, the parish of Kearn was disjoined from that of Forbes, and annexed to Auchindoir. Patron, the Earl of Fife. Minister's stipend £158 ls., with manse and glebe. Church built in 1811; sittings 450. A United Secession congregation was formed at Lumdsen, in this parish, in 1834; chapel built in 1803; sittings 203. The population of the village of Lumdsen, in 1836, was 235. The parish-schoolmaster's salary is £30, with £21 10s. of fees, and other emoluments. There are two small private schools:—"On a little hill close by the church there was anciently a castle, said to be mentioned by Boetius; but no traces of the walls of it remain. It has been defended on three sides by rocks and precipices, and on the fourth by a moat or deep excavation, evidently the work of art. There are several other antiquities, such as tumuli, barrows, and some little hillocks called 'pest-hillocks,' about which last tradition is altogether vague and uncertain. In the south-east corner of the parish there is a spring called the Nine Maidens' well, near to which, tradition says, nine young women were slain by a boar

that infested the neighbouring country. A stone with some rude figures on it, marks the spot where this tragical event is said to have happened. The boar was slain by a young man of the name of Forbes, the lover of one of the young women; and a stone with a boar's head cut on it was set up to preserve the remembrance of his gallantry and courage. The stone was removed by Lord Forbes to his house of Putachie; and it is from this circumstance that a boar's head is quartered in the arms of that family." [Statistical report of 1792.]

AUCHINLECK, a parish of Ayrshire; bounded on the north by the parishes of Mauchline, Sorn, and Muirkirk; on the east by Muirkirk and Crawfordjohn; on the south by Kirkcunell, New Cumnock, and Old Cumnock; and on the west by Ochiltree. It is a narrow strip of country, measuring 16 miles in length, while it does not exceed 2 in average breadth. Its area is estimated, in Alton's 'View,' at 18,000 Scots acres, of which not one-third part is under cultivation. The general appearance of the district is wild and bleak; but the western part of it is more generally cultivated and enclosed. There are some coal-works in this parish which afford employment to about 60 men, and free-stone and limestone quarries. The value of coal and lime annually obtained in this parish is estimated, in the Statistical report of 1838, at £2,990. The rivers Ayr and Lugar skirt the boundaries of the parish,—the former on the east, the latter on the south and west. The principal heritor is Sir James Boswell, Bart., to whose ancestor the barony of Auchinleck was granted by James IV. Boswell, the biographer of Dr. Johnson, was of this family; and carried his illustrious friend hither, while on their tour in Scotland, to visit his father, Lord Auchinleck, one of the lords of session. The Doctor appears to have been pleased with his visit, and it would appear at one time entertained the idea of writing an history of the Boswells of Auchinleck. "Lord Auchinleck," he writes, "is one of the judges of Scotland, and therefore not wholly at leisure for domestic business or pleasure, yet has found time to make improvements in his patrimony. He has built a house of hewn stone, very stately and durable, and has advanced the value of his lands with great tenderness to his tenants. I was, however, less delighted with the elegance of the modern mansion, than with the sullen dignity of the old castle. I clambered with Mr. Boswell among the ruins, which afford striking images of ancient life. It is, like other castles, built upon a point of rock, and was, I believe, anciently surrounded with a moat. There is another rock near it, to which the draw-bridge, when it was let down, is said to have reached. Here, in the ages of tumult and rapine, the laird was surprised and killed by the neighbouring chief, who perhaps might have extinguished the family, had he not in a few days been seized and hanged, together with his sons, by Douglas, who came with his forces to the relief of Auchinleck." Grose has preserved a view of the old castle. Near it is the old house of Auchinleck. In the upper part of the parish are the remains of another old fortalice called Kyle castle. Population, in 1801, 1,214; in 1831, 1,662. Valued rent £3,462 15s. 4d. Scots. Real rent, in 1799, £2,870. The total yearly value of raw produce raised within this parish was estimated, in 1837, at £16,035. Houses, in 1831, 142. The village of Auchinleck is $\frac{1}{2}$ mile distant from Old Cumnock, and 15 from Ayr. It contains about 600 inhabitants, and is intersected by the Glasgow and Dumfries road. Many of the families here and throughout the parish are engaged in flowering muslin by the needle. A lamb fair is held here on the last Tuesday in August.—This parish is

in the presbytery of Ayr, and synod of Glasgow and Ayr. Patron, Sir James Boswell, Bart. Church built in 1838; sittings 800. Stipend £161 1s. 11d., with a manse, and a glebe valued at £10. There is a small Antiburgher chapel in the village. The parochial schoolmaster has the maximum salary of £34 4s. 4½d. There are three other schools in the parish, which are attended by about 130 children.—The parish of Auchinleck (generally pronounced Affleck by the country-people) was the birth-place of William M'Gavin of pious memory, the author of 'The Protestant'; and of William Murdoch, whose name is associated with that of James Watt, in his splendid career of scientific discovery and mechanical application.

AUCHINLECK, a hill in Dumfries-shire, in the parish of Closeburn, at the head of Nithsdale, rising 1,500 feet above sea-level.

AUCHINLOCH, a township in the under ward and shire of Lanark, parish of Cadder; 2 miles south of Kirkintilloch. It derives its name from an extensive loch now drained, at the lower extremity of which it stands. In 1744, Patrick Baird, a native of this place, bequeathed £325 for erecting a school here: £15 of the interest to be paid annually to the master, and £1 5s. to a young man, for preaching a sermon at Auchinloch at Christmas (the donor's birth-day), and to buy books and buns for the scholars. To this donation, John Baird added a piece of ground for a house and garden. All the heritors possessed of a plough-gate of land in the parish are patrons of the school. Population, in 1831, 89.

AUCHLOSSEN (Loch), a lake in Aberdeen-shire, in the parish of Lumphannan, about a mile long, and nearly half-a-mile broad. It abounds with various kinds of fish, and is frequented by flocks of aquatic fowls. Pikes have been caught in it measuring 6 feet in length, and weighing 25 lbs.

AUCHMEDDEN, a small-fishing village on the Moray frith, in the parish of Aberdour, in Aberdeen-shire; 3½ miles west-north-west of Aberdour. Here was formerly a small and convenient harbour, sheltered by a pier; but it is now totally destroyed, and it is with difficulty that fishing-boats can enter, especially if there is any great agitation of the sea. Here is a small school, the master of which, besides the usual school-fees, has a salary of £2 1s. 8d., which is paid out of the interest of money mortgaged for that purpose by one of the lairds of Auchmedden, and his lady's sister, Lady Jean Hay, a daughter of the Earl of Kinnoul, and of which the church-session are trustees. In the face of a tremendous precipice overhanging the sea is a mill-stone quarry of excellent quality. Auchmedden was long the residence of the very ancient and respectable family of Baird.

AUCHMITHY, a fishing-village in the parish of St. Vigean's, upon the German ocean, about 3½ miles north-east of Arbroath. It is situated on a high rocky bank, which rises about 120 feet above the sea, and is irregularly built; but contains several good houses, upon feus granted by the Earl of Northesk. The harbour is only a level beach in an opening between the high rocks which surround this part of the coast; and, after every voyage, the boats are obliged to be drawn up from the sea, to prevent their being destroyed by the violence of the waves. Near the village is The Gaylet pot, a remarkable cavern into which the sea flows. See **ST. VIGEANS**.

AUCHNACRAIG. See **Achnacraig**.

AUCHTERARDER, a parish in Perthshire. Its name, derived from the principal town in it, signifies 'the Summit of the rising ground,' which describes exactly its situation on the ridge of an eminence in

the middle of Strathern, commanding, on the north and east, an extensive prospect of the adjacent country. The parish has united with it that of Abruthven, which signifies 'the Mouth of the Ruthven,' a small river on which it lies, and which discharges itself into the Earn. The annexation of the two parishes seems to have taken place some considerable time before the Revolution. Auchterarder parish is of an irregular form: its greatest extent from east to west is about 3 miles, and from north to south nearly 8 miles. It is bounded on the west by the parish of Blackford; on the north by Trinity-Gask; on the east by Dunning; and on the south by Glen-devon. The greater part of the parish is a flat and level country, lying on the south of the river Earn; it also includes in it some part of the Ochil hills, particularly Craigrossie, which is one of the highest of them, having an altitude of 2,359 feet above sea-level. These hills are clothed to their summit with grass, and afford good sheep-pasture. The general declivity is from the base of the Ochils to the Earn. Almost the whole of the lower part of the parish is arable, and the northern declivity of the hills is arable a considerable way upwards. The Earn produces salmon, and the large white and yellow trout; it greatly beautifies the parish as well as the adjacent country, but is sometimes prejudicial to the neighbouring tenantry, by overflowing its banks in harvest. The Ruthven, which takes its rise in the hills, about 3 miles beyond the western boundary of the parish, is a beautiful little river, and runs with an uniform and constant stream through the whole length of this parish from south-west to north-east: It passes about 1,200 yards to the south of the village of Auchterarder, and joins the Earn about 4 miles from that village. This stream drives a number of corn and lint mills. It abounds with a species of trout peculiar to itself, of a small size, but remarkable for flavour and delicacy. This stream, also is liable to sudden and extensive floods. In 1839, in particular, it did extensive damage in this way. The parish, and particularly the neighbourhood of the town of Auchterarder, abounds with a hard and durable stone which is very fit both for building houses and dry-stone fences; the quarries in the neighbourhood of the town also afford grey slate in abundance. No coal has yet been found here. In the Statistical report of 1838, the acres under the plough in this parish are stated at 7,176; the waste or pasture at 6,571 acres. There is only a small quantity of ground occupied by woods and rivers, and none at all by forests, or marshes; about 300 acres are under plantation. There are a couple of hundred acres in common at the west end of the village of Auchterarder, called the moor of Auchterarder, to which the inhabitants of Auchterarder send their cows to pasture. In its present state it is of no great value; but were it improved, the value of it would be vastly increased. Attempts have been repeatedly made to get it enclosed and divided, but hitherto it has been found impossible to settle the respective claims of the various parties interested in it. The average rent of land, in 1792, was 20s.; in 1838, 30s. Population, in 1801, 2,042; in 1831, 3,315, of whom 1,981 were resident in the town of Auchterarder, and about 400 in the village or Smithyhaugh. Houses 475. Assessed property, in 1815, £6,434.

This parish is in the presbytery of Auchterarder, and synod of Perth and Stirling. Patron, the Earl of Kinnoul. Minister's stipend £199 14s. 2d., with a manse, and a glebe of the value of £17. Unappropriated teinds £18 15s. 11d. Church built in 1784; sittings 909. The old church of Abruthven is still standing; it is roofless, but the walls are

good; and it has been suggested that it might be repaired and erected into a church for the village and district of Smithyhaugh. It is $2\frac{1}{2}$ miles distant from Auchterarder church. A Relief church was built in Auchterarder in 1778; sittings 553. Minister's stipend £110, with manse and garden. A United Secession church was erected in 1813; sittings 500. Minister's stipend £100, with manse and garden. By a census taken by the church-elders, in December, 1835, it was ascertained that the population of this parish then amounted to 3,315, of whom 2,196 belonged to the establishment, and 1,070 were dissenters. There are seven schools in the parish. The parochial schoolmaster has the maximum salary, and about £40 of school-fees. Mr. Sheddan of Lochie, in 1811, built and endowed a school here with £1,000, on condition of 12 poor children being taught in it gratuitously. There is a subscription school at Smithyhaugh.—This parish will long be famous, in the ecclesiastical annals of the country, for the singular struggle connected with the Veto Act which had its origin here, and of which the following is a brief but fair summary. The exercise of patronage was at one time very unpopular in Scotland. It had been an early principle of the Church that clergymen should not be intruded on parishes contrary to the consent of the parishioners. When a patron presents, it is for the presbytery to say whether the presentee is qualified, and to refuse collation if he is not. The Church now considers the presentees' acceptability to the parishioners a necessary qualification, and in 1834 passed the 'Veto Act,' instructing all presbyteries to reject presentees to whom a majority of male heads of families in communion with the Church objected. In the case of the Auchterarder presentation, when this was acted on, the presentee brought an action in the civil courts to declare it an undue interference with his civil rights. The Church said—This is a matter purely ecclesiastical. The civil and the church-courts have their respective jurisdictions. This is ours entirely, and the civil court must not interfere. The Court of Session said—We care not what you call it. We are here to protect men's property. Patronage has been constituted property by Act of Parliament. Whether rightly or not, it is a commodity that may be bought and sold. You have attempted to deprive a proprietor of the use of it, under a pretence, and we must stop you. The Church appealed to the House of Lords. The judgment of the court below was confirmed; but the General Assembly declined to implement the decision of the civil tribunals, holding itself irresponsible to any civil court for its obedience to the laws of Christ.

The town of Auchterarder was once, perhaps, of greater note. It was a royal burgh, and sent a member to parliament; and a great number of the houses hold burghage to this day. How it came to lose its privileges is not certainly known. It consists of one street above a mile long. Besides six fairs every year,—viz. on the last Tuesday of March, the first Thursday of May, and in each of the harvest-months,—there has been a yearly tryst held here in the beginning of October, since the year 1781, at which there has been always a great show of black cattle, previous to the tryst at Falkirk. Another fair is held on December 6th. About 60 years ago, a considerable manufacture of yarn and narrow linen-cloth was carried on in Auchterarder. The main business now is that of cotton weaving. There are about 500 looms, all employed by Glasgow houses, in weaving pulicates, gingham, and stripes. The average nett weekly earnings of a cotton-weaver do not at present exceed 4s.—On the 28th January, 1716, the Earl of Marr burnt this town on the advance of the royalist troops under

Argyle upon Perth. Argyle arrived on the 30th, and here passed the night upon the snow, "without any other covering than the fine canopy of heaven." [Annals of Geo. I., vol. ii. p. 222.] Auchterarder, says Newte—who visited this place in 1782—"seems to have lain under the curse of God ever since it was burnt by the army in the year 1715. The dark heath of the moors of Ochil and Tullibardun,—a Gothic castle belonging to the Duke of Athol,—the naked summits of the Grampians seen at a distance,—and the frequent visitations of the presbytery, who are eternally recommending fast-days, and destroying the peace of society by prying into little slips of life, together with the desolation of the place, render Auchterarder a melancholy scene, wherever you turn your eyes, except towards Perth and the lower Strathern, of which it has a partial prospect." ['Tour in England and Scotland,' London, 1791. 4to. p. 252.] When this superficial tourist penned his coarse and unjust remarks on presbyterial visitations, he probably knew no more of the matter than he seems to have done of what he calls the Antimonian heresies of the place.—At a little distance from Auchterarder, is a village called the Borland-Park, built by government for the accommodation of the soldiers who were disbanded after the war in 1763. Most of the soldiers who were planted in it, left it very soon afterwards—though the terms of their settlement were very advantageous—either from dislike to the place, or more probably to their new mode of life.—On the south of Auchterarder, and along the side of the Ruthven, is Miltown, a small village.—The village of Smithyhaugh is of very recent origin. It is $2\frac{1}{2}$ miles east of Auchterarder, and chiefly inhabited by cotton-weavers.—In the neighbourhood of Auchterarder, and on the north side of the town, are the remains of an old castle said to have been a hunting-seat of King Malcolm Kenmore; adjoining to which is a small copse wood which commonly goes by the name of the King's wood.—A little to the northward of the castle, are the remains of a popish place of worship, commonly known by the name of the Old Kirk, or St. Mungo's chapel. This was formerly the parish-church; the church-yard was the burying-ground of the parish,—many of the inhabitants still retain burying-places in it.—There are some traces of encampments on the south-east of the village of Auchterarder, at the foot of the Ochils. Perhaps these were out-posts of the Roman camp at Ardoch. About 60 years ago, there was found in a marl-pit, in the parish, a pair of large horns, supposed to be those of the Elk, or Eurus, which were sent to Edinburgh, and are now in the custody of the Antiquarian society. "The alteration in the dress and manner of living of the inhabitants, within these 30 or 40 years, is not a little remarkable. Every body is now decently and comfortably clothed, which perhaps was not the case then; and there is now four times the quantity of butcher-meat used. About 25 or 30 years ago, there were but two sixpenny wheaten loaves brought from Perth, to two private families, in the week. There is now a baker in the village, who sells bread to the amount of £200 a-year, and about £80 worth is brought every year from Perth." [Statistical report of 1792.] We have inserted this statement as marking the progress of social comforts in this district. We need scarcely say that Auchterarder has been long abundantly supplied with white bread as well as brown from its own ovens, and that there is not a cottage in the parish within which at least a couple of sixpenny wheaten loaves are not consumed weekly.

AUCHTERDERRAN, a parish in the county of Fife. It is of an irregular form, about 5 miles long from north to south, and 3 broad. It is bounded

by Auchtertool on the south; Abbotshall on the south-east; Dysart on the east; Kinglassie and Portmoak on the north; and Balingray on the west. The valley in which this parish lies is surrounded on the south, east, and west, by rising grounds, which are of sufficient elevation to exclude the view of the frith of Forth, although they are cultivated to the top. The water of Orr flows through the parish from north-west to south-east. It is a slow running stream, rising in the north-west corner of the county, flowing through Loch Fetty, and falling into the Leven about 3 miles from its mouth. On the southern border of the parish is a sheet of water measuring nearly 3 miles in circumference, called Lochgelly, which discharges its waters, by a small rivulet, into the Orr. Population, in 1801, 1,045; in 1831, 1,590, of whom 786 were resident in Lochgelly village, and 77 were employed in the coal-mines now opened in this parish. Houses, 331. Assessed property, £5,669. The land-rent of the parish in 1792 was £2,000; it is now nearly £7,000.—This parish is in the presbytery of Kirkcaldy, and synod of Fife. Patron, Boswell of Balmuto. Stipend, £237 lls. 10d., with manse and a glebe of the annual value of £30. Unappropriated teinds, £824 0s. 11d. Church built in 1789. There is a Secession church at Lochgelly. The parochial schoolmaster has a salary of £34 4s. 4d., with £25 school-fees. Average number of pupils, 60. There are other two schools in the parish attended by about 150 children.—The venerable incumbent of this parish, who has twice drawn up the Statistical Account of it, concludes his report of 1836 with the following interesting comparative account of its progress during the last 40 years. “Drunkenness, formerly rare, is now lamentably frequent.—Forty years ago emigration was thought of with much reluctance; now the predilection for the native spot has diminished, and emigration is more readily embraced.—Forty years ago we were accustomed to regard increase of population as increase of national prosperity; now such increase seems regarded as an obstruction.—Forty years ago we had no medical gentlemen in the parish; at present two are resident.—Since the draining of our soil and marshes obtained, the heron has nearly disappeared; and since our district became wooded, pheasants have reached our latitude.—Forty years ago servants for husbandry were few in number, at present they seem redundant.—Formerly coal-hewers were inferior to other classes in morals and respectability, here they are now nearly on a level.—Forty, nay twenty, years ago, we had not one metalled road, now we have several.—Forty years ago irregularity, multiplicity, and confusion of weights and measures, pervaded all transactions, now we have one philosophical and just standard.—Forty years ago the ministers of the Established church generally delivered all their discourses from the pulpit without reading; now they are generally read.—Forty years ago land was sold in Fife at 35 years’ purchase of the existing rental; now it sells at 26 years’ purchase of the present rental.—Forty years ago rents were all paid here in money; now they begin to be paid in grain, at the rate of the county fiars.—Forty years ago resurrectionists, as they are called, were unheard of; now even the poor labourer is under the hardship of providing safes for the graves of his friends.—Forty years ago thrashing-machines were unknown to us; now they are become general, and so beneficial that it is difficult to believe how farming could be carried successfully on without them.—Forty years ago the different ranks in society were distinguished from each other by their dress; at present there is little distinction in dress.—Forty-

nine years ago I was the youngest minister of the presbytery; now I am the oldest.” [‘New Statistical Account of Scotland, Fifeshire, pp. 173, 174.’]

AUCHTERGAVEN, a parish in the shire of Perth. It is 10 miles in length from east to west, and about 3 in average breadth from north to south. Its general surface measures nearly 20,000 acres; but a great proportion of this consists of hills and moors, or waste uncultivated ground. A small neighbouring parish, called Logiebride, has been annexed to Auchtergaven: but no account can be had of the time when this annexation took place, either from tradition, or from the records of presbytery, in which the parish is always named Oughter, or Auchtergaven. The people residing in the district that belonged to Logiebride parish, however, still continue to bury in the churchyard at Logiebride; and a part of the church is yet standing, and is used as a burying-ground by the family of Tullybelton. It is distant 2 miles from Auchtergaven church. This parish is bounded on the north by the parish of Little Dunkeld; on the east by Kinclaven parish; on the south by the parishes of Redgorton and Moneydie; and on the west by Redgorton. A lower range of the Grampians skirts it on the north, some points in which exceed 1,000 feet in elevation. From these heights a number of streams descend towards the Ordie, a tributary of the Tay, which rising in a small lake in the hill of Tullybelton, flows through Strath-ordie in this parish, and unites with the Shochie at Luncarty. At Loak the Ordie receives the Garry from Glen Garr. The bed of the Tay, near to Stanley, is crossed by a whin-dike, which here forms the celebrated Linn of Campsie. At the foot of Birnam hill [altitude 1,300 feet,] there is a small secluded sheet of water which is frequented by the heron. The great bittern (*Ardea stellaris*, L.) has been shot in this neighbourhood. In the year 1784 Mr. Dempster of Dunnichen, and Mr. Graham of Fintray, along with several gentlemen in Perth, feued some ground at Stanley from the duke of Atholl, built a mill for spinning cotton, and soon after began to erect a village in its neighbourhood. At that time only a few families dwelt near Stanley; and, except the land within the enclosures around Stanley house, most part of the district was almost in a state of nature. In 1838 there were two cotton-mills here, with a moving-power by water which was equal to 202 horse-power, and employing 887 hands; and the village contained a population of 1,500 souls.—This parish is in the presbytery of Dunkeld, and synod of Perth and Stirling. Patron, the Crown. Minister’s stipend, £179 6s. 4d., with a manse and glebe. The church of Auchtergaven is finely situated upon the slope of a rising ground, half-a-mile eastward from the manse, and adjoining the public road from Perth to Dunkeld. It is distant from Perth $8\frac{1}{2}$ miles, and $6\frac{1}{2}$ from Dunkeld. The parochial schoolmaster has a salary of £34 4s. 4 $\frac{1}{2}$ d., with about £12 fees. Pupils, 90. There is a private school at the village of Bankfoot, within a quarter of a mile of the parish-school; and another at Stanley, which is attended by about 136 children, and the master of which has a salary of £20, and a house, besides his fees, from the Stanley cotton-mill company. Besides these, there are other three schools in the parish,—one at Stanley, one at Glack, and one at Nether-Olney.—Stanley house is beautifully situated upon the Tay, in the eastern part of this parish. It was built by the late Lord Nairne. The family of Nairne had another elegant house near Loak, the ruins of which are yet to be seen. It was purchased by the Duke of Atholl after the forfeiture of Lord Nairne, and thereafter demolished. The title of Nairne was revived in 1824 in the person of Wil-

liam, Lord Nairne, who was succeeded by his son William, 6th Lord Nairne, who died, without issue, in 1837. The title is understood to have descended to the Baroness Keith. The Nairne family bury in the south aisle of Auchtergaven church.

AUCHTERHOUSE, a parish in the south-west of Forfarshire, bounded on the north by Newtyle and Glammis parishes; on the east by Tealing and Strathmartine; on the south by the parish of Liff, and the shire of Perth; and on the west by Lundie parish. Its greatest length is about $4\frac{1}{2}$ miles, and greatest breadth $3\frac{1}{2}$. About three-fourths of the surface are arable. The range of the Sidlaw hills shelter it on the north-west, and in the north-east are the hills of Auchterhouse and Bockello. Two streams, both rising in the parish of Lundie, flow through the lower part of this parish, and uniting at the village of Dronlaw, form the Dighty water, which flows into the frith of Tay, about 4 miles east of Dundee. The turnpike road from Dundee to Meigle passes the kirk-town, which is 7 miles north-west of Dundee, and 100 feet above the sea-level. The Dundee and Newtyle railway passes through the bog of Auchterhouse. Population, in 1801, 653; in 1831, 715. Houses, 125. Assessed property in 1815, £3,118. Valued rent, £169 14s. 5d. Scots. Real rent, in 1792, £2,000.—This parish is in the presbytery of Dundee, and synod of Angus and Mearns. Patron, the Earl of Airlie. Minister's stipend, £229 0s. 2d., with a manse, and a glebe of the value of £12. Schoolmaster's salary, £34 4s. 4½d.; school-fees about £20. Church built in 1775. The old church was a large and handsome Gothic structure.—In the old Statistical account of this parish there are some curious extracts given from the parish-register, of which we select the following:—

Sunday, the 1st of June, 1645, "there was but anes preaching, because of the enemie lying so neir hand."—On Sunday, the 20th of July, there was no preaching, "because of the enemie being so neir the towne."—On the 5th of July, 1646, there was intimation made out of the pulpit, of a fast to be kept on the 9th of July, "because of the deplorable stat and cure of several congregations which have been starved by dry-breasted ministers this long time bygone, and now are wandering like sheep but shepherds, and witnesseth no sense of scant; and because of the pregnant scandal of witches and charmers within this part of the land."—On Sunday, the 27th of September, the minister read out of the pulpit "the names of those who were excommunicat be Mr. Robert Blair in the Kirk of Edinburgh, to wit, the Earl of Airlie, Sir Alexander Makdonald, the Lord of —, and some others."—On the 7th of January, 1649, "the minister and twa of the elders went through the church after sermon, desiring the people to subscribe the covenant."—6th January, 1650, "the minister desired the session to make search every ane in their own quarter gave they knew of any witches or charmers in the paroch, and delate them to the next session."—On Sunday the 18th of July, 1652, "Janet Fife made her publick repentance before the pulpit, for learning M. Robertson to charm her child; and whereas M. Robertson should have done the like, it pleased the Lord before that time to call upon her by death."—Nov. —, 1665, "Mr. William Skinner, minister and moderator of the presbyterie of Dundee, having preached, intimat to the congregation, Mr. James Campble his suspension from serving the calling of the ministrie, till the synod assemble of Dundee, for ane fornication committed betwixt him and dam Marjorie Ramsay, Countess of Buchanne; for the gik, by the said presbyterie's order, he beganne his repentance on the pillare, and sat both sermons; and is exhorted to repentance."—December 24th, "Mr. James Campble, for ane fornication forsaide, being thrice in the pillare; upon evident signs of his repentance, was absolvit."—December 21, "That day the Countess of Buchanne, for ane fornication committed with Mr. James Campble her chaplain, beganne her repentance."—February 24, 1662, "All kirk-sessions are discharged till farder orders."

AUCHTERLESS, a parish in Aberdeenshire; bounded on the north by the parish of Turriff; on the east by Fyvie; on the south by Fyvie, Rayne, and Culsamond; and on the west by Forgue and Inverkeithnie. The Ythan river takes its rise near the south-western extremity of this parish, and runs through it in a north-east direction, passing the kirk-town, which is near the centre of the parish. At the point where it enters the parish on the south-

west from Forgue, are some traces of ancient encampments supposed to be Roman. There are also some Druidical circles within the parish. Population, in 1801, 1,129; in 1831, 1,701. Houses, 325. Assessed property, in 1815, £2,930. Valued rent, £3,153 7s. Scots. Real rent about £2,000.—This parish is in the presbytery of Turriff, and synod of Aberdeen. Patron, Duff of Hatton. Stipend, £191 6s. 5d., with a manse, and a glebe of the value of £13 13s. Unappropriated teinds, £171 5s. 1d. Schoolmaster's salary, £34 4s. 4½d., with about £21 fees. Average number of pupils 45. There are other five private schools attended by about 150 children.

AUCHTERMUCHTY, a small parish in the shire of Fife, measuring $2\frac{1}{2}$ miles from east to west, and about 2 from north to south. It is bounded on the north by the Perthshire portion of Abernethy parish; on the east by Collesie; on the south by the river Eden, which separates it from Strathmiglo; and on the west by Strathmiglo and Abernethy. From its northern limits, where it rises to a considerable elevation on the Ochils, the face of the country slopes gently to the Eden. The soil is fertile and well-cultivated. Average rent £3 per acre; valued rent £5,783 9s. 11d. Scots. Assessed property, in 1815, £6,930. The heritors are numerous. Population, in 1801, 2,060; in 1831, 3,225. Houses 670.—This parish is in the presbytery of Cupar, and synod of Fife. Patron, Bruce of Falkland. Stipend £253 11s. 2d., with a manse, and a glebe valued at £20. Unappropriated teinds £77 5s. 8d. Church built in 1780; sittings 900. Schoolmaster's salary £34 4s. 4½d., with about £15 school fees. Average number of pupils 60. There are five private schools, attended by about 240 children. Four of these are in the town of Auchtermuchty, and one at Dunshelt. There are four dissenting congregations in the parish, two of which are in connexion with the United Associate synod; the third is connected with the Relief synod; and the fourth is a Baptist congregation. Mr. John Glass, the founder of the Glassites, was born in this parish, October 5, 1691, at which time his father was minister of the parish.

The royal burgh of **AUCHTERMUCHTY** is situated near the middle of the parish, about a mile from the Eden, on the road from Cupar to Kinross, and from Kirkaldy to Newburgh. A small burn flows through it from Lochmill in Abdie parish, and joins the Eden near Kilwhis. It is an irregularly built town, consisting of three principal streets, and a number of lanes. The East Lomond hill forms the finest object in the surrounding landscape. This place was erected into a royal burgh by a charter of James V., dated May 25, 1517, and confirmed by charter of James VI., dated October 28, 1595. It had not, however, exercised its privilege of sending a member to parliament for a considerable time before the Union. Since the date of the 1 and 2 William IV., parties qualified in terms of it, resident within the borough, have voted in the election of the county-members. Population, in 1833, 2,400, of whom 76 rented property within the burgh amounting to £10 per annum and upwards. The burgh having become bankrupt in 1816, the whole property of the burgh—except the town-house, jail, steeple, bell, and customs, which, on appearance for the magistrates and the Crown, were held to be *extra communitatem*—was sequestrated in June, 1822, and sold under authority of the court of session in a process of ranking and sale. The present revenue is about £30. The affairs of the burgh were formerly managed by a council of 15, and 3 bailies; the magistrates and council are now elected in terms of the statute 3 and 4 William IV. There is a weekly market held on Monday; and three public

fairs during the year, of which the principal one is held on the 13th of July. There is a branch of the Glasgow Union bank here. There are above 800 looms in the burgh, and above 1,000 within the parish. They are chiefly employed in the manufacture of linen for Newburgh, cotton cloth for Glasgow and Aberdeen, and woollen shawls for Tillicoultry. The average weekly wages of a weaver are at present about 4s. 6d. There is also a large bleachfield in the vicinity of the town.—At the south-eastern extremity of the parish is a large village called Dunsheult.—Immediately to the south of the burgh is the fine old castle of Myers, the property of Bruce of Falkland, who purchased it from the Moncrieffs of Reedie.

Every one has heard of the humorous Scottish poem, 'The Wife of Auchtermuchty,' which has been ascribed, but most erroneously, to James V. We shall quote a stanza or two:

In Auchtermuchty dwelt a man,
An husband, as I heard it tauld,
Quha weil could tippie out a can,
And nowther luvit hungir nor cauld;
Till anes it fell upon a day,
He zokit his plewch upon the plain;
But schort the storm wald let him stay,
Sair blew the day with wind and rain.

He lowsd the plewch at the land's end,
And draife his owsen hame at ene;
Quhen he came in he blinkit ben,
And saw his wyfe baith dry and elene,
Set beikand by a fyre full bauld,
Suppand fat sowp, as I heard say:
The man being weary, wet and cauld,
Betwain thir twa it was nae play.

Quod he, "Quhair is my horses corn?
My owsen has nae hay nor strae;
Dame, ye maun to the plewch the morn,
I sall be hussy gif I may.
This seid-time it proves cauld and bad,
And ze sit warm, nae troubles se;
The morn ze sall gae with the lad,
And syne zeil ken what drinkers drie."

"Gudeman," quod scho, "content am I,
To tak the plewch my day about,
Sae ye rule weil the kaves and ky,
And all the house baith in and out.
And now sen ze haif made the law,
Then gyde all richt and do not break;
They sicker raid that neir did faw,
Therefore let naething be neglect."

The bargain proved, as might be anticipated, a most unfortunate one for the gudeman, whose successive disasters in 'hussyskep' brought him 'meikle schame,' fairly sickened him of his new employments before night-fall, and forced him upon the sound reflection and wise resolution with which the ballad closes:

Quod he, "When I forsuke my plewch,
I trow I but forsuke my skill!
Then I will to my plewch again,
For I and this house will nevir do weil."

AUCHTERTOOL, a small parish in Fifeshire, about 2 miles in length, and one in breadth; bounded on the north by Auchterderran parish; on the east by Abbotshall; on the south by Kinghorn and Aberdeen; and on the west by Beath. The surface is undulating, and rises towards the north. There is a small village in the parish, and the church is situated about half-a-mile to the west of it. The ground about the church and manse is elevated and commanding, and takes in a fine view of the sea to the east, as far as the eye can reach, comprehending in it the isle of May, the Bass, North-Berwick law, and a point of the Lothian coast which stretches a considerable way into the sea. There is one small lake in the parish called Camilla Loch, in which are some perch. It takes its name from the old house of Camilla adjacent to it; which was so called after one of the countesses of Moray, a Campbell. The

ancient name of the house was Hallyards, when it belonged to the family of the Skenes. It is said to have been the rendezvous of the Fife lairds at the rebellion in 1715. When James V. was on his road to the palace of Falkland, after the defeat of his army on the English border, under the command of Oliver Sinclair, he lodged all night in the house of Hallyards, where he was courteously received by the Lady of Grange, "ane ancient and godlie matrone," as Knox calls her. It seems then to have belonged to the Kirkcaldies of Grange, a family of considerable note in the history of Scotland. It is now a ruin. Population, in 1801, 396; in 1831, 527. Houses 113. Assessed property, in 1815, £2,044.—This parish is in the presbytery of Kirkcaldy, and synod of Fife. Patron, the Earl of Moray. Stipend £157 18s. 10d., with a manse, and a glebe valued at £20. Schoolmaster's salary £29 18s. 10d., with about £30 fees. Average number of pupils 40. There are two private schools, attended by about 100 children.

AUGUSTUS (FORT), is situated on a small triangular plain, at the western extremity of Loch Ness, in the parish of Boleskine, Inverness-shire; 13 miles north of Garviemore-inn; 32½ south-west of Inverness; 29 north-east of Fort-William; 5½ miles from the north-east end of Loch Oich; and 144 from Edinburgh. It was erected on a part of the forfeited estate of Lord Lovat in 1729, and is a regular fortification, with 4 bastions, defended by a ditch, covert-way, and glacis, and barracks capable of accommodating 300 soldiers. It was until late years garrisoned by a company of soldiers, and supplied with provisions from Inverness; but the guns have been removed to Fort-George, and there are only a few soldiers stationed here. The fortifications are in good repair; but as the whole is commanded from the neighbouring hills on every side, it is by no means capable of long resistance. It is a neat-looking place; the surrounding plantations, and the rivers Tarffe and Oich which run by it, give it very much the appearance of an English country-seat. "Looking down from the glacis," says Miss Spence, "the eye commands the whole length of the lake, 24 miles. On the south side, bordered by lofty and precipitous rocks as far as the eye reaches, without any interruption except the hanging gardens of Glendoe. On the north, a softer and more varied prospect forms a happy contrast to the rude grandeur of Suidh Chuiman, and the dark heights of Stratherrick. Verdant bays retire from the view: wooded heights gently rising, and peopled glens of the most pastoral description, intervene,—each divided by its blue narrow stream pouring in to augment the abundance of the lake. This last, in calm weather, holds a most beautiful and clear mirror to its lofty and varied borders. In wintry storms its agitations 'resemble Ocean into tempest wrought.' The eddying winds, which rush with inconceivable fury down the narrow opening in the hills, make navigation dangerous from their violence and uncertainty. The east wind—which sometimes prevails in winter for more than a month—raises tremendous waves, yet it is not so dangerous as the impetuous blasts which descend from the apertures between the mountains." ['Letters.' London, 8vo. 1817, pp. 178, 179.] Fort Augustus was taken by the rebels in 1745, who deserted it after demolishing what they could. The Duke of Cumberland established his head-quarters here after the battle of Culloden. Immediately behind the fort is a small village called Killiecumming, or Cill Chuiman. The Caledonian canal here passes through a series of five locks. There is a small church here, and a missionary clergyman, who is supported from the Royal bounty. See BOLESKINE.

AULD-DAVIE, a rivulet in Aberdeenshire, a head-tributary to the Ythan, into which it falls near Glenmailen. Near the confluence of the two streams, in the parish of Auchterless, are some relics of Roman antiquities, called the Rae or Ri dykes, supposed by many to point out the Statio ad Itunam of Tacitus. See 'Caledonia,' vol. i. p. 127; and Roy's 'Military Antiquities,' Plate LI. See AUCHTERLESS.

AULDEARN, a parish in the county of Nairn; bounded on the north by the Moray frith; on the east by the parish of Dyke; on the south by Ardlach; and on the west by Nairn. It extends 4 miles along the frith; being in length about $6\frac{1}{2}$ miles, and in breadth about $5\frac{1}{2}$. The ground rises gradually from the coast to the inland part of the parish, where it becomes hilly. The soil is generally light and fertile in proportion to its vicinity to the sea. Near the coast is a small lake, called Loch Loy, about $1\frac{1}{2}$ mile in length, and a quarter of a mile broad. A fair for cattle and horses is held here on the 20th of June, if that day fall on a Wednesday or Thursday; if not, on the first Wednesday thereafter; and another fair is held on the first Tuesday after Inverness November fair. Population, in 1801, 1,401; in 1831, 1,613, of whom 1,300 belonged to the established church. Houses 330. Assessed property £3,200. The village of Auldearn, in the above parish, is a burgh of barony. It is 20 miles west of Elgin, and about $2\frac{1}{2}$ south-east of Nairn. Population about 400.—This parish is in the presbytery of Nairn, and synod of Moray. Patron, Brodie of Brodie. Stipend £241 5s. 4d., with a manse, and a glebe valued at £12 10s. Unappropriated teinds £360 5s. 3d. Church built in 1751; repaired in 1816; sittings 525. There are two catechists.—A United Secession congregation meets at Boghole. Church built about 1780; repaired in 1817; sittings 353. Salary £80, with a manse and garden, and glebe worth £10.—The parochial schoolmaster has a salary of £37 6s., with £10 school-fees; average number of pupils 100. There are three private schools in the parish, attended by about 150 scholars.—It is rather remarkable that a very large portion, it is thought a great majority, of the inhabitants of the town of Nairn (not of the fishing-class) have their burial places in Auldearn, and that to these they cling with a romantic feeling, the funerals of the poorest being well-attended all the way. To other causes, the supposed greater sacredness of the soil of Auldearn, on account of its having been the ancient seat of the deans of Moray, may perhaps be added as a reason for such a resort of funerals from Nairn, as well as many other places.

In May, 1645, Montrose, while pursuing General Hurry in his retreat on Inverness, took up a position near the village of Auldearn, with 1,500 foot, and 250 horse, where he was attacked by Hurry, now reinforced by the clan Fraser, and the Earls of Seaforth and Sunderland. "The village of Auldearn stands upon a height, behind which, or on the east, is a valley, which is overlooked by a ridge of little eminences running in a northerly direction, and which almost conceals the valley from view. In this hollow Montrose arranged his forces in order of battle. Having formed them into two divisions, he posted the right wing on the north of the village, at a place where there was a considerable number of dikes and ditches. This body, which consisted of 400 men, chiefly Irish, was placed under the command of Macdonald. On taking their stations, Montrose gave them strict injunctions not to leave their position on any account, as they were effectually protected by the walls around them, not only from the attacks of cavalry but of foot, and could, without much danger to themselves, keep up a galling and destructive fire upon their assailants. In order to attract the best

troops of the enemy to this difficult spot where they could not act, and to make them believe that Montrose commanded this wing, he gave the royal standard to Macdonald, intending, when they should get entangled among the bushes and dikes with which the ground to the right was covered, to attack them himself with his left wing. And to enable him to do so the more effectually, he placed the whole of his horse and the remainder of the foot on the left wing to the south of the village. The former he committed to the charge of Lord Gordon, reserving the command of the latter to himself. After placing a few chosen foot with some cannon in front of the village, under cover of some dikes, Montrose firmly awaited the attack of the enemy.—The arrangements of Hurry were these. He divided his foot and his horse into two divisions each. On the right wing of the main body of the foot, which was commanded by Campbell of Lawers, Hurry placed the regular cavalry which he had brought from the south, and on the left the horse of Moray and the North under the charge of Captain Drummond. The other division of foot was placed behind as a reserve and commanded by Hurry himself.—When Hurry observed the singular position which Montrose had taken up, he was utterly at a loss to guess his designs; and though it appeared to him, skilful as he was in the art of war, a most extraordinary and novel sight, yet, from the well-known character of Montrose, he was satisfied that Montrose's arrangements were the result of a deep-laid scheme. But what especially excited the surprise of Hurry, was the appearance of the large yellow banner or royal standard in the midst of a small body of foot stationed among hedges and dikes and stones, almost isolated from the horse and the main body of the foot. To attack this party, at the head of which he naturally supposed Montrose was, was his first object. This was precisely what Montrose had wished by committing the royal standard to the charge of Macdonald, and the snare proved successful. With the design of overwhelming at once the right wing, Hurry despatched towards it the best of his horse and all his veteran troops, who made a furious attack upon Macdonald's party, who defended themselves bravely behind the dikes and bushes. The contest continued for sometime on the right with varied success, and Hurry, who had plenty of men to spare, relieved those who were engaged by fresh troops. Montrose, who kept a steady eye upon the motions of the enemy, and watched a favourable opportunity for making a grand attack upon them with the left wing, was just preparing to carry his design into execution, when a confidential person suddenly rode up to him and whispered in his ear that the right wing had been put to flight. This intelligence was not, however, quite correct. It seems that Macdonald—who, says Wishart, 'was a brave enough man, but rather a better soldier than a general, extremely violent, and daring even to rashness'—had been so provoked with the taunts and insults of the enemy, that in spite of the express orders he had received from Montrose on no account to leave his position, he had unwisely advanced beyond it to attack the enemy, and though he had been several times repulsed he returned to the charge. But he was at last borne down by the great numerical superiority of the enemy's horse and foot, consisting of veteran troops, and forced to retire in great disorder into an adjoining enclosure. Nothing, however, could exceed the admirable manner in which he managed this retreat, and the courage he displayed while leading off his men. Defending his body with a large target, he resisted, single-handed, the assaults of the enemy, and was the last man to leave the

field. So closely indeed was he pressed by Hurry's spearmen, that some of them actually came so near him as to fix their spears in his target, which he cut off by threes or fours at a time with his broadsword. It was during this retreat that Montrose received the intelligence of the flight of the right wing; but he preserved his usual presence of mind, and to encourage his men who might get alarmed at hearing such news, he thus addressed Lord Gordon, loud enough to be heard by his troops, 'What are we doing, my lord? Our friend Macdonald has routed the enemy on the right and is carrying all before him. Shall we look on, and let him carry off the whole honour of the day?' A crisis had arrived, and not a moment was to be lost. Scarcely, therefore, were the words out of Montrose's mouth, when he ordered his men to charge the enemy. When his men were advancing to the charge, Captain or Major Drummond, who commanded Hurry's horse, made an awkward movement by wheeling about his men, and his horse coming in contact with the foot, broke their ranks and occasioned considerable confusion. Lord Gordon seeing this, immediately rushed in upon Drummond's horse with his party, and put them to flight. Montrose followed hard with the foot, and attacked the main body of Hurry's army, which he routed after a powerful resistance. The veterans in Hurry's army, who had served in Ireland, fought manfully, and chose rather to be cut down standing in their ranks than retreat; but the new levies from Moray, Ross, Sutherland, and Caithness, fled in great consternation. They were pursued for several miles, and might have been all killed or captured if Lord Aboyne had not, by an unnecessary display of ensigns and standards, which he had taken from the enemy, attracted the notice of the pursuers, who halted for some time under the impression that a fresh party of the enemy was coming up to attack them. In this way, Hurry and some of his troops, who were the last to leave the field of battle, as well as the other fugitives, escaped from the impending danger, and arrived at Inverness the following morning. As the loss of this battle was mainly owing to Captain Drummond, he was tried by court-martial at Inverness and condemned to be shot, a sentence which was carried into immediate execution. He was accused of having betrayed the army, and it is said that he admitted that after the battle had commenced he had spoken with the enemy. The number of killed on both sides has been variously stated. That on the side of the covenanters has been reckoned by one writer at 1,000, by another at 2,000, and by a third at 3,000 men. Montrose, on the other hand, is said by Gordon of Sallagh to have lost about 200 men; while Spalding says, that he had only 'some twenty-four gentlemen hurt, and some few Irish killed;' and Wishart informs us that Montrose only missed one private man on the left, and that the right wing, commanded by Macdonald, 'lost only fourteen private men.' This trifling loss on the part of Montrose will appear almost incredible, and makes us inclined to think that it must have been greatly underrated; for it is impossible to conceive that the right wing could have maintained the arduous struggle it did without a large sacrifice of life. The clans who had joined Hurry suffered considerably, particularly the Frazers, who, besides unmarried men, are said to have left dead on the field no less than eighty-seven married men. Among the principal covenanting officers who were slain, were Colonel Campbell of Lawers, and Sir John and Mr. Gideon Murray, and Colonel James Campbell, with several other officers of inferior note. The laird of Lawers' brother, Archibald Campbell, with several other officers were taken prisoners. Captain Mac-

donald and William Macpherson of Invereschie, were the only persons of any note killed on Montrose's side. Montrose took several prisoners, whom, with the wounded, he treated with great kindness. Such of the former as expressed their sorrow for having joined the ranks of the covenanters he released—others who were disposed to join him he received into his army, but such as remained obstinate he imprisoned. Besides taking sixteen standards from the enemy, Montrose got possession of the whole of their baggage, provisions, and ammunition, and a considerable quantity of money and valuable effects. The battle of Auldearn was fought on the 4th of May, according to some writers, and on the 9th according to others." [Browne's 'History of the Highlands,' vol. i. pp. 382—385.]—The Rev. Mr. Barclay, of Auldearn, has shown his good taste in collecting and replacing, at considerable personal expense and trouble, various ancient monuments which had long lain scattered about the interesting churchyard of his parish. He has also restored the original inscriptions of a tombstone and tablet—the latter in the ancient choir attached to the church—which were intended to commemorate the heroes of the Covenantant who fell at the battle of Auldearn. The tombstone is inscribed thus:—"Heir lyeth Captaine Bernard McKenzie, who, in defence of his religion and countrie feighting, died at Alderne the 8 of May an. 1645." The tablet bears—"This monument is erected by Sir Robert Innes, younger of that ilk, in memorie of Sir Alexander Dromond of Meedhope, Sir Johne Morray, and Maister Gideon Morray, who lies heir interred, who, fighting valiantly in defence of their religione, king, and native countray, died at Auldearn the 8 May, 1645."

AULD TOWN. See LOUDON.

AULTGRANDE, or ALTGRAD, a river in Ross-shire, in the parish of Kiltarn, which rises in Loch Glass, about 6 miles from the sea, and, after a winding course, falls into the frith of Cromarty, about a mile north of Kiltarn. For a considerable way it runs through a vast chasm, occasioned by a slip in the sandstone strata, called the Craig-grande or Ugly-rock, of which Dr. Robertson, in the first Statistical report of Kiltarn, gives the following description:—"This is a deep chasm or abyss, formed by two opposite precipices that rise perpendicularly to a great height, through which the Aultgrande runs for the space of two miles. It begins at the distance of 4 miles from the sea, by a bold projection into the channel of the river, which diminishes in breadth by at least one-half. The river continues to run with rapidity for about three quarters of a mile, when it is confined by a sudden jutting-out of the rock. Here the side-view from the summit is very striking. The course of the stream being thus impeded, it whirls and foams and beats with violence against the opposite rock, till, collecting strength, it shoots up perpendicularly with great fury, and, forcing its way, darts with the swiftness of an arrow through the winding passage on the other side. After passing this obstruction, it becomes in many places invisible, owing partly to the increasing depth and narrowness of the chasm, and partly to the view being intercepted by the numerous branches of trees which grow out on each side of the precipice. About a quarter of a mile farther down, the country people have thrown a slight bridge, composed of trunks of trees covered with turf, over the rock, where the chasm is about 16 feet broad. Here the observer, if he can look down on the gulf below without any uneasy sensations, will be gratified with a view equally awful and astonishing. The wildness of the steep and rugged rocks,—the gloomy horror of the cliffs and caverns, where the genial rays of the sun never yet

penetrated,—the waterfalls, which are heard pouring down in different places of the precipice with sounds various in proportion to their distances,—the hoarse and hollow murmuring of the river, which runs at the depth of near 130 feet below the surface of the earth,—the fine groves of pines which majestically climb the sides of a beautiful eminence that rises immediately from the brink of the chasm,—all these objects cannot be contemplated without exciting emotions of wonder and admiration in the mind of every beholder.”

ALTMORE, a rivulet in Banffshire, which falls into the Isla, near Auchinhove. It rises in the ridge of Altmore in Ruthven parish, and has a southerly course of about 5 miles.

AUSDALE, a small village in the parish of Latheron, Caithness-shire. It is 4 miles south-west of Berridale.

AUSKERRY, one of the Orkneys; constituting part of the parish of Stronsay. It is a small, uninhabited island, lying $2\frac{1}{2}$ miles to the south of Stronsay, and is appropriated to the pasturage of cattle and sheep. Here are the remains of a chapel; and also the ruins of a house which retains the appellation of The Monker, or Monk's house. A great quantity of kelp used to be manufactured here.

AUTORSKYLE, or **ACH-TA-SKALT**, a hamlet in the shire of Cromarty, though locally situate in the shire of Ross: it is in the parish of Loch Broom, and is situated on the southern shore of Little Loch Broom, at the point where the Little Broom flows into the head of the loch.

AVEN* (THE), or **AVON**, a river which issues from a small lake of the same name which lies embosomed among the vast mountains of Cairngorm, at an altitude of about 1,800 feet above sea-level. [See article **AVEN (LOCH)**.] It flows northwards through a narrow valley, and being joined by the Livat and Tervie at Castle Drummin, falls into the Spey at Ballindalloch, on the right bank, after a course of nearly 40 miles through a wild country. It abounds with trout. “The Aven issues in a large stream from its lake, and flows with so great pellucidity through its deep and dark glen, that many accidents have occurred to strangers by its appearing fordable in places which proved to be of fatal depth. This quality is marked by an old doggerel proverb,

“The water of Aven runs so clear,
It would beguile a man of an hundred year.”

At Poll-du-ess, a little way above the first inhabited place called Inchroy, the river is bounded by perpendicular rocks on each side. There the bed of the stream is 44 feet broad, and the flood (in August, 1829,) was 23 feet above the usual level. Deep as the ravine was, the river overflowed the top of it. From correct measurements taken, the column of water that passed here, with intense velocity, appears to have been about 1,200 square feet in its

transverse section.” [Sir T. D. Lauder's Account of the Great Floods of August 1829, p. 233.] At Ballindalloch the rise of the Aven exceeded that in the flood of 1768 by 6 feet.

AVEN (THE), or **AVON**, a river which takes its rise in the parish of Cumbernauld, in Stirlingshire, from Loch Fanny-side; and, receiving considerable additions in passing east, and then north-east through Slamannan and Linlithgow parishes, falls into the Forth, about half-way between Grangemouth and Borrowstoness. Its estuary, like that of the Carron water, about 2 miles to the west, is a deep muddy cut through the wide extent of sands and sleetches which appear here at low water on the side of the frith. Its whole course, including windings, is about 20 miles, throughout 16 of which it forms the boundary betwixt the shires of Stirling and Linlithgow. In the parish of Muiravon the Union canal is carried across this river by a splendid aqueduct. See **FORTH AND CLYDE UNION CANAL**.

AVEN (THE). See **AVON**.

AVEN (LOCH), a small solitary sheet of water, in the south-west extremity of Banffshire. It is deeply embosomed amidst huge mountains. On its western and northern edges, Cairngorm and Ben-Buinnac shoot up perpendicularly; while the vast limbs of Ben-Macduh and Ben-Main overhang its southern extremity in frightful masses. Professor Wilson has thus described this lonely mountain-tarn: “You come upon the sight of it at once, a short way down from the summit of Cairngorm, and then it is some two thousand feet below you, itself being as many above the level of the sea. But to come upon it so as to feel best its transcendent grandeur, you should approach it up Glenaven—and from as far down as Inch-Rouran, which is about half-way between Loch Aven and Tomantoul. Between Inchroy and Tomantoul the glen is wild, but it is inhabited; above that house there is but one other; and for about a dozen miles—we have heard it called far more—there is utter solitude. But never was there a solitude at once so wild—so solemn—so serene—so sweet! The glen is narrow; but on one side there are openings into several wider glens that show you mighty coves as you pass on; on the other side the mountains are without a break, and the only variation with them is from smooth to shaggy, from dark to bright; but their prevailing character is that of pastoral or of forest peace. The mountains that show the coves belong to the bases of Ben-Aven and Ben-y-buird. The heads of those giants are not seen—but it sublimates the long glen to know that it belongs to their dominion, and that it is leading us on to an elevation that ere-long will be on a level with the roots of their topmost cliffs. The Aven is so clear—on account of the nature of its channel—that you see the fishes hanging in every pool; and 'tis not possible to imagine how beautiful in such transparencies are the reflections of its green ferny banks. For miles they are composed of knolls, seldom interspersed with rocks, and there cease to be any trees. But ever and anon we walk for a while on a level floor, and the voice of the stream is mute. Hitherto sheep have been noticed on the hill, but not many, and red and black cattle grazing on the lower pastures; but they disappear, and we find ourselves all at once in a desert. So it is felt to be, coming so suddenly with its black heather on that greenest grass; but 'tis such a desert as the red-deer love. We are now high up on the breast of the mountain, which appears to be Cairngorm; but such heights are deceptive, and it is not till we again see the bed of the Aven that we are assured we are still in the glen. Prodigious precipices, belonging to several different mountains—for between mass and

* Mr. Thomas Richards, in his ‘Antique Lingue Britannice Thesaurus,’ under the article *Afon*, observes: “Avon is the proper name of several rivers in England; as Avon, the river of Bristol; the Avon in Northamptonshire; another in Warwickshire, where there is a town called Stratford-upon-Avon, &c., for which this reason is to be assigned, viz. that the English, when they drove the Britons out of that part of Great Britain, called from them England, took the appellatives of the old inhabitants for proper names; and so, by mistaking *Avon*, which, with us, signifies only a river in general, it came to serve with them for the proper name of several of their rivers.” Mr. Ireland says that the name *Avon*, or *Eon*, is common to rivers whose course is easy and gentle. There are three rivers in Scotland which bear this name, besides several minor streams. The term *Avon* is also prefixed to the names of several Scottish streams: such as the Avon-Brouchag, and the Avon-Coll, in Ross-shire; the Avon-Adail, and the Avon-Araig, in Argyleshire. Chalmers says that the term *Anon*, is merely a variation of *Avon*; and, in confirmation of this, we may remark that the Almond of Perthshire is sometimes called *Almon*, and sometimes *Avon*.

mass there is blue sky—suddenly arise, forming themselves more and more regularly into circular order, as we near; and now we have sight of the whole magnificence; yet vast as it is, we know not yet how vast; it grows as we gaze, till in a while we feel that sublimer it may not be; and then so quiet in all its horrid grandeur we feel too that it is beautiful, and think of the Maker." [Remarks on the Scenery of the Highlands, pp. 43, 44.]

AVICH (Lochn), a fresh water lake in Nether Lorn, Argyshire, on the west side of Loch Awe, from which its north-east extremity is about 2 miles distant. Its western extremity is about 4 miles distant from the head of Loch Melfort. It is about 8 miles in circumference, and its appearance is enriched by some beautiful little islands. It is sometimes called Loch Luina.

AVIEMORE, a village in the shire of Moray, and parish of Duthil; on the western bank of the Spey; 13½ miles north-east of Pitmain, and 126 miles north-north-west of Edinburgh. There is a good inn here at the base of Craigellachie. The scenery betwixt Grantoun and Aviemore is somewhat tame and uninteresting; but the view becomes sublime when, after passing Aviemore inn, we ascend an eminence which commands the plain of Alvie and the course of the Spey, bounded by the lofty mountains beyond Pitmain. Near Avielochan, about 2½ miles to the eastward of Aviemore, is Loch-namhooon, a small sheet of water about 90 yards long, by 50 across, in which there was, previous to the great floods in 1829, a floating island of about 30 yards diameter. It was composed chiefly of eriophori, junci, and other aquatic plants, the roots of which had become matted together to a depth of about 18 inches, and having about 18 inches of soil attached to them. [Sir T. D. Lauder's Account of the Moray Floods, pp. 189, 190.]—The elegant plant, *Andromeda cerulea* of Linnæus, has been found on the hills near Aviemore.

AVOCH, in old records, written **AVACH** or **AUACH**, and commonly pronounced Auch, a parish in Ross-shire, and one of the eight parishes comprehended within the ancient district of Ardmearnach or the Black Isle. It extends about 2½ miles from east to west, and 4 from south to north; and is nearly of a rhomboidal form. It is bounded by the parish of Rosemarky towards the east; by the Moray frith and Munlochay bay on the south-east, south, and south-west; by the united parishes of Kilmuir-Wester and Suddie, on the west; by Urquhart or Ferrintosh on the north-west; and by the united parishes of Cullicudden and Kirkmichael on the north. It marches with these last on the hill of Mulbuy, or Maole-buidhe, which attains here an altitude of 800 feet above sea-level, and extends nearly the whole length of the Black Isle, from Cromarty to Beauley. This parish consists chiefly of two ridges of hills of moderate altitude, running nearly parallel to each other in a direction from east to west, with a gently sloping vale on the north side of each, and the Mulbuy rising behind all these towards the north. In Munlochay bay there is an excellent quarry of hard reddish freestone, accessible to boats on the water-edge. Out of this quarry almost the whole of the extensive works of Fort-George were built. The Moray frith at Avoch is about 4 miles broad; and a finer basin is scarcely to be seen in the North. To an observer on this shore it has all the appearance of a beautiful lake. Chanonry point from the north, and that of Ardersier from the south-east, appear like projected arms to clasp each other and break-off its connection with the sea; while the point of Inverness, and the hills in that neighbourhood, seem to bound it in like manner in an opposite direction. The town of Inverness,

at the one end, and Fortrose and Fort-George at the other, add much to the landscape. From a boat in the middle of the frith, opposite to Cullogen-house and the bay of Avoch, the view is still grander and more embellished. In the southern vale there is a fine rivulet, called the burn of Avoch—perhaps the largest stream in Ardmearnach—which empties itself into the sea near the church. A small lake, called Scaddin's loch, near the eastern boundary of this parish, was drained many years ago. Sir James W. Mackenzie of Scatwell, Bart., is proprietor of two-thirds of the parish. His seat of Rosehaugh-house stands on a beautiful bank, about 1½ mile from the sea, on the north side of the southern vale. The area of this parish is about 7,000 acres. The total gross rental, in 1790, was somewhat more than 730 bolls of victual, and £900 sterling. The valued rent is £2,531 6s. 4d. Scots. Assessed property, in 1815, £4,144. Population, in 1801, 1,476; in 1831, 1,956. Houses 389.—This parish is in the presbytery of Chanonry and synod of Ross. Patron, Sir J. W. Mackenzie, Bart. Stipend £249 9s. 6d., with a manse, and a glebe of the value of £7 10s. Unappropriated teinds £74 18s. 5d. Church repaired in 1792. Schoolmaster's salary £30, with about £10 fees. There are four private schools. Number of children at school, in 1834, about 240.

In 1793, the Statistical reporter stated:—"There is not one surgeon, or attorney, or Roman Catholic, or Jew, or negro, or gypsey, or foreigner; nor any native of England, Ireland, or the British colonies, residing at present in this parish. About the end of last century, there was only one fishing-boat here, the crew of which resided in the country. The village of Seatown, which contains at present 93 families, has been mostly if not entirely built since that period; and the fishermen there are now equal to any in the north of Scotland, for hardness, skill, and industry, though their distance from the main ocean subjects them to many inconveniences. From the beginning of October to the middle of March, they commonly fish for herrings in these upper parts of the frith. Towards the end of March and in April they go down along the coasts of Moray and Caithness, for cod, skate, and haddocks. In May and June, some of them are engaged by the Northumberland fishing company to catch lobsters for the London market, on the shores of Easter Ross about Taret-point. The others, during those months, work at the haddock-fishing, to supply the towns of Inverness and Fortrose, and the western part of the Black Isle. About the middle of July, all the able fishermen here go off to Caithness and Loch Broom, for six or eight weeks, when the herring-fishery at those stations is commonly most favourable; and in good years they have been known to bring home from thence, £8 or £10 sterling each man of nett gain. They generally return in September to prepare for the season at home, which, owing to the small depth and clearness of this frith, begins only about the autumnal equinox, or a fortnight thereafter. The same causes oblige the fishermen, for the most part, to delay their work here till evening or night, as the herrings are then caught in much greater numbers than during the day. In good seasons, it is not uncommon for each boat to bring in the quantity of from 18 to 25 barrels in one night. When the shoal comes up in the end of June or beginning of July, the herrings prove generally best and most plentiful. In winter 1786-7, besides those used at home, five or six thousand barrels were cured here for exportation; and several sloops also were despatched with full cargoes of unpacked herrings for Dunbar and other towns on the east coast. The fishing-boats used here are of a small size; their keel being only

26 or 27 feet in length; the mouth from 30 to 32 feet long, and 10 feet wide. The depth is so proportioned to these dimensions as that they may sail well, and may carry, besides the crew and their fishing tackle, 3 or 4 tons safely. Six of these boats, wrought by seven men each for the white fishing, and two or three smaller ones or yawls occupied by old men and boys, belong to the place. During the herring-season they fit out a good many more: as four men, with a boy to steer, serve this purpose, and they then hire some additional hands from the country. When the season here proves successful, the fishing-boats of Nairn, Delniet, Campbeltown, and Petty, join them; and some likewise from Easter Ross, Cromarty, Rosemarky, Fortrose, and Kessock; so that, even in this upper part of the frith, 60 or 80 herring-boats, containing above 300 men, may be seen at times plying together on the same stream. The quantity of canvas carried by the Avoch men, and some others in this neighbourhood, is very much disproportioned to the small size and burden of their boats. The length of the mast is generally above 30 feet. On this they hoist an immense oblong sail, containing nearly 80 square yards, or 700 square feet of cloth. And they carry a foresail besides, on a pole at the boat stem, of the same oblong form, but only a tenth part of the size of the other. Their skill and alertness in setting and reefing those sails, according to the wind and weather, and the course they mean to pursue, are wonderful. No less remarkable are the inhabitants of this thriving village in general for their industry and diligence. They manufacture, of the best materials they can procure, not only all their own fishing-apparatus, but also a great quantity of herring and salmon nets yearly for the use of other stations in the North and West Highlands. From Monday morning to Saturday afternoon, the men seldom loiter at home 24 hours at a time, when the weather is at all favourable for going to sea; and the women and children, besides the care of their houses, and the common operations of gathering and affixing bait, and of vending the fish over all the neighbouring country, do a great deal of those manufactures. Some of their families also cultivate from a rood to half-an-acre of potatoes yearly for their own supply; and others, whose children are more advanced, raise and dress for the herring nets a good quantity of hemp. Even the aged and infirm employ themselves as busily as they can at making and baiting hooks, and mending nets: so that, except for a few days about Christmas, or on the occasion of a fisher's wedding, there are none but little children idle in the whole Seatown. And this their industry turns out to good account; for they bring up and provide for their families decently in their sphere; they pay honestly all the debts they contract in the country; and, considering the number of widows, and fatherless, and of infirm and aged persons among them, very few of this village, except in cases of great emergency, are found to solicit the assistance of either public or private charity. The inhabitants of Seatown live more comfortably than those of the country; and they begin now to build neat commodious houses which cost above £20 sterling, each. Among the fishers, it is usual for both sexes to marry at or under 20 years of age; and of several of their families, there are four generations now living in the place. Their women are, in general, hardy and robust, and can bear immense burdens. Some of them will carry a hundred weight of wet fish a good many miles up the country. As the bay is flat, and no pier has yet been built, so that the boats must often take ground a good way off from the shore, these poissardes have a peculiar custom of carrying out and in their husbands on their backs,

'to keep their men's feet dry,' as they say. They bring out, in like manner, all the fish and fishing tackles; and at these operations they never repine to wade, in all weathers, a considerable distance into the water. Hard as this usage must appear, yet there are few other women so cleanly, healthy, or so long lived in the country." The interesting account here given of the habits of the fishing-population of Seatown, or Avoch, as it is now generally called, may be compared with our notices of the same class of people under the articles FISHERROW and NEW-HAVEN. In 1831, the number of families in the parish of Avoch engaged in the fisheries on the coast was 84.

AVON (THE), or EVAN, a small tributary of the Annan, falling from the heights on the borders of Peebles-shire, and joining the Annan on its west bank below Moffat. See article, THE ANNAN.

AVON (THE), or AVEN, a beautiful stream in Lanarkshire, a tributary of the Clyde. It rises on the south of Distinethorn hill in Ayrshire, at an elevation of about 800 feet above sea-level, and flows north-east between Carnscoch hill in Ayrshire, and Gravestone hill in Avondale parish, to Torfoots, a little below which it is joined by the Glengive or Glengeil water, flowing from the south. Two miles farther on it is joined by Drumclog burn, coming from Moss Malloch on the north. A mile and a half below this point it receives the Little Cadder from the north, and soon after Lockart water from the south. Passing about a mile to the south of the town of Strathaven, it receives its largest tributary, the Kype, which flows from the south, and precipitates itself near its mouth over a cascade of about 50 feet in height. From this point it pursues a north-east course through Avondale and Stonehouse parishes, till it touches the western boundary of Dalserf, where it turns nearly north, and, after forming the dividing line betwixt Dalserf and Stonehouse parishes, enters the parish of Hamilton, flows through the Duke of Hamilton's ground, passes to the south of the town of Hamilton, and falls into the Clyde about a mile to the south-east of that town, after a course of about 28 miles including windings. The Lanarkshire Avon is a beautiful stream, and gives name to the parish of Avondale or Strathaven, which it divides into two nearly equal parts. The upper part of its course is through a district very destitute of wood; but in the lower part it presents much pastoral beauty. The name of this river is uniformly pronounced *Aivon* by the people of the district.

AVONDALE, or AVENDALE, a parish in Lanarkshire; bounded on the north by the parishes of Kilbride and Glassford; on the east by Glassford and Stonchouse; on the south by Lesmahagow, and Muirkirk in Ayrshire; and on the west by Loudon, Galston, and Sorn parishes in Ayrshire. Its greatest length, from Avonhead on the south-west, to Righead on the north-east, is about 14 miles; its greatest breadth, from Regal hill on the south, to the boundary of Kilbride parish on the north, is about 8 miles. The total superficies of this parish must be nearly 40,000 acres; and the present rental about £20,000. Valued rent £7,650 Scots. Assessed property, in 1815, £16,287. Hamilton or Wishaw, in his account of the sheriffdom of Lanark, compiled about the beginning of last century, describes this "great paroch," as "a plentiful country, especially in grain, and no want of corns." Its agricultural reputation is still good; its dairy husbandry is particularly celebrated; and in the art of fattening calves for the butcher, the farmers of Strathaven are unrivalled in Scotland. [The agricultural reader will find the system of calf-rearing as practised here described in a paper by Mr. Aiton of Hamilton,

in the 'Quarterly Journal of Agriculture,' vol. x. p. 249.] The upper part of the parish is wholly moorland, and presents a succession of hills, mosses, and moors, on which there is capital grouse-shooting. The fertility of the soil, and consequent richness of cultivation and beauty of landscape, increases as we descend the strath of the Avon, which below Strathaven becomes, as Wordsworth has described it in one of his sonnets, 'a fertile region green with wood.' In very ancient times the great Caledonian forest extended up Avondale, by Strathaven, and, passing over the high ground near Loudon hill, entered Ayrshire. Trunks of huge oaks, the relics of this forest, have been discovered near the head of the Avon, and amongst the mosses that still exist here; and at Chatleherault, in the neighbourhood of Hamilton, there still exist some noble ashes and oaks, the remnants probably of the ancient forest. [See a paper by Thomas Brown, Esq., in 'Edinburgh New Philosophical Journal,' July, 1834.]—The principal river in this parish has been described in the immediately preceding article; and the reader is referred to the separate article STRATHAVEN, for an account of the principal village. The Duke of Hamilton is the principal heritor in Avondale; but property here is greatly subdivided. Hamilton of Wishaw states that "this baronie did anciently belong to the Bairds; and thereafter came to Sinclair; and from them to the Earle of Douglas, with whom it continued severall ages; and after his fatal forfaulture, in anno 1455, it was given by King James the Third to Andrew Stewart, whom he created Lord Avendale; and it continued with him and his heirs untill 1538, or thereby, that he exchanged it with Sir James Hamilton for the baronie of Ochiltree, in the parliament 1543 [1534?]. From which tyme, it continued with the successors of Sir James Hamilton untill it was acqrued by James, first of that name, Marquess of Hamilton; and continueth with his successors since. This paroch is large, and lyeth betwixt the parishes of Killbryde to the west, Hamilton to the north and north-east, and Glasfoord, Stonehouse, and some parts of the shire of Ayre to the south and south-east. There are many small vassals in this parish, besyde three or four gentlemen,—Overtoun, Netherfield, Rylandsyde, Lethem, and Kype; but all of them hold of the familie of Hamilton." [Maitland club edn., p. 10.] Population, in 1801, 3,623; in 1831, 5,761; of whom 3,597 belonged to the town of Strathaven.—This parish is in the presbytery of Hamilton, and synod of Glasgow and Ayr. Patron, the Duke of Hamilton. Stipend £305 2s. 6d., with a manse, and a glebe of the value of £24. Unappropriated teinds £955 18s. 8d. Church built in 1772; sittings 803. The established minister is assisted by a catechist.—A new chapel, in connection with the Establishment, has been erected by subscription in the town of Strathaven; sittings 803.—A United Secession congregation was established in Strathaven, in 1764. Church built in 1820; sittings 630. Stipend £120, with manse and garden. There are two congregations in connection with the Relief body. Of these the first was established in 1777, when the church now occupied by them was built; sittings 1,087. Stipend £160, with a manse, and glebe of the value of £30. The West Relief church was built in 1835; cost £1,400; sittings 976. Stipend £120, with a manse and garden.—The parish-schoolmaster has a salary of £34 4s. 4½d., with about £25 fees. Number of pupils 60. There are 11 private schools, which, in 1834, were attended by 453 children.—According to a census made by the dissenters, in January, 1836, out of a total population of 6,155, there were in connection with the established church 2,536; with the Relief, 2,827; with the United

Secession, 486; Roman Catholics, 85; and some others.

The memorable battle of Drumclog, in which 'cruel Claver's' was signally defeated by a small body of Covenanters collected together under Hamilton, Burley, Cleland, and Hackston, was fought on the farm of that name in the upper part of this parish, about 2 miles to the east of Loudon hill, on Sabbath, June 1, 1679. The localities of the spot, as well as the engagement itself, are very accurately described in 'Old Mortality.' In this affair Claverhouse lost his cornet and about a score of his troopers; on the side of 'the hillmen' only four were killed. A monument has recently been erected at Drumclog in commemoration of this noble struggle. It is in the Gothic style, 23 feet high, and does credit to its architect and sculptor, Mr. Robert Thom.—At Kype, in this parish, stood, in ancient times, a chapel dedicated to St. Bridget, called St. Bride's chapel.

AVONDHU. See FORTH.

AWE (LOCH), a beautiful lake in that district of Argyshire called Lorn, between Loch-Fyne and Loch-Etive. From Inverary, by the road through

* The victors commemorated their triumph in a rude ballad entitled 'The Battle of Loudon hill,' which Scott has preserved in his 'Border Minstrelsy,' [Cadell's edn., vol. ii. pp. 206–225,] though not without a quantity of industriously gleaned introductory matter, well-calculated to throw ridicule on those worthy men

"Who fled to woods, caverns, and jutting rocks,
In deadly scorn of superstitious rites,—
Or what their scruples construed to be such."

With better feeling, though perhaps with more of the imaginativeness of the poet than the veracity of the historian, has Allan Cunningham indited his Cameronian legends and ballads. In the 7th vol. of Blackwood's Magazine, there is a bundle of very spirited Cameronian ballads from Allan's pen, from one of which, on 'The Discomfiture of the Goddess at Drumclog,' we shall here quote a couple of stanzas:—

"This morning they came with their brass trumpets braying,
Their gold pennons flaunting, their war-horses neighing;
They came and they found us—the brand and the spear
Soon emptied their saddles and sobered their cheer;
They came and they sounded—their trumpet and drum
Now give a mute silence, their shouters are dumb;
The chariot is smote, and the charioteer sleeping,
And Death his dark watch o'er their captains is keeping.
Oh! who wrought this wonder?—men ask me—this work
Is not of man's hand for the covenant kirk;
Few few—were the saints' heath their banners arraying,
Weak, hungry, and faint, nor grown mighty in slaying;
And strong, fierce, and furious, and thirsting and vain
Of our blood—as the dust of the summer for rain—
Came our foes; but the firm ground beneath their feet turned
Into mist and quagmire—above their heads burned
Heaven's hot and swift fires—the sweet wind to-day
Had the power for to blast, and to smite, and to slay!"

If we may believe the Nithsdale bard, however, Cameronian meekness has been proof against all the scorn and misrepresentation which has been heaped upon the party and the cause for which they struggled so manfully:—"To the mimics of the graceless and the profane, the poets have added their sarcasm and their ridicule; and William Meston—a man of much wit, but of little feeling for the gentle, and pathetic, and lofty beauties of poetry—has seized upon some of the common infirmities of human nature, and made them the reproach of this respectable race. Having little sympathy in the poetical part of their character, he has sought to darken the almost cloudless day of their history with specks which would not detract much from the fixed splendours of the established kirk, but which hang black and ominous amid the purity of Cameronian faith and practice. Lately, too, the MIGHTY WARLOCK of Caledonia, has shed a natural and supernatural light round the founders of the Cameronian dynasty; and, as his business was to grapple with the ruder and fiercer portion of their character, the gentler graces of their nature were not called into action, and the storm and tempest and thick darkness of John Balfour of Burley, have darkened the whole breathing congregation of the Cameronians, and turned their sunny-hill-side into a dreary desert. All the sufferers of England, and of Scotland too, have lifted up their voices against this ancient remnant of the Scottish covenant, [Is this so?] and all the backslidings of the numerous sectaries of the North have been fairly wrought into a kind of tapestry picture, and hung over the honoured grave of Richard Cameron. At this, which would have provoked the patience, and obtained the anathemas of other churches, failed to discompose the meekness and the sedate serenity of the mountaineers; they read, and they smiled at Meston, and with the untrivalled novelist they are charmed and enchanted; they would sooner part with the splendour of the victory of Drumclog, or the name of Alexander Peden, than pass the Torwood curse on the legend of Old Mortality." [Blackwood's Magazine, vol. vii. pp. 482, 483.]

Glen-Aray, it is distant about 12 miles; the distance from Tyndrum, through Glen-Orchy, is 16 miles. The chief beauty of Loch-Awe is comprised between its eastern extremity and Port-Sonnachan, about 6 miles down its southern shore. Here the scenery can hardly be equalled in Great Britain; but the remaining portion of the lake is uninteresting to the traveller, possessing little variety, and neither beauty nor grandeur. At its eastern end, however, the stranger may spend weeks in examining the beauty of its wooded and varied shores and islands, or the grandeur of its lofty mountains and deeply secluded glens. The water of the lake appears a basin enclosed among mountains of rude and savage aspect, but lofty and grand,—“filling,” says Dr. Macculloch, “at once the eye and the picture, and literally towering above the clouds.” On the north side, the elevated ridge of Cruachan rises simple and majestic, throwing its dark shadows on the water, which, spacious as we know it to be, seems almost lost amid the magnitude of surrounding objects. On the opposite side, Ben-Laoidh, Ben-a-Chleidh, and Meall-nan-Tighearnan form a striking and magnificent termination to the landscape. Among all the mountains, however, which surround Loch-Awe, Ben-Cruachan soars pre-eminent. In approaching Loch-Awe through Glen-Aray, the traveller finds little to attract his attention after leaving the pleasure grounds around Inverary castle, until he has attained the head of the glen, and begins to descend towards Cladich. There, however, Loch-Awe, with its beautiful expanse of water, its islands, and the magnificent screen of mountains which enclose it, bursts at once upon his view. Ben-Cruachan is immediately opposite to him, its summit enveloped among clouds; and the dark pass of the river Awe winding along its base. To the east is seen the castle of Kilchurn, the openings of Glen-Strae and Glen-Orchy, and the lofty mountains which enclose them lessening gradually in the distance; to the west the long and sinuous portion of the lake glitters like a silver stream amid the dark heathy hills and moors which form its banks. See articles BEN-CRUACHAN, KILCHURN, and GLENORCHY. Loch-Awe is 30 miles in length, but in the greater part of its extent not above a mile in breadth. Its eastern portion, however, is considerably broader; and at the opening of the river Awe it is not less than 4 miles across. Here its beauty is further increased by a number of islands which spot its surface and give relief to its expanse. There is one peculiarity in Loch-Awe which is not to be found in any other Highland lake: instead of its being emptied at either end, the river Awe flows from its northern side, and pours its waters into Loch-Etive at Bunawe. Looking down upon the loch from Cladich, a long heathy isle called Innishail, or ‘the Fair island,’ presents itself to the view. In this island, the remains of a small monastery with its chapel are still to be seen; and its ancient burying-ground is still sometimes used. It was inhabited by nuns of the Cistercian order, memorable, says tradition, for the sanctity of their lives, and the purity of their manners. At the Reformation, when the innocent were involved equally with the guilty in the sufferings of the times, this house was suppressed, and the temporalities granted to Hay, abbot of Inchaffrey, who, abjuring his former tenets of religion, embraced the cause of the reformers. Inchaffrey was erected into a temporal lordship by King James VI., in favour of the abbot. The old church-yard on this island is an object of peculiar interest, from its ancient tombstones, the greater part of which are carved in a variety of ways. Some appear, from the figures cut upon them, to have covered the graves of religious

persons; others, having the long two-hand sword, or the claymore, mark the graves of warriors; on others, again, mailed figures point out the resting-place of knights and crusaders; and, one stone in particular, from the arms, coronet, and numerous figures it contains, would lead us to suppose that in this lone spot even the noble had been buried. Among other families, the M’Arthurs appear to have made this their place of interment, as numerous stones bear the name of individuals of that ancient race. This sept formerly inhabited the shores of Loch-Awe, opposite to this island, as the M’Gregors did the lands at the upper portion of the lake: both, however, have given way before the overpowering influence and good fortune of the Campbells.—Beyond Innishail, and farther up the lake, is Innes Fraoch, or ‘the Heather isle.’ Here is an ancient castle, the residence at one period, of the chief of the MacNaughtans. It is a small but strongly built fortalice. Its solitary walls are over-shadowed by chance-planted trees and bushes, and are the haunts of sea-birds and large water-fowl. This island is the subject of a very singular highland tradition. It was the Hesperides of the Highlands, and produced, according to Celtic poetry, the most delicious apples, but which were guarded by an enormous serpent. Dr. W. Beattie, in his ‘Scotland Illustrated,’ [vol. ii. pp. 99—101.] has given a very absurd and tasteless amplification of the simple Gaelic legend connected with this island. It is singular, thus to find in a remote district of the Highlands of Scotland, a traditionary fable which is generally considered as classic.

The shores of Loch Awe, and the recesses of the surrounding mountains and glens, seem anciently to have been the retreat of the Campbells in times of danger. ‘It’s a far cry to Lochow!’ was the slogan, or war-cry of the knights of Lochow and their followers: with it they derided their foes, and indicated the impossibility of reaching them in their distant fastnesses. At a still earlier period, this district formed a portion of the extensive tract of country at one time possessed by the numerous and powerful Clan-Gregory; but so early as the 15th century, the Campbells had obtained a footing here. Not a stone of the MacGregor’s dwelling in Glen-Strae is now remaining to mark the spot where his mansion stood; but in many a corrie, and many a lonely glen, the highlander still points out where a fugitive son of Alpine stood at bay, and fell beneath the exterminating rage of his relentless pursuers. In a wild corrie or hollow of Ben-Cruachan, is pointed out a huge stone from behind which a MacGregor, no longer able to continue his flight, shot a blood-hound which had been set upon his track, and from which he found it impossible otherwise to make his escape. This is alleged to have been the last instance in which any of the outlawed Clan-Alpine were chased as beasts of prey.

AWE (THE), a rapid and powerful mountain-stream by which—as noticed in the preceding article—Loch Awe discharges its waters into Loch Etive. It issues from the western extremity of an offset of Loch Awe, projecting in a north-west direction, near its head; and flows in a north-west course through Mid Lorn to Bunawe on Loch Etive, where there is a ferry across that loch into Upper Lorn. It is about 7 miles in length, and is skirted on the north side by the road from the head of Loch Awe to Bunawe and Connel ferries. A considerable portion of the western base of Cruachan seems to have been torn asunder to form an opening for the waters of the lake; and the river flows through a gulley or hollow of the most frightful description. “This pass,” says Mr. Allan, “is about 3 miles in length; its east side is bounded by the almost inaccessible steepes which form the base

of the vast and rugged mountain of Cruachan. The crags rise in some places almost perpendicularly from the water; and, for their chief extent, show no space nor level at their feet, but a rough and narrow edge of stony beach. Upon the whole of these cliffs grew a thick and interwoven wood of all kinds of trees, both timber, dwarf, and coppice; no track existed through the wilderness, but a winding part which sometimes crept along the precipitous height, and sometimes descended in a straight pass along the margin of the water. Near the extremity of the defile, a narrow level opened between the water and the Craig; but a great part of this, as well as the preceding steep, was formerly enveloped in a thicket, which showed little facility to the feet of any but the martins and the wild cats. Along the west side of the pass, lies a wall of sheer and barren crags: from behind they rise in rough, uneven, and heathy declivities, out of the wide muir before mentioned, between Loch-Etive and Loch-Awe; but in front they terminate abruptly in the most frightful precipices, which form the whole side of the pass, and descend at one fall into the water which fills its trough. At the north end of this barrier, and at the termination of the pass, lies that part of the cliff which is called Craiganuni: at its foot the arm of the lake gradually contracts its water to a very narrow space, and at length terminates at two rocks (called the rocks of Brandir), which form a straight channel, something resembling the lock of a canal. From this outlet there is a continual descent toward Loch-Etive, and from hence the river Awe pours out its current in a furious stream, foaming over a bed broken with holes, and cumbered with masses of granite and whinstone. If ever there was a bridge near Craiganuni in ancient times, it must have been at the rocks of Brandir. From the days of Wallace to those of General Wade, there were never passages of this kind; but in places of great necessity, too narrow for a boat, and too wide for a leap, even then they were but an unsafe footway, formed of the trunks of trees, placed transversely from rock to rock, unstripped of their bark, and destitute of either plank or rail. For such a structure there is no place in the neighbourhood of Craiganuni, but at the rocks above-mentioned. In the lake, and on the river, the water is far too wide; but, at the strait, the space is not greater than might be crossed by a tall mountain pine, and the rocks on either side are formed by nature like a pier. That this point was always a place of passage, is rendered probable by its facility, and the use of recent times. It is not long since it was the common gate of the country on either side the river and the pass. The mode of crossing is yet in the memory of people living, and was performed by a little currach moored on either side the water, and a stout cable fixed across the stream from bank to bank, by which the passengers drew themselves across, in the manner still practised in places of the same nature. It is no argument against the existence of a bridge in former times, that the above method only existed in ours, rather than a passage of that kind which might seem the more improved expedient. The contradiction is sufficiently accounted for, by the decay of timber in the neighbourhood. Of old, both oaks and firs of an immense size abounded within a very inconsiderable distance; but it is now many years since the destruction of the forests of Glen-Etive and Glen-Urcha has deprived the country of all the trees of a sufficient size to cross the strait of Brandir; and it is probable, that the currach was not introduced till the want of timber had disabled the inhabitants of the country from maintaining a bridge. It only further remains to be noticed, that at some distance below the rock of

Brandir there was formerly a ford, which was used for cattle in the memory of people yet living. From the narrowness of the passage, the force of the stream, and the broken bed of the river, it was, however, a dangerous pass, and could only be attempted with safety at leisure, and by experience." Mr. Allan has clearly identified the pass of Brandir with the scene of a memorable exploit of Scotland's favourite hero, Sir William Wallace. It appears that Edward of England had given a grant of Argyle and Lorn to a creature of his own, named M'Fadyan, who proceeded to take possession of the country at the head of 15,000 Anglo-Irish and renegade Scots. Before this force Duncan of Lorn retreated towards Loch Awe, where he was joined by Sir Niel Campbell; but the force of the invader compelled them to throw themselves into a castle which crowned a rock in this formidable pass, called the Crag-an-aradh, or 'Rock of the Ladder.' Wallace, on being apprized of their danger, hastened to their relief, and managed to surprise M'Fadyan's army in a situation where flight was impracticable. "The conflict continued for two hours, with unexampled fury on both sides. Multitudes of the Irish were forced over the rocks into the gulf below. Many threw themselves into the water to escape the swords of the Scots; while various bands of highlanders, stationed among the rocks, sent down showers of stones and arrows where the enemy appeared most obstinate in the strife. Wallace, armed with a steel mace, at the head of his veterans, now made a charge, which decided the fate of the day. Those Scots who had joined the Irish, threw away their arms, and on their knees implored mercy. M'Fadyan, with fifteen or his men, having made his way over the rocks, and attempted to conceal himself in a cave, 'wnder cragmòr,' Duncan of Lorn requested permission of Wallace to follow and punish him for the atrocities he had committed; and it was not long before he returned, bringing his head on a spear, which Sir Niel Campbell caused to be fixed on the top of the rock in which he had taken shelter. After the defeat of M'Fadyan, Wallace held a meeting of the chiefs of the West Highlands, in the priory of Ardochattan, and having arranged some important matters respecting the future defence of the district, he returned to his duties in the Low Country, having received an accession to his numbers, which covered any loss he had sustained in the late engagement. The spoil which the Scots collected after the battle is said to have been very considerable; any personal share in which our hero, as usual, refused." [Carriek's Life of Wallace, edn. 1840, pp. 45. 46.]—Here too, in 1306, after a fierce struggle at Dalree, a sharp skirmish took place between Bruce and Macdougall of Lorn. This chief had throughout opposed the claims of the Bruce, who, after gaining the ascendancy, determined to punish him. A detached party of archers having taken a commanding position on the hills, annoyed the Argyle men so much that they retreated; and, having attempted in vain to break down the bridge across the Awe, they were defeated with great slaughter: Lorn himself escaping by means of his boats on the lake. This defeat argues little for the military tactics of John and his followers; as the pass of the river Awe might easily be defended by a handful of men against a very superior force; it is a stronger position than even Killcrankie.—The bridge of Awe is also the scene of Sir Walter Scott's beautiful tale of the Highland Widow and her son, which must be in the recollection of all our readers. His description of this wild spot is—like all his other descriptions—not more graphic than correct.

AYR (THE), a river which rises at Glenhuck in the eastern extremity of the parish of Muirkirk, in

Ayrshire; and, after a course of about 33 miles nearly due west, in which it divides the county at its broadest part into two nearly equal portions, falls into the sea at the town of Ayr, where its estuary forms the harbour. It is for some miles of its course only a small rivulet, flowing among holms and haughs through an open moorland district; but, being joined by the Greenock, and 'the haunted Garpal,' it becomes a large body of water. It is augmented by 'the winding Lugar' at Barskimming, and by 'the brawling Coil' at Shaws. "Most of its course for the last 20 miles is bounded by steep rocky banks, generally covered with wood, which in several places are highly picturesque. In a few spots the banks open, and some enchanting holms are found between them; but in many places the river is seen for some miles together, dashing and foaming in a deep and narrow chasm, rendered dark and gloomy by the bulky foliage of the trees which overhang the stream." [Aiton's 'View,' p. 59.] The Ayr is subject to heavy floods during winter. After continued rains in the upland districts through which it flows, in the language of Burns,

"from Glenbuck down to the Ratton-key,
Auld Ayr is just one lengthened tumbling sea."

Sorn castle, Ballochmyle, Auchencruive, and Auchinleck, may be mentioned as worthy of notice for their beautiful situation on the banks of this river. The Ayr was anciently named Vidogara. The etymology of the present name of the river is doubtful. In its bed is procured a species of claystone which is well-known to artisans by the name of 'Water-of-Ayr stone,' and proves a fine whetstone. Salmon are caught in the mouth of the river during the summer-season; but the fishing in this river is not nearly so productive as that in the Doon.

AYR, anciently ARE, sometimes AIR, a parish in Ayrshire, about 5 miles in length, and 3 in breadth. It is bounded on the north by the river just described, which divides it from Newton-upon-Ayr; on the east by Coylstone; on the south-east by Dalrymple; on the south-west by the river Doon, which separates it from Maybole; and on the west by the sea. The surface is flat and sandy, but here and there interspersed with beautiful plantations and villas. Towards the east the country rises gradually; in the immediate neighbourhood of the sea there is a good deal of light shifting sand, especially in the neighbourhood of Prestwick. Aiton estimates the superficies at 4,000 Scots acres. Real rent, in 1799, £3,700. Present rental about £10,000. Assessed property, in 1815, £16,578. There are two small lakes in this parish, one toward the south side named Carleny, and the other at the eastern extremity called Loch Fergus. The latter has a small island in the centre, but is not above a mile in circumference. There is plenty of muirstone in this district; but freestone is neither abundant nor good; and coal is not wrought, although all the neighbouring parishes possess inexhaustible pits of the finest coal. There is a strong chalybeate spring on the north side of the river Ayr, which is famous in scrofulous and scorbutic complaints. Tradition reports an engagement to have taken place in the valley of Dalrymple, between Fergus I., king of Scots, and Coilus, king of the Britons, in which both leaders lost their lives. The names of places in the neighbourhood seem derived from this circumstance; and a circular mound, marked by two large upright stones, and long the reputed burial-place of 'auld King Coil,' having been opened in May, 1837, was found to contain four urns. History has recorded two distinguished characters in literature, natives of this parish: Johannes Scotus, surnamed Erigena, and the Chevalier Ram-

say, author of *Cyrus's Travels*, and other works. To these may be added John L. M'Adam, Esq., of road-making celebrity, who was born at Ayr in 1756, and Lord Alloway. Population, in 1801, 5,492; in 1831, 7,606; by a census in January 1836, 7,475; of whom 4,958 belonged to the Established church, and 2,424 to other denominations, chiefly the Relief. Houses 892.—This parish is in the presbytery of Ayr, and synod of Glasgow and Ayr. It consists of the united parishes of Ayr and Alloway. Patron, the Crown, and the Magistrates of Ayr and Kirk-session. It was anciently a prebendal benefice of Glasgow.* There are two parish-churches, both in the town of Ayr. The old one was built in 1654, on the site of the Grey Friars convent, in place of St. John the Baptist's church which Cromwell had converted into an armory for his citadel in Ayr. It is a massive cruciform structure, and is surrounded with the town burying-ground. The new church was built in 1810, by the town council of Ayr, at an expense of £5,703. Total sittings in both churches, 1,982. The charge is collegiate, and the two ministers officiate indiscriminately in both churches. Stipend of the 1st charge £178 5s., with a manse and glebe; of the 2d, £283 6s. 9d., with allowance for a manse, and a glebe of the value of £28 6s. 8d. Mr. Ferguson of Doonholm left the interest of £1,000 to be divided between the two ministers.—The Relief church was built in 1816, at an expense of £3,000; sittings 1,182. Stipend £180.—The Wesleyan Methodist church was built in 1813, at an expense of £1,500; sittings 530. Stipend £86, with a manse.—There are also Independent, Roman Catholic, and Episcopalian chapels on the opposite side of the river.—The parochial schools were formed into an academy in 1797, which is conducted by 6 teachers and 2 assistants. The salary of the rector is £100 per annum; that of the other teachers from £15 to £22. There were 460 pupils in the academy in 1833; and above 600 children attended the private schools in the parish, which were 16 in number. Mr. Ferguson of Doonholm bequeathed the annual interest of £1,000 to the public schoolmasters of Ayr; and, in 1825, Captain John Smith bequeathed a sum for erecting a school for poor children here which produces £88 yearly. There is also a school of industry.

The royal burgh of AYR, the county-town of Ayrshire, and the seat of a circuit-court, is of great antiquity. It is 75 miles south-west of Edinburgh, 34 distant from Glasgow, 12 from Kilmarnock, 11 from Irvine, and 9 from Maybole. It is situated at the western end of a fertile and beautiful valley, on the southern bank of the Ayr, at its influx into the frith of Clyde. The principal or High street is broad and spacious, with a row of houses on each side presenting a motley groupe of elegant structures and mean buildings, in most uncouth and amorphous combination, with fronts, gables, and corners projecting to the street as chance or caprice may have directed; and having, till within these few years, the huge mass of the tolbooth and town-hall in the centre, with a spire 135 feet high. At the end of this street is 'the Auld brig o' Ayr,' consisting of four lofty and strongly framed arches, said to have been built in the reign of Alexander III., and connecting the town with Newton-on-Ayr; and 150 yards below is 'the New brig,' a fine structure of five arches, built in 1787-8, from a design by Robert Adam. At the junction of the High street and Sandgate are the assembly-rooms, with a spire 226 feet high. The court and record rooms, and county-hall, are in Wellington square, near the south end of

* The 'Rectoria de Ayr' was taxed £26 13s. 4d., the tenth of its estimated value, in the reign of James V.

Sandgate. They were designed by Mr. Wallace, and erected at an expense of £30,000. The streets are lighted with gas, and well-paved. Ayr was erected into a royal burgh by William the Lion, about the year 1202; and the extensive privileges granted by that charter are still enjoyed by the town. This charter contains a reference to the grantor's "New castle upon Ayr" which was built about five years before, and probably stood at the eastern corner of Cromwell's fort. Here the heroic exploits of Sir William Wallace began; and here Edward I. fixed one of his most powerful garrisons. Oliver Cromwell, too, judging it a proper place to build a fortress, took possession of the old church of St. John the Baptist, and converted it and the neighbouring ground, to the extent of 10 or 12 acres, into a regular citadel. On one of the mounts, within the walls of this fortress, stood the old castle of Ayr, and the old church—the tower of which still remains—noted for the meeting of the Scottish parliament on the 26th of April, 1315, when the succession to the Crown was settled on Edward Bruce, Earl of Carrick, the king's gallant brother. In 1830 upwards of £700 were expended in rebuilding Wallace's tower, in the High street; the foundation, however, having given way it was rebuilt, in 1832, at a further expense of £1,500. The new tower is a Gothic building 113 feet high, ornamented with a statue of Sir William Wallace by Thom. In ancient times we find Ayr to have been a place of considerable trade. Buchanan characterises it as "emporium non ignobile." And Defoe remarks of it: "It is now like an old beauty, and shows the ruins of a good face, but is still decaying every day; and from having been the fifth best town in Scotland, as the townsmen say, it is now the fifth worst; which is owing to the decay of its trade. So true it is that commerce is the life of cities, of nations, and even of kingdoms. What was the reason of the decay of trade in this place is not easy to determine, the people themselves being either unwilling or unable to tell." [*Tour through Great Britain*, edn. 1745, p. 114.] The merchants used to import a great quantity of wine from France, and export corn, salmon, and other produce of the country. The rising-trade of Glasgow proved very injurious to the trade of this town; but of late it has somewhat revived. The opening of the railway from Ayr to Irvine, and thence to Kilwinning, has already added considerably to the trade of the town; and now that the entire line to Glasgow is opened, a large increase of traffic must necessarily follow from the increased intercourse with the towns of Dalry, Kilbirnie, Beith, Stevenston, Saltcoats, and Ardrossan. During the first twelve months after the opening of the line to Irvine, the number of passengers who travelled between the two towns was 137,117. A branch line to Kilmarnock and an ultimate connexion with Carlisle by Dumfries, is contemplated. With Glasgow, Ayr has repeated intercourse daily by steam-boats plying in the frith. The sea-shore is flat and shallow, and the entrance of the river Ayr, which forms the harbour, is subject to the inconvenience of a bar of sand, which is often thrown quite across the river, especially by a strong north-west wind. The water, even at spring-tides, never rises above 14 feet. The piers extend about 1,100 feet each; and there are two light-houses in taking the harbour. The position of Ayr north pier light, as determined by Mr. Galbraith in 1827, is N. lat. 55° 28' 53"; W. long. 4° 36' 21".* There are

three lights, bearing S. E. by E. $\frac{3}{4}$ E. 850 feet. Two of the lights are bright, and one red. The red and one bright light are in the same building, and show all night. In 1792 an act was passed for deepening and maintaining this harbour, and enlarging and improving the quays. Another act was passed in 1817, with the same objects. The annual receipts of the harbour vary from £1,200 to £800. The harbour-master has a salary of £107 10s. The principal trade now carried on at this port is the exportation of coal to Ireland, to the amount of about 50,400 tons annually. The other exports are pig-iron from Muirkirk and Glenbuck, coal-tar, brown paint, lamp black, coal-oil, and Water-of-Ayr stone. About 60 vessels, amounting to 5 or 6,000 tons, and employing 500 seamen, belonged to this port in 1812. The shipping of Ayr has, however, fallen off since that period, and at present consists of 20 vessels. The imports are hides and tallow from South America; beef, butter, barley, yarn, and linen from Ireland; spars and deals from our American colonies; hemp and iron from the Baltic; and general cargoes from Glasgow, Greenock, Liverpool, the Isle of Man, &c. Shipbuilding is carried on to a considerable extent; and there is a woollen mill employing, in 1838, 55 hands. Between 200 and 300 families are employed in flowering muslin. Besides the salmon-fisheries in the Ayr and the Doon, the sand-banks off the coast abound with all kinds of white fish, and afford employment to 8 or 9 boats of four men each. There is an extensive manufacture of leather here, and another of shoes. There are branches of the Bank of Scotland, Royal Bank, Glasgow Union Bank, and Sir William Forbes' Bank here. The bank of Hunters and Co., has been long-established, and has six branches throughout the county. The Ayrshire banking company, formed in 1831, has also six branches. Ayr possesses a good academy, of which notice has been taken in the preceding article. It was incorporated by royal charter in 1797. All the branches of education necessary for a commercial life are here taught by able masters; besides the Latin, Greek, and modern languages, experimental philosophy, chemistry, astronomy, &c. A library and museum have recently been formed in connection with this institution. The building is plain but chaste, and occupies a fine airy situation near the citadel. A Mechanics' institution was formed in 1825. Two newspapers are published in the town. Ayr is reckoned a gay and fashionable place. It has a theatre, and well-attended races, and is sometimes the seat of the Caledonian hunt. The race-course consists of an enclosure of about 90 acres, about a mile to the south of the town. The races are generally held on the first week of September. It has markets on Tuesday and Friday; and four annual fairs; viz. on 1st Tuesday of January, O. S., last Tuesday of June, O. S., 29th of September, and 3d Tuesday of October. It was governed until the late municipal act by a provost, 2 bailies, a dean-of-guild, a treasurer, and 12 councillors. The jurisdiction of the magistrates extended over the conjoined parishes of Ayr and Alloway. The water of Ayr forms the eastern boundary of the royalty, and separates it from the populous communities of Newton-upon-Ayr, Wallacetown, and Content, which are, however, united with Ayr under the Reform act. The jurisdiction of the magistrates of Ayr is at present entirely confined to their own side of the river, Newton-on-Ayr having its own magistracy. The revenue of the burgh, from 1832 to 1833, was £2,057 6s. 11d. Ordinary expenditure £1,870 12s. 7d. Nett amount of debt, in October 1833, £18,823 9s. 11d., all of which had been contracted since 1792. The only taxation is for cess and poor's money. The amount of the

* In Norie's Navigation, [edition of 1835,] this point of the Ayrshire coast is stated to be in N. lat. 55° 28' 30"; and W. long. 4° 37' 0". In Mackay's Navigation, [edition of 1804,] N. lat. 55° 25' 0"; W. long. 4° 26' 0". And in the tables of the Hydrographic office, N. lat. 55° 27'; W. long. 4° 38'.

duties levied, in 1833, was £991 6s. 3d. About £600 is mortified to the poor of the parish. The magistrates, in conjunction with the Kirk-session, are patrons of the 2d charge. There are nine incorporated trades in Ayr, who all possess funds varying respectively from £50 to £1,500. Ayr unites with Irvine, Oban, Inverary, and Campbeltown, in sending a member to parliament. The population exceeds 6,500, and has increased upwards of a third during this century. See articles ALLOWAY, NEWTON-UPON-AYR, and ST. QUIVEX.

AYR (NEWTON-ON). See NEWTON-ON-AYR.

AYRSHIRE, a large and important county on the south-west coast of Scotland, which derives its name from the town just described. It is bounded by Renfrewshire on the north and north-east; by the counties of Lanark and Dumfries on the east; by the stewartry of Kirkcudbright on the south-east; by Wigtonshire on the south; and by Loch Ryan, the North channel, and the frith of Clyde on the west. The length of Ayrshire, from Galloway burn upon the north side of Loch Ryan, to Kelly burn which divides it from Renfrewshire, is, by the public road, 90, and in a direct line 60 miles, the difference being occasioned by the curvature of the coast; its breadth from east to west is in some places 30 miles. Its average length does not, however, extend to above 80 miles, while in average breadth it may be about 20. It contains, according to Mr. Aiton, whose admeasurements we are now following, 1,600 square miles; but, according to Sir John Sinclair's calculations founded on Arrowsmith's map, only 1,045 square miles; we are inclined to think Mr. Aiton's admeasurement over-estimated, while Sir John's is probably greatly under-estimated. "Ayrshire is in nearly the form of a half-moon, concave towards the sea, and convex on the land side. A considerable part of Carrick, and some parts of Kyle and Cunningham towards the inland verges, are hilly; and that part of Ayrshire which borders with the counties of Dumfries and Galloway justly merits the name of mountainous. A chain or group of mountains commences at Saint Abb's head on the verges of the shires of Berwick and East Lothian; runs westward the whole breadth of the island, on the boundaries of the Lothians and the county of Roxburgh, and between those of Lanark and Ayr on the north, and Dumfries and Galloway on the south; and terminates at the rock of Ailsa. Richard, who wrote in the 12th century, and is the earliest Scots writer certainly known, denominates this range of mountains the *Uxellum Montes*. Some of the highest of the mountains in this chain are situated in the neighbouring counties; but a considerable range of the south and eastern parts of Carrick is mountainous, and forms a part of that group of mountains, abounding with lochs, and very barren. A large range of Ayrshire, from the foot of the water of Doon, to the north of Ardrrossan harbour, is a plain open country, neither level nor hilly, but rising from the shore in a gradual easy acclivity, till it terminates in mountains on the south-east, and moorish hills on the eastern boundaries. No part of it can be termed level; for the surface abounds with numerous swells or roundish hills which facilitate the escape of moisture, promote ventilation, and diversify and ornament the face of the country. The prospects from some of these eminences are uncommonly rich and varied. On ascending any of the little heights, in almost any part of the county, you have a delightful view of the frith of Clyde, the beautiful hills of Arran and Ailsa, rising out of the sea, a large tract of Ayrshire, the Highland hills, and the coast of Ireland." [Aiton's 'General View of the Agriculture of the County of Ayr.' Glasgow, 1811. 8vo.

pp. 2, 3.] The principal elevations are on the southern border of Carrick, in the parish of COLMONELL; which see.* On the western skirts of the parish of Muirkirk there are some lofty hills, the most conspicuous of which is Cairntable, which rises to an altitude of 1,650 feet above sea-level.

The climate is similar to that of other districts situated on the western coast of Britain. For more than two-thirds of the year the wind blows from the south-west, and the rains are often copious, and sometimes of long duration.—The principal rivers of Ayrshire are: the Garnock, a small stream, which rises on the borders of Renfrewshire, 10 miles above Kilwinning, flows southward, receives the Lugton, and falls into the harbour of Irvine; the Irvine, which has its source near Loudon hill, on the confines of Lanarkshire, and thence proceeds westward by Derval, Newmills, Galston, Riccarton, &c., until augmented by many rivulets it flows into the sea at Irvine; the Ayr, already described, which holds a western course nearly parallel to the Irvine; and the Doon, from Loch Doon, on the north border of Kirkcudbrightshire, which flows north-north-west to the sea near the mouth of the Ayr. The Girvan and the Stinchar or Ardstinchar two inconsiderable streams, issue from small lakes near the border of Kirkcudbrightshire, and flow south-west to the North channel into which they fall, the former at Girvan, and the latter at Ballantrae. All these rivers receive further notice in separate articles. Their course is short, and, as they all rise on or near the inland boundaries, indicates the general basin-like outline of the county.—The principal loch is LOCH DOON: which see. There are several small lochs in different quarters of the county.

Clay or argillaceous earth is the most common soil in this county, and in different quarters it has been found from 40 to 200 feet in depth. This species of soil is naturally so tenacious that it can only be ploughed when in a state of moisture. By summer-fallowing, and the application of lime and other manure, it is, however, convertible into fine rich loam, and there are thousands of acres in the county of Ayr, which, by this mode of treatment, have been changed from sterile clay to the richest mould. Loam of alluvial formation is found in holms, on the sides of rivers, and in other low situations in different parts of the county, but this bears a small proportion to what has been converted into loam by human industry. There is a greater proportion of moss and moor ground than any other. The origin of the extensive mosses in Ayrshire may be traced to the overthrow of the forests which, we are informed from the earliest and most authentic history, at one time covered great tracts of land in Scotland. Forest-trees are frequently found lying many feet under ground, in the position in which they had been cut down by the earlier inhabitants. These trees, laid prostrate on the earth, extirpated all former vegetation, and moss earth has been formed from the aquatic plants introduced by the stagnation of water occasioned by such circumstances. Lochs of water of moderate depth have also grown into flow-mosses, by plants striking root in the bottom, when composed of earth or mud. The most common of those plants are marsh-fog, gouk-bear, drab-coloured fog, cotton-beads, and turfy club-rush. The following is the extent of the different kinds of soil in the county, according to Mr. Aiton:

* Nothing can be more perplexing than the discrepancies which prevail amongst topographers as to the altitude of mountains. Thus we have Playfair assigning three different admeasurements to Knockdoul, viz. 2,061, 1,950, and 650 feet; while Chambers states the altitude of that hill at 2,000 feet; and Webster at 1,950 feet.

Clay soil,	Acres.
In the district of Carrick,	10,000
In Kyle,	175,600
In Cunningham,	135,000
	<hr/>
	330,600
Sand or light soil,	
In Carrick,	90,000
In Kyle,	41,000
In Cunningham,	16,000
	<hr/>
	147,000

In Kyle,	98,000
In Cunningham,	54,000
	<hr/>
	347,000
	<hr/>
	814,600

Chalmers assigns to these different classes of soil the following proportions: clay soil 261,960 acres; sandy soil 120,110; moor lands 283,530. There are no extensive natural woods in Ayrshire, but a considerable quantity of copse-wood occurs on the banks of the rivers, and a large extent of ground in the lower parts of the county is now under rising plantations.

The mineralogy of Ayrshire is highly interesting, and capable of affording a wide field of study both to the geologist and agriculturist. The higher parts of Carrick abound in unmixed granite of a greyish colour: braccia, whinstone, greenstone, and red sandstone, are also found in the same district. Immense beds of coal have been discovered in different parts of the county. The coal-district of Scotland, which intersects the island from the Atlantic to the German ocean, runs through the centre of Ayrshire, from the shore to its inland verges. It commences on the south, in the strath of Girvan in Carrick, about 2 miles from the sea, runs up by Dalmellington and New Cumnock on the south side of Kyle, by Sanquhar in Nithsdale, and Douglas and Carnwath in Lanarkshire, and, being cut off by the heights of Lammermoor, terminates near North Berwick: it runs nearly in a line from the rock of Ailsa to that of the Bass. Cannel coal, of excellent quality, is found at Bedlar hill near Kilbirnie, and at Adamel hill, by Tarbolton. Blind coal—a species principally composed of carbon, and in which there is only a very small portion of bituminous matter—is obtained in great quantities, and many thousand tons of it are yearly exported to Ireland. It is chiefly used for drying grain or malt. Copper and lead have both been wrought,—the latter to some extent at Daleagles in New Cumnock. Gold is said to have been discovered in Ayrshire, and dug by an Englishman, named Dodge, about the year 1700. A few specimens have been found in the hills of Carrick, of agates, porphyries, and calcareous petrifications. Millstones are quarried near Kilbride; and a species of fire-stone near Auchinleck. Iron-stone is found in different parts of Carrick, and in the higher parts of Kyle. In the parish of Stair, antimony and molybdena have been found; and, in several parts of the county, that species of whetstone known by the name of Water-of-Ayr stone. Chalybeate springs—some of them strongly impregnated with sulphur—are found in almost every parish, but none of them present any thing peculiarly interesting. There are two springs in the parish of Maybole of uncommon magnitude.

In favourable seasons, ploughing commences in this county about the beginning of February. The rotation of crops differs widely in the different districts of Ayrshire. Wheat was seldom to be seen in this county beyond the limits of a nobleman's farm previous to the year 1785; but it is now become common, and seldom fails to yield a valuable return. Rye is not often sown, except on the sandy ground near the shores, where small quantities have been

raised. Oats have always been the principal grain crops of Ayrshire. Peas and beans are also extensively sown. Turnips were first introduced by the earls of Eglinton and Loudon, about the middle of the last century, and they have subsequently been reared on almost every description of land; but, as in all other places, they grow to the best advantage on light dry soil. Swedish turnip is extensively cultivated. Potatoes are reared in great abundance, and to as good account as in any other county in Scotland. Clover is abundant. Ryegrass, though a native plant, remained unnoticed till about the year 1760, and it did not come into general use till about 1775. Only a small proportion of the surface of the county is occupied as meadow-land. The natural pasture—of which there is a considerable extent in the county—is devoted to the feeding and rearing of sheep. Much of the arable land also undergoes an alternation of crop and pasture; the greater part of the pasture is occupied with dairy stock, or other cattle fed in the district. The gardens and orchards of this county have long been objects of general admiration, from their extent, and the great taste with which they are laid out. At Eglinton there is one of the best-displayed policies in Ayrshire. Extensive woods, both copse and plantation, are thickly interspersed through many parts of the shire.—It would be a matter of some difficulty to ascertain at what period attention was first given, in this district, to the rearing of cattle. At all events it must have been remote, as the following adage, which was familiar to every grey-beard of the 17th century, shows:

“ Kyle for a man,
Carrick for a cow,
Cunningham for butter and cheese,
And Galloway for woo!”

The Galloway cattle are well-made and hardy; but the native dairy cows are now preferred as milkers, and are much more profitable to the farmer. About the year 1750, several cows and a bull—either of the Teeswater, or some other English breed—were sent to the Earl of Marchmont's estates in Kyle, all of the high brown and white colour now so common in this county. It is probably from these or other similar mixtures that the red and white colours of the common stock were first introduced. In 1780, or a year or two previous, the opulent farmers in the parishes of Dunlop and Stewarton, made up their stocks of this breed; their example was followed by others, and the breed was gradually spread over Cunningham, Kyle, and Carrick. The size of the Ayrshire improved dairy cows varies from 20 to 40 stones English, according to the quality or abundance of their food. The most valuable quality which a dairy cow can possess is to yield an abundance of milk. Ten Scots pints per day is not thought uncommon for the Ayrshire breed; some give twelve or thirteen; and fourteen pints have been taken from a good cow in one day. The greater portion of the milk is manufactured into cheese, of which there are two kinds,—the common and the Dunlop cheese. The Rev. Mr. Brisbane, in the first Statistical account of Dunlop parish, says, that a woman of the name of Gilmour, who had fled to Ireland during the persecution, discovered, while in that kingdom, the method of manufacturing this celebrated kind of cheese; and that it was introduced by her into her native parish on her return in 1688. It is said, however, to have been known before that period; for long before the Revolution, the making of cheese of a superior quality was the chief excellence and particular boast of the Cunningham farmers. Sheep, chiefly of the black-faced kind, are bred in Ayrshire in considerable numbers.—Labourers' wages average in this county from 9s. to 11s. per week.

Ayrshire is divided into three districts, or bailiwicks, which, though constantly occurring in history, and in the language of the country at this day, have no longer a separate legal existence: viz. Cunningham, Kyle, and Carrick.

CUNNINGHAM, in general a level and agreeable district of a triangular form and declining gradually towards the sea, is divided from Kyle by the Irvine, intersected by the Garnock, and watered by several streams of little note. Towards the confines of Renfrewshire, it rises into an assemblage of hills with intervening valleys. Along the sea-coast, and in the southern part of the district, there are tracts of tolerably flat and fertile soil. Its western angle, however, is mountainous, and the coast is rocky. This district comprehends 260 square miles, [Playfair,] and abounds in manufacturing towns and villages.

KYLE, the middle district, consisting of about 380 square miles, [Playfair,] lies between the river Doon and the Irvine, and is traversed from east to west by the Ayr, which divides it into King's Kyle on the south, and Kyle Stewart on the north. Toward the confines of Lanark and Dumfries-shire, it is elevated, rugged, and covered with heath; but the midland and maritime tracts are agreeably diversified, well-cultivated, and planted with villages and seats. "Kyle, or Coil, having once been a forest, may have taken its name from that circumstance, the Celtic *coil* signifying 'wood;' but the natives, misled probably by the old chroniclers, derive it from Coilus, a British king, who is reported to have fallen in battle somewhere on the river Coil, and to have been buried either at Coylton or at Coilsfield. If such a personage ever existed, this does not appear to have been the scene either of his actions or of his misfortunes. The hill-country, towards the east, is bleak, marshy, uncultivated, and uninteresting; and on that side, except at one or two places, the district was formerly impervious. In advancing from these heights to the sea, the symptoms of fertility and the beneficial effects of cultivation, rapidly multiply; but there is no 'sweet interchange of hill and valley,' no sprightliness of transition, no bold and airy touches either to surprise or delight. There is little variety, or even distinctness of outline, except where the vermiculations of the river are marked by deep fringes of wood waving over the shelvy banks, or where the long and almost rectilinear summit of the Brown Carrick terminates abruptly in a rugged foreland; or where the multitudinous islands and hills beyond the sea exalt their colossal heads above the waves, and lend an exterior beauty to that heavy continuity of flatness, which, from the higher grounds of Kyle, appears to pervade nearly the whole of its surface. The slope, both here and in Cunningham, is pitted with numberless shallow depressions, which are surmounted by slender prominences, rarely swelling beyond the magnitude of hillocks or knolls. Over this dull expanse the hand of art has spread some exquisite embellishments, which in a great measure atone for the native insipidity of the scene, but which might be still farther heightened by covering many of these spaces with additional woods, free from the dismal intermixture of Scotch fir,—a tree which predominates infinitely too much all over the country, deforming what is beautiful, and shedding a deeper gloom on what is already more than sufficiently cheerless."—[*Edinburgh Encyclopædia*, Article AYRSHIRE.]

CARRICK, the southern and most romantic district, including that portion of Ayrshire which lies to the south of the river Doon, and consisting of 399 square miles, [Playfair,] is in general mountainous, with some delightful valleys interspersed, and fertile declivities inclining towards the sea-coast. The two valleys watered by the Stinchar and the Girvan ex-

hibit a wild and varied scenery which attracts the notice and excites the admiration of every traveller.

The manufactures of Ayrshire are important. The census of 1831 returned 8,000 males upwards of twenty years of age as being engaged throughout Ayrshire in different branches of manufacture. The woollen manufacture has long existed in this district, especially at Kilmarnock, Ayr, Stewarton, and Dalry. In 1838 there were 18 woollen-mills within the county, employing 242 hands.—Linen has been more extensively manufactured in former years in Ayrshire than it is now. The chief localities of this manufacture are Kilbirnie and Beith. The number of flax-mills, in 1838, was 3, employing 172 hands.—The cotton manufacture has long been increasing, and is now prosecuted on a large scale. Its chief localities are Catrine, Kilbirnie, and Patna. The number of cotton-mills, in 1838, was 4; employing 703 hands. A considerable number of women are employed in embroidery. They make from 3s. 6d. to 6s. per week. There are extensive iron-works at Muirkirk and Glenbuck. The manufacture of wooden snuff-boxes affords occupation to about 120 hands. Trade has been greatly facilitated by the execution of good roads, and by the formation of several railroads,—one of which extends from Troon point to Kilmarnock [see TROON]; another from Kilmarnock to Dalry; and another will unite Ayr, Irvine, and Dalry. The two latter are branches of the Glasgow and Ayr railway now executing. The completion of the line of railway betwixt Glasgow, Paisley, Kilmarnock, and Ayr, will doubtless develop the resources of this shire, and open up many sources of additional traffic. Several extensive coal-fields have been already opened in the immediate neighbourhood of the line in this county. A company has been formed to build a steam-vessel to ply between Troon and Liverpool, as soon as the railway is opened; it being expected that many passengers from and to Glasgow will prefer to go on board or land at Troon or Ardrossan, and thus save the long and circuitous route by the river. Proposals have also been made to sail a steam-vessel between Ardrossan and Belfast; and some influential proprietors in the Western isles propose to start a steam-vessel for the purpose of conveying passengers, cattle, and produce from Skye, Mull, and the opposite mainland, to Troon or Ardrossan, whence the cattle can be conveyed by railway to the markets in Glasgow, and Paisley, and eventually to Edinburgh. The prospect of an English junction railway being formed from Kilmarnock to Carlisle is warmly entertained by the Ayrshire proprietors. See article, GLASGOW, PAISLEY, KILMARNOCK & AYR RAILWAY.—There are several canals of short length in different places of the county. A canal of 31 miles from Glasgow to Ardrossan has been long projected, though only about one-third of the length,—viz. from Glasgow to Johnstone—has yet been executed.—Previous to the late equalization of weights and measures, the Ayrshire potatoe boll was very arbitrary. The bushel contained 2 pecks; the pound of butter, hay, and meat, 24 oz. avoird.; and the stimpert, $\frac{1}{4}$ peck.

Ayrshire returns one member to parliament. The parliamentary constituency, in 1839-40, was 4,274. The two boroughs of Ayr and Irvine are associated as contributory burghs with three of the Argyleshire burghs; while Kilmarnock is a contributory burgh of the Renfrew district. The principal towns—to which as separate articles the reader is now generally referred for further information on various points respecting the trade, manufactures, history, and antiquities of this county—are ARDROSSAN, AYR, BEITH, GIRVAN, IRVINE, KILWINNING, LARGS, MAYBOLE, NEWTON-ON-AYR, SALTCOATS, and STEWARTON.

'To Ayrshire belong the island of **LITTLE CUMBRAE**, and **AILSA CRAIG**: which see.

The number of parishes in Ayrshire is 46; of which 16 are in the presbytery of Irvine; 23 in that of Ayr; and 2 in that of Stranraer. Ayrshire was formerly comprehended in the bishopric of Glasgow. —The number of parochial schools in 1834 was 46, under 62 teachers; of schools not parochial 225, under 241 teachers. The total number of scholars 14,800.—The population of the county, in 1801, was 84,306; in 1831, 145,100, in 30,501 families, of whom 6,967 families were chiefly employed in agriculture, and 15,193 in trades, handicrafts, and manufactures. The population was thus distributed :

Cunningham,	63,453
Kyle,	56,046
Carrick,	25,336

The number of inhabited houses, in 1831, was 19,001; of uninhabited, 439. The valued rental, in 1674, was £191,605. Assessed property, in 1815, £409,983. Sir John Sinclair estimated the real rent, in 1796, at £112,752. In 1808 it was as follows :

Cunningham,	£127,632	4
Kyle,	113,462	3
Carrick,	63,724	0
Royalty of Ayr,	9,855	0
	£314,673	7

Throughout every part of Ayrshire are scattered the relics of former ages. Cairns, encampments, and druidical circles are numerous: see articles **DUNDONALD**, **GALSTON**, and **SORN**. Of ancient castles the most celebrated are **LOCH DOON**, **TURNBERRY**, **PORTENCROSS**, **DUNDONALD**, and **SORN**: see these articles. The principal ecclesiastical ruins are those of the abbeys of **CROSSRAGUEL** and **KILWINNING**: which also see. The most ancient families of Ayrshire are the **Auchinlechs**, **Boswells**, **Boyd**s, **Cathcarts**, **Crawfords**, **Cunninghams**, **Dalrymples**, **Dunlops**, **Fullartons**, **Kennedys**, **Lindsays**, **Montgomerys**, and **Wallaces**. Of the titles of nobility connected with this county, the earldom of Carrick, now merged in the Crown, is the oldest. The earldom of Glencairn was created in 1488; that of Eglinton in 1503; that of Cassillis in 1509; those of Loudon and Dumfries in 1633; and of Dundonald in 1669.

Ayrshire was inhabited in Roman times by the **Damnii** and the **Novantes**. After the abdication of the Romans, this district became a part of the **Cumbrian** kingdom. During the Saxon heptarchy Kyle became subject to the kings of Northumbria. The Saxons maintained themselves in this district for many centuries, and have left numerous traces of their presence here. In 1221 the sheriffdom of Ayr was erected. In the wars of Wallace and Bruce, Ayrshire was the scene of numerous conflicts with the English. During the religious persecutions under the last of the Stuarts the men of Ayrshire distinguished themselves by their struggles for the maintenance of the rights of conscience; and were punished for their contumacy by having 'the Highland host' quartered upon them in 1678. "We might from these circumstances," says Chalmers, "suppose that the people of Ayrshire would concur zealously in the Revolution of 1688. As one of the western shires, Ayrshire sent its full proportion of armed men to Edinburgh to protect the convention of Estates. On the 6th of April, 1689, the forces that had come from the western counties, having received thanks from the convention for their seasonable service they immediately departed with their arms to their respective homes. They were offered some gratification; but they would receive none; saying that they came to save and serve their country, but not to enrich themselves at the nation's expense. It was at the same time ordered, 'that

the inhabitants of the town of Ayr should be kept together till further orders.' On the 14th of May, arms were ordered to be given to Lord Bargeny, an Ayrshire baronet. On the 25th of May, in answer to a letter from the Earl of Eglinton, the convention ordered, 'that the heritors and fencible men in the shire of Ayr be instantly raised and commanded in conformity to the appointment of the Estates.' But of such proofs of the revolutionary principles of Ayrshire enough! The men of Ayr not only approved of the Revolution; but they drew their swords in support of its establishment and principles. On that memorable occasion the governors were not only changed; but new principles were adopted and better practices were introduced: and the Ayrshire people were gratified, by the abolition of episcopacy, and by the substitution of presbyterianism in its room, which brought with it its old maxims of intolerance and its invariable habit of persecution."—[*Caledonia*, vol. iii. pp. 473, 474.] The singular assertion with which this extract closes requires no refutation from us. It is but a proof of the amazing obliquity of perception with which otherwise shrewd minds are sometimes afflicted, even on points where facts as well as all history and respectable testimony are against them.

AYTON, a parish on the coast of Berwickshire, which seems to take its name, anciently written *Eytun*, and *Eitun*, from the water of Eye. It is bounded by Coldingham and Eyemouth parishes on the north; by the German ocean on the east; by Mordington and Foulden on the south; and by Chirnside and Coldingham on the west. This parish is about $4\frac{1}{2}$ miles long, measured from north-east to south-west, or from north-west to south-east; and $3\frac{1}{2}$ broad, measured from east to west. There are about $2\frac{1}{2}$ miles of sea-coast, which presents a high and rocky shore, celebrated in the annals of smuggling. The hills in this parish lie chiefly in the south-western extremity. The whole of the parish, with the exception of about 800 acres which are in plantations, is under cultivation. The water of Eye which intersects the parish contains good trout, but not in any quantity. The Ale skirts the northern boundary. This stream unites with the Eye at the Kip rock, and the conjunct stream then flows north-east to Eyemouth. Cod, ling, haddocks, whittings, flounders, hollyback, turbot, mackerel, and other kinds of fish are caught on the coast in their seasons; and lobsters and crabs are plentifully obtained on the rocky shore. Population, in 1801, 1453; in 1831, 1680, of whom 663 resided in the kirk-town of Ayton. Assessed property in 1815 £13,169. In 1741 the village of Ayton seems to have contained about 320 souls, and the country-part of the parish about the same number. This village is situated on the banks of the Eye, near the centre of the parish, and on the post-road from Berwick to Dunbar. It is 9 miles distant from Berwick, and 48 from Edinburgh. A considerable part of it is built upon a pleasant sloping bank fronting the south. A paper-mill was erected here about the end of last century, and is still in employment. Markets for the sale of fat stock are held at Ayton on the first Thursday of every month. The largest occurs during the spring; and the buyers are chiefly from the neighbourhood of Morpeth. The fishing-village and harbour of Burnmouth is finely situated in a deep cove on the coast. The line of the projected Newcastle and Edinburgh railway, as surveyed by Mr. George Stephenson, after crossing the Tweed a little above Berwick bridge, runs parallel to the coast nearly as far as Burnmouth, where it bends to the west, and pursues the valley of the Eye to Grant's House near its source, which is the summit

of the whole line, and is about 370 feet above sea-level. From this point the line falls towards Dunbar.—The following notices from the Statistical report of 1790 are curious in comparison with the present prices and rates. "The price of butcher-meat is from 3½d. to 4d. per lb. English weight; it has advanced about 1d. per lb. within these 6 or 8 years. The price of pork is variable. Haddocks, which sold formerly at 4d. or 6d. per score, now often bring as much a piece. A goose is sold here for 2s.; a pair of ducks for 1s. 3d.; a pair of hens for 1s. 6d.; a turkey for 2s. 6d.; butter sells for 7d. and cheese for 4d. per lb. The wages of a labourer are 1s. a day; a carpenter's and mason's, 1s. 4d.; a tailor's 1s. Threshing of corn is usually paid by what is termed lot, i. e. 1 boll is allowed for every 25 bolls that are threshed. The wages of a mason and his labourer, &c. are generally settled at so much a rood. A hind receives 2 bolls of barley, 1 boll of pease, and 10 bolls of oats; he has also a cow's grass, a house and yard, and as much ground as will serve to plant a firloft of potatoes. He is likewise allowed what coals he may have occasion for in his family, paying only the prime cost, which is about 2s. 8d. per cart-load, including the tolls; the carriage is equal to 4s. per load. The hind's wife reaps in harvest for the house. He has also £1 allowed for sheep's grass. A man-servant receives from £5 to £7, with bed and board; a maid-servant from £2 to £4 per annum." The Statistical reporter, in 1834, states the wages of labourers in this parish to be 1s. 6d. per day; that of artisans from 2s. to 2s. 6d.—This parish is in the presbytery of Chirnside, and synod of Merse and Teviotdale.

It was anciently united to Coldingham; at the Reformation it formed a parish in conjunction with Lamberton; but in 1650, Lamberton was disjoined from it. The present church is built upon the site, and includes part of the walls of the old parish-church; sittings 456. Stipend £235 0s. 6d., with a manse, and a glebe of the value of £24 3s., and certain teinds of fish. Unappropriated teinds, £364 18s. 2d. Patron, the Crown.—There are two United Secession congregations. Of these, the first was formed in 1779. Church-sittings 295. Stipend £80. The second was formed in 1781. Church-sittings 561. Stipend £100, with a manse and garden and some other allowances.—The parish schoolmaster has a salary of £34 4s. 4d., with about £80 school-fees and £40 other emoluments. There were six private schools within the parish in 1834.—On the hills on the south side of the parish are the remains of two camps supposed to be Roman or Saxon. Urns, and broken pieces of armour, have been found here. In the low grounds towards the north-west are the vestiges of three encampments thought to have been Danish or Pictish. History mentions the castle of Ayton, founded by the Norman baron De Vesci, which was taken by the Earl of Surrey in 1498, but no vestiges of it now remain. The modern house of Ayton which was built upon its site was unfortunately consumed by fire in 1834. In 1673, there appears to have been 24 heritors, including portioners and feuars, in this parish; in 1790, there were about 14. At the former period, they were more distinguished by family and rank. There were six of the name of Home, each of some distinction.

SUILBHEIN IN ASSYNT.

B

BADCALL (LOCH), or **BADCAUL**, a small bay on the western coast of Sutherlandshire, in the parish of Eddrachillis, between Loch Broom on the south, and Scourie bay on the north. At its mouth is an archipelago of small islands. See **EDDRACHILLIS**.

BADENOCH, a district in the south-east of Inverness-shire, about 35 miles in length, and 28 in breadth. It is bounded on the north by the Monadhleath mountains, which form the southern side of the vale of the Findhorn; on the east by the Braes of Abernethy; on the south by Athole and Lochaber; and on the west by the Great Glen of Scotland, or rather by the Coryraik mountains which lie farther to the east. It is a wild and mountainous district, thinly inhabited, and poorly cultivated, covered in many places with natural woods, and in others presenting wide stretches of bleak lonely moorland. The river Spey intersects the district, rising in Loch Spey, a small mountain tarn at the western extremity of Badenoch, at an elevation of 1,200 feet above the sea, and flowing slowly through a gradually widening valley, first eastwards, and then north-east. See article **SPEY**. The most interesting scenery and localities of Badenoch will be found described in the articles **ALVIE**, **KINGUSSIE**, and **LAGGAN**.—This district was in ancient times the land of the powerful family of the Cumyns or Cummins, who came from Northumberland in the reign of David I. In 1230, Walter, second son of William Cumyn, Earl of Buchan, acquired the lordship of Badenoch, by grant of Alexander II. [*'Caledonia'* ii. 563.] In 1291, John Cumyn, Lord of Badenoch, acknowledged Edward I. as superior lord of Scotland. His son, popularly called Red John Cumyn, was slain at Dumfries by the dagger of Bruce, on the 10th of February, 1306. Bruce annexed the lordship of Badenoch to the earldom of Murray; and the Clan Chattan appears from about this period to have settled in Badenoch. [Gregory, p. 77.] Robert II. granted Badenoch to his son Alexander, Earl of Buchan, "a species of Celtic Attila, whose common appellation of 'the Wolf of Badenoch' is sufficiently characteristic of the dreadful attributes which composed his character." [Tytler, vol. iii. p. 71.] "On some provocation given him by the Bishop of Moray, this chief descended from his mountains, and, after laying waste the country, with a sacrilege which excited unwonted horror, sacked and plundered the cathedral of Elgin, carrying off its rich chalices and vestments, polluting its holy shrines with blood, and, finally, setting fire to the noble pile, which, with the adjoining houses of the canons, and the neighbouring town, were burnt to the ground. This exploit of the father was only a signal for a more serious incursion, conducted by his natural son, Duncan Stewart, whose manners were worthy of his descent, and who, at the head of a wild assemblage of katherans, armed only with the sword and target, broke with irresistible fury across the range of hills which divides the county of Aberdeen and Forfar, and began to destroy the country, and murder the inhabitants, with reckless and indiscriminate cruelty. Sir Walter Ogilvy, then sheriff of Angus, along with Sir Patrick Gray, and Sir David Lindsay of Glenesk, instantly collected their power, and, although far inferior in numbers, trusting to the temper of their armour, attacked the mountaineers at

Gasklune, near the Water of Ila. But they were almost instantly overwhelmed, the katherans fighting with a ferocity, and a contempt of life, which seem to have struck a panic into their steel-clad assailants. Ogilvy, with his brother, Wat of Lich-toune, Young of Ouchterlony, the Laids of Cairncross, Forfar, and Guthry, were slain, and sixty men-at-arms along with them; while Sir Patrick Gray and Sir David Lindsay were grievously wounded, and with difficulty carried off the field. The indomitable fierceness of the Highlanders is strikingly shown by an anecdote preserved by Winton. Lindsay had pierced one of these, a brawny and powerful man, through the body with his spear, and thus apparently pinioned him to the earth; but although mortally wounded, and in the agonies of death, he writhed himself up by main strength, and with the weapon in his body, struck Lindsay a desperate blow with his sword, which cut him through the stirrup and boot into the bone, after which he instantly sunk down and expired." [Ibid. pp. 74, 75.] In 1452, the Crown bestowed Badenoch on the Earl of Huntly, who, at the head of the Clan Chattan, maintained a fierce warfare with the western clans, and his neighbours of Lochaber.

BADENYON, a small property in the parish of Glenbucket, Aberdeenshire, on which are the relics of an old house, celebrated in the Rev. John Skinner's excellent song, 'John o' Badenyon.'

BAIKIE MOSS. See **AIRLIE**.

BAINSFORD. See **BRAINSFORD**.

BALAGEICH. See **BALLOCHGEICH**.

BALAGICH, a mountain in Renfrewshire, in the parish of Eaglesham, east of Binnend loch; rising nearly 1,000 feet above the level of the sea. It affords considerable quantities of sulphate of barytes, and is said to contain ores of silver and lead.

BALAHULISH. See **BALLACHULISH**.

BALBIRNIE, a village in the parish of Markinch, Fifeshire; $7\frac{1}{2}$ miles north of Kirkcaldy, near the Leven. The proprietor of Balbirnie estate has, within these few years, made great alterations on his property, and nearly removed this village.

BALCARRES, the family-house and estate of a branch of the house of Lindsay, in the parish of Kilconquhar, Fifeshire. Balcarres was erected into a barony in 1592, in favour of John, second son of David, eighth Earl of Crawford. His son David was created first Lord Balcarres in 1633; and his grandson, Alexander, first Earl in 1651. It is now the property of Colonel Lindsay.

BALCHRISTIE, a hamlet in the parish of Newburn, Fifeshire; $1\frac{1}{4}$ mile south-west of Colinsburgh. This is a very ancient place, but contains at present only a few houses. David I. granted to the monks of Dunfermline, "Balchristie cum suis rectis divis, excepta rectitudine quam Keledei habere debent." A dispute ensued between the prior and canons of St. Andrews, and the monks of Dunfermline, about their respective rights to Balchristie. King William determined that the monks should have Balchristie, subject to the rights which the Culdees had in it during the reign of David I. It is now the property of James Buchan, Esq.

BALDERNOCK, a small parish in the southern extremity of Stirlingshire; bounded on the north by the parishes of Strathblane and Campsie; on the east by Campsie and Lanarkshire; on the south by the

river Kelvin, which separates it from Lanarkshire; and on the west by New Kilpatrick. On the south, where it is bounded by the Kelvin, there are about 700 acres of rich flat land. The inundations of the river having frequently blasted the hopes of the husbandman by damaging or sweeping away his luxuriant crops in this quarter, the proprietors, about 70 years ago, united in raising a bank upon the brink of the river; but there are seasons still, when it breaks over or bursts through its barriers, to resume for a little its former desolating sway. From south to north there is a gradual ascent pleasantly diversified by round swelling hills. On the north side there is some moorish ground; but the greater part of the parish is arable. Towards the south-west lies Bardowie loch, covering about 70 acres. In it are pike and perch of a good size and quality. The valuation of the parish is £1,744 Scots. The real rent, in 1794, was supposed to be about £3,000 sterling; and arable land was then rented at from 10s. to £2 per acre. Assessed property, in 1815, £5,043. Population, in 1801, 796; in 1831, 805, of whom 50 were employed in the coal-mines in this parish. Houses 150.—This parish is in the presbytery of Dumbarton, and synod of Glasgow and Ayr. Patron, the Crown. Stipend £156 19s. 1d., with a manse, and glebe of the value of £19. Schoolmaster's salary £34 4s. 4½d., with about £20 fees. Pupils 50.—In the beginning of the reign of Alexander II. the lands of Cartonbenach were conveyed to Maurice Galbraith by Malduin, Earl of Lennox. Soon after, in 1238, we find the same barony granted, under the name of Bathernock, to Arthur, son of Maurice Galbraith, with power to seize and condemn malefactors, on condition that the convicts should be hanged on the earl's gallows. From the Galbraiths of Bathernock, chiefs of the name, descended the Galbraiths of Culcruich, Greenock, Killearn, and Balgair. In the north-west corner of the parish, on an elevated piece of ground, stands an old ruined tower, being all that now remains of the mansion-house of the Galbraiths of Bathernock. It appears to have been a large building surrounded by a ditch.—Not far from this to the eastward, are several of those large loose heaps of stones called cairns, some of them oblong, and others of a circular shape. One of the circular cairns is about 80 yards in circumference. Tradition says that in this place, called Craigmaddy moor, a battle was fought with the Danes, in which one of their princes was slain; and the farm on which these cairns are is named Blochairn, which may be a corruption of Balcairn, viz., 'the town of the cairns.'—But the most curious relic of antiquity in this parish, is a structure called the Auld wife's lift, situated about a mile to the north of the church, on high ground, in a little plain of about 250 yards in diameter, which is surrounded by an ascent of a few yards in height, and in the form of an amphitheatre. It consists of three stones of a greyish grit, two of which, of a prismatic shape, are laid along close by each other upon the earth; and the third—which was once probably a regular parallelopiped, and still, notwithstanding the depredations of time, approaches that figure—is laid above the other two. The uppermost stone is 18 feet long, 1½ broad, and 7 thick, placed nearly horizontally with a small dip to the north. Its two supporters are about the same size. It can hardly be matter of doubt that this is one of those rude structures erected by the Druids in their sacred groves. Its situation, in a very sequestered spot, on an eminence surrounded by a grove of oaks—the stumps of which trees were still visible in 1795—corresponds exactly with every description we have of these places of worship. The tradition is that three old women, having wagered which should

carry the greatest weight, brought hither in their aprons the three stones of which the lift is constructed!

BALERNO, a village in the parish of Currie, in Mid Lothian. It stands on the water of Leith, about 6 miles west of Edinburgh. There is a free-stone quarry here, and a paper-mill.

BALFOUR. See MARKINCH.

BALFRON,* a parish in Stirlingshire, bounded on the north by Drymen and Kippen parishes; on the east by Gargunnoch; on the south by Fintry and Killearn; and on the west by Drymen. It is nearly 12 miles in length from west to east, and about 2 in average breadth. From the river Endrick, which skirts its southern boundary, the surface rises gradually towards the north. Population, in 1801, 1,634; in 1831, 2,057, of whom 1,700 resided in the village of Balfron. Houses 193. Assessed property, in 1815, £4,925. Valued rent £2,078 2s. 4d. Scots. Real rent, in 1812, £3,480 11s. The population is chiefly composed of hand-loom weavers, cotton-spinners, and a few farmers. The village of Balfron is 19 miles north of Glasgow, and about the same distance west-south-west of Stirling. In the vicinity are the Ballindalloch cotton-mills which, in 1838, employed 239 hands. The village of Balfron was founded in 1789 by Robert Dunmore, Esq. of Ballindalloch, who first introduced cotton-weaving into the parish.—This parish is in the presbytery of Dumbarton, and synod of Glasgow and Ayr. Patron, the Earl of Kinnoul. Stipend, £157 6s. 4d.; with a manse, and a glebe valued at £25. Church built in 1832; sittings 690.—There is a United Secession congregation at Holm-of-Balfron, which has existed for nearly a century. Church built about 1790; sittings 500. Stipend £100.—There is also a congregation in connection with the Relief. Church built in 1797; sittings 320. Stipend £75, with a house and garden.—There are two parochial schools, attended by about 76 children. The salary of one of the masters is £25, with £10 fees; of the other £10, with £7 10s. fees. There were in 1834, three private schools within the parish, attended by about 140 children.

BALGALVIES (LOCH), a small lake, which formerly existed in Forfarshire, formed by the waters of the Lunan in their passage through the parish of Rescobie. It lay to the south-east of the loch of Rescobie, and closely adjoining to it. It has been drained, and affords excellent marl.—[Headrick's 'View of Angus,' p. 85.]

BALGOLLO, a hill in the parish of Monieffeth, in Forfarshire, about half a mile from the Tay, on which are the remains of fortifications erected by the English, in 1548, when in possession of Broughty castle, which lies at its base.

BALGONIE, a village in Fifeshire, in the parish of Markinch, 2 miles south of that place. Near it, on the south bank of the Leven, is Balgonie castle, one of the seats of the Earl of Leven, created Baron Balgonie in 1641. It is of great antiquity, and is in tolerably good repair.

BALGOWNIE. See ABERDEEN. "The brig of Doon, near the 'auld town' of Aberdeen," writes Lord Byron in one of his letters, "with its one arch and its deep black salmon stream below, is in my memory as yesterday. I still remember, though perhaps I may misquote the awful proverb which made me pause to cross it, and yet lean over it with a childish delight, being an only son, at least by the mother's side. The saying as recollected by me was

* This name is understood by some to be *Bal fruinn*, i. e. 'the Town of Sorrow.' Others derive it from *Bal-fruar-avon*, 'the Cold town of the river.'

this, but I have never heard or seen it since I was nine years of age:—

Brig of Balgounie black's your wa'!
Wi' a wife's ae son, and a mear's ae foal,
Doun ye shall fa'."

BALGRAY, a hamlet, 3 miles north-west of Glasgow, in the parish of Govan. There is here an excellent free-stone quarry, about 600 yards from the Forth and Clyde canal, at which there is a wharf for shipping the stones.

BALLACHULISH, or **BALLAHULISH**, or **BALCHULLISH**,* a *quoad sacra* parish, divided from the parish of Kilmalie by authority of the General Assembly in May, 1833. It consists of two distinct districts, separated from each other by the Linnhe loch, with a church in each district in which worship is performed alternately once a fortnight. The district connected with the church at North Ballachulish, which lies in Inverness-shire, is 17 miles in length by 7 in breadth; that connected with the church at Ardour, in Argyleshire, is 14 miles by 6. The two churches are about 4 miles apart, and were built in 1829, at an expense of £1,470 each, under the provisions of the act 5° Geo. IV. c. 90. The church at Ballachulish has 300 sittings; that of Ardour, 210. Stipend £120, with a manse and glebe. Population of the Ardour district in December 1835, 549; of the Ballachulish district, 706. Total, 1,255, of whom 935 belonged to the Established church. This parish is in the presbytery of Abertarff, and synod of Glenelg. Patron, the Crown.—There is a large and valuable slate-quarry here, on the great clay-slate formation which extends from Easdale on the south to this point northwards. "The prospect from the inn is, on all hands, sublime. Beyond the ferry, the hills, covered with woods and pastures, rise gradually to a considerable height, and decline to the south-west, where the lochs of Leven and Linnhe unite; in that direction, the eye, gliding over a vast expanse of water, is arrested by immense groups of mountains of different forms and heights in Morven, which compose an admirable landscape. About 4 miles eastward are the stupendous mountains of Glenco. Such variety of grand and interesting scenery is not perhaps to be found in any other part of Scotland."—[Playfair, Vol. II. p. 15.]—Ballachulish ferry is 5 miles from Coffan ferry; 16 miles from King's House; 14 from Fort-William; 31 from Tyndrum by the Glenco road; 45 from Fort-Augustus; and 61 from Inverary by the military road.

BALLINDALLOCH. See articles, **AVEN** and **INVERAVEN**.

BALLANTRAE, a large parish forming the south-east corner of Ayrshire. It is bounded on the north and north-east by the parish of Colmonell; on the east and south-east by the parish of New Luce in Wigtonshire; on the south by that of Inch in Wigtonshire; on the south-west by Loch Ryan; and on the west by the Irish sea. The extent of sea-coast is about 12 miles. The shore, excepting for about 2 miles opposite to the village of Ballantrae, is in general high and rocky, having a tremendous surf or swell beating against it when the wind blows from the west or north-west. Opposite to this coast the sea appears land-locked: for a most spacious bay of nearly 25 or 30 leagues diameter is formed by part of the coast of Galloway, part of the two counties of Down and Antrim in Ireland, the east coast of Argyleshire, part of Dumbartonshire, and the whole stretch of coast along the shire of

Ayr for about 80 miles. All this vast extent of coast is easily discernible by the naked eye in a clear day, together with the islands of Sana, Arran, Bute, and the two small islands of Cumbrae. The land rises with a gradual slope from the shore to the tops of the mountains forming part of that extensive range of hills which stretches across the south of Scotland, almost from the Irish sea to the frith of Forth beyond Edinburgh. The highest hill is that of Beine-rard, about 6 miles south-east of Ballantrae, which, according to Thomson's atlas, has an elevation of 1,430 feet. The surface is much diversified with heights and hollows, intersected by little streams of water descending from the hills. All beyond the mountains towards the east is soft mossy ground covered with heath and ling. The principal river is the **ARDSTINCHAR**: see that article. There is another stream called the App, which flows in a south-west direction through Glenapp into Loch Ryan. Mr. Aiton estimated the superficial area of this parish at 49,000 Scots acres; in the Statistical report of 1838 it is estimated at between 24,000 and 25,000, of which about 7,000 are arable. The valued rental is £3,551 ls. 6d. Scots; the real rental, in 1790, about £2,000, but, in 1838, nearly £7,500. The want of roads, complained of in the Statistical report of 1791, has now been remedied; there is a good turnpike-road from Stranraer to the village of Ballantrae, a distance of 17 miles, and also from Ballantrae to Girvan, a distance of 12½ miles; besides numerous branch-roads. The village of Ballantrae consists of about 84 houses, with a population of 456. It now enjoys regular steam-communication with Glasgow at least three times a-week. Population of the parish, in 1801, 837; in 1831, 1,506. Houses 263. Assessed property, in 1815, £4,684.—The parish of Ballantrae is in the presbytery of Stranraer, and synod of Galloway. Both the parish of Ballantrae, and the neighbouring parish of Colmonell, were originally connected with the presbytery of Ayr; and synod of Glasgow and Ayr; but were disjoined in 1699, on account of their great distance from the seat of presbytery, and annexed to the presbytery of Stranraer and synod of Galloway. Patroness, the Duchess De Coigny. Stipend £258 ls. 3d., with a manse, and a glebe of the value of £15 10s. Church built in 1819; sittings 600. Parochial schoolmaster's salary £34 4s., with £16 school fees, and £16 other emoluments. Average number of pupils 40. There are three private schools in this parish, which were attended, in 1834, by about 80 pupils. There is a chapel and a school in Glenapp.—Chambers says: "The inhabitants of this part of the country were, till within the last twenty or thirty years, almost as wild and rude as the remote Highlanders of Ross-shire, though no doubt a great deal wealthier. And what the natural circumstances of the district gave rise to, was greatly influenced, at one period, by the lawless state into which much of the population was thrown by smuggling. It is not yet more than forty years, since the immense bands of people, who, in this district, attend funerals, would fall out on the road to the parish town, where the church-yard is situated, and without regard to the sober character of their duty, set down the corpse and fight out their quarrel, with fists, sticks, and such other rustic weapons as they happened to be possessed of, till, in the end, one party had to quit the field discomfited, leaving the other to finish the business of the funeral. Brandy, from the French luggers that were perpetually hovering on the coast, was the grand inspiration in these *polymachia*, which, it is needless to say, are totally unknown in our own discreeter times. Another fact may be mentioned, as evincing the state of barbarity from which Ballantrae has re-

* By Webster, written *Ballychelish*; by Playfair, *Baillicheish*; by many, *Ballachulish*; by others, *Balihulish*; and by Macalloch, *Bdlahulish*.

cently emerged, that previous to the end of the eighteenth century, there was not a single individual connected with the three learned faculties, not so much as a justice of the peace, in the whole district, nor within twelve miles of it."—The only antiquities within the parish are the remains of an old church at the north-east extremity of the parish, which seems to have been formerly the parish-church, and to have been deserted for the present one as being more commodious for the inhabitants; and the remains of a large old castle adjoining the village, and situated upon a high rock now within the minister's glebe, which about a century ago belonged to the Lords of Bargenry.

BALLATER, a village in the parish of Glenmuick, Aberdeenshire, on the left bank of the Dee, $1\frac{1}{2}$ mile above Pannanich, and $41\frac{1}{2}$ west of Aberdeen. This is a fashionable watering-place. The chalybeate wells are at Pannanich, which is always crowded during the summer-months, but the visitors reside at Ballater. A bridge was built across the Dee here in 1783, but was destroyed by a river-flood in 1799. A new bridge was finished at the end of the year 1811, with a water-way of 238 feet, at an expense of £4,224. It consisted of five arches, the middle arch having a span of 60 feet, the extreme arches of 34, and the intervening arches of 55 feet. This bridge also was swept away by the great flood in August 1829. "The view of Ballater from the lower extremity of the plain," says Sir T. D. Lauder, "is something quite exquisite. I do not speak of the village itself, which, at that distance, presents little more than the indication of a town, with a steeple rising from it; but I allude to the grand features of nature by which it is surrounded. The very smallness of the town adds to the altitude of the mountains; for, when seen from the point I mean, it might be a city for aught the traveller knows to the contrary. It stands, half-hidden among trees, in the rich and diversified vale. On the north rises the mountainous rock of Craigdarroch, luxuriantly wooded with birch, and divided off from the bounding mountains of that side of the valley by the wild and anciently impregnable Pass of Ballater. Beyond the river, amidst an infinite variety of slopes and wood, is seen the tall old hunting-tower of Knock; and, behind it, distance rises over distance, till the prospect is terminated by the long and shivered front, and (when I saw it on the 15th of October last) the snow-covered ridge of Loch-na-gar—the nurse of the sublime genius of Byron, who, in his beautiful little poem, so entitled, still

'Sighs for the valley of dark Loch-na-gar.'"

BALLERNO, or **BALEDGARNO**, a village in the parish of Inchture, in Perthshire, the property of Lord Kinnaird. It is 14 miles north-east of Perth, and $1\frac{1}{2}$ north-west of Inchture.

BALLINGRAY, an upland parish in Fifeshire; bounded on the north by Portmoak parish; on the east by Kinglassie and Auchterderran; on the south by Auchterderran and Beath; and on the west by Cleish. It is about $3\frac{1}{2}$ miles in length, by $1\frac{1}{2}$ in breadth. About one-third of the parish is under tillage. Coal is extensively wrought in it. There was until recently a considerable loch in this parish called Loch Orr, from which the small stream Orr issues; but it has been in great part drained. Towards the eastern extremity of this loch was a small island, upon which stood the remains of an ancient castle supposed to have been founded in the reign of Malcolm III. The family of Loch Orr was of considerable importance in early times. In the reign of Alexander II., Adam De Loch Orr was sheriff of Perth, and the name of Thomas De Loch Orr oc-

curs in the roll of the parliament held at Ayr. The domain of Loch Orr afterwards passed into the hands of the Wardlaws of Torry. A little to the westward of Loch Orr house were the vestiges of a Roman camp, now levelled and effaced. Some have conjectured that this was the spot where the Ninth legion was attacked and nearly cut off by the Caledonians. Population, in 1801, 277; in 1831, 392. Houses 65. Assessed property £3,014.—This parish is in the presbytery of Kirkcaldy, and synod of Fife. Patron, Jobson of Lochore. Stipend £172 8s. 3d., with a manse, and a glebe valued at £18. Church built in 1831. Schoolmaster's stipend £34 4s. 4½d., with about £8 10s. of fees and other emoluments. Pupils, in 1834, 20.

BALLO, one of the Sidlaw range of hills, in the parish of Longforgan, Perthshire. It attains an altitude of 992 feet above sea-level.

BALLOCH, a ferry in the parish of Bonhill, Dumbartonshire, a little below the issue of the Leven from Loch Lomond. Somewhat to the north-east of this ferry are the ruins of Balloch castle, an ancient stronghold of the earls of Lennox.

BALLOCH, a small sheet of water, about half-a-mile in circumference, at the foot of Torlum, in the parish of Muthil in Perthshire. It discharges itself into the Earn by a small stream.

BALLOCHGEICH, a steep narrow ascent leading to the old postern gate of Stirling castle. That facetious monarch James V., when rambling through the country after the fashion of Sultan Alraschid, was wont to assume the title of 'The gudeman o' Ballochgeich,' or 'Ballengeich.'

BALLOCHMYLE, a locality in Ayrshire, on which Burns has conferred celebrity by his fine song of 'The Bonny Lass o' Ballochmyle.' 'The braes o' Ballochmyle' are on the northern bank of the Ayr, between Catrine and Howford bridge, and about 2 miles distant from Moss-giel. "Bending in a concave form," says Chambers in his 'Illustrations of the Land of Burns,' "a mixture of steep bank and precipice, clothed with the most luxuriant natural wood, while a fine river sweeps round beneath them, they form a scene of bewildering beauty, exactly such as a poet would love to dream in during a July eve."

BALLOCHNEY RAILWAY. This is an extension of one of the branches of the Monkland and Kirkintilloch railway, or rather a prolongation of that railway, by two arms which run into the interior of New Monkland parish, so as to embrace the coal and iron-stone works in the rich mining districts on both sides of Airdrie. The company of proprietors was incorporated in 1826 by 7° Geo. IV. c. 48. The original capital was £18,000, which was increased, in 1835, to £28,000; and by an act passed in July 1839, to £70,000. It commences at Kippis colliery, about 2 miles west of Airdrie, runs from thence in an easterly direction, and passing Airdrie about a quarter of a-mile to the north, terminates at Ballochney colliery, about 3 miles to the north-east, sending out in its course several branches to the town and to the different collieries. This is but a short railway, not exceeding 3 miles of length in the main line, and about as much in the branches; but it is remarkable for two beautiful self-acting inclined planes, which form part of the line, and are the first of the kind that have been constructed in Scotland on any great scale. The gravity of the ascending and descending trains of waggons, are nicely balanced against each other, and their velocities regulated throughout the different parts of the line by varying slightly the inclination of the plane from top to bottom, by which means undue acceleration is prevented. The Ballochney lower inclined plane is 1,100 yards in length, and rises 118 feet perpendicular; the inclination varies

from 1 in 22 at the top to 1 in 32 at the bottom; the upper inclined plane is also 1,100 yards in length, and rises 94 feet perpendicular, varying in inclination from 1 in 25 at the top to 1 in 36 at the bottom.

BALLYCHELISH. See **BALLACHULISH.**

BALMACLELLAN, a parish in Kirkcudbrightshire; bounded on the north-west and north by the parish of Dalry; on the north and north-east by Dumfries-shire; on the east by Kirkpatrick-Durham parish; on the south by Partoun parish; and on the south-west by the parish of Kells. Its outline is very irregular. In its greatest dimensions, from north-east to south-west, it is about 14 miles. Its greatest admeasurement from east to west is about 10 miles. Urr water, flowing from Loch Urr, forms its eastern boundary; the Ken and Loch Ken skirt it on the south-west; while the Grapel, flowing south-west into the Ken, and the head-sources of the Cairn flowing north-east, separate it from Dalry. The road from Dumfries to Newton-Stewart, by New Galloway, intersects the lower or southern half of the parish, from east to west, passing the kirk-town, which is $1\frac{1}{2}$ mile north-east of New Galloway. The surface is in general level, except towards the northern march, where there is a considerable range of hills running north-east and south-west. Along the banks of the Ken, the soil is chiefly dry, light, and gravelly; the remainder is also of a light nature, but sometimes of a deep moss, and covered with heath. There are five small lakes within the parish, which are plentifully stocked with fish, especially Loch Brack, which is remarkable for excellent trout of a large size. This parish seems to have derived its name from its ancient proprietors; a branch of the family of Maclellan having possessed lands contiguous to the church and village for several centuries, and they are supposed to have transferred their name to the property. This family was in great authority so early as the reign of Alexander II.; in 1217, David Maclellan is mentioned in a charter of that king; they were also heritable sheriffs of Galloway till the time of James II. Its branches were so numerous and respectable that there were then in Galloway twelve knights of the name of Maclellan, of whom Sir Patrick Maclellan, tutor of Bombie, was the chief. He was the eldest son of Sir Patrick, who lived about the year 1410, and of a daughter of Sir Andrew Gray, of Broxmouth and Foulis. But, in 1452, having taken part with Herries, of Tereagles, against William, Earl Douglas, he was besieged in his own castle of Raeberry, and after being cast into close prison in the Earl's castle of Thrieve, was put to death, and interred in the abbey of Dundrennan. Whereupon his relations, making great depredations on Douglas's lands in Galloway, his office of sheriff was forfeited to the Crown. Sir Robert Maclellan was made a gentleman of the bed-chamber by Charles I., and afterwards, in 1633, created baron Kirkcudbright, with limitation to heirs male. The family-possessions at Kirkcudbright have long since been alienated; and the title has been dormant since the death of the 9th lord in 1832. Population, in 1801, 554; in 1831, 1,013. Houses 205. Assessed property £4,953.—This parish, formerly a rectory, is in the presbytery of Kirkcudbright, and synod of Galloway. Patron, the Crown. Minister's stipend £226 19s. 8d., with a manse, and a glebe of the value of £35. Church built in 1722; enlarged in 1833; sittings 366. Of a population of 1,050 ascertained by census in 1836, 950 belonged to the established church, and 100 to the Dissenters. There were 3 parochial schools in this parish in 1834. The salary of each of the masters is £17 2s. 2d.; and the school-fees of two of them amounted to about £30. Average number of scholars at the three schools 95.

BALMAGHIE,* a parish in Kirkcudbrightshire; bounded on the north by the parishes of Kells and Partoun, from which it is separated by the water of Dee; on the east by the parishes of Crossmichael and Tongueland, from which it is separated by the Dee; on the south by Tongueland and Twineham parishes; and on the west by Girthon, from which it is separated by Auchencloy burn, which flows north into the Dee. Its length may be about 8 or 9, and its breadth from 3 to 6 miles. The general appearance of the surface is far from pleasing to the eye. A great part of it is covered with heath, rocks, and morasses. There are a few bleak rugged hills, which rise to a considerable height, and are incapable of improvement; but the parish in general cannot be said to be mountainous. The best cultivated tracts lie along the eastern and southern skirts. There are five small lakes in the parish, in which anglers find abundance of pike, perch, and trout. Of these, Grannoch, or Woodhall loch, is the largest; it is about a quarter of a mile broad, and $2\frac{1}{2}$ miles in length. At Lochenebreck, on the estate of Woodhall, is a strong mineral spring, "that for time immemorial," says a writer quoted in the Old Statistical account, "has been frequented by numbers every spring and summer-season, for behoof of their health; and its good effects have been sanctioned by every one of the faculty that knows its virtues. It is a chalybeate water, and perhaps one of the strongest of the kind in North Britain." The valued rent of the parish is £3,651 Scots; its real rent, at the close of last century, was £2,640 sterling. Assessed property, in 1815, £7,996. Population, in 1801, 969; in 1831, 1,416. Houses 228.—This parish is in the presbytery of Kirkcudbright, and synod of Galloway. Patron, Gordon of Balmaghie. Stipend £203 8s. 8d., with a manse, and a glebe of the value of £17 10s. Unappropriated tithes £146 0s. 1d. Church built in 1794; sittings 360. The dissenters are about 150 in number, of whom the greater part are Roman Catholics, who have their places of worship at Dalbeatie and Gatehouse of Fleet. The remainder are Reformed Presbyterians. There are 2 parish-schools, which were attended by about 200 children in 1834. The salary of one schoolmaster was £12, with about £30 fees; of the other £17 6s. 6d., with £18 fees. There was also a private school with about 100 pupils.—After the Revolution, the Covenanters dissented from the church on account of her Erastianism, and professed to refuse subjection to the state, because the king and parliament had not subscribed the covenants. They had no minister for about sixteen years, but they met for worship in societies, in different parts of the south and west of Scotland, where they chiefly resided and were known by the name of 'Hill Folk,' 'Society Men,' and 'Cameronians.' Their views were favoured by Mr. John Macmillan, minister of the gospel at Balmaghie, who sometimes dispensed religious ordinances to some of them who resided without the bounds of his own parish. For this he was deposed from the office of the ministry about the year 1704. He submitted for some time to the sentence of deposition, but conceiving it to be founded in error, he afterwards resumed the office of the ministry. After preaching for some time, he received a call from the societies in the year 1706, and continued to be their sole minister till he was joined by Mr. Nairn, about the year 1743, and these two were the only ministerial members who constituted the first Re-

* "Bal, in the Gaelic language, signifies a township or residence. For about 600 years previous to the year 1786, the family of Maghie of Balmaghie possessed extensive estates in this part of the country, and here they resided. Hence the etymology of the name of the parish is obvious."—*Old Statistical Account.*

formed Presbytery.—Several persons here suffered as martyrs, during the persecution which prevailed in the 17th century. In the churchyard there are grave-stones over three of them. One of these has the following epitaph engraven on it:—

Here lyes David Halliday, portioner of Meifield, who was shot upon the 21st of February, 1685, and David Halliday, one in Glogap, who was likewise shot upon the 11th of July, 1685, for their adherence to the principles of Scotland's Covenanted Reformation.

Beneath this stone two David Hallidays
Do lie, whose souls now sing their Master's praise.
To know, if curious passengers desire,
For what, by whom, and how they did expire;
They did oppose this nation's perjury,
Nor could they join with lordly prelacy.
Indulging favours from Christ's enemies,
Quench'd not their zeal this monument then cries;
These were the causes not to be forgot,
Why they by Lag so wickedly were shot.
One name, one cause, one grave, one heaven do tie
Their souls to that one God eternally.

BALMANGAN BAY, a small harbour below Kirkcudbright, at the mouth of the Dee. There are 12 or 15 feet water here at four hours flood in all tides.

BALMERINO, a parish in Fifeshire; bounded on the north by the frith of Tay; on the east by the parish of Forgan; on the south by Kilmany; and on the west by Creigh and Flisk. Its medium length from east to west is about $3\frac{1}{2}$ miles; and its greatest breadth $2\frac{1}{2}$ miles. Two hilly ridges, spurs of the Ochills, traverse the parish from east to west, leaving between them a fertile valley inclining towards the east. The highest point of the southern ridge is Coultrey hill, which exceeds 500 feet, and is wooded to the top. The whole shore is bold and rocky. Mr. Leighton states the area of the parish at 3,346 acres, of which 2,700 are in cultivation, and about 500 under wood. The valued rent is £3,944 9s. 2d. Scots. Real rent £4,800. Assessed property, in 1815, £4,331. Population, in 1801, 786; in 1831, 1,055. Houses 212. There are four villages in the parish: namely, Galdry near the northern boundary; Balmerino on the coast; Coultrey towards the west; and Kirkton. Balmerino is a nice little fishing village, and a creek of the port of Dundee, with which it communicates by a weekly packet. When the first Statistical report was written, it was stated that above 7,000 bolls of grain were yearly shipped at this port for Dundee and other markets; but this trade no longer exists: the farmers find it more convenient to send their grain to Cupar, and other neighbouring towns. Salmon are caught on the coast by means of the toot net, but no longer in such numbers as formerly; and that delicate little fish, the spirling, once caught here in immense quantities, seems to have betaken itself to other haunts. A considerable number of the population are employed in weaving for the Dundee manufacturers. Mr. Leighton says an expert weaver can earn upon an average 2s. per day of twelve hours. We greatly fear this is too high an estimate. At this present time the average of the nett weekly earnings of a steady weaver in Dundee does not exceed 9s. per week.—The lands of Balmerino, at the beginning of the 13th century, were in the possession of Henry de Ruel or Rewel, whose nephew and heir, Richard, sold them, in 1225, to Queen Emergarde, the mother of Alexander II., for 1,000 merks. Emergarde founded an abbey upon her newly acquired possession, which she dedicated to the Virgin Mary, and to St. Edward the Confessor; and, dying in 1233, was buried before the high altar. The last abbot of this well-endowed house was Sir John Hay. After the Reformation, the lands belonging to it were erected into a temporal lordship in favour of Sir James Elphinston, in whose family they continued till the forfeiture of John, 6th

Lord Balmerino, in 1746. They were then purchased from the Crown by the York Buildings company, who resold them to the Earl of Moray. The remains of the abbey are now of trifling extent. An arcade of pointed arches supported on short thick pillars, and two vaulted apartments still remain; but the chapel has entirely disappeared. There are still some remains of the orchard, and one or two venerable chestnut trees in the surrounding grounds.*—A little to the east of the abbey are the ruins of the ancient castle of Naughton, surmounting an isolated mass of rock. Sir William Hay of Naughton is noticed by Winton as

"Ane hanest knycht, and of gud fame,
A travallit knycht lang before than."

And Gawain Douglas places him among the heroes of romance in his 'Palice of Honour':

"Then saw I Maitland upon auld beir'd grey,
Robin Hude, and Gilbert with the quhite hand,
How Hay of Naughton flew in Madin land."

Mr. Leighton conjectures that Naughton was the site of the battle of Dunnechtan, fought in 685, wherein the Pictish king, Bredei, defeated and slew the Saxon king, Egfrid of Northumbria. But Chalmers supposes this engagement to have taken place at Dunnichen in Angus.† There is a field in the neighbourhood of Naughton, called Battle-law, where the Danes, in their flight from the battle of Luncarty, made a vigorous stand against the Scots and Picts under Kenneth III., but were again put to flight with severe loss, and compelled to take refuge in their ships which lay in the mouth of the Tay.—This parish, formerly a vicarage, is in the presbytery of Cupar, and synod of Fife. Patron, the Crown. Stipend £239 9s., with a manse, and a glebe of the value of £18. Unappropriated teinds £95 4s. 4d. The abbey-church was used for service till the year 1595, when a new church was erected near the foot of the Scurr hill, where the burial-ground still remains, although the church now in use, which was built in 1811, is farther east, or more towards the centre of the parish. There are about 100 dissenters in the parish, who are mostly connected with the Secession-church at Rathillet. The parish-school is at Galdry. Schoolmaster's salary £34 4s. 2d., with from £25 to £28 of fees. Average number of scholars 80. There is a female school attended by about 40 children.

BALNAHUAIGH, an islet of about one mile in circuit, lying midway between Lunga and Eidsdale. It is included in the parish of Jura, and, in 1800, had a population of 150, who were supported by quarrying slate, the whole rock being one slate-quarry.

BALNAMOON'S MIRES, a morass formerly of great extent, but now drained and cultivated, about 5 miles north of Arbroath. The small stream Keiler takes its rise here.

BALQUHIDDER, a very large parish in the south-west of Perthshire; bounded on the west and north by Killin; on the east by Comrie; and on the south by Callander. Measured from its north-east to its south-west corner, it is 20 miles in length; and from Craig-na-Caillach on its north-eastern border, across the country in a north-west direction, it is 10 miles. Its general outline is triangular, and it is nearly enclosed by ranges of lofty mountains, from which numerous torrents descend to Loch Voel, which, with its adjunct Loch Doine, occupies the

* Grose has given a view of these ruins. Another and recent view is given in 'Fife Illustrated,' Glasgow, 1839, &c.

† Simeon of Durham relates that this battle was fought in the vicinity of a lake, which he calls Stagnum Nechtain; and the Saxon Chronicle says that the field of battle was "juxta mare Boreali." It is not easy to reconcile these features with the present locality.

centre of the parish. These lochs discharge themselves by the Balvaig, into Loch Lubnaig, of which the northern half is projected into this parish, on the east of Craign-na-Cailliaich. See articles LOCH DOINE, LOCH LUBNAIG, and LOCH VOEL. After heavy rains the low grounds around these lochs are widely inundated—as might be expected from the form of the country. According to tradition all the lower grounds, and the foot of the mountains in this parish, were formerly covered with wood; and large trunks of oak and birch trees are still found occasionally in the mosses. There is still a considerable quantity of coppice within this parish. The writer of the first Statistical account claims the south part of Benmore as in this parish, and estimates its height at 3,903 feet above sea-level; also the western side of Ben Voirlich, to which he assigns an altitude of 3,300 feet. A little to the south of Benmore is Binean, or 'the Mountain of Birds,' which has a nearly equal elevation. To the south-west of Binean is Benchroan; and to the south-east of Benchroan are Stobdune and Benchoan. All these are very lofty mountains; but we have not admeasurements of their respective heights. The principal roads which intersect this parish is that from Callander, by Loch Lubnaig, to Lochearnhead, and through Glen Ogle to Tyndrum; and that from Lochearnhead to Balquhiddier. Glen Ogle is a narrow pass hemmed in for several miles on both sides by very lofty and precipitous rocks. Glen Ample is a narrow deep ravine on the eastern skirts of the parish, intersected by a rapid mountain-torrent called the Ample, which flows north into Loch Earn. The vale of Balquhiddier, and its two fine lochs, presents some very beautiful scenery, and is rife with traditions of Rob Roy, many of whose exploits were performed here; and whose ashes rest in the little churchyard of Balquhiddier. To the west of the kirk-town are 'The Braes of Balquhiddier,' celebrated in Scottish song. This village is 12 miles distant from Callander. Population of the parish, in 1801, 1,377; in 1831, 1,049. Houses 200. Assessed property £6,794.—This parish is in the presbytery of Dunblane, and synod of Perth and Stirling. Patron, Sir Evan J. Macgregor, Bart. Minister's stipend £275 15s. 11d., with a manse, and a glebe of the value of £20. Church built in 1631; repaired in 1810; sittings 425. The district of Lochearnhead, called the half-parish, being part *quoad civilia* of Comrie parish, is annexed to Balquhiddier *quoad sacra*. It contains about 200 individuals. There are about 20 dissenters within the parish.

BALTA, an islet lying to the east of the isle of Unst, in the Shetland groupe, in N. lat. 60° 41'. Baltasound, between Balta and Unst, is a bay 2 miles in length, and about half-a-mile broad, so completely shut in by the island of Balta that, seen from a distance, it resembles a lake. Both sides of this bay are in a state of high cultivation. An excellent survey of Balta harbour, by Captain Ramage, was published in 1819.

BALVAIG (THE), a stream which rises in the western corner of Balquhiddier parish in Perthshire, flows east-north-east into Loch Doine, through which it flows into Loch Voel, and thence emerging, flows first east, and then south, to Loch Lubnaig, from the lower or southern extremity of which it re-issues, and then flows south-east into the Teith, coming from Loch Venachoir, which it joins at Bochartle, about half-a-mile above Callander bridge.

BALWEARIE, the ancient seat of the family of

"the wondrous Michael Scott,"

in the parish of Abbotshall, Fifeshire. Sir Michael flourished during the 13th century, and was born at

Balwearie some time previous to the year 1214. Filled with the thirst of learning from his youth, he left his native country, and studied successively at Oxford—where he had Roger Bacon for a fellow-student—at Padua, and at Toledo; and, having acquired a European reputation for learning, was invited to the court of the emperor of Germany, where he remained some years. On his return to England, he was honourably received by Edward I., who permitted him to proceed to Scotland, where he arrived just after the death of Alexander III., rendered an embassy to Norway expedient, for the purpose of conveying the princess Margaret, daughter of Eric, king of Norway, by Margaret, the eldest daughter of Alexander III., to Scotland, of the crown of which kingdom she had become, by her grandfather's death, the direct and lawful inheritress. To this honourable embassy, Sir David Scott, and Sir Michael Wemyss, another Fifeshire gentleman, were appointed by the regents of the kingdom. They succeeded so far in their mission as to get the young princess intrusted to their care; but the royal maiden sickened on her passage to Scotland, and died in Orkney. Sir Michael's name does not again appear in history; he died soon after, having attained an extreme age. Tradition varies concerning the place of his burial; by some accounts he is represented as having been buried at Home-Cultram in Cumberland, where Henry, son of King David of Scotland, had founded a Cistercian abbey, of which abbey Lysons says, Michael Scott was a monk about the year 1190; by others, he is said to have been buried in Melrose-abbey. Our great Minstrel has decided in favour of Melrose, and any other belief on this subject is therefore most unwarrantable. "It is well known," says Tytler, in his 'Lives of Scottish Worthies,' [vol. I. p. 121.] "that many traditions are still prevalent in Scotland concerning the extraordinary powers of the Wizard; and if we consider the thick cloud of ignorance which overspread the country at the period of his return from the continent, and the very small materials which are required by Superstition as a groundwork for her dark and mysterious stories, we shall not wonder at the result. The Arabic books which he brought along with him, the apparatus of his laboratory, his mathematical and astronomical instruments, the Oriental costume generally worn by the astrologers of the times, and the appearance of the white-haired and venerable sage, as he sat on the roof of his tower of Balwearie, observing the face of the heavens, and conversing with the stars, were all amply sufficient to impress the minds of the vulgar with awe and terror. 'Accordingly,' says Sir Walter Scott, in his Notes on the Lay of the Last Minstrel, 'the memory of Sir Michael Scott survives in many a legend, and in the south of Scotland any work of great labour and antiquity is ascribed either to the agency of Auld Michael, or Sir William Wallace, or of the Devil.' Some of the most current of these traditions are so happily described by the above mentioned writer, that we cannot refrain from quoting the passage. 'Michael was chosen,' it is said, 'to go upon an embassy to obtain from the king of France satisfaction for certain piracies committed by his subjects upon those of Scotland. Instead of preparing a new equipage and splendid retinue, the ambassador retreated to his study, and evoked a fiend, in the shape of a huge black horse, mounted upon his back, and forced him to fly through the air towards France. As they crossed the sea, the devil insidiously asked his rider what it was the old women of Scotland muttered at bed-time. A less experienced might have answered, that it was the Pater Noster, which would have licensed the devil to precipitate him from his back. But Michael sternly replied,

'What is that to thee?
Mount, Diabolus, and flee!'

When he arrived at Paris, he tied his horse to the gate of the palace, entered, and boldly delivered his message. An ambassador with so little of the pomp and circumstance of diplomacy, was not received with much respect, and the king was about to return a contemptuous refusal to his demand, when Michael besought him to suspend his resolution till he had seen his horse stamp three times. The first stamp shook every steeple in Paris, and caused all the bells to ring; the second threw down three towers of the palace; and the infernal steed had lifted his foot to give the third stamp, when the king rather choose to dismiss Michael with the most ample concessions, than to stand the probable consequences. Another time, it is said, when residing at the tower of Oakwood, upon the Ettrick, about three miles above Selkirk, he heard of the fame of a sorceress, called the Witch of Falsehope, on the opposite side of the river, Michael went one morning to put her skill to the test, but was disappointed, by her denying positively any knowledge of the necromantic art. In his discourse with her, he laid his wand inadvertently on the table, which the hag observing, suddenly snatched it up, and struck him with it. Feeling the force of the charm, he rushed out of the house; but as it had conferred on him the external appearance of a hare, his servant, who waited without, halloo'd upon the discomfited Wizard his own hounds, and pursued him so close, that in order to obtain a moment's breathing to reverse the charm, Michael, after a very fatiguing course, was fain to take refuge in his own jaw-hole, *Anglice*, common sewer. In order to revenge himself of the Witch of Falsehope, Michael, one morning in the ensuing harvest, went to the hill above the house with his dogs, and sent down his servant to ask a bit of bread from the goodwife for his greyhounds, with instructions what to do if he met with a denial. Accordingly, when the witch had refused the boon with contumely, the servant, as his master had directed, laid above the door a paper which he had given, containing, amongst many cabalistical words, the well-known rhyme,

'Maister Michael Scott's man
Sought meat, and gat nae.'

Immediately the good old woman, instead of pursuing her domestic occupation, which was baking bread for the reapers, began to dance round the fire, repeating the rhyme, and continued this exercise, till her husband sent the reapers to the house, one after another, to see what had delayed their provision, but the charm caught each as they entered, and, losing all idea of returning, they joined in the dance and the chorus. At length the old man himself went to the house, but as his wife's frolic with Mr. Michael, whom he had seen on the hill, made him a little cautious, he contented himself with looking in at the window, and saw the reapers at their involuntary exercise, dragging his wife, now completely exhausted, sometimes round, and sometimes through the fire, which was, as usual, in the midst of the house. Instead of entering, he saddled a horse, and rode up the hill, to humble himself before Michael, and beg a cessation of the spell, which the good-natured warlock immediately granted, directing him to enter the house backwards, and with his left hand take the spell from above the door, which accordingly ended the supernatural dance. * * * Michael Scott,' continues the same author, 'once upon a time was much embarrassed by a spirit, for whom he was under the necessity of finding constant employment. He commanded him to build a cauld, or dam-head, across the Tweed at Kelso; it was accom-

plished in one night, and still does honour to the infernal architect. Michael next ordered that Eildon hill, which was then a uniform cone, should be divided into the three picturesque peaks which it now bears. At length the enchanter conquered this indefatigable demon, by employing him in the hopeless and endless task of making ropes out of seasand.'" Finlay in his 'Scottish Historical and Romantic Ballads,' [vol. II. p. 55,] conjectures that Balwearie was the scene of the atrocious Lammikin's "black revenge," as related in the ballad of that name, of which one copy commences thus:—

"Lammikin was as gude a mason
As ever hewed a stane;
He biggit Lord Weire's castle,
But payment gat he nae."

And another copy,—

"When Balwearie and his train
Gaed to hunt the wild boar,
He gar'd bar up his castle
Behind and before."

In this latter copy, "the wicked Balcanqual" takes the place of Lammikin, or Lambkin; but all writers, Mr. Finlay tells us, agree in considering this not the name of the hero but merely an epithet.

BANCHORY-DAVINICK, a parish divided into two parts by the river Dee, which being the boundary between the counties of Aberdeen and Kincardine, that part of the parish which lies on the north side of the river is in the former county, and that on the south side in the latter. That part of the parish in Aberdeenshire, is a strip about one mile in breadth, and 4 in length, and stretching both farther east and farther west than the parish does upon the opposite bank. On the east this part is bounded by the parish of Old-Machar; on the north by Newhills, and on the west by Peterculter. The Kincardineshire portion is bounded on the east by the parish of Nigg, and by the German ocean, for about 3 miles; on the south by Fetteresso parish; and on the west by Fetteresso and Maryculter. The coast is bold and rocky, but presents three small fishing-harbours, Findon, Portlethen, and Downies or Dounies. The first of these villages had a population, in 1831, of 224; the second of 220; and the third of about 100. The general appearance of the country is rugged and stony. The stone which prevails is blue granite. The soil is in general light, and either mossy or sandy, but when properly managed produces good grain, particularly on the river side, and on some parts of the coast. The writer of the Statistical account, in 1792, complains of the high price of labour operating as a bar to agriculture in this district. A day-labourer, if a good hand, then earned 1s. a-day for nine months of the year, and 9d. a-day the other three; and the wages of a capable farm-servant, who had his victuals found, was "seldom under £6, and sometimes as high as £9 a-year." An anecdote related by the same writer curiously illustrates the change which has taken place in the value of land here as elsewhere throughout Scotland within the last hundred years. "Mr. Fordyce of Ardo, one of those brave men," says the reporter, "who circumnavigated the globe with Lord Anson, and suffered so many hardships in the service of their country, after accomplishing that voyage, returned to Scotland in the year 1744, with the well-earned wages of his toil, and purchased the estate of Ardo in this parish, where he has resided ever since. When he took possession of his estate, he found the mansion-house, such as it was, with the garden, and about 40 acres of land, in the hands of a tenant, who paid about £3 6s. 8d. sterling annually. Having it in contemplation at that time to go abroad again, he asked the man if he would renew his lease, which

was expired, at the annual rent of £5 sterling, his answer was, 'Na, by my faith, God has gien me mair wit!' Mr. Fordyce," adds the reporter, "settled, and employed himself in improving the land, which is now in a good state of cultivation, and would rent at £1 5s. an acre." The river Dee is here about 80 yards broad, but is not navigable. From its long course, and the mountainous country through which it runs, it is subject to sudden and high floods. A foot suspension bridge has been thrown across the Dee in this parish. Its span between the pillars is 185 feet, and whole length 305 feet. Population, in 1801, 1,557; in 1831, 2,588, of whom 1,905 resided in the Kincardineshire portion of the parish. Houses 468, of which 353 were in Kincardineshire. Assessed property £5,312.—Although the church stands in Kincardineshire, the parish is in the presbytery and synod of Aberdeen. Patron, the Crown. Stipend £159 2s. 9d., with a manse, and a glebe of the value of £13 16s. 8d. Church built in 1822; sittings 900. There are about 30 dissenters in the parish. There is a chapel-of-ease at Portlethen, about 4½ miles from the parish-church, originally an old family-chapel; sittings 460. Dr. Morison, incumbent of the parish, amongst other benefactions has built and endowed a good school-house at this latter village. The parish-school is attended by about 40 children. Schoolmaster's salary £30, with about £20 fees and other emoluments. There are other two private schools.—There are several very large cairns, both on the north side of the river, and towards the coast. There is also on the south side of the parish, a Druidical temple, situated on an eminence about 1½ mile from the coast.

BANCHORY-TARNAN,* a parish in Kincardineshire; bounded on the east, north, and west, by Aberdeenshire; and on the south by Durriss and Strachan parishes. It is of very unequal surface; and the whole is interspersed with muir ground covered with heath and hills. It contains 15,040 Scots acres. The rent, in 1792, was about £1,800, besides £200 arising from the yearly sales of birch and fir wood. The valued rent is £3,450 Scots. Assessed property, in 1815, £4,366. Houses 398. Population, in 1801, 1,465; in 1831, 1,972. The river Dee—which intersects the southern and narrower portion of this parish from west to east, and forms its southern boundary for many miles—is here in general pretty rapid; and its banks are adorned with natural woods and plantations, forming beautiful and picturesque scenery in many places. This is much heightened at Banchory-Tarnan, by the junction with the Dee of a small, but impetuous and often impassable river called the Feugh, a collection of numerous streams which descend the Grampian hills; over this river, near a fine cataract and fall of its waters among rocks, and near its conflux with Dee, almost opposite to Banchory, the road from Stonehouse to Deeside is carried on a substantial stone-bridge of four arches. There is a loch, called the Loch of Drum, between 2 and 3 miles in circuit, on the north-eastern skirts of the parish; and another of the same dimensions, near the middle of the parish, called the Loch of Leys, "having," says the Statistical report of 1792, "an artificial island on oak piles, with ruins of houses, and of an oven upon it; but there is no tradition concerning the use which may have been made of the ancient structure."—This parish is in the presbytery of

Kincardine O'Neil, and synod of Aberdeen. Patron, Sir T. Burnet of Leys, Bart. Stipend £287 10s. 9d., with a glebe of the value of £10. Church built in 1775. There are 3 parochial schools, attended by about 200 children. One of these has a small endowment. There are besides 4 private schools.

BANFF,* a parish in Banffshire; bounded on the north by the Moray frith; on the east by Gamrie, and Alvah parishes; on the south by Marnoch parish; and on the west by that of Boyndie. The Deveron river separates it from Gamrie; and the Boyndie, from Boyndie parish. The surface is pleasingly diversified, and is estimated in Robertson's map at 6,312 acres, and in the old Statistical account at 7,680 acres. About 250 acres are under wood. It is generally supposed that a considerable part of this parish towards the south-west was, in ancient times, covered with wood, and belonged to the forest of Boin. A simple distich, which Tradition has handed down, confirms this opinion:—

"From Culbirnie to the sea,
You may step from tree to tree."

Culbirnie is a farm-hamlet about 3 miles distant from the sea. The turnpike road from Aberdeen to Inverness passes through the northern part of the parish from east to west. The principal landholders are, the Earl of Fife, the Earl of Seafield, and Sir Robert Abercromby of Birkenbog. Duff house, the mansion of the Earl of Fife, is a noble edifice in the Roman style; and contains some fine paintings. See article **DUFF HOUSE**. The old castle of Inchdrewer, about 4 miles south-west of the town, is still entire. It is only remarkable as having been the scene of Lord Banff's death, under very suspicious circumstances, in 1713. Banff castle, in the environs of the town of Banff, has descended to the Earl of Seafield. It was the family-seat and birth-place of James Sharp, archbishop of St. Andrews, who was born in 1613. The Bairs of Auchmedden in this parish are a very ancient family. Of this family are descended the Bairs of Newbyth in East Lothian; and of the same family it is asserted, in Rose of Mountcoffer's manuscripts,—but with little probability we think,—was the celebrated Boyardo, the author of the 'Orlando Innamorata.' Population, in 1801, 3,572; in 1831, 3,711, of whom 2,935 were in the town of Banff. Houses 670, of which 498 were in the town. Valued rent of the landward part of the parish £2,313 Scots. Real rental in 1798, including the salmon-fishings, and town lands, £4,500.—The parish of Banff is in the synod of Aberdeen, and presbytery of Fordyce. It was united with Inverboyndie till 1634. Patron, the Earl of Seafield. Minister's stipend £245 19s. 9d., with a glebe of the value of £35. Unappropriated teinds £280 3s. 3d. Church built in 1790, at a cost of £1,961; sittings 1,300. The upper district of the parish is under the charge of a missionary who officiates at Ord chapel, distant about 5 miles from Banff. See **ORD**. The parish-minister reckoned 3,050 adherents of the established church in this parish in 1837, and 610 dissenters.—There are several dissenting places of worship in the town of Banff, but their statistics will be here given. A Scottish Episcopal church has existed here since the abolition of Episcopacy in Scotland. Chapel built in 1833-4. Cost £1,000. Sittings 356. Salary from £110 to £115.—A United Secession congregation was established in 1822. Chapel built in 1823, at an expense of £800. Sittings 490. Stipend £100.—An Independent church was formed in 1808. Chapel built in 1834, at an expense of £500. Sittings 400. Sti-

* "The last part of the name is that of a saint; hence one of two annual fairs, held near by, is called St. Tarnan's market, and a small fountain not far distant is called St. Tarnan's well. *Banchory* is said to signify 'fair' or 'goodly choir'; and it is conjectured, that in some remote period there has been a kind of seminary of the clergy established at this place, by one of the above name."—*Old Statistical Account*.

† Always pronounced Banff.

pend £60, with a manse and garden.—A Wesleyan Methodist congregation was formed in 1767, and a chapel built in 1818. Cost £300; sittings 300. Salary £50.—There is also a Roman Catholic congregation which assembles in the upper story of a house in the town, their own property. Sittings 110. The priest officiates alternately at Portsay and Banff.—There is no legally established parochial school; but the rector of the grammar-school in Banff, founded in 1786, receives the parochial salary. This school was attended by about 180 children in 1834. And there were also at that date 15 private schools, within the bounds of the parish, attended by above 500 children.

The royal burgh of BANFF is situated in the north-east corner of the parish, on the peninsula formed by the influx of the Deveron into the Moray frith. It was a part of the ancient thanedom of Boin, whence the name seems to be derived. In some old charters it is spelled Boineffe and Baineffe. The district of Boin has probably received its name from a conspicuous mountain in the neighbourhood of Cullen, called the Binn. On the south side of this hill, at Darbrich, the forester had his dwelling; and it is well known that the forestry and thanedom territory extended thence to the borough-lands of Banff, divided only by the water of Boyndie. The town occupies a fine declivity opening to the east and south-east, and commanding a charming prospect. Tradition has assigned a very early origin to Banff as a royal burgh. In 1165, William the Lion gave a toft and garden in this burgh to the Bishop of Moray; and Robert I. confirmed its privileges. But the earliest charter extant is one of Robert II., dated October 7, 1372; and the governing charter is one of James VI., dated May 9, 1581, which was renewed when that sovereign attained the age of 25. The citadel in ancient times, similar to the castles of Edinburgh and Stirling, occupied a mount originally at the end, though now near the middle of the town. It was a constabulary of the same constitution with that of Elgin or Nairn: some remains of its ancient strength, both in the walls and in the moat, may yet be traced. The lands of Blairshinnock were bestowed by David Bruce in 1364, for furnishing a soldier to attend the king in his court *apud castrum de Banffe*. Being the seat of justice, it was the residence of the constable or sheriff, in the absence of the court. This office, in ancient times hereditary, was occasionally transferred to different families, and in 1683 was purchased by the family of Findlater, by whom the castle was transformed into a pleasant residence, fitted up in the modern style.

The town was formerly governed by a provost, 4 bailies, and 12 councillors. It is now governed by a provost, 4 magistrates, and 17 councillors. Municipal constituency, in 1838, 133. The territory over which the jurisdiction of the burgh is exercised extends from the burn-mouth of Boyndie, across the Gallowhill, to the Spittal Myre, and thence to the sea at Palmer cove. Macduff, a burgh of barony, is situate within the parliamentary boundaries of Banff; but is altogether an independent borough. The magistrates used to claim the right of patronage over the parish church, but have never shown a title to it. They have five mortifications under their management, viz.: 1st, Cassie's bounty, consisting of £10,000, the interest of which is half-yearly distributed among indigent persons. 2d, Smith's bounty, which is also sum of £10,000, yielding an yearly dividend of £308 18s. 8d. The objects of this charity are, first, to pay £25 of additional stipend to the minister of Fordyce; and, secondly, to apply the remainder to the maintenance and education during five years, of boys of the name of Smith, at an yearly allowance of

£25 for each. The academy for this purpose is at Fordyce, and the teacher has a salary of £40, with a free house, a garden, and about 10 acres of ground. 3d, Perrie's free school, being a mortification of £1,100 for educating poor children, and from which a salary of £40 is paid to a schoolmaster, who has also a free house and garden, and from 80 to 90 pupils. 4th, Wilson's charity, consisting of a sum of between £5,000 and £6,000. 5th, Smith's mortification, being a sum of £1,000.—There are in Banff six incorporated trades. No one can carry on business as a merchant without becoming a guild-brother. The property of the burgh consists of lands and houses, salmon-fishings, feu-duties, public buildings, and markets. The value of the lands, in 1833, was £2,014 10s. The revenue of the burgh, in 1833, was £1,304; expenditure £1,336. In 1838-9, the revenue was £1,172. The total estimated value of the burgh-property, in 1834, was £22,961. The total amount of debts, in 1833, was £14,298. In 1763, the debt was only £20; although so early as 1470, the burgh was under embarrassments. At that time it was held by the public functionaries that they had no power to increase their revenues, except by leasing their property. The magistrates, therefore, without fraud, and upon their "great aith, with consent of all and sundry neighbours of Banff," let out to certain burgesses, for 19 years, the whole salmon fishings, consisting of 12 nets, for the "infetting and foundation makkin of a perpetual chaplenary, to sing in the peil heife* of the burgh, for our sovereign lord the king and queen, their predecessors and successors,—for all Christians soules,—for the theiking of the kirk with slate, and the bigging of the tolbuthe,—and for quhat the burgh has not substance." It is believed that similar leases were granted until 1581, when there was obtained the charter, formerly referred to, giving power to feu to the resident burgesses and their heirs male. In 1595 the provost, bailies, and certain other persons, were appointed commissioners to carry the power into execution. The instructions to them bear that, "because of the warres and troubles, the darth of the country and scantiness of victual, with exorbitant stents and taxations for supporting the warres, the public warkes, and uphading of the kirk, tolbuthe, and calxies, &c.; for remeid whereof this empowers to set, sell, and feu the common land and salmon fishings of the burgh to merchant burgers and actual residents." By virtue of these powers these commissioners did alienate, for a small feu-duty, the greater part of the burgh-lands and salmon-fishings. The limitation in the charter, that the alienations should be made only to resident burgesses, and their heirs male, either never had been in observance, or quickly fell into disuse. Nor does the forfeiture emerging if a burgess should alienate to other than to a resident burgess, appear to have been operative. The greater part of the property was acquired by neighbouring proprietors, including the families of Fife, Findlater, and Banff. The last alienation of any importance, which has been traced, was in 1783, when the provost purchased about 20 acres of the burgh-lands, for 20 years' purchase of a feu-duty of 1s. 6d. per acre. It constitutes a wholesome feature in the municipal arrangements of Banff that the cess and other public burdens and taxations are levied annually by a Head court—as it is called—consisting of all the heritors and burgesses within burgh.—Banff unites with Elgin, Cullen, Inverury, Peterhead, Macduff, and Kintore in returning a member to parliament. The parliamentary constituency, in 1839, was 203. The parliamentary borough bound-

* The Pool-haven, where formerly boats and small craft were moored. It is now the burying-ground.

daries extend from the Little Tumbler rocks on the shore to the westward of Banff, and the mineral well of Tarlair to the eastward of Portsoy, so as to include the recently erected town of Macduff.

The town of Banff comprises several well-built streets. The church, and the town-house, are each handsome structures; and there are several very substantial private houses,—the town being, to a considerable extent, a place of resort for genteel families of small private fortune, being deemed the most fashionable town north of Aberdeen. The town is usually described as consisting of two parts,—the upper and the lower town,—or the town, and the sea-town. Between these, on an elevated piece of ground, stands the castle. The harbour, which lies to the north of the town, on the west side of the bay, is neither commodious nor good, owing to the continual shifting of the banks at the mouth of the river; that of Macduff, at the opposite extremity of the bay, is much the better of the two. In 1816, about £18,000 were spent in improvements on the harbour, and a vessel drawing 12 feet can enter the new basin at ordinary high water. There is little trade and no manufactures in the town; there is an extensive distillery in the neighbourhood; the fisheries are extensive, and there is a large annual export of fish from the port of Banff. The Deveron salmon-fishings are rented at about £1,800, and the fish caught at them are principally sent to the London market. In 1831, 1,759 barrels of herrings were cured here; in 1835, 631 barrels. These are exported to London, Ireland, and Germany. Live cattle, and grain, are also exported to London. The port of Banff includes the creeks of Fraserburgh, Gardenstown, Macduff, Portsoy, Port-Gordon, and Garmouth. The registered tonnage and shipping belonging to the port, in 1834, was 67 vessels of an aggregate tonnage of 4,301 tons. The amount of customs' duty collected at the port, in 1835, was £1,112; in 1837, £1,164. The town was first lighted with gas in 1831. There is a good suite of public baths; and a very commodious market built in 1830. There are four yearly fairs, of which the Brandon or Whitsunday fair is the largest. The others are held on January 7th, the 1st Tuesday in February, O. S.; the 1st Friday in August, O. S.; and the Friday before the 22d of November. The Commercial bank of Scotland, and the National Bank, have branches in this town. A Savings bank was instituted in 1815.

Banff is 165 miles north-east of Edinburgh; 80 east of Inverness; 7 east of Portsoy; 45½ north-west of Aberdeen; and 22 west of Fraserburgh. The road from Aberdeen approaches the town by a handsome bridge of 7 arches, which crosses the Deveron about 650 yards above its mouth, and about 2 miles below the bridge of Alvah; immediately below the fine policies of Duff house. During the great floods of 1829, these parks were laid under water to the depth of 14 feet, the whole of the lower streets in the town completely inundated, and the bridge itself in great danger of being swept away. The former bridge was swept away by a flood in 1768. Banff gives the title of Baron to the Ogilvie family.—We shall bring this article to a close with a few historical memoranda. In 1644, the lairds of Gight, Newton, and Ardlogie, with a party of 40 horse, and musketeers, all, in the language of Spalding, "brave gentlemen," made a raid upon the good town of Banff, and plundered it of buff-coats, pikes, swords, carabines, pistols, "yea, and money also," grievously americing the bailies, and compelling them to subscribe a renunciation of the Covenant. In 1645, Montrose, following the example so recently set him by his adherents, marched into Banff, plundered the same

"pitifully," carried off all goods and gear on which he could lay his hands, burnt some worthless houses, and left "no man on the street but was stripped naked to his skin!"—On the 7th of November, 1700, the famous James Macpherson, with some associates, was brought to trial before the sheriff of Banff, and being found guilty "by ane verdict of ane assyse, to be knaive, holden and repute, to be Egyptians and vagabonds, and oppressors of his majesty's free lieges in ane bangstrie manner," were condemned to be executed on Friday the 16th of the same month of November. The sentence was carried into execution against Macpherson only. He was a celebrated violin player, and, it is affirmed, performed at the foot of the gallows, on his favourite instrument, the rant which bears his name, besides reciting several rude stanzas by way of a last speech and confession.*—On the 10th of November, 1746, the duke of Cumberland's troops passed through Banff on their way to Culloden, and signalized themselves by destroying the Episcopal chapel, and hanging a poor countryman whom they suspected of being a spy. In 1759, a French vessel of war appearing off the coast threw the worthy burghers into no small consternation, and suggested the expediency of erecting a battery for the future protection of the harbour. The following curious comparative notices are from the Old Statistical account of Banff, [vol. xx. pp. 363—365.] drawn up by the Rev. Abercromby Gordon in 1798:—

1748.

A gown of linsey-woolsey was the usual dress of a laird's daughter,

Veil'd in a simple robe, her best attire,
Beyond the pomp of dress.—

THOMPSON.

Her mother, indeed—who was dignified with the knightly title of lady—appeared on great occasions in a silk gown, and fine laces, which were considered as part of the paraphernalia destined to the succeeding generation. Ladies seldom wore any other than coloured stockings. The town could only boast of one silken pair, and these were black. The occupation of milliner was totally unknown.

1748. A four-wheeled carriage was a luxury seldom enjoyed, unless by the nobility. A gentleman and his wife generally rode together on the same horse. Drawing-rooms and dining-parlours were no less rare than carriages. Mahogany was seldom seen, save in the tea-tray, the round folding table, and the corner cupboard.

1748. When wants were fewer, and easily supplied, most of the useful articles of merchandise might be procured in the same shop. The various designations of grocer, iron-monger, and haberdasher, were little known, and almost every trader, even although he did not traffic to foreign countries, was denominated merchant.

1798.

The decoration of our persons is now become a more general study among both sexes, and all ranks. In order to accommodate their dress to the capricious rules of fashion, there is a frequent, and some times a needless, recourse to the "foreign aid of ornament." The art millinery affords employment and profit to many; and every trading vessel from London brings a fresh assortment of dresses, adjusted to the prevailing mode.

1798. Post-chaises are now in general use. Several private gentlemen keep their carriages. The pad is become the exclusive property of the country good-wife. The minister of the parish must have his drawing-room. Mahogany is a species of timber in general use for articles of furniture; and the corner press is superseded by the splendid side-board.

1798. The several distinctions of tradesmen are better understood. As ministers to our luxury, we have in the same street an oil man, who advertises the sale of Quin sauce, Genoa capers, and Gorgona anchovies, &c.; a confectioner, whose bills contain the delectable names of nonpareils, ice-cream, and apricot jelly, &c.; and a perfumer, who deals in such rare articles, as Neapolitan cream for the face, Persian dentifrice for the teeth, and Asiatic balsam for the hair.

* The curious reader will find a full notice of this wild out-law, in Motherwell's Notes to 'Macpherson's Farewell,' in the 2d vol. of Burns' Works, p. 178; and some additional details in the New Statistical account of the parish of Banff.

1748. A joyous company, after dinner, have been seen quaffing the wine of a dozen bottles from a single glass.

1748. Agreeable to Queen Mary's act of parliament, A.D. 1563, all butcher-meat was carried to market *skin and birt*, and, agreeable to custom, was sold amidst abounding filth.

1748. The annual wages of a great man's butler was about £8; his valet, £5; and his other servants £3. The farmer had his ploughman for 13s. 4d. in the half-year, with the allowance of a pair shoes. The wages of a maid-servant, 6s. 8d.

1773. When Dr. Johnson honoured Banff with a visit, he was pleased to observe, that the natives were more frugal of their glass, (in windows,) than the English. They will often, says the Doctor, "in houses not otherwise mean, compose a square of two pieces, not joining like cracked glass, but with one edge laid perhaps half an inch over the other. Their windows do not move upon hinges, but are pushed up and drawn down in grooves. He that would have his window open, must hold it with his hand, unless—what may sometimes be found among good contrivers—there be a nail, which he may stick into a hole, to keep it from falling."

1798. A sober party sometimes meet, whose libation consists of a solitary bottle, with a dozen glasses.

1798. There are convenient slaughter-houses apart, and meat is brought to market seemly and in good order

1798. The nobleman pays at least in a quadruple ratio for his servants. The wages of a ploughman vary from £10 to £12, and of a maid-servant from £3 to £3 10s. per annum. [These wages were nearly the same in 1840.]

1798. Many of our windows are furnished with weights and pulleys. We think of the necessity of ventilating human habitations, where we may enjoy the luxury of fresh air, without resorting to the contrivance of a nail, and with very little assistance from the hand.

to bear some resemblance to an hour-glass. Making the proper deduction on this account, its surface is, according to Mr. Souter, 622 square miles, or 315,600 acres Scots computation. By another admeasurement its superficies is estimated at 647 square miles, or 412,800 English acres. The course of the Deveron, in general, is accounted the boundary of Banffshire with Aberdeenshire; yet the parish of Gamrie, on the shore, and part of the parish of Inverkeithnie, which is in the interior of the county, are on the Aberdeenshire side of that river; while the greater part of the parishes of Cairney, Glass, and Cabrach, politically in the county of Aberdeen, are on the Banffshire side. Kirkmichael, the most upland district of the county, is bounded by the mountains which rise on the southern sides of Glenbucket and Strathdon. Similar to the Deveron on the east, the river Spey may, with little impropriety, be deemed the general boundary on the west; although the county of Moray also extends in various places across that river into the parishes of Bellie, Keith, Boharm, and Inveraven. The principal rivers are the DEVERON, the SPEY, the AVEN, and the FIDDICH. See these articles. The principal lochs are LOCH AVEN and LOCH BULG: which also see. The great mountain-knot in the south-west corner of this county, at the point where the counties of Inverness, Banff, and Aberdeen meet, and composed of Cairngorm, Ben Buinac, Ben Macdhu, and Ben Aven, all surrounding Loch Aven, belongs to the Northern Grampians, and forms the highest land in Great Britain. Of these Ben Macdhu, on the south side of Loch Aven, in N. lat. 57° 6', and W. long. 3° 37', is in Aberdeenshire, and its altitude, according to a recent admeasurement, is 4,390 feet, being 17 feet higher than Ben Nevis. Cairngorm, which is common to Inverness-shire and Banffshire, has an elevation of 4,095 feet, and Ben Aven, common to Aberdeenshire and Banffshire, has an elevation of 3,967 feet. Among the detached summits of the Grampians which entirely belong to Banffshire, are,

Ben Rinnes, 15 miles S. W. by W. of Keith, 2,747 feet.
Corryhabbies, S. E. of Ben Rinnes, 2,558 —
Knock-hill, 12 miles S. W. of Banff, 2,500 —

This county along the coast has, from remote antiquity, been divided into two districts. Between the towns of Banff and Cullen, the Boyne is the general name borne by the district; the tract between Cullen and the environs of Gordon castle is distinguished by the appellation of the Enzie.* The parish of St. Fergus, part of Old Deer, half of Gartly, and the estate of Straloch in New Machar, appertain to the county of Banff, although in distant and unconnected quarters of Aberdeenshire. These detached pertinents, in what relates to civil justice, are, by a particular provision of the legislature, under the jurisdiction of the sheriff of Aberdeen.

"From the nature of the soil," says the first agricultural reporter, "as well as from its generally exposed situation, and the great height of many of the mountains, this district is often subjected to all the evils of a cold and rainy climate. The harvests, which are precarious and often interrupted, are rarely completed before the end of October. The crops, in the more upland parts of the county, are for the most part damaged by rains, which about that season often set in for weeks together, and are frequently succeeded, without any interval of good weather, by frosts and deep falls of snow, which often suspend the operations of husbandry for many of the winter-months." In the years 1782 and 1787 the harvest was scarcely completed in less than three months;

* Though the *z* has always maintained its place in the orthography of this word, it has in the pronunciation obtained the sound of *ng*.—Souter.

Comparative Statement of the Prices of Cattle, Sheep, Provisions, &c., at the above periods, and in 1840:—

1748.	1798.	1840.
A draught ox, £1	£15, £20, and £25.	£16 to £18.
13s. 4d.		
20 sheep, small size, £4	£12.	£16 to £20.
Beef and mutton, 1d. and 1½d a pound.	Beef and mutton, 5½d. and 6d. per lb.	6d. per lb.
A hen, together with a dozen eggs, 4d.	Hen, without eggs, 1s. and 1s. 3d.	1s.
Dozen eggs, 1d.	4d. and 6d.	6d. per doz.
Goose, 2s. a pair.	5s. 6d.	6s. per pair.
Turkey, 3s. ditto.	7s.	7s. per do.
Pigeons, three half-pence ditto.	6d.	6d.
14 Haddocks, three halfpence.	1s. 6d.	1s. 3d.
Claret sold at 1s. a bottle.	Claret sells in the tavern at 6s.	9s.

BANFFSHIRE, one of the north-east counties of Scotland; bounded on the north by the Moray frith or the German ocean; on the east and south by Aberdeenshire; and on the west by the shires of Inverness and Elgin. This county, according to Mr. Souter in his 'Agricultural Survey of Banffshire,' published in 1812—which we principally follow in this article—might be comprehended in an isosceles triangle, on a base of 30 miles along the coast from Troup-head, on the border of Aberdeenshire, to the influx of the Spey, on the confines of Moray; its height being 64 miles inland from the shore. Measured on the latest and most accurate maps, the distance in a direct line between the two extreme points on the coast, is 34 miles; and from Troup, in a direct line running south-west to Ben Macdhu, or to Cairngorm, both in the south-west corner of the county, at the head of Glen-Aven, 67 miles. At the average distance of 12 miles from the coast, however, it is contracted by the county of Aberdeen on the east, and by part of Moray on the west, in the parish of Keith, to a breadth of only 4 miles; so that, in its general form, it has been thought

and in some parts of the interior the crop lay uncut during the whole winter. It is, however, a curious fact, that in 1782 the parish of Rathven, in the Enzie, had the good fortune to escape the general calamity: scarcely had they ever a better crop, or more grain to spare.

The whole of Banffshire, except the tract along the sea-shore, may be described as a hilly mountainous country, interspersed with fertile valleys well adapted to the cultivation of corn and grass. The hills, either covered with heath or moss, afford little pasture; while, from their bleak and barren aspect, they have a very gloomy and unpleasant appearance. The arable land—which bears but a small proportion to the waste—lies on the sides and towards the bottoms of the higher hills, or on the sides of those valleys through which the waters have their courses. In several of these valleys, where cultivation has hitherto been found impracticable, there is abundance of fine healthy pasture, on which young cattle are raised to great advantage, the grounds being in general well-sheltered with natural woods. Taking a general view of the whole district, the arable soil may be described as of three qualities. That of the plains on the banks of the waters, where it has not been mixed with the sand by the washings of the streams, is a stiff deep clay; on the sides of the valleys it is a deep black loam on a bed of rock, generally limestone; on the sides of the hills, and in the higher parts of the country, where cultivation has taken place, the soil is either of the same quality as that last described, or a mixture of moss and gravel on a red tilly bottom, and—as may be supposed—very retentive of water. Along the whole coast, consisting of the parishes of Gamrie, Banff, Boyndie, Fordyce, Cullen, Rathven, and Bellie, the soil consists for the greater part of sand and loam, the latter by far the more predominant; and in general lies upon a freer bottom. The aggregate rental of the county, presuming that the average rent of the arable acre did not, on the whole, exceed £1, limited the number of arable acres, in 1811, to 80,000: thus leaving an amount of uncultivated surface equal to 236,000 acres. The quantity of arable land now, however, greatly exceeds that in 1811. It is probable that at least 120,000 acres are now under cultivation, and that not above 80,000 are incapable of cultivation.*

In a general view the county of Banff may be denominated a land of limestone, which, although it is not found in one continuous bed, over any extensive tract in the county, yet may be easily traced in almost every quarter of it. This fossil is extended through the district of Strathspey, where the counties of Inverness and Moray meet with Banff; and being also found in Badenoch, farther up the course of the Spey, may perhaps extend onwards even to the western shore. It may be also traced southwards through the higher district of the county of Aberdeen, in the adjoining parishes of Cabrach, Glenbucket, Auchindoir, and Tullynessle. At Portsoy it passes into marble, or serpentine, which composes almost entirely the hill of Durn. Marble is also found in the parishes of Keith and Mortlach. When first quarried at Portsoy it was exported to France, where, for some time, it became fashionable; but the market being overstocked, a ship-load of it long lay neglected on the banks of the Seine. It is still wrought into monuments, chimney-pieces, and toys. In the Enzie district the calcareous matter, probably

from a tinge of iron-ore, is in the form of stone marl, of a dark red colour. In the upper extremity of the county, in the parishes of Kirkmichael and Inveraven, there are extensive beds of pure white marl. In Kirkmichael it appears in a white cliff, 40 or 50 feet high, on the bank of the Aven. Except the red stone of the Enzie already mentioned, there is no free-stone in this county; but it is in general well furnished with stone for building. Slate is found near Letterfourie, in the parish of Rathven; near the Boat-of-Bridge, in the parish of Boharm; and in several other places. Flints have been found along the shore of Boyndie bay. "Some years ago," says Professor Jamieson, "while examining the geognosy of the vicinity of Peterhead, our attention was directed to the chalk-flints found in that neighbourhood, by previous information. We traced them extending over several miles of country, and frequently imbedded in a reddish clay, resting on the granite of the district. These flints contain sponges, alcyonia, echini, and other fossils of the chalk-flint, thus proving them to belong to the chalk formation, which itself will probably be found in some of the hollows in this part of Scotland." In the course of the Fiddich a laminated marble is found which may be formed into whetstones and hones. Scotch topazes, or what are commonly called Cairngorm stones, are found in the mountains in the southwestern extremity of Banffshire, bordering with those in Aberdeen and Inverness-shires; and also on several other adjoining mountains, in the forest of Mar. The stones are found near the top of these mountains.*

It does not appear, that previous to the year 1748, any material improvements in agriculture were introduced into this district. In those days the mode of management was the same here as was then universally practised over all the north of Scotland. The arable lands on every farm were divided into what was called *outfield* and *infield*. To the *infield*—which consisted of that part of the farm nearest to the farm-houses—the whole manure was regularly applied. The only crops cultivated on the *infield* land were oats, beer, and pease; the lands were kept under tillage as long as they would produce two or three returns of the seed sown; and when a field became so reduced and so full of weeds as not to yield this return, it was allowed to lie in natural pasture for a few years, after which, it was again brought under cultivation, and treated in the manner before-mentioned. The *outfield* lands were wasted by a succession of oats after oats as long as the crops would pay for seed and labour; they were

* By another, but evidently most erroneous admeasurement, Banffshire is represented as "containing 900 square miles, or 458,100 acres; of which the arable land in cultivation may be about 69,900; ditto in ley and summer fallow, 35,000; pasture, 40,000; plantations and natural woods, 15,000; hill, muir, and woss 248,200."—*Webster's Gazetteer*.

* "Till within these few years, they were considered of so trifling value as to be little sought after. The digging for them now affords employment for a considerable number of people, whose families, during the summer-months, reside day and night in these mountains; and as all the stones of any value that were to be found above ground, or near the surface, are long since picked up, they now dig to the depth of from one to four feet. In many places several acres are ransacked in quest of them. In some places they are found growing out of the rocks, where the access is so difficult that the searchers can only come at them suspended in ropes from the top of the mountains. Sometimes they dig for several days without finding any; but at other times find an ample recompense for that loss of labour, by finding them to the value of from £20 to £50, nay, sometimes to the value of £200 in one day. Last summer it was computed that not less than £2,000 worth had been found in these mountains. Some go as far as Edinburgh, and even London, to sell them; and lapidaries from these cities come to the country in summer for the purpose of purchasing, some of whom hire labourers to dig for them at the rate of from 5s. to 10s. per day. The stones are all hexagonal. One end is like a diamond; the other end is, or has been, fastened to the granite rock, from which they seem to have been disjoined by some convulsion in Nature; as some of them are found broken, the one half several yards distant from the other, and, what is more remarkable, three or four feet deeper in the rock, and corresponding so exactly that no doubt can be entertained of their having been united at some former period."—*Agricultural Report of 1812*.

then allowed to remain in a state of absolute sterility, producing little else than thistles and other weeds; till, after having rested in this state for some years, the farmer thought proper to bring them again under cultivation, when, from the mode of management before described, a few scanty crops were obtained. About this time, it was a common practice for the farmers to lime their outfield-ground substantially after this kind of rest, and then to crop it as long as it would bear, oats after oats, without any intermission. Only oxen ploughs were used; and when the seed-time was over, the cattle were either sold to dealers, or sent to the high lands, where they were grazed for three or four months at the rate of 1s. or 1s. 6d. each. During this period the plough was laid aside, and the farm-servants and horses were employed in providing the necessary stock of fuel, and collecting earth to be mixed with the dung produced by the cattle during the preceding winter. About the year 1754, the earl of Findlater, then Lord Deskford, came to reside in the neighbourhood of Banff; and having taken one of his farms into his own possession, set about cultivating it in the most approved manner then known in England; and, for that purpose, engaged three experienced overseers from that kingdom. His lordship also selected some of the most intelligent, active, and substantial tenants in the country, to whom he granted leases on reasonable terms, for two nineteen years, and a lifetime, of farms formerly occupied by three or four tenants. By these leases each tenant became bound to enclose and subdivide a certain portion of his farm with stone-fences, or ditch and hedge, during the first nineteen years of the lease, and, in the course of the second nineteen years, to enclose the remainder. They were also bound to summer fallow and sow grass-seeds on a certain number of acres within the first five years of the lease. His lordship was also the first that introduced the turnip-husbandry, and by his example, as well as precept, during his frequent excursions among his tenants, was the means of bringing the cultivation of that crop, as well as other green crops, by degrees, into general practice. Agriculture is now conducted on the best principles in Banffshire. A regular rotation of cropping is followed; wheat is extensively grown in the lower districts; and the cattle and stock are of the most approved breeds. The average rent of land is 22s. per acre. In 1667, the rent-roll of the county of Banff amounted to £80,468 of Scots currency, equal to £6,705 13s. 4d. sterling. This amount, upon the average, is now apparently increased about twenty-fold. The value of real property in this county, as assessed in 1815, was £88,942; the present rental is about £120,000. The ancient rent-roll, called 'the valued rent,' was, in 1811, shared among 39 proprietors, in the following proportions:

3 of whom possess from £17,989 2s. 6d. to £11,565 13s. 4d., amounting to		
Which amount may be at present estimated about	£46,159 13 1	
5 possess from £3,699 17s. 10d. to £2,163 4s. 2d. amounting to	13,800 16 8	
Which amount may be at present estimated about	14,000	
10 possess from £1,700 to £1,060, amounting to	13,544 8 4	
Which amount may be at present estimated about	13,400	
14 possess from £800 to £200, amounting to	6,277 17 1	
Which amount may be at present estimated about	6,200	
7 possess from £140 to £61 4s. 6d., amounting to	685 5 9	
Which amount may be at present estimated about	700	
39	£80,460	£80,468 0 11

The lowest denomination of land in Banffshire is

the fall, consisting of 36 square yards. Previous to the late equalization of weights and measures, the firloft contained 31 pints, each 6 per cent above the standard. A quarter of grain by the Banffshire old wheat-firloft is nearly 3 pecks more than a quarter by the Winchester bushel. The boll of barley was 17 stones, or 17½ stones; and of potatoes, 36 stones. The potato-peck was 32 lbs. Four gills, or two English pints, make a Banffshire choppin; and two Banffshire pints are about one-tenth part less than an English gallon. Wool was sold in market by the Banffshire pound, which was eight ounces more than the English pound. Butter, cheese, and hay, were also sold by the same pound weight of 24 ounces; but meal and butcher's meat were sold by a pound which was only one and a half ounce more than the English pound. In the higher part of the district, about Keith, a stone of wool was two pounds more than about the town of Banff and along the coast.

The principal productions of this county are cattle, corn, and fish. The cattle are bought up by the dealers, from the 1st of May to the end of November, and sent off in droves to the southern districts. The corn and fish are exported by sea. There were 55,000 quarters of grain exported for the London market from this county in 1831. There are in this county ten fishing-towns, which employ from 100 to 120 boats. The fish which visit the shores are cod, ling, haddock, skate, whittings, hollybut, dog-fish, and occasionally turbot and mackerel. The herrings caught on this coast, in 1826, produced about £100,000. The salmon-fishery on the Spey, for the distance of 8 miles from the mouth of the river, has been acquired by the family of Gordon; and as the fishing-quarters are now established on the Banffshire side of the river, the whole of the duke of Gordon's salmon-fishery, now let at the yearly rent of £8,000, may be stated as among the produce of this county. The salmon-fishing on the Deveron, of which the earl of Fife is the principal proprietor, his right extending from the sea about 3½ miles up the river, is now let at a yearly rent of about £2,000 sterling. There are from 160 to 190 men usually employed by the tacksmen of these fishings in the different departments of the work. The staple manufactures of this county are those of linen-yarn and linen-cloth, which at one time were carried on to a very considerable extent at Banff, Cullen, Keith, and Portsoy, and gave employment to a great number of men and women in the different operations of heckling, spinning, weaving, and bleaching. There were likewise at Banff and Portsoy very extensive manufactures of stocking-threads, which were chiefly sent to Nottingham and Leicester. There are several tan-works and some extensive distilleries in the county. The principal proprietors are the duke of Gordon, the earl of Seafield, and the earl of Fife. The population, in 1755, was 37,574; in 1801, 35,807; and in 1831, 48,604. The number of families, in 1831, was 10,855; of inhabited houses, 9,814. Of families engaged in agriculture, 4,264; of families engaged in trade, manufactures, handicraft, 2,456. The number of hands employed in retail trade, or in handicraft, in 1831, was 2,643; of whom 401 were shoemakers; 391 carpenters; 320 masons; 197 blacksmiths; 181 tailors; and 131 coopers. The parliamentary constituency, in 1839, was 717.—Banff is the county-town; small debt courts, under the new act, are held at Keith, Cullen, and Dufftown.—There are 24 parishes in Banffshire. The number of parochial schools, in 1834, was 25, under 29 instructors, and attended by 1,774 pupils. The number of schools not parochial was 125, under 131 instructors, and attended by 3,913 children. James

Dick, Esq. of London, at his death in 1827, bequeathed £130,000 to the parochial schoolmasters in the counties of Banff, Elgin, and Aberdeen. The interest of this fund, it is expected, will afford an average of £25 per annum to all the members of this most useful body in these three counties.

BANGOUR, an estate in the parish of Uphall, in Linlithgowshire, which has been for many generations the residence of the Hamiltons of that ilk, one of whom, William, second son of James Hamilton of Bangour, holds an honourable name in Scottish song. He was born in 1704. He engaged in the Rebellion of 1745, and celebrated the victory won by Charles's arms on the 21st September, 1745, by an 'Ode on the Battle of Gladsmuir.' After the defeat at Culloden, he escaped to France; but he was enabled, in 1749, to make his peace with government, and return to his native country. He again went abroad on account of his health, and died at Lyons, in 1754. His poems were collected and published in 1748, and again in 1760. They are inserted in the 9th vol. of Anderson's 'British Poets,' and in the 15th of Chalmers's 'English Poets.' An accurate list of all his pieces, published and unpublished, with an engraving from an original portrait, is inserted in the 3d vol. of the 'Archæologia Scotica,' pp. 255—266. His finest effusion is the exquisite ballad, 'The Braes of Yarrow,' founded on an ancient ballad called 'The Dowie dens of Yarrow,' and commencing,—

"Busk ye, busk ye, my bonny bonny bride!
Busk ye, busk ye, my winsome marrow!
Busk ye, busk ye, my bonnie, bonnie bride,
And think nae mair of the Braes of Yarrow!

Where gat ye that bonnie, bonnie bride?
Where gat ye that winsome marrow?
I gat her where I daurna weil be seen,
Puing the birks on the Braes of Yarrow."

This ballad first appeared in the 'Orpheus Caledonius,' in 1725.

BANKTON, the seat of the gallant Colonel Gardiner, who fell at the battle of Prestonpans—or Gladsmuir, as it is sometimes called—in 1745, in the parish of Prestonpans, and shire of Haddington, 1 mile north-west of Tranent. It was afterwards the seat of Andrew Macdowall, Esq., advocate, who, on his promotion to the bench, took the title of Lord Bankton from it.

BANNOCKBURN, a village in the parish of St. Ninian's, in Stirlingshire, on the road from Stirling to Falkirk, 2 miles south-east of Stirling, and 9 north-west of Falkirk, between St. Ninian's and Torwood. It is intersected by the Bannock, which divides it into two parts, known as Upper and Lower Bannockburn, of which that on the eastern side of the stream is the larger. It is an industrious, thriving village. The inhabitants are chiefly employed in the woollen manufacture, especially in that of tartans. The Bannock rises in Loch Coulter, on the south side of the Gillies hill, and flows in a winding course, between steep and rugged banks, eastwards to Milton, passing to the south of Greysteel farmhouse, where the bank has a steep southern declivity, and to the south of Caldum-hill, between which eminence and the town are two morasses, one on each side of the old Kilsyth road. At Milton, or Milntown, on the road from St. Ninian's to Glasgow, the Bannock turns towards the north-east, winding in that direction, through a deep and rugged valley, to the village of Bannockburn, and, after a course of a few miles, falls into the Forth at a place called Manor, opposite Black Grange.

The famous and decisive battle of Bannockburn was fought in the neighbourhood of this village, on Monday, June 24th, 1314. The Scottish army under The Bruce, and mustering 30,000 disciplined men,

and about half that number of disorderly attendants, first rendezvoused at the Torwood, between Falkirk and Stirling. The English army, commanded by Edward II. in person, and reported to have been in the proportion of at least three to one to that of the Scotch, approached from the side of Falkirk, and encamped on the north of Torwood. The Scottish army, meanwhile, drew nearer Stirling, and posted themselves behind the Bannock. They occupied several small eminences upon the south and west of the present village of St. Ninian's; their line extending in a north-easterly direction from the brook of Bannock, on which their right flank rested, to the elevated ground above St. Ninian's, on which their extreme left rested. Upon the summit of one of these eminences, now called Brock's brae, is a large granite stone sunk in the earth, with a round hole, about four inches in diameter, and the same in depth, in which, according to tradition, Bruce's standard was fixed, and near it the royal pavilion was erected. This stone is well known in the neighbourhood by the name of the Bored stone. Thus the two armies lay facing each other, at a mile's distance, with the Bannock running in a narrow valley between them. Stirling castle was still in the hands of the English. Edward Bruce had, in the preceding spring, besieged it for several months; but, finding himself unable to reduce it, had abandoned the enterprise. By a treaty, however, between Edward and Philip Moubray the governor, it had been agreed, that, if the garrison received no relief from England before St. John the Baptist's day, they should then surrender to the Scots. Robert was much dissatisfied with his brother's terms; but, to save his honour, confirmed the treaty. The day before the battle, a body of cavalry, to the number of 800, was detached from the English camp, under the conduct of Sir Robert Clifford, to the relief of the castle. These, having marched through low grounds upon the edge of the carse, had passed the Scottish army on their left before they were observed. The King himself was among the first to perceive them; and, desiring his nephew, Randolph, who commanded the left wing, to turn his eyes towards the quarter where they were making their appearance, in the crofts north of St. Ninian's, said to him, angrily, "Thoughtless man! you have suffered the enemy to pass. A rose has this day fallen from your chaplet!" Randolph, feeling the reproach severely, instantly pursued them with 500 foot; and, coming up with them in the plain, where the modern village of Newhouse stands, commenced a sharp action in sight of both armies, and of the castle. Clifford's squadron wheeling round, and placing their spears in rest, charged the Scots at full speed; but Randolph having formed his infantry into a square with their spears protended on every side, and resting on the ground, successfully repelled the first fierce onset, and successive charges equally desperate. Much valour was displayed on both sides; and it was for some time doubtful who should obtain the victory. Bruce, attended by several of his officers, beheld this encounter from a rising ground supposed to be the round hill immediately west of St. Ninian's, now called Cockshot hill. Douglas, perceiving the jeopardy of his brave friend, asked leave to hasten with a reinforcement to his support. This the king at first refused; but, upon his afterwards consenting, Douglas put his soldiers in motion. Perceiving, however, on the way, that Randolph was on the point of victory, he stopped short, that they who had long fought so hard might enjoy undivided glory. The English were entirely defeated with great slaughter. Among the slain was William Daynecourt, a knight and commander of great renown, who had fallen in the beginning of the action. The loss of the Scots was very

inconsiderable; some assert that it amounted only to a single yeoman. Randolph and his company, covered with dust and glory, returned to the camp, amidst acclamations of joy. To perpetuate the memory of the victory, two large stones were erected in the field—where they are still to be seen—at the north end of the village of Newhouse, about a quarter of a mile from the south port of Stirling. Another incident happened, in the same day, which contributed greatly to inspirit the Scots forces. King Robert, according to Barbour, was ill mounted, carrying a battle-axe, and, on his bassinet-helmet, wearing, for distinction, a crown. Thus externally distinguished, he was riding upon a little palfrey, in front of his foremost line, regulating their order; when an English knight, who was ranked amongst the bravest in Edward's army, Sir Henry de Bohun, came galloping furiously up to him, to engage him in single combat; expecting, by this act of chivalry, to end the contest, and gain immortal fame. But the enterprising champion, having missed his blow, was instantly struck dead by the king, who raising himself in his stirrups, as his assailant passed, with one blow of his battle-axe cleft his head in two, shivering the handle of his own weapon with the violence of the blow. The Scottish chiefs remonstrated with their king for having so rashly exposed his precious life. He felt the justice of their censures at so critical a juncture, but playfully evaded further confession by affecting to be chiefly concerned for the loss of his good battle-axe. The incident is thus recorded by Barbour:—

“ And quhen Glosyster and Herfurd war
With thair bataill, approachand ner,
Befor thaim all thar come rydand,
With helm on heid, and sper in hand
Schyr Henry the Boune, the worthi,
That was a wycht knycht, and a hardy;
And to the Erie off Herfurd cussye;
Armty in armys gud and fyne;
Come on a sted, a bow schote ner,
Befor all othyr that thar wer:
And knewe the King, for that he saw
Him swa rang his men on raw;
And by the crowne, that was set
Alsua upon his bassyneet.
And toward him he went in hy.
And [quhen] the King swa spertly
Saw him cum, forouth all his feris,
In hy til him the hors he steris.
And quhen Schyr Henry saw the King
Cum on, for owty n abaying,
Till him he raid in full gret hy.
He thought that he said weill lychtly
Wyn him, and haf him at his will,
Sen he him horsyt saw sa ill.
Sprent thair samyn in till a ling.
Schyr Henry myssit the noble king.
And he, that in his sterapys stod,
With the ax that was hard and gud,
With sa gret mayne raucht him a dynt,
That nothyr hat, na helm, mycht stynt
The hewy dusche that he him gawe,
That ner he heid till the harnys cleave.
The hand ax schaft fruschit in twa;
And he doune to the erd gan ga
All flatlyns, for him faillyt mycht.
This wes the fryst strak off the fycht.”

The heroic achievement performed by their king before their eyes, raised the spirits of the Scots to the highest pitch.

The day was now far spent, and as Edward did not seem inclined to press a general engagement, but had drawn off to the low grounds to the right and rear of his original position, the Scots army passed the night in arms upon the field. Next morning, being Monday, the 24th of June, all was early in motion on both sides. Religious sentiments in the Scots were mingled with military ardour. A solemn mass was pronounced by Maurice, abbot of Inchaffray; who also administered the sacrament to the king, and the great officers about him, while inferior priests did the same to the rest of the army. Then, after a sober repast,

they formed in order of battle, in a tract of ground, now called Nether Touchadam, which lies along the declivity of a gently rising hill, about a mile due south from Stirling castle. This situation had been previously chosen on account of its advantages. Upon the right, they had a range of steep rocks, whither the baggage-men had retired, and which, from this circumstance, has been called Gillie's or Servant's hill. In their front were the steep banks of the rivulet of Bannock. Upon the left lay a morass, now called Milton bog, from its vicinity to the small village of that name. Much of this bog is still undrained; and part of it is now a mill-pond. As it was then the middle of summer, it was almost quite dry; but Robert had recourse to a stratagem, to prevent any attack from that quarter. He had, some time before, ordered number of pits to be dug in the morass and the fields on the left, and covered with green turf supported by stakes, so as to exhibit the appearance of firm ground. These pits were a foot in breadth, and from two to three feet deep, and placed so close together as to resemble the cells in a honeycomb. It does not appear, however, that the English attempted to charge over this dangerous ground during the conflict, the great struggle being made considerably to the right of this ground. He also made calthrops be scattered there; some of which have been found in the memory of people yet alive. By these means, added to the natural strength of the ground, the Scottish army stood as within an intrenchment. Barbour, who lived near those times, mentions a park with trees, through which the English had to pass, before they could attack the Scots; and says, that Robert chose this situation, that, besides other advantages, the trees might prove an impediment to the enemy's cavalry. The improvements of agriculture, and other accidents, have, in the lapse of four hundred years, much altered the face of this, as well as other parts of the country: vestiges, however, of this park still remain, and numerous stumps of trees are seen all around the field where the battle was fought. A farm-house, situated almost in the middle, goes by the name of the Park; and a mill built upon the south bank of the rivulet, nearly opposite to where the centre of Robert's army stood, is known by the name of Park-mill. The Scottish army was drawn up in four divisions, and their front extended near a mile in length. The right wing, which was upon the highest ground, and was strengthened by a body of cavalry under Keith, Marschal of Scotland, was commanded by Edward Bruce, the king's brother. The left was posted on the low grounds, near the morass, under the direction of Walter, Lord-High-Steward, and Sir James Douglas, both of whom had that morning been knighted by their sovereign. Bruce himself took the command of the reserve, which was drawn up immediately behind the centre. Along with him was a body of 500 cavalry well-armed and mounted; all the rest of the Scottish army were on foot. The enemy were fast approaching in three great bodies, led on by the English monarch in person, and by the earls of Hereford and Gloucester, who were ranked among the best generals that England could then produce. Their centre was formed of infantry, and the wings of cavalry, many of whom were armed cap-a-pee. Squadrons of archers were also planted upon the wings, and at certain distances along the front. Edward was attended by two knights, Sir Giles de Argentine, and Sir Aymer de Vallance, who rode, according to the phrase of these days, at his bridle. That monarch, who had imagined that the Scots would never face his formidable host, was much astonished when he beheld their order and determined resolution to give him battle. As he expressed his surprise, Sir Ingram Umfraville took

the opportunity of suggesting a plan likely to insure a cheap and bloodless victory. He counselled him to make a feint of retreating with the whole army, till they had got behind their tents; and, as this would tempt the Scots from their ranks for the sake of plunder, to turn about suddenly, and fall upon them. The counsel was rejected. Edward thought there was no need of stratagem to defeat so small a handful. Among the other occurrences of this memorable day, historians mention an incident. As the two armies were on the point of engaging, the abbot of Inchaffray, barefooted, and with a crucifix in his hand, walked slowly along the Scottish line; when they all fell down upon their knees in the act of devotion. The enemy, observing them in so uncommon a posture, concluded that they were frightened into submission, and that, by kneeling, when they should have been ready to fight, they meant to surrender at discretion, and only begged their lives. "See!" cried Edward, "they are kneeling; they crave mercy!" "They do, my liege," replied Umfraville; "but it is from God, not from us." "To the charge, then!" replied Edward; and Gloucester and Hereford threw themselves impetuously upon the right wing of the Scots, which received them firmly; while Randolph pressed forward with the centre division of the Scotch army upon the main body of the English. They rushed furiously upon the enemy, and met with a warm reception. The ardour of one of the Scottish divisions had carried them too far, and occasioned their being sorely galled by a body of 10,000 English archers who attacked them in flank. These, however, were soon dispersed by Sir Robert Keith, whom the king had despatched with the reserve of 500 horse, and who, fetching a circuit round Milton bog, suddenly charged the left flank and rear of the English bowmen, who having no weapons fit to defend themselves against horse, were instantly thrown into disorder, and chased from the field:—

"The Inglis archeris schot sa fast,
That mycht thair schot haff ony last,
It had been hard to Scottis men.
Bot King Robert, that wele gan ken
That thair archeris war peralious,
And thair schot rycht hard and grewous,
Ordanyt, forouth the assemblee,
Hys marschell with a gret menyne,
Fyve hundre armyt in to stele,
That on lycht hors war horsyt welle,
For to pryk among the archeris;
And swa assaile thaim with thair speris,
That thair na layser haff to schute.
This marschell that Ik of mure,
That Schyr Robert of Keyth was could,
As Ik befor her has yow tauld,
Quhen he saw the bataillis sua
Assembill, and to gadder ga,
And saw the archeris schoyt stoutly;
With all thaim off his company,
In hy apon thaim gan he rid;
And our tuk thaim at a sid;
And ruschynt among thaim sa rudly,
Stekand thaim sa dispitously,
And in sic fusoun berand down,
And slayand thaim, for owtyr ransoun;
That thair thaim scalyt euirikane,
And fra that tyme furth thair was nane
That assemblyt schot to ma.
Quhen Scottis archeris saw that thair sua
War reboty, thair woux hardy,
And with all thair mycht schot egrely
Among the hors men, that thair raid;
And woundis wid to thaim thair maid;
And slew of thaim a full gret dele."

Barbour's Bruce, Book ix., v. 228.

A strong body of the enemy's cavalry charged the right wing, which Edward Bruce commanded, with such irresistible fury, that he had been quite overpowered, had not Randolph, who appears to have been then unemployed, hastened to his assistance. The battle was now at the hottest; and it was yet uncertain how the day should go. Bruce had brought up

his whole reserve; but the English continued to charge with unabated vigour, while the Scots received them with an inflexible intrepidity; each individual fighting as if victory depended on his single arm. An occurrence—which some represent as an accidental sally of patriotic enthusiasm, others as a premeditated stratagem of Robert's—suddenly altered the face of affairs, and contributed greatly to victory. Above 15,000 servants and attendants of the Scottish army, had been ordered, before the battle, to retire, with the baggage, behind the adjoining hill; but having, during the engagement, arranged themselves in a martial form, some on foot, and others mounted on the baggage-horses, they marched to the top, and displaying, on long poles, white sheets instead of banners, descended towards the field with hideous shouts. The English, taking them for a fresh reinforcement of the foe, were seized with so great a panic that they gave way in much confusion. Buchanan says, that the English king was the first that fled; but in this contradicts all other historians, who affirm, that Edward was among the last in the field. Nay, according to some accounts, he would not be persuaded to retire, till Aymer de Vallance, seeing the day lost, took hold of his bridle, and led him off. Sir Giles de Argentine, the other knight who waited on Edward, accompanied him a short way off the field, till he saw him placed in safety; he then wheeled round, and putting himself at the head of a battalion made a vigorous effort to retrieve the disastrous state of affairs, but was soon overwhelmed and slain. He was a champion of high renown; and, having signalized himself in several battles with the Saracens, was reckoned the third knight of his day. The Scots pursued, and made great havoc among the enemy, especially in passing the river, where, from the irregularity of the ground, they could not preserve the smallest order. A mile from the field of battle, a small bit of ground goes by the name of Bloody fold; where, according to tradition, a party of the English faced about and made a stand, but, after sustaining a dreadful slaughter, were forced to continue their flight. This account corresponds to several histories of the Earl of Gloucester. Seeing the rout of his countrymen, he made an effort to renew the battle, at the head of his military tenants, and, after having personally done much execution, was, with most of his party, cut to pieces. The Scottish writers make the enemy's loss, in the battle and pursuit, 50,000, and their own 4,000. Among the latter, Sir William Vipont and Sir Walter Ross were the only persons of distinction. A proportion almost incredible. The slain on the English side were all decently interred by Bruce's order; who, even in the heat of victory, could not refrain from shedding tears over several who had been his intimate friends. The corpse of the Earl of Gloucester was carried that night to the church of St. Ninians, where it lay, till, together with that of the Sir Robert Clifford, it was sent to the English monarch. Twenty-seven English barons, two hundred knights, and seven hundred esquires, fell in the field; the number of prisoners also was very great; and amongst them were many of high rank, who were treated with the utmost civility. The remains of the vanquished were scattered all over the country. Many ran to the castle; and not a few, attempting the Forth, were drowned. The Earl of Hereford, the surviving general, retreated with a large body towards Bothwell, and threw himself, with a few of the chief officers, into that castle, which was then garrisoned by the English. Being hard pressed, he surrendered; and was soon exchanged against Bruce's queen and daughter, and some others of his friends, who had been captive eight years in England. King

Edward escaped with much difficulty. Retreating from the field of battle, he rode to the castle; but was told by the governor, that he could not long enjoy safety there, as it could not be defended against the victors. Taking a compass to shun the vigilance of the Scots, he made the best of his way homeward, accompanied by fifteen noblemen, and a body of 500 cavalry. He was closely pursued above forty miles by Sir James Douglas, who, with a party of light horse, kept upon his rear, and was often very near him. How hard he was put to, may be guessed from a vow which he made in his flight, to build and endow a religious house in Oxford, should it please God to favour his escape. He was on the point of being made prisoner, when he was received into the castle of Dunbar by Gossip, Earl of March, who was in the English interest. Douglas waited a few days in the neighbourhood, in expectation of his attempting to go home by land. He escaped, however, by sea, in a fisherman's boat. His stay at Dunbar had been very short. Three days after the battle, he issued a proclamation from Berwick, announcing the loss of his seal, and forbidding all persons to obey any order proceeding from it, without some other evidence of that order's being his. "The riches obtained by the plunder of the English," says Mr. Tytler, "and the subsequent ransom paid for the multitude of the prisoners, must have been very great. Their exact amount cannot be easily estimated, but some idea of its greatness may be formed by the tone of deep lamentation assumed by the Monk of Malmesbury. 'O day of vengeance and of misfortune!' says he, 'day of disgrace and perdition! unworthy to be included in the circle of the year, which tarnished the fame of England, and enriched the Scots with the plunder of the precious stuffs of our nation, to the extent of two hundred thousand pounds. Alas! of how many noble barons, and accomplished knights, and high-spirited young soldiers,—of what a store of excellent arms, and golden vessels, and costly vestments, did one short and miserable day deprive us!' Two hundred thousand pounds of money in those times, amounts to about six hundred thousand pounds weight of silver, or nearly three millions of our present money. The loss of the Scots in the battle was incredibly small, and proves how effectually the Scottish squares had repelled the English cavalry."

BANTON, a hamlet in the parish of Kilsyth, Stirlingshire; $1\frac{1}{2}$ mile north-east of Kilsyth. There is a parochial school here, the master of which has a salary of £12 6s. 3d., with £31 school-fees, and a house.

BARDOWIE LOCH. See **BALDERNOCK**.

BARGARRAN, a village in the parish of Erskine in Renfrewshire, in which the manufacture of fine thread was first established. In the old Statistical account it is stated that "one of the last trials for witchcraft which happened in Scotland, had its origin in this parish in 1696-7. The person supposed to have been bewitched or tormented by the agency of evil spirits, or of those who were in compact with them, was Christian Shaw, daughter of John Shaw of Bargarran, then about eleven years of age. A short account of this trial may be seen in Arnot's 'Collection of Criminal Trials.' Three men and four women were condemned to death, as guilty of the crime of witchcraft, and were executed at Paisley. This may furnish ample matter of speculation to those whose object it is to trace the progress and variation of manners and opinions among men. The subsequent history of this lady is, however, more

interesting to the political inquirer. Having acquired a remarkable dexterity in spinning fine yarn, she conceived the idea of manufacturing it into thread. Her first attempts in this way were necessarily on a small scale. She executed almost every part of the process with her own hands, and bleached her materials on a large slate placed in one of the windows of the house. She succeeded, however, so well in these essays as to have sufficient encouragement to go on, and to take the assistance of her younger sisters and neighbours. The then Lady Blantyre carried a parcel of her thread to Bath, and disposed of it advantageously to some manufacturers of lace, and this was probably the first thread made in Scotland that had crossed the Tweed. About this time a person who was connected with the family happening to be in Holland, found means to learn the secrets of the thread manufacture, which was then carried on to great extent in that country, particularly the art of sorting or numbering the threads of different sizes, and packing them up for sale, and the construction and management of the twisting and twining machine. This knowledge he communicated on his return to his friends in Bargarran, and by means of it they were enabled to conduct their manufacture with more regularity, and to a greater extent. The young women in the neighbourhood were taught to spin fine yarn, twining mills were erected, correspondences were established, and a profitable business was carried on. Bargarran thread became extensively known, and, being ascertained by a stamp, bore a good price. From the instructions of the family of Bargarran, a few families in the neighbourhood engaged in the same business, and continued it for a number of years. It was not to be expected, however, that a manufacture of that kind could be confined to so small a district, or would be allowed to remain in so few hands for a great length of time. The secrets of the business were gradually divulged by apprentices and assistants. Traders in Paisley availed themselves of these communications, and laid the foundation of the well-established and extensive manufacture of thread, which has ever since been carried on in that town."

BARNBOUGLE CASTLE, an ancient seat of the Moubays, in the parish of Dalmeny, Linlithgowshire. In 1620, it passed, by sale, from the Moubays; and it is now the property of the Earl of Roseberry. Its site is close on the frith of Forth; and the sea has, in its encroachments here, completely washed away the lawn before it, so that it was long since found necessary to erect a bulwark for the safety of the castle.

BARNS (EAST), a village in the parish of Dunbar, Haddingtonshire; on the great line of road from Berwick to Edinburgh, and $2\frac{1}{2}$ miles east of Dunbar. An Antiburgher congregation which used to assemble here, removed their place of meeting to Dunbar in 1820. There is a parochial school here, endowed with the interest of £150.

BARNS (WEST), a village in the same parish, and on the same line of road, 2 miles west of Dunbar; on a small stream called the Biel, which here flows into Belhaven bay.

BARNS OF AYR, an encampment, or military building, held by the English forces in the reign of Edward I., on the south-east side of the town of Ayr, celebrated in history for the fearful revenge which Wallace executed upon the garrison then in possession of the place, for the treacherous seizure and putting to death of Sir Reginald Crawford, Sir Bryce Blair, and Sir Hugh Montgomerie. Dr. Jamieson, in his notes to 'Wallace,' says: "The story of the destruction of these buildings, and of the immediate reason of it, is supported by the universal tradition

of the country to this day; and local tradition is often entitled to more regard than is given to it by the fastidiousness of the learned. Whatever allowances it may be necessary to make for subsequent exaggeration, it is not easily conceivable, that an event should be connected with a particular spot, during a succession of ages, without some foundation. Sir D. Dalrymple deems this story 'inconsistent with probability.' He objects to it, because it is said, 'that Wallace, accompanied by Sir John Graham, Sir John Menteith, and Alexander Scrymgeour, constable of Dundee, went into the west of Scotland, to chastise the men of Galloway, who had espoused the part of the Comyns, and of the English; and that, 'on the 28th August, 1298, they set fire to some granaries in the neighbourhood of Ayr, and burned the English cantoned in them.'—Annals, I. 255, N. Here he refers to the relations of Arnold Blair and to Major, and produces three objections to the narrative. One of these is, that 'Comyn, the younger of Badenoch, was the only man of the name of Comyn who had any interest in Galloway; and he was at that time of Wallace's party.' The other two are; that 'Sir John Graham could have no share in the enterprise, for he was killed at Falkirk, 22d July, 1298;' and that 'it is not probable that Wallace would have undertaken such an enterprise immediately after the discomfiture at Falkirk.' Although it had been said by mistake, that Graham and Comyn were present, this could not invalidate the whole relation, for we often find that leading facts are faithfully narrated in a history, when there are considerable mistakes as to the persons said to have been engaged. But although our annalist refers both to Major and Blair, it is the latter only who mentions either the design of the visit paid to the west of Scotland, or the persons who are said to have been associates in it. The whole of Sir David's reasoning rests on the correctness of a date, and of one given only in the meagre remains ascribed to Arnold Blair. If his date be accurate, the transaction at Ayr, whatever it was, must have taken place thirty-seven days afterwards. Had the learned writer exercised his usual acumen here—had he not been resolved to throw discredit on this part of the history of Wallace—it would have been most natural for him to have supposed, that this event was post-dated by Blair. It seems, indeed, to have been long before the battle of Falkirk. Blind Harry narrates the former in his Seventh, the latter in his Eleventh Book. Sir David himself, after pushing the argument from the date given by Blair as far as possible, virtually gives it up, and makes the acknowledgment which he ought to have made before. 'I believe,' he says, 'that this story took its rise from the pillaging of the English quarters, about the time of the treaty of Irvine, in 1297, which, as being an incident of little consequence, I omitted in the course of this history.' Here he refers to Hemingford, T. I. p. 123. 'Hemingford says, that 'many of the Scots and men of Galloway had, in a hostile manner, made prey of their stores, having slain more than five hundred men, with women and children.' Whether he means to say that this took place at Ayr, or at Irvine, seems doubtful. But here, I think, we have the nucleus of the story. The barns, according to the diction of Blind Harry, seem to have been merely 'the English quarters,' erected by order of Edward for the accommodation of his troops. Although denominated barns by the Minstrel, and horrea by Arnold Blair, both writers seem to have used these terms with great latitude, as equivalent to what are now called barracks. It is rather surprising, that our learned annalist should view the loss of upwards of five hundred men, besides women and children, with that

of their property, 'as an incident of little consequence,' in a great national struggle. Major gives nearly the same account as Blair. Speaking of Wallace, he says, 'Anglorum insignes viros apud horrea Aerie residentes de nocte incendit, et qui a voraci flamma evaserunt ejus mucrone occubuerunt.'—Fol. lxx. There is also far more unquestionable evidence as to the cause of this severe retaliation, than is generally supposed. Lord Hailes has still quoted Barbour as an historian of undoubted veracity. Speaking of Crystal of Seton, he says—

It was gret sorow sekirly,
That so worthy personne as he
Suld so sic maner hangy be.
Thysgate endyt his worthyness.
And off Crauford als Schyr Ranald wes,
And Schyr Bryce als the Bar,
Hangyt in till a berne in Ar.'

The Bruce, III. 260 v. &c.

This tallies very well with the account given by the Minstrel.

'Four thousand hall that nycht was in till Ayr.
In gret bernys, biggyt with out the town,
The justice lay, with mony bald barroun.'

Wallace, vii. 334."

Miss Baillie has made good use of this incident in the life of Wallace, in her 'Metrical Legend.'

BARNYARDS. See KILLCONQUHAR.

BARONY PARISH. See GLASGOW.

BARR, a very large parish in the district of Carrick in Ayrshire; bounded on the north by Dailly parish; on the east by Straiten; on the south by Kirkcudbrightshire and the parish of Colmonell; and on the west by Colmonell and Girvan parishes, which interpose between it and the Irish channel. Its superficies is estimated by Aiton at 50,000 Scots acres, being 1,000 acres more than that of Ballantrae, which is the second parish in Ayrshire in point of extent. In the new Statistical account, published in 1837, its area is stated to be about 100 square miles, or 64,000 imperial acres. It is a rude moorland district, of which not above a fiftieth part is under cultivation, and not as much more cultivable. The Ardstinchar rises in it and flows through it from north-east to south-west between two high ranges of hills. The principal lines of road which intersect it are the old and new roads to Ayr; the former running up the dale of the Minnock water from south to north, on the eastern side of the parish; the latter branching off in a north-east direction from the former, at Rowantree. The new Statistical report states, that some of the mountains on the banks of the Minnock attain an elevation of 2,700 feet. Another road branches off from the Ayr road shortly after its entrance into the parish, and runs north-west to the kirktown of Barr. The third stream in this parish is the Muck water, which rises among the hills to the south of Barr, and flows in a direction parallel to the Stinchar, to its confluence with the Dusk in the parish of Colmonell. There are a few small lochs, and several extensive morasses. The village of Barr, which is situated on the south side of the Stinchar, at the confluence of the Gregg water with that river, has a population of about 250. An annual fair is held in this parish on the last Saturday of May, at Kirk Dominæ, a name given to the ruins of an ancient Roman Catholic chapel which still exist here, about a mile to the south-west of the church. Population, in 1801, 742; in 1831, 941. Houses 175. Assessed property £5,115.—This parish, formerly a vicarage, is in the presbytery of Ayr, and synod of Glasgow and Ayr. It was disjoined in 1653 from the parishes of Girvan and Dailly. Patron, the Crown. Stipend £231 3s. 1d., with a manse, and a glebe of the value of £18. Unappropriated teinds £154. Church built above a century ago, and repaired in

1834; sittings 410. Schoolmaster's salary £34 4s. 4½d., with £18 fees, and other emoluments. There were 3 private schools in 1834.

BARR, a small village in Kintyre, about 12 miles north-west by north of Campbelton, on the coast.

BARRHEAD, a thriving village in the parish of Neilston, Renfrewshire; on the road from Glasgow to Irvine; 3 miles south-east of Paisley; on the south side of the Levern. There is a Secession chapel here. A small debt-court is held here every alternate month. The population are chiefly engaged in weaving. The progress of this village within the last forty years has been rapid.

BARRHILL. See COLMONELL.

BARRA, or **BARA**, or not unfrequently **BARRAY**, an island-parish in the county of Inverness, synod of Glenelg, and presbytery of Uist; consisting of a groupe of islands divided, on the north, from South Uist by a channel of 8 miles; the island of Tiree, in the county of Argyre, is the nearest land to it on the south, and lies at the distance of about 35 miles; Canna and Rum, in the parish of the Small isles, are at the distance of about 30 miles; on the west it is exposed to the Atlantic ocean. The parish of Barra consists of the main island of Barra, and a number of much smaller islands and islets. The whole, forming what is called the estate of Barra, as lately belonging to Colonel Macneil, is reckoned to consist of 4,000 imperial acres of arable land, and 18,000 of meadow and hill-pasture, of which the rental, in 1840, was £2,458 10s. 7d. The main island of Barra is 8 miles in length, and from 2 to 4 in breadth, being deeply intersected in different places by arms of the sea. The island of Vatersa, separated from the main island by a channel of one mile, is about 3 miles in length, and in some places 1½ mile broad. Sandera, to the south of Vatersa, and distant 5 miles from Barra, is 2 miles in length, and 2 in breadth. Pabba, at the distance of 8 miles from Barra, is 1½ in length, and 1 in breadth. Mingala, at the distance of 12 miles, is 2 miles in length, and 2 in breadth. Bernera—which, from its being called the Bishop's isle, seems to have once belonged to the Bishop of the Isles—16 miles south-south-west of Barra, is 1 mile in length, and ¾ in breadth. All these islands are difficult of access, on account of the strong currents running between them. Close by the island of Mingala is a high rock, with very luxuriant grass on the top of it. The inhabitants of this island climb to the top at the risk of their lives, and by means of a rope hoist up their widders to fatten on the fine herbage. This must be the Scarpa Vervecum mentioned by Buchanan. The main island of Barra has a barren rocky appearance, excepting the north end, which is fertile. In the middle and at the south end are some very high hills, presenting a mixture of green sward, rock, and heath. The soil in general is thin and rocky, excepting at the north end; there is also a great deal of sand, which is blown about with every gale of wind, so that a large part of the best corn-land has been thus blown away, or covered with sand. According to Dr. Webster's report, the number of souls upon these islands in 1755, was 1,150. In 1801, it was 1,969; in 1831, it was 2,097, of whom 302 families were employed in agriculture, 15 in manufacture and handicraft, and 56 were not comprised in either of these classes. The number of houses, in 1831, was 373. In 1821 the population was 2,303; the decrease, in 1831, was attributable to extensive emigration from this quarter. The system of sheep-farming has also been recently introduced into these islands, and will compel many of the inhabitants to seek a home elsewhere. Barra held originally of the kings of Scotland, till the reign of James VI., when an English ship was seized

upon the coast by Roderick Macneil, then laird of Barra, surnamed Rory the turbulent. Queen Elizabeth complained of this act of piracy committed upon her subjects; upon which the laird was summoned to appear at Edinburgh, to answer for his unjustifiable behaviour; but he treated the summons with contempt. Several attempts were then made to apprehend him, all of which proved unsuccessful, until Mackenzie, tutor of Kintail, undertook to effect by stratagem what others could not do by more direct means. Having come, under cover of a friendly visit, to the castle of Kisimul, where the laird then resided, he invited him and all his retainers on board his vessel, where, not suspecting any hostile design, they suffered themselves to be overpowered with liquor. In this situation poor Rory's friends were easily put on shore, leaving their unconscious chief in the hands of his kidnapper. Kintail hoisted sail under night, and, the wind proving fair, was soon out of reach of his pursuers. He at length arrived with his prisoner in Edinburgh, where Rory was immediately put on his trial. Rory confessed to his malpractices, but alleged that he thought himself bound, by his loyalty, to avenge the unpardonable injury done by the queen of England to his own sovereign, and his majesty's mother. By this answer, he obtained his pardon, but forfeited his estate, which was given to Kintail, who restored it back to the laird, on condition of his holding of him, and paying him 60 merks Scots as a yearly feu-duty. Some time after, Sir James Macdonald of Slate married a daughter of Kintail's, who made over the superiority to Sir James, in whose family it continues till this day. The old residence of the feudal lairds of Barra was a small fortalice in Castlebay, built upon a rock which must have formerly been almost covered with the sea. This building is of an hexagonal form; the wall is about 30 feet high; and in one of its angles is a high square tower, on the top of which, at the corner immediately above the gate, is a perforated stone through which the gockman, or watchman, who sat there all night, could let a stone fall upon any one who might attempt to surprise the gate by night. Within the wall are several houses, and a well dug through the middle of the rock. Buchanan calls it an old castle in his time. "I saw," says Martin, "the officer called the cockman, and an old cock he is: when I bid him ferry me over the water to the island, he told me that he was but an inferior officer, his business-being to attend in the tower; but if, says he, the constable—who then stood on the wall—will give you access, I'll ferry you over. I desired him to procure me the constable's permission, and I would reward him; but having waited some hours for the constable's answer, and not receiving any, I was obliged to return without seeing this famous fort. Macneil and his lady being absent, was the cause of this difficulty, and of my not seeing the place. I was told some weeks after, that the constable was very apprehensive of some design I might have in viewing the fort, and thereby to expose it to the conquest of a foreign power; of which I supposed there was no great cause of fear." There are great quantities of cod and ling caught upon the east coast of Barra. The fishing-banks extend from the mouth of Loch Boisdale to Barrahead. At the close of last century from 20 to 30 boats were generally employed in this business from the latter end of March, or the beginning of April, to the end of June; there were five hands to every boat, and on an average they killed from 1,000 to 1,500 ling each boat. In 1829, the number of boats belonging to this parish employed in the herring, cod, and ling fisheries was 81, manned by 405 hands. The number of cod, ling, and hake fish taken was 31,574;

the total quantity cured and dried 1,136 cwt., of which 291 cwt. were exported to Ireland. It does not appear that this fishery has made any progress since the end of last century. Shell fish abound here, such as limpets, mussels, wilks, clams, spout-fish or razor-fish, lobsters, and crabs; but the most valuable to the inhabitants is the shell fish called cockle. It is found upon the great sand at the north end of Barra, in such quantities, that in times of great scarcity all the families upon the island have resorted hither for their subsistence; and it has been computed, that no less than from 100 to 200 horse-loads of cockles have been taken off the sands at low-water, every day of the springtides, during the months of May, June, July, and August. Dean Monroe tells us that, "in the north end of this isle of Barray, there is ane rough heigh know, mayne grasse and greine round about it to the head, on the top of quihlk there is ane spring and fresh water well. This well truly springs up certaine little round white things, less nor the quantity of confeit corne, lykest to the shape and figure of ane little cokill, as it appearit to me. Out of this well runs there ane little strype downwith to the sea, and quher it enters into the sea there is ane myle braid of sands, quihlk ebbs ane myle, callit the Traymore of Kilbaray, that is the grate sands of Barray. This ile is all full of grate cokills, and alledgit be the ancient countrymen that the same cokills comes down out of the foresaid hill through the said strype, in the first small forme that we have spoken of, and after ther coming to the sandis growis grate cokills always. There is na fairer and more profitable sands for cokills in all the world." Of harbours, the first towards the north is Ottirvove, which is more properly a roadstead than a harbour; the entrance to it is from the east between the islands of Griskay and Gigha. The next farther south is Flodda sound, which is surrounded by a number of islands, and opens to the south-east; here the largest ships may ride with safety all seasons of the year. Tirivee, or the inland bay, is so called from its cutting far into the middle of the country; here vessels may ride out the hardest gales; it opens also to the south-east. At the south end of Barra is Kisimul-bay, or Castle-bay, so called from the old castle formerly mentioned; it opens to the south. In the island of Vatersa is a very commodious harbour for ships of any burden; it is accessible from the south-east between the islands of Sandera and Muldonich. Ottirvove and Flodda are much frequented by ships to and from the Baltic. There is a light-house on Barra head, the highest part of Bernera in N. lat. $56^{\circ} 48'$, and W. long. $7^{\circ} 38'$. The light is intermitting every three minutes, being bright for $\frac{2}{3}$ minutes; and then suddenly eclipsed for $\frac{1}{2}$ a minute. It is 680 feet above high water, and is seen at the distance of 32 miles in clear weather. It was erected in 1833. The expense of maintaining this light, in 1838, was £638 9s. 9d. There are some fresh water lochs with plenty of trout.—The Protestant religion universally prevailed here till after the Restoration; when some Irish priests crossed over to these islands, and made many converts. Harris and Barra at this time made one parish; and the minister always resided in Harris. The number of Protestants has always been so small that it was thought unnecessary to put the heritor to the expense of building a church. There are three places of worship, viz. Kilbar, Borge, and Watersay. The minister preaches two Sundays at Borge; the third Sunday at Kilbar; and the fourth at Watersay. The inhabitants of the South isles were stated to be all Roman Catholics in the old Statistical account. The stipend of the parochial minister is £165 10s. 5d., with a manse, and a glebe of the value of £7 10s.

In 1834 there was no school in the parish, so that, in a population of above 2,000 souls, few were able either to read or write, and the young generation were growing up in ignorance. A church has been erected in Bernera by the parliamentary commissioners, at an expense of £1,470.—The island of Barra, with all the surrounding islands, is the property of Macniel of Barra, whose predecessors are said to have been in possession of those islands before the Danes, and were the first of that name who came from Ireland, whence they derive their pedigree; so that they have always been acknowledged the chief of the Macniels in Scotland. Martin, in his 'Description of the Western Islands,' gives some curious notices of this groupe of islands, and the manners of these simple inhabitants. He says, "The church in this island is called Kilbarry, i. e. St. Barr's church. There is a little chapel by it, in which Macneil, and those descended of his family, are usually interred. The natives have St. Barr's wooden image standing on the altar, covered with linen in form of a shirt: all their greatest asseverations are by this saint. I came very early in the morning with an intention to see this image, but was disappointed; for the natives prevented me, by carrying it away, lest I might take occasion to ridicule their superstition, as some Protestants have done formerly: and when I was gone, it was again exposed on the altar. They have several traditions concerning this great saint. There is a chapel—about half a mile on the south side of the hill near St. Barr's church—where I had occasion to get an account of a tradition concerning this saint, which was thus: 'The inhabitants having begun to build the church, which they dedicated to him, they laid this wooden image within it, but it was invisibly transported,' as they say, 'to the place where the church now stands, and found there every morning.' This miraculous conveyance is the reason they give for desisting to work where they first began. I told my informer that this extraordinary motive was sufficient to determine the case, if true, but asked his pardon to dissent from him, for I had not faith enough to believe this miracle; at which he was surprised, telling me in the mean time that this tradition had been faithfully conveyed by the priests and natives successively to this day." "The inhabitants are very hospitable," the same writer informs us, "and have a custom, that when any strangers from the northern islands resort thither, the natives, immediately after their landing, oblige them to eat, even though they should have liberally eat and drunk but an hour before their landing there. And this meal they call Bieyta'v; i. e. Ocean meat; for they presume that the sharp air of the ocean, which indeed surrounds them, must needs give them a good appetite. And whatever number of strangers come there, or of whatsoever quality or sex, they are regularly lodged according to ancient custom, that is, one only in a family; by which custom a man cannot lodge with his own wife, while in this island. Mr. John Campbell, the present minister of Harries, told me, that his father being then parson of Harries, and minister of Barra—for the natives at that time were Protestants—carried his wife along with him, and resided in this island for some time, and they disposed of him, his wife and servants, in manner above-mentioned: and suppose Macneil of Barray and his lady should go thither, he would be obliged to comply with this ancient custom."

BARRIE, a parish in the south-east of Forfarshire; bounded on the west and north by Monikie parish; on the north and north-east by Panbride parish; on the east by the German ocean; and on the south by the frith of Tay. The coast is flat and

sandy; but a high verdant bank, which seems once to have formed the coast-line in this quarter, extends from north-east to south-west, so as to give to the northern division of the parish the appearance of a terrace elevated about 50 feet above the southern division. On the extreme south-east point of the coast, the Buddon-ness, in N. lat. $56^{\circ} 28'$, and W. long. $2^{\circ} 45'$, are two light-houses, the one bearing N. N. W. 1,122 feet from the other; the height of the two lanterns being respectively 85 feet and 65 feet, and both showing a white fixed light, visible the one at the distance of 9 and the other at the distance of 12 miles, in clear weather. These two lights form the leading lights to vessels entering the Tay, between the Gaa sands and Abertay sands. The post-road between Dundee and Arbroath intersects this parish from south-west to north-east. Population, in 1801, 886; in 1831, 1,682. Houses 408. There are three villages within the parish: viz. Carnoustie, Gardenbury, and Barry. Of these Carnoustie is greatly the largest, having a population of 1,200. The greater part of the population is employed in trade and manufactures, chiefly that of brown linen for the Arbroath merchants. Assessed property, in 1815, £2,946.—This parish is in the presbytery of Arbroath, and synod of Angus and Mearns. Patron, the Crown. Minister's stipend £143 12s. 11d., with a manse, and a glebe of the value of £5 10s. Unappropriated tithes £4 3s. 8d. Church altered and enlarged in 1818; sittings 673. A chapel-of-ease has been recently erected at Carnoustie, where there are also two dissenting places of worship. The United Secession church in this village was built in 1810; sittings 380. Stipend £86, with a manse and glebe. The Original Seceder church in this village was also built in 1810; sittings 250. Stipend £70, with a manse and garden. The parochial schoolmaster has a salary of £29 18s. 9½d., with about £30 school-fees. Pupils from 70 to 100. There is also a private school attended by about the same number of children.—In the neighbourhood of Carnoustie, Malcolm II. signally defeated a body of marauding Danes under Camus.

BARVAS, a parish in the island of Lewis, and county of Ross; bounded on the north by the Atlantic ocean; on the east, by the *quoad sacra* parish of Cross; on the south by Stornoway parish, and that of Lochs; and on the west by Lochs. The extent of sea-coast is about 15 miles; it is bold and rugged throughout, having a tremendous surf upon it when the wind blows from the west or the north-west. The soil is in general light and stony, or mossy, and the whole surface is nearly level throughout. The only arable land is along the coast. There is not a tree, and scarcely a shrub throughout the whole parish. The principal river is the Barvas, which rises in some small lakes on the southern boundary of the parish, and flows northwards, expanding near its mouth into a small loch. The streams contain some trout, and occasionally salmon; on the coast, cod, ling, and haddocks are caught. The interior abounds with plovers, snipes, wild-geese, and ducks. There is a road from the mouth of the Barvas, southwards along the eastern bank of that stream, to Stornoway, a distance of about 18 miles. Population, with that of Cross, in 1801, 2,233; in 1831, 3,011. Houses 617. Assessed property £14. The population of Barvas as distinct from Cross, was estimated, in 1835, at 1,840, all of whom were engaged in agricultural labour, renting small patches of ground at from £1 to £6 per annum.—This parish is in the synod of Glenelg, and presbytery of Lewis. Patron, the Crown. Minister's stipend £158 6s. 8d., with a manse, and a

glebe of the value of £20. Church built about 1794; sittings 300. Parochial schoolmaster's stipend £28. Number of pupils from 30 to 40. There are two itinerating Gaelic schools, which are usually stationary for two years at a time, and are then removed to some other quarter. In 1834, it was stated that there were in this parish 390 persons above 15 years of age unable to read.—The islands of Rona and Sulisker belong to this parish.

BARVIE (THE), a small river which rises in the parish of Monzie, in Perthshire, and falls into the Earn near Crieff.

BASS (THE), a stupendous insulated rock, in the frith of Forth, about $3\frac{1}{2}$ miles east-north-east, from North Berwick, and $1\frac{1}{2}$ north of Canty bay; in N. lat. $56^{\circ} 4' 53''$, and W. long. $2^{\circ} 37' 57''$. It is about a mile in circumference, and shoots up to 420 feet above the surface of the water. Its loftiest side is towards the north; on the south side it assumes a conical form, sloping rapidly towards the sea. There are about 7 acres of grassy surface on the rock, presenting a fine clean short bite of pasturage to a few sheep. The mutton fed here is proverbially delicious. A cavernous passage penetrates through the rock from north-west to south-east, which has often been explored, but presents nothing remarkable. The only landing-place is on the south-east side, and this was commanded by a small fortalice now in ruins. Beague thus describes this castle, in the time of Mary of Guise's regency: "Now, the island in which the castle stands is itself an impregnable rock, of a small extent and oval figure, cut out by the hands of nature; it has only one avenue that leads to it, and that is towards the castle, but so very difficult and uneasy, that by reason of the hidden sands that surround the rock, nothing can approach it but one little boat at a time. The island is so exorbitantly uneven, that till one reach the wall of the castle, he cannot have sure footing in any one place; so that—as I have often observed—those that enter it must climb up by the help of a strong cable thrown down for the purpose; and when they have got with much ado to the foot of the wall, they sit down in a wide basket, and in this posture are mounted up by strength of hands. There is no getting into this wonderful fortress by any other means. Formerly, it had a postern-gate which facilitated the entry, but it is now thrown down, and fortified in such a manner as is incredible." The story about "the hidden sands" is altogether apocryphal; the channel all round being not only free from rocks or sands, but of great depth. This

"island salt and bare,
The haunt of seals and orcs and sea-mews' clang,"

is said to have been chosen by St. Baldred, the apostle of East Lothian, for his residence in the early part of the 7th century.* In 1405, the Earl of Carrick, son of Robert III., and then in his 14th year, embarked here, along with the Earl of Orkney and a small suite, in a vessel which was to carry him to France, where he could pursue his studies in safety from the intrigues of Albany. There was a truce at this period between England and Scotland, nevertheless an armed merchantman belonging to Wye attacked and captured the prince's vessel off Flamborough head. In 1671, the Crown acquired this island by purchase from Sir Andrew Ramsay of Abbotshall for £4,000. It had previously been for several centuries in the possession of the Lauder family. Under the reigns of Charles II. and James II. it was used

* Mr. James Miller has collected a variety of curious legendary matter touching the Bass and St. Baldred in the Notes to his poem entitled "St. Baldred of the Bass." Edinburgh, 1825, 8vo.

as a state-prison, and many of the covenanters were confined here. Among these sufferers for conscience' sake was the celebrated Colonel John Blackadder, who died in confinement here, and whose cell is still pointed out to the visitor.* At the Revolution, it held out so stoutly for King James, under Captain Maitland, with a garrison of 50 men, that the Scottish Privy council were necessitated to enter into negotiations for the surrender of the place, in which the garrison were granted honourable terms.† The fortifications were then demolished, and the island was gifted by the Crown to Sir James Dalrymple, Lord-president of the court of session. Immense quantities of sea-fowl nestle and breed on this rock. Of these the most remarkable is the solan goose, of which De Foe has given us the following account: "They feed on the herrings, and therefore 'tis observed they come just before, or with them, and go away with them also; though 'tis evident they do not follow them, but go all away to the north, whither none knows but themselves, and he that guides them. As they live on fish, so they eat like fish, which, together with their being so exceeding fat, makes them, in my opinion, a very coarse dish, rank, and ill-relished, and soon gorging the stomach. But as they are looked upon there as a dainty, I have no more to say; all countries have their several gusts and particular palates. Onions and garlick were dainties, it seems, in Egypt, and horse-flesh is so to this day in Tartary, and much more may a solan-goose be so in other places. It is a large fowl, rather bigger than an ordinary goose; 'tis duck-footed, and swims as a goose; but the bill is long, thick, and pointed like a crane or heron, only the neck much thicker, and not above five inches long. Their laying but one egg, which sticks to the rock, and will not fall off, unless pulled off by force, and then not to be stuck on again, though we thought them fictions, yet, being there at the season, we found true; as also their hatching by holding the egg fast in their foot. What Nature meant by giving these singularities to a creature that has nothing else in it worth notice, we cannot determine." The Bass is frequently visited by parties of pleasure. The best season for visiting it is June or July. Boats are obtained at the keeper's house in the hamlet of Canty bay.

BASS OF INVERURY (THE), an earthen mound on the banks of the Ury in Aberdeenshire, said by tradition to have been once a castle which was walled up and covered with earth because the inhabitants were infected with the plague. It is defended against the stream by buttresses, which were built by the inhabitants of Inverury, who were alarmed by the following prophecy, ascribed to Thomas the Rhymer,

"Dee and Don, they shall run on,
And Tweed shall run and Tay;
And the bonny water of Ury
Shall bear the Bass away."

The inhabitants of Inverury sagaciously concluded that this prediction could not be accomplished without releasing the imprisoned pestilence, and, to guard against this fatal event, they raised ramparts against the encroachments of the stream. The notion of the plague, or pestilence, or black death, or other fearful epidemic, being buried in certain places, is one of the most common traditions in Scotland. "According to some accounts," says Leyden, "gold seems to have had a kind of chemical attraction for the matter of infection, and it is frequently repre-

sented as concentrating its virulence in a pot of gold. According to others, it seems to have been regarded as a kind of spirit or monster, like the cockatrice, which it was deadly to look on."

BASSENDEN, or BASINGDENE, in the parish of Westruther, and shire of Berwick, an ancient vicarage, which formerly belonged to the nuns of Coldstream. The church, now in ruins, stood near the mansion-house, on the south-east; and the walls still enclose the burying-place of the Homes of Bassendean. Soon after the Reformation, Andrew Currie, vicar of Bassendean, conveyed to William Home, third son of Sir James Home, of Coldenknows, "terras ecclesiasticas, mansionem, et glebam vicariæ de Bassendene:" whereupon, he obtained from James VI. a charter for the same, on the 11th of February, 1573-4. This William, who thus built his house upon church-lands, was the progenitor of the present family here; of whom George Home, a compatriot of the Duke of Argyll, was one of the most devoted supporters of Presbyterianism against the inroads of Episcopacy in the 17th century. See **WESTRUTHER**.

BATHGATE, a parish in Linlithgowshire, bounded on the north by the parishes of Torphichen and Linlithgow; on the east by Ecclesmachan, Uphall, and Livingston; on the south by Livingston and Whitburn; on the west by Torphichen and Shotts. It is about $7\frac{1}{2}$ miles in length from east to west, and 2 in average breadth; and has a superficial area of 11,214 English acres. It is intersected by one of the great roads leading from Edinburgh to Glasgow: A considerable portion of the south-east, south, and west of the parish is almost a level; but towards the north-east it becomes hilly. The soil is exceedingly variable, some very good, some very indifferent and intermixed with patches of moss and moor; and the climate is far from genial; but yet where it is arable, it is in a good state of cultivation, and yielding good crops of barley, oats, pease, and some beans. Large tracts also are covered with thriving plantations, which tend greatly to heighten the beauty of the landscape and improve the climate. Iron-stone has been found within this parish, but not much wrought; freestone, coals, and limestone are found in great abundance, and wrought to a great extent. Some mines of silver, in the hills to the north of the town of Bathgate, were formerly wrought by Germans, but the vein has long been lost. This parish in ancient times was a distinct sheriffdom. On the abolition of hereditary jurisdictions, in 1747, John, Earl of Hopetoun, claimed £2,000 for his right of sheriffdom. Population, in 1801, 2,513; in 1831, 3,593; of whom 2,581 reside in the town of Bathgate. Houses 510. Assessed property, in 1815, £9,843.—This parish, anciently a vicarage, is in the presbytery of Linlithgow, and synod of Lothian and Tweeddale. Patron, the Earl of Hopetoun. The church of old was of moderate value. Malcolm IV. granted to the monks of Holyrood the church of Bathgate, with a portion of land. Robert, the diocesan, who died about the year 1159, also granted to it certain privileges, and subsequently the abbot and monks of Holyrood made a transfer of the church-property to the abbot and monks of Newbattle, which arrangement was confirmed in 1327 by Bishop Landels. The present parish-church was built in 1739, and underwent some alterations in 1780. It is in tolerably good repair, and capable of accommodating 719 persons. The stipend is £132 8s. 4d., with a manse, and a glebe of the value of £19. The salary of the parochial schoolmaster is £34 4s. 4½d., and 11s. 6d. of a mortification, with fees amounting to about £24. There is also a free academy here, conducted by four teachers, in which

* See Crichton's *Memoirs of Blackadder*, a very interesting piece of biography.

† A Narrative of this siege was published in a small tract about the beginning of the 18th century. This piece is inserted in the 3d vol. of the *Miscellanea Scotica*. Glasgow, 1820.

Latin, Greek, French, and other branches of education are taught. This institution originated in an ample bequest by Mr. John Newlands of Jamaica, a native of Bathgate; and occupies a handsome building, with connected yards, on a rising ground a little to the south-east of the town. There is, besides these, a very considerable private school at Armadale, two miles west of Bathgate.—In 1839, the total number of children at school in this parish was 590. There are several dissenting places of worship in this parish, within the town of Bathgate. The Relief church was built in 1812; sittings 786.—The United Secession church was built in 1807; sittings 400. An Original Burgher place of worship was built in 1828; sittings 400. Stipend £83.—According to a census made by the parish-minister in August, 1836, there were then 2,159 persons belonging to the Established church in this parish, and 1,378 belonging to other denominations.

The town of Bathgate is pleasantly situated near the centre of the parish, on the middle-line of road from Edinburgh to Glasgow, 18 miles distant from the former, and 24 from the latter. It lays claim to considerable antiquity, being part of the extensive possessions given by King Robert Bruce as the dowry of his daughter, Lady Margery, to Walter, high-steward of Scotland, in 1316. Walter himself died here in 1328, at one of his chief residences, the site of which may be still seen marked by three stunted fir-trees. The town consists of two parts, the old and the new. The old town is built on a steep ridge, and the streets are narrow and crooked. The new town is built on a regular plan, and has a good appearance. Within these few years the town has been considerably extended; there has also been a large increase of population, which is principally supported by the weaving of cotton-goods for the Glasgow manufacturers, and by the lime and coal works in the vicinity. In 1824, Bathgate was erected into a burgh of barony by act of parliament. The preamble of this act states, that the town of Bathgate having increased greatly of late years in extent and population, it is become expedient that a regular magistracy should be established, and the town be erected "into a free and independent burgh of barony." The municipal body consists of a provost, three bailies, twelve councillors, and a treasurer—seventeen persons in all. The first set of magistrates and councillors were elected by all the persons, whether within the burgh or not, who subscribed one pound or more towards the expense of the act of parliament. But in all future elections the members of council were to be changed partially, every year, in the following manner. On the first Tuesday of September the provost and treasurer, with the eldest and third bailies, and four eldest councillors, that is, eight members of the seventeen go out, and their places are filled by the open votes of the whole assembled burgesses. But the proprietor of the lands and barony of Bathgate is entitled to one vote, whether a burgess or not; and he has further the privilege of filling up the office of third baillie, if he choose to exercise it; but he must name for the office a person who has previously officiated as provost, baillie, or treasurer, within the last three years, or who has been a councillor within two years. The electors consist of all resident persons who have been admitted burgesses, and are at the same time proprietors or feuars, or occupiers of houses of £3 yearly rent or upwards. All who paid £1 towards the expense of the act, were declared burgesses *ipso facto*; and all in future renting £3, or more, who paid the fees of entry fixed by the magistrates and council, which were not to exceed two guineas. The magistrates must be bur-

gesses, paying £6 rent or upwards, and resident within the burgh, except the provost, of whom residence is not required. But residence, and £3 of yearly rent, qualifies for a councillor. The office of procurator-fiscal for the burgh is filled up from a list of four persons nominated by the baronial proprietor, which is shortened to two by the provost and magistrates, and of these two, the proprietor nominates one to be fiscal. The act contains also detailed regulations for lighting the burgh with gas, for paving the streets, and for establishing a system of police, for which there is to be an annual assessment, not exceeding one shilling in the pound.—The town has a weekly market, which is held on Wednesday, and which has become important of late as a central corn-market for West Lothian and the adjoining counties. It has seven fairs. The 1st, held on the 2d Wednesday of April, is a cattle and hiring-market for farm-servants. The 2d, on the 1st Wednesday after the term, O. S., is also for cattle. The 3d is held on the 4th Wednesday in June; the 4th, on the 3d Wednesday in July; the 5th, on the 3d Wednesday in August: all these are cattle-markets. A 6th is held on the 4th Wednesday in October, for cattle, and for hiring farm-servants. The 7th for Winter fair, is held on the Wednesday after Martinmas, O. S. The stock exhibited at any of these markets seldom exceeds 300 head. A justice of the peace court sits here once a month, and a small-debt sheriff-court every quarter. Branches of the National bank and the Glasgow Union bank have been established here; and there is a subscription library. In the old Statistical account it is stated, that "a great alteration in the manner of living has taken place in this parish within the last 40 years. About 1750, there were not above ten families who used tea, and now, perhaps, there is not above twice that number who do not use it. Butcher-meat was then not more used than tea: scarcely any cattle or sheep were killed, except at Martinmas, when some families used to salt a whole, or others only a part of an ox or cow, to serve for winter-provision; but now there is a regular flesh-market twice a-week, and almost every family, who can afford it, eats flesh constantly. A much greater quantity of wheat bread is now consumed in the parish in a month, than was in a twelvemonth 40 years ago. The alteration in dress since 1750 is also remarkable. When the goodman and his sons went to kirk, market, wedding, or burial, they were clothed in a homespun suit of friezed cloth, called kelt, plaiden hose, with a blue or brown bonnet; and the goodwife and her daughters were dressed in gowns and petticoats of their own spinning, with a cloth cloak and hood of the same, or a tartan or red plaid. But now, the former, when they go abroad, wear suits of English cloth, good hats, &c.; and the latter the finest printed cottons, and sometimes silk gowns, silk caps, and bonnets, of different shapes, sizes, and colours, white stockings, cloth shoes," &c.

BATTLEHILL, in the parish of Annan, Dumfries-shire, said to have received its name from a bloody engagement which took place here betwixt the Scots and English, in which the latter were cut off to a man. A strong mineral spring was recently discovered here.

BEALOCK-NAM-BO, a magnificent pass across the northern shoulder of Ben Venue, leading into the district on the south side of Loch Katrine. It appears to have been formed by the partial separation of this side of the mountain from the rest, and composes an exceedingly sublime piece of scenery.

BEATH, a small inland parish in Fifeshire; bounded on the north by Cleish parish, from which it is separated by Orr water; on the east by Ballin-

gry parish; on the south by Auchtertool, Dalgetty, and Dunfermline; and on the west by Dunfermline. The surface is undulating, and attains its greatest elevation in the hill of Beath, in the south-west corner of the parish. On the western boundary of the parish, lying partly in Dunfermline and partly in Beath parish, is Loch Fetty, a sheet of water about 3 miles in circumference, and containing some pike and perch. From this loch, a principal tributary of the water of Orr flows eastwards to the latter stream, which it joins at Clockret bridge. The Great North road from Queensferry to Kinross and Perth, passes through the parish from south-west to north-east. The kirk-town of Beath is $18\frac{1}{2}$ miles from Edinburgh, 7 from Kinross, and $25\frac{1}{2}$ from Perth. Population, in 1801, 613; in 1831, 921. Houses 166. A number of feus have been recently granted for building in this parish, on the line of the Great Northern road. Assessed property, in 1815, £2,746. —This parish is in the presbytery of Dunfermline, and synod of Fife. Patron, the Earl of Moray. Minister's stipend £183 17s. 10d., with manse, and a glebe of the value of £17. Schoolmaster's salary £34 4s. 4d., with about £30 fees, and a house and garden. Average number of pupils 100. There is a small bequest for the education of poor children in this parish. In the minutes of session of this parish it is recorded, that "the first place of meeting that ever the Protestant lords of Scotland had for the covenant and reformation was at the kirk of Baith." Yet it appears from the same record—of which a long and curious extract is given in the New Statistical account—that this kirk was long neglected after the Reformation, and being unsupplied by any minister, the parishioners were accustomed to assemble "to heere a pyper play upone the Lord's daye, which was the daye of their profaine mirth, not being in the workes of their calling."

BEAULY, a village in the parish of Kilmorack, Inverness-shire, on the north side of the river Beaully, at its confluence with Loch Beaully; 166 miles north by west of Edinburgh, and $12\frac{1}{2}$ west of Inverness. It was the market-town of the old barons of Lovat. In the immediate neighbourhood, near the brink of the river, are the remains of the old priory of Beaully, which was founded by Bisset of Lovat, in 1230, for monks of the order of Valliscaulium. The Frasers, Chisholms, Mackenzie of Gairloch, and several other families, have their burial-place here. —About 2 miles west of Beaully are the celebrated falls of KILMORACK: which see.

BEAULY (THE), a river of Inverness-shire, principally formed by the union of the Farrer from Glen Farrer, and the Glass river which gives name to the entire strath through which the Beaully flows. These two streams unite at Erchless castle; and the conjoined streams then flow in a winding course of about 10 miles in length, and with frequent narrowings and widenings, north-east, to Loch Beaully. The road from Inverness to Beaully is carried across this river by a bridge of 5 arches, with a waterway of 240 feet, known as the Lovat bridge, and built by the Parliamentary commissioners in 1810. There is an excellent salmon-fishery at the mouth of the Beaully. The river is navigable by ships of about 50 tons burden as far as the village of Beaully.

BEAULY (LOCH), the upper basin, or inner division of the Moray frith, into which the Caledonian canal flows. Its northern shores are in Ross-shire; the southern, in Inverness-shire. From Kessock ferry to the mouth of the Beaully river it is 7 miles in length; its greatest breadth is about 2 miles. The shores are low, and well-cultivated.

BEDRULE, a parish situated in the centre of Roxburghshire; in length from north to south, up-

wards of 4 miles, and in breadth from east to west between 2 and 3. It is bounded by the parish of Jedburgh on the east, by Abbotrule—now annexed to Hobkirk and Southdean—on the south, by Hobkirk and Cavers, from which it is, for the most part, divided by the Rule on the west; and by Minto and Ancrum on the north-west and north, from which it is separated by the Teviot. It is somewhat of an oval figure, and consists of nearly an equal quantity of arable, pasture, and muir-land. There were anciently four villages in this parish, all which are now much decayed, viz. Bedrule to the west, Newton to the north-west, Rewcastle to the north-east, and Fulton to the south-west, from the centre of the parish. The chief of the family of Turnbull—a branch of the very ancient family of Rule—had his principal residence at Bedrule castle in ancient times. This stronghold is pleasantly situated behind the church, on the bank of the river,—a situation from which are seen distinctly to the north-west, the most elevated tops of some of the hills near Ettrick and Yarrow, and the Eildons near Melrose abbey; the Reidswyre to the south-east; and south-westward, the same frontier tract whence the Liddel derives its source, which, after uniting with the Ewes and the Esk, falls into the Solway frith. The view is more confined towards the east and the west, yet in this direction are seen the tops of the Dunian and Ruberslaw hills, the former having an elevation of 1,031 feet; the latter of 1,419 feet above sea-level. The castle of Bedrule no longer exists. Newton was anciently the property of a family of the surname of Ker, who appear to have been cadets of Fernihirst. There was also a house of strength here, now likewise demolished; but the beautiful avenues of venerable trees still remaining bespeak to the passing traveller something of the consequence and taste of its former inhabitants. Rewcastle, situated upon a more elevated ground than either Bedrule or Newton, is considered by some as a place of great antiquity. Indeed, it is said, that the courts of justice were originally held here, and afterwards removed to Jedburgh. Of Fulton there are now scarcely any vestiges of its ancient consequence left, except some remains of its tower. There are vestiges of a regular encampment, on an elevated ground almost at an equal distance between Bedrule and Newton; from its figure it appears to have been British. There is another, at the distance of about half-a-mile to the eastward, which seems to have been Roman. There is abundance of freestone in the parish, of different kinds, red and white, both of excellent quality. Mainslows quarry not only supplies Jedburgh and the neighbouring country, but stone from thence is also transported to the town of Hawick, and sometimes a considerable way beyond it. A branch of the great road from London to Edinburgh passes through the southern part of the parish; the great road between Berwick and Carlisle directs its course through the northern part. The Dunian, or Hill of John, merits particular notice, not so much from its own height or magnitude, as that from its remarkable situation it is plainly seen in all directions, particularly over that vast tract of country comprehending what were formerly the middle and eastern marches, or frontiers of the two kingdoms, extending from the western extremity of the Reidswyre, to the German ocean, and overlooking, in a singularly commanding prospect, an immense extent of classical ground, celebrated in poetry and song, and memorable in the page of martial history. "Near, and eastward below, the spectator views, as it were in a basin, the town of Jedburgh, distinguished by the venerable ruins of its formerly rich and magnificent abbey. At a greater

distance, to the north-west, and on the opposite side of the Teviot, as in an amphitheatre opening to the south, the eye is struck with the plain yet elegant modern house of Minto, distinguished as the birth-place of many eminent patriots, statesmen, and legislators. To the south-east, and at a still farther distance, appears the house of Edgerston, distinguished for the fidelity, prowess, and loyalty of its inhabitants. Westwards are seen the beautiful windings of the wooded Rule, where it issues in three streams from the lofty mountains, the Not o' the Gate, Fana, and Wind burgh, to where its rapidly rolling flood mixes with the Teviot, opposite to the castle of Fatlips, which is most romantically situated north of that river, almost in a line with the course of the Rule, on the summit of the easternmost and most picturesque of the Minto craigs." Population, in 1801, 260; in 1831, 309. Houses 51. Assessed property, in 1815, £2,222. Valued rental £3,475 13s. 4d. Scots.—This parish is in the presbytery of Jedburgh, and synod of Merse and Teviotdale. Patron, Hume of Newmills. Minister's stipend £148 9s. 8d. Schoolmaster's salary £26, with fees. Average number of scholars 28. A sum of 500 merks was mortgaged to the poor of the barony of Bedrule in 1695, by William Ramsay in Bedrule mill, and Margaret Turnbull, his wife. Mrs. Mary Ann Stevenson, relict of the Rev. James Borland, mortgaged £100 Scots to the poor of this parish.

BEE (Loch), a large irregular inlet of the sea, in the northern part of the island of South Uist. It is nearly connected with Loch Skipton on the eastern side of the island, by a long narrow arm running along the eastern base of Ben Phorister.

BEMEN, a rocky islet lying in the middle of the frith of Forth, about a mile to the westwards of Inch Garvie.

BEG, a hamlet above Allanton, in the parish of Galston, Ayrshire, where Sir William Wallace defeated and slew Fenwick, the English governor of Ayr.

BEGLIE (WICKS OF), a celebrated pass in the Ochils, in the parish of Dron, in Perthshire, about $3\frac{1}{2}$ miles to the west of Abernethy, and a little to the west of the Great road leading from Queensferry to Perth, through Glenfarg. Sir Walter Scott, in the opening chapter of 'St. Valentine's Day,' in the second series of the 'Chronicles of the Canongate,' describes this spot as commanding a matchless view of "the fair city of Perth," and its beautiful environs; but the truth is, that no part of Perth, or its Inches, nor even the stupendous rock of Kinnoull, can be seen from the Wicks properly so called,—the beautiful and picturesque hill of Moredun or Moncrieff, completely intercepting the view of any of these objects. The view from the Wicks, however, is most magnificent, and well-repays the labour of the ascent and circuit. Immediately beneath is stretched out the delightful vale of Strath-erne, with the river from which it takes its name winding along till it loses itself in the Tay; while to the right, the whole extent of that garden of Scotland, the carse of Gowrie, is in full view, with the expansive estuary of the Tay even to its confluence with the ocean,—not to mention the innumerable objects of minor interest which lie scattered on the fore-ground, and the magnificent range of the Grampians in the farthest distance. It is not, however, until the traveller on this line of road arrive at a place called Cloven Crag, 4 miles nearer Perth, and immediately adjoining the west end of Moredun, that the view described in the novel breaks upon his astonished sight; or that the scene in the direction of Perth, however beautiful, excites the emotion of wonder, or could have called forth the exclamation

of the Romans. The mistake appears to have arisen from the author having in his memory combined the views from both stations; and when we consider that both possess many points in common,—are both on the same road, and within a few miles of the other,—and that Scott's recollections were those of more than half-a-century's wear and tear, the mistake is very naturally accounted for.

BEILD, a hamlet, inn, and post-office station in the parish of Tweedsmuir, shire of Peebles, 35 miles south-south-west of Edinburgh.

BEIN. See **BEN**.

BEITH, a parish in the county of Ayr, district of Cunningham; with the exception of a small portion which belongs to Renfrewshire, on the border of which it is situated. It extends about 7 miles in length, from east to west; and its average breadth is about 4 miles. The land rises by a gradual ascent from south to north. On the northern boundary there is a small ridge of hills whose summits are elevated about 400 feet above the lowest ground in the parish, or 500 feet above the level of the sea. It is bounded on the north by Kilbirnie and Lochwinnoch parishes; on the east by Lochwinnoch and Neilston; on the south by Dunlop; and on the west by Dalry. The superficial area of the parish is 11,000 acres. The valued rent, of that part of the parish which lies in Ayrshire, is £6,115 14s. 2d. Scotch; and that of the portion in Renfrewshire, £163 6s. 8d. The amount of assessed property, in 1815, was £10,054. The real rent is believed to be in some places six times, and perhaps in others—owing to their vicinity to the town of Beith, the richness of the soil, or the high cultivation of the lands—even twelve times the valued rent. The subdivision of property is more remarkable in this and the neighbouring parishes than perhaps in any other part of Scotland. The small landholders generally reside upon their own property. Rents, in this parish, are paid chiefly from the dairy. The great road from Glasgow, by Paisley, to Irvine, Ayr, and Portpatrick, passes through the town of Beith; and the Ayrshire railway crosses between Kilbirnie and Lochwinnoch lochs. Great difficulty was experienced in carrying forward the line at this point owing to the soft nature of the soil. It is supported on pile-work. Population, in 1801, 3,103; in 1831, 5,052, besides 65 in that portion of the parish which is in Renfrewshire. Houses in Ayrshire 605; in Renfrewshire 9.—About the time of the Revolution, or rather earlier, the kirk-town of Beith is said to have consisted of only five dwelling-houses and the minister's manse. In 1759, there were 700 examinable persons in the town of Beith, and upwards of 800 in the country-part of the parish. In 1788, the town contained nearly 1,500 examinable persons. Its present population is nearly 3,000. About the time of the union of the two kingdoms, a trade in linen cloth was introduced into this place, which became so considerable that the Beith markets were frequented by merchants from the neighbouring towns every week. About the year 1730, the linen business, which had greatly declined, was succeeded by a considerable trade in linen-yarn. The Beith merchants purchased the yarn made in the country around, and sold it to the Paisley and Glasgow manufacturers. This trade, when carried to its greatest extent, about the year 1760, is supposed to have amounted to £16,000 sterling yearly; and though it has long been upon the decline, linen yarn is still a considerable article of merchandise. From 1777 to 1789, the manufacture of silk gauze was carried on to a great extent in this place. There are three principal fairs annually, and a weekly market upon Friday. There is often a fine show of horses in the Beith markets, especially on St. Tennant's day, or

August 30th, and on several Fridays in the beginning of spring. This town is 11 miles west of Paisley; 5 east of Dalry; and 4 south of Dunlop.—The parish of Beith, anciently a vicarage, is in the presbytery of Irvine, and synod of Glasgow and Ayr. The Earl of Eglinton is patron. The stipend is £251 5s. 11d., with a manse, and a glebe of the annual value of £130. Unappropriated teinds £447 18s. 9d. The old glebe—upon which a part of the town now stands—was exchanged in 1727, by contract between the Earl of Eglinton, the presbytery of Irvine, and the incumbent, for a small farm near the town of Beith, consisting of 31 acres 3 roods. A new and handsome parish church was built in 1807; sittings 1,250. It would appear, that the old church was built soon after the Reformation. The third minister of Beith, after the Revolution, was Dr. William Leechman, principal of the University of Glasgow, in 1736; who, in 1744, was succeeded by Dr. John Wotherspoon, afterwards president of Princetown college, New Jersey. According to a survey made in 1835–6, there were 3,457 persons in this parish belonging to the Establishment, and 1,520 belonging to other denominations.—A Relief church was founded here in 1784; sittings 849. Stipend £120, with manse, glebe, and some other emoluments.—A United Secession congregation was established in 1759. Church rebuilt in 1816; sittings 498. Stipend £105, with manse and garden.—The parochial schoolmaster has the minimum salary, with fees; and about 150 pupils. There are besides 8 private schools within the parish, attended by about 350 children.—Before the Reformation, there were two chapels for public worship in this parish; one where the present church now stands, and the other upon the lands of Treehorn, one end of which remains entire. This chapel, with two acres of land adjoining to it, belonged to the monastery of Kilwinning, as appears from a charter under the great seal, dated 1594.—Kilbirnie loch, which lies at the west end of this parish, is something more than a mile long, and about half-a-mile broad. It contains trouts, pikes, perches, &c., and is frequented in hard winters by aquatic birds of various kinds. The writer of the first Statistical account of this parish suggested that a navigable canal might easily be carried across the country, from the Clyde below Paisley, to the sea at Irvine or Saltcoats, a distance of about 20 miles, through a narrow strath, running in that direction most of the way. In the middle of this strath stands the loch of Kilbirnie, about an equal distance from each end of the proposed canal, and it occupies also nearly the highest ground between them. A stream runs from the north end of this loch into the Clyde below Paisley; and the water of Garnock, running in an opposite direction, passes by the other end of it, and empties itself into the sea at Irvine. The fall, from the north end of Kilbirnie loch to Clyde, is calculated to be about 95 feet, and the declivity towards the sea cannot be much more. The whole of this strath lies between the Kilbirnie hills on the north, and the rising uplands of Beith and Lochwinnoch parishes on the south; and is thought to have been at one time covered with water, forming an extensive lake, of which Kilbirnie and Lochwinnoch lochs, at the two extremities, are the remains.

BELHAVEN, a village in the shire of Haddington, and parish of Dunbar; within the parliamentary boundaries of which burgh it is included, though distant from it nearly one mile to the west. It is intersected by the Great post-road from Edinburgh to Berwick, and is close upon the sea, at the bottom of a small bay which in ancient times formed the haven of Dunbar. It gives the title of Lord to a branch of the family of Hamilton. In 1647, Sir

John Hamilton of Broomhill was created Lord Belhaven and Stenton. The title is now borne by a descendant of Hamilton of Wishaw. A strong sulphurous spring has recently been discovered here. It contains sulphur and hydrogen gas in considerable quantity; the muriates of lime and soda; and sulphate and muriate of magnesia both in large quantity.

BELHELVIE, a parish in the shire and district of Aberdeen; bounded on the north by Foveran; on the east by the German ocean; on the south by Old Machar; and on the west by New Machar. Its greatest length is 6 miles; greatest breadth 5. A great part of this parish formerly belonged to the Earl of Panmure, on whose forfeiture in 1715, it was purchased by the York Building company. In 1782, it was again sold, by order of the court of session, in sixteen different lots, since which partition a rapid improvement has taken place on the district. There is a great deposit of serpentine, or Portsoy marble, called also Verde d'Ecosse, near Milldens in this parish, about 6 miles from Aberdeen. Population, in 1801, 1,428; in 1831, 1,615. Houses 350. Assessed property, in 1815, £3,590.—This parish, formerly a rectory, belonging to the chapter of Aberdeen, is in the presbytery and synod of Aberdeen. Patron, the Crown. Stipend £179 12s. 10d., with a manse, and glebe of the value of £10. A part of the church is very old. An addition was made to it in 1690; and it was repaired in 1786 and 1790; sittings 519.—There is a United Secession congregation at Shiels. Church built in 1791; sittings 330. Stipend £72, with a house and garden.—Schoolmaster's salary £27 10s., with about £16 10s. fees, and house and garden. There are also three private schools within this parish.

BELL-ROCK, a reef in the German ocean, formerly called The Scape, and the Inch Cape, situated in 56° 26' N. lat.; and 2° 23' W. long.; about 12 miles south-east of Arbroath, and 30 north-west of St. Abb's Head; in the direct track of navigation, to vessels entering either the frith of Forth or the frith of Tay, and formerly much dreaded by the mariner as the most dangerous spot on the eastern coast of Scotland, or perhaps upon the whole coast of Great Britain. The rock is a red sandstone apparently of the same formation with the Redhead in Forfarshire, from which it is 11 miles distant. Its angle of inclination with the horizon is about 15°, and it dips towards the south-east. The reef is altogether about 2,000 feet in length, of which at spring-tide ebbs a portion of about 427 feet in length, by 230 in breadth, is uncovered to a height of about 4 feet; but at high water the whole is covered to the depth of 12 feet. At low water of spring-tides, and at the distance of 100 yards all round the rock, there are about 3 fathoms water. The lower parts of the rock are covered with fuci; seals frequent it at low water, when it also becomes the haunt of gulls, shags, and cormorants. In former times, mariners were warned of their proximity to this perilous reef by the booming of a bell, which one of the abbots of Arbroath had caused to be attached to the rock in such a way as to be tolled by the waves when the rock itself was covered. There is a tradition, that the bell was wantonly cut adrift by a Dutch pirate, whose vessel soon afterwards went to pieces on this very reef. Southey has made a fine ballad of this story, the insertion of which will perhaps gratify many readers:

"No stir on the air—no swell on the sea,
The ship was still as she might be;
The sails from heaven received no motion;
The keel was steady in the ocean;
With neither sign nor sound of shock,
The waves flowed o'er the Inch-Cape rock

So little they rose, so little they fell,
They did not move the Inch-Cape bell.
The pious abbot of Aberbrothock
Had placed that bell on the Inch-Cape rock :
On the waves of the storm it floated and swung,
And louder and louder its warning rung :
When the rock was hid by the tempest swell,
The mariners heard the warning bell,
And then they knew the perilous rock,
And blessed the abbot of Aberbrothock.

The sun in heaven shone bright and gay,
All things looked joyful on that day ;
The sea-birds screamed as they skimmed around,
And there was pleasure in the sound ;
The float of the Inch-Cape bell was seen,
A darker spot on the ocean green.
Sir Ralph the Rover walked the deck,
And he fixed his eye on the darker speck,
He felt the cheering power of spring,—
It made him whistle—it made him sing :
His heart was mirthful to excess,
But the Rover's mirth was wickedness ;
His eye was on the bell and float,—
Quoth he, ' My men, put down the boat,
And row me to the Inch-Cape rock,—
I'll plague the priest of Aberbrothock !'

The boat was lowered, the boatmen row,
And to the Inch-Cape rock they go.
Sir Ralph leant over from the boat,
And cut the bell from off the float.
Down sunk the bell with a gurgling sound ;
The bubbles rose, and burst around.
Quoth he, ' Who next comes to the rock
Wont bless the priest of Aberbrothock !'

Sir Ralph the Rover sailed away ;
He scoured the sea for many a day ;
And now grown rich with plundered store,
He steers his way for Scotland's shore.
So thick a haze o'erspread the sky,
They could not see the sun on high ;
The wind had blown a gale all day ;
At evening it hath died away.
On deck the Rover takes his stand,
So dark it is they see no land.

Quoth he, ' It will be brighter soon,
For there's the dawn of the rising moon.'
' Canst hear,' said one, ' the breakers roar ?
For yonder, methinks, should be the shore.
Now, where we are, I cannot tell,—
I wish we heard the Inch-Cape bell !'
They heard no sound—the swell is strong,
Though the wind hath fallen they drift along,
Till the vessel strikes with a shivering shock,
' Oh heavens ! it is the Inch-Cape rock !'

Sir Ralph the Rover tore his hair,
And cursed himself in his despair.
The waves rush in on every side ;
The ship sinks fast beneath the tide ;—
Down down, they sink in watery graves,
The masts are hid beneath the waves !
Sir Ralph, while waters rustle round,
Hears still an awful, dismal sound ;
For even in his dying fear
That dreadful sound assails his ear,
As if below, with the Inch-Cape bell,
The devil rang his funeral knell."

It was not until the year 1786, that a lighthouse board for Scotland was organized. The chief lights on the Scottish coast at this period were on the isle of May in the frith of Forth, and on the Little Cumbræ isle in the frith of Clyde: at both these stations, open coal-fires, placed in elevated choffers, were exhibited to the mariner. About the year 1800, the commissioners began to contemplate the erection of a lighthouse on the Bell rock. In 1806, they were authorized by act of parliament to proceed with the building, and operations were commenced in 1807 under the direction of Mr. Stevenson, whose plans had received the approbation of Mr. Rennie the celebrated engineer. The execution of the work occupied about four years, and the expense was £61,331 9s. 2d., toward which Government lent a sum of £30,000. The height of the lantern above high water is 90 feet; and the light—which is revolving, and bright and red alternately—is seen at the distance of 14 miles in clear weather. The reflectors—which measure 24 inches over the lips—consist of copper coated with silver, and formed into a parabolic curve of exquisite mathematical precision. In erecting this light-house, the first object was

to moor a vessel as near the Bell-rock as she could ride with any degree of safety, to answer the double purpose of a floating-light, and of a store-ship for lodging the workmen employed on the rock. This vessel measured 80 tons. She had three masts, on each of which a lantern was made to collapse and to traverse, which distinguished this light from the double and single lights on the coast. Under the deck, she was entirely fitted up for the accommodation of the seamen and artificers, with holds for provisions and necessaries. Thus furnished, she was moored about 2 miles from the rock, in a north-east direction, in 22 fathoms water, with a very heavy cast-iron anchor resembling a mushroom, and a malleable iron chain, to which the ship was attached by a very strong cable. In this situation, the floating light was moored in the month of July, 1807, and remained during the whole time the house was building, and until the light was exhibited in February, 1811, when she was removed.—The bill for the erection of the lighthouse passed late in the session of 1806, and during the following winter, the necessary steps were taken to have every thing in readiness to commence operations at the rock at the proper season. A work-yard, upon a lease of seven years, was provided at Arbroath, where shades for hewing the stones, and barracks for lodging the artificers, when they landed from the rock, were erected. Vessels for conveying the stones from the quarries to the work-yard, and from thence to the rock, were hired or built; and upon the 17th of August, 1807, the operations at the rock commenced. But little, however, was got done towards preparing the rock for the site of the building till the year following: the chief object of this season's work being to get some temporary erection on the rock to fly to in case of an accident befalling any of the attending boats. As the rock was accessible only at low water of spring-tides, and as three hours was considered a good tide's work, it became necessary to embrace every opportunity of favourable weather, both under night by the help of torch-light, and upon Sundays; for the water had no sooner begun to cover the rock, than the men were obliged to collect their tools, and betake themselves to the boats, which, when the wind shifted suddenly, were with great difficulty rowed to the floating-light. By the latter end of October, the work for the season was brought to a close, after erecting a beacon, which consisted of twelve beams of wood forming a common base of 36 feet, with 50 feet of height; the whole being strongly held to the rock by batts and chains of iron. The upper or third compartment of this beacon was used as a barrack for the artificers while the work was in progress; on the second floor, which was fixed at the height of 25 feet from the rock, the mortar was prepared, and a smith's forge erected for sharpening the tools used in preparing the rock. On several occasions the violence of the sea lifted this floor, but none of the batts were shaken, and it remained on the rock till the summer of 1812, when it was removed. To the erection of this beacon, the rapidity with which the lighthouse was got up is chiefly to be ascribed. It is extremely doubtful, indeed, if ever it would have been accomplished, without some such expedient,—certainly not without the loss of many lives; for in a work of this nature, continued for a series of years, it is wonderful that only one life was lost on the rock, by a fall from a rope-ladder when the sea ran high, and another at the mooring-buoys, by the upsetting of a boat.—The operations of the second season were begun at as early a period as the weather would permit. The risk and often excessive fatigue which occurred every tide, in rowing the boats to and from the rock to the floating-light,

made it necessary to have a vessel which, in blowing weather, could be loosened from her moorings at pleasure, and brought to the lee-side of the rock, where she might take the artificers and attending boats on board. A new vessel of 80 tons was accordingly provided, and named *The Sir Joseph Banks*, in compliment to that worthy baronet, who, ever ready in the cause of public improvement, had lent his aid in procuring the loan from government for carrying this work into execution. Through much perseverance and hard struggling with the elements, both during day and night-tides, the site of the lighthouse was got to a level, and cut sufficiently deep into the rock. Part of the cast-iron railways for conveying the stones along the rock was also got ready; on the 10th July, 1808, the foundation-stone was laid; and by the latter end of September, the building-operations were brought to a conclusion for the season, the first four courses of the lighthouse having been completed. A stock of materials being procured from the granite quarries of Aberdeenshire, for an outside-casing to the height of 30 feet, and from the freestone quarries of Mylnfield near Dundee, for the inside and upper walls, a number of masons were kept in the work-yard at Arbroath, and every preparation made during the winter-months for the work at the rock against next season. The stones were wrought with great accuracy, laid upon a platform course by course, numbered and marked as they were each to lie in the building, and then laid aside as ready for shipping,—a part of the work which was performed with wonderful dexterity, for the vessels were generally despatched with their cargoes on the tide following that of their arrival.—At the commencement of the operations in April, 1809, the four courses built during the preceding season were found to be quite entire, not having sustained the smallest injury from the storms of winter. In the arrangements for the work, the first thing to be done was to place the moorings for the various vessels and boats employed in attending the rock and landing the materials; the machinery for receiving the stones from the praam-boats was also erected, and cranes for laying the stones in their places upon the building. With an apparatus thus appointed, the lighthouse was got to the height of 30 feet by the month of September, 1809, when the work was again left off during the winter-months.—Early in the spring of 1810, the building was resumed, but with very faint hopes of bringing the whole to a close in the course of that year: however, not a single stone was lost or damaged, and, by the month of December every thing was got into its place; and the interior having been finished, the light was exhibited, for the first time, on the night of the 1st of February, 1811.

The foundation-stone of the lighthouse is nearly on a level with the low water of ordinary spring-tides; consequently the lower part of the building is about 15 feet immersed in water when the tide has flowed to its usual height at new and full moon. But during the progress of the work, the sea-spray has been observed to rise upon the building to the height of 80 feet, and upon one occasion to 90 feet, even in the month of July. The building is of a circular form, measuring 42 feet diameter at the base, from which it diminishes as it rises, so as to measure only 13 feet at the top where the light-room rests: including which, its height is altogether 115 feet. To the height of 30 feet it is entirely solid, excepting a drop-hole of 10 inches in diameter for the weight of the machinery which moves the reflectors. The ascent to the door—which is placed at the top of the solid—is by a kind of rope-ladder. A narrow passage leads from the door to the staircase, where

the walls are 7 feet in thickness: at the top of the staircase, which is 13 feet in height, the walls get thinner, and diminish gradually to the top. Above the staircase, the ascent to the different apartments is by means of wooden-ladders; and the remaining 57 feet of masonry is divided by five stone floors into rooms for the light-keepers, and stores for the light. The three lower apartments have each two small windows, while the upper rooms have each four windows; and the whole are provided with strong shutters to defend the glass against the sea in storms. The two first courses of the building are entirely sunk into the rock; the stones of all the courses are dove-tailed and let into each other, in such a manner as that each course of the building forms one connected mass; and the several courses are attached to each other by joggles of stone and oaken trenails, upon the plan of the Eddystone lighthouse. The cement used at the Bell-rock was a mixture of pozzolana earth, sharp sand, and lime; which last was brought from Aberthaw in Wales, where the lime for the Eddystone lighthouse was got. Round the balcony of the light-room, there is a cast-iron rail, curiously wrought like net-work, and resting on bats of brass. The light-room is 12 feet diameter, and 15 feet in height, made chiefly of cast-iron, with a copper roof. The windows are glazed with plates of polished glass, one quarter of an inch thick, and measuring 2 feet 6 inches by 2 feet 3 inches. The light is from oil, with Argand burners, placed before the reflectors already noticed. That the Bell-rock light may be distinguished from all others on the coast, the reflectors are ranged upon a frame which is made to revolve upon a perpendicular axis once in three minutes. Before some of the reflectors are placed shades of red coloured glass; so that the effect produced in each revolution of the frame with the reflectors, is a light of the natural appearance, and a light with the rays tinged red, with intervals of darkness between the lights. During the continuance of thick and foggy weather, two large bells are tolled night and day by the same machinery which moves the lights; and as these bells may be heard in moderate weather considerably beyond the limits of the rock, the mariner may be advertised of his situation in time to put about his vessel before any accident can happen. When these works were begun, it was a very common saying, that although the Bell-rock lighthouse were built, (which it never would be,) no one would be found hardy enough to live in it. The sequel has, however, shown the fallacy of such a supposition; for no sooner was the house ready for possession, than numerous applications were made for the situation. Of these applicants, a principal light-keeper and three others were nominated, and they took up their abode in the building at Martinmas, 1810; each, in his turn, gets ashore at the end of every six weeks, and remains a fortnight, when he goes off to the lighthouse again. The pay of the light-keepers is about £50 per annum, with provisions while they are at the lighthouse; but ashore they provide for themselves. At Arbroath, there are buildings erected in which each keeper has apartments for the accommodation of his family; and, connected with this establishment, there is a very handsome signal-tower, 50 feet in height, in which an excellent achromatic telescope is kept, and signals arranged with the people at the rock for the attending-vessel: this vessel is about 50 register tons, and attends also on the isle of May and Inchkeith light-houses.

BELL'S MILLS, a village on the Water of Leith, in the immediate neighbourhood of Edinburgh, on the Queensferry road. It is a curious stragglingly built village, but receives its name from

very extensive flour mills which have long existed here.

BELLIE,* a parish partly in Moray, and partly in Banffshire; extending from south to north nearly 6 miles; and from east to west almost 4. It is bounded on the north by the Moray frith; on the south-east by Rathven and Boharm; and on the west by the Spey. A considerable portion of this area, to about 4 miles from the sea, is contained within the ancient banks of the river Spey, which has greatly shifted its channels at different periods. At Gordon castle, which lies between the old and the new course of the river, these banks are near a mile distant from each other; but they gradually widen in their approach to the sea, and where the river falls into the frith, are nearly 2 miles asunder. This district suffered severely during the great floods in 1829. **GORDON CASTLE**, well known to be one of the noblest palaces in Britain, and which attracts the notice of all travellers, will be described in a separate article in this work. About a mile north of Gordon castle, and 3 south of the frith, stood the old parish-church of Bellie, now translated to the town of **FOCHABERS**: which see. There is a capital salmon-fishery here upon the Spey. It extends, from Speymouth, about 5 miles. Population, in 1801, of that part of the parish which is in Banff, 1,802; and in 1831, 1,151; of that part in Moray, in 1831, 1,281. Assessed property of the former division, in 1815, £8,960; of the latter, £2,282. Houses in Banffshire, 218; in Moray, 273.—This parish, formerly a vicarage, is in the presbytery of Strathbogie, and synod of Moray. Patron, the duke of Richmond. Stipend £173 16s. 2d., with a manse, and a glebe of the value of £33. Schoolmaster's salary £34 4s. 4½d., with a proportion of Dick's bequest, and about £20 school-fees. Average number of scholars 45. There were, in 1834, eight private schools within this parish, attended by about 300 children.

BELMONT, one of the Sidlaw hills, in the district of Strathmore, rising to an altitude of 759 feet above sea-level.

BELRINNES. See **BENRINNES**.

BELTON, an ancient rectory, in the shire of Haddington, now comprehended in the parish of Dunbar. It is situated on a small stream, the Biel, at the distance of 2 miles south-west of the town of Dunbar.

BENABHRAGIDH, a mountain in the parish of Golspie, Sutherlandshire, in the vicinity of Dunrobin castle, rising to 1,300 feet above sea-level. It is composed of red transition sandstone and breccia.

BENACHALLY, a mountain in the parish of Clunie, Perthshire, about 5 miles north-east of Birnam, having an altitude of 1,800 feet, and commanding a splendid view of the **STORMONT**: which see. On its northern side, at an elevation of about 900 feet, is a lake about a mile in length, and ½ mile in breadth.

BENACHOLAIS. See **JURA**.

BENALDER, a mountain on the borders of Inverness and Perthshire, on which the unfortunate Prince Charles Stuart lay concealed several weeks, till the arrival of the French frigate which conveyed him from this country.

BENAN, or **BENNAN**, a mountain in the parish of Straiton, in Ayrshire, about half-a-mile south of Straiton village. Altitude 1,150 feet.

* * * Bellie has been imagined by some to be the Gaelic *Bellaigh*, signifying 'broom'; but others, more justly, reckon it a compound from the two Gaelic words *beul* and *aith*, meaning 'the Mouth of the Ford.' This etymology is perfectly natural, as, a little above the church, there was—till the prodigious flood in 1768 destroyed it, and opened various channels—one of the finest fords upon the Spey, over which his majesty's army passed with safety in 1746, a few days before the battle of Culloden.—*Old Statistical Account*.

BENANOIR, one of the peaks of Jura, having an altitude of 2,420 feet above sea-level, according to Pennant, or 2,340 according to Dr. Walker. Pennant ascended this mountain†—which he calls *Beinn-an-óir*, or 'the Mountain of Gold'—and describes the task as one of much labour and difficulty. The best ascent to it is from the bay of the Small isles, passing Corrabhain, the most precipitous but lowest of the cluster. It is composed, Pennant says, "of vast stones, slightly covered with mosses near the base, but all above bare, and unconnected with each other. The whole seems a cairn, the work of the sons of Saturn; and Ovid might have caught his idea from this hill, had he seen it."

*Affectasse ferunt regnum celeste gigantes,
Altaque congestos struxisse ad sidera montes.*

Gain the top, and find our fatigues fully recompensed by the grandeur of the prospect from this sublime spot: Jura itself afforded a stupendous scene of rock, varied with little lakes innumerable. From the west side of the hill ran a narrow stripe of rock, terminating in the sea, called the slide of the old hag. Such appearances are very common in this island and in Jura, and in several parts of North Britain, and the north of Ireland, and all supposed to be of volcanic origin, being beds of lava of various breadths, from three feet to near seventy. Their depth is unknown; and as to length, they run for miles together, cross the sounds, and often appear on the opposite shores. They frequently appear three or four feet above the surface of the ground, so that they are called on that account *whin-dikes*, forming natural dikes or boundaries. The fissures were left empty from earliest times. It is impossible to fix a period when some tremendous volcanic eruption happened, like that which of late years infested Iceland with such fatal effects, and filled every chasm and every channel with the liquid lava. Such a stream poured itself into these fissures, and having cooled and consolidated, remains evident proofs of the share which fire had in causing the wondrous appearances we so frequently meet with and so greatly admire. In a certain bay in the isle of Mull, there remains a fissure which escaped receiving the fiery stream. The sides are of granite: the width only nine or ten feet; the depth not less than a hundred and twenty. It ranges north by west, and south by east to a vast extent: and appears against a correspondent fissure on the opposite shore. In the *Phil. Trans. Tab. iv.* is a view of this tremendous gap, together with the two stones which have accidentally fell, and remained hitched near the top of the northern extremity. These, and numbers of other volcanic curiosities in the Hebrides, are well-described by Abraham Mills, Esq. of Macclesfield, who in 1788 visited several of the islands, and in the lxxxth vol. of the *Phil. Trans.* has favoured the public with his ingenious remarks. To the south appeared Ilay, extended like a map beneath us; and beyond that, the north of Ireland; to the west, Gigha and Car, Cantyre, and Arran, and the frith of Clyde bounded by Ayrshire; an amazing tract of mountains to the north-east as far as Benlomond; Skarba finished the northern view and over the Western ocean were scattered Colonsay and Oransay, Mull, Iona, and its neighbouring groupe of isles; and still farther the long extents of Tirey and Col just apparent. On the summit are several

† Lord Teignmouth during his excursion in Scotland in 1826 had an interview with the laird of Jura who had accompanied Pennant on this expedition. "Pennant he assured me," says his lordship—"descended much more happily than he ascended on the strength of a glass of whisky which he had prevailed on him to drink, a beverage to which the traveller expressed a dislike. Mr. Campbell said of Pennant that he derived his information too much from the lower classes."—*Sketches*, vol. ii. pp. 335, 336.

lofty cairns, not the work of devotion, but idle herds, or curious travellers. Even this vast heap of stones was not uninhabited: a hind passed along the sides full speed, and a brace of ptarmigans often favoured us with their appearance, even near the summit. The other paps are seen very distinctly: each inferior in height to this, but of all the same figure, perfectly mammillary. Mr. Banks and his friends mounted that to the south, and found the height to be 2,359 feet;* but Beinn-an-óir far over-topped it: seated on the pinnacle, the depth below was tremendous on every side. The stones of this mountain are white (a few red), quartz, and composed of small grains; but some are brecciated, or filled with crystalline kernels of an amethystine colour. The other stones of the island that fell under my observation, were a cinereous slate veined with red, and used here as a whetstone; a micaceous sandstone; and between the small isles and Ardefin, abundance of a quartz micaceous rockstone."

BENARTHUR. See **ARROQUHAR.**

BENAVEN, in the south-west extremity of Aberdeenshire, one of a noble groupe of mountains forming the highest of the Grampians. Its altitude is estimated by Playfair at 3,931 feet; by some others at 3,967 feet.

BENBECULA, one of the Hebrides, lying between the islands of North and South Uist, from the last of which it is separated by a narrow channel nearly dry at low water. It is a low flat island, measuring about 8 or 9 miles each way. The soil is sandy and unproductive. In the interior are several fresh water lakes; and its shores are indented with an endless variety of bays, and fringed with islands. "The sea," says Macculloch, "is here all islands, and the land all lakes. That which is not rock is sand; that which is not mud is bog; that which is not bog is lake; and that which is not lake is sea; and the whole is a labyrinth of islands, peninsulas, promontories, bays, and channels." This island is an ancient property of the chiefs of Clanranald.

BENCAIRN, a mountain in Kirkcudbrightshire, in the parish of Rerwick, rising 1,200 feet above sea-level.

BENCHOCHAN, a mountain in the parish of Aberfoyle, Perthshire, rising to the height of 3,000 feet above sea-level.

BENCHONZIE, a mountain of Perthshire, in the northern extremity of the parish of Monivaird, having an altitude, according to Jameson, of 2,923 feet.

BENCLOCH, or **BENCLEUGH**, the highest of the Ochils, in the parish of Tillicoultry, Clackmannanshire. It is mostly composed of granite, containing large crystals of black schearl. It rises to the height of 2,420 feet above the level of the Devon, which runs at its base.

BENCLYBRIC, or **BEINCHLIBRIG**, the highest mountain in Sutherlandshire, on the skirts of the parishes of Lairg and Farr. Its form is conical, and its altitude about 3,200 feet.

BENCRUACHAN, a magnificent mountain of Argyleshire, in the district of Lorn, between Loch Etive and Loch Awe. It has an elevation of 3,393 feet according to Jameson, or 3,390 feet according to an admeasurement of Colonel Watson; and its base is 20 miles in circuit. Its steepest side is towards the north-east; from the south it rises gently, and may be ascended with considerable ease. Macculloch says of it: "Compared to Benlomond it is a giant; and its grasp is no less gigantic. From the bold granite precipices of its sharp and rugged sum-

mit—which is literally a point—we look down its red and furrowed sides into the upper part of Loch Etive and over this magnificent group of mountains, which, extending northward and eastward, display one of the finest landscapes of mere mountains in the Highlands. Its commanding position not only enables us thus to bring under our feet the whole of this group as far as Appin and Glenco, and even to Ben Nevis, but opens a view of the whole of the eastern ocean of mountains, reaching from Rannoch as far as Ben Lawers and Benlomond, and, beyond them, to lands which only cease to be visible because they at length blend with the sky. So marked also are their characters, so rocky and precipitous their summits, and so varied their forms, that this landscape excels, in variety as in picturesque character, all other landscapes of mere mountains, excepting perhaps that from Ben Lair in Ross-shire. The view which it yields, of the opener country, is not much inferior to that from Ben Lawers, if indeed it is inferior; and, in this respect, it can only be compared with that mountain and Benlomond. While it looks down on the long sinuosities of Loch Awe and over the irregular lands of Lorn, bright with its numerous lakes, it displays all the splendid bay of Oban and the Linnhe Loch, with Jura, Isla, and all the other islands of this coast: commanding, besides, the horizon of the sea, even beyond Tirey and Coll, together with the rude mountains of Mull and the faint and blue hills of Rum and Sky; a scene as unusual as it is rendered various by the intermixture of land and water, by the brilliant contrast of these bright and intricate channels with the dark and misty mountains and islands by which they are separated, and by the bold and decided forms of all the elements of this magnificent landscape."

BENDEARG, a mountain in Athole, Perthshire. Altitude 3,550 feet. See **BLAIR-ATHOLE.**

BENDORAN, a mountain in Glenorchy, Argyleshire, on the western confines of Perthshire, and a little to the eastward of the outlet of the Orchy from Loch Tulla.

BENDOTHY, or **BENDOCKY**, a parish in Perthshire; bounded on the north by a detached portion of Blairgowrie parish, and by Alyth; on the east by Alyth and Cupar-Angus, from the latter of which it is separated by the windings of the Isla; on the south by Cupar-Angus; on the west by Blairgowrie and Rattray. There is a detached portion of the parish, separated from it, on the north-west, by the intervention of Alyth and Blairgowrie parishes. Population, in 1801, 860; in 1831, 780. Assessed property £4,863. Houses 136.—This parish, formerly a vicarage, is in the presbytery of Meigle, and synod of Angus and Mearns. Patron, the Crown. Stipend £251 17s. 6d., with a manse, and glebe of the value of £14. Church repaired in 1752 and 1803; sittings 380. The highland district of this parish has been assigned to the chapel at PERSIE: which see. Salary of parochial schoolmaster £34 4s. 4½d., with about £10 fees. Average number of pupils 50. There were three private schools in this parish in November, 1834, each attended upon an average by 76 pupils.

BENGLOE, or **BENYGLOE**, a mountain, or rather ridge of mountains, in Athole, which attains an altitude in some points of 3,690, and according to others of even 3,725 feet. See **BLAIR-ATHOLE.**

BENHOLME, a parish in Kincardineshire, about 3 miles in length, and nearly as much in breadth. The German ocean bounds it on the south-east; on the south-west it is bounded by St. Cyrus; on the north-west by Garvock; and on the north-east by Bervie. The face of the country is considerably diversified. Close upon the shore lies a narrow strip of land almost level with the sea.

* This must be Benshianta, or 'the Mountain of Enchantment,' which is about 60 feet lower.

Adjoining to this, a bank or rising ground of considerable height extends the whole length of the parish. Above this ancient boundary of the ocean—which is steep in some places, and slopes gently in others—the ground rises by an unequal ascent towards the north-west. A chain of little hills, whose summits are covered with heath, run along the south-west boundary; and a piece of rising ground, called Gourdon hill, which attains an altitude of about 400 feet, terminates the view on the north-east. The interior parts of the parish consist of hill and dale. The coast abounds with fish and shell-fish of various kinds. The census of 1831 returned 28 men as engaged in fishing in this parish. Some coarse linen is woven in this parish. In so little repute was farming in this district, before the year 1712, that the proprietor of Brotherston found it necessary to give premiums in order to induce tenants to rent his farms! To one he gave a present of 500 merks, and farm-stocking to the value of 2,000 merks, free of interest for three years; to another the same sum in a present, and 3,000 merks value of stock for his farm, free of interest for four years. "There is no necessity now," says the writer of the old Statistical account of this parish, "for holding out pecuniary temptations to the farmer: since the above-mentioned period, the rents are tripled, and numbers are still ready to offer a considerable advance when the lease of a farm expires." In the New Statistical account it is stated, that the average rent of land here is £1 12s. per acre, and that husbandry "is in a state of high improvement." By a survey of the county, taken in 1774, this parish contains 4,721 English acres, of which nearly a fifth part was uncultivated at the close of last century. About the beginning of the 18th century, the greatest part of the property within this district belonged to the Earl Marischal, whose ancient dominion in these parts can now only be traced from records and monumental inscriptions. Not long after that period, all this parish, except Balandro, formed the estate of Benholme, and belonged to a proprietor of the name of Keith, probably a younger branch, or near relation of the Marischal family. It was afterwards divided among his heirs into four portions, which now compose different estates of Benholme, Brotherston, Nether-Benholme, and Knox. The principal village is the fishing-village of **JOHNHAVEN**: which see. Population, in 1801, 1,412; in 1831, 1,441, of whom about 1,020 resided in the village of Johnshaven. Houses 344. Assessed property £3,957.—This parish is in the presbytery of Fordun, and synod of Angus and Mearns. Patrons, Scott of Benholme, and Scott of Brotherston. Stipend £232 4s. 1d., with a manse, and glebe of the value of £12 10s. Unappropriated teinds £28 4s. 4d. The church stands nearly in the centre and most agreeable part of the parish. The old church, an irregular Gothic building, was taken down in 1832, and a new building erected on its site, capable of accommodating 750 persons. There is a United Secession church at Johnshaven, the origin of which is thus accounted for in the old Statistical report:—"All the inhabitants of this parish, except a few who continued their attachment to the Episcopal religion, were regular attendants on public worship as established in the Church of Scotland, till about the year 1763. At that time, the minister's anxiety to improve the church-music, led him to adopt the more approved method of singing without intermission, or reading the line, as it is called. This gave umbrage to many, who had been accustomed to hear every line separately given out by the precentor or clerk, before the congregation joined in the psalm. They were forced to acknowledge that the psalmody would be im-

proved by singing without interruption; but they urged, that many who could not read, would, by that means, be entirely excluded from joining in this part of public worship. Whether a regard to the good of others, was the real, or only the ostensible cause of this opposition; or whether it proceeded from a dread of innovation, they persisted in it. They remonstrated again and again; and when their remonstrances were not attended to, abandoned the church, built one for themselves in Johnshaven, and invited a minister of the Secession to settle among them." There are a parochial school, the master of which has the maximum salary, and six undendowed schools in this parish.—Among the few antiquities in this parish, may be mentioned a square tower, the ancient residence of the family of Benholme, and still entire, though not inhabited. From its peninsular situation, thickness of walls, and battlements, this building seems to have been originally intended for a place of strength.—On the summit of the nearest hill to the sea, except one, bordering with the parish of Cyrus, and commanding an extensive prospect, stands a rough stone, in the circumference of a stony circle, commonly called the Cloach stone. It is more than a foot thick, measures 8 feet along the ground, and rises nearly 6 above its surface, in an inclined direction towards the north. Tradition says, a battle was fought near this place, and the number of flint-heads of arrows, found on the side of the hill where it stands, affords some reason to credit this report. Between this and the coast, a great quantity of human bones has been dug up, in the course of improving the land, for nearly the space of a mile along the rising ground above Johnshaven. The bottom and sides of the graves, containing these bones, are always lined with rough stones.—On an eminence bordering with Garvock, called Kinchet, or, more properly, King's Seat hill, there is a large heap of stones, where, according to tradition, a king used in ancient times to sit in judgment. Among other complaints here preferred to him, many were lodged against Melville of Allardice, at that time sheriff of the county, for his oppression. The royal judge, either wearied with the complainers, or enraged at the offender, exclaimed, "I wish that sheriff were sodden and supped in brose!" Such was the savage barbarity of the times, that the barons, who were little accustomed to the formalities of a trial, laid hold on these words, and put them literally in execution. The place where the deed was perpetrated, at the bottom of the hills, on the side next Garvock, is not unlike the cavity of a kiln for drying corn, and still retains the name of the Sheriff's kettle. The writer of the old Statistical account thus concludes his notices of this parish: "About fifty years ago, the excise officer's family was the only one in Johnshaven that made use of tea. When the tea-kettle was carried to the well, to bring in water, numbers both of children and grown people followed it, expressing their wonder, and supposing it to be 'a beast with a horn!' In those days of simplicity, a watch or an eight-day clock would have created equal surprise. Now the tea-kettle has lost the power of astonishing, having become a necessary piece of furniture among the meanest: and one can scarcely enter a house where he is not put in mind of the fleeting of time from some one corner of it."

BENHOPE, a noble mountain of Sutherlandshire, towering to the height of 3,150 feet above sea-level. It extends in a south-west direction along the vale of Strathmore in the parish of Durness. It may be approached by the road leading from the head of Loch Eribol to Loch Naver; or from the head of Loch Hope, which stretches from its west-

ern base towards Loch Eribol. It is composed of quartz and grey slate.

BENHORN, a mountain of Sutherlandshire, in the parish of Golspie. Altitude 1,712 feet.

BENLAWERS, a mountain of Perthshire, in the parish of Kenmore, on the north-east side of Loch Tay. Its altitude is stated by some at 3,944 feet; by others, at 4,015 feet above sea-level. It is easy of ascent; so much so, that one may, in perfect safety, ride to the summit. Benlomond alone can, probably, compete with this mountain for grandeur of the view to be obtained from it. But a much greater variety, and a greater range of country can be seen from Benlawers; and it has this advantage, that it towers over all the neighbouring mountains, by more than 1,000 feet. Words cannot express the grandeur and variety of the view from Benlawers; but a faint conception of it may be formed from the extent of country it embraces. Looking to the south, the lake with all its ornaments of wood and field, lies at our feet, terminating towards the west in the rich valley of Killin, and joining eastward with the splendour of Strath-Tay. Beyond the lake the successive ridges of hills embosoming Strath-Earn, lead the eye to the Ochills and the Campsie fells, and beyond even to Edinburgh. Dunkeld and its scenery are also distinctly visible; and we can make out, with ease, the bright estuary of the Tay, the long ridge of the Sidlaw hills, and the plain of Strathmore. Westward, we trace the hills of Loch Lomond and Loch Katrine, and, indeed, every marked mountain as far as Oban. Cruachan and Buachaille-Étive are particularly conspicuous. To the north, Shehallion and its adjoining mountains, with the valley of the Tummel and Loch-Rannoch, as far as Loch-Laggan, which appears like a bright narrow line. In this direction the eye is carried as far as Glencoe and Bennevis, on the one hand; while, on the other, Benyglloe lifts its complicated summit above the head of Ferrogan; and, beyond this the mountains of Marr and of Cairngorm, at the head of the Dee, some of them marked with perpetual snow, are the last that can be traced. This mountain presents a most interesting field to the botanist. Amongst other very rare plants the *Gentiana nivalis* has been found upon it.

BENLEDI, a mountain of Perthshire, 2 miles west of Callander, rising to 3,009 feet, according to some, but according to others—and more correctly we believe—to only 2,863 feet above sea-level. It commands an extensive prospect of Stirlingshire and the windings of the Forth.

BENLOMOND, a mountain renowned in song and story, situated on the eastern bank of Loch-lomond, in the parish of Buchanan, in Stirlingshire, at the south-west extremity of the Grampian chain. Its altitude has been variously estimated at 3,262, 3,175, and 3,091 feet.* We are inclined to adopt the second of these admeasurements, which is that of Mr. Galbraith. [See 'Edinburgh New Philosophical Journal,' vol. vi. p. 126.] In every view, Benlomond is an object of interesting grandeur. When approaching it,—whether we advance from the lake, or from its south-eastern base,—it is impossible to do so without all the higher feelings of our nature being excited. The journey to the top is long and laborious—from the inn at Rowardennan it is about 6 miles—but the horizon extends at every step, and

the labour is richly repaid from the magnificence of the view which it affords:

It is the land of beauty, and of grandeur,
Where looks the cottage out on a domain
The palace cannot boast of. Seas of lakes,
And hills of forests!—Torrents here
Are bounding floods! and there the tempest roams
At large, in all the terrors of its glory!

The lake, with its numerous islands, are spread out beneath the feet of the traveller; the cities of Edinburgh and Glasgow are seen sparkling in the sun-beam; the whole county of Lanark, and the rich vale of the Clyde, with all its towns and villages, the hill of Tintock, and the distant mountains of Cumberland, attract the eye toward the south. To the west are seen the counties of Renfrew and Ayr, the frith of Clyde, with the islands of Arran and Bute, and beyond this the distant Atlantic and the coast of Ireland; on the east, the county of Stirling, with the windings of the Forth, the fertile plains of the Lothians, and the castles of Edinburgh and Stirling; on the north the prospect is awfully sublime, presenting mountain piled on mountain,—Bencruachan towering above Benvoirlich and all his brethren in the foreground,—and Bennevis rearing his still loftier head in the extreme distance, while nearer at hand are seen,

"Craggs, knolls, and mounds, confusedly hurled,
The fragments of an earlier world,
And mountains, that like giants stand,
To sentinel enchanted land."

None meet the view, from the base of Benlomond to the Western ocean. The northern side of this mountain presents an aspect peculiarly terrific. Here the mighty mass, which hitherto had appeared to be an irregular cone placed on a spreading base, suddenly presents itself as an imperfect crater, with one side forcibly torn off, leaving a stupendous precipice of 2,000 feet to the bottom. Standing on the brink of this tremendous precipice, from which most travellers recoil with terror, the spectator is above the region of the clouds, which are seen floating in the atmosphere beneath, or enveloping the sides of the mountain. The effect of the rainbow, as seen from hence, is "beautiful exceedingly." But when the forked or sheeted lightning is beheld flashing below, and the thunder heard, pealing and reverberating among the mountains, the awful pomp and majesty of the scene is heightened in an immeasurable degree; the spectator, overwhelmed with sensations of grandeur and sublimity, feels as if he had shaken off for a time this mortal coil and all terrestrial impressions, and were no longer a denizen of this nether sphere. "In such a situation," says Dr. Stoddart, "the most sublime sensations cannot be felt, unless you are alone. A single insulated being, carrying his view over these vast, inanimate masses, seems to feel himself attached to them, as it were, by a new kind of bond; his spirit dilates with the magnitude, and rejoices in the beauty of the terrestrial objects and,

— the near heav'ns their own delights impart."

In the summer months, this mountain is visited by strangers from every quarter of the island, as well as foreigners, who come to view the romantic scenery of the highlands; the month of September is in general accounted the best for ascending it, because from

eye. That which you look toward, as one unbroken surface, upon your approach appears divided by impassable valleys; an unheard rill becomes a roaring torrent; and a gentle slope is found to be an unscalable cliff. These circumstances rendered me unable to reach the top, with the most persevering toil, in less than three hours. The higher ridges are remarkably green, and, like most lands in such situations, very wet and boggy; until you reach the last ascent, which is steep, and formed mostly by huge fragments of slaty rock, intermixed with a kind of sparry marble, of very considerable size."—Stoddart's 'Remarks,' vol. i. p. 234.

* In the 'Beauties of Scotland' its height is stated to be 3,362 feet; in Black's 'Picturesque Tourist,' 3,242 feet; in the old Statistical account, and in the 'Geography of Great Britain' published by the Society for the Diffusion of Useful Knowledge, 1,080 yards.

† "The easiest path lies along a green ridge, very conspicuous from below; but any one who has climbed such a mountain, must know how greatly its breaks and chasms deceive the

the cool temperature of the air, the horizon is then less clouded by vapours than during the more intense heats of summer. Those who wish to visit the summit, may either take a boat from Luss to Rowardennen, or cross over from Inverglas, or be ferried over from Tarbet. On a pane of glass, in the window of this last-mentioned inn, or rather of the old inn of Tarbet, some verses were written by an English gentleman who had ascended Benlomond, and was probably afterwards confined at Tarbet by rain. Though these verses have been copied into almost every guide and tour-book, yet as they contain some very good advice and instruction to those who wish to ascend the mountain, and at the same time possess a considerable share of merit, we shall take the liberty of presenting them to our readers.

Stranger! if o'er this pane of glass perchance
Thy roving eye should cast a casual glance,—
If taste for grandeur, and the dread sublime,
Prompt thee Benlomond's fearful height to climb,—
Here stop attentive, nor with scorn refuse
The friendly rhymings of a tavern muse.
For thee the muse this rude inscription plann'd,
Prompted for thee her humble poet's hand.
Heed thou the poet; he thy steps shall lead,
Safe o'er yon towering hill's aspiring head.
Attentive then to this informing lay,
Read how he dictates, as he points the way.
Trust not at first a quick adventurous pace;
Six miles its top points gradual from the base.
Up the high rise with panting haste I pass'd,
And gain'd the long laborious steep at last.
More prudent thou, when once you pass the deep,
With measur'd pace and slow ascend the steep.
Oft stay thy steps, oft taste the cordial drop,
And rest, oh! rest, long, long upon the top.
There hail the breezes, nor with toilsome haste,
Down the rough slope thy precious vigour waste;
So shall thy wondering sight at once survey,
Vales, lakes, woods, mountains, islands, rocks, and sea;
Huge hills, that heap'd in crowded order stand,
Stretch'd o'er the northern and the western land;
Vast lumpy groups! while Ben, who often shrouds
His lofty summit in a veil of clouds,
High o'er the rest displays superior state,
In proud pre-eminence, sublimely great.
One side, all awful, to th' astonished eye
Presents a steep three hundred fathoms high.
The scene tremendous, ah! shocks the startled sense,
In all the pomp of dread magnificence.
All this, and more shalt thou transported see,
And own a faithful monitor in me.

THOMAS RUSSELL, Oct. 3, 1771.

Benlomond is chiefly composed of granite, interspersed with great quantities of quartz. This last mineral is found near the top, in immense masses, some of which must weigh several tons; these appear like patches of snow upon the mountain, even when seen from Luss. Considerable quantities of micaceous schistus are found, even at the top, and many rocks towards the base of the mountain are entirely composed of this mineral. Plovers abound near the middle of the mountain, grouse a little

higher, and near the top ptarmigans are occasionally seen. To the botanist, Benlomond affords a fund of great amusement; as we ascend, we find the plants we had left below assume a very different appearance, and some very rare and beautiful species are found in abundance. The *Alchemilla alpina*, or cinquefoil ladies mantle, grows upon all the upper part of the mountain. The *Sibbaldia procumbens*, or procumbent silver-weed, distinguished by its tridentate leaves, grows in great quantity, even on the very summit. The *Silene acaulis*, or moss catchfly, the leaves of which form a beautiful green turf, like a carpet, which is variegated with a fine purple flower, grows in large patches. The *Rubus chamaemorus*, or cloud-berry, is found in great quantities, about half-way up the south-east side of the mountain: the blossoms of this plant are of a purplish white, succeeded by a bunch of red berries, which are ripe in July, and have a flavour by no means unpleasant. These berries are much esteemed by many northern nations, but probably for want of finer fruits. The Laplanders bury them under the snow, and thus preserve them fresh from one year to another. They bruise and eat them with the milk of the rein-deer. The *Azalea procumbens*, or trailing rosebay, the smallest of woody plants, was first found here by Dr. Stuart, of Luss, but is not very plentiful. The *Trientalis Europæa*, or chick-weed-wintergreen—the only British plant of the class Heptandria—grows in the woods near the base of the mountain. The *Pinguicula vulgaris*, *Narthecium ossifragum*, and *Thymus acinus* likewise abound. Very near the inn of Rowardennen, are to be found great quantities of the *Drosera rotundifolia*, or round-leaved sundew, and *Drosera Anglica*, or great sundew. These plants catch flies, by shutting up their leaves, and crushing them to death; in this they resemble the *Dionæa muscipula*, or American fly-eater.

At Craigrostan, on the western side of Benlomond, is a cave, to which tradition has assigned the honour of affording shelter to King Robert Bruce, and his gallant followers, after his defeat by M'Dougal of Lorn, at Dalry. Here, it is said, the Bruce passed the night, surrounded by a flock of goats; and he was so much pleased with his nocturnal associates, that he afterwards made a law that all goats should be exempted from grass mail or rent. Next day, tradition adds, he came to the Laird or Buchanan, who conducted him to the Earl of Lennox, by whom he was sheltered for some time, till he got to a place of safety. Craigrostan was in a later age the property of the celebrated outlaw, Rob Roy M'Gregor; and north of it is a cave, said to have been used by him as a place of refuge.

View from Summit of Ben-Lomond.—From a Painting by Knox.

BENLUNDIE, a mountain of Sutherlandshire, in the parish of Golspie. Altitude 1,464 feet.

BENMACDHU, or **BENMACDUICH**, or **BENMACDHUE**, one of the Cairngorm groupe of mountains in the south-west corner of Aberdeenshire, estimated by Jameson at 4,300 feet in altitude; by Mr. H. C. Watson at 4,326 feet; and by others at 4,390 feet. If this latter admeasurement be correct, this mountain must be higher than Bennevis, hitherto regarded as the most elevated spot in Great Britain. The best account we have met with of the ascent of this mountain, and the prospect from its summit, is given in 'Chambers's Journal.' [Vol. II. p. 180.] The writer of the lively article in question, after informing us that the attempt to ascend a rough surface, at an angle of about 25°, and to the extent of some 2,000 or 3,000 feet, is no trifling matter, goes on to say: "Your eye will teach you at a glance the most accessible mode of ascent, which you will find to resemble a great ill-constructed stair of unbewn blocks of granite, some mile or so in length. By degrees you are introduced to a different tract. The heather and long fern no longer impede your progress; and you sometimes walk over a deep-cushioned carpet of alpine mosses, short and stunted, but rich in variety of colouring, and fresh and moist from the recently melted snow; then you pass over a broad field of snow, hard as ice, and under which, from a puny archway, trickles some small stream which feeds the river beneath. In the hottest noon of a summer-day the summit is cold and wintry; the various gentle breezes which fan the sides of the warm valleys will here be found concentrated into a swirling blast, cold and piercing as if it had sprung from the sea on a December morning; then the snow appears in large patches wherever you look around you, and the bare surfaces of the rocks are deserted even by the alpine moss. We know no mountain so embedded among others as Benmuichdhu. On all sides it is surrounded; and the eye, fatigued with tracing their distant outlines, feels as if the whole earth were covered by such vast protuberances. Betwixt these hills, and over their summits, you will see the clouds wandering about like restless beings who have no fixed habitation. Benmuichdhu, stretching over a considerable space, has many summits, and presents a vast variety of aspects; but there is a certain part towards the north-east where it turns itself into a basin, joining the contiguous summits of Benaun and Benabour, and where it assumes a form peculiarly striking and grim. Here one rock distinguishes itself from its brethren by displaying a pointed needle from a summit of vast height, which appears considerably off the perpendicular, and hangs its head over the glen below. Betwixt this wild height and another bolder and broader, there is a deep fissure, down which tumbles a considerable stream, which, after forming itself into Lochna,* descends to join the Spey." Mr. Macpherson Grant of Ballindalloch, in a communication to the editor of the 'Edinburgh New Philosophical Journal,' gives an interesting account of an atmospheric appearance resembling that of the far-famed spectre of the Brocken, witnessed by him on this mountain on the 10th October, 1830, at 3 P.M.

BENMORE, the highest mountain in Mull. It lies between the head of Loch-na-keal and Loch Screidan. Macculloch says: "The ascent is neither very tedious nor difficult. I found it to be 3,097 feet high. The view is various and extensive. Staffa, Iona, The Treshinish isles, Coll and Tirey, with Ulva, Gometra, Colonsa, Eorsa, and other objects, are seen beautifully diversifying the broad face

of the western sea, distinct as in a map; while, to the southward, Scarba and Jura, with the smaller isles of the Argyllshire coast, recede gradually in the distant haze. The rugged surface of Mull itself, excludes the objects to the eastward; but Loch Screidan forms a beautiful picture beneath our feet its long and bright bay deeply intersecting with its dazzling surface, the troubled heap of mountains."

BENNEVIS, a mountain in the south-west extremity of Inverness-shire, in 56° 49' N. lat. and 4° 40' W. long., having an altitude, according to Jameson, of 4,380 feet. Dr. Macculloch ascended this mountain from Fort-William, and thus describes it: "From the rarity of fair weather and a cloudless sky at Fort-William, and because the distance to the top of Bennevis is considerable, and the ascent laborious, it is not often visited. Measuring it as well as I could by pacing, I found it about eight miles; the path on the mountain—which is very circuitous—amounting to about six miles, out of which there are two of a very steep and laborious ascent. The perpendicular height is more than 4,000 feet; but it is exceeded, geometrically, by Ben Muic Dhu, and, I believe, by others of the mountains of Mar. But it must be remembered that Bennevis—the Hill of Heaven—is a much more independent mountain; and that, on the west side at least, it rises, almost immediately, from a plain which is nearly on a level with the sea. Hence it is, in reality, still the highest mountain in Scotland, though not the most elevated ground; while its effect to the eye is far more striking than that of any other,—all the rival elevations, either springing from high land, or being entangled among other hills so as to lose their consequence. Its form is, at the same time, heavy and graceless; particularly from Inverlochy and Loch Eil, where the eye takes in the whole. That form is also very peculiar, as if one mountain had been placed on another; and this effect, as of a casual and posterior addition, is rendered still more striking by the difference in outline and character between the two portions. This appearance, so remarkable to the ordinary spectator, is easily explained by the geologist; who finds that the lower portion is formed of granite and schistose rocks, and that the upper is a mass of porphyry. Some of the rarer alpine plants grow on Bennevis; conveniently situated for the botanist, as they lie chiefly near the sides of the path by which the upper portion is accessible. But the summit itself is utterly bare, and presents a most extraordinary and unexpected sight. If any one is desirous to see how the world looked on the first day of creation, let him come hither. Nor is that nakedness at all hyperbolic; since the surfaces of the stones are not even covered with the common crustaceous lichens; two or three only of the shrubby kinds being barely visible. It is an extensive and flat plain, strewed with loose rocks, tumbled together in fragments of all sizes, and, generally, covering the solid foundation to a considerable depth. While these black and dreary ruins mark the power of the elements on this stormy and elevated spot, they excite our surprise at the agencies that could thus, unaided by the usual force of gravity, have ploughed up and broken into atoms, so wide and so level a surface of the toughest and most tenacious of rocks. Certainly Nature did not intend mountains to last for ever; when she is so fertile in expedients as to lay plans for destroying a mountain so apparently unsusceptible of ruin as Bennevis. Situated in the midst of this plain, whence nothing but clouds and sky are visible, the sensation is that of being on a rocky shore in the wide ocean; and we almost listen to hear its waves roar, and watch as if for the breaking of the surge, as the driving rack sweeps along

* The Loch Aven described in our work.

its margin. As the clouds began to close in around, curling and wheeling over head, and hurrying up in whirlwinds from the deep and dark abysses which surround it, a poetical imagination might have imaged itself on the spot where Jupiter overthrew the Titans; the bulk, the apparent freshness, and the confusion of the fragments, resembling a shower of rocks just discharged by a supernatural power from the passing storm. The wild and strange sublimity of this scene is augmented by the depth of the surrounding precipices, whence the eye looks down into interminable vacancy, on the mists that are sailing in mid air, or into the rugged depths of chasms, black as night, impenetrable to the eye or to the light of day. The distant view presents no interest. The whole is a heap of mountains; but so remote and so depressed, from the altitude of this station, that scarcely any marked feature is to be seen; and the effect, on the east side in particular, resembles a congregation of mole-hills."

BENNOCHIE, a mountain in Aberdeenshire, situated between Alford and Garioch, and stated by Dr. Keith, in his "Survey of Aberdeenshire," to have an altitude of 1,440 feet. The chief peculiarity of Bennochie is its bold peaks, which communicate to it, when viewed from certain points, a remarkably grand and striking aspect. The mass of the mountain consists of a reddish granite, traversed from north to south by great dykes of porphyry.

BENREISPOL, a mountain in Sunart, Argyleshire, estimated by Sir James Riddell, Bart., at 2,661 feet in elevation.

BENRINNES. See **ABERLOUR**.

BENVOIRLICH. See **ARROQUHAR**.

BENVRACKY, a mountain in Perthshire, which terminates the vale of Athole on the one hand, and the strath of Garry on the other. The view from its summit is one of the most beautiful and extensive in the Alpine scenery of Scotland. Though this mountain is about 30 miles from Perth, a good eye can discern from it, in a favourable day, not only the bridge, but the steeples, and some of the more prominent objects in the neighbourhood of that city. Its height has been determined to be 2,756 feet above the level of the sea.*

BENWYVIS, or **BENWYVES**, and sometimes **BENUAISH**, a mountain in the parish of Kiltarn, in Ross, having an elevation of 3,426 feet according to the new Statistical account, but of 3,722 feet according to Mr. C. Schmidt's admeasurement. It is visible in the shires of Nairn and Banff, and from Inverness. It is seldom without snow on its summit even in mid-summer; and, in one of the charters of Fowls, the forest of Uaish is held of the Crown on condition of presenting at court a snow-ball, or, as some say, three wain-loads of snow, gathered from the top of this mountain, on any day in the year on which they may be required. Its outline presents an enormous lateral bulk like a hay-stack; its summit where free from snow is covered with soft green sward. It has never been entirely free from snow in the memory of man, except in September, 1826.

BERIGONIUM,† a celebrated spot about 4 miles

from Dunstaffnage, on the opposite side of Conna ferry, supposed to be the site of a fortress fabulously ascribed to Fergus, the first of the name, and the first in our legendary catalogue of kings. He, it is said, "beildit the castell of Berigone in Lochquhaber. This castell standis in the west part of Scotland forneit the Ilis, quhare he exercit his lawis to that fyne, that his pepyl might be drawin the more esaly for exercitioun of justice." Not to say that the place referred to is only in the vicinity of the district now called Lochaber, it would appear that what is here asserted can be carried no farther back than to Fergus, the second of the name, who came to Argyle from Ireland about the year 503, with his brothers Angus and Loarn; from the latter of whom it is most probable that the region called Lorn received its denomination. The highest honour to which Berigonium has a claim, is undoubtedly that of having been the capital of the ancient Dalriadic kingdom, extending from Drum-albin, or the mountains of Breadalbane, to the Mull of Cantire. That this was a place of some consequence in former ages, is evident from what still remains of it. In the Old Statistical account, [vol. vi. p. 180.] it is stated that: As it was situated between two hills, "a street paved with common stones, running from the foot of the one hill to the other, is still called *Straid-mharagaid*, 'the Market-street,' and another place, at a little distance, goes by the name of *Straid-namin*, 'the Meal-street.' About ten or eleven years ago a man, cutting peats in a moss between two hills, found one of the wooden pipes that conveyed the water from the one hill to the other, at the depth of five feet below the surface. On Dun Maenichan is a large heap of rubbish and pumice stones; but no distinct traces of any building or fortification can now be seen on either of the hills, the foundations having been dug up for the purpose of erecting houses in the neighbourhood. There is a tradition among the lower class,—that Berigonium was destroyed by fire from heaven." The following account of this place has been given by the ingenious Pennant, in which he views the remains in a light considerably different. "It was at best such a city as Cæsar found in our island at the time of his invasion; an *oppidum*, or fortified town, placed in a thick wood, surrounded with a rampart or fort, a place of retreat from invaders. Along the top of the beach is a raised mound, the defence against a sudden landing. This, from the idea of here having been a city, is styled *Straid-a-mhargai*, or Market-street. Within this are two rude erect columns, about six feet high, and nine and a half in girth." The other hill, which is much higher, is called *Dun-bhail-an-righ*, (pronounced *Dun-valiré*), 'the Hill of the King's town.' It is surrounded by circular trenches. As this district is filled with memorials of the Fingalian heroes, tradition pretends to point out this lofty hill

ed by Ptolemy, had not only read it erroneously, but, in consequence of the false position given to our country in the map, had viewed a town or castle in Galloway as belonging to Argyle. We learn, however, from Camden, that the oldest edition of his Geography, printed at Rome A. 1480, gives *Berigonum*, which he views as the modern *Bargeny* in Carrick. The only Gaelic name, by which the pretended Berigonium is known, is *Dun-Mac-Snochan*, or *Dun-Maenichan*. As *Snochan* is supposed to be a patronymic, the designation may signify, 'the fortified hill of the son of Snochan or Suachan.' It is by no means improbable that this name had originated in a later era than that of the erection of the kingdom of the Dalriads; as it will be found that, in many instances, the name borrowed from posterior occupants supersedes that of those who preceded them. This holds as to a variety of camps or fortifications, undoubtedly Roman or British, which are by the tradition of the country called Danish; as having been possessed by these northern invaders in a later period. The name *Snochan*, or *Suachan*, has more appearance of relationship to Norwegian, than to Celtic nomenclature. For, in the Danish memorials, we meet with *Sniig-ur*, or as otherwise written *Suio*, in Latin bearing the form of *Sniogon-is* in the genitive, as the name of a northern prince.—Dr. Jamieson.

* This is the result of three barometrical calculations, and one geometrical measurement, conducted with every attention to accuracy, in reference to a point in the parish of Moulin, near the banks of the Tummel, the height of which above the level of the sea was carefully deduced from a series of contemporaneous observations with the barometer made at the point alluded to, and the manse of Kinfauns. On account of the coincidence of result in all these cases, the height thus obtained must be extremely near the truth.

† It is beyond a doubt, that the term *Berigonium*, also written *Beregonium*, is a misnomer. There is not a vestige, in the language or traditions of the country, that this castle ever bore a name that had the slightest resemblance of it. It has been supposed, that Boece, finding *Berigonium* mention-

as the site of the royal 'halls of Selma. Pennant—who has discovered volcanoes where they never existed—says of Dun-macnìchan: "The hill is doubtless the work of a volcano, of which this is not the only vestige in North Britain." On examining this hill, Dr. Jamieson saw no reason to entertain a doubt that it exhibited the remains of an ancient British fortress: for the scoria found on it exactly agrees with that which is met with in the many vitrified forts that are scattered through Scotland. The beautiful site and fine plantations of Lochnell, the seat of General Campbell, add greatly to the richness of the landscape.

BERNERA, the southmost of a groupe of islands in the Hebrides, of which some notices have been already given under the general head *BARRA*. It is a mass of gneiss, with the north-western part dipping into the water, and the south-eastern exhibiting an abrupt section rising to the height of above 500 feet. The cliffs on this side are greatly varied in outline,—inclining, perpendicular, and projecting,—smooth, largely fissured, or minutely intersected,—here overhanging the deep in a jutting mass,—there forming a retiring cove terminating above in a perpendicular fissure, and below in a gloomy cavern, the abode of the dark-winged cormorant. In the summer-months these cliffs are inhabited by prodigious numbers of kittiwakes, guillemots, auks, and puffins. The natives of the island derive a plentiful supply of excellent food from the nests of these birds, first robbing them of the eggs, and afterwards of the young. They also procure abundance of puffins by dragging them from the holes in which they breed at the summits of the cliffs. One who has not seen some of the great breeding-places of the Hebrides, can hardly form an idea of the prodigious swarms of birds by which they are frequented. When the wind blows strongly from the south or south-east, some of the birds in flying to the cliffs are frequently carried inland over the summit—which in this island is pretty even—to a small distance, when they wheel about and regain their nests. This happens especially to the puffins, which always nestle near the tops of the rocks. The natives, aware of this circumstance, take advantage of it for procuring these birds. A man lays himself upon his back, close to the edge of the cliff, with his head to the sea, and having in his hands a stout fishing-rod, or light spar, which is directed over his head toward the sea, and projects in part beyond the edge of the rock. He remains patiently in this state until a bird, driven over him by the force of the wind, comes within reach, when he suddenly raises the rod, and dexterously hits it, which long practice enables him to do with precision. The bird of course falls, and is immediately secured. The man resumes his expectant position, and in this manner procures a very considerable number of puffins and auks, when the weather is favourable to the operation. This method of procuring birds is practised only in the island of Bernera, none of the other breeding-places in the Hebrides happening to be so constructed as to admit of it.

BERNEBA, an island in the sound of Harris, lying between North Uist and Pabbay; about 1 mile to the east of the former, and 5 miles south-west of the latter.

BERNERA, an island on the west coast of the isle of Lewis, formed by Loch Bernera, and Loch Roag, inlets of the sea which indent the mainland of Lewis in this quarter. It is about 8 miles in length, by 2 in breadth; and is surrounded by an archipelago of islets, amongst which is one to the west of Bernera, known as Little Bernera. Near the shore of the larger Bernera are some interesting monuments, of the kind commonly called Druidical: the remains

of three stone circles. The principal, and by far the most perfect of them—one of the most remarkable in form and extent in the British isles—stands on the brow of a promontory overhanging the bay; striking the eye at a considerable distance, like a cemetery of thickly-clustered tomb-stones. We are indebted to Dr. Macculloch for the following description of it. "The general aspect of this structure is that of a cross, nearly of the proportions of the Roman crucifix, with a circle at the intersection. But a nearer inspection discovers more than is essential to that form. The largest line lies in a direction of about twenty-four degrees west of the true meridian, or pretty nearly in that of the magnetic variation at present, which is therefore the general bearing of the work. Great stones intermixed with some that have fallen, and with blank spaces whence they may have been removed, or where more probably they are covered by the soil, are found along this line for the space of 538 feet, including the circle; their number amounting to fourteen, and eleven of them being still erect. If we were allowed to fill up the blanks according to the general proportions of the intervals between those that remain, the number would be twenty within that distance. But following the direction of this line further on, there are indications of other stones, all of them fallen, and nearly covered by earth and vegetation, that would justify us in extending it ninety feet, or more, further; thus making the total length about 680 feet. Parallel to the long leg of the cross, and to that only, is another line, now far less perfect than the first, since it contains only three erect and seven fallen stones, and reaches, as far as I could discover, only to 480 feet. Thus these two lines may be conceived to form a sort of avenue to the circular enclosure; its breadth being exactly equal to a semi-diameter of the circle, as the additional line touches the edge of this. The shorter line of the cross, at right angles to the other now measures 204 feet, including the circle: but as it is longer on one side than the other, its original length has probably been greater, though I was unable to detect any traces of fallen stones; the progress of some enclosures having here interfered with the integrity of the work. This line contains ten erect stones. The diameter of the circle is sixty-three feet from north to south, and sixty-two from east to west, and it contains fourteen erect stones in the circumference, with one in the centre. This central stone is twelve feet high; one near the end of the long line measures thirteen, a few are found reaching to seven or eight, but the height of the greater number does not exceed four. The intervals between the stones vary from two to ten yards, but the larger ones are probably the consequence of the loss of those which once occupied these places. I ought to add that the total number of stones which I could discover, either erect or recently fallen, is forty-eight; and that if the whole rank were complete, as it appears originally to have been built, they would amount to sixty-five or sixty-six." "My measurements," says Lord Teignmouth, "did not entirely coincide with those here stated; but on the whole they are doubtless accurate. The recent removal of the peat-moss, in which the stones are half buried, from the sides of one of them, exhibits not only the surprising growth of this vegetable production, on a height where it could not receive any alluvial contributions, or deposit of extraneous decayed vegetable matter, but also the method employed by the rude architects who erected them, to fix them on those bases on which they have remained unmoved for centuries. The stone is inserted in a hole, filled up with small loose fragments of the same material. The elevation of the stones of the

central circle must have amounted to thirty feet above the ground. Where exposed to view, the substance is as white as a bleached bone, contrasting singularly with the 'gray' hue produced by the atmosphere. The fanciful conjecture of Toland respecting this structure, which I have read detailed in an *Encyclopædia*, is ridiculed by Dr. Macculloch. The circular or oval form of these edifices was selected, no doubt, as best adapted to the purpose for which they were erected, and not with reference to the signs of the zodiac, as the number of stones in the circle varies indefinitely. The extensive appendage to the circle at Calernish, which distinguishes it from other circles, consists of the four avenues of stones directed towards it, from the four principal points of the compass, and is also so simply constructed that its origin may be accounted for without imputing to the architect an astronomical design exhibited in no other structure of the same kind. The other two circles in the neighbourhood are composed of much smaller stones: one is incomplete, the other has a double row still standing, and arranged in an oval form. The people have no tradition respecting them."

BERRIEDALE, or **BERRINDALE**, a *quoad sacra* parish in Caithness, divided from Latheron, in 1833, by authority of the General Assembly. Its greatest length is 20 miles; greatest breadth $12\frac{1}{2}$ miles. Population, in 1836, 1,556, chiefly earning their livelihood by fishing. Minister's stipend £120. Church built in 1826, by Government, at an expense of £750. Sittings 312. Patron, the Crown. The hamlet of Berriedale is $25\frac{1}{4}$ miles north of Edinburgh, and $9\frac{1}{2}$ north-east of Helmsdale. It gives the title of Baron to the family of Sinclair, Earl of Caithness. There are here the ruins of the ancient castle of Berriedale. According to tradition, William Sutherland, alias William More Mackehin, that is, Big William the son of Hector, was the last inhabiting proprietor of this castle. Being about to set out on a warlike expedition to the Orkneys with one of the earls of Caithness, and impressed with the idea that he should never return to his native country, he lay down on the ground above Berriedale inn, contiguous to the small burying-ground, and there caused the length of his body to be cut out in the sward in the form of a grave, which to this day retains the name of The Long Grave, and measures about 9 feet 5 inches. There is a good inn here. The water of Berriedale rises on the borders of Sutherland, runs eastwards on the northern side of Morven and the Maiden-Pap, for about 10 miles, and then turns to the south-east, and flows into the small bay on which the hamlet is situated, and which also receives the water of Langwell, an alpine stream likewise flowing from the west. There is a good salmon-fishery in this bay. The country, included between the two rivers, consists of a groupe of huge dark mountains. The next stage to Berriedale, proceeding by the coast northwards, is Dunbeath, which is $7\frac{1}{2}$ miles distant from Berriedale.

BERTHA, a spot of some interest to antiquaries and others who,

"Such places labour to make known,
As former times have honoured with renown."

It is situated at the confluence of the Almond with the Tay, about 2 miles above the town of Perth; and, according to General Roy, there are still some faint vestiges of Old Perth, or Bertha, here. Buchanan relates that an inundation of the Tay, in one night swept the greater part of the town of Bertha away. This happened towards the end of William's reign, who died in 1214. The king himself escaped the disaster which overwhelmed the place; but his

infant-son, with many of the promiscuous multitude lost their lives. Though the existing vestiges of Bertha are extremely slight, yet they serve to show how, in all probability, the place was situated on a tongue of land before it was washed away. Here the Roman road crossed the Tay, and the houses on the opposite bank are still called Rome. From so many concurring circumstances, but especially from the distance between it and Hierna corresponding so well with that assigned by Richard in his *Itinerary*, there seems to be some ground to conclude, that the ancient Bertha must have been the Orrea of the Romans. General Roy has preserved a plan of it.

BERVIE, a small parish in Kincardineshire; bounded on the north and north-east by the parish of Arbuthnot; on the east by Kinneff; on the south-east by the German ocean; on the south and south-west by Benholme parish; and on the north-west by Garvock. The superficial area of the parish does not exceed 2,000 acres, whereof about 300 are under cultivation. The principal elevation, Bervie hill, is about 400 feet. The water of Bervie, which gives name to the parish, rises in the parish of Glenbervie, and falls into the sea a little to the north of Inverbervie, after a course of about 14 miles. It is a good trouting-stream, and forms a small harbour at its mouth. Population, in 1801, 1,068; in 1831, 11,371. Assessed property, in 1815, £2,467. Houses 208. In 1831, the burgh of Bervie contained 757 inhabitants, and the fishing-village of Gourdon 238. —This parish, originally a part of Kinneff, is in the presbytery of Fordoun, and synod of Angus and Mearns. Patron, the Crown. Stipend £141 12s. 1d., with a glebe of the value of £18, and manse. Unappropriated tithes £1 15s. 6d. Church built in 1836; sittings 900. —There is a small independent church here. There are six schools within the parish. The parochial schoolmaster has a salary of £29 18s. 9d., with about £20 fees. James Farquhar, Esq. of Inverbervie, left £500 to the poor of this parish.

The town of **INVERBERVIE** owes its distinction, as a royal burgh, to the circumstance of David II. being shipwrecked on the coast in 1362, and having been kindly treated by its inhabitants on reaching the shore. It has no natural advantages of site, and no manufactures except a little linen-weaving. The public funds do not exceed £150 per annum. In 1838-9 the income of the burgh was £118 5s. 7½d.; the buildings are straggling; and there is little appearance of any speedy increase of the town. The true harbour of the place is at Gourdon, already mentioned, which is about a mile distant. At this latter place there are several granaries and warehouses belonging to Montrose merchants. The market-day is Wednesday; and for six months in the year is a good grain market. A good cattle-market is held here on the Thursday before the 19th of May in each year. There is also another of less importance held on the Thursday before the 19th of September; and there have recently been established hiring and cattle-markets on the Wednesday before November 22d, the Wednesday before Christmas, O.S., and the Wednesday before February 13th. The magistracy of Inverbervie consist of a provost, two baillies, a dean-of-guild, a treasurer, and 9 councillors. The old council choose the six magistrates and the remaining 9 councillors. It unites with the Montrose district of burghs in returning a member to parliament; and the parliamentary constituency is about 40. A little to the south-east of the burgh, on a rising-ground near the shore, is the old castle of Hallgreen, which is about to be thoroughly repaired by its proprietor James Farquhar, Esq.

BERVIE BROW, or **CRAIG DAVID**, a bold promontory on the north side of Bervie water, in the parish of Kinneff. It is a conspicuous land-mark for

mariners, and is seen at sea at the distance of 15 leagues.

BERWICKSHIRE. The county of Berwick forms the south-east extremity of Scotland, and lies on the coast of the German ocean, and along the north-east border of England. Its principal division was anciently called *The Merse*, or *March*, a name which it still retains, and which probably signifies the *Border-district*, or *frontier-province*.* But this district seems formerly to have included a considerable portion of the eastern lowlands of Teviotdale, as Roxburgh castle was anciently called *March-mount*, or the *Castle of the March* or *Merse*. This denomination, the *Merse*, is still often used, loosely, for the whole county. The modern name, *Berwickshire*, is derived from the town of *Berwick-upon-Tweed*, once its chief burgh or county-town; but which, after the demise of Elizabeth, and the accession of James VI. of Scotland to the English throne, was constituted a peculiar jurisdiction, hypothetically separate from both kingdoms, and virtually forming a distinct county.

Berwickshire is bounded on the east by the German ocean; along which, from the boundaries of Berwick township to St. Abb's Head, its coast trends north-north-west for $8\frac{1}{2}$ miles. The shore then takes a west-north-west direction, for other 9 miles, till its junction with East Lothian at Dunglass bridge; and, by the revenue laws, this latter part of the coast is considered as being within the limits of the frith of Forth. Almost the whole of this coast consists of bold rocky precipices of considerable altitude; and is nearly inaccessible, except at Eyemouth and Coldingham bays, and two or three other places, which are accessible to fishing-boats, at sandy or gravel beaches at the foot of the rocks. The whole irregular northern boundary skirts with East Lothian, along the mountain-range of Lammermoor. But, within this line, Berwickshire entirely surrounds a detached portion of one of the East Lothian parishes; while the most northerly part of this county is situated beyond, or to the north of, the Lammermoor hills, and is continuous with the extensive and fertile vale of the Lothians. *Clint-hill*, one of the highest of the Lammermoor chain, in the parish of *Channelkirk*, at the north-western extremity of the county, rises 1,544 feet above the level of the ocean. *Lammerlaw*, in the parish of *Lauder*, has an altitude of 1,500 feet. The general range of these mountains declines as it approaches the sea, averaging about 1,000 feet in perpendicular elevation, and it terminates in three precipitous promontories, at *Fast-castle*, *Ernsleugh*, and *St. Abb's Head*; which last is detached from the extremity of the chain by a deep narrow dell almost level with high water mark at spring-tides. The western irregular limit of Berwickshire is partly with *Mid-Lothian*, towards the north, but chiefly with *Roxburghshire*, from which it is partly divided, on that side, by the lower and principal stream of the *Leader* water, to its junction with the river *Tweed* near *Melrose*.

Excepting a portion of *Roxburghshire* adjoining *Kelso*, and the township of *Berwick*, both of which are on the north side of the *Tweed*, that beautiful river, in a meandering course of about 40 miles, forms the southern boundary of this county, dividing it from *Roxburghshire* on the west, *Northumberland* in the middle, and *North Durham* on the east, of this line of division. *North Durham* is a detached portion of the English bishopric and county-palatine of *Durham*, having the whole extent of *Northumberland* interposed between it and the main body of the

patrimony of *St. Cuthbert*, which once held extensive possessions in Scotland also. From *Berwick township*, *Berwickshire* is divided by a semilunar dry march, consisting partly of a ruinous dry stone wall called the *Bound dyke*, and partly of a narrow lane called the *Bound road*; this boundary extends from *Marshal-Meadows* on the sea-shore on the east, to the *Tweed* on the west, crossing the *Whitadder* in its course.

Mr. Blackadder estimates the extreme length of the county, from east to west, at $31\frac{1}{2}$ miles, and its extreme breadth, from north to south, at $19\frac{1}{2}$ miles; the mean length at $26\frac{1}{2}$ miles, and the mean breadth at 17 miles; and the total contents at 285,440 acres. But, *Mr. Kerr* says, "from a very careful consideration of the map itself, attentively measured by its own scale, the mean length appears to be 28 miles, the mean breadth 17 miles, and the consequent contents 304,640 acres." Of the three former reporters on this county, *Mr. Low* and *Mr. Bruce* differ from *Mr. Blackadder*, and from each other, in the foregoing enumerated particulars, probably from having trusted to some old inaccurate maps, while *Mr. Home* adopts the measures of *Mr. Blackadder* implicitly. A comparative enumeration of the several measures and computations is here subjoined:

COMPARATIVE TABLE OF ESTIMATED EXTENT.

Particulars.	Blackad.	Low.	Bruce.	Home.	Kerr.
Extreme length,	$31\frac{1}{2}$ m.	$27\frac{1}{2}$ m.	Omitted	$31\frac{1}{2}$ m.	34 m.
Extreme breadth,	$19\frac{1}{2}$ do.	$19\frac{1}{2}$ do.	Omitted	17 do.	21 do.
Mean length,	$26\frac{1}{2}$ do.	Omitted	30 m.	Omitted	28 do.
Mean breadth,	17 do.	Omitted	17 m.	Omitted	17 do.
Square miles,	Omitted	431.	510.	446.	476.
Statute acres,	285,440.	275,000.	326,400.	285,000.	304,640.

Since the dismemberment of *Berwick* from *Scotland*, *Lauder* remains the only royal borough in the county; and, in conjunction with *Jedburgh*, *Haddington*, *Dunbar*, and *North-Berwick*, sends one representative to parliament. *Greenlaw*, a small village 37 miles south-east of *Edinburgh*, in an inconvenient situation for the purpose, is the county-town, where all public meetings of the freeholders are convened, where the sheriff and commissary courts and quarter-sessions of the peace are held, and in which is the county-jail. *Dunse* and *Coldstream*, small towns, are the only places of any size in the county, though neither of them are of much importance. But *Dunse* is much better fitted—from being more central to the chief population—than *Greenlaw*, for being the county-town. *Eyemouth*, little better than a fishing village, is the only sea-port within the county. Small debt sheriff courts are held thrice a-year at *Lauder*; six times a-year at *Coldstream*; at *Ayton* thrice a-year; and at *Dunse*, six times a-year. Justice of peace small debt courts are held monthly at *Dunse*, *Ayton*, *Coldstream*, *Greenlaw*, *Lauder*, and *Earlston*.

In ancient times, the shire of *Berwick* seems to have been a separate jurisdiction from the bailliary of *Lauderdale*, and to have been itself divided into the *Merse* and *Lammermoor* districts. It is not easy to say what had been the exact boundaries and extent of these three divisions, now almost obsolete. For the purposes of agricultural inquiry, the whole county may be very conveniently considered under two districts,—the *Merse* and *Lammermoor*: the former including all the comparatively low land along *Tweed*, *Whitadder*, *Blackadder*, and *Eye*; and the latter comprehending *Lauderdale*, along with the more eastern hilly country peculiarly called *Lammermoor*. According to the general division of the county just pointed out, the *Merse* designates the whole lower ground from *Tweed* up the cultivated slopes of the lower southern range of the *Lammermoor* hills, including the western par-

* Chalmers thinks it more probable it was so called from the Anglo-Saxon *merc*, a marsh; or from *mariscus*, a naked plain.

ishes of Nenthorn and Merton, and forming the largest piece of compact level ground—diversified only by a few gentle undulations—to be found in Scotland. Mr. Blackadder estimates this division to contain 100,226 acres. The whole remainder of the county—with an exception to be mentioned in the sequel—is therefore to be considered as forming the Lammermoor district; and, according to the same authority, should contain 185,214 acres. But Mr. B. computes that there are 7,280 acres of lowland and arable slopes of the lower hills in Lauderdale, besides a detached portion of lowland containing 2,200 acres, at the north-east corner of the county, in the parish of Cockburnspath, adjoining the vale of East Lothian. Consequently the hill-lands of Lammermoor and Lauderdale are thus reduced to 175,734 acres. Some farther considerable reduction might still be made from this estimate of the hill-lands, as there are several narrow tracts of vale land along the sides of streams winding deep among the mountains, and many arable slopes of the lower interior hills themselves. But these are, probably, fully compensated for by hills, and moors, and bogs, within the district of the Merse. The township of Berwick, geographically situated within this county, may probably contain 4,680 acres of land, almost entirely arable, exclusive of the site of the town and suburbs. Thus, according to the respectable authority of Mr. Blackadder, the whole of this county may be estimated and distributed as in the following table:

	Acres.
Lowlands of the Merse	100,226
Lowlands in Lauderdale	7,280
Lowlands of Cockburnspath	2,200
Berwick township	4,680
Total arable, improved or improveable	114,386
Hill lands of Lammermoor and Lauderdale	175,734
Total extent in statute acres	290,120
Or, leaving out Berwick township	285,440

In spring the prevalent winds are from the eastern points, and are attended by much cold raw weather and frequent frosts. This cold ungenial temperature is very apt to continue far into the summer, probably owing to the neighbourhood of the ocean; but, from the same cause, the winters are seldom of very long continuance, or peculiar severity; though certainly more severe than on the west coast in the same latitude. This influence lessens perceptibly in all respects at 8 or 10 miles from the sea; and the winters in the Lammermoor hills and Lauderdale are severe and continued, though not more so than in the hills of Northumberland, or of Yorkshire. In autumn the prevailing winds are from the west, and are often attended with injury to the standing corn by shaking, especially when harvest is protracted much beyond the equinox. From the best information that can be procured, this county, in common with the whole eastern lowlands of Britain, appears to enjoy a comparatively dry climate, much more friendly to the cultivation of grain, and other agricultural pursuits, than the lowlands on the western coast. The hilly district of Lammermoor, however, and the higher parts of the southern slopes of the Lammermoor hills, called the moor-edges, are greatly more liable than the lower part of the county to have the spring seed-time delayed and interrupted, and the harvest rendered late, difficult, and precarious. These disadvantages, however, are by no means greater in Berwickshire than in other districts of equal elevation, either in Scotland or England. The Merse, as already observed, is skirted on the north by the elevated range of the Lammermoor hills, and at some distance on the south, beyond the Northumberland portion of the vale of Tweed, by the more lofty chain of the Cheviot mountains; and these two

chains are united, in a great measure, far inland by intermediate lower hills dividing the eastern from the western lowlands. Hence the clouds, wafted by the eastern gales from the British ocean, are attracted from the vale between by these ranges of hills, which in spring and autumn are often enveloped in mist, drenched by rain, or clothed in snow, while the lower intermediate Merse, and the rest of the vale of Tweed, are enjoying the most genial seed-times, and highly propitious harvest weather.

In the 11th century, almost the whole of Berwickshire was covered with wood, except a portion of the Merse. During the 12th and 13th centuries, many persons of consideration settled in it, having received from the Crown grants of lands which they cultivated; but the husbandry of those times consisted more in the feeding of flocks and rearing of cattle than in the production of corn. Toward the middle of last century, agriculture began to be studied as a science, and essential improvements to be made here by enlightened practical farmers. About the year 1730, Mr. Swinton of Swinton, father of the late Lord Swinton, in the course of a few years, drained and enclosed his whole estate. Mr. Hume of Eccles, about the same time, began and carried on his improvements with great ardour and success. Lord Kames, another of the early improvers in this county, about the year 1746 introduced the turnip-husbandry which has been carried to perfection in this county. Clover and grasses were also sown at Kames, and at sundry other places, towards the year 1750. Soon after this period, the enclosing and improving of estates became a favourite pursuit with other landed proprietors. Mr. Fordyce of Ayton profited by all the preceding discoveries and meliorations. In enclosing his landed property, he sheltered his fields with belts and clumps of planting, and added the Scots cabbage to the husbandry of Berwickshire. Dr. Hutton, the geologist, a considerable proprietor in this county, turned his attention to practical husbandry, and succeeded in all his plans. In this way, the fertility and wealth of Berwickshire have been greatly improved, and the land-rent has been more than quadrupled. The average size of farms is from 300 to 400 acres; held on leases of an average duration of 19 years. According to Mr. Lowe, the Merse district, including the vales on the Eye and Leader, contained in 1794:

	Acres.
Under tillage, and cultivated grass	50,000
In pasture, bog, moor, moss, and wood	75,000
	125,000
And the Lammermoor district, including Lauderdale:	
Under tillage	25,000
Arable and green pasture	75,000
Moor, moss, and wood	51,000
	151,000
The whole county, in his opinion, extending to	276,000

In the subsequent report of the county, prepared and published by Mr. Home in 1798, the soils are thus arranged and estimated:

	Acres.
Deep loam on the principal rivers	25,410
Clay lands in the bow of the Merse	40,390
Turnip soil in the remainder of the Merse, in Lauderdale, Westruther, Merton, Nenthorn, Longformacus, and other arable parts	119,780
Meadow,* moss, and muir of Lammermoor and Lauderdale, including some arable patches	99,870
Total contents of the county	285,440

* It may be proper to remark that the term *meadow*, used by Mr. Home, is a provincial name for green bog, or marshy ground, producing a coarse grass mostly composed of rushes and other aquatic plants; and that the word has no reference whatever to what is called meadow in England, which is here termed old *Kerr's* land, and which is very seldom cut for hay in Scotland.—*Kerr's Report.*

Perhaps, if we were to estimate in round numbers the total extent of cultivated ground at 160,000 acres, the uncultivated at 100,000, and the unprofitable at 30,000 acres, we should not be greatly wide of the truth.

The Merse is comparatively an extensive plain, yet much diversified by frequent swells, and with several hills of some elevation interspersed, as at Lamberton, Dunse, and Home castle. Lammermoor and Lauderdale are composed of an extensive range of lofty, rounded, well-defined hills, dividing this north-eastern portion of the vale of Tweed from the expanded vale of Forth. These hills are mostly flat, or at least very obtuse on their summits, and not precipitous or rocky on their sides. They are everywhere intersected by a number of narrow upland valleys or dells, through which the numerous feeders or brooks which combine to form the Leader, Whitadder, Blackadder, and Eye waters, wind towards the lower vale. The summits, in many places, extend into considerable flats or elevated table-lands, which often slope gradually to the lower vales on the south sides of the hills, the higher parts being moor, but gradually declining into good land. The north sides of the Lammermoor hills are more steep, but, as belonging to the Lothians, require no particular mention here. This county possesses every variety of soil, from the most stubborn clay to the most barren sand or gravel, but none whatever of a chalky or calcareous nature. Along the banks of Tweed, Whitadder, and Blackadder there is an extensive tract of fine deep free loam, often upon a gravel bottom, sometimes upon a bottom of till or coarse retentive clay. In this lower vale land there is likewise a large extent of stiff and rather coarse clay soil, usually cut off from the immediate vicinity of the rivers by the before-mentioned rich loam. A third species of soil, of a free and dry sandy or gravelly consistency, occupies most part of the remainder of the Merse, the vale lands of Lammermoor and Lauderdale, and the lower slopes of most of the hills: this is denominated turnip soil, and is usually incumbent upon a dry bottom of gravel or sand. In every quarter of the county,—frequently in the same farm, and sometimes in the same field,—these three soils are intermixed in patches, or irregular stripes, of greater or less extent, and all graduate into each other, forming intermediate varieties. In many situations, even of the most fertile parts of the country, marshy places or bogs are found in the hollows, into which the water of springs or small rills are poured from the adjoining slopes. These are overgrown with rushes or other marsh-plants, and are inundated with water in rainy weather. Some of these larger bogs are of great depth, and seem anciently to have been lakes or ponds now filled up with peat moss, owing to the long continued accumulation of decayed aquatic plants. Others seem to have been anciently the sites of woods, as the remains of trees are still found when digging for peats in them. Some bogs have little or no peat-moss in their composition; and such, in various instances, have been converted into sound firm pasture, or good arable land, by judicious draining. Peat-mosses or turf-bogs are found in all the hilly country, and in various patches through the low lands. These are used, in various parts, as supplies of fuel; but the culture of peat has not yet made its way into this county, so that it cannot hitherto be reckoned one of the Berwickshire soils. Dogden moss, near Polwart, covers about 500 acres, and is in some places 10 feet deep.

Several endeavours have been made to discover a workable seam of coal in Berwickshire. In the estate of Lamberton, contiguous to Berwick bounds,

at the south-east extremity of the county, a stratum of coal has long been known, which crops out on the sea-banks near the fishing-hamlet of Ross. Some coal has also been found in the parishes of Mordington and Cockburnspath. An attempt was once made to dig for copper ore, at Ordwell on the Whitadder; but, either from want of produce in proportion to expense, or want of skill in working, it has been long abandoned. More recent attempts to work this mineral at St. Bathans, and also near the old church of Ellim, in Longformacus parish, have proved equally abortive. No indications of lead, tin, antimony, or any other metallic ore—copper and perhaps red iron-ore excepted—are known to exist in this county. Some slight trials were made many years ago of a ferruginous clay-stone rock, on the estate of Ayton, as an iron-stone or ore of iron; but it was found too poor in metal to defray the expense of transport to Carron iron-works. In some inland parts of the county there are a few veins of limestone; but hitherto, the county has been mainly dependent on its neighbours for the two great articles of domestic comfort and agricultural improvement,—coal and lime. Coals are brought from the south side of the Tweed to all the south and east parts of the county, and from Mid-Lothian into Lauderdale. The north-east corner is supplied from Dunbar harbour, whither they are imported mostly from Fife. Lime follows nearly the same roads; except that some of the north and east parts of the county procure it from kilns in the vale of East-Lothian. Both coals and lime, especially the latter, are imported at Eyemouth. The coals come from the frith of Forth, and from Newcastle and Sunderland. Lime is brought from the river Wear, and from North Sunderland, near Bambrough castle. Coke, or charred pit coal, for brewers, maltsters, and corn merchants, is likewise imported at Eyemouth from Newcastle. In many parts of the county, shell marl has been found in small quantities. Trap whinstone, and amorphous basalt, interspersed with irregularly stratified clay-stone, are almost universal. In several places, rocks of breccia, or coarse pudding-stone, are found. The most remarkable instance of this is the rocky promontory which covers Eyemouth bay, on the north-west, in which nodules of whin and schist, of great variety of size, form, and colour, are imbedded in a lapidified clay, somewhat like steatite, of various colours, often greenish, generally very hard and tough, but soapy to the touch. The durability of this stone is thoroughly ascertained, as the outer pier of Eyemouth harbour has been above 30 years exposed to the fury of the German ocean, without the slightest apparent waste; and it is built of this stone without cement of any kind. In many places, large beds of silicious sandstone or freestone occur in regular stratification. Some of these are of a coarse open grain, and serve tolerably well for filtering stones. Many of the quarries are of excellent quality; and perhaps there does not exist a finer specimen of that kind of stone than is exhibited in the magnificent ruins of Melrose abbey, in the county of Roxburgh, only about 2 miles from the western borders of Berwickshire; in which exquisitely rich and delicate carvings in high relief, which have been many centuries exposed to the weather, are still sharp and uninjured. From comparison of grain and colour—the last a pale red or almost peach bloom—there is every reason to suppose that beautiful structure had been supplied with stone from Dryburgh upon Tweed within this county. Along the shores of Lamberton estate, contiguous to Berwick township, there are extensive strata of free sandstone.*

* The Berwickshire Naturalists' Club, instituted for the pur-

Excepting the Eye, with its scanty tributaries, which falls into Eyemouth bay, and a very small number of inconsiderable brooks which run separately into the sea, all the streams of Berwickshire contribute to swell the waters of the Tweed. This fine river, so celebrated in song and renowned in story, is only navigable for sea-vessels to Berwick bridge, about one mile from its mouth; though the tide flows about 7 miles higher. The other streams in the county are usually denominated *waters*,—a kind of intermediate provincial term, between the dignity of a river, and the insignificance of a brook, which latter is called a *burn* in Scotland. Still smaller rills, especially in marshy places, are often called *sykes*. The Leader, or Leeder, with its numerous burns, winds through the vale of Lauderdale. It issues from a number of narrow upland dells or valleys, among the wild hills of that district, and joins the Tweed at the south-western angle of the county, where that river begins to form the south boundary of Berwickshire. The Whitadder and Blackadder—*quasi* White and Black waters, owing to their respective tinges when in flood—are next to exclusively Berwickshire streams. Dye, one of the main sources of Whitadder, rises by several brooks or feeders, on the ridge of hills which separate Lauderdale from Lammermoor. The Whitadder proper, rising within East Lothian, at an elevation of 1,150 feet, unites with Dye in a romantic vale of some extent, in the bosom of the Lammermoor hills; and, having received the Blackadder much lower down, at Allanton, in the vale of the Merse, unites with the Tweed within Berwick bounds, about 3 miles from the sea. The Blackadder and its streamlets, or feeders, rise from the southern slopes of the Lammermoor and Lauderdale hills, at an elevation of about 1,130 feet; and, after winding through the vale of the Merse, joins the Whitadder between Allanbank and Ninewells. The small stream of the Eden principally belongs to that portion of Roxburghshire which indents into this county, on the north side of Tweed, into which that small river flows a few miles below Kelso. The Leet, another small stream, belongs entirely to the how of the Merse, and joins Tweed at Coldstream. The small river Eye, with a few feeders—particularly the Ale and Horn—waters a narrow but fertile vale in the east end of the Merse; several of its upper streamlets wind among some narrow valleys towards the west end of the Lammermoor hills. Its peculiar source is within East Lothian. At one place,—from near Ayton to near Chirnside,—a narrow winding vale, of very inconsiderable elevation, almost permits the Whitadder and Eye to unite. Midway between, Billy bog or Billy mire discharges its superfluous waters into both rivers,—eastwards, by the Horn burn, into Eye, with just sufficient declivity for its ready passage; westwards, by the Billy burn, into Whitadder. This singular vale is about 5 miles long, and has a northern branch, more elevated, from

Achincrow on Billy bog, to Reston on the Eye, enclosing an isolated hill of considerable extent and elevation, but altogether arable. The Ale, Wedderburn, and many other brooks, are too inconsiderable to require any special notice. All the rivers, waters, and brooks in this county abound with trout of different kinds; some contain a few pike and perch, and all have plenty of eels. See articles LEADER, WHITADDER, BLACKADDER, EYE, and ALE.—There are no lakes of any importance in the county. Coldingham loch—a piece of water covering about 30 acres—and one or two more, are too insignificant to form exceptions, and do not merit any particular notice. Dunse spa, once in some little repute as a mineral spring, has fallen into complete neglect.

The annual value of assessed property within this county, in 1815, was £245,379. There are no very large estates in Berwickshire, though several have become of great value, and some are connected with estates in other counties of very considerable magnitude. Towards the end of last century, Mr. Low estimated that hardly any of the Berwickshire estates exceeded £5,000 of yearly rent. “That circumstance”—says Mr. Kerr in 1808—“must now be very materially altered in consequence of the rapid rise of rents since he wrote, and the limitation might probably be now extended to nearly double that amount, or from £8,000 to £10,000 a-year; but the reporter has no data on which he can depend for ascertaining this circumstance, and is not inclined to hazard assertions on vague information. In the year 1795, according to the cess-roll or land-tax book of the county, its lands were then unequally divided among 294 proprietors, of whom only 14 held under the limitations of entail. At that period, according to the report of Mr. John Home, and circumstances have not since materially altered, the relative valuations of these properties were classed thus:

	Number of Properties.
Valued below £100 Scots	141
From £100 to £400 Scots	66
From £400 to £1,000 Scots	41
Of £1,000 Scots and upwards	46
Total number of proprietors	294

The ducal family of Gordon derives its name and chief titles from the lands of Gordon and Huntly in this county; but since acquiring their princely estate and residence in the north, to which they have transferred these names, they have given off their ancient Berwickshire estate in feu, retaining the superiority only. The dukedom of Roxburgh has a shooting-lodge, and some sheep-farm lands of small comparative importance, in the bosom of the Lammermoor hills. The estate and residence of the Earl of Home is at the Hirsell, near Coldstream. Marchmont house, the seat of the last earl of that name, is now in the possession of Sir Hugh Purves Hume Campbell, Bart. The Earls of Buchan, Lauderdale, Wemyss, Haddington, Breadalbane, and Roseberry, and Lord Douglas of Douglas, have all estates in this county, but their residences and principal estates are elsewhere.

The customary boll of Berwickshire is equal to 1.043 Linlithgow barley bolls, or to 1.529 Linlithgow wheat bolls. It is consequently equal to .779 parts in the 1000 of the Winchester quarter, or to 6.237 Winchester bushels. In the western parts of Berwickshire, adjoining Roxburghshire, the Roxburgh customary measures used to be employed; but in Berwick market—the great mart of Merse grain—all kinds of corn were sold and delivered by the customary Berwickshire boll, there called the old boll; as another customary measure was used farther south, underspood to contain two Win-

poses of examining the Natural History and Antiquities of the county and its adjacent districts, and of affording to such as were interested in those objects, the opportunity of benefiting by mutual aid and co-operation, held its first meeting at Bank House, in the parish of Coldingham, Sept. 22, 1831. The club hold no property, and exact no fees of admission; all gentlemen are eligible, provided 3-4ths of the members present when they are proposed are agreeable. The club, like the British Association, is migratory, by which its value and facilities are enhanced. It holds five meetings in the year, the third Wednesday in September, December, April, June, and July, each of which is held in a different town from the others. The members assemble at some inn, early in the forenoon disperse themselves to explore and collect the various subjects the district affords, return to dine, exhibit newly discovered specimens, read communications, and discuss the topics most likely to suggest themselves after their excursion. At the last meeting in the year an address is delivered by the president, who briefly recapitulates the proceedings of the past year.

chester bushels, and called the new boll. Shipborne lime, imported only at Eyemouth, is sold unslacked by a customary lime boll, which is understood to be only equal to the East Lothian peas boll, or about half a Winchester quarter. Lime and coals from Northumberland, or rather North Durham, are understood to be delivered at the coal-pits and lime-kilns by the same measure. In Berwickshire, potatoes are usually sold by measure. Six fills of the corn firloft up to the edge of the wood, or a little higher, or four fills heaped by hand as high as they can go, were counted as one boll; being about 9 Winchester bushels, and supposed equal to 476 English pounds. In Berwick township, the universal custom was to give 560 English pounds as a boll of potatoes. The Berwickshire ton of potatoes for the English market was 28 cwt. In Berwick market, fresh butter was sold by a customary pound of 18 avoirdupois ounces; while in the country markets, the tron pound of 22½ ounces was used, which was also the usual pound for cheese, while that for wool was 24 ounces. The legal firkin of 56 English pounds was universally used for salt butter, but usually a pound or two heavier to allow for brine. Fresh salmon—a principal staple of Berwick, and a considerable part of which comes from fishings within this county—was sold to the coopers, or salmon-dealers, by a customary stone of 18½ avoirdupois pounds. The Berwickshire peck is ½ of a firloft, instead of ¼.

Berwickshire is a strictly pastoral and agricultural district. The only manufacture of any importance, within the county, is that of paper, at Broomhouse, Ayton, and Allan-bank paper mills. These three mills in 1808 gave employment to 200 individuals, and paid above £4,000 yearly of excise duties. They might at that period manufacture paper to the value of above £25,000 annually, the far greater part of which was sent to London. The Millbank paper mills in the parish of Ayton, pay about £3,000 a-year of excise duty. The manufacture of woollens and linens within the county, is so small as not to merit consideration; being confined, in the former, entirely to coarse goods for ordinary use; and, in the latter, to household linens for farmers and labourers' families. The expense of fuel is rather hostile to the introduction of the woollen manufacture, for which this county affords ample materials; yet the example of Gallashiels, a very short distance from the extreme western part of the county, gives warrant for believing that it might succeed here. The manufacture of ginghams has been recently introduced with great success at EARLSTON: which see.

The fishery upon the coast is not of very material importance. It gave employment in 1808 to upwards of 100 fishermen, with about 20 boats, at eight small fishing-stations. Fish carriers, called *cadgers*, purchase from the fishers, and distribute the white fish, codlings, haddock, whittings, skate, halybut, and flounders, and a few turbot, into the inland country, and often as far as Edinburgh. The herring fishery on the coast is exceedingly precarious; but during some seasons no less than 10,000 barrels have been brought into Eyemouth. A few red herring houses at Eyemouth were once well-employed. Some boats or small vessels go annually to the herring fishery on the coast of Caithness. The salmon fishery in Tweed is of considerable importance, but the principal share of it belongs to the township of Berwick, and the opposite side of the Tweed. From Berwick bounds, up to where the fishery ceases to be important, half of the river belongs to England, and the other half to Scotland; and the 3 lower miles of the river—by far the most important—belong entirely to England and Berwick. Mr. Home,

in 1797, estimated the rental of the salmon-fishings on the Berwickshire side of the Tweed at £1,500 a-year. They have of late years greatly fallen off in productiveness.

The chief line of road running through this county is the Great post road from Berwick to Edinburgh, which follows the outline of the coast, generally at a little distance from the sea. Mr. Blackadder estimated the total extent of roads in this county at 647 miles; it must now considerably exceed this.

At the close of last century, Mr. Home estimated the inhabitants of the Merse at 20,075; and those of Lammermoor and Lauderdale at 9,633; making a total of 29,708. He also arranged the whole population as under, which enumeration is here copied as not incurious, though, perhaps, not very rigidly precise in its data:—

1. Class.—Landed Interest.	
1. Resident proprietors or heritors, with their families and servants	1,470
2. Clergy and schoolmasters of all denominations, with ditto	460
3. Tenants, with their families and in-door servants	3,240
4. Labourers of the land with their families	15,455
5. Agricultural artizans, and their families	2,400
6. Brewers, and household trades, with their families and servants	260
Total of the landed interest	23,275
2. Class.—Remaining inhabitants.	
7. Paper makers, and their families	296
8. Weavers, and other manufacturers and artizans, not agricultural, with their families	900
9. Salmon fishers, and their families	220
10. Salt water fishers, and their families	325
11. Inhabitants of townes	4,629
12. Sundries nondescript	139
Total of these	6,433
General total	29,708

Berwickshire is divided into 31 parishes, of which 18 may be considered as in the Merse, and 13 in Lammermoor. Those belonging to the Merse district are: 1. Whitsom; 2. Chirnside; 3. Fouldean; 4. Eccles; 5. Coldingham; 6. Hutton; 7. Dunse; 8. Coldstream; 9. Langton; 10. Ayton; 11. Edrom; 12. Mordington; 13. Fogo; 14. Eyemouth; 15. Buncle; 16. Swinton; 17. Nenthorn; 18. Ladykirk. The Lammermoor district contains: 19. Legertwood; 20. Greenlaw; 21. Cockburnspath; 22. Merton; 23. Channellkirk; 24. Abbey St. Bathans; 25. Earlston; 26. Westruther; 27. Lauder; 28. Longformachus; 29. Polwarth; 30. Gordon; 31. Cranshaws. To these must be added Home, formerly a parish by itself, but now united with the parish of Stichel in the county of Roxburgh. The largest parishes are those of Lauder and Coldingham; the smallest is Eyemouth.—The Berwickshire parishes are classified under three presbyteries,—Dunse, Chirnside, and Lauder; and are all, with the exception of Cockburnspath, within the synod of Merse and Teviotdale.—The number of parochial schools within the county in 1834 was 34; and of private schools, 59. The total number of scholars was estimated at 4,998.

The population of the county, as enumerated in the years 1801, 1811, 1821, and 1831, is as follows: 1801, pop. 30,621; 1811, pop. 30,779; 1821, pop. 33,385; 1831, pop. 34,048. In 1821, the number of houses inhabited was 5,803, and in 1831 it was 6,159; the number of families in 1821 was 7,165, and in 1831 it was 7,385; the number of houses building in 1821 was 42, and in 1831 it was 13; the number of houses uninhabited in 1821 was 276, and in 1831 it was 267; the number of families employed in agriculture in 1821 was 3,334, and in 1831 it was 2,921; the number of families employed in trade, manufactures, and handicraft in 1821 was 1,923, and in 1831 it was 1,915; the number of all other families not

comprised in the two preceding classes in 1821 was 1,908, and in 1831 it was 2,549. In 1821 the number of males was 15,976, and the number of females was 17,409, and in 1831 it was males, 16,239; females, 17,809. Of late years the migration from Berwickshire has been considerable. The poor-law commissioners, in a recent report, state that in the year 1836-7, in 17 parishes of this county, the number of paupers relieved, out of a population of about 20,000 persons, was 755; and that the amount of allowances granted to them was £3,441 14s. 6d., to permanent paupers, and £274 8s. 10d. to temporary paupers, making a total of £3,716 8s. 4d., independently of expenses incidental to management. Although these amounts are somewhat less than the corresponding particulars of the unions in Northumberland, yet if they are compared with the statements relating to the Shropshire unions, and even with the population and expenditure in some parts of England, in which, previously to the passing of the poor-law amendment act, pauperism was most burdensome, we shall find that the comparison is by no means favourable to the Scotch county, and that the pecuniary burthen thrown on the occupiers in that district is greater than is now the case in the English districts adverted to, notwithstanding these districts must still be considered as in a transition state towards still better management.

Anciently, the agricultural population of Berwickshire was chiefly collected in farm-towns or villages, in which ten, twelve, or more small farmers, with their rick-yards, and outhouses and cottagers, were crowded together. These villages are now deserted, so far as the farmers and their immediate servants are concerned, and farm-houses, with their yards, buildings, rick-yards, and cottages for married servants, are now placed centrally on every farm. Many of the old farm-towns,—the ancient abodes of idleness, poverty, and dissipation,—have now become clean country-villages, filled with industrious mechanics of all kinds, shop-keepers and labourers, who work for the surrounding farmers. The circumstances of the agricultural labourers in this county are thus described by an intelligent writer in the 'Quarterly Journal of Agriculture,' No. 27. "The terms of the engagement of a married ploughman are the following:—A house, seldom less than 24 feet by 15, and which is large enough to form, by the appropriate arrangement of the furniture, one large, and one small apartment;—a garden, containing perhaps 10 or 12 perches of land, situated generally behind the house;—a cow, kept all summer on grass, and accommodated in winter in a cow-house, with straw, and 3 cartloads of turnips in spring, or in lieu of the turnips, 60 stones of hay;—the produce of 1,000 yards of potatoes, measured along the drills, the ploughman supplying the seed, and the farmer bestowing the dung and the labour;—60 bushels of oats, 18 bushels of barley, and 6 bushels of peas, of the best quality; but, should there be none of the best, then of the quality next to the seed corn; the corn being given about Christmas;—as much ground as would sow one peck of linseed, but this allowance is now commuted to the setting of 500 yards more of potatoes, linen cloth being bought cheaper than the best that can be manufactured by the poor people;—formerly poultry and sheep were kept for ploughmen, but now the value of their maintenance is commuted into money, 15s. for the poultry, and £3 for the sheep yearly, and this is all the money the ploughman receives:—coals are driven to the ploughmen when required, but this is accomplished at little expense to the farmer, inasmuch as the carts bring them which would return empty from the delivery

of corn. The value of all these allowances may be estimated as not exceeding £26 a-year, which makes the wages of a ploughman 10s. a-week. For all these considerations, which have evidently been formed for the comfort of the ploughman, he is obliged to take charge of, and work one pair of horses, in every requisite operation connected with the farm;—he must attend the stable every morning, noon, and night, to give food to the horses;—he must take his turn with the ploughmen to remain at home on Sunday to fodder and water the horses;—he must work in winter as long as there is day-light, and in summer ten hours a-day in the fields, and in seed-time and harvest his hours of labour are unlimited;—he must supply a female labourer to work at farm labour at all seasons, and for the same time as himself, when required; and for whose labours he receives eightpence or tenpence a-day, when she is employed, according to the rate of wages; this female must reap corn during harvest, as rent for the house and garden, for which she receives the ordinary victuals allowed in harvest;—his own family must feed his cow in winter;—and he must work his garden only at leisure hours. Most farmers erect a pig-stye, or allow one to be erected in the garden, in which the ploughman feeds a pig at his own expense, for his domestic consumption. The manure to the garden is supplied from the ploughman's own house and the pig-stye. Should the female worker get constant employment, the ploughman may just clear himself with her labour; if not, he will certainly lose by her maintenance and wages, which are from £6 to £8 a-year; but, should he have a daughter to supply the place of a hired servant, her labour will be profitable to him. He generally earns a little money from his cow, for butter and cheese, provided she is a good one, and his wife manages his domestic affairs cleanly and thriftily. He receives a sixpence for drink-money when he goes from home with the horses, on the delivery of corn. These terms may appear complicated to those who are accustomed to simpler, but in practice they are very easily understood. The farm-steward receives, in addition to the terms of the ploughman, a little more money, and sometimes a bushel and a half of light wheat, as a compensation for his greater responsibility. His wages are seldom under £30 a-year. His duty is to give the corn for the horses every day out of the horse-corn chest; to order and distribute the labour of the farm; to superintend the labour of the women in the fields in summer, and in the thrashing and cleaning of the corn in the barn in winter; to sow the corn, and to build it into stacks; and generally to keep a watchful eye on all things for his master's interest. He is exempted from staying at home on Sunday, but he must supply a female to work in the fields; and to reap the harvest, as rent for his house and garden. The shepherd, in addition to the ploughman's allowance, receives the keep of eight ewes summer and winter. He must dispose of these lambs after weaning in July, with the exception of two ewe-lambs and two gimmers, which he keeps on to renew his ewe stock, two of which he must sell off every autumn before tupping time in October. His wages seldom amount to less than £35 a-year. The shepherd is generally the servant on the farm who receives the highest wages, but his hours of labour are unlimited. His duty is very constant and fatiguing when a large flock and a wide range of pasture occur. He must go through his flock early in the morning and late at night, and at other times during the day, and count his flock once a-day; he must keep them clean from scab, maggots, and other filth; he must watch the ewes at the lambing-season night and day, and castrate the tup lambs; he must

wash the sheep and clip the wool, and bathe them for turnip-feeding in winter; he must be able to slaughter sheep and pigs neatly; and he must give such general assistance in harvest as his time permits, such as taking the reapers' victuals to the harvest-field, and binding up loose corn to be led in. He must also supply a female to work in the field and reap the harvest, as rent for his house and garden. In regard to unmarried ploughmen, when they live with their fathers or friends, who are ploughmen, they receive the same allowance of corn as they do; but the keep of the cow is commuted to them in money, and they are exempt from supplying a field-worker. When an unmarried ploughman takes up house, he receives the same wages as a married one, and is bound to supply a female worker. When an unmarried ploughman gets his victuals in the farm-house, as the other domestic servants, the rest of his wages is given in money, £5 half-yearly, according to the rate of wages; and he sleeps in some apartment in the stead-ing. Female domestic servants live in the farm-house and receive £5 or £6 in the summer, and about £3 in the winter half-year. Their duty is to milk the cows, feed the calves, perform the dairy operations of making butter and cheese, do kitchen work; and one of them, when not fully occupied in the house, goes to work in the field or barn. Stable-boys get their meat in the house, and receive £2 or £3 half-yearly. They keep the riding-horses and gig, if there is one, attend to visitors' horses, and go errands. Cottagers or labourers who work with the spade where they can get work, smiths, and carpenters, take their houses and shops on similar terms. Each supplies a field worker, who reaps the harvest as rent for the house and garden; and each gets 500 yards of potatoes set, and the carriage of two cart-loads of coals. The smith undertakes to shoe the horses and uphold the iron-work of all the implements on the farm, for £3 a-year and the carriage of one cart-load of smithy coals, for every pair of horses. The carpenter upholds all the wood-work of the implements, and supplies a pair of cart-wheels without the rings for £3 the pair of horses yearly. The accounts of both are settled half-yearly. The smith and carpenter, with all their apprentices and journeymen, generally lend a hand for a day at the building of the hay-stack, for their meat. A regular hedger and ditcher, when such is kept on a farm, is regarded as a hired servant, though his house is let to him on the same condition as a cottager. He either receives his wages entirely in money, at so much per week and settled half-yearly, or in corn like the ploughman, and the remainder in money. His wages may amount to £30 a-year. His duty is to cut, switch, clean, and repair gaps in the hedges; scour ditches to prevent the overflow of water; to cut water-furrows across headlands and in hollow parts of fields to prevent the accumulation of surface-water. He assists the steward to build corn-stacks and sow corn; the shepherd to clip wool and wash and bathe the sheep. Frequently the ploughmen assist him to cut the long water-furrows in new sown fields, if the weather appears precarious.*

No Druidical monuments have been discovered within this county; but in several places cairns of stones denote the graves of those who had fallen in battle. In the parish of Eccles, at Crosshall, there is an upright stone column, with various sculptures; but there is no inscription, nor is there any tradition concerning it. On the ridge between Coldingham and Bunkle there are vestiges of five oval and circular encampments. Similar remains of antiquity may also be traced on Cockburn law, on Habbchester, and at Chesters in Fogo parish. Herri's dyke, a mile from Greenlaw, is an earthen mound, with a

ditch on one side of it; and not many years ago it could have been traced 14 miles eastward. Edin's or Wodin's hall, about a mile below the abbey of St. Bathan, on the Whitadder, consists of three concentric circles of stone, 7 feet and 10 feet distant from one another: the diameter of the innermost circle is about 20 feet. On the south are deep and wide trenches; and eastward are traces of several camps. There are remains of several religious houses, viz. the monastery of Coldingham, the abbey of Dryburgh, St. Bathan's, &c. Many castles and places of strength, were built in this shire after the 11th century. The castle of Berwick was the residence of David I. Home castle, in the 12th century, was the seat of the family of Home; the tower of Cockburnspath was built, perhaps, by the Earls of Dunbar. Fast castle, on a rocky cliff overhanging the sea, was long ago demolished. Lauder or Thirlstane castle was built by Edward I. There were many other castles in different parts of the county, viz. Cranshaw, Huntly in Gordon parish, Edrington in Mordington parish, &c.*

At the period of the Roman invasion, Berwickshire was inhabited by the Ottadini. It was afterwards invaded by bands of Saxons from Germany, who ingrafted their language and manners on those of the original inhabitants. The conquests of these foreigners extended a considerable way along the shores to the east and west, and in course of time they gave the land thus secured to themselves the title of Lothian. The whole area of Berwickshire was comprehended in this Saxon territory, which received the name of Saxonia in the *Scoto-Irish Chronicle*, but was called *Bernicia* in the age of Bede. Until 1020, this district of country was included within the kingdom of Northumberland. In that year it was ceded to Malcolm II. by Cospatrick, Earl of Northumberland, who settling in Scotland, was created Earl of Dunbar. In 1097 Edgar, the son of Malcolm, acquired the sovereignty of Berwickshire, which on his death he bequeathed, along with part of Cumberland and Lothian, to his brother David. Under this personage Berwickshire rose into consequence, and the town of Berwick came to be a seat of merchandise, and known for the value of its fisheries. About this epoch many Norman and Anglo-Saxon families settled in Berwickshire, and laid the foundation of a number of noble houses still ranked in the peerage of the country. It appears likewise that the town of Berwick became a settlement of Flemish and other foreign tradesmen. Berwickshire suffered in the succeeding centuries in all the wars between the two hostile nations, and was occasionally involved in disputes with its neighbour the palatine bishop of Durham. Berwick, and its bridge across the Tweed, were in general chief and special objects of dispute between the belligerents. Henry II. in 1174, wrenched Berwick and its castle from his captive, William. Richard I. again restored them to Scotland. The disputes regarding the succession to the crown, after the death of Alexander III., involved Berwick in many miseries. In 1291 it was given up to Edward I. A few years afterwards, Berwick renounced its allegiance, and in 1296 was taken by assault by Edward. After the defeat of the English at Falkirk, they retained Berwick for

* The antiquities of Berwickshire are described in the *Border history of England and Scotland*, by the Rev. Messrs. Philip and George Redpath, 4to. 1776. Some conjectures concerning ancient camps and cairns on Lammermoor are inserted in the *Scots Mag.* 1759. A dissertation on Dunse spa, by Francis Home, was published in 1751, 8vo. A map, from an actual survey, on a scale of one inch to a mile, constructed by Arni- strong, was published in 4 sheets, 1771. Mr. Blackadder published a good two-sheet map of this county in 1797. A large map from a survey in 1825-6, was published by Sharp and Co., London.

twenty years. In 1318 Berwick was once more, and for the last time, attached to the Scottish monarchy. During the reign of James III., the crown was coveted by the Duke of Albany, who, to support his pretensions, introduced an English army into North Britain, under the Duke of Gloucester, afterwards Richard III. The affair ended in compromise; but Gloucester refused to withdraw his forces unless Berwick was delivered into his hands. After a persevering diplomatic struggle, the Scotch were forced to accede to the dishonourable terms; and on the 24th of August, 1482, this oft-contested town and castle were resigned to England. In 1551 it was made a free town, independent of both England and Scotland, which it still remains, with many privileges peculiar to itself and its citizens. It is governed by English laws, and does not come within the scope of the present work. After it ceased to be the county-town, the affairs of the shire were administered at Dunse or Lauder; but on Greenlaw becoming the property of Sir George Home of Spot, in 1596, it was declared the most fit to be the shire-town, and this arrangement was ratified by parliament in November, 1600. It did not, however, become the head-town of the county, in every particular, till 1696.

BERWICK (NORTH), a parish and a royal burgh, in the shire of Haddington, so called to distinguish it from the town and territory of Berwick-upon-Tweed, which is sometimes described as South Berwick. The parish is bounded on the north by the frith of Forth; on the east by Whitekirk parish; on the south by Whitekirk, Preston, and Dirleton parishes; and on the west by Dirleton. The coast towards the east is bold and rocky; towards the west it presents considerable stretches of level sand and flat grassy downs. Several rocky islets stud the coast. A range of low but in some parts very picturesque hills stretches across the southern part of this parish, from Fenton tower, eastwards to Whitekirk hill; but the most remarkable hill is North Berwick law, a very beautiful conical shaped hill which, rising to the height of about 940 feet above sea-level from a flat country, is visible from all sides at a great distance, and forms a well-known land-mark to mariners. A few small rivulets intersect the parish. The soil is in a high state of cultivation, and the annual rental is about £25,000. Population, in 1801, 1,583; in 1831, 1,824. Houses 284. Assessed property £12,976.—This parish is in the presbytery of Haddington, and synod of Lothian and Tweeddale. Patron, Sir Hew Dalrymple, Bart. Minister's stipend £306 2s. 5d., with a glebe of the annual value of £35, and 12 solan geese, with the feathers on, from the Bass. Unappropriated tithes £434 15s. 6d. Church built in 1670; altered in 1770; reseatd in 1819; sittings 550.—A United Secession congregation was established here in 1769. Church built in 1832; cost £630; sittings 390. Stipend £105, with a manse and garden. There are a parochial and a sub-parochial school, and three private schools, in this parish; at which about 250 children are educated.

The most interesting natural object in this parish is the **BASS** rock, which has already been described under that head. The most interesting relic of former ages is Tantallon castle, which will also be described in a separate article. About a quarter of a mile west of the town of North Berwick stand the ruins of an abbey, or Cistercian nunnery, founded in 1154 by Duncan, Earl of Fife. At the Reformation this nunnery contained 11 nuns, and was well-endowed. It presents few traces of its former magnificence. Views of it are given by Grose.—Adjoining the harbour, on a small sandy knoll, are the slight remains of what is called the Auld Kirk, and which

has evidently at one period been surrounded by the parish burying-ground, now nearly washed away by the sea.

The royal burgh and sea-port of **NORTH BERWICK** is 22 miles north-east by east of Edinburgh; 11 north-west of Dunbar; and 9 north-north-east of Haddington. It mainly consists of two streets nearly at right angles to each other; but the parliamentary boundary extends from the Yellow Craig rock on the east, to Point Garry on the west—a distance of nearly a mile in a direct line, but considerably more by the curvatures of the coast—with an average breadth betwixt the shore and the southern boundary line of about 360 yards. There are 33 houses of £10 rent and upwards, within these boundaries. The municipal constituency, in 1839, was 24. The burgh joins with Haddington, Dunbar, Jedburgh, and Lauder, in returning a member to parliament. North Berwick is said to have had the distinction of being a port from the time of Robert II., and was created a royal burgh by Robert III. Its privileges were confirmed by a charter of James VI., dated 18th September, 1568. It stands in a rich and well-cultivated neighbourhood, and has the character of having once been a place of some trade, but at what period is nowhere stated. Mr. Tucker, in his enumeration of the ports of Scotland in 1656, does not even mention North Berwick, though he notices Eyemouth and Dunbar, and the minor ports of the Forth up to Borrowstouness. In the report of the commissioners appointed by the convention of royal burghs, in 1691, to visit the different burghs, and report upon their condition, it is stated "that there were neither yearly fairs nor weekly markets;" and the other observations on its trade are summed up in these words, "ships they have none, nor ferry boat, except two fish-boats which pay nothing to the town." At the present day the harbour is formed by a tolerably good pier, on which considerable sums have been laid out; but it is dry at low water, and neither very easy of access, nor very well sheltered when gained. There were in 1834 five vessels belonging to the port, amounting in burden to 249 tons. Ten years before that the tonnage was 299 tons. For forty years the trade may be considered to have been stationary, the letting of the customs and shore-dues having varied very immaterially during the greatest part of that time. "There has latterly," say the Parliamentary commissioners, "been a great falling-off in the grain and lime trade, but new objects of traffic have sprung up in the export of potatoes, turnips, and flour; and within the last ten years there has been a considerable increase in the importation of foreign rape cake, and crushed bones for manure. There are no manufactures, and no traces of any such ever having existed in the borough. There are still no regular markets, and only two annual fairs, one in the month of June, and the other in the month of November." A weekly stock grain-market has recently been established here, with every prospect of success from the rich agricultural character of the surrounding district. It is held on Monday. The revenue of the burgh, in 1833, was £141 18s., of which £85 arose from customs and shore-dues. The expenditure during the same year was £124 5s. 2d.; and the debt amounted to £794 19s. 8d. The revenue, in 1838-9, was £142. The municipal government is vested in 12 councillors, who elect 2 bailies, and a treasurer. The town-clerk is appointed by the magistrates during pleasure, and has a salary of £10 10s. There is no regular burgh-court, but sheriff small-debt courts are held here three or four times in the year. The burgesses have a right of commonalty on the links on both sides of the town. In 1814, the town sold the island of Craighleith,

lying off the harbour, to Sir Hew Dalrymple for £400.—North Berwick is an excellent bathing-place, the beach on both sides of the harbour presenting fine gently sloping sands, and the air being remarkably pure and salubrious. The links also afford good ground for the diversion of golfing, while the neighbourhood presents very pleasing scenery.—The parish-kirk of North-Berwick is famous in the annals of witchcraft, as having been a favourite rendezvous of the Lothian witches and wizards.

BIGGA, one of the Shetland isles, lying in Yell sound.

BIGGAR, a parish in the upper ward and shire of Lanark; bounded on the east by Peebles-shire, from which it is separated by Candy burn, a tributary of the Biggar; on the south by Peebles-shire and the parish of Culter; on the west by Libberton parish; and on the north by Libberton, Walston, and Dolphiston. Its superficial area is estimated at 5,852 Scots acres. The surface is diversified, but upon the whole the district is an upland and hilly one. The principal stream is the Biggar, which rises on the southern skirts of Libberton parish, and flows south towards the town of Biggar, between two ridges of considerable elevation,—that on the east attaining, in the Bushy Berry or Bizzy berry,* an elevation of 1,150 feet, and that on the west rising to 1,260 feet. After flowing through the town, the Biggar turns to the south-east, and on the southern confines of the parish enters a stretch of open level ground, which here extends between the head-streams of the Clyde on the west, and of the Tweed on the east. The descent, however, inclines to the Tweed; but so gradually that the Clyde does in fact, when swollen by heavy rains, discharge a portion of its waters eastwards into the Biggar, which joins the Tweed a little below Drummelzier. The elevation of this rill above sea-level is about 700 feet, and the descent to the Tweed, in a course of about 7 miles, is 25 feet. The real rental of the parish, in 1791, was about £1,800; in 1834, it was £4,671. Population of the parish, in 1801, 1,216; in 1831, 1,915. Assessed property, in 1815, £4,017. Houses 304.—The town of Biggar is a borough of barony. In 1831, it contained 1,454 inhabitants. It consists chiefly of one long wide street. The Commercial bank of Scotland has a branch here; there is also a Savings' bank. Three fairs are held here in the year, viz. at Candlemas, Midsummer, and on the last Thursday of October, old style, for horses and cattle. It is 27½ miles south by west of Edinburgh.—This parish is in the synod of Lothian and Tweeddale, and is the seat of a presbytery. Patron, Admiral Fleming. Minister's stipend £263 14s. 7d., with a glebe of the value of £30. Unappropriated teinds £146 5s. 7d. The collegiate church of Biggar was founded in 1545, by Malcolm 3d Lord Fleming, lord-high-chamberlain of Scotland; and largely endowed by him for the support of a provost, 8 prebendaries, 4 singing boys, and 6 poor men. It is built in the form of a cross; the fabric is entire, but the steeple and spire have never been finished. It has undergone some cruel mutilations, even in very recent times.—A Burgher congregation was formed here in 1760. Minister's stipend £130. Church seated for 450. A Relief congregation was formed in 1780. Minister's stipend £110. Church seated for 700. Schoolmaster's salary £34 4s. 4½d., with about £75 fees, and other emoluments. Average number of pupils 150. There is also a private school attended by about 50 children.—At the west end of the town of Biggar is a tumulus, or moat-hill, which appears never

to have been opened; and there are vestiges of three camps, each of a roundish figure, at different places in the neighbourhood.—“There is tradition of a battle having been fought at the east end of the town, between the Scots, under the command of Sir William Wallace, and the English army, who were said to be 60,000 strong, wherein a great slaughter was made on both sides, especially among the latter.” [Old Statistical Account.] “It has been alleged,” says Mr. Carrick, “that, on this memorable occasion, Edward commanded in person; but such could not have been the case, as the English monarch was not in the country at the time. That a considerable battle was fought in the neighbourhood, there is reason to believe, as well from current tradition, as from the number of tumuli which are still to be seen. These accounts, however, are decidedly at variance with truth, both in regard to the amount of the English, and the person who commanded. It is more probable, that the enemy did not exceed 8,000, or at most 10,000 men, part of which appears to have been under the command of Roden, Lord de Whichenour. On the side of the Scots, Sir Walter Newbigging headed a body of cavalry. His son David, a youth, at that time little more than fifteen years of age, held a command under him, and the well-tried military talents of the father were not disgraced by the efforts of the young patriot, whose conduct on this occasion was afterwards rewarded by the honour of knighthood, probably conferred by the hand of our hero himself. The family of Newbigging came originally from England; and Sir Walter and his son, on this occasion, found themselves opposed to their near kinsman, the Lord of Whichenour.” [‘Life of Wallace.’] Edward II. spent the first six days of October, 1310, at Biggar.—In 1651, Boghall castle in this parish, held out for the commonwealth of England, against General Leslie's army. This strength has long been dismantled, and has nearly disappeared, but more in consequence of the ruthless hand of man than that of time. Boghall stands upon a flat, or rather a marshy ground, half-a-mile south from the town, and is probably so called from its situation. This castle formerly belonged to the Flemings, Earls of Wigton, a family of great antiquity. They acquired the lands and barony of Biggar by the marriage of Sir Patrick Fleming with one of the daughters and co-heiresses of the brave Sir Simon Fraser, of Oliver Castle. This Sir Patrick was the second son of Sir Robert Fleming, who died in 1314; and, like him, was a faithful friend to King Robert Bruce. In 1451, Sir Robert de Fleming obtained a charter from James II., erecting the town of Biggar into a free burgh of barony, and by the same was created a lord of parliament, by the title of Lord Fleming, of Cumbernauld; and, on the 15th of June, 1452, Malcolm Fleming, his nephew, procured a grant under the great seal, of the lands and barony of Boghall, and some other estates. The mansion of Boghall continued in the family of the Flemings, until a few years ago, when Admiral Sir Charles Elphinstone Fleming, of Cumbernauld, sold his large estates in this parish. Mr. Grose has preserved a view of Boghall castle.

BIN or CULLEN, a remarkable hill in Banffshire, about 1½ mile south-west of the town of Cullen, and 2 miles from the sea, elevated 1,050 feet above sea-level. From its conical shape, it forms a conspicuous land-mark to mariners.

BINCHINNIN MOUNTAINS, that portion of the Grampians which lies in Forfarshire. “None of these mountains,” says Headrick in his ‘General View of the Agriculture of Angus,’ “are so abrupt and majestic as many other alpine districts of Scotland, nor are they covered with such valuable herbage

* In Hamilton of Wishaw's ‘Description of the Shires of Lanark and Renfrew,’ it is called Bizziebiggar.

as falls to the lot of some. These mountains are generally rounded and tame, are mostly covered with a thin coat of moorish soil, and carry stunted heath. Perhaps the only exception to this observation, are the mountains at the head of Glen Clova. There the glen divides into two narrow defiles, and the valley is bounded by a mountain which rises abrupt and majestic, between the defiles into which the glen divides. This, and the contiguous mountains exhibit bold and terrific precipices; and where there is any soil, it is clothed with green and succulent herbage. An observation of the late Dr. Walker, Professor of Natural History, Edinburgh, 'That the steepest side of mountains, islands, and continents, is chiefly towards the west,—is in them verified; the most abrupt declivity of these mountains being towards the west. It is hence, that the streams which arise in the west and north of the county, run chiefly south-east, and receiving in their progress innumerable torrents from the mountains, are swelled into rivers before they reach the ocean. These streams have scooped out considerable valleys among the mountains, the principal of which are Glen Isla, with its branches, on the west, Glen Prosen, Clova, Lethnot, and Glenesk. The Grampian district of this county is about 24 miles from west to east, and from 9 to 15 miles in the opposite direction."

BINNIE, in the parish of Uphall, Linlithgowshire, 13 miles west of Edinburgh, and 2 miles from the Union canal at Broxburn. There is a good sandstone quarry here, which is extensively used for building in Edinburgh and Glasgow. Binnie Craig rises to the height of about 450 feet.

BINNING, in the shire of Linlithgow, an ancient parish, annexed after the Reformation to the parish of Linlithgow. Thomas Hamilton, who was by James VI. made one of the senators in the college of justice, secretary of state, and lord-advocate and register, in 1613, was created Baron Binning and Earl of Melros, which title he afterwards changed for that of Haddington. In 1627, he was constituted lord-privy-seal, which office he held for ten years. The title Lord Binning is borne by the eldest son of the Earl of Haddington.

BIRGHAM, formerly **BRIGHAM**, a village on the northern bank of the Tweed, in the parish of Eccles, Berwickshire, immediately opposite Carham hall in Northumberland. When Henry II. of England, relying on the alleged superiority of his clergy over those of Scotland, sent Hugh, Bishop of Durham, into Scotland, in 1188, to collect funds for carrying on a new crusade, the envoy, it is said, was met at Brigham, by William the Lion, and some of his nobles and prelates, who boldly denied the authority of the English church over that of Scotland, and declined to allow the proposed subsidy to be levied in Scotland. In 1289, a meeting of the Estates of Scotland was held here to take into consideration the proposal for a marriage between the Prince of Wales, and the princess Margaret of Scotland; and in July, 1290, the treaty of Brigham—as it is called—was signed here, by which a lasting peace seemed to be secured to the two kingdoms, but which was rendered null by the death of the young princess on whom so many fair hopes depended, at Orkney, on her voyage to Scotland from Norway, in September, 1290. See **ABERDOUR**, Fifeshire.

BIRNAM, a mountain in the parish of Little Dunkeld, Perthshire, rendered classic ground by Shakspeare. It rises, from the southern bank of the Tay, to the height of 1,580 feet above sea-level. It is about 12 miles distant from Dunsinann hill, and was in ancient times included within the bounds of a royal forest. "When Malcolm Canmore came into Scotland, supported by English auxiliaries, to recover

his dominions from Macbeth the Giant, as the country people called him, he marched first towards Dunkeld, in order to meet with those friends who had promised to join him from the north. This led him to Birnam wood, where accidentally they were induced, either by way of distinction, or from some other motive, to ornament their bonnets, or to carry about with them in their hands the branches of trees. The people in the neighbourhood stated, as the tradition of the country, that they were distinguished in this situation by the spy whom Macbeth had stationed to watch their motions. He then began to despair, in consequence of the witches' predictions, who had warned him to beware 'when Birnam wood should come to Dunsinann;' and when Malcolm prepared to attack the castle, where it was principally defended by the outer rocks, he immediately deserted it; and flying ran up the opposite hill, pursued by Macduff; but finding it impossible to escape, he threw himself from the top of the hill, was killed upon the rocks, and buried at the Lang Man's Grave, as it is called, which is still extant. Not far from this grave is the road where, according to tradition, Banco was murdered. The resemblance between these traditions and Shakspeare's account of the same event, in his tragedy of Macbeth, is extremely remarkable, and suggests the idea that this celebrated dramatist must have collected the tradition upon the spot; because, had he taken the subject of his play from the Scottish history, he must have represented Macbeth as having perished at a different part of the country. The only material difference between the tradition and the tragedy is, that by the former Macbeth cast himself from the top of a rock; whereas Shakspeare, in consistency with poetical justice, as well as to give greater interest to the catastrophe, represents the usurper as falling in single combat with Macduff, whom he had so deeply injured. In Guthrie's 'History of Scotland,' (vol. viii. p. 358.) it is stated, that, anno 1599, king James desired Elizabeth to send him a company of English comedians; with which request she complied; and James gave them a license to act in his capital, and before his court. 'I have great reason,' he adds, 'to think that the immortal Shakspeare was of the number.' There is no doubt that in 1589 plays were actually exhibited in Perth, within a few miles of Dunsinann or Dunsinain. From the old records kept at Perth of that year, it appears that on the 3d of June the kirk-session of Perth authorized this amusement, after having examined the copy of the play. The actors were at that time all of them men, no women having appeared on the stage till the reign of Charles the Second." ['Beauties of Scotland,' vol. iv. pp. 320—322.] See **DUNSINNAN**.

BIRNIE,* a parish in the shire of Elgin; bounded on the west, north, and east, by the parish of Elgin; and on the south by Rothes and Dallas. The figure of the parish is irregular, but comes near to an oval shape; the distance from the northern to the southern extremity being about 5 miles, and from the eastern to the western about 2 miles. The greater part of the surface consists of high hills covered with heath. The cultivated soil, however, in the valleys, and on the sides of hills, and the several falls of water in the rocky channel of the rivulets, have formed some beautifully diversified scenes. The parish is intersected by three rivulets, the Lennock, the Bar-

* "This parish was named Brenuth about the beginning of the 13th century: a name probably derived from *Brae-nut*, that is, 'High land abounding in nuts' for many hazel-trees once grew upon the sides of the hills and banks of the rivulets, and the general appearance of the parish is hilly. The natives pronounce it *Burn-nigh*, that is, 'A village near the burn or river.' This etymology is descriptive enough of the particular place now called Birnie."—*Old Statistical Account*.

den, and the Rusheroock, which flow into the river Lossie. The Lossie taking its rise in the parish of Edinkillie, and gliding through the parish of Dallas, receives the burn of Lennock on the west side of Birnie parish, then flows through the northern end of the parish, and, after a course of about 25 miles, falls into the Moray frith at the harbour of Lossiemouth. There are about 100 acres of deep rich loam on its banks. This river abounds in burn-trouts and eels. Salmon and white trouts swim up the river about Lummas, and afford fine diversion to the angler. The Lossie is subject to violent floods. Its most remarkable inundations happened in the years 1768, 1782, and 1829. The parish contains 5,784 Scots acres, of which 850 were under cultivation in 1791, and 2,130 in 1829. It is divided into 40 compact farms, varying from 20 to 120 acres, and held in leases of 19 years. About 450 acres are under wood. The real rent, in 1791, was £360; in 1835, £1,200. Population, in 1801, 366; in 1831, 408. Assessed property, in 1815, £10. Houses 82. —This parish is in the presbytery of Elgin, and synod of Moray. Patron, the Earl of Moray. Stipend £156 8s. 4d., with a glebe of the value of £17. The church was repaired in 1734 and 1817, and seats 253. It is built with hewn freestone, and consists of a nave and choir. The late Mr. Shaw—a learned and respectable clergyman of this presbytery, who published the history of Morayshire in 1775—says, that it is probable that the bishop's first cathedral in this diocese was situated in Birnie, and that Simeon de Tonei, one of the bishops of Moray, was buried in Birnie in 1184. "It is held in great veneration by many in this county," says the Statistical reporter in 1791. "They still, in some measure, entertain a superstitious conceit that prayers there offered up three several sabbaths will surely be heard. Inasmuch that when a person is indisposed, or of bad behaviour, this common saying obtains, 'You have need to be prayed for thrice in the church of Birnie, that you may either end or mend.'" There are a parochial and a private school in this parish. Salary of parish schoolmaster £26.—A stone baptistery, and an old bell made of a mixture of silver and copper, of an oblong figure, named the coronach, are still kept in the church as relics of antiquity. Tradition relates that the bell was made at Rome, and consecrated by the Pope.—The Biblestone, having the figure of a book engraven upon it, lying about a mile east from the church, on the side of the road leading from Birnie to Rothes, has probably been placed there as a land-mark.—The cairn of Killforman, of a conical figure, 300 feet in circumference at the base, has been probably placed over the remains of a brave man whose exploits are now forgotten.—A cave in the middle of a steep rock, near the Gedloch, was, according to tradition, haunted about 150 years ago by a gang of armed ruffians who had no visible way of obtaining the means of subsistence but by theft and robbery. Some vestiges of an encampment can be traced near the burn of Barden. It commands a prospect of the Moray frith, from Speymouth to Cromarty bay. Probably the Danes, after invading this part of the country, had a camp there. This parish is entirely the property of the Earl of Seafield, who has done a great deal for its agricultural improvement, advancing the sum of £5 to his tenants for every acre of land brought under cultivation.

BIRSAY AND HARRAY, two united parishes in the northern part of Pomona or the Mainland of Orkney. Its general form is an oblong square, measuring $7\frac{1}{2}$ miles by 5 miles; and, in superficies, 48 square miles, or thereabout. The parish is bounded on the west and north sides by the sea. It is a

hilly but not mountainous district. There are six lakes within the parish, which abound with ducks and other kinds of water-fowl, and with swans in the spring and fall of the year. There are two or three small burns containing fine trout, and sometimes salmon. The extent of sea-coast is about 10 miles; the shore is rocky. The flood-tide here sets right in from the north-west upon the point of the Brough of Birsay, where it splits, one part flowing eastwards towards Evie sound, whence it goes away with a rapid stream towards Kirkwall; and the other westwards down the Sandwick shore, till it get in to the indraught of Hoy sound, where it becomes very strong. The head-lands are Marwick-head on the west, the Brough-head on the north-west, and the North-craig on the north. The hills are covered with heath, and what is here called *lubba*, a sort of grass which feeds the cattle in summer time, and generally consists of different species of carices, bent and other moor-grasses. The wild quadrupeds of this parish are, rabbits, the brown or Norwegian rat, the short tailed field-mouse, common mice, and a small species of mice called here *wights*. Seals and otters are also found here. The return to Dr. Webster in 1755, for Birsay and Harray, was 2,200 souls. In 1801, the population was 2,176; in 1831, 2,245. Houses 537. The assessed property, in 1815, was £202. The valued rent of the parish is £3,144 11s. Scots.—This parish is in the presbytery of Cairston, and synod of Orkney. Stipend £218 6s. 8d., with a glebe valued at £21. Patron, the Earl of Zetland. The church was built in 1664; repaired in 1760; and recently resealed for 565. There are several standing stones or obelisks in this parish. Remains of popish chapels are numerous, because every Erysl-land of 18 penny land had one for matins and vespers, but now all are in ruins. There are no towns in this parish, and only one ancient ruinous building, which was the palace of the Earls of Orkney. Robert Stuart, natural brother to Queen Mary, and his son Patrick, made great additions to this place; it is now in ruins, but has been built upon the model of Holy roodhouse, being a square area, with a well in the middle. Above the gate was the famous inscription, which, among other points of dittay, cost Earl Patrick his head. It run as follows: "Dominus Robertus Stuartus, filius Jacobi quinti Rex Scotorum, hoc opus instruxit." Above his coat of arms was the following motto: "Sic fuit, est, et erit." The parochial schoolmaster has a salary of 900 merks Scots, besides some perquisites, which are generally paid in kind. The schoolmaster has likewise the session clerkship, which yields £20 Scots. Two charity schools have been established in this parish, by a mortification left by Nicol Spence, church-agent.—Harray is under the same ministry as Birsay, and is joined with Birsay on the north-west. Towards the west it touches Sandwick; on the west, south-west, and south, it is bounded by a large brackish loch commonly called the Loch of Harray; and on the other quarters, by Stenness, a small part of Firth, and the hills that part it from Randle. A new church has recently been erected here. The parish-minister officiates alternately at Harray and at Birsay; but he employs an assistant at a salary of £60 per annum, so as to insure service each sabbath at each church.—An Original Secession congregation was established at Birsay in 1801. Church built in 1829; sittings 470. Stipend £65.—An Independent church was formed at Harray about 1818. Stipend £60.—The ancient Norse language long prevailed in Harray, more so than in any other part of the country, but is now worn out: the names of places here are all undoubtedly Norwegian.

BIRSE,* a parish in the south of Aberdeenshire, and district of Kincardine O'Neil; bounded on the north by the river Dee; on the east by Kincardine; on the south by Forfarshire; and on the west by Glentanar. Its extent from east to west is about 12 miles, and from the Dee on the north to the southern boundary it is nearly of equal admeasurement. It may be divided into three large straths or districts. The largest, in the south-east part of the parish, is called Feughside. It has the Feugh, a tributary of the Dee, running through it; and is about 3 miles long, and 2 broad. On the banks of the Feugh, and among the Grampian hills is situated the forest or glen of Birse. The middle strath or district is called the Water Chattie. It is about 4 miles long, and 1 broad. On the south of the burn is Midstrath, and on the north Ballogie. The most northerly district is along the south side of the Dee; through it runs the burn of Birse. The church and manse are situated here. This district is about $2\frac{1}{2}$ miles long, and $1\frac{1}{2}$ broad. It is vulgarly called the Six Towns. The whole parish is divided into what was called 24 towns; and each town, in 1792, was supposed to contain from 80 to 85 arable acres. The surface is rocky and mountainous, but beautifully diversified with hill and dale, wood and water. The largest plantations, and greatest number of trees of all sorts, are on the estate of Finzean; but among many others were two remarkable trees, the one at Midstrath, and the other at Ballogie. The one at Midstrath was an ash. It was commonly called the Maiden of Midstrath. We regret to say, this noble tree perished in one of the destructive gales in 1833. There is no authentic record of the Maiden's birth; but tradition, with great probability, refers it to the end of the 16th century. The following are the dimensions of this venerable ash-tree, probably one of the most remarkable in the North of Scotland:—

Girth of the trunk at the root	21 feet
Do. do. 9 feet from the ground	18 feet
Here it divided into four branches.	
Girth of the largest	10 feet
Second	8 feet 10 in.
Third	7 feet
Fourth	6 feet
Containing 500 cubic feet at the lowest estimate.	

The tree at Ballogie is a birch of the weeping sort, from 70 to 80 feet high. It has a straight stem of 50 feet and upwards, and is 5 feet in circumference through the whole. Three large ridges of hills run through this parish in a south-west direction till they terminate in the Grampians, of which indeed they are a part. Peter-hill, the White-hill, and Mulbrax, are in the southern ridge. The Ords, the Shooting-greens, Tomcain, Corse-Dardar, Midstrath, Arntilly, Lamachip, and Brackenstaik, are in the middle ridge. The most northerly ridge takes its rise at Inchbair, and terminates at Cairnferg. On the west of the parish are the hills of Birsemore, Deuchry, and Mount-Ganiach. Mount Battach is also claimed as belonging to Birse. Its height by Garden's map of the county of Kincardine, is 1,150 yards above the level of the sea. Mount Ganiach is conjectured to be about 1,000 yards above sea-level. Peter-hill and Mulbrax may be rated at 900 yards. Cairnferg, a remarkably conspicuous conical mount, may be about 700 yards. On Mount Ganiach there is a well called St. Com's well; but concerning it there is no tradition. The Dee here abounds with excellent

salmon, grilse, sea-trout, sterlings, (here called dowbrecks,) trout, and parr, with some pikes, fresh water flounders, with finicks. Feugh is the most considerable stream within the parish. It rises on the western skirts of the parish from Mount Ganiach, and flows eastwards. It produces salmon, and most of the sorts of fish above-mentioned, and would abound with them, were they not stopped by a considerable water-fall near its influx into the Dee, opposite to Banchory-Ternan, which prevents the salmon from getting up except when the river is flooded. The Feugh receives the Aven before it leaves the parish of Birse, and then flows north-east into the Dee. The principal roads in the parish, are the great road from the Cairn O'Mount, which enters this parish at the bridge of Whitestone, a mile north of the inn of Cutties-Hillock, and leads northward to the Dee at Inchbair. Another road passes through the greater part of the parish, from the ferry over the Dee at Aboyne, to the bridge of Whitestone. There is a bridge over the burn of Birse, near the church; and at Potarch, over the Dee, near Inchbair, by which the Great south and north road is carried across the Dee. This parish is famous for its honey of great richness and flavour. Two men in the Six Towns exported 100 pints each, in summer and autumn 1791. The pint consisted of 5 lbs. Amsterdam, and sold from 2s. 6d. to 4s. 2d. It would now bring 10s. or 12s. "The price of labour," says the Statistical reporter in 1792, "is greatly increased from what it was. There are living in the parish two old men who, in their younger days, were servants, the one at 20s. and the other at 30s. a-year. For young men to do the same work now, there must be paid from £4 to £5; and from £5 to £6, with their entertainment, in which they are most extravagant, often requiring better entertainment than the tenant can afford to himself. Women-servants have from £2 to £2 10s.; and a few house-servants £3; herd-boys from 12s. to 20s. for the summer half-year. When the children of the tenant grow up, he employs them. This is his first relief: before, he was much at the mercy of merciless menials. A day-labourer—of whom we have few—gets 6d. and victuals; at some work he requires more; for in harvest he gets 1s. and upwards; a wright, 8d., and lately 10d.; a tailor, 6d. and victuals; a mason, from 1s. 6d. to 1s. 9d. without victuals. The blacksmith works by the piece, and is very extravagant in his demand. The weaver asks 2½d. or 3d. for what was formerly done at 1d. the ell. Shoes are at an exorbitant rate, triple of what they were 30 years ago. The poorer sort have much ado to purchase that necessary article. The women of the parish are chiefly employed in the knitting of stockings, or spinning of lint-yarn. By the former they earn, when working on their own account, 1s. 8d. or 2s. the week; by the latter a little more. If working on account of a master, they often earn less." Wages are nearly doubled since this report was made; but provisions are also doubled in price. During the years 1790 and 1791, meal sold from 13s. to 17s. the boll, of 9 stone Amsterdam; bear from 15s. to 19s. the boll. Butter sold from 6d. to 8d. the pound, of 28 ounces; cheese from 5s. to 6s. the stone; eggs at 2d. the 12; a chicken 2d., and a hen from 6d. to 8d.; salmon about 3d. the pound. Illicit distillation prevailed to a great extent in this district previous to the late modification of the excise duties. Gordon of Cluny was once proprietor of upwards of two-thirds of this parish. The valued rent is £3,139 8s. 4d. Scots. The assessed property, in 1815, was £2,218. Population, in 1791, 1,253; in 1801, 1,266; in 1831, 1,476. Houses, in 1831, 297.—This parish is

* The ancient name of this parish is said to have been *Press*, meaning in Gaelic "a Wood or Thicket." A great part of the parish is covered with natural wood, such as fir, birch, ash, alder, mountain-ash, gum or black cherry, holly, hazel, aspen, and oak. The name seems to have been written *Preiss*, then *Breiss*; and this is inscribed on the communion-cups about a century ago. In some writings it is called *Brass*, and it now obtains the name of *Birse*.—*Statistical Account* in 1792.

in the presbytery of Kincardine O'Neil, and synod of Aberdeen. The Crown is patron. The church, built in 1779, is a substantial and commodious edifice. Minister's stipend £158 7s. 4d., with a glebe of the value of £7. The church-session are proprietors of a piece of land which yields from £4 to £5 yearly. Dr. Gilbert Ramsay, of the island of Barbadoes, mortified, in 1732, for the behoof of the poor, £500. Robert Farquharson of Finzean, mortified 600 merks; and £20 were left by Isaac Robertson of Grenada, in 1789. The parochial schoolmaster has £28 of salary, with fees. His school is attended by about 60 children; and there are four private schools, the joint attendance on which is about 90. Dr. Ramsay also mortified £500 for the support of a free school—one of these four—in the east end of this parish. On the hill, about a mile north-east of Finzean, bearing the name of Corse-Dardar, there is a place marked near the way-side with a long granite-stone, which is reported to mark the spot where King Dardanus, the 20th from Fergus I. was put to death.

BIRSELEY, a hamlet and colliery in the parish of Tranent, and shire of Haddington, about $1\frac{1}{2}$ mile south of the spot on which the battle of Prestonpans was fought in 1745. It was from the rising grounds here, or 'Birseley brae', that the chevalier's troops descended to meet their opponents.

BISHOP'S LOCH, a small piece of water on the southern skirts of the parish of New Machar, Aberdeenshire, between Loch hills and Foulis hill.

BISHOP'S LOCH, a narrow strip of water, about a mile in length, lying between Calder parish, and Old Monkland, in the shire of Lanark.

BISHOPTON, a village in the parish of Erskine, Renfrewshire. Bishopton ridge, which divides the low land near Paisley from the Clyde, is composed of solid whinstone rock. The Glasgow, Paisley, and Greenock railway passes through it for a distance of 2,300 yards. There are two tunnels in the middle of the ridge, having an open part 100 yards long, and 70 feet deep, between them. These tunnels are 320 and 340 yards long respectively. The depth of the open cutting at the entrance to each is 70 feet; and the length, from the face of the east tunnel is 748 yards, and from the face of the west tunnel 946 yards.

BLACKADDER* (THE), a stream of the Merse division of Berwickshire, whose head-streams descend from the mountains in the north-west part of Westruther parish, and from Derrington law in the parish of Longformacus, and flowing south-east towards Greenlaw, fetch a circuit to the south of that town in one conjoined stream. From Greenlaw, the Blackadder flows north-east through the parishes of Greenlaw, Fogo, and Edrom, to the Whitadder, which it joins a little above Allanton. The total length of this stream is about 20 miles. The height of its head-springs above sea-level may be 1,130 feet. It is supposed to derive its name from the prevailing dark tinge of its waters, occasioned by the nature of the soil through which it flows.

BLACKBURN, a village in the parish of Livingstone, $3\frac{1}{2}$ miles west of Livingstone, and $2\frac{1}{2}$ east of Whitburn. The south road from Edinburgh to Glasgow passes through it. A cotton mill here employed 100 hands, in 1838; and a flax mill, 42 hands.

BLACKBURN (THE), a small river of Liddesdale, in the parish of Castletown, Roxburghshire, celebrated for the romantic falls and cascades which are formed by its stream. One of the falls is $37\frac{1}{2}$ feet in height, and 20 in breadth; and another $31\frac{1}{2}$ feet in height, and 36 in breadth. In one part of its course a natural bridge of stone seemed to be thrown

across the river. It was 55 feet long, 31 in span, and $10\frac{1}{2}$ broad; and the thickness of the arch was $2\frac{1}{2}$ feet of solid stone. The arch was not composed of an entire rock, but had the appearance of several square stones united together in the neatest manner. The height of the arch from the water was 31 feet. This bridge gave way in April 1810. The Blackburn is a tributary of the Liddel.

BLACKBURN (THE), a small river in the county of Linlithgow, which rises on the borders of Lanarkshire in the parish of Whitburn, and forms the principal branch of the Almond.

BLACKFORD, a parish in Perthshire, of a circular figure, having a diameter of nearly 6 miles; bounded by Trinity-Gask on the north; by Auchterarder and Glendevon on the east; by Alva, Tillicultry, and Logie, on the south; and by Dunblane and Muthil on the west. A ridge of the Ochils occupies the southern part, which, towards the river Devon, is steep and craggy; but on the north it descends gently to the flat part of the parish which is watered by the Allan. The soil is thin, with a gravelly bottom. A great part is marshy; and a moor of considerable extent, now under plantation, occupies the northern part of the district. The vicinity of the Ochils renders the climate moist and unfavourable to vegetation. There are a few small lakes from which the Ruthven and the Allan take their rise. Freestone of a very hard quality, excellently adapted for making millstones, is obtained within the parish. Population, in 1801, 1,520; in 1831, 1,918. Assessed property, in 1815, £10,330. Houses in 1831, 321.—This parish is in the presbytery of Auchterarder, and synod of Perth and Stirling. Patron, Moray of Abercainey. Minister's stipend £206 11s., with a glebe of the value of £18. Schoolmaster's salary £34 4s. 4d., with £22 fees. There were four private schools within the parish in 1834. Average number of scholars at the five schools, 250.—The village of Blackford is $9\frac{1}{2}$ miles north-east of Dunblane. A cattle-fair is held at it on the 3d Wednesday in October. There were formerly several chapels in this parish; and, before the year 1745, divine service was occasionally performed in one at the house of Gleneagles, the burial-place of the family of Haldane; and in another near the castle of Tullibardine, in the choir of which the dukes of Athol formerly interred. Besides these, there are the vestiges of two chapels in Mahany, at one of which is a burying-ground still in use by the inhabitants of the neighbourhood. Upon an eminence, fronting Gleneagles, are the vestiges of a small Roman camp; there are also several Druidical circles. In this parish, the ancestors of the duke of Montrose had their ordinary residence, at the castle of Kincardine, which was burned in the time of the Civil wars, and has never been rebuilt. In Tullibardine stand the remains of a castle of that name, the seat, in former times, of the earls of Tullibardine, who, for a long time after that family came to the titles of Athole, resided here some part of the year. In 1715, it was garrisoned by a party of the Earl of Marr's army, and taken by the Duke of Argyll; before the year 1745, Lord George Murray and his family inhabited it; but since that time it has been suffered to go to ruin. Tullibardine gives the title of marquis to the illustrious family of Murray, Duke of Athole.

BLACKFORD HILL, an eminence about $1\frac{1}{2}$ mile south of Edinburgh, divided from Braid hill on the south by a ravine which is intersected by Braid burn. "It is well worth while to ascend to the top of Blackford hill, from which a fine prospect of Edinburgh, the frith of Forth, the coast of Fife, the Lo-mond and Ochil hills, even to the Grampian moun-

* Usually pronounced and sometimes written *Blackater*, which is probably nearer the true etymology of the word, viz. *Black water*.

tains, is commanded. In ascending from the bottom of the valley through which the rivulet winds, we first reach one summit; and in gaining the next, the heaving into view of the castle, spires, and other buildings of the city, piled in irregular masses, and enveloped in the sombre obscurity of its smoke, seems as if all were in motion by the power of enchantment. On obtaining the topmost ridge of the hill, an extent of prospect truly sublime and beautiful spreads out before us. Immediately beneath the north brow, Blackford mansion-house, half hid among trees, and several others near it, of an old construction and aspect, appear on the plain below. One of these, namely, Grange-house, was that in which Principal Robertson breathed his last. Winding by cautious and slow degrees down the declivity of Blackford hill, we descend into Egypt; through which, after crossing the river [brook] Jordan, we pass into Canaan and other regions of the Holy Land; for thus are the circumjacent fields in the neighbourhood of Braid denominated. We may take a short cut by the farm-house of Egypt to the turnpike-road leading to Edinburgh by Borrow-moor Head, Merchiston-house, and thence by Bruntfield links, and the Cage walk, into the city." [Campbell's 'Journey from Edinburgh,' vol. ii. pp. 288, 289. London, 1802. 4to.]

BLACKHOUSE, an old square tower, on Douglas burn in Selkirkshire, about 4 miles south of Traquair, one of the most ancient seats of the puissant family of Douglas. It now gives name to a sheep-farm of about 4,000 acres in size, belonging to the Earl of Traquair. It is said to be mentioned as early as the reign of Malcolm Canmore. The tower might be built by William, first Earl of Douglas, when he succeeded to the Forest: for Robert Bruce had granted to his favourite warrior, Sir James Douglas, the forests of Selkirk and Traquair. From the tower of Blackhouse, according to tradition, Lady Margaret Douglas was carried off by her lover; between whom and her seven brothers a most bloody scene took place, as they all perished in attempting to bring her back to her father's house. Her lover was also slain. Seven large stones, on the heights of Blackhouse, are pointed out as marking the different spots where the brothers fell. Lady Margaret and her lover are said to have been buried in St. Mary's chapel, which stood in the neighbourhood.

"Lord William was buried in St. Marie's kirk,
Lady Margaret in Marie's quire;
Out o' the lady's grave grew a bonnie red rose,
And out o' the knight's a brier.

And they twa met, and they twa plait,
And lair they wad be near;
And a' the world might ken right weel,
They were twa lovers dear.

But bye and rade the black Douglas,
And wow but he was rough;
For he pu'd up the bonny brier,
And flang'd in St. Marie's loch."

Their fate is commemorated in a very beautiful traditional ballad, of which we have quoted the last three stanzas. In a MS. in the possession of Lord Traquair, dated 1711—from which the circumstances above-mentioned are extracted—this is called 'Lord William and Fair Margaret.' But like most of our popular ballads it has borne different names. It is published, in the *Minstrelsy of the Border*, vol. iii. 243, &c., under the title of 'The Douglas Tragedy.' This place is merely mentioned by Chalmers as "Blackhouse tower, on Douglas burn." Godscroft says, that "the eldest sonne" of William, "first created Lord of Douglas at the parliament of Forfaire," held by Malcolm Canmore, "was Sir John of Douglasburn, which is a parcell of ground and mannour lying bewtix Ettrick forrest and Peebles." According to

this writer, "he and his brother William were both knights at the same parliament," in which their father was nobilitated. It may be added, as a further memorial of the connection of this district with the Crown, that the name of the King's road is still given to a road which runs from Blackhouse to Henderson, on Megget water, where it is said there was another royal hunting-seat. This place was held, in a later age, by that famous freebooter Cockburn; and here his tomb-stone is still pointed out. On the banks of this beautiful stream, it is, indeed, said, there are the remains of two old towers, which appear to have been built, partly for accommodating the kings of Scotland, when on their hunting parties in the forest; as well as the traces of three or four roads in different directions across the hills, supposed to have been cut out for the king and his suite when they went a-hunting.

BLACKHOUSE HEIGHTS, a ridge of hills in the county of Selkirk, dividing the upper part of the vale of Yarrow from Tweeddale. The highest point of elevation in these hills measures 2,370 feet above the level of the sea.

BLACK ISLE (THE). See ARDMEANACH.

BLACKNESS, a small port on the frith of Forth, in the parish of Carriden, Linlithgowshire, $3\frac{1}{2}$ miles east of Borrowstounness, and 5 west of Queensferry. It was in ancient times the port of Linlithgow, from which it is about 5 miles distant; but trade has totally left this place, and the village owes its chief distinction to the old castle of Blackness, which is generally supposed to mark the eastern extremity of ANTONINUS'S WALL: See that article. The town and port of Blackness were anciently of great distinction, and formed the principal emporium of this part of Scotland. "There were," says Sir Robert Sibbald, "many rich men masters of ships lying there; and the cities of Glasgow, Stirling, and Linlithgow, had a great trade from thence with Holland, Bremen, Hamburg, Queensburgh, and Dantzick, and furnished all the West country with goods they imported from these places, and were loaded outwards with the product of our own country." The attack of the port of Blackness was usually a principal object with the English in their expeditions into the frith of Forth. In 1481, under the reign of James III., they burnt the town with a store-ship which was lying in the harbour. When, in 1487, the nobles, irritated by the conduct of James, took up arms, in the course of military operations, they met his troops near Blackness, and a skirmish ensued, which, terminating to the disadvantage of the king, he concluded with them the pacification of Blackness, [Acts of the Parliament of Scotland, vol. ii. p. 210] which, however, did not produce any lasting harmony. During the victorious expedition of Somerset into Scotland, under the reign of Edward III. of England, Blackness was one of the objects of attack. The result is thus stated by Patten, in his narrative of this expedition: "My Lord Clynton, hye Admiral of this flete, taking with him the galley (whereof one Broke is Captain) and iiii. or v. of our smaller vessels besides, all well appointed with munition and men, rowed up the frith a ten myle westward, to a haven town standing on the south shore called Blacknestes, whereat, towards the water syde is a castel of a pretty strength. As nye whear unto as the depth of the water thear wold suffer, the Skots, for savegard, had laied ye Mary Willoughby, and the Antony of Newcastle, ii tall ships, whiche with extreme injury they had stollen from us before tyme, whe no war between us; with these ley thear also an oother large vessel called (by them) the Bosse, and a viii mo, whearof part laden with merchandize. My Lord Clynton, and his copenie, w^t

right hardy approche, after a great conflict betwixt the castel and our vessels, by fyne force, wan from them those iii ships of name, and burnt all ye residue before their faces as they ley." [Dalziel's 'Fragments of Scottish History,' p. 80.] Under the reign of Charles II., Blackness was one of the king's castles, and the Earl of Livingston was hereditary constable. In the course of the 16th century Borrowstounness, being nearer to Linlithgow, and possessing some other advantages of situation, rose to a rivalry with Blackness; and in 1680, it succeeded, notwithstanding the opposition of the latter place, in being declared a port for entry. Blackness thereupon sunk gradually into total insignificance, and scarcely any vestiges of the town now remain. The castle, however, is still kept up, in conformity to an article in the treaty of Union. It was usually garrisoned by a governor, lieutenant-governor, 2 gunners, 1 serjeant, 2 corporals, and 14 or 15 privates.

BLACKSHIELDS, a small village, 15 miles south-east of Edinburgh, on the road to Kelso. The next stage southwards from this leads across Soutra hill.

BLACKSIDE-END, a mountain on the north-east boundary of the parish of Lorn in Ayrshire, having an altitude of above 1,500 feet, and commanding a splendid view, embracing parts, it is said, of no fewer than sixteen different counties. A few years ago, a curious phenomenon was observed near this hill after a thunder-storm which occurred about the middle of March. Near the base of the hill, something like an open quarry, which had not been perceptible on the preceding day, attracted the attention of people in the neighbourhood, and on going to the spot they found, to their astonishment, an excavation in the ground 60 feet long, 40 broad, and 16 in depth. The earth scooped out was not scattered round the pit, but thrown down at one place at 120 feet distance from the hole or cavity; and part remained in lumps of from 3 to 6 feet square, with many stones of some hundred weight. The earth on the sides and bottom of the pit remained firm and solid, without rent or aperture. The soil was what is called hill-moss or black earth, a few inches in thickness; and under the moss was hard till, some of it of a red colour, and part of it blue, without any appearance of rock of any kind. The preceding day had been stormy, with flashes of lightning, and that this excavation was effected by the invisible but irresistible element can scarcely admit of doubt.

BLADENOCH (THE), a river in Galloway. It rises in the hills which divide Galloway from Carrick, and, after a winding course of 24 miles, empties itself into the bay of Wigton. Several islands, once famous for the resort of eagles, are formed in its bed. Good salmon are found in this stream.

BLADENOCH, a village in the parish of Wigton, Wigtonshire; about a mile south-west of the town of Wigton, within the parliamentary boundaries of which it is included. There is a large distillery here.

BLAIR-ATHOLE, an extensive parish in the district of Athole, in Perthshire, comprising the united parishes of Blair-Athole and Strowan, which anciently comprehended the parishes of Blair-Athole, Strowan, Lude, and Kilmaveonaig.* These united parishes extend upwards of 30 miles in length; and

allowing for the ascents and descents of the hills, 18 in breadth. Their superficial area has been estimated at 312 square miles. They are bounded on the north by Inverness-shire; on the north-east by Aberdeen-shire; on the east by Kirkmichael and Moulin parishes; on the south by Dull parish; and on the west by Rannoch. An extensive well-cultivated strath or valley lies along the Garry, from the kirk-town of Strowan, for 6 miles downwards; and Strath-Tummel runs along the loch of that name, which is about 2 miles long. Between these two straths is a stretch of moorland about 4 miles in breadth. The rest of the parish consists of small straths or glens along the rivulets which descend from the mountains, of naked rocks, and extensive moor clad hills. On the summits of the higher mountains, the weather has left little else than gravel and stones covered with moss. Farther down we find heath, uva ursi, and the crawberry plant; on boggy places, the cloudberry, and on drier ground, the whortleberry with coarse grass. Still lower down, amidst heath and peat-bog, occur small valleys with pretty good pasture, and here and there a green spot, with huts to which the women, children, and herds, retire with the cattle for the summer-season. The vestiges of the plough are often seen here much higher up than it goes at present; probably because wood then clothed the higher places, and much of the bottom was a thicket. Every glen and valley is intersected by its own river, or stream; and in some of them there occurs a loch. The most remarkable mountain is Beinndeirg, or Bendearg, i. e. 'the Red mountain,' so called from a vein of red stone, said to be a kind of granite, which intersects it. It rises 3,550 feet above the level of the sea; but is exceeded by Bengloe, or Benygloe, the highest pinnacle of which, Carn-nan-gour, or Carn-nan-Gabhar, i. e. 'the Mountain of goats,' rises 3,725 feet above sea-level. The other summits of this mountain are Carn Liath, Carn Torkie, and Airdiodbheann. There are several lochs, and two considerable rivers, the Tummel and the Garry, in this parish. See articles **TUMMEL** and **GARRY**. The principal streams are the Erochty or Erickhie, the Bruar, and the Tilt, which are all tributaries of the Garry. See articles **BRUAR** and **TILT**. The Dukes of Athol, and Robertson of Lude, have planted a great deal in this parish. The prevailing kinds of timber are birch, alder, ash, oak, poplar, and hazle; the shrubs are willow, broom, bog-gall, heath, &c.—The village of Blair-Athole is situated on the road from Edinburgh to Fort Augustus. A fair is held at Blair-Athole on the 2d of February, and for cattle and horses on the 3d Wednesday in May. Bridge-of-Tilt cattle fairs are held on the 25th of June, and 20th of August, O. S.—In 1792, it was conjectured that of about 130,000 Scots acres, the supposed superficial area of this parish, not above 4,000 were under tillage. The valued rent is £4,204 18s. 8d. Scots. This sum bears a very small proportion to the real rent, which, in the New Statistical Account, it is conjectured may amount to £14,000. Population, in 1801, 2,848; in 1831, 2,384. Assessed property, in 1815, £3,270. Houses, in 1831, 520.—This parish is in the presbytery of Dunkeld, and synod of Perth and Stirling. Patron, the Duke of Athole. Minister's stipend £143 19s. 4d., with three glebes of the annual value of £95 10s. Unappropriated teinds £443 0s. 5d. There are two parish-churches, one at Blair, and one at Strowan, about 5 miles distant from each other. The church of Blair was built in 1825, and seats 650; that at Strowan, in 1828, and seats 460. A portion of the eastern extremity of the parish, with a population of about 200, has recently been annexed *quoad sacra* to the new church

* *Blair*, or *blar*, properly signifies 'a Plain clear of woods;' but the Celts, of whom the Gaei were a branch, in general choosing such plains for their fields of battle, *blar* came at length to signify a battle. *Strowan*, or *struthain*, signifies 'streams;' and the district is so called from the confluence of the Garry and the Erochty at that place. *Kilmaveonaig*, signifies 'the Place of worship,' or 'the Burial place of St. Eonog,' or Veonog, or Vequair. *Lude*, or *Le'oid*, seems to signify Deities where a plough can bring a turnrow only one way.—*Old Statistical Account*.

and parish of **TENNANDRY**: which see. There is an Episcopalian congregation at Kilmaveonaig, which has existed there about 150 years. Chapel built in 1791; seats 200. Stipend about £78 10s.—A Baptist congregation was also established at Kilmaveonaig in 1821.—The parochial schoolmaster has a salary of £34 4s. 4d., with about £14 fees; pupils 50. There were seven private schools within the parish in 1834, attended by about 200 children.—On the east bank of the Tilt, south-east of Athole-house, is Clagh-ghil-Aindreas, or ‘the cemetery of Andrew’s disciple.’ The Tilt has left only a small portion of this burying-place. The coffins which are found in it are usually composed of five flag-stones.—On the north side of Beinniglo, is Lochainn, i. e. ‘the River that is slow like a loch.’ It runs from Lochloch, towards the Tilt. Upon Lochainn are the vestiges of a palace in which the Earl of Athole entertained James V., his mother, and the French ambassador, in a most sumptuous manner; and, which was burnt to the ground, as soon as the king left it.—To the east of Athole-house there is a deep pool, with a rock in it, whence adulteresses were of old thrown, sewed up in a sack, and drowned.—Blair castle, or Athole house, seated on an eminence rising from a plain watered by the Garry, is of uncertain antiquity. The oldest part is called Cummin’s tower, being supposed to have been built by John, commonly called De Strathbogy, who enjoyed the title of Athole in right of his wife. It became the principal seat of his successors. In 1644 the Marquis of Montrose possessed himself of it, and was here joined by a large body of the Athole highlanders, to whose bravery he was indebted for the victory at Tibbirmoor. In the troubles of 1653, this place was taken by storm by Colonel Daniel, an officer of Cromwell, who, unable to remove a magazine of provision lodged there, destroyed it by powder. In 1639, it occasioned the celebrated battle of Killcrankie. An officer belonging to Viscount Dundee had flung himself into it, and refusing to deliver it to Lord Murray, son to the Marquis of Athole, was by him threatened with a siege. His lordship, to effect the reduction, assembled a body of forces and marched towards the place. Dundee knew the importance of preserving this pass, and his communications with the Highland clans in whom he had the greatest confidence. With his usual expedition he joined the garrison; and, in a few days, after concluded his life with the well-known defeat of the royal forces under Mackay, at Killcrankie. The last siege it experienced was in March, 1746, when it was gallantly defended by Sir Andrew Agnew against the rebels, who retired from before it a few weeks preceding the battle of Culloden. The reader will find some curious details of this siege in the ‘Scots Magazine’ for 1803. As soon as peace was established, a considerable part of the fortress was reduced in height, and the inside most magnificently furnished. “The views in front of the house,” says Pennant—who visited this place in 1772—“are planted with so much form, as to be far from pleasing, but the picturesque walks among the rocks on the other side cannot fail to attract the admiration of every traveller of taste. The late noble owner, with great judgment, but with no less difficulty, cut, or rather blasted out, walks along the vast rocks and precipices that bound the rivers Banovy and Tilt. The waters are violent, and form in various places cascades of great beauty. Pines and trees of several species wave solemnly over the head, and darken the romantic scene. The place appeared to great advantage: for the Highlands, as well as other beauties, have their good and their bad days. The glen, that in 1769 I thought deficient in water, now by reason of the rains, looked

to great advantage, and finished finely the rich scenery of rock and wood.”

BLAIR-DRUMMOND, an estate in the parish of Kincardine, in the Menteith district of Perthshire, chiefly celebrated for its extensive moss, and the successful efforts which have been made to reclaim it. This moss is a portion of the tract of land known as the mosses of Kincardine and Flanders, which covered above 3,000 acres to the depth of from 3 to 14 feet. Lord Kames—into whose possession the estate of Blair-Drummond came in 1767—commenced clearing that part of his estate which lay in the moss; and with this view invited a number of poor families from Balquhiddy to settle on the waste. Hitherto draining, trenching, burning, and other methods had failed; but the idea which presented itself to his lordship’s mind was that of sweeping away the superincumbent stratum of moss, after being loosened and divided into small portions, by means of water. The reader will find an account of this successful effort, in a pamphlet of which the 3d edition was published at Edinburgh in 1793, entitled ‘An Account of the Improvements of Moss, &c., in a Letter to a Friend,’ also in an article in the 3d vol. of the ‘Edinburgh Philosophical Transactions.’ Two wooden wheels of curious and ancient construction were found in this moss, at the depth of 9 feet, a few years ago. They were wholly of wood, not even a nail or any thing of iron being to be found about them. They consisted of three planks joined together by two oval pieces of oak passing through the centre like bolts; and measured 3 feet in diameter, by 2½ inches thick. The centre, or nave, was 6 inches thick, apparently turned out of one solid piece, and bushed with the red wood of oak. The bushing was composed of small staves set in, like cooper-work, as exemplified in the form of the Scottish bicker. Both wheels were discovered in a horizontal position, and a layer of fir-trees and brush-wood was imbedded in the moss about a foot above them; which seems to prove that in whatever manner the wheels got there, they were at least of as ancient a date as the moss itself.

BLAIR-GOWRIE,* a parish in Perthshire of considerable extent, but irregular figure, being about 11 miles long from south to north, and, in some places, not less than 8 miles broad; but intersected by the parishes of Kinloch, Bendochy, and Rattray. The connected part of it is only about 9 miles long, and from 1 to 2 broad. The parish is divided into two districts by a branch of the Grampian mountains forming a part of the northern boundary of the beautiful valley of Strathmore. The southern district, which lies in this strath, is about 4 miles long, and from 1 to 2 broad. The northern district—which includes the detached parts of the parish—is high ground, and very uneven in the surface. The hills are mostly covered with heath, and some of them may be about 600 feet above sea-level. Not above a third part of the parish consists of arable ground. The Isla, which skirts the northern part of the parish, is the most considerable river. As its banks are here low, it often suddenly overflows them, and occasions considerable loss to the husbandman. This was remarkably the case in the harvest of 1783.—The next river in size is the Erich, which, from its

* The name of the parish is derived from the village near which the church stands. In old papers it is sometimes written *Blair-in-Gowrie*. Various etymologies and interpretations of it have been suggested. Like many other names of places in the parish, it is probably Gaelic. In that language *Blair* is said to be descriptive of a place where muir and moss abound. Thus *Ardblair* is ‘the Height in the muir.’ The muir of Blair-Gowrie is in the near neighbourhood of the village. *The Water of Blair*, the *Lochend of Blair*, *Little Blair*, and *Ardblair*, are names of places on the borders of the muir.—*Old Statistical Account*.

rapidity, has acquired the appellation of "the Ireful Ericht." It is formed by the junction of the Ardlie and the Black-Water; and runs along the east side of the parish for about 9 miles. Its channel in general is rocky and uneven, and it often varies in its depth and breadth. In some places the banks are so low that it frequently overflows them; in other parts they rise to a great height, and are often covered with wood. About 2 miles north of the village of Blair-Gowrie, they rise at least 200 feet above the bed of the river; and on the west side are formed, for about 700 feet in length, and 220 feet in height, of perpendicular rock as smooth as if formed by the tool of the workman. This place is called Craig-lioch. Two miles farther down is the Keith, a natural cascade considerably improved by art, and so constructed that the salmon—which repair in great numbers to it—cannot get over it unless when the river is very much swollen.* The parish abounds with lakes of different sizes, several of which have been drained, and now supply the neighbourhood with peats and marl. In those which still exist, pike and perch are caught. They are also frequented by wild fowls of different kinds. There is one chalybeate spring in the Cloves of Maves, which was formerly much resorted to by persons in its neighbourhood, for scorbutic disorders. In 1774, the muir of Blair-Gowrie—then a common of 500 acres—was divided, and most of it, in 1775, was planted with Scotch firs; the rest of it has been gradually planted since that time, partly with larch, and partly with Scotch firs. The principal branches of manufacture carried on in this parish are spinning and weaving. The yarn is either wove in the neighbourhood, or sent to Dundee. Considerable quantities of household-cloth are woven here; in 1796, about 50,000 yards of yard-wides were made here, part of which was bleached in the neighbouring parish of Rattray; but a greater proportion, sold in the village of Blair-Gowrie, and sent green to London. Population, in 1801, 1,914; in 1831, 2,644. Assessed property, in 1815, £6,206. Houses, in 1831, 448.—This parish is in the presbytery of Meigle, and synod of Angus and Mearns. Patrons, M'Pherson of Blairgowrie, and Oliphant of Gask. Minister's stipend £222 18s., with a glebe of the value of £20. Church built in 1824; sittings 850.—An Independent congregation was formed here in 1802. Chapel built in 1824; sittings 350.—An Original Burgher congregation exists here, and a small Roman Catholic congregation. According to a survey made in 1836, there appeared to be 2,419 persons in this parish connected with the established church, and 578 with other denominations.—The village of Blair-Gowrie is pleasantly situated on the north side of Strathmore, close upon the river Ericht. It was made a borough of barony, by charter from Charles I., in 1634. The situation of the village is very healthy, and it is well-supplied with water. There are fairs held in it on the 3d Wednesday in March, for horses and cattle; on the 26th of May, if a Wednesday, or the 1st Wednesday thereafter, for cattle; on the 2d Wednesday in August; on the Wednesday before Falkirk

tryst in October; and on the 1st Wednesday in November. The Bank of Scotland, and the Commercial bank of Scotland, have branches here. The population, in 1836, was 1,834. The great road, from Cupar-Angus to Fort-George, passes through this parish. The great road from Dunkeld to Kirriemuir also passes through the parish, and cuts the military road at right angles.—Newton-House, once the seat of the proprietors of the barony of Blair-Gowrie, is an old building, something in the style of a castle. This house was rebuilt on the foundation of the old house said to have been burnt down by Oliver Cromwell. Several gentlemen were miraculously saved in a vault of the old house, while it was burnt down. It stands about the middle of the south slope of the range of high ground which bounds Strathmore on the north, and has a most commanding view, not only of Strathmore, but also of parts of different counties.—About half-a-mile farther west, lies the mansion-house of the old family of the Blairs of Ardblair. The mansion-house seems evidently to have been surrounded with water on three sides.

BLAIRINGONE, i. e. 'The Field of Spears,' a village in the shire of Perth, parish of Fossaway; 10 miles north-west of Dunfermline, and 7 west of Kinross. It is a burgh of barony, under the superiority of the Duke of Athole. A market is holden here in the month of June. It probably derives its name from weapon-shavings having been held here; for the chieftain of the Murrays had a family-seat at this place; and the rocky pinnacle, now called Gibson's craig, is said to be the real Gartwhinzie, where the whole clan of the Murrays assembled to attend their chief.

BLAIR-LOGIE, a village in the parish of Logie, Stirlingshire, at the entrance of Glen Devon. Veins of copper and barytes exist here. The copper was wrought several centuries ago; and the ore raised, it is said, was carried into England to be smelted.

BLANE (THE), a small stream in the county of Stirling, whence the parish of Strathblane takes its name. It has its source in the Earl's seat, one of the Lennox hills; and, after running 3 or 4 miles to the south-west, is precipitated over several high falls, into a romantic hollow, which is filled with a vast assemblage of gigantic stones piled upon each other, and adorned, on the sides, with many alternate strata of various hues. "The stream has already formed two smaller cascades in sight, before it precipitates itself over a shelf 30 feet high, and descends among the rocky masses which it has loosened from the parent-hill. The lowest of the three falls is known as 'the Spout of Ballaggan.' The earls of the old race of Levenax had a castle near and in sight of this romantic scene. Ballaggan, the seat of Alexander Graham, Esq. of Ballaggan, commands a view of this beautiful and sublime cataract from the windows, and is within hearing of its music even when it has not the means of striking a loud note. In flood-time the Spout is stupendous, increasing its apparent height by covering the huge masses below so as to vie with the sublimity if not the beauty of Corra-Lin. In drier periods, the visitant can ascend, with more seeming than real hazard, amongst the scattered fragments of rock, till he have reached the bottom of the lowest fall." [Additions to Nimmo's History of Stirlingshire. Edn. 1817, pp. 646, 647.] After a course of 8 miles farther towards the north-west, the Blane joins the Endrick a little above where it falls into Loch Lomond. Several specimens of antimony have been found in its bed; but the mine from which they have been washed is not yet discovered. The boyhood of George Buchanan was spent in the neighbourhood of this stream.

* The manner of fishing here is probably peculiar to this place. The fishers, during the day, dig considerable quantities of clay, and wheel it to the river-side immediately above the fall. About sun-set the clay is converted into mortar, and hurled into the water. The fishers then ply their nets at different stations below, while the water continues muddy. This is repeated two or three times in the space of a few hours. It is a kind of pot-net, fastened to a long pole, that is used here. From the Keith, for about 2 miles down the river, there is the best rod-fishing to be found in Scotland, especially for salmon. The fishing with the pot-net is confined to a small part of the river near the Keith. When the water is very small—which is often the case in summer—the fish are caught in great numbers, in the different pools, with a common net.—*Old Statistical Account.*

BLANE'S (ST.) CHAPEL, a small ruin in the southern extremity of the isle of Bute, in the parish of Kingarth. This edifice is said to have been reared by the piety of St. Blane or Blain, of whom tradition and Catholic legends report as follows: St. Cathan, an Irish bishop, attended by his sister, Ertha, came from his own country to the isle of Bute, with the intention of leading the solitary life of an hermit in some chosen retirement. Ertha wandering about unprotected, was accidentally met in the field by a young man, apparently of superior station, and possessed of many personal attractions, who, becoming suddenly enamoured of the lady, forced her to submit to his embraces. Ertha, in due course of time, found herself pregnant, and brought forth a son. Some barbarous persons into whose hands she had fallen, as a punishment for her involuntary crime, thrust her with her little infant into a boat and committed them to the mercy of a tempestuous sea. After she had struggled long with the horrors of her situation, Providence intervened; and the boat was driven to shore. Congal and Kenneth, two holy men, walking on the sands, saw what had happened; and, having learned of Ertha the cause of her misfortunes, took compassion upon her, and received both the mother and the son into their immediate protection. They baptized the child, and gave him the name of Blane. He was educated under their care and direction; and, becoming an adept in theology, was sent to Rome, where he took holy orders. After some years, his learning and piety recommended him so strongly to the Pope that he was consecrated a bishop; and returning to his own country, presided over a city in Scotland, ever since then called Dunblane. Deeply impressed with the history which his mother had given him of his providential escape in infancy, he built the old church of Kingarth, as a votive memorial of his gratitude, upon his return from Rome. The situation, which he chose for it is deeply retired, and probably, at the time of its foundation was sequestered in a wood. That no circumstance of sanctity might be wanting to his pious work, he brought a quantity of consecrated earth from Rome, to form the upper stratum of the burying-ground. It happened that some of the women on the coast either refused to assist in conveying the precious mould from the ship, or profanely negligent let some of it fall by the way, St. Blane therefore decreed that none of the sex should ever be interred within the holy cemetery. But another piece of ground, called the lower church-yard, was destined for that purpose; and, according to the saint's decree, was exclusively used for the interment of the females; it being then firmly believed, that, had their bodies been laid in the hallowed earth of Rome,

Their bones, though canonized and hearsed in death,
Had burst their cerements—that the sepulchre
Had open'd his ponderous and marble jaws
To cast them up again.*

This superstition continued in force till 1661; when the presbytery going their progress of the parochial bounds, a complaint was made against this practice of the separate burial of the sexes. The Assembly consented to its abolition; and, from that time, women as well as men have safely, though promiscuously, been deposited in the favoured cemetery. Wives have not only been quietly inurned in the neighbourhood of their husbands; but have continued quiet ever since in the same company.—Not far from St. Blane's church is still shown the Devil's cauldron, which—

* "The Saint's order," says Mr. Blain, "was carefully observed, the people entertaining a belief, that should they transgress, and inter the dead bodies of females, contrary to his injunctions, such bodies would be cast above the earth."

though vulgar tales formerly current of the evil spirit's purgatorial parboiling of the bodies and souls of departed sinners are too gross for notice—is known to have been, in Catholic times, a place of real penance for living ones. "This cauldron," says Mr. Blain, "30 feet in diameter, is formed by a wall of dry stone, 7 feet, 6 inches high, and 10 feet in thickness, with an entrance from the east. It was a place of penance, as its name imports, such as Sir James Ware describes in his antiquities of Ireland. Poor culprits were sometimes obliged to traverse the top of the wall on their bare knees, a certain number of times, according to their demerit; whilst their path was covered over with sharp stones. At other times, a number of these unhappy people were made to sit, days and nights together, on the floor, within the inclosure, without food, and necessitated to prevent each other from enjoying the comforts of sleep: for it was inculcated on them by their ghostly fathers, as an article of belief, that, if they suffered any of the company to slumber, before the time appointed for expiating their guilt was at an end, the whole virtue of their penance would be lost."

BLANTYRE, a parish, formerly a vicarage, in the county of Lanark; bounded on the north by the Clyde, which divides it from Bothwell; on the east by Hamilton; on the south by Glasford and Kilbride; and on the west by Cambuslang. It is about 6 miles in length, and, on an average, one in breadth. Its superficial area is about 3,300 Scots acres; rental £2,579. Next to the Clyde, the Calder is the principal river in this parish, which it bounds on the west. The whole parish forms almost a continuous plain. The soil is various; but, though part is clay, loam, and sand, the whole is very fertile, except towards the southern extremity where it becomes a deep peat moss. There are very extensive cotton spinning and cotton-dyeing works here, founded by Mr. David Dale in 1785, and now the property of Henry Monteith & Co., which give employment to a number of people. In 1838, 839 hands were employed in 2 cotton mills here; in 1791, 368 hands were employed. Ironstone, of excellent quality, is now wrought to great advantage within the parish. Limestone is also wrought at Auchentiber and Calderside. There is a mineral spring at Park, strongly impregnated with sulphur dissolved by means of hydrogen gas, which used to be much resorted to, about the middle of last century, by families from Glasgow, and is still famed in scrofulous and scorbutic cases. Population in 1801, 1,751; in 1831, 3,000. Assessed property in 1815, £4,438. Houses in 1831, 248.—This parish is in the presbytery of Hamilton, and synod of Glasgow and Ayr. Patron, Lord Blantyre. Stipend £196 10s. with a glebe of the value of £16. Church built in 1793; sittings 841. There is a chapel at Blantyre works, built by the proprietors of the works at their own expense, for the accommodation of their working-people. Sittings 392. The preacher receives £50 from the proprietors, and £50 from the seat-rents. The chapel is under a committee of management, one-half of whom are churchmen, and one-half dissenters. The parish minister reported that about 2,053 of the population in 1831 were in connexion with the Established church, and about 812 were dissenters.—The parochial schoolmaster has a salary of £26 with £19 fees; average number of scholars 45. There are four private schools attended by above 200 children; the largest of these is in connexion with the Blantyre works.—The ruins of the priory of Blantyre, which was founded some time prior to the year 1296, are finely situated, in a most retired situation, on the top of a rock which rises perpendicularly from the Clyde, exactly opposite the

noble ruins of Bothwell castle, and commands a very romantic view. Walter Stewart, first commendator of this priory, and Lord-privy-seal in 1595, was made a peer by the title of Lord Blantyre, July 10th, 1606. The revenues of the priory were, in 1561, money £131 6s. 7½d. Hamilton of Wishaw says in his 'Descriptions' compiled about the beginning of last century, "the Lord Blantyre heth ane fruitful orchard at the old priorie, where he is some tymes in use to dwell." There are yet a few relics of this orchard here; but from the state of the buildings it could scarcely have been supposed that they were in a habitable state at any period within the 18th century. See article BOTHWELL. Urns have been dug up at different times in several parts of the parish.—Blantyre village in the above parish, is about 8 miles south-east of Glasgow, and 3 west of Hamilton. It is inhabited chiefly by people employed at the cotton works, and contained in 1835, 1,821 inhabitants. The Clyde at the ferry here is 79 yards broad.

BODDOM, a village on the sea-coast of Buchan, near Peterhead, inhabited chiefly by fishers. A small harbour has recently been formed here close to the Boddom-head—or Buchanness as it is more frequently called—for the accommodation of those engaged in the herring-fishery.

BODOTRIA, the name given in ancient geography to the tri of Forth.

BOGHALL. See BIGGAR.

BOGIE (THE). See AUCHINDOIR.

BOG-OF-GIGHT, or **BOGEN-GIGHT**, the ancient designation of the seat of the Dukes of Gordon, in the parish of Bellie, now called **GORDON CASTLE**: which see. Shaw and others derive the name from *Bog-na-Gaoith*, that is, 'the Windy bog.' Richard Franck, who made a journey through Scotland in 1658, describes "Bogageith, the marquess of Huntly's palace all built with stone facing the ocean; whose fair front—set prejudice aside—worthily deserves an Englishman's applause for her lofty and majestic rivers and turrets that storm the air, and seemingly make dints in the very clouds!" The ferry, or more strictly speaking ferry-boat, across the Spey near this mansion, for ages known as "the Boat of Bog," has been supplanted by a magnificent stone bridge of four arches, said to have cost £13,000.

BOHARM, a parish in the shires of Banff and Moray, anciently called *Bocharin*, that is, 'the Bow about the Cairn,' which is sufficiently descriptive of its situation, the parish surrounding on three sides the mountain Beneageen or Benegin. Its outline is irregular; but its average length from east to west is 9 miles, and average breadth from 2 to 3. It is bounded by Moray on the north; Botriphnie parish on the east; Mortlach and Aberlour on the south; and the Spey on the west. The Fiddich separates it from Aberlour parish on the south-west. Population in 1801, 1,161; in 1831, 1,385, of whom 758 were in that portion of the parish belonging to Banffshire. Houses, in 1831, in Banffshire, 141; in Moray 152. Assessed property in Banffshire, in 1815, £2,014; in Moray, £1,517; valued rent £2,840.—This parish, formerly a rectory, with the ancient rectory of Ardintullie annexed, is in the presbytery of Aberlour, and synod of Moray. Patrons, the Crown, and the Earl of Fife. Stipend £244 16s. 7d., with a glebe of the value of £22 10s. 1½d. decret of the court of teinds, in June 1782, a part of Dundurcus parish was united to it. Church built in 1795; sittings 575. Schoolmaster's salary £34 4s. 5½d., with £15 fees, and a share of Dick's bequest. Scholars 50. There are three private schools attended by about 60 children in all.—The ruin of the castle of Gallvall is the only relic of an-

tiquity in the parish. It was built fronting the east, on the north side of the valley towards the western end of the parish, where a promontory is pushed forward into the deep defile formed by the course of the Aldermy. It appears to have been a simple structure of 119 by 24 feet within, divided by an internal wall so as to form two halls on the ground-floor, one 65, and the other 54 feet in length. The windows were only 20 inches wide, though the walls were 8 feet thick, built up in frames of timber which were employed for keeping in the fluid mortar which was poured into the dry stone-wall when raised to a certain height. The front and corners were finished with free-stone from the quarries of Duffus. About a century ago several silver spoons were found among the rubbish, having the handle round and hollow like a pipe, and the concave part, or mouth, perfectly circular. This bulky fabric, in 1200, was denominated *Castellum de Bucharin*. It then belonged to the Freskyns of Duffus, by whom it was no doubt built. By assuming the title De Moravia, from their connection with that country, they became the author of that surname. They were once possessed of many fair domains in the north: namely, Duffus, Duldavie, Dalvey, Inverallen, and Kirkdaphes, in Moray; Airdilly, Aikenwall, Boharm, Botriphnie then Botruthin, Kinermonie then Cere Kainermonth, in Banffshire; and Brachlie, Croy, Ewan, Lunyn, and Petty, in Nairn or Inverness, as appears by the charter of Moray from 1100 to 1286. At this day, they are represented by the Duke of Athole, Sutherland of Duffus, and Murray of Abercairny. It also appears by the charter of Moray that, between 1203 and 1222, William, the son of William Freskyn, obtained the consent of Brucius, bishop of Moray, for building a domestic chapel for the more commodious performance of the offices of devotion. It stood on its own consecrated burying-ground—forsaken only in the course of the last century—about 50 yards from the north end of the castle; and, though only 24 by 12 feet within, must have been the parent of the parish-church, which, with several others, was erected at the private expense of James VI. for civilizing the north of Scotland, in the year 1618, at which period Ardintullie or Airdilly may be supposed to have been annexed. On the annexation of a part of the parish of Dundurcus a new parish-church was erected about 2 miles to the eastward.—James Ferguson, the self-taught astronomer, received the rudiments of his education here, under the patronage of Grant of Airdilly.

BOINDIE. See BOYNDIE.

BOISDALE (Loch), a deep inlet of the Minch, on the eastern side of South Uist, and to the south of Loch Eynort. It is thickly strewn with islets, and has a small half-ruined tower at its entrance.

BOLESKINE and **ABERTARFF**, two united parishes in the county of Inverness. They extend in length about 21, and in average breadth about 10 miles, on the south side of Loch Ness. The united parish is bounded on the north by Urquhart; on the north-east by Dores; on the east by Daviot; on the south by Laggan; and on the south-west by Kilmanivaig. There are one or two small detached portions of the parish. The district at the western extremity of Lochness is level; the eastern is mountainous. The soil is as varied as the surface. There are a great many sheep fed in the hilly part of the country. Much natural wood still remains; and, from the large trunks of oak-trees found in all the mosses, we may conclude the whole country has at one period been an extensive oak-forest. **FOUR-ANGUSTUS**, the centre of communication betwixt the east and west coasts of the kingdom, is in this

district: see that article. The celebrated FALL OF FOYERS, near the seat of Frazer of Foyers, will be described in a distinct article. The parish abounds with lakes, which contain a variety of fish; several streams also intersect it, of which the principal are the Oich, and the Tarff. LOCH NESS forms a separate article in this work. The Caledonian canal runs through this parish, and the old military road. Granite of beautiful appearance is found in the hills, and inexhaustible quarries of limestone are wrought in several parts. There are two small villages in this district, Cillchuiman and Balfrishel. The population of the former, including the garrison of Fort-Augustus, was 216 in 1831; of the latter, 159. Population of the parish in 1801, 1,799; in 1831, 1,829. Assessed property, in 1815, £4,756. The average gross amount of raw produce raised within the parish is estimated in the New Statistical account, published in May 1835, at £4,313. Houses, in 1831, 360. This parish is in the presbytery of Abertarff and synod of Glenelg. Patron, Fraser of Lovat. Stipend, £238 2s. 2d. There are two churches,—one the parish-church of Boleskine, built in 1777; and the other at Fort-Augustus, 11 miles distant, where a missionary officiates. The mission district comprehends the whole original parish of Abertarff, comprising a population of 1,201, of whom 872 were in connexion with the Establishment, and 329 were dissenters, chiefly Roman Catholics, of whom there is a small congregation here. The missionary has a house in the fort, and a salary of about £80. The Catholic clergyman has about £30. Parochial schoolmaster's salary £30, with about £20 fees.

BOLFRACKS. See FORTINGAL.

BOLTON, a small parish in the shire of Haddington. It is very irregular in its boundaries and dimensions; extending from north-east to south-west, nearly 6 miles; and in breadth, at a medium, not above $1\frac{1}{4}$ mile. It is bounded by Haddington parish on the north; on the east by that beautiful little branch of the Tyne called the Gifford or Coalstone water, running north-west from Yester, and which separates it from Haddington parish; on the south by Yester or Gifford parish; on the west by Humble and Salton. The Boins water, one of the head-streams of the Tyne, descending from the northern skirts of West hill in the Lammermoor chain, separates Bolton from Humble parish. The valued rent of the parish is £2,437 12s. 7d. Scots; the real rent, in 1792, was about £1,400. It is now nearly double that sum. Assessed property, in 1815, £2,274. The number of acres is about 2,400, of which there are about 300 planted; most of the grounds are enclosed with stripes of planting. Population, in 1801, 252; in 1831, 332. Houses, in 1831, 63. This parish is in the presbytery of Haddington, and synod of Lothian and Tweeddale. Patron, Lord Blantyre. Stipend £153 15s. 5d., with a glebe of the value of £18. Schoolmaster's salary £34, with £40 fees. Average number of pupils 75. In the little village of Bolton there were, till recently, some vestiges of a house, with a park on the west side of it still called the orchard, which is said to have belonged to John Hepburn, a friend of Bothwell's, who fled with him from Dunbar, when Bothwell escaped from the battle of Falside. Chalmers says:—"The manor of Bolton was early enjoyed by the St. Hilaries, who were succeeded by William de Vetereponte, who married Emma de St. Hilary. Notwithstanding the terrible disasters of the succession war, in which, as we learn from Rymer and Prynn, this family was involved, yet was Bolton, with lands in other districts, enjoyed by it under Robert I. and David II. In the

reign of James II. it belonged to George, Lord Hali-burton of Dirleton. It was at length acquired by Patrick Hepburn, Earl of Bothwell, after a long suit in parliament with Marion, the lady of Bolton. In 1526 and 1543, Bolton was in possession of a cadet of his family, by the name of Hepburn of Bolton. In January 1568, John Hepburn of Bolton was executed, as the associate of the Earl of Bothwell, his chief, in the murder of Darnley. The manor of Bolton, thus forfeited, was given to William Maitland, the well-known secretary Lethington. It was confirmed to the Earl of Lauderdale in 1621. Richard, Earl of Lauderdale, who died about the year 1693, sold the barony of Bolton, and even the ancient inheritance of Lethington, to Sir Thomas Livingston, who was created Viscount Teviot, in 1696; and Sir Thomas transferred the whole to Walter, Master of Blantyre, afterwards Lord Blantyre, in 1702, in whose family the property remains."

BONA, in the shire of Inverness, formerly a rectory, united to the ancient rectory of Inverness, and now comprehended in that parish. The ruins of its church still exist on the banks of Loch-Dochfour. Service is regularly maintained in the school room here by the Established ministers of Inverness. It is 6 miles south-south-west of Inverness, at the northern extremity of Loch-Ness, over which there is a ferry here. The population of the district, in 1831, was 1,363. On the east side of the Ness, about 600 yards below its efflux from Loch-Ness, and between it and Loch-Dochfour, there are the remains of a Roman station, which, it is supposed, was the site of the Banatia Urbs of Richard of Cirencester.

BON-ACCORD. See ABERDEEN.

BONAR, in the shire of Sutherland, and parish of Crieich; 12 miles west of Dornoch. The commissioners for Highland roads and bridges, in April 1811, reported, that all the investigations of Highland lines of road north of Inverness, had uniformly designated the head of the Dornoch-frith as a necessary central point; and that the inconvenience and danger experienced at the Meikle ferry, at the mouth of the frith, and the circuitous rout by Portinlech, a ferry at the head of the frith, rendered it very desirable to ascertain the most convenient place for crossing it between these points. For this purpose, Crieich and Bonar appeared to possess nearly equal pretensions,—the first being wider but nearer the coast,—the other, narrower, but not affording so direct a road towards the north east. In 1811, Mr. Telford reported to the commissioners as follows: "Having repeatedly examined this frith, I find that about 12 miles above Dornoch, at Bonar ferry, it is contracted into the breadth of about 70 yards at low water of a spring-tide; at which time, 20 yards of that breadth extending from the southern shore, is covered by water not more than 3 feet in depth; and as the spring-tides rise no more than 8 feet, I conceive it is practicable to construct a bridge at this place where the several roads, south and north of it, may be made to centre without inconvenience. As considerable quantities of ice float here in winter, and the tides run with considerable velocity, it is advisable to construct an iron bridge of one arch, 150 feet span, and 20 feet rise; and by making the arch to spring 3 feet above high water mark, no interruption can then take place. I accompany this with a plan, in which I have endeavoured to improve the principles of constructing iron bridges, and also their external appearance; the principal ribs have here their parts all of equal dimensions, which, by cooling equally, will avoid defects hitherto experienced in structures of this sort; the road-way, instead of being supported by circles or perpendicular pillars as formerly, is sustained by lozenge forms, which pre-

serve straight lines, and keep the points of pressure in the direction of the radii; the covering plates, instead of being solid as formerly, are to be made reticulated, something in the way of malt-kiln tiles, which enables them to be made thicker, and yet so as to save a very considerable portion of iron, and consequently weight." Mr. Telford's plan was carried into execution in 1812. The bridge consists of an iron arch of 150 feet span, and 2 stone arches of 60 and 50 feet respectively, presenting a water-way of 260 feet. In the year 1814, the iron arch sustained, without damage, a tremendous blow from an irregular mass of fir-tree logs consolidated by ice; and in 1818, a schooner was drifted under the bridge, and suffered the loss of her 2 masts, the iron arch remaining uninjured. The total cost of the bridge was £13,971. By means of this bridge and that at Lovat, the benefit of the Great Highland road, without the intervention of any ferry, was extended to the northern extremity of Great Britain; the bridges of Dunkeld, Lovat, Conan, and Bonar, forming a connected series of bridges, which for size, solidity, and utility, are not surpassed any where in the kingdom.

BO-NESS. See **BORROWSTOUNNESS.**

BONHILL,* a parish in the county of Dumbarton, bounded on the north by Luss parish, the southern extremity of Loch Lomond, and the parish of Kilmaronock; on the east by Kilmaronock and Dumbarton; on the south by Dumbarton and Cardross; and on the west by Cardross and Luss. It is 5 miles in length, and about 3½ miles in breadth. The south end of Loch Lomond, with the Leven which issues from it, divide the parish nearly into two equal parts. The Leven,—whose beauties Smollett has sung in his well known verses:—

On Leven's banks while free to rove,
And tune the rural pipe to love,
I envied not the happiest swain
That ever trod th' Arcadian plain,—

is remarkable for the softness of its water, and the clearness of its stream. Gaelic scholars derive its name from the words *Le*, 'smooth' or 'soft,' and *Avon*, 'a river.' It issues from Loch Lomond at Balloch, and falls into the frith of Clyde at Dumbarton castle. In a straight line from the lake to the Clyde, it will measure about 5 miles; but its course, owing to its windings, is more than 9 miles. The fall from the lake to the Clyde is 22 feet. The tide flows up the river more than a third of its length; and large vessels come up to the quay of Dumbarton at high tide, but the navigation is much impeded by a sand-bar at the mouth of the river; where the tide fails, the vessels are drawn up the river by horses. These vessels are constructed to draw little water. They are chiefly employed in bringing coals, lime, and other heavy articles, to the manufacturers and others who reside upon the banks of the Leven and the lake; and in carrying down wood and bark from the coppices in Loch Lomond, and slates from the slate-quarries in the parish of Luss. The Leven produces salmon, parr, and a variety of trout, and other small fish. The salmon it produces are reckoned among the best in Scotland. The largest salmon ever taken in the Leven weighed 45 lbs. troy. The salmon-fishing in that part of the Leven which lies in the parish of Bonhill, rented, about 10 years ago, at 300 merks. The last lease of the fishings on the Leven, the property of

the town in Dumbarton, was at the rent of £270. Some peculiar excellencies in the water of Leven have encouraged manufacturers to settle in this parish. The softness of its water fits it, in a peculiar manner, for the purposes of bleaching. It is seldom or never muddy, as the rivers and burns from the hills fall first into Loch Lomond, where the mud they carry along with them subsides. Neither is it subject to sudden risings and fallings, though at all times commanding a full supply from its great source. The first printfield on the Leven was begun about 1768. There are two villages in the parish, besides several houses built upon feus, or long leases, by the manufacturers adjoining the printfields. In the village of **ALEXANDRIA** [which see] the houses are built upon feus, at the rate of £8 per acre; in the village of Bonhill, upon a lease of 99 years, at the rate of £6 per acre. The grounds occupied by the printfields and bleachfields are feud at the rate of £2 10s. per acre. The valued rent of the parish is £2,180 9s. 2d. Scots. The real rent may be £4,500 Sterling. The value of property, as assessed in 1815, was £5,611. There are about 300 acres planted with Scotch firs and larix. There is an ash-tree in the churchyard of Bonhill, the trunk of which is 9 feet in length, the girth, immediately above the surface of the ground, 25 feet; about 3 feet above the surface it measures 19½ feet; and, at the narrowest part, 18 feet. It divides into three great branches; the girth of the largest of which is 11 feet; of the second, 10; and of the third, 9 feet 2 inches. The branches hang down to within a few feet of the ground; and, from the extremity of the branches on the one side, to that of those on the other, it measured no less than 94 feet. There was another large ash-tree, the trunk of which was about 11 feet in length; the girth, immediately above the surface of the ground, 33 feet; and at the narrowest part it measures 19 feet 10 inches. The proprietor fitted up a room in the inside of it, with benches around and three glass windows. The diameter of the room was 8 feet 5 inches, and from 10 to 11 feet high. Population in 1801, 2,460; in 1831, 3,623. Houses, in 1831, 390. About seven-eighths of the population inhabit the vale of the Leven, and are employed at the bleachfields and printfields on that river.—This parish is in the presbytery of Dumbarton, and synod of Glasgow and Ayr. Patron, Campbell of Stonefield; stipend £224 15s. 5d., with a glebe of the value of £15. There are two parochial schools, attended together by about 100 children, and 7 private schools attended by about 300 children. The parochial schoolmasters have a salary of £21 7s. 8½d. each, with about £15 fees, and other emoluments. The ancient family of Lennox had a mansion-house at the south end of Loch Lomond; but nothing remains of it but the fosse. The tradition is, that the materials of the mansion were carried from this place to one of the islands in the lake, to build a castle there, as a place of greater safety, and where a considerable part of the building still remains, though in ruins. The whole lands in the parish formerly belonged to the family of Lennox; but in the 15th century, the Darnley family, by marriage, got one-half of the estate, and the titles. The other half went to the Rusky family. Smollett, the novelist, was born in the old mansion-house of Bonhill, and a monument has been erected here to his memory.

BONNINGTON, a small village on the water of Leith, about a mile north of Edinburgh, on the road to Newhaven. There is a mineral well here.

BONNINGTON, a village in the county of Mid-Lothian, in the parish of Ratho, 1½ mile south-west of the village.

* "The ancient mode of spelling the name of the parish was *Buneil*, which, in the opinion of some judges of the Gaelic language, means 'a bottom' or 'hollow.' Others imagine that it signifies 'the Surgeon's residence,' as the ancient family of Lennox had a mansion-house in the parish, and several places derive their names from their servants and dependants."—(O'd Statistical Account)

BONNY (THE), a river in Stirlingshire, which takes its rise in the parish of Kilsyth, and, running eastward, falls into the Carron, a little below Dunipace.

BOOSHALA, or BRUACHILLE, an islet off the south coast of Staffa, from which it is separated by a channel about 30 yards wide, through which a foamy surf is constantly rushing. It is of an irregular pyramidal form, entirely composed of basaltic pillars inclined in every direction, but principally pointing towards the top of the cone, resembling—Dr. Garnett remarks—billets of wood piled up in order to be charred. Many of the columns are horizontal, and some of them bent into segments of circles.

BOBA HOLM, one of the Orkneys; constituting part of the parish of Rendal. It is opposite to the entrance of the harbour called the Millburn, in the isle of Gairsa, and is uninhabited.

BOBERAY, a small fertile island of the Hebrides, lying northward of North Uist. It is about $1\frac{1}{2}$ mile in length, and $\frac{1}{2}$ mile in breadth. Lochmore, a small lake in this island, the bottom of which was only 2½ feet above low water-mark, was recently drained, whereby, at an expense of only £125, about 47 Scots acres of good soil, being a mixture of alluvial earth and sand, were gained.

BORERAY, a small island of the Hebrides, about a mile in circuit, lying 2 miles north of St. Kilda.

BORGUE, a parish in the stewartry of Kirkcudbright. Its length is about 10, and its extreme breadth 7 miles; but, from its irregularity of outline, the superficial contents are not more than 40 square miles. It is bounded throughout nearly one-half of its circumference by the sea on the east and south-west; by Girthon on the north-west; and Twynholm on the north-east; having an extent of coast of upwards of 15 miles, indented with several bays where vessels may anchor with safety. In some places, the coast presents a perpendicular cliff 300 feet high. The surface is very unequal, but there are no high hills. Though mostly arable, a great part of the parish is under pasture, and a number of black cattle and sheep are reared in it. Freestone and whinstone are abundant. There are two fine ruins within the parish,—the tower of Balmangan, and Plunton castle. Population, in 1801, 820; in 1831, 894. Houses 160. Assessed property in 1815, £11,283.—This parish is in the presbytery of Kirkcudbright, and synod of Galloway. Patron, the Crown. Stipend, £230 16s. 10d., with a glebe of the value of £29. Schoolmaster's salary £34 4s. 4d. with £36 fees, and £50 other emoluments. Pupils 160. There is also a small private school. The old parish of Sandwick forms the southern part of the present parish. The ruins of its church are still visible on the side of the bay. Tradition relates that it was sacrilegiously plundered of its plate by French rovers, some time previous to the Reformation; but that a storm wrecked the vessel on a rock nearly opposite the church, where the pirates perished. It is called the Frenchman's rock. The church of Kirk-Andrew in this parish, originally belonged to the monks of Iona; when the devastations of the Danish pirates left them without an establishment, William the Lion transferred it, along with their churches and estates in Galloway, to the monks of Holyrood. It afterwards fell into the hands of the prior and canons of Whithorn. The ruins of this ancient kirk, dedicated to the patron saint of Scotland, stand on a creek of the Solway which from it is called Kirk-Andrew's bay.

BORLAND, or BORELAND, a village in Fifeshire, in the parish of Dysart, $\frac{1}{4}$ mile north of that town, containing, in 1811, 228 inhabitants; in 1831, only

184. They are chiefly colliers. The village belongs in property to the Earl of Rosslyn.

BORLAND-PARK. See AUCHTERARDER.

BORLEY (LOCH), a small lake in the north of Sutherlandshire, parish of Durness, containing abundance of a species of trout called Red bellies, which are only fished for in October.

BOROUGH-MOOR, a tract of ground, formerly an open common, in the shire of Edinburgh, and parish of St. Cuthbert; adjacent to the city of Edinburgh on the south. In the west end of the Borough-moor, there stood a large chapel dedicated to St. Roque, and round it there was a cemetery where those who died of the plague were interred. The town-council, in 1532, granted four acres of ground in the Borough-moor to Sir John Young, the chaplain, for which he was bound to keep the roof and windows of the chapel in repair; but at the Reformation the church and churchyard were converted into private property. A part of the walls of this chapel are still standing; Grose has preserved a view of it. This moor appears, in 1513, to have abounded with large oak-trees; and here James IV. reviewed his army before he marched to the fatal battle of Flodden-field. See Notes to 'The Lay of the Last Minstrel.'

BORROWSTOUNNESS, or BO'NESS, a parish in the county of Linlithgow; bounded by Carriden on the east; Linlithgow on the south; Polmont on the west; and the frith of Forth on the north. It is about 4 miles in length, and $2\frac{1}{2}$ in breadth. The surface declines gradually on the north toward the Forth, and on the west to the river Avon. The soil is a deep loam, well-cultivated. There are several excellent coal-pits within the parish; ironstone also abounds; and there are great beds of limestone, but of bad quality. Quarries of freestone and whinstone are wrought here. The house of Kinniel, long inhabited by the venerable and accomplished metaphysician Dugald Stewart, is a seat of the Hamilton family, and as such is frequently mentioned in history. Population of the town and parish in 1801, 2,790; in 1831, 2,809. Houses 323. Assessed property, in 1815, £9,093.—This parish is in the presbytery of Linlithgow, and synod of Lothian and Tweeddale. Patron, the Duke of Hamilton. Stipend £272 7s. 7d., with a glebe of the value of £21, and free coal.—There is a United Secession church within the town.—Schoolmaster's salary £34 4s. 4d., with about £60 fees. Average number of scholars 100. In 1834, there were eleven private schools within the parish, attended by about 250 children.—Prior to the middle of the 17th century, Kinniel was the name of the parish, but the inhabitants of Borrowstounness having built a church for themselves, the town was created a separate parish. In 1669, the Duke of Hamilton procured an act of parliament for uniting the two districts, and since that time the old landward-church of Kinniel has been neglected, though the burying-ground remains.

The burgh of **BORROWSTOUNNESS** in the above parish is 9 miles west of Queensferry, 8 east of Falkirk, and 3 north of Linlithgow. It is situated on a low peninsula washed by the Forth, at the north-east corner of the parish, only a few feet above high water-mark. It has two principal streets running from west to east about 300 yards, which terminate in one which is 350 yards more. The streets and lanes are narrow; the houses in general low and old-fashioned. Borrowstounness is a burgh of barony under the Duke of Hamilton. Its population, in 1831, was 2,188, and there were at that time 65 houses within burgh of the yearly value of £10 and upwards. The annual revenue averages £216, of which about one-half arises from anchorage and harbour-dues, and

about £14 from impost on ale. The petty customs are the property of the superior. There is some ship-building carried on here; and in the immediate vicinity were extensive salt-works, at which 30,000 bushels used to be manufactured annually. The harbour is one of the safest and most commodious in the frith, having a great depth of water. By an act passed in 1744, an impost of 2d. Scots was laid on every Scots pint of ale and beer sold within the town and parish, to be vested in timber for improving the harbour. In 1816 an act was passed, authorizing trustees, for a period of 25 years from its date, to assess and levy a duty not exceeding 1s. on the pound of rent, on all buildings within the town, for cleaning, paving, and lighting the town, and supplying it with water. The total debt in 1834, was £2,030. Two or three Greenlandmen belong to this port, and it has some coasting-trade, but its commerce has greatly declined. Defoe describes this town as consisting "only of one straggling street, which is extended along the shore, close to the water. It has been, and still is, a town of the greatest trade to Holland and France of any in Scotland, except Leith; but it suffers very much of late by the Dutch trade being carried on so much by way of England. However," he adds, "if the Glasgow merchants would settle a trade to Holland and Hamburg in the frith, by bringing their foreign goods by land to Alloway, and exporting them from thence, as they proposed some time ago, 'tis very likely the Borrowstownness men would come into business again; for as they have the most shipping, so they are the best seamen in the frith, and are very good pilots for the coast of Holland, the Baltic, and the coast of Norway." It has a custom-house. About 45 years ago a canal was begun to be cut between this place and Grangemouth, to communicate there with the Forth and Clyde canal. This canal was never finished. There is an annual fair held here on the 16th of November.—In 1774 an embankment, $1\frac{1}{2}$ mile in length, was made westwards from this port along the north side of the cause of Kinniel, with the view not of gaining but of saving ground from the sea. It has answered this purpose very well, and effectually protects about 450 acres of cause-land, at present rented at £4 4s. per acre.

BORROWSTOWN, a fishing-village on the north coast of Caithness, parish of Reay, 6 miles west of Thurso.

BORTHWICK, a parish in the shire of Edinburgh; bounded on the north by Cockpen, Newbottle, a detached portion of Temple parish, and Cranston parish; on the east by Crichton parish; on the south by Heriot; and on the west by Temple and Carrington parishes. Measured from the village of Ford on the north-east, to Castleton hill on the south-west, it is nearly 6 miles in length; and from Arniston bridge on the north-west, to Fala hill on the south-east, it is about 4 miles in breadth. The general aspect of the parish is hilly, especially when viewed from the kirk-town, which is near the centre of the parish. Two streams, known as the South and North Middleton burns, descend from the Moorfoot hills on the southern boundary of the parish, and, after pursuing north-easterly courses, unite a little above the kirk-town; and then fetching a circuit round the mole on which Borthwick castle is built, flow north-west, under the name of the Gore, to a point a little beyond Arniston bridge, where they unite with the South Esk. These streams drain a vast extent of upland surface, and are consequently subject to sudden and extensive floods. The South Esk divides Borthwick parish from Carrington parish; and the Tyne divides it on the east from Crichton. Many romantic scenes occur

throughout this district, particularly in the valleys of the Gore and the Tyne; and the locality is a favourite one with botanists. Grahame has described the sylvan scenery of the district in the following lines:—

"What though fair Scotland's valleys rarely vaunt
The oak majestic, whose aged boughs
Darken a roof breadth; yet nowhere is seen
More beautifully profuse, wild underwood;
Nowhere 'tis seen more beautifully profuse,
Than on thy tanging banks, well-wooded Esk,
And Borthwick, thine, above that fairy nook
Formed by your blending streams,—The hawthorn there,
With moss and lichen grey, dies of old age,
No steel profane permitted to intrude;
Up to the topmost branches climbs the rose,
And mingles with the fading flowers of May;
While round the brier the honeysuckle wreaths
Entwine, and with their sweet perfume embalm
The dying rose; a never-fading blow
From spring to fall, expands; the sloethorn white,
As if a flaky shower the leafless sprays
Had hung; the hawthorn, May's fair diadem;
The whin's rich dye; the bonny broom; the rasp
Erect; the rose, red, white, and faintest pink;
And long-extending bramble's flowery shoots."

There are five villages within the parish. Of the village of Ford only a few houses belong to Borthwick parish. See **FORD**. Dewarston, on the estate of Vogrie, a little to the south-west of Ford, is a beautiful little village, of quiet and cleanly aspect, and inhabited by about 150 souls. Middleton, on the line of road leading through the centre of the parish to Galla water, is pleasantly situated. There is an inn here, formerly better known as a posting-station, 13 miles from Edinburgh. Newlandrigg is a village of about 100 inhabitants. Stobb's mill, well-known for its gunpowder manufactory, is a village of about 70 inhabitants. There are large beds of limestone within the parish, and lime is extensively manufactured at Hemperston and Middleton, at Vogrie and Arniston. Population of the parish in 1801, 842; in 1831, 1,473. Assessed property in 1815, £8,955; valued rent, £5,600 18s. Scots. Houses, in 1831, 296.—This parish is in the presbytery of Dalkeith, and synod of Lothian and Tweeddale. Patron, Dundas of Arniston. Stipend £193 12s. 3d., with a glebe of the value of £28. Unappropriated teinds £15 0s. 8d. Schoolmaster's salary £34 4s. 4½d., with about £30 fees. Scholars 100. There are two private schools. The old church was accidentally destroyed by fire in May, 1775. The present church, about 40 yards from the ruins of the old one, was built in 1778. About a fourth part of the population are dissenters.—This parish evidently derives its name from the ancient and once powerful family of Borthwick, concerning whose origin traditional accounts are very various. Some say that they were descended from one Andreas, a son of the lord of Burtick in Livonia, who accompanied Queen Margaret from Hungary to Scotland, in 1057, and having got possession of some lands in the west or south parts of this country, his posterity, with some small alteration in the spelling, assumed the surname of Borthwick, from the place of their progenitor's birth. Others are of opinion that the name is merely local. Be that as it may, certain it is, that during the 15th and following centuries, the lords of Borthwick had immense possessions and very great influence in this part of the country. The peerage is now dormant; John, the 9th Lord Borthwick, having died without issue in 1672. The present proprietor, though a branch of the old family, acquired the property by purchase, and is now a claimant for the titles also of his ancestors. What now constitutes this parish formerly belonged to the college-kirk of Crichton, which lies about a mile north-east of this place. In April, 1596, James I. dissolved from the said college-kirk the prebendaries

of Ardnalestown (now Arniston), of Middleton first and second, and of Vogrie, of old called Lochquharret, or Locherwart, and also two boys or clerks to assist in the performance of divine service, with suitable salaries annexed to their office. These prebendaries, with the hail vicarage of Borthwick, fruits, rents, manse, and glebe thereof, were then, by a royal charter, erected into a distinct and separate charge, to be in all time coming called the parsonage of Borthwick. The year before this, the presbytery of Dalkeith had designed a glebe for Mr Adam Colt, the then officiating parson; but this they seem to have considered only as a measure of expediency, the parish having been constituted before the royal charter could be obtained. This deed must have been regarded at the time as a transaction of considerable importance; for, in 1606, the erection of the parsonage by the said charter was solemnly ratified in parliament, and in 1609, confirmed by George, archbishop of St. Andrew's, as the patron of said prebendaries; always reserving, however, the presentation and advocacy of all the premises, gifts, and benefices, to himself and successors in office.

About $1\frac{1}{2}$ mile below the kirk-town, there is, on the lands of Harvieston, beautifully situated by the side of the Gore, a ruin, called the old castle of Catcune, which is said to have been the residence of the family of Borthwick, before they had risen to such eminence in this country. About the end of the 14th and beginning of the 15th century, lived a Sir William Borthwick, who, being a man of great parts, was employed as an ambassador on several important negotiations, and concerned in most of the public transactions of his time. This William appears to have been created Lord Borthwick before 1430; for, in October that year, at the baptism of the king's two sons, several knights were created, and among the rest William, son and heir of Lord Borthwick. He obtained from James I. of Scotland, a license to build and fortify a castle on the lands of Lochwarret, or Locherworth, which he had bought from Sir William Hay: "Ad construendam castrum in loco illo qui vulgariter dicitur le Mote de Lochorwart." This grant was obtained by a charter under the great seal, June 2d, 1430. A stately and most magnificent castle was accordingly reared, and afterward became the chief seat and title of the family. This amazing mass of building is yet upon the whole very entire, and of astonishing strength. There is indeed in the middle of the east wall a considerable breach; but whether occasioned by a flash of lightning, or by the influence of the weather, or by some original defect in the building, cannot now with certainty be determined. The form of this venerable structure is nearly square, being 74 by 63 feet without the walls, but having on the west side a large opening which seems to have been intended to give light to the principal apartments. The walls themselves—which are of hewn stone without and within, and most firmly cemented—are 13 feet thick near the bottom, and towards the top are gradually contracted to about 6 feet. Besides the sunk story, they are, from the adjacent area to the battlement, 90 feet high; and if we include the roof, which is arched and covered with flag-stones, the whole height will be about 110 feet. "From the battlements of Borthwick castle, which command a varied and beautiful view, the top of Crichton castle can be discovered, lying about two miles distant to the eastward. The convenience of communicating by signal with a neighbouring fortress was an object so much studied in the erection of Scottish castles, that, in all probability, this formed one reason of the unusual height to which Borthwick castle is raised."—[*Provincial An-*

tiquities of Scotland. Edn. 1834, p. 200.] In one of the low apartments is an excellent spring-well, now filled up with rubbish. On the first story are state-rooms, which were once accessible by a draw-bridge. The great hall is 40 feet long, and so high in the roof that, says Nisbet, "a man on horseback might turn a spear in it with all the ease imaginable." The chimney, which is very large, has been carved and gilded, and in every corner may be traced the remains of fallen greatness. "On the 11th of June, 1567, Morton, Mar, Hume, and Lindsay, with other inferior barons, and attended by nine hundred or a thousand horse, on a sudden surrounded the castle of Borthwick, where Bothwell was in company with the queen. Bothwell had such early intelligence of their enterprise, that he had time to ride off with a very few attendants; and the insurgent nobles, when they became aware of his escape, retreated to Dalkeith, and from thence to Edinburgh, where they had friends who declared for them, in spite of the efforts of Queen Mary's partisans. The latter, finding themselves the weaker party, retreated to the castle, while the provost and the armed citizens, to whom the defence of the town was committed, did not, indeed, open their gates to the insurgent lords, but saw them forced without offering opposition. These sad tidings were carried to Mary by Beaton, the writer of the letter, who found her still at Borthwick, 'so quiet, that there was none with her passing six or seven persons.' She had probably calculated on the citizens of Edinburgh defending the capital against the insurgents; when this hope failed, she resolved on flight. 'Her majesty,' says the letter, 'in men's clothes, booted and spurred, departed that same night from Borthwick to Dunbar; whereof no man knew, save my lord duke, (i. e. Bothwell, created Duke of Orkney,) and some of his servants, who met her majesty a mile from Borthwick, and conveyed her to Dunbar.' We may gather from these particulars, that, although the confederated lords had declared against Bothwell, they had not as yet adopted the purpose of imprisoning Queen Mary herself. When Bothwell's escape was made known, the blockade of Borthwick was instantly raised, although the place had neither garrison nor means of defence. The more audacious enterprise of making the queen prisoner, had not been adopted by the insurgents until the event of the incidents at Carberry-hill showed such to have been the Scottish queen's unpopularity at the time, that any attempt might be hazarded against her person or liberty, without the immediate risk of its being resented by her subjects. There seems to have been an interval of nearly two days betwixt the escape of Bothwell from Borthwick castle, and the subsequent flight of the queen in disguise to Dunbar. If, during that interval, Mary could have determined on separating her fortunes from those of the deservedly detested Bothwell, her page in history might have closed more happily."—[*Provincial Antiquities*, p. 208.] The castle is surrounded on every side but one by steep ground and water, and at equal distances from the base are square and round towers. "Like many other baronial residences in Scotland, Sir William de Borthwick built this magnificent pile upon the very verge of his own property. The usual reason for choosing such a situation was hinted by a northern baron, to whom a friend objected this circumstance as a defect, at least an inconvenience: 'We'll brizz yont,' (*Anglice*, press forward,) was the baron's answer; which expressed the policy of the powerful in settling their residence upon the extremity of their domains, as giving pretext and opportunity for making acquisitions at the expense of their neighbours. William de Hay, from whom

Sir William Borthwick had acquired a part of Locherworth, is said to have looked with envy upon the splendid castle of his neighbour, and to have vented his spleen by building a mill upon the lands of Little Lockervorth, immediately beneath the knoll on which the fortress was situated, declaring that the Lord of Borthwick, in all his pride, should never be out of hearing of the clack of his neighbour's mill. The mill accordingly still exists, as a property independent of the castle."—[*'Provincial Antiquities,'* p. 200.] Strong, however, as this fortress was both by nature and art, it was not proof against the arms of Oliver Cromwell. John, 8th Lord Borthwick, had, during the Civil war, remained firmly attached to the royal cause, and thus drew upon himself the vengeance of the Protector, who, by a letter, dated at Edinburgh, 18th November, 1650, summoned him to surrender in these terms:

"For the Governor of Borthwick Castle, These.

"Sir,—I thought fitt to send this trumpett to you, to lett you know that, if you please to walk away with your company, and deliver the house to such as I shall send to receive it, you shall have libertie to carry off your armes and goods, and such other necessaries as you have. You harboured such parties in your house as have basely unhumanely murdered our men; if you necessitate me to bend my cannon against you, you must expect what I doubt you will not be pleased with. I expect your present answer, and rest your servant,

O. CROMWELL."

A surrender was not the immediate consequence of this peremptory summons, for the castle held out until artillery were opened upon it; but seeing no appearance of relief, Lord Borthwick obtained honourable terms of capitulation, viz., liberty to march out with his lady and family unmolested, and fifteen days allowed to remove his effects. Notwithstanding the waste of time, the grand appearance of this princely edifice still fills the mind of the beholder with veneration.

This parish has produced several eminent men. Principal Robertson was born in the manse of Borthwick, and ever cherished an attachment to the place of his nativity, and the scenes of his youth. The Dundases of Arniston have made a conspicuous figure in Scottish history. Two of the heads of that family were presidents of the highest civil courts in this country; and the Right Honourable Henry Dundas rose to the office of secretary of state. James Small, an eminent mechanic and agricultural implement maker, was also a native of this parish.

BORTHWICK (THE), a Roxburghshire stream, whose head-streams, Craikhope burn, Howpassley burn, and Brownshope burn descend from the range of hills on the south-west skirts of the county, where the shires of Selkirk, Dumfries, and Roxburgh meet. It flows in a north-east direction and with a rapid course, through the parish of Robertson; and joins the Teviot a little below Branxholm, and about 2 miles above Hawick.

BOSWELL'S (ST.), or **LESSUDDEN**, a parish on the banks of the Tweed, in Roxburghshire; bounded on the north by the parish of Melrose, and the Tweed which separates it from Berwickshire; on the east by the Tweed and Maxtown parish; on the south by Ancrum parish; and on the west by Bowden parish. It derives its name, St. Boswell, from St. Boisel a disciple of St. Cuthbert, who is said to have founded the church of this parish. Lessudden is the name of the principal village in the parish, and is supposed to have been originally *Lis-Aidan*, that is, 'the Residence of Aidan'; or perhaps *Lessedwin*—as it is in old chartularies—that is, 'the Manor-place of Edwin.' It was burnt by the English, under Sir Ralph Sadler, in 1544. It is 10 miles west of Kelso, and 4 east of Melrose. The old village of St. Boswell stood about a mile to the south-

east of Lessudden. St. Boswell's burn, rising in Bowden parish, intersects the parish, and falls into the Tweed a little above Lessudden. The superficial area of the parish is 2,600 acres, nearly all arable. The valued rent is £4,330 18s. 2d. Scots. Real rental, in 1792, about £1,600; in 1834, about £3,000. Assessed property, in 1815, £4,048. Population, in 1801, 497; in 1831, 701. Houses 117.—This parish is in the presbytery of Selkirk, and synod of Merse and Teviotdale. Patron, the Duke of Buccleugh. Stipend £211 11s. 7d., with a glebe of the value of £12. Unappropriated teinds £572 10s. Schoolmaster's salary £25 13s., with about £40 fees. Average number of pupils 50. There is a small private school. Robert Scott, Esq. of Penang, left £100, and a field of 5 acres, for behoof of the poor of this parish.

St. Boswell's fair is held on a large green of the same name, of about 40 acres in extent, through which passes the turnpike-road from the Lothians to Jedburgh, &c. It is the greatest in the south of Scotland. It is held annually on the 18th of July; or on the Monday following, if the 18th fall on a Sunday. Its happening either on the Monday or Saturday is very justly thought to occasion much inattention to the religious observance of the Sabbath; and the evil has been often and long since complained of, but no remedy has yet been applied. If the day be fine, the concourse of people from all the surrounding country is immense; and some come from a very considerable distance. Great flocks of sheep and lambs—the latter chiefly Leicester and crosses—are brought hither from all parts of the adjacent country, and generally find so ready a market as to be disposed of early in the morning, or at latest in the forenoon. The average number shown at this fair, until within these ten or twelve years, was 30,000; it does not now exceed 20,000. The chief purchasers are the Berwickshire and East Lothian graziers. The show of black cattle is not very imposing; but the show of horses has usually been so fine that buyers attend from all parts both of the north of England and south of Scotland. Linen cloth, hardware, toys, crockery, and other miscellaneous articles, are also exhibited to a considerable amount in value, in booths—or, as they are here called, *crains*—which are erected in great numbers on the green. St. Boswell's is among the last of the wool-fairs, and generally winds up the wool-trade for the season. The money turned in the course of the day at this fair used to be from £8,000 to £10,000 sterling. The Duke of Buccleugh receives a certain rate or toll upon sheep, cattle, and all other commodities brought into this fair for sale. Old sheep pay one merk Scots per score; lambs, one-half of that sum; and so on. This toll is sometimes collected by people appointed for the purpose; but is more commonly let for such a sum of money as can be agreed on. The highest at which it ever was let was £53, the lowest £33; and the average is supposed to be about £38.

BOTHKENNAR, a small parish of Stirlingshire, in the carse of Falkirk; about 1½ mile in length, and nearly of equal breadth. It is bounded on the north by the parish of Airth; on the west by the parish of Larbert; on the south by the parishes of Falkirk and Polmont; and on the east, by the Forth. It seems anciently to have been bounded on the south by the river Carron, but that river, having changed its course, now intersects both the parishes of Bothkennar and Falkirk, leaving part of the former on the south, and a small part of the latter upon the north side of it. The parish contains 96 oxgangs of land, of 13 acres each, or 1,248 Scots acres in whole; the old valuation of which is £3,591 12s.

Gd. Scots. The real rent of the parish, in 1796, was about £2,808. Assessed property, in 1815, £5,429. This district is almost a continuous flat; there is scarcely the least rising ground to be observed through the whole of it, and, excepting the roads, there is not a spot of it uncultivated. Population, in 1801, 575; in 1831, 905. Houses 150.—This parish is in the presbytery of Stirling, and synd of Perth and Stirling. Stipend £201 12s. 10d., with a glebe of the value of £12. Church built in 1789. Schoolmaster's salary £34 4s. 4½d., with £10 fees. There is also a private school.

BOTHWELL,* a large parish on the northern banks of the Clyde, in Lanarkshire. In ancient times Bothwell was a great and noble barony, extending from Clyde to the boundaries of West Lothian. It is situated in the Lower ward of the county of Lanark, and bounded upon the south by the river Clyde, and the South Calder; on the west and north by the North Calder; and on the east by Shotts. It is of an oval figure, extending from west to east about 8½ miles in length, and 4 at its greatest breadth. The great flat of the upper part of the parish is, at a medium, 300 feet above the level of the sea; that toward the Clyde is much lower. The surface rises gradually from the Clyde to the north and north-east. The old valuation of the parish is £7,389 16s. 0½d. Scots. In 1650, the rental of the parish was £1,950 18s. 5½d. sterling; in 1782, £4,431 7s. 4d. sterling. The present rental, exclusive of the collieries and iron-works, may amount to between £9,000 and £10,000. The income from mines and iron-works, it is stated in the New Statistical Account of this parish, is supposed to exceed £160,000 per annum. The value of assessed property, in 1815, was £16,053. The parish abounds in free-stone. The quarries near the Clyde are of a red-coloured stone; in the upper part of the parish, of a beautiful white. Coal is extensively wrought, and there are large iron-works. Population, in 1801, 3,017; in 1831, 5,545. Houses in 1831, 1,086. If the parish were divided by a line drawn across the narrowest part, passing a little to the east of the village of Bellshill, the population of the two districts would be nearly equal; but that of the eastern district is composed of colliers, iron-smelters, and others connected with the coal and iron works; while that of the west is chiefly agricultural labourers and weavers. The village of Bothwell is 3½ miles from Edinburgh; 8 from Glasgow; 27 from Stirling; and 17 from Lanark.—This parish is in the presbytery of Hamilton, and synd of Glasgow and Ayr. Patron, the Duke of Hamilton. Stipend £282 14s. 8d., with a glebe of the value of £36. Unappropriated tithes £491 12s. 11d. Church built in 1833; sittings 1,150. It is a very handsome Gothic edifice, with a tower 120 feet in height; cost £4,179. A preaching-station was opened at Holytown in March, 1834; and a church has since been built a little to the east of that town, with 830 sittings, at a cost of £1,152, for the accommodation of parties connected with the Established church in the eastern district of the parish. Salary about £60.—There is a Relief congregation at Bellshill. Church built in 1763; sittings 812. Stipend £120, with a manse and glebe of the value of £30.—A United Secession congregation was established and a church built in 1802 at

Newarthill. Sittings 600. Stipend £70, with a house, and glebe of the value of £14.—There are three parish-schools and ten private schools. The parochial schoolmaster has a salary of £34 4s., each of the other two has a salary of £8 11s. By a census made by the parish-minister of Bothwell in 1836 it was found that, of a total population of 6,381, there were 3,757 in connexion with the Established church, and 2,485 in connexion with other denominations.—For further information regarding this parish, see articles: CALDER, CHAPELHALL, CLYDE, HOLYTOWN, UDDINGSTONE, &c.

The castle of Bothwell, on the north bank of the Clyde in this parish, is a very ancient and noble structure. What of it remains occupies a space in length 234 feet, and in breadth 99 feet over the walls. The walls are upwards of 15 feet in thickness, and in some places 60 feet high, built of a kind of red grit or friable sandstone. In the notes to Wordsworth's poems [Vol. v. p. 379, edn. 1839,] occurs the following description of this noble relic of feudal ages: "It was exceedingly delightful to enter thus unexpectedly upon such a beautiful region. The castle stands nobly, overlooking the Clyde. When we came up to it, I was hurt to see that flower-borders had taken place of the natural overgrowings of the ruin, the scattered stones and wild plants. It is a large and grand pile of red free-stone, harmonizing perfectly with the rocks of the river, from which, no doubt, it has been hewn. When I was a little accustomed to the unnaturalness of a modern garden, I could not help admiring the excessive beauty and luxuriance of some of the plants, particularly the purple-flowered clematis, and a broad-leaved creeping plant without flowers, which scrambled up the castle wall, along with the ivy, and spread its vine-like branches so lavishly that it seemed to be in its natural situation, and one could not help thinking that, though not self-planted among the ruins of this country, it must somewhere have its native abode in such places. If Bothwell castle had not been close to the Douglas mansion, we should have been disgusted with the possessor's miserable conception of adorning such a venerable ruin; but it is so very near to the house, that of necessity the pleasure-grounds must have extended beyond it, and perhaps the neatness of a shaven lawn and the complete desolation natural to a ruin might have made an unpleasant contrast; and, besides being within the precincts of the pleasure-grounds, and so very near to the dwelling of a noble family, it has forfeited, in some degree, its independent majesty, and becomes a tributary to the mansion; its solitude being interrupted, it has no longer the command over the mind in sending it back into past times, or excluding the ordinary feelings which we bear about us in daily life. We had then only to regret that the castle and the house were so near to each other; and it was impossible not to regret it; for the ruin presides in state over the river, far from city or town, as if it might have a peculiar privilege to preserve its memorials of past ages, and maintain its own character for centuries to come. We sat upon a bench under the high trees, and had beautiful views of the different reaches of the river, above and below. On the opposite bank, which is finely wooded with elms and other trees, are the remains of a priory built upon a rock; and rock and ruin are so blended, that it is impossible to separate the one from the other. Nothing can be more beautiful than the little remnant of this holy place: elm trees (for we were near enough to distinguish them by their branches) grow out of the walls, and overshadow a small, but very elegant window. It can scarcely be conceived what a grace the castle and priory impart

* The origin of this name is uncertain. *Both*, in Celtic, Syriac, Chaldean, and Saxon, signifies 'a Habitation or Dwelling.' *Hyl or Huil*, in Celtic, is 'a Flood or Water'; and compounded with *both*, *Bothail* or *Bothwell* may signify 'a Habitation beside or on the Waters.' *Old Statistical Account*.—Chalmers suggests that as *gruill*, or, in composition, *will*, means 'a Stranger or Interloper,' *Bothwell* or *Bothwell* may signify 'the Habitation of the Stranger.' *Caledonia*, iii. p. 200.—Bullock renders *Bothwell*, 'a Castle upon an eminence'; from *both*, which he interprets 'Eminence,' and *well*, in composition *well*, 'a Castle.'

to each other; and the river Clyde flows on, smooth and unruddled below, seeming to my thoughts more in harmony with the sober and stately images of former times, than if it had roared over a rocky channel, forcing its sound upon the ear. It blended gently with the warbling of the smaller birds, and the chattering of the larger ones, that had made their nests in the ruins. In this fortress the chief of the English nobility were confined after the battle of Bannockburn. If a man is to be a prisoner, he scarcely could have a more pleasant place to solace his captivity; but I thought that, for close confinement, I should prefer the banks of a lake, or the sea-side. The greatest charm of a brook or river is in the liberty to pursue it through its windings; you can then take it in whatever mood you like; silent or noisy, sportive or quiet. The beauties of a brook or river must be sought, and the pleasure is in going in search of them; those of a lake or of the sea come to you of themselves. These rude warriors cared little, perhaps, about either; and yet, if one may judge from the writings of Chaucer, and from the old romances, more interesting passions were connected with natural objects in the days of chivalry than now: though going in search of scenery, as it is called, had not then been thought of. I had previously heard nothing of Bothwell castle, at least nothing that I remembered; therefore, perhaps, my pleasure was greater, compared with what I received elsewhere, than others might feel."—The following is a concise statement of the various lords or masters this castle has successively received in the vicissitudes of fortune. During the reign of Alexander II. it belonged to Walter Olifard, justiciary of Lothian, who died in 1242. It afterwards passed by marriage to the Morays or Murrays. In the time of Edward I. it was given to Aymer de Valence, Earl of Pembroke. Upon his forfeiture, it was given by Robert Bruce to Andrew Murray, Lord Bothwell, who had married Christian, sister to that king. With his grand-daughter, it came to Archibald the Grim, Earl of Douglas, and continued in their family till their forfeiture under James II. in 1455. After the forfeiture of the family of Douglas, the bulk of the lordship of Bothwell was given to Lord Crichton, son to Chancellor Crichton; and Bothwell forest, or Bothwell moor, was obtained by Lord Hamilton, in exchange for the lands of Kingswell. Crichton was forfeited in 1485, for joining with Alexander Duke of Albany against James III. It was then given by James III. to Lord Monipenny, but afterwards resumed, as having been gifted by the king in his minority, and bestowed on John Ramsay, who enjoyed it till 1488, when the lordship of Crichton was gifted by James IV. to Adam Hepburn,—

"he who died
On Flodden, by his sovereign's side."

It continued in this line till November, 1567, when James, Earl of Bothwell, was forfeited for the murder of Darnley. Thereafter it was given to Francis Stewart, son of John, Abbot of Kelso, who was natural son to James V.; and on his forfeiture his estate was gifted to the lairds of Buccleugh and Roxburgh, from whom the Marquis of Hamilton acquired all the superiority and patronage of that lordship. The castle of Bothwell, with a third of the lordship, was disposed by Hepburn, Earl of Bothwell, to the Earl of Angus, in exchange for the lordship of Liddisdale. Angus, and Archibald his son, in 1630, feued off their part of the lordship to the particular tenants and possessors thereof, reserving the castle and mains of Bothwell. It was given off as a patrimonial portion with the Earl of Forfar, but again returned to the family of Douglas on the death of Archibald Earl of Forfar, who died at Stirling of

wounds received at Sheriffmuir, in 1715. The Douglas family enlarged and improved the castle; and their arms are found in different places of the wall. It is said that a great part of it was taken down by the Earl of Forfar, to build a modern house out of the materials.

The old church of Bothwell is a structure, in the Gothic style, of excellent workmanship, 70 feet in length over the walls, and 39 in breadth. The roof is arched and lofty. It was lighted with a tire of large windows on each side, and a great window in the east end, in the upper part of which the Douglas arms are cut. At the south corner of the window, within and without, the same arms are quartered with the royal arms. The Hamilton arms are engraved in the centre of the arch which supported the organ loft. The arched roof is covered with large polished flags of stone, somewhat in the form of pan-tiles. Near the outer base of the spire, the name of the master-mason was written in Saxon characters, "Magister Thomas Tron." In the two east corners of the church are two sepulchral monuments to the Earl of Forfar and his son. This building was used as the parish church till 1828. The collegiate church of Bothwell was founded October 10, 1393, by Archibald earl of Douglas, for a provost and 8 prebendaries; with a grant of the lands of Osberington, or Orbiston, in his barony of Bothwell, and the lands of Netherurd, in the sheriffdom of Peebles. The endowments of this church were very great; for besides these lands, there was given them a right to all the tithes of Bothwell and Bertram-Shotts, Avondale, and Stonehouse parishes, and several superiorities. Most of these superiorities, with part of the property, and the tithes, belong now to the Duke of Hamilton, who is both patron and titular. The noble founder died in 1400; and, as tradition has it, was buried with his lady under a large marble stone in the east end of the quire. In the same year David, prince of Scotland, was married to Marjory Douglas, daughter to Archibald, Earl of Douglas, in the church of Bothwell. The provost of Bothwell had a vicar at St. Catherine's chapel, for serving the upper part of the parish now called the Shotts; but after the Reformation, it was divided into two parishes. A list of the provosts and successive ministers of Bothwell is given in the Old Statistical Account of this parish.

Bothwell bridge was the scene of an engagement on the 22d of June, 1679, between the Covenanters, and the king's army commanded by the Duke of Monmouth, assisted by Claverhouse and Dalzell. The king's army advanced by the north or Bothwell side. The Covenanters amounted to 4,000; and the bridge was vigorously defended for a time by Hacketon of Rathillet; but the main body divided among themselves, and madly employing the precious moments while the king's troops were carrying the bridge in cashiering their officers, were soon thrown into confusion; 400 were killed, chiefly in the pursuit, and 1,200 taken prisoners. The aspect of the bridge and scenery in the immediate vicinity has been entirely changed within these few years. Formerly the bridge, about 120 feet in length, rose with an acclivity of about 20 feet, and was only 12 feet in breadth, fortified with a gateway near the south-east or Hamilton end. The gateway and gate have been long removed; and in 1826, 22 feet were added to the original breadth of the bridge, by a supplemental building on the upper side, while the hollow on the south bank was filled up. The Clyde is here 71 yards broad.

Bothwell-haugh, about a mile above the bridge, was formerly the property of James Hamilton of Bothwell-haugh, who shot the Earl of Murray, then

regent of Scotland, at Linlithgow, on the 23d of January, 1569. "He had been condemned to death soon after the battle of Langside, as we have already related, and owed his life to the regent's clemency. But part of his estate had been bestowed upon one of the regent's favourites, who seized his house, and turned out his wife naked, in a cold night, into the open fields, where, before next morning, she became furiously mad. This injury made a deeper impression on him than the benefit he had received, and from that moment he vowed to be revenged of the regent. Party rage strengthened and inflamed his private resentment. His kinsmen, the Hamiltons, applauded the enterprise. The maxims of that age justified the most desperate course he could take to obtain vengeance. He followed the regent for some time, and watched for an opportunity to strike the blow. He resolved at last to wait till his enemy should arrive at Linlithgow, through which he was to pass, in his way from Stirling to Edinburgh. He took his stand in a wooden gallery, which had a window towards the street; spread a feather bed on the floor to hinder the noise of his feet from being heard; hung up a black cloth behind him that his shadow might not be observed from without; and, after all this preparation, calmly expected the regent's approach, who had lodged, during the night, in a house not far distant. Some indistinct information of the danger which threatened him had been conveyed to the regent, and he paid so much regard to it, that he resolved to return by the same gate through which he had entered, and to fetch a compass round the town. But as the crowd about the gate was great, and he himself unacquainted with fear, he proceeded directly along the street; and the throng of people obliging him to move very slowly, gave the assassin time to take so true an aim, that he shot him with a single bullet through the lower part of his belly, and killed the horse of a gentleman who rode on his other side. His followers instantly endeavoured to break into the house whence the blow had come: but they found the door strongly barricaded; and, before it could be forced open, Hamilton had mounted a fleet horse, which stood ready for him at a back passage, and was got far beyond their reach. The regent died the same night of his wound."—[Robertson's 'History of Scotland,' Book V.]*

About a quarter of a mile east of this, there is a bridge over the South Calder which is thought to be of Roman construction; it is a single arch of 20 feet span, high, narrow, and without parapets. The Roman road called Watling Street—one of the four great Roman roads in Britain—leading to it from the east, through Dalziel parish, was in a state of considerable preservation towards the end of last century, but is now scarce discernible.—A mile above this, upon the banks of the same water, there is a quarry of the finest millstones in the west of Scotland. Three miles higher, upon the north bank of the Calder, in the middle of the steep rock upon which the house of Cleland stands, is a large natural cave, which has been partly improved by art, capable of holding 40 or 50 men, and of difficult access. The entry was secured by a door and an iron gate fixed in the solid rock; the fire-place, and part of the chimney and floor, still remain. The tradition is, that it was used as a place of concealment in the troublesome times of the country, as far back as the gallant patriot Sir William Wallace,—perhaps by the hero himself, and his trusty band; also during the violent feuds between the house of Cleland

and Lauchope; and especially in the convulsions of this country under the Charles's.

The house of Lauchope was the seat of a very ancient family, the mother-family of the Muirheads. It is an old tower-house, with walls of a prodigious thickness.—Woodhall, near the village of Holytown, the property of W. F. Campbell, Esq. of Islay, is a fine mansion.—The house of Bothwell, the residence of Lord Douglas, a handsome edifice consisting of a centre and two wings, stands a little east from the old castle, and commands a charming view of the banks, the river, the ruins of the old castle of Bothwell, and the adjacent country. The banks of the river have been improved with pleasure-walks, rustic huts, and shrubbery. The park is enclosed with a remarkably good wall.

One of the finest views in Scotland is commanded from the east brow of the hill, upon which the village of Bothwell stands. This seems to be the great promontory which Nature has erected from which to contemplate the beauties of the Vale of Clyde, for that river, after it quits this parish, loses its noble wooded banks, and generally falls into a flatness on both sides. On the right hand, and on the south side of the river, the residence of the Duke of Hamilton, called the Palace, Châtelherault, and the town of Hamilton, appear just under the eye, amidst extensive pleasure-grounds. A little above this, the vale is contracted, and the banks of the river become wide and deep, with a gradual declivity on both sides, occupied by gentlemen's seats, and highly cultivated and embellished. Numerous orchards are here interspersed through the groves, which give a great part of the vale an Italian aspect, or rather

"The bloom of blowing Eden fair."

In autumn they are richly loaded with fruits, and this district may be called the Garden of Scotland. Beautiful meadows covered with flocks, and rich fields of corn, adorn the holms and plains; while villa succeeds villa, as far as the eye can reach, till the prospect terminates upon Tintock, at the distance of 24 miles.

The beauties of Bothwell banks were celebrated in ancient song, of which the following incident is a striking proof: "So fell it out of late years, that an English gentleman, travelling in Palestine, not far from Jerusalem, as he passed through a country town, he heard by chance a woman sitting at the door, dandling her child, to sing,

"Bothwell bank, thou bloomest fair."

The gentleman hereat exceedingly wondered, and forthwith in English saluted the woman, who joyfully answered him, and said, She was right glad there to see a gentleman of our isle; and told him, that she was a Scotch woman, and came first from Scotland to Venice, and from Venice thither; where her fortune was to be the wife of an officer under the Turk, who being at that instant absent, and very soon to return, she entreated the gentleman to stay there until his return; the which he did; and she, for country sake, to show herself more kind and bountiful unto him, told her husband at his home-coming, that the gentleman was her kinsman; whereupon her husband entertained him very kindly, and at his departure gave him divers things of good value." [Verstegan, in his 'Restitution of Decayed Intelligence,' Antwerp, 1605. Chap. Of the Surnames of our Ancient Families.]

BOTRIPHIE, a parish in Banffshire, about 24 miles west of the county-town; extending from north to south about 4½, and from east to west about 3 miles. It is bounded on the north by part of Dundurcas, in Moray; on the east by Keith and Cairney

* See Sir Walter Scott's magnificent ballad entitled 'Cadyow Castle,' in the 4th vol. of the 'Border Minstrelsy.'

parishes; on the south by Culrash-Glass and Mortlach; and on the west by Mortlach and Bobarm. The greater part of the parish consists of one beautiful strath, situated between two hills to the north and south with the small river of Isla, which takes its rise in the west part of the parish towards Mortlach, running through the middle of it. The banks of this stream are beautifully adorned with aller and birch trees; several small rills, which fall into it from the hills on each side, are clothed in the same manner. The fields on the north side of the parish have a good exposure, and are of considerable extent, stretching from the river to the top of the hill; for the whole length of the parish on that side, there is hardly a break in them, except where they are intersected by a few small rills and clumps of birch and aller. Population, in 1801, 569; in 1831, 721. Houses, in 1831, 117. Assessed property, in 1815, £2,683.—This parish is in the presbytery of Strathgogie, and synod of Moray. Patron, the Earl of Fife. Stipend £178 15s. 5d., with a glebe of the value of £8 15s. Unappropriated teinds £254 4s. 2d. Schoolmaster's stipend, £30, with about £7 fees. There were two private schools within this parish in 1834.

BOURTIE, a parish in the Garioch district of Aberdeenshire; bounded on the north by the parish of Old Meldrum; on the west by Tarves and Udney; on the south by Keithhall; and on the west by Daviot. Its extent is about 4 miles in length, and 2 in breadth, and it contains about 4,000 acres. About the middle of the parish there are two ranges of green hills, which seem to have been laboured at some former period to within 50 yards of the top. In 1744, there were only two carts within this parish, and only two houses which had stone chimneys,—the house of Barra, and the manse. On the summit of the hill of Barra, there are the distinct remains of a camp of a circular form, and surrounded with three ditches. It is called the Cummin's camp. The Cummins were a bold and numerous race, who are said to have been proprietors of the greater part of the Buchan country, and disaffected to King Robert Bruce. After the battle near Inverury, in which the king's arms were victorious, he marched his troops hither, stormed this camp, and put the Cummins who had rallied here to flight. It is probable, however, that this camp had been originally formed by the Danes, and that the Cummins had only taken possession of it as an advantageous post. In the churchyard there is a rough stone cut out into a coarse statue of a man. The traditional report is that it was executed in memory of the celebrated Thomas de Longueville, the companion of Wallace, who was killed in storming the camp, and is buried here. Population, in 1801, 445; in 1831, 472. Houses, in 1831, 84. Assessed property, in 1815, £1,709.—This parish is in the presbytery of Garioch, and synod of Aberdeen. Patron, the Crown. Stipend, £225 15s., with a glebe of the value of £10.—The parochial school is attended by about 30 children. Salary of schoolmaster £30, with £8 fees.

BOWDEN,* a parish in Roxburghshire; bounded on the north by Melrose parish; on the east mostly by St. Boswells, though partly also by Lang-Newton, now annexed to Ancrum; on the south by Lilliesleaf; on the west by Selkirk; and on the north-west by Galashiels. Its greatest length from east to west is 6 miles. Its greatest breadth from

south to north is about $4\frac{1}{2}$ miles. The whole superficies is nearly 6,700 acres. The surface is much varied. One of the Eildon hills, and one-half of another, are in this parish. These hills present three conical summits springing from one broad and elevated base. Sir John Leslie estimated their altitude at 1,364 feet above sea-level. Their situation in a flat country, more than their height, gives them an imposing aspect, and they are seen at a great distance. Some parts of them also being covered with a kind of red stone, without a pile of grass, present a singular and striking appearance. The rock is chiefly felspar and felspar porphyry. The highest peak is thickly covered with a little shrubby plant, the *vacinium myrtillus*. About three-fourths of the parish have been at one time or another under the plough; the other fourth consists of bog, moss, and plantations of fir and forest-trees. The most extensive plantation occupies the southern base of the Eildons. The real rent of the parish, in 1794, amounted to £2,300. It is now at least double that sum. The valued rent is £8,030 11s. Scots; of which above one-half belongs to the Duke of Roxburgh. Towards the close of last century the wages of a man-servant, in this parish, were, in addition to his meat, from £7 to £8; they are now from £9 to £10 10s. Maid-servants got £2 10s. and £2 15s. for the summer, and £1 5s. for the winter half-year; these wages are now nearly doubled. There are two villages in the parish, viz., Bowden, 3 miles from Melrose, and Midlem or Middleham, $3\frac{1}{2}$ miles from Selkirk. Population, in 1801, 829; in 1831, 1,010. Houses, 191. Assessed property, in 1815, £5,813.—This parish is in the presbytery of Selkirk, and synod of Merse and Teviotdale. Patron, the Duke of Roxburgh. Stipend, £211 11s. 7d., with a glebe of the value of £15. Unappropriated teinds, £44 4s. 6d.—The Associate Synod of Original Seceders have a chapel at Midlem.—There are two parochial schools,—one at Bowden, the other at Middleham,—attended by about 150 children. The salary of one of the master's is £30; that of the other £21 6s. 6 $\frac{1}{2}$ d.; and each has about £20 of fees. A vault adjoining to the church is the burying-place of the ducal family of Roxburgh. The coffins—21 in number—are above ground; and some of them, by the dates upon them, appear to have stood upwards of 200 years, and are still entire. The remains of a military road, with circular stations or camps, supposed to be Roman, can be traced running nearly north through the centre and broadest part of this parish, about a mile to the westward of the church, from Beaulieu in the parish of Lilliesleaf, to Caldsheels in the parish of Galashiels.—There was, towards the end of last century, a strong fortification of its kind, at Holydean, or Haliudean, once a residence of the family of Roxburgh. The court-yard, containing about three-fourths of an acre, was surrounded by strong stone and lime walls, 4 feet thick, and 16 feet high, with slanting holes, about 36 feet from each other, from which an arrow or a musket could have been pointed in different directions. Upon an arched gateway in the front there was a strong iron gate. Within the court stood two strong towers, the one of three, the other of five stories, and each consisting of eight or ten lodgeable rooms, besides porters' lodges, servants' hall, vaulted cellars, bakehouses, &c. The roof and flooring were all of the strongest oak. This building was mostly pulled down, merely for the sake of getting the stones in it to build a large farm-house and appurtenances at the distance of 3 miles, though the difficulty of separating these stones from the lime made them a dear purchase!

* In a charter granted by David I. to the abbey of Selkirk, mention is made of *Botheniden*, which seems to favour the conjecture of this parish being named after a *St. Bothen*, or *Bohten*, and the site of his tower is still pointed out near the village. Yet the name may be derived from a *den* or *dean* in the bow or curve of a small rivulet, where the church is said to have once stood.—*Old Statistical Account*.

One of the vaults still remains. One stone, preserved from the ruins, and now a lintel to the door of the farm-house at Holydean, has in the middle an unicorn's head and three stars, with this inscription on either side:—"Feer God. Flee from sin; mak to the lyfe everlasting to the end. Dem Isbel Ker 1530."—About 140 yards from this house, on the top of a precipice hanging over a deep dell called Ringan's dean, there had been a chapel or place of worship, and a burying-ground, as appears from the number of grave-stones, and pieces of human bones, which have been dug up in it from time to time. Hence probably has arisen the name Holydean or Haledéan. The greatest curiosity, perhaps, of its kind in Britain, is a stone dike without lime, which encloses about 500 acres of this farm, and has stood more than 300 years, yet is still a tolerable fence. It has at first been 6 or 7 feet high, with capstones. In an old tack, this enclosure is called, "The great deer park of Haliédéan."

BOWER, a parish in the shire of Caithness; bounded on the north by Orlig, Dunnet, and Cannisbay parishes; on the east by Cannisbay and Wick parishes; on the south by Wick and Watten; and on the west by Hüllkirk and Thurso. The name—as of most places in this country—seems to be derived from the Danish language, and is said to denote a valley, or what in Scotch is called a carse. The parish is 7 miles in length, and 3 in breadth. On a ridge of rising ground, which almost equally divides the parish, betwixt Bower tower and Brabster, is a large stone called Stone Lude or Lutt, perhaps from Liotus, mentioned by Torfæus, who is said to have resided in this neighbourhood. The cairn of Heather Cow seems to be a monument of Druidical antiquity. It is situated about a mile south of the kirk, from which the ground rises by a gradual ascent, till it terminates in a round top. On this eminence—which is the highest ground in the parish—there is a circular building of stones, about 9 feet in diameter, and 4 or 5 feet high, ascending by 2 or 3 steps, like a stair, on one side. From it, in a clear day, we have a view of the general outlines of the country, of the hills which separate Sutherland and Caithness, the Strathnaver hills, part of the North sea and Pentland frith, some of the Orkney isles, and the entrance into the Murray frith at Riese bay. The valued rent of the parish is £2,761 16s. Scots; the real rent, in 1793, about £1,500. Population, in 1801, 1,572; in 1831, 1,615; in 1836, 1,751. Houses, 230. Assessed property, in 1815, £1,796. The conversion of services has done much to encourage agriculture in this district. In the Old Statistical Account, published in 1793, it is stated that the practice here, and generally throughout Caithness, used to be as follows:—"A proprietor let a certain small extent of land to his tenants, for which he received the greater part of his rent in victual, and a very small acknowledgment in money—specie being then very rare in the country—in the name of gross rent. The tenants of this description were bound to pay the following services: They tilled, dunged, sowed, and harrowed a part of an extensive farm in the proprietor's natural possession. They provided a certain quantity of peats for his fuel,—carried feal and divot,—thatched a part of his houses, and furnished simmons for that purpose, as well as for securing his corns in the barn-yard,—weeded the land,—led a certain quantity of midden feal from the common for manure to his farm,—mowed, made, and ingathered his hay, the spontaneous produce of the meadow and marshy grounds,—and cut down, ingathered, thrashed out in part, manufactured, and carried to market the growth of his farm. Besides these services, the tenants paid in kind the following

articles under the name of customs, viz., straw-caz-zies, which were used as sacks for carrying victual; side-ropes, made of hair, for drawing the plough-halters; floss or reeds, used for these and similar purposes; teathers made of heather; straw for thatch, &c. They also wintered a beast or more each, according to the extent of his possession,—paid vicarage, or small teind, meat lamb, wedder, hawk, hen, and eggs, out of each house, with poultry, according to the extent of their farms, meat and teind geese, meat swine, and mill gault. Besides these flesh-duties, grass farms in the Highlands paid veal, kid, butter, and cheese, &c. And tenants on the sea-coast paid teind and quatel fish, and oil, out of each boat belonging to them, and carried sea-ware, for manuring the proprietor's farm. Amongst other articles of rent, the parsonage, or great teind—being the tenth sheaf of the tenant's produce—was also till lately drawn in harvest by the proprietor in some few places in the country. They also, in general, spun a certain quantity of lint for the landlady, who likewise had from them a certain portion of wool annually. All these different payments obtained generally in the county of Caithness 30 or 40 years ago."—A few years ago there were found in a moss on the estate of Thura, the bones of some animals of the ox species, of a size now unparalleled in this county. The remains were three feet under the surface, and were in a high state of preservation. Two heads were found locked together by the horns, as if the animals had killed each other. The horns form a graceful curve, but if distended, measure 5 feet 10 inches, from tip to tip; breadth of skull across the eyes, 1 foot 6 inches; one of the ribs measures $3\frac{1}{2}$ inches at the broadest part, and exceeds 3 feet by little more than an inch in length; the largest joint of the leg-bone measures 9 inches in circumference, but the bone itself is comparatively short.—This parish is in the presbytery of Caithness, and synod of Sutherland and Caithness. Patron, Sir James Colquhoun, Baronet. Stipend, £191 4s. 6d., with a manse and glebe. Unappropriated teinds, £132 2s. Church built about the middle of the 17th century; sittings, 441.—Schoolmaster's salary, £35 16s. 2½d., with about £14 fees. There are three private schools. Alexander Miller of Thurso mortified £100 for teaching children in this parish; and Dr. James Oswald of Glasgow, a like sum for this and every other parish in Caithness-shire.

BOWLING, a hamlet in the parish of West Kilpatrick, Dumbartonshire; at the western extremity of the Forth and Clyde canal, where it joins the Clyde. It is prettily situated on a narrow strip of level ground between the finely-wooded hills of Kilpatrick and the river, which is here still of contracted limits, but a few hundred yards farther down, after turning the rocky point of Dunglass, begins to expand and assume a frith-like appearance.

BOWMONT (THE), a stream which rises in the Cocklaw, and flows in an easterly direction through the parish of Yetholm into Northumberlandshire, where it joins the Glen near Kirk-Newton, by which its waters are conveyed to the Till, a tributary of the Tweed. The Bowmont and the Glen afford fine trouting.

BOWMORE, a port in the island of Islay, in the parish of Kilarrow; on the eastern side of Lochindaal, which here forms a spacious but shallow bay much frequented by shipping. The bay is landlocked, and affords good anchorage in the deeper water, but is much exposed to the north-west wind. Bowmore is a neat little place, containing about 1,500 inhabitants. It was founded in 1768, and is well-furnished with shops, and a pier; but the re-

cently formed villages of Port Charlotte, and Port Eleanor, on the opposite side of the bay, have somewhat diverted attention from the older port. The parish of Kilarrow is now not unfrequently called Bowmore, from the circumstance of the old church at Kilarrow having been demolished, and the present handsome parish-church erected at the end of one of the principal streets in the village of Bowmore. It is 11 miles south-south-west of Port-Askaig, and 3 south-west of Bridgend.

BOYNDIE, or **BOINDIE**, a parish in Banffshire, bounded by the Moray frith on the north and north-west; by Banff on the east; by Ordiequhill on the south; and Fordyce on the west. It is 5 miles long, and from a mile to $1\frac{1}{2}$ mile in breadth. It contains about 3,000 acres, above one half of which are arable. The rental of the parish was about £1,200 in 1797. Assessed property, in 1815, £2,903. Population, in 1801, 1,122; in 1831, 1,501. Houses, 238. About two-fifths of the population are collected in the seaport of Whitehill, which is chiefly inhabited by fishers. The kinds of fish principally caught here are cod, ling, and haddocks.—This parish is in the synod of Aberdeen, and presbytery of Fordyce. Patron, the Earl of Seafield. Stipend, £204 19s. 3d., with a glebe of the value of £7. Unappropriated tithes, £222 8s. 1d. Church built in 1773; sittings 600. This district at one time comprehended the parish of Banff, but they were disjoined about 1634. A portion of the parish, with a population of 252 souls, is now under the charge of a missionary officiating at Ord chapel in the parish of Banff. Schoolmaster's salary, £25 12s. 4d., with about £23 fees, and interest in Dick's fund. Scholars 30. There are two private schools attended by about 100 children.—There is a chalybeate spring, called the Red well, in this parish, which, with that of Talarin in the parish of Gamery, is so highly valued "that the farm servants, at the distance of from 30 to 40 miles, make it a part of the agreement with their masters that they shall be allowed two weeks in the month of July or August to attend these wells!" [Souter's 'View of the Agriculture of Banffshire.' Edin. 1812, p. 66.]—Boyne castle is romantically situated on a high perpendicular rock, on the south side of a deep gloomy ravine through which the river Boyndie flows: its banks being wooded quite to the water's edge. This was the baronial castle of the district called the Boyne, and anciently the residence of the noble family of Ogilvie, ancestors of the earl of Seafield. It was deserted in the reign of Queen Anne, and is now quite a ruin. Grose has preserved two views of it.

BRACADALE, a parish in the island of Sky. It is of an irregular form. The length of the inhabited part is about 17 computed miles. The breadth in one part is 7, and in other places about 4 miles. It is intersected by arms of the sea in different directions. The surface, in general, is hilly, with some level spots adjacent to the sea. The soil in some parts is fertile. There are no considerable lakes or rivers, and none that are navigable; though there are many rapid waters, which are frequently attended with inconvenience and even danger to people travelling from one part of the parish to the other. The shore is flat in some places, but for the most part high and rocky. The principal bays, or harbours are: Loch-Bracadale, a good and safe harbour; Loch-Harport, a considerable branch of Loch-Bracadale, where vessels may ride with safety; and Loch-Eynort, 7 miles south of Loch-Bracadale, where vessels sometimes resort. To the south of Eynort, at the distance of 3 miles, is Loch-Brettie, an open bay, and not a safe harbour. The islands in this parish are Haversay, Vuiay, Oransa, and Soa.

These islands are not inhabited, but are only penicles to the different farms on the shore opposite to them, and afford pasture for cattle during part of the summer and winter seasons. There are no remarkable mountains within the parish; but a considerable ridge of very high and lofty hills runs betwixt this parish and the parish of Strath. They are commonly called the Culinn or Coolin hills,—a name conjectured by some to be derived from the famous Cuchulinn, so often mentioned in Ossian's poems. See article **COOLIN**. Population, in 1801, 1,865; in 1831, 1,769. This decrease is attributed to small lots being thrown into large tacks in the system of farming now pursued here. Houses, 332. Value of assessed property, in 1815, £513.—This parish is in the presbytery of Skye and synod of Glenelg. Patron, M'Leod of M'Leod. Stipend, £158 6s. 8d., with a glebe of the value of £15. Church built in 1831; sittings 516. There is a preaching-station at Minginish, and an itinerating Gaelic school. Annual emoluments, £60 from the royal bounty, and accommodation from the heritor valued at £20. Salary of the parochial schoolmaster, £28. Scholars average 30. There were, in 1834, five private schools within this parish, attended by about 130 children.—The natives of Skye were celebrated for the second sight; and Bracadale, of all its wild districts, appears to have been that in which the supernatural gift was most frequent and potent in its manifestations. "The traveller," says Lord Teignmouth, "naturally inquires in Bracadale for traces of the second sight, and may be disappointed when he is informed here, as in other parts of Scotland, in general terms, qualified not a little when investigated, that all the ancient superstitions of the country have vanished. Now this statement cannot be admitted. Serious, imaginative, indolent, solitary in the ordinary condition of their lot, though social in disposition, familiar with nature in all the changing aspects with which northern seasons invest it, and with dangers by flood or fell, the natives of these regions are peculiarly susceptible of religious impressions. And unhappily, during many ages, ignorant, or instructed only in error, they blended with the true faith which they had received from the missionaries of the gospel, all the absurd poetical fictions derived from the stock from which they sprang, from Scandinavian invaders, from monks, or the innumerable horde of impostors, bards, minstrels, seers, and dealers in second sight, who preyed upon their credulity. Among this number must be included the criminals of all classes and conditions, to be found in all communities, but more especially in those in which, as in the ancient Highland clanish associations, certain convenient customs had superseded moral and legal obligation. These persons naturally encouraged a popular creed which furnished a ready explanation of all the mischief, whether theft, plundering of cattle, parentage, or kidnapping of children, which was constantly perpetrated, by the suggestion of demoniacal agency; in short, by multiplying into a diversity of mischievous beings, ready to do an ill-turn to any one, that unknown but right well-known personage—the No-man of Homer, the Nobody of domestic life. That the supposed prodigies which render these regions objects of superstitious awe, or of timid curiosity, should have been exaggerated by those few travellers who penetrated the veil of mystery which enwrapped them, may be attributed partly to the credulity of the times in which they lived, no less than to that of the natives from whom they received their information, and to the wilful imposition practised upon them. The same motive which formerly stimulated the narration

of tales of wonder, now restrains it, namely, regard to the estimation of strangers. But the creed of centuries is not at once eradicated, and it is impossible to converse familiarly with the natives of the Highlands and Islands of Scotland, whether of the upper or lower classes, by their hearths, or by their torrents, on their wild moors, or on their stormy seas, in the season of peril or of repose, of sorrow or of festivity, without being convinced that they cling, in spite of education and intercourse with strangers, to the superstitious delusions, and even practices, of their forefathers."

BRACH (LOCH). See **BALMACLELLAN**.

BRACHLA. See **PETTY**.

BRACKLIN, or BRACKLAND (FALLS OF), a series of short falls and dark deep linn, formed by the western branch of the Keltie burn in the parish of Callander, Perthshire; about $1\frac{1}{2}$ mile to the north-east of the village. The Keltie rises at the base of Stiuicachroin, flows through a wild glen between Brackland and Auchinlaich, and falls into the Teith about $1\frac{1}{2}$ mile below Callander. The falls are viewed to great advantage from a narrow Alpine bridge, which hangs suspended at the height of 50 feet above the white foaming pool—as *Brac-lynn* literally signifies—into which the Keltie here precipitates itself, over disjointed masses of rock, with a thundering incessant roar. The tourist should also note here the magnificent view from the corner of the larch wood, east of Callander, which he passes on his way from the village to the falls.

BRACO. See **ARDOCH**.

BRADWOOD, or BRADWOOD, a village in the upper ward and shire of Lanark, in the parish of Carluke; 4 miles north-west of Lanark. The great Roman road, called Watling Street, passes through this place. The lands of Bradwood belonged to the ancient castle of Hallbar, but have since been feued out by the Earl of Lauderdale, and Lockhart of Carnwath.

BRAE-AMAT, in the shire of Cromarty, though locally in the shire of Ross; constituting part of the parish of Kincardine. It is on the eastern bank of the river Carron.

BRAEMAR, a district of Marr, in the heart of the Grampian chain, in the south-west extremity of Aberdeenshire. It is now parochially united with the parish of **CRATHY**: which see. The only part of the forest of Marr which is now used as a red and roe deer preserve is in Braemar, and belongs to the Earl of Fife, and Farquharson of Invercauld. There is upon the estate of Castleton or Castle-town of Braemar, the ruins of an ancient castle built, tradition reports, by Malcolm Kenmore for a hunting-seat. It is on the top of a rock on the east side of the water of Cluanadh; and the king having thrown a drawbridge across the river to the rock on the opposite side, the parish of Braemar derived its original name of *Cearn-an-drochart*—that is, 'the Bridge-head'—from that circumstance.—On a little mount on the haugh of Castleton stands the castle of Braemar. It was originally the property of Farquharson of Invercauld, and given to a second son of that family as his patrimony. About the end of Queen Mary's reign, these lands were exchamed with the Earl of Marr for the lands of Monaltry; and, soon after his accession to the estate, he built the present house. King William, after the Revolution, put some troops into it to keep the country in awe; but the people sore besieged the garrison, obliged the troops to retire under favour of night, and, to save themselves from such troublesome neighbours for the future, burnt the castle. In this state it continued till 1715, when the Marr estates were forfeited. About 1720, Lords Dun and Grange

purchased from government all the lands belonging to the Erskine family; and about 1730, John Farquharson of Invercauld bought the lands of Castleton from Lords Dun and Grange. About 1748, Mr. Farquharson gave a lease to government of the castle, and an enclosure of 14 acres of ground, for the space of 99 years, at £14 of yearly rent; upon which the house was repaired, a rampart built round it, and the place occupied by a party of soldiers.—On the lands of Monaltry, on the north bank of the river Dee, in a narrow pass, where there is not above 60 yards of level ground from the river to the foot of a steep, rocky hill, stands a cairn, known by the name of *Carn-na-cuimhne*, or 'the Cairn of remembrance.' The military road is carried along the foot of this hill, and through this pass. The tradition of the country is, that, many ages ago, the country being in danger, the Highland chieftains raised their men, and marching through this pass, caused each man lay down a stone in this place. When they returned, the stones were numbered; by which simple means it was known how many men were brought into the field, and what number had been lost in action.

Carn-na-cuimhne is the watchword of the country-side here. Every person capable of bearing arms, was in ancient times obliged to have his weapons, a bag with some bannocks in it, and a pair of new-mended shoes always in readiness; and the moment the alarm was given that danger was apprehended, a stake of wood,—the one end dipped in blood, and the other burnt, as an emblem of fire and sword,—was put into the hands of the person nearest to where the alarm was given, who immediately bore it with all speed to his nearest neighbour, whether man or woman, who, in like manner, and with equal haste, bore it to the next village, or cottage; and so on, till the whole country was raised, and every man capable of bearing arms had repaired to the *Carn-na-cuimhne*. The stake of wood was named *Croishtarich*. "At this day,"—says the writer of the Old Statistical Account of this parish, from whom we borrow these details,—"was a fray or squabble to happen at a market, or any public meeting, such influence has this word over the minds of the country people, that the very mention of *Carn-na-cuimhne* would, in a moment, collect all the people in this country, who happened to be at said meeting, to the assistance of the person assailed."—Dr. Stoddart has pleasingly described the scenery of Invercauld and Braemar, which he approached by an unwonted route through the glen of Fishie. "After crossing," says he, "a few slight eminences, among which were scattered some poor hamlets, we entered the deep glen of the Fishie, bounded by lofty mountains, whose sides, for a long distance, were clothed with fir. The last trace of human habitation was a green, turf-built hut, belonging to the shepherd of the glen. At the door—for I could not enter on account of the smoke—I sat to take some refreshment; and could not but be struck with the mountains, which, at no great distance to the eastward seem to bar all further access. Their forms were fantastic; and their snowy tops, tinged with crimson by the rising sun, gave life and beauty to the silent prospect. On advancing, we found the glen wind to the left, scarcely affording room to creep along the base of the rocks, which confined the stream. The mountain masses, though apparently the haunt only of the eagle, or the roe, had each a peculiar name, many of which evidently related to a state of manners and cultivation very different from the present—thus *Stroan-na-Barin*, *Craig-na-Cailloch*, and *Craig-na-Gaur*, are the promontory of the queen, the rock of the old woman, and that of the goats; but it is long since goats have occupied any great part in the sys-

tem of Highland agriculture: the term *Cailloch* is very commonly applied to the muns, who have been still longer abolished; and history can scarcely inform us what queen it was, who left her name to these now deserted wilds. After reaching the heights, we crossed a dreary moor, surrounded by the tops of some of the highest mountains in Scotland, from Cairngorm, on the left, to Scarscoch, on the right. In this moor are the streams of the Fishie and the Giouly, flowing different ways: by descending the latter, we soon reached the glen of the Dee. This river, receiving several tributary brooks, becomes of considerable importance, and is bordered by the fir plantations of Mar lodge, a hunting-seat of the Earl of Fife's. The vale now opened with great majesty, presenting a noble assemblage of mountain forms, which added to the windings of the river, formed a succession of the most delightful landscapes, as we passed Mar lodge, the Castle-town of Braemar, and at length reached Invercauld, the seat of — Farquharson, Esq., after a continued walk of twelve hours. No place, that I have seen in Scotland, is more characteristically adapted to the residence of a Highland chieftain than Invercauld, and few are more judiciously preserved in an appropriate state of decoration. The house is a large and irregular building, more suitable to such a situation than if its architecture were formally scientific. It stands on a rising ground, not far removed from the bank of the Dee, which glides silently and majestically through the valley. All around are vast birch woods, and firs, which Mr. Farquharson has planted in incredible numbers. The mountain, which rises behind the house, is Craig Leik: those which stretch in front, like a gigantic amphitheatre, are perhaps among the loftiest in Britain; for their height has never been ascertained. The large mass, to the northward of east, is topped by the peak of Loch-na-Gar: below these is the opening of Balloch Buy, an immense fir wood, among whose shades the fall of Garwal glitters to the sun. Stretching round to the south are the wild cliffs and precipices of Craig Cluny, Scailloch-na-Moustard, and Craig Caonich; westward, about a mile and a half distant, are the castle and town of Braemar, backed by Craig Cle-rich; and further up, the vale is shut in by the vast mountain screens folding before each other, whilst above them peer the summits of Ben-y-Bourd, Ben Vrotachan, &c. Few proprietors have done more, or with more judgment, toward the improvement of their estates, both in appearance and in product, than Mr. Farquharson. Of the ancient royal forest of Mar he keeps a great proportion in its natural state, as does the Earl of Fife; and on both properties the deer are cherished with great care. There are many natural woods, but the extent of plantation is still greater, Mr. Farquharson himself, in the course of a long possession, having planted no less than sixteen millions of fir, and two millions of larch. The latter is newly introduced into the practice of Scotch plantation, and answers for every purpose, except fuel, much better than the fir. Firs, however, appear tolerably congenial to this soil, and there still remain some very ancient ones, above 100 feet in straight height. They were much more numerous; but having been injudiciously thinned, the wind forced its way into the plantation, and in one night laid most of these veterans low. Much has been said in dispraise of the Scotch fir. I think the natural beauty of the individual tree has been greatly undervalued; but surely when planted on so broad a scale, their effect is peculiarly adapted to augment the grandeur and majesty of these vast hollows. At Invercauld, as in Glenmore, the mountains seem to be divided by a dark sea of firs, whose uniformity of hue and ap-

pearance affords inexpressible solemnity to the scene, and carries back the mind to those primeval ages, when the axe had not yet invaded the boundless regions of the forest. But the most remarkable of Mr. Farquharson's improvements are the roads, which he has carried, in a variety of directions, through his estate, for purposes both of utility and of pleasure. They are in all considerably more than twenty miles; they are excellently constructed, and their level so well kept, that you reach, by a regular progress, the very tops of the mountains, ere you are well aware of having ascended. Before any of the roads, public or private, were formed, Invercauld was much more completely separated from social intercourse, than at present. A new road has lately been made, at a considerable expense, nearly the whole way along the bank of the Dee, to Aberdeen, which, from the nature of the country, must afford much fine scenery. This is particularly the case at the pass of Ballater, near Ballater-house, about 15 miles below Invercauld. Approaching from Invercauld, the first object which strikes you, is the bridge of Coich, an impetuous stream, which forms a cataract, among wild broken rocks, as it hastens to join the Dee. About a mile to the westward stands Mar lodge, a small pile, but rendered considerable in appearance, by the extension of false wings, connecting it with the offices. It is seated on a flat, very little above the level of the river, and backed by a steep mountain, planted nearly to the top with firs. In its front is a spacious lawn, surrounded with a variety of trees, birch, aller, willow, &c. The Dee is here crossed by a long wooden bridge, with stone arches. About a mile higher up, is another bridge, at the Linn of Dee, where that river forms a fall, after being confined for above sixty yards, between two rocks, a very few feet distant from each other. Crossing the river, I ascended Craig Neagh, a rocky eminence, where—as in many other commanding spots—Lord Fife has built a rude prospect-house. Here you obtain the best view of Mar lodge, with the long bridge, and the upper part of the glen, terminated by the summits of Cairn Toul, Glashan Mor, and Ben-y-Vrotan. Some of these prospect-houses are decorated with spires, and other ornaments, rather unsuitable to the magnificence of the natural objects by which they are surrounded. They serve, indeed, to diversify the landscape; but where variety is only to be attained by the sacrifice of sublimity, a correct taste will deem the purchase too great. One of the most pleasing scenes belonging to Mar lodge, is a small hollow, on this side of the river, called Corry Mulzie. Wandering some time between lofty, over-arching rocks, which enclose the course of a brook, you at length reach its fall. The hanging wood, the shrubs and weeds, the natural, or apparently natural steps in the rock, the rude seat from which you view it, and the arch which supports the road above, all together render this a most picturesque retreat. Not far hence I observed a Catholic chapel, to which great numbers of the neighbouring peasantry were resorting. Nor could a stranger fail to notice the neat cottages which Lord Fife has built for his tenants: thus endeavouring to effect a salutary change in their habits of life, by the introduction of cleanliness and domestic accommodations. Having resolved to cross to Blair in Athol, I was supplied with a guide at Mar lodge, and set off from thence early in the morning. This road is marked in the maps, as one which might easily be travelled by a stranger; but it is, in fact, very much the reverse, a great part of it lying over mountains entirely pathless. Having ascended part of the Giouly, we turned to the left, up an-

other small stream, called the Beinac, until it brought us to the heights. Here we were unfortunately enveloped in mist, and I began to be in some apprehension of missing my way, until my guide discovered a small stream flowing southward into the Tilt. When we had once reached Glen Tilt, it was impossible to deviate. Its sides are precipitous, and scarcely afford room for a horse-path, along the stream. The whole way is dreary and uncultivated: nor does any object occur deserving notice—except a romantic fall on the Tarf, near its junction with the Tilt—until you reach the Forest Lodge, belonging to his Grace the Duke of Athol. The form and situation of this building only fit it for a hunting box, and the scenery around is uninteresting. As you descend the glen, it assumes a more cultivated appearance. About two miles from the lodge, several cottages present themselves, surrounded with birch wood. Here is a bridge, picturesquely situated: the rocky banks are prominent, the mountains steep and lofty, and marked with silver stripes, by the streams, which run down their sides. After some miles of similar country, you emerge from this deep glen, and come at once upon the rich plain of Athol. My walk this day was about twenty-six miles.”—[‘Remarks on Local Scenery and Manners in Scotland.’ London: 1801. Vol. I. pp. 163—175.]

BRAE-MORAY. See **EDENKELLIE**.

BRAHAN CASTLE, the principal seat of Mackenzie of Seaforth, in the parish of Urray in Ross-shire. It is placed nearly in the centre of a beautiful bank, which extends on the north side of the Conan river, from Contin to Dingwall, rising in a series of successive terraces from the river. The road from Inverness to Dingwall, by the head of Loch-Beauly, runs a little to the east of it. Miss Spence visited Brahan castle—or Braan castle as she spells it—in 1816, but declares herself to have been very ill rewarded for her trouble. She expected, it seems, an edifice “possessing somewhat of the magnificence of many of our noble edifices in England,” instead of which, she says, “I beheld a heavy pile of buildings, neither modern nor antique, extremely gloomy, and without the imposing air of gloomy grandeur which often characterizes ancient fabrics.” [‘Letters,’ p. 151.] A more recent lady traveller, Miss Sinclair, writes in a kindlier spirit of the Mackenzie’s house and domain, which she pronounces “worthy of the ancient Seaforth dynasty, being a massy old edifice of handsome exterior, though united to a better-half of very disproportioned age and unsuitable appearance,—the one being venerable with declining years, the other very plain, and exceedingly juvenile.” [‘The Western Circuit,’ p. 310.] There are some interesting portraits here, and a good library.

BRAID HILLS, a range of low cultivated hills, an offset of the Pentland range, lying about 2 miles south of Edinburgh, behind Blackford hill. Their most elevated point is about 700 feet above sea-level. A stratum of petunse runs through them, continued from a stratum of the same mineral in the Pentland-hills. This mineral is similar to the petunse of the Chinese, and has been employed with success in the manufacture of British porcelain. Besides this mineral, petrosilex, terra ponderosa, zeolites, and agates, have been found here in considerable masses. Several fine specimens of molybdena have also been picked up. According to one traditional legend, these hills were the scene of ‘Johnie o’ Breadislee’s’ woeful hunting as related in the old ballad commencing thus:—

Johnie rose up in a May morning,
Called for water to wash his hands, hands,

And he is awa to Braidiebanks,
To ding the dun deer down, down,
To ding the dun deer down.

BRAINSFORD, BRIANSFORD, or BAINSFORD, a village in the parish of Falkirk, Stirlingshire, contiguous to Grahamston, on the banks of the Forth and Clyde canal. Part of the inhabitants are employed at the Carron iron-works, which are connected with this place by a short railway. Pop., in 1831, 791. The name is said to have been derived from a knight, named Brian, who was slain here at the battle of Falkirk.

BRAN (THE), a tributary of the Tay, which issues from the eastern end of Loch Freuchie in the parish of Dull, flows north-east past Amulree and through Strath Bran, or Brand, in the parish of Little Dunkeld, and falls into the Tay a little above Dunkeld bridge, after a course of about 14 miles. “The contrast between the Tay and this river is very strong. The former is deep, broad, and smooth; the latter, turbulent and impetuous, and its bed composed of rocks, or large loose stones. At the village of Inver, which stands between the Tay and the Bran, a mill, a woody island, and a bridge of two arches over the latter river, form a very picturesque landscape. Proceeding up the banks of the Bran, we reach an extensive enclosure, laid out as a garden, with walks that wind through the shrubbery and wood. One of these leads to a small building, where the guide introduces us into a circular vestibule, and suddenly throws open, with a pulley, the door of an elegant inner apartment, the farther end of which is one large bow window. Through this window, a noble cataract, so close, that it wets the glass with its spray, and a stretch of the river, for 200 or 300 yards, tumbling through a rocky bed, in one continued rapid, burst at once on the eye! The window was formerly composed of different coloured panes, but this childish device has been corrected. The Bran continues struggling among rocks, as we quit the enclosure, and a little above it reach the Rumbling bridge. This is a single arch, thrown across the mouth of an hideous chasm, where the rocks almost unite at top, and through which the river, after being precipitated from an height nearly level with the bridge, runs at the depth of 80 or 90 feet. The immense masses of shapeless rock—one of which lies quite across the chasm, and conceals the lower part of the fall—the disorder in which they are grouped, the roaring of the water, and the gloom of the narrow fissure through which it flows, form, all together, a sublime and terrific scene. In returning from the Rumbling bridge we may choose various paths; and indeed a stranger might employ several days, with pleasure, in following the different walks among the hills. Though these are mostly embosomed in wood, we come every five or ten minutes to some interesting spot. We are either led under lofty projecting precipices, or to some commanding eminence, or opening of the trees, which offers the full prospect or partial glimpses of the valley below. Two scenes, in the course of the walk, cannot fail to arrest the particular notice of a stranger. One is in the gully, or ravine, which divides the two summits of Craigie Barns. Here vast fragments of mis-shapen rock, which seem to have been rent from the cliffs, that shoot to an awful height on the hill above, are thrown together, in a rude and stupendous confusion. Spots of heath, brush-wood, and wild plants, are interspersed, to which a few laurels and flowering shrubs have been added, and a clear rivulet forms various waterfalls, as it tinkles through the crevices. At the lower part of this singular mass, an irregular cave, formed by one of

the large blocks lying across several others, has been converted, with a little aid from art, into a grotto or hermitage, one fissure serving for a window, and another for a vent. When here, a stranger should not omit to follow the path that leads along the bottom of the cliffs, which, with the screams of kites and other ravenous birds flying perpetually across them, are wild and terrific. The other scene I recommended to notice, is a lake, at the foot of the same mountain. It is nearly of an oval form, and so closely and completely sheltered by the hill, which rises from its margin on one side, and on the rest, by the thick woods in which it is embosomed, that its surface is almost always smooth as glass. On the bank next the mountain are scattered a few cottages, whose white walls make a fine contrast with the dark green woods. From the opposite bank, the view of this scene is highly picturesque. The still and tranquil lake, the mountain rising over it, covered with wood and grey precipices of rock, the white cottages, and the picture repeated in the water, form a peaceful and pleasing landscape. On the whole, Dunkeld seems a choice spot for the painter. The sublimity of the mountains, the extent of the woods, the noble size of one river, the wild romantic appearance of the other, the large Gothic ruins, and the genial and sheltered beauty of the low grounds, when taken separately, may, perhaps, be equalled, but I have never elsewhere seen them so admirably combined." [Stoddart's Remarks, Vol. II. pp. 191-194.]—Mr. Gilpin speaks of this scene as the most interesting of the kind he ever saw. "The whole scene and its accompaniments," he observes, "are not only grand, but picturesquely beautiful in the highest degree. The composition is perfect, but yet the parts so intricate, so various, and so complicated, that I never found any piece of nature less obvious to imitation: it would cost the readiest pencil a summer's day to bring off a good resemblance."

BRANDANES, a name given by some ancient writers to the natives of Bute. Thus Wyntoun, speaking of the disastrous battle of Falkirk, says:

The Scottis thare slayne war in that stoure.
There Jhon Stewart a-poon fute,
Wyth hym the *Brandanis* thare of Bute,
And the gentil-men of Ryf
Wyth Makduff, thare tynt the lyf.
Cronykil, B. viii. c. 15, v. 44.

This might almost seem a translation of the language of Arnold Blair, chaplain to William Wallace. "Inter quos de numero nobilium valentissimus miles Dominus Johannes Senescallus, cum suis *Brandanis*, et Comes de Fyfe Macduffe, cum ejusdem incolis, penitus sunt extincti." [Relationes A. Blair, p. 2.]—"In this unfortunate battle were slain, on the Scottish side, John Stewart of Bute, with his *Brandans*; for so they name them that are taken up to serve in the wars forth of the Stewart's lands." [Comment. in Relationes, p. 36.] The term has also been extended to the inhabitants of the isle of Arran. "*Brandani*,—ita enim ea ætate incolæ Arain et Boitæ insularum vulgo vocabantur." [Boeth. Hist. Fol. 330.] The term has been understood as denoting the military tenants holding of the Great-steward. Of these 1,200 are said to have followed Sir John Stewart to the battle of Falkirk. Bowyer denominates the *Brandani* de *Botha*, or Brandanes of Bute, "*nativi homines domini sui Roberti Stewart;*" and quotes some monkish Latin rhymes, composed in honour of these faithful adherents:—

Tales *Brandani* rex cœli suscipe sanos;
Ex quibus ornantur, &c.

Still we find nothing as to the reason of the name.

The only probable conjecture we have met with is that of the accurate D. Macpherson:—"The people of Bute, and, I believe, also of Arran, perhaps so called in honour of St. Brendan, who seems to have given his name to the kyle between Arran and Kintyre." This Brandon, or, as the name is more commonly written, *Brendan*, was a companion of St. Columba, who held him in great veneration for his piety. He died A. D. 577. The parish of Kilbrandon, in Lorn, seems to retain his name. It is probable, that the inhabitants of Bute and Arran might be thus denominated, from the idea that they were peculiarly under the guardianship of St. Brendan. Were we assured of the sufficiency of the authority, on the ground of which the learned Camden has asserted that this worthy had his cell in Bute, we could not well hesitate as to the origin of the appellation.

BRANDIN (PASS OF). See AWE.

BRANXHOLM, or BRANKSOME, the ancient seat of the Dukes of Buccleugh, in the parish of Hawick and shire of Roxburgh; about 3 miles from Hawick, on a steep bank north of the Teviot. The only relic of the original castle is part of a square tower which is connected with the present building. The house, as appears by an inscription, was finished in 1574, the old castle having been destroyed by order of Queen Elizabeth, who had been provoked by the Border forays of the then knight of Buccleugh, and by his unshaken attachment to the cause of Queen Mary. This place has often been celebrated in song. Allan Ramsay has dedicated one of his best songs to "The bonny lass of Branksome;" and Sir Walter Scott has consecrated the name forever in his immortal pages.—In the month of September 1839, this place was selected with great taste and judgment by the tenantry of the Duke of Buccleugh for the scene of an entertainment to his Grace. The pavilion which was erected on the occasion was constructed in the form of an ancient baronial hall. It was 101 feet by 70, and was seated to contain upwards of 1,000 persons. It was festooned with scarlet drapery, and the pillars were made to represent veined marble. Three large chandeliers hung from the roof, and small ones were attached to each pillar; there being upwards of 500 lights altogether in the hall. Over the chair was a buck's head with magnificent branching antlers; above it was suspended a star illuminated with variegated lamps; and above these was painted the ancient war cry of the clan, 'Bellenden;' and above this again, in letters of gold, the generous maxim of his Grace's conduct—"Live and Let live."—The dinner caused great excitement throughout the whole of his Grace's extensive estates. Representatives were there from Dumfries-shire, from Liddesdale, from Mid-Lothian—and even the few fishermen of New-haven, who rent his Grace's fishing-grounds, sent a deputation to grace the festival. See HAWICK.

BREADALBANE, a very extensive district, on the north-west side of the county of Perth, being about 33 miles in length, and 31 miles in breadth. It is mountainous and rugged, lying among the Grampians; and is bounded on the north by Lochaber and Athole; on the south by Strathearn and Menteith; and on the west by Lorn, Knapdale, and Lochaber. It gives the title of Earl to a branch of the ancient family of Campbell. Sir John Campbell was created Earl of Caithness in 1677; but, in 1681, that title, on a claim and petition, being allowed by parliament to be vested in George Sinclair, who was the 6th Earl of Caithness, Campbell was instead thereof created Earl of Breadalbane, with precedence according to the former patent. The Earl of Breadalbane is the chief proprietor. His estate

commences 2 miles east of Tay bridge, and extends to Easedale, in Argyshire, a stretch of 100 miles, varying in breadth from 3 to 15 miles, and interrupted only by the property of three or four proprietors who possess one side of a valley or glen, while Breadalbane has the other. In 1793-4, the Earl of Breadalbane raised two fencible regiments amounting together to 2,300 men, of whom 1,600 were obtained from the estate of Breadalbane alone. In the extreme point of this district lies Loch Lyon, whence the Lyon river flows through a sinuous valley, till it falls into the Tay. In the centre of the district lies Loch Tay, an inland lake about 16 miles long, surrounded by splendid natural scenery. See LOCH LYON and LOCH TAY. The high hills—of which Benlawers is the chief—are mostly composed of a grey granite, containing beautiful crystals of schœrl. There is a copper mine at Aithra, and a lead mine was formerly wrought at Tyndrum. A mountain near Loch Dochart contains steatites or rock soap. Peat-moss is found in abundance, and is the only fuel of the country. Towards the beginning of last century, the people of this district were adverse to industry; indeed the danger they were constantly exposed to from the incursions of lawless banditti was a great obstacle to the improvement either of the land or their condition. Breadalbane, and even the whole county of Perth, so late as the year 1745, were obliged to submit either to be plundered, or to pay black mail, as the price of their security. Lord Breadalbane, who had more spirit than submit to these conditions, generally kept up a small army of militia for the defence of the tenants on his estates. The act of parliament, however, which abolished hereditary jurisdictions, and vested the power and punishment in stronger hands, soon put an end to these depredations; and since that period the people have become industrious, and their condition has much improved. Kenmore, Killin, and Clifton, are the principal villages. Breadalbane has good roads and bridges, rendering the communication more easy than could well be supposed in so mountainous a country.—Hugh Cameron, who died in 1817, at the extraordinary age of 112 years, though an individual moving in the humblest rank was one of the greatest benefactors to this district of Perthshire. This singular character was bred a millwright. After acquiring a knowledge of his business, he settled at Shiain of Lawers, where he built the first lint-mill that ever was erected in the Highlands of Scotland. Before his time only the distaff and spindle were used for spinning lint and wool in this part of the country; and he was not only the first who constructed spinning-wheels and jack-reels in Breadalbane, but likewise the first who taught the people there how to use them. The number of lint-mills afterwards erected by him throughout the Highlands cannot be reckoned at less than a hundred; in short almost all the lint-mills in the Highlands of Perthshire, and many in the counties of Inverness, Caithness, and Sutherland, were of his erecting; he also constructed the first barley-mill that was built upon the north side of the Forth, for which he was highly complimented by Maca Ghlasarich,—Campbell, the bard,—in a very popular song, called ‘*Moladh di Eobhan Camashran Muilleir lin*,’ that is, A song in praise of Hugh Cameron, the lint-miller. Though he could only be called a country-wright, he was a man of uncommon genius, of great integrity, and of a very shrewd and independent mind.

BRECHIN,* a parish in the shire of Forfar;

bounded by the parishes of Strickathrow and Menmuir on the north; by Dun on the east; by Farnwell on the south; by Aberlemno on the south-west; and by Caraldstone on the west. It extends about $7\frac{1}{2}$ miles from east to west; and, towards the west side, is nearly as broad from north to south. Its superficial area is 15,840 acres. It rises gradually on the north side of the South Esk, and to a greater height on the south side. The soil is rich and fertile, especially on the north side of the river, and contiguous to it on the west. The high grounds on both sides of the river are rocky. The low grounds are occasionally overflowed by great inundations.—In the northern part of the parish are the remains of a Danish camp.—Breachin castle, the seat of Lord Panmure, is built on the site of the old castle, on a perpendicular rock overhanging the South Esk, half a mile south of the town. It sustained a siege of twenty days in 1303 by the English under Edward I.; and, notwithstanding every effort to compel the besieged to surrender, held out, until the governor, Sir Thomas Maule, was killed by a stone thrown from an engine, when the place was instantly given up. A descendant of this brave man was, in 1616, created Lord Maule of Brechin and Earl of Panmure. These titles were forfeited in 1715, but restored at the coronation of William IV., in the person of the Hon. William Ramsay Maule, created Lord Panmure and Navar.—On the 5th of July, 1572, Sir Adam Gordon of Auchindown, who was of the queen's party, and was besieging the castle of Glenbervie, hearing that a party of the king's friends were in Brechin, came upon them by surprise in the morning, and cut off the whole party. Another battle was fought in this neighbourhood, between the Earls of Crawford and Huntly, on the 18th May, 1452, when the former was defeated, and the latter did James II. very essential service. This battle is called the Battle of Brechin, though the spot on which it was fought is not in the parish, but a little to the north-east of it, on the road leading to the North Water bridge.—Maitland, author of the histories of London and Edinburgh; Dr. Gillies, the historian of Greece; Dr. Tytler, the translator of Callimachus; and his brother James Tytler, who had so large a share in compiling the ‘*Encyclopædia Britannica*’ and other works, were natives of this parish.—Population, including that of the burgh, in 1801, 5,466; in 1831, 6,508, of whom 5,060 were in the burgh. Houses 900. Assessed property, in 1815, £20,062. Real land rental about £14,000.—This parish is in the presbytery of Brechin, and synod of Angus and Mearns. Patron, the Crown. It is a collegiate charge. Stipend of 1st minister £292 5s. 1d., with a glebe of the value of £20; of the 2d minister, £340. Unappropriated teinds £704 11s. 4d. The parish-church, which is in the centre of the burgh, was built in 1808; sittings 1,511. A new church was finished in the City road in June, 1836, at a cost of £1,100; sittings 864. Stipend £160.—An Episcopalian congregation has existed in the town of Brechin ever since Episcopacy was established in Scotland. Chapel built in 1809; repaired in 1830, at an entire expense of £1,150; sittings 300. Stipend £100.—The United Secession church has two congregations within the town. The 1st of these was formed in 1765, in which year their church was built. Sittings 573. Stipend £100. The 2d was established in 1800. Church built in 1802-3; sittings 400. Stipend £90, with manse and garden.—A Relief con-

* Some imagine this name to be derived from the Gaelic *bracchin*, which signifies ‘fern;’ but this seems not very probable, as that plant is by no means abundant in the parish. Others, with more probability, trace its origin to the word

brae, which signifies, the declivity of a hill, and is indeed very descriptive of the local situation of the town of Brechin—whence the name of the parish is derived—on the sloping bank of the South Esk.

gregation was established in the town of Brechin in 1830. Stipend £100.—An Original Seceder congregation was established in 1765. Church built in 1821; cost £700; sittings 400. Stipend £101. By a recent census taken by the session-clerk, it was estimated that in a total population of 6,502, there were 3,944 in connexion with the Establishment, and 2,316 belonging to other denominations, within this parish.—There are nine schools in the parish, besides three or four girls' schools. Parochial school-master's salary £34 4s. 4d., with about £70 fees. Pupils 180. The other schools were attended in 1834 by about 500 children.

BRECHIN, a royal burgh in the above parish, anciently an episcopal see, and once the county-town, is finely situated near the centre of the parish, on the left bank of the Esk, at the distance of 9 miles from where it falls into the sea at Montrose; 12½ miles north-east of Forfar; 25 south-west of Stonehaven, 26½ north-east of Dundee, and 83½ from Edinburgh. Population, in 1801, 5,466; in 1821, 5,906; in 1831, 6,508. The principal street is about a mile in length, extending southward to the bridge over the river. Towards the east and south are the Upper and Lower Tenements of Caldhame, as they are called, which are two streets of considerable length, but independent of the burgh, being without the royalty, but within the parliamentary boundary. Some parts of the main streets are very steep; yet Brechin, on the whole, is a well-built town, and contains a considerable number of good houses. The streets are lighted with gas, and the town is well-supplied with water. An anonymous rhymester tells us:

"The finest view of Brechin may be got
From a soft rising ground beyond the bridge,
Where you may see the county every spot,
And the town rising up a sudden ridge;
The castle, old cathedral, and what not,
And the spire's griffin minish'd to a midge."

It was formerly walled round, and some relics of the gates were in existence till very recently. It has been twice devastated by fire,—by the Danes in 1012, and by the Marquis of Montrose in 1645. A bishopric was founded here, by David I., in 1150, and liberally endowed. The revenues of this see were, in 1561, as follows: Money, £410 5s.; wheat, 11 bolls; bear, 61 ch. 5 bolls; meal, 123 ch. 3 bolls; horse-corn, 1 ch. 2 bolls; salmon, 3 barrels; capons, 11½ doz.; poultry, 16 doz. and 10; geese, 18. Add to this money of teinds £241 6s. 8d. "We have already hinted," says Headrick in his 'Agricultural Report on Forfarshire,' "the strong probability that the places which were occupied, first by the Culdees, and afterwards by bishops and mitred abbots, had previously been consecrated in popular estimation as the chief seats, or, in more modern language, the cathedral churches of Druidism. However this may be, it seems certain that this place was a seat of the Culdees, who had established schools and seminaries of such learning as was in fashion in their time, long before bishops, mitred abbots, or monastic institutions, such as afterwards prevailed, were known in this country. The first origin of the town seems to have been houses for religious persons, contiguous to the cathedral. The revenues of ecclesiastics being accumulated and expended here, and the place being a general resort from religious motives, would induce tradesmen to settle, with a view to supply such articles of manufacture or of commerce as were then in demand."—The Cathedral-church of St. Ninian, supposed to have been founded by David I., was a stately Gothic fabric, 166 feet long and 61 broad, the roof supported by two rows of pillars and arches. The eastern end was sadly devastated at the Reformation; but the building in

fact appears never to have been completed. The present parish-church occupies the west end of the cathedral. At the north-west corner is a square tower, with a handsome spire 128 feet high.—At the south-west corner is one of those round towers, probably of Pictish origin, of which this and another at Abernethy are all the specimens that remain in Scotland. See ABERNETHY. The tower of Brechin is a circular column of great beauty and elegance, 80 feet high, with a kind of spire or roof rising 23 feet more, making the whole height 103 feet, while the diameter over the walls at the base is only 16 feet. The building consists of 60 courses of stone, not very regular, however, some of them measuring 21, and others only 9 inches in thickness. The fabric seems to have sustained very little injury from the lapse of years. Formerly, when the bells of the church—now transferred to the square tower—were fixed in it, there was a series of platforms erected in it, which were ascended by ladders. The door of entrance is about 6½ feet from the ground, 2 feet wide, and 6 feet high; the sides are formed of a block of granite; nearly in the middle of each stands a human figure on a kind of bracket; the lintel is a block of granite cut into a semicircular arch; over the centre stands another figure in a different drapery from the other two. The sole is one block of stone, on each side of it are the figures of two animals with long claws and tail; that on the left hand seemingly in the act of devouring something. The whole entrance is ornamented with a border of diamond figures. A drawing and description of this singular monument is given in the 2d volume of the 'Archæologia.*' Tradition ascribes the erection of this building to the Picts. It is somewhat off the plumb-line, and has been observed to vibrate in high winds. In a lane at the back of the town are some remains of the ancient chapel of Maison Dieu, founded by William de Brechin, in 1256, and confirmed by James III. in 1477. The town-house is a respectable edifice erected in 1789. Brechin possesses a dispensary and a savings bank.—There is an academy in Brechin, the master of which is appointed by the magistrates; he has a salary of £8 17s. 9d. a-year, and a free house. Government has also been in the practice of giving to him the appointment of 'Preceptor of Maison

* Pennant says of these singular buildings: "Some think them Pictish, probably because there is one at Abernethy, the ancient seat of that nation; and others call them Danish, because it was the custom of the Danes to give an alarm in time of danger from high places. But the manner and simplicity of building in early times of both these nations was such as to supersede that notion; besides, there are so many specimens left of their architecture as tend at once to disprove any conjecture of that kind. The Hebrides, Caithness, and Ross-shire, exhibit reliques of their buildings totally different. They could not be designed as bellies, as they are placed near the steeples of churches infinitely more commodious for that end; nor places of alarm, as they are often erected in situations unfit for that purpose. I must therefore fall into the opinion of the late worthy Peter Collinson, that they were *inclusorii*, *et arcti inclusorii ergastula*, the prisons of narrow enclosures; that they were used for the confinement of penitents, some perhaps constrained, others voluntary; Dunchad o' Braoin is said to have retired to such a prison, where he died A. D. 987. The penitents were placed in the upper story; after undergoing their term of probation, they were suffered to descend to the next—in all I have seen there are inner abutments for such floors; after that they took a second step; till at length, the time of purification being fulfilled, they were released and received again into the bosom of the church. Mr. Collinson says, that they were built in the tenth or eleventh century. The religious were in those early times the best architects, and religious architecture the best kind. The pious builders either improved themselves in the art by their pilgrimages, or were foreign monks brought over for the purpose. Ireland being the land of sanctity—*patria sanctorum*—the people of that country might be the original inventors of those towers of mortification. They abound there, and in all probability might be brought into Scotland by some of those holy men who dispersed themselves to all parts of Christendom to reform mankind."—*Second Tour in Scotland*, in Kerr's edn. p. 435.

Dieu,' which office is the only remnant of that ancient establishment; and he draws the revenues attached to it, arising from the rents of certain houses which are worth about £37 a-year. The parish-school within burgh is united with the academy. The master is paid in the same way as other parish-schoolmasters; and the magistrates have a voice in his election, along with the minister and heritors of the parish. His salary from the parish is £34 4s., and he receives £10 from the town, in lieu of a house and garden. In 1826 and 1827 there was a subscription of about £300, for the purpose of providing a third or assistant teacher; and this sum being given to the town, they pay £25 a-year to a third teacher who assists the parish-schoolmaster. The fees are regulated by act of council, passed in 1809, and are very moderate. The average number of scholars at the academy is stated at 220. There are several private teachers in town. It appears that 200 merks yearly were mortified, at a very remote period, to the rector of the grammar-school. This sum is under the management of the magistrates; and the interest of it forms part of the salary paid by them to the master of the grammar-school. The public schools now occupy the lower floor of an elegant Gothic building of two storeys, erected in 1838 at the expense of Lord Panmure. The second floor is devoted to the Mechanics' institution, which was founded in 1835.

Brechin was formerly governed by a provost, 2 bailies, a dean of guild, treasurer, hospital-master, and 7 councillors; and joined with Aberdeen, Arbroath, Montrose, and Bervie, in sending a member to parliament. It is now governed by a provost and 13 councillors, and unites with Arbroath, Bervie, Forfar, and Montrose in returning a member. Small debt courts are held at Brechin on the 3d Tuesday of January, March, May, July, September, and November. The value of the burgh-property was, in 1832, £13,935; the town-house and school might be valued at about £830 more. The revenue arising from these subjects was £440, and from customs, dues, &c., £281; making a total of £721; while the expenditure was £709. The town's debts at the same period amounted to £3,284. In 1838-9, the corporation revenue amounted to £816. In 1793, the income was £268, and the debt £614. The burgh was at one time possessed of about 1768 Scotch acres of land, the greater part of which was feued out prior to 1770. There are six incorporated crafts and a guildry. Total number of burgesses about 300. The parliamentary constituency in 1839 was 232; municipal, 191. The trade of the place is chiefly confined to the manufacture of osnaburghs, sailcloth, and brown linen, which is carried on to considerable extent. The number of looms employed on linen fabrics in 1838 was 870, having increased about one-third since 1824. About a third of the produce is for the French market. Canvas weavers earn from 9s. 6d. to 10s. a-week; but the average of all the looms is at present only 5s. 8d. There are three flax spinning-mills here, extensive bleaching-grounds, a porter brewery, and two distilleries. The country around exports a considerable quantity of grain through the port of Montrose. The British Linen company and Dundee Union bank have branches here. There are weekly markets on Tuesday.—A great fair for all sorts of bestial is held on the 2d Wednesday in June, on Trinity or Tarinty muir, being the name of an extensive tract of waste ground, about a mile to the north of the town, which is reserved for holding this fair. Another fair, towards the end of the same month, is held upon the streets of the town, and there are other three markets held on the muir in the months of April,

August, and September. It has often been proposed to open a communication between Brechin and the sea, by means of a navigable canal. Only about 4 miles of cutting would be necessary down to the head of the basin of Montrose, and the lockage to raise vessels up to the lower part of the town would be very inconsiderable. This would combine the advantages the town derives from being in the heart of a fertile country, with those arising from a sea-port.

BRESSAY, or BRESSA, one of the Shetland isles. It is about $4\frac{1}{2}$ miles in length, and 3 in breadth; and lies to the eastward of the mainland, from which it is separated by Bressay sound. On the south-east side of it lies the small island of Noss; which see. Until the year 1833, the islands of Bressay and Burra, and the district of Quarff, with the lesser islands of Havera or Hevra, House, and Papa, constituted a united parish, the population of which, in 1801, was 1,330; and, in 1839, 1,699. Houses in 1831, 299. Assessed property, in 1815, £15. In May 1833, the district of Quarff—which is on the mainland—with the islands of Burra, House, Papa, and Havera, having a population, it was calculated in 1837, of 856, were erected into a separate parish. See QUARFF. The stipend of Bressay is £153 6s. 8d.; with a glebe of the value of £11. Patron, the Earl of Zetland.—Bressay sound is the rendezvous of the English and Dutch busses employed in the herring-fishery, and of the whale-ships on their passage to Greenland and Davis's straits. The sound has two entries, one from the south and another from the north. "The south passage," says Edmondston, "is the one at which vessels of a large draught of water enter, and go out. Nearly at the middle, where there is a rock, the harbour narrows, but it widens again into a deep bay. On account of this rock, vessels almost always moor between the middle and the south end, where indeed there is ample accommodation for a great number. The north passage is very narrow, and a rapid tide runs through it; nor are there in it, even at spring-tides, more than 18 feet of water at its deepest point. There is no dry harbour at Lerwick, as the water does not fall above 7 or 8 feet; but small sloops unload, during fine weather, at the wharfs. Bressa sound frequently affords shelter to men-of-war, and, at a small expense, might be rendered a most useful station to our North sea cruisers. In 1653 the English fleet, consisting of ninety-four men-of-war, under the orders of Admirals Deans and Monk, lay some days in Bressa sound. And in 1665 another fleet, under the Earl of Sandwich, consisting of ninety-two sail of men-of-war, spent some time in the same harbour." On the outside of the north entry lies a sunk rock called the Unicorn. When the Earl of Bothwell fled to Shetland, four vessels, under the command of Grange and Tullibardine, were despatched in pursuit of him. On the appearance of this squadron, Bothwell's ships, then lying in Bressay sound, immediately got under weigh, and sailed out at the north entry, followed hard by their pursuer, whose flag-vessel, called the Unicorn, struck upon this rock, which has ever since been called the Unicorn.—There is a good harbour at Aithova. Lerwick is supplied with peats from the hills of Bressay, and the whole of Shetland with slates from its excellent quarries. The fishing on the coast of Burra is carried on at a small expense. The fishermen set their lines in the evening, and draw them in the morning. Their winter-fishings have been sometimes known to exceed their summer's. They have upon their coast a fine oyster-scalp, from which they take large rich oysters.—There are several ruins of Pictish castles in this ministry. There

are also several perpendicular stones, about 9 feet high, erected no doubt for the purpose of commemorating some great event, but of which we have no account. One of them, in the island of Bressay, makes an excellent land-mark to ships coming into Bressay sound. There are the remains of several chapels in Bressay.

BRIARACHAN, or **BRERACHAN**, a river in Perthshire, which rises in the parish of Moulin, and, running through Glen Briarachan, forms the **AIRDLE**: which see.

BRIDE-KIRK, or **BRYDEKIRK**, a village and *quoad sacra* parish in the parish of Annan, 4 miles north of that town, lying on the west bank of the Annan, on the road from Langholm to Dumfries, where it crosses the Annan by a bridge of 3 arches. The population is about 400. A church was erected here in 1835, and the district established as a parish in 1836.

BRIDGE-OF-ALLAN. See **ALLAN**.

BRIDGE-OF-EARN. See **EARN**.

BRIDGE-END, a large village in the stewartry of Kirkcudbright, on the right bank of the river Nith, in the parish of Troqueer, so named from its local situation, at the west end of the bridge of Dumfries. It is now better known by the name of **MAXWELLTOWN**: which see.

BRIDGE-END, a village in the parish of Melrose, where formerly was a large bridge over the Tweed, said to have been built by David I. in order to afford a passage to his abbey of Melrose, which he had newly translated from its ancient site, and also to facilitate the journeys of the devout to the four great pilgrimages of Scotland, viz., Scone, Dundee, Paisley, and Melrose. Gordon has engraved what remained of it in his time, in his 64th plate. See **MELROSE**.

BRIDGE-END, a village in the island of Islay, and parish of Killarrow; $8\frac{1}{2}$ miles south-west from Port-Askaig. It is situate at the northern extremity of Loch-in-Daal. There is a good road from Port-Askaig to this place.

BRIDGE-END. See articles **KINNOUL** and **PERTH**.

BRIDGETON, a small village in the parish of Kinghorn, in Fifeshire, immediately adjoining Linktown of Kirkcaldy on the west, and within the parliamentary boundaries of the burgh of Kirkcaldy.

BRIDGETON, a suburb of Glasgow, in the Barony parish, to the north of Rutherglen bridge. See **GLASGOW**.

BRIGHAM. See **BIRGHAM**.

BRIMS NESS, a headland on the north-western coast of Caithness, on which is situated Brims castle.

BROAD BAY, or **LOCH TUA**, a capacious bay on the west side of Lewis.

BROADFORD, a small village and post-station at the head of Broadford bay, in the parish of Strath, Isle of Skye. The mountain Ben-na-Caillach rises in the neighbourhood.

BROADLAW, a mountain in Peebles-shire; in the northern part of the parish of Tweedsmuir, rising 2,741 feet above the level of the sea. It is of easy ascent, and clothed with rich herbage.

BROADSEA, a small fishing-village in the district of Buchan, Aberdeenshire, a little west of the town of Frazerburgh.

BRODICK. See **ARRAN**.

BROLUM (LOCH), an inlet of the sea on the south-east side of Lewis.

BROOM (LOCH), a capacious bay; terminating in a narrow flexuous arm, on the north-western coast of Ross-shire. At its mouth lie Priest and the Summer islands; at its head is situated Martin island; about half-way up the northern shore of the narrow

inlet stands the village of **ULLAPOOL** (which see); and at the head of this inlet is the small village of Loch Broom. The country from Loch Broom northwards is destitute of trees; and, in most places, presents only barren moors and naked rocks.

BROOM (LITTLE LOCH), another and a smaller arm of the sea, immediately south of the above loch, running in a parallel direction inland, and separated from it by a narrow ridge.

BRORA (THE), a river of Sutherlandshire, which, with its branches of Strathbeg, and Skinsdale, springs from the south-east sides of Bencli-brick, Benvadon, and Benarmin, in the interior of the county, and takes a course in a south-easterly oblique direction, until lost in the Murray frith at Brora. The Brora and its branches are narrow and rapid. It runs through a level plain, and forms three lakes; the upper lake about a mile long and half-a-mile broad, the others of less extent; the water seems deep and black, from the dark shade reflected on it from the mountains, and the rock of Carrol, a bold precipice upon the southern border of the lake, at least 600 feet high. The scenery at Gordon-bush is very romantic and beautiful. From Killend the river runs rather rapid over a pebbly bed for 3 miles through Strathsteven to Brora, whence it is rocky to the sea. In this river the pearl-mussel is found, and pearls collected. There is a good bed of coal in the strath of the Brora. The village of Brora, at the mouth of the river, has a good harbour, and exports salt and coals. It is 4 miles from Golspie.

BROTHER ISLE, a small island of Shetland, off the south coast of Yell.

BROTHER (LOCH), a small lake in Renfrewshire, in the parish of Mearns, about 3 miles in circumference.

BROTHOCK (THE), a small river in the county of Angus. See **ARBROATH**.

BROUGH, a fishing-village in Caithness, near Dunnet-head, where there is a safe harbour, thought to be one of the best fishing-stations on the coast of Caithness.

BROUGH-HEAD, or **BURGH-HEAD**, a promontory on the coast of the Moray frith, in the parish of Duffus, so named from what was supposed to be a Danish fort or burgh, at one time distinguishable on the headland, but which is now generally thought to be of Roman* origin, and seems to correspond with the Alata Castra of Ptolemy. It consists of a round hill about 50 feet in height; guarded by high perpendicular sides to the north and west, and rocks washed by the sea; while on the south, a trench was cut into which the sea flowed.—It gives its name to a sea-port village lying on its south-west side, 8 miles north-west of Elgin, and 18 east of Cromarty. Population, in 1831, 749. This village is laid out on a regular plan, and the houses are substantially built with freestone, and slated. It is the principal herring-fishing station in Moray. There is also a good salmon-fishery here. The harbour consists of a basin about 200 yards long and 50 yards wide, the entrance fronting westwards, or towards Cromarty. This basin or artificial harbour was completed in the summer of 1809, and has been found very useful, especially as a station for passage-vessels which keep up a communication with the Little Ferry in Sutherland, distant about nine leagues. There is a chapel-of-ease here in connexion with the Establishment, and a Secession church. See **DUFFUS**.

* Within its limits, a Roman bath was discovered; and, on the 11th of May, 1809, Mr. Anthony Carlisle exhibited to the Society of Antiquaries of London, a drawing of a bull, taken from a stone found here, obviously of Roman sculpture. An engraving of it is given in the 16th volume of 'Archæologia,' p. 365. General Roy has preserved a plan and sections of this station, Plate 33.

BROUGHTON, GLENHOLM, AND KILBUCHO, a united parish in the shire of Peebles; bounded by Kirkurd on the north; on the north-east and east by Stobo; on the south-east and south by Drummelzier; and on the west and north-west by Culter and Skirling. It is about 9½ miles in length, and 3½ in breadth. Of about 20,000 acres, being the superficial area of this parish, nearly three-fourths are under pasture. The principal mountains are Culterfell, Carden, and Chapelgill. The first of these has an altitude of 2,430 feet. The Tweed divides the Glenholm division of this parish from Drummelzier; and the Biggar water skirts the Broughton division of the parish on the south. The village of Broughton has a population of about 100. It is 5 miles distant from Biggar, and forms a stage betwixt Edinburgh and Moffat. A fair is held here on the 3d of October. The population of the three united districts was as follows:

	1801.	1831.	Houses.	Assessed pro- perty.
Broughton,	214	299	49	£1,599
Glenholm,	242	259	48	£2,083
Kilbucho,	171	182	See article KILBUCHO.	
	627	740		

This parish is in the presbytery of Biggar, and synod of Lothian and Tweeddale. Patron, Renny of Danevale. Stipend, £231 ls. 10d., with a glebe of the annual value of £64 las. 9d. Unappropriated teinds, £249 11s. 3d. The church, built in 1804, is in Kilbucho; sittings 500.—There are three parish-schools. The salary of the schoolmaster at Broughton is £32, with about £20 fees. Pupils 50. The schoolmaster at Glenholm has a salary of £32, with about £12 fees. Pupils 30. The schoolmaster at Kilbucho has the same salary, with about £15 fees. Pupils 40. See articles GLENHOLM and KILBUCHO.

BROUGHTY FERRY, a handsome village, chiefly in the parish of Monifieth in Forfarshire, on the northern shore of the frith of Tay, 4 miles east of Dundee, and directly opposite Ferry-port-on-Craig in Fifeshire, with which it has hourly communication, the frith being little more than a mile broad here. In 1834, portions of the adjacent parishes of Monifieth and Dundee, comprising this village, were united into a *quoad sacra* parish, with a population which was estimated, in 1837, at 1,998, and which, during two or three months in summer, is augmented by 400 or 500 visitors. A church was built in 1826; sittings 720. Stipend £140. The United Secession church have also a congregation here, which was established in 1837. This place is now much resorted to as a sea-bathing residence during summer by the citizens of Dundee and Perth. That part of the village which lies in the parish of Dundee, is often called the West ferry; the other and more considerable portion—between which and the former there is indeed a vacant space of ground—bears the name of East ferry, as well as that of Broughty ferry. North and west of the sandy plain over which most of the houses are spread, the ground rises with some abruptness. To the east and south-east, are uneven links, stretching towards Monifieth. South-east of the village, a point of land stretches southward into the frith, which it contracts in width so as to render the ferry across to Fife shorter than any other between Errol and the sea. On this point, named Broughty Craig, yet stand considerable remains of a fortress, not undistinguished in history. The castle—of which, however, not much is left—is a very interesting object, and a point towards which the promenaders of Broughty often direct their steps. The first transaction of

importance connected with it was its occupation by the English, in 1547, after the battle of Pinkie. The party of English by whom Broughty castle was garrisoned, had scarcely secured themselves within the fortress, when they were blockaded by Arran; who sat down before it on the 1st of October 1547, but on the 1st of the following January, hastily raised the siege. Immediately after his departure, the English fortified the neighbouring hill of Balgillo, and ravaged great part of the county of Angus. Archibald, 5th earl of Argyle, hearing of this, hastily collected a party of his clansmen, and led them against the English at Broughty, where he sustained a defeat, as not long after did a numerous body of French and German troops. On the 20th of Feb. 1550, both the castle and fort were taken by Des Thermes, who brought against the English in this quarter an army composed of Scots, Germans, and French. The works at both places were now dismantled; and although, at least on the castle, repairs were, perhaps more than once, bestowed, yet we find in the annals of subsequent times little of consequence recorded concerning them.

BROXBURN, a village in Linlithgowshire, in the parish of Uphall, near the banks of the Union canal, on a rivulet of the same name. It is on the middle road between Edinburgh and Glasgow, 12 miles from the former, and 30 from the latter. A cattle fair is held here on the Friday after the Falkirk September tryst.

BROXBURN (THE), a rivulet in Haddingtonshire, which rises in the parish of Spott, and falls into the sea at Broxmouth about ¼ mile east of Dunbar. In the low ground to the westward of Broxmouth, Cromwell defeated the Scottish army under Leslie. The duke of Roxburgh has a seat here.

BRUAR (THE), a small stream in Athole, celebrated for the romantic beauty of its cascades. It joins the Garry, a short distance below Pitgowan. Dr. Garnett, who visited the falls in 1798, thus describes them:—"From Dalnacardoch we proceeded to Blair-Athol, distant 10½ miles. The first half of our ride was by no means interesting, being among lumpy hills covered with heath; but when we arrived within about 5 miles of Blair, the country began to assume more the appearance of cultivation, and we discerned the extensive grounds of the Duke of Athole covered with wood. About ¾ miles before we reached Blair we passed the small village Bruar, which takes its name from a turbulent stream, called Bruar-water, that rolls along its rocky bed under a bridge. We went up the left bank of this river, whose channel is the most rugged that can be conceived; the rocks which form it have been worn into the most grotesque shapes by the fury of the water. A foot-path has lately been made by the Duke of Athole, which conducts the stranger in safety along the side of the chasm, where he has an opportunity of seeing, in a very short time, several very fine cascades; one over which a bridge is thrown, forms a very picturesque object. This is called the lower fall of Bruar. The water here rushes under the bridge, and falls in a full broad sheet over the rocky steep, and descends impetuously through a natural arch, into a dark black pool, as if to take breath before it resumes its course and rushes down to the Garry. Proceeding up the same side of the river, along the footpath, we came in sight of another rustic bridge, and a noble cascade, consisting of three falls or breaks, one immediately above another; but the lowest is equal in height to both the others taken together. Each of the upper breaks is about 50 feet, the lowest 100: so that the whole cascade is not less than 200 feet. This is called the upper fall of Bruar. Crossing the bridge

over this tremendous cataract, with trembling steps, we walked down the other bank of the river, to a point from whence we enjoyed the view of this fine fall to great advantage. The shelving rocks on each side of the bridge, with the water precipitating itself from rock to rock, and at last shooting headlong, filling with its spray the deep chasm, form a scene truly sublime; the nakedness of the hills indeed takes away somewhat from its picturesque beauty. The poet Burns, when he visited these falls, wrote a beautiful poetical petition from Bruar-water to the Duke of Athole, praying him to ornament its banks with wood and shade; the noble proprietor has been pleased to grant the prayer of the petitioner, and has lately planted the banks of this river: the plantation is yet very young, but in a few years will have a very good effect. No person from the southern parts of the country, coming to Blair, should omit seeing the falls of Bruar. It must be confessed that we saw them to great advantage, on account of the rain which had fallen during the two or three preceding days; the grandeur of the scene may perhaps be diminished after a long fit of dry weather. Such a drought does not however often occur in this part of the country."—Miss Spence, who visited the spot in 1816, says, "By the assistance of art, veiling itself in the modest garb of nature, beauty is now happily blended with that savage greatness which was the former attribute of the place. A succession of falls, interrupted by windings of the waters, projections of the rocks, and recesses where they retire back, leaving fair openings for the sun and spots of productive soil, give such constant and fanciful variety to the scene as neither language nor painting is adequate to convey to the imagination. The fair creation of the poet's fancy has, in the meantime, been realized by the noble proprietor. The shades which he imagined have actually sprung up, and the melody of his ideal birds resound from their branches. Flowers, which seem scattered by the lavish hand of native spring, adorn every crevice in the rock; and the vegetable soil on the brink of this turbulent stream affords room for a variety of trees and shrubs most judiciously adapted to the scenery, and which seem to partake of its wild and unequal character. Nothing can be more sudden and luxuriant than the growth of the plants scattered along the abrupt banks of the Bruar. Fed by a constant though scarce visible shower from the ascending mist of the successive cascades,—sheltered from every wind by the rocky walls that surround them,—and enjoying by the reflection of the sun from their flinty bed a degree of heat scarce inferior to that of a hot-house,—the tenderest plants are here safe and flourishing. The little pastoral huts, in the form of highland shealings, which are here and there erected as resting-places in this enchanting wilderness, are quite in character with the chaste simplicity of the other decorations. The whole scene so much resembles, 'the negligence of Nature, wide and wild,' that in a more genial climate it might be supposed to be merely the result of abundant moisture and sunshine."

BRUCEHAVEN, a small village in the parish of Dunfermline, Fifeshire, adjoining the village of Limekilns.

BRUIACH (Loch), a lake in Inverness-shire, in the parish of Kiltarlity; about 2 miles long, and 1 broad. It abounds with trout and char; and there is a small island in the middle of it.

BRUNSWARK, BURNWARK, or BIRRENSWARK, a hill in Dumfries-shire, in the north-east corner of the parish of Hodum, rising to 740 feet above sea-level, and famous for two rectangular encampments—still very entire—the formation of which is ascribed

to the Romans. From this hill the great military roads diverge in every direction, through the southern parts of the kingdom. It is 8 miles north-west of Annan, and commands a fine prospect. On the north the view is confined, and the country barren; to the west, all the valley is washed by the Annan, and lies open from Moffat to the Solway frith; on the east, you penetrate far into the wilds of Northumberland, about the heads of south Tyne; all the low country of Cumberland lies full before you, gradually rising from the frith, till the scene terminates in the romantic falls of Keswyck, among which the lofty Skiddaw, towering pre-eminent, forces itself on your attention. The lowering Criffel, on the Scottish side, shuts up the prospect of the less level country about Dumfries. The frith of Solway adorns the middle of the plain, and greatly brightens the prospect; appearing near Langholm as a moderate river, it gradually spreads out to your view; in some places sending its waters far into the country, these seem detached like lakes; proceeding on, it widens along the plain, and expands to a sea.

BRUNTISLAND. See **BURNTISLAND**.

BUCCLEUCH, in the shire of Selkirk, an ancient parish now comprehended in the parish of Etterick. It is 13 miles west by south of Hawick. Buccleuch gives the title of Duke to the ancient and illustrious family of Scott. In 1663, the Duke of Monmouth, marrying Anne, Countess of Buccleuch, and assuming her name, was created Duke of Buccleuch, and the countess was at the same time created Duchess of Buccleuch.

BUCHAN, a district of Aberdeenshire, extending along the coast, from the Ythan nearly to the Deveron, a distance of above 40 miles. In length from north to south it is about 27 miles, and from west to east about 28; superficial area 450 square miles. Population, in 1831, 43,306. Inhabited houses 8,937. It is divided into 21 parishes, of which 13 are in the district of Buchan Proper, sometimes called Deer; and 8 are in what is frequently called the Ellon district. The principal elevation is Mormond hill, altitude 810 feet. The prevailing rock is granite. Peterhead and Fraserburgh are the principal towns within the district. Buchan once formed a county of itself, and an earldom which was vested in the chief of the Cummins, until their forfeiture in 1309.—The reader will find a good account of this district, and its agricultural capabilities, in the 3d vol. of the Prize Essays of the Highland Society.

BUCHANAN,* a parish in the western extremity of Stirlingshire; bounded on the north by Perthshire and Loch Katrine; on the west by Perthshire and the parish of Drymen; on the south by Dumbartonshire, from which it is separated by the Endrick river; and along the whole of its western side by Loch Lomond. The parish of Buchanan has been reckoned 20 miles long, and 6 in extreme breadth. One head-branch of the Forth has its source in the upper end of this parish, in a small burn which runs down Glenguoi into Glendow, and by the addition of several burns in the latter glen, is considerably increased. At the lower end of the glen—which be-

* Buchanan was formerly called *Incheailloch*, the name of an island in Lochlomond, on which the parish-church stood till the year 1621, when a considerable part of the parish of Luss—at that time extending on this side of the loch—was annexed to the parish of Incheailloch. Some years after this annexation, the walls of the church in Incheailloch failing, and the people likewise finding it by no means convenient, especially in stormy weather, to be crossing over to the island every Sabbath, worship was performed in a church near the house of Buchanan, which was originally a chapel-of-ease to the parish of Luss. From this chapel—which was called the church or chapel of Buchanan—the whole united parish came by degrees to be called the parish of Buchanan. *Incheailloch* signifies 'the Island of the Old Women'; and was so called because in former times there was a nunnery upon it.

gins at the root of Benlomond, and extends 5 or 6 miles east—it is called the water of Dow, and below that the water of Duchray. See **ABERFOYLE**. The Endrick, which is the boundary of this parish on the south, flows in beautiful curves through the fertile haughs of Buchanan and Kilmarnock, and falls into the lower part of Loch Lomond. This river, in the winter-season, when the loch is full, occasionally covers a part of the lower grounds on both sides, in the parishes of Buchanan and Kilmarnock. It is stated in the Old Statistical Account, that during harvest, in 1782, the haughs of Endrick were covered with water, and immediately after, there came snow and intense frost, so that in some places people walked on the ice above the standing corn! The Grampian hills run through this parish, and divide the lower from the higher grounds. There is one pretty high hill in the lower part of the parish called the Conic hill; but the highest elevation is Benlomond, in the upper end or the parish. See article **BENLOMOND**. Though Loch Lomond cannot be said to belong to any one parish, yet as the parish of Buchanan extends 16 or 17 miles up the side of the loch, and several of the islands make a part of it, the greater share of the loch may be assigned to the parish of Buchanan. See article **LOCH LOMOND**.—In the lower end of the parish, on a small tributary of the Endrick, is the house of Buchanan. This place, for many centuries, belonged to Buchanan of that ilk, and was the seat of that ancient family, but it has been for some time in the possession of the ducal family of Montrose. At Inversnaid, in the upper part of the parish, there was a fort built near midway between Loch Lomond and Loch Katrine; the design of which was to guard the pass between the two lochs. See **INVERNSNAID**.—In Craigrostan there are several caves known by the names of the most remarkable persons who used to frequent them. See article **BENLOMOND**. Population, in 1801, 748; in 1831, 787. Houses, in 1831, 131. Assessed property, in 1815, £7,447.—This parish is in the presbytery of Dumbarton, and synod of Glasgow and Ayr. Patron, the Duke of Montrose. Stipend £156 12s. 8d., with a glebe of the value of £10. The church is situated about 3 miles from the south-eastern, and 18 from the north-western boundary of the parish. It was repaired in 1828; sittings 300. The minister officiates twice a-year at Rowderennan, and once a-year at Inversnaid. In 1837, of 124 families in this parish, 115 belonged to the Establishment.—The parochial schoolmaster has a salary of £30. There is another school in the parish, the master of which is allowed £15 per annum by the Society for propagating Christian knowledge.

BUCHANDY. See **FOWLIS (WESTER)**.

BUCHAN-NESS. See **PETERHEAD**.

BUCHLYVIE, a *quoad sacra* parish, disjoined from the parishes of Kippen and Drymen, in Stirlingshire, by authority of the General Assembly, in 1836. Population of the portion disjoined from Kippen, 630, of whom 400 was in the village of Buchlyvie; of the portion disjoined from Drymen, 400; total 1,030. Church built in 1836; cost £600; is vested in the ministers of Kippen and Drymen, and in certain heritors and managers; sittings 352.—A United Secession place of worship was built in the village of Buchlyvie in 1751; sittings 554. Stipend £100, with a manse, garden, and glebe.—The village of Buchlyvie is 5 miles west of the village of Kippen, on the road from Stirling to Dumbarton. It is a burgh of barony, and has five fairs in the year: viz. on the 2d Tuesday in February; 2d Tuesday in March, O. S.; 26th June; last Tuesday in July,

O. S.; and 18th November. The greater part of the inhabitants are dissenters.

BUCK OF CABRACH. See **AUCHINDOIR**.

BUCKHAVEN, a fishing-village in the parish of Wemyss, in Fife; 2 miles south-west of Leven, and 5½ north-east of Dysart. It consists of a groupe of cottages, apparently scattered at random over a steep ascent from the shore, and thickly interspersed with boats, oars, nets, anchors, dungsteeds, and the other accompaniments of a fishing-village. With the exception of a few weavers, the inhabitants are all engaged in catching or retailing fish, and are proverbially industrious and expert at their calling. They have not a few peculiar traits of character and appearance, and it is said that they are descended from the crew of a Brabant vessel which was wrecked on this coast in the reign of Philip II. Defoe describes Buckhaven as "inhabited by fishermen, who are employed wholly in catching fresh fish every day in the firth, and carrying them to Leith and Edinburgh markets. The buildings are but a miserable row of cottages; yet there is scarce a poor man in it; but they are in general so very clownish, that to be of the college of Buckhaven, is become a proverb. Here we saw the shore of the sea covered with shrimps like a thin snow; and as you rode among them, they would rise like a kind of dust, and hop like grasshoppers, being scared by the footing of the horse. The fishermen of this town have a great many boats of all sizes, which lie upon the beach unrigged, ready to be fitted out every year for the herring-season, in which they have a very great share." The value of the boats and nets, presently belonging to this industrious colony, is supposed to exceed £20,000.—A United Secession congregation has been in existence here for half-a-century. The church accommodates 600, and is usually well-attended by the fishermen, excepting about seven weeks in July and August during the herring-fishery. Salary £110, with a manse and garden. A new pier and harbour has recently been formed here under the auspices of the Board of Fisheries.

BUCKIE, a considerable fishing-village, and a *quoad sacra* parish, recently disjoined from Rathven in Banffshire. It is situated at the mouth of Buckie burn; 4 miles east of Speymouth, and 5 west by south of Cullen. The population of the district, as ascertained by a census taken by the minister in 1837, was 2,342, of whom 1,926 resided in the village of Buckie. A church was built here in 1835, at a cost of £800; sittings 800. Minister's stipend £80. There is a mineral spring here.

BUDDO ROCK, a dangerous rock off the coast of Fife, in St. Andrew's bay, about 2 miles from land.

BUITTLE, a parish on the Solway frith, in the stewartry of Kirkcudbright; bounded on the north by Crossmichael; on the east by the river Urr, which separates it from Kirkgunzeon and Colvend; on the south by the Solway frith; and on the west by Kelton. Its extent, in length, may be about 8 miles, and 3 in breadth. The surface is unequal, but the hills are not of great height; they are covered with verdure, and most of them exhibit marks of tillage to the very top. The soil is fertile. The coast abounds with fish of all kinds. Rock crystal, talc, and spar, are frequently met with in this district; and iron-ore is plentiful.—Buittle-castle, on the west side of the Urr, is a considerable ruin; the ditches and vaults which still remain show it to have been a place of great extent and strength. When Galloway was an independent state, this was a considerable fortress; and it seems to have been the favourite residence of John Baliol. After be-

longing to the Baliols, the Cummings, and the Douglasses, it appears to have become the property of the Lennoxes of Caillie. It now belongs to Murray of Broughton, the representative of the Caillie family. Grose has preserved a view of it. There is a vitrified fort on the top of one of the hills. Population, in 1801, 863; in 1831, 1,000. Houses, in 1831, 164. Assessed property, in 1815, £8,554.—This parish is in the presbytery of Kirkcudbright and synod of Galloway. Patron, the Crown. Stipend £231 6s. 2d., with a glebe of the value of £20. Unappropriated teinds £312 2s. 5d.—There are two parochial schools, the masters of which have conjointly a salary of £51 6s. 7d., with about £25 fees. There is also a private school.

BULAY (THE GREATER and the LESSER), two islets about 2 miles off the southern coast of Skye.

BULLERS OF BUCHAN, a singular group of rocks and sea-caves, in the parish of Cruden, Aberdeenshire. "Upon these rocks—those of Dun Buy—there was nothing that could long detain attention," says Dr. Johnson, "and we soon turned our eyes to the Buller, or Bouilloir of Buchan, which no man can see with indifference who has either sense of danger or delight in rarity. It is a rock perpendicularly tubulated, united on one side with a high shore, and on the other rising steep to a great height above the main sea. The top is open, from which may be seen a dark gulf of water, which flows into the cavity through a breach made in the lower part of the enclosing rock. It has the appearance of a vast well bordered with a wall. The edge of the Buller is not wide, and, to those that walk round, appears very narrow. He that ventures to look downwards, sees that if his foot should slip, he must fall from his dreadful elevation upon stones on one side, or into the water on the other. We, however, went round, and were glad when the circuit was completed. When we came down to the sea, we saw some boats and rowers, and resolved to explore the Buller at the bottom. We entered the arch which the water had made, and found ourselves in a place which—though we could not think ourselves in danger—we could scarcely survey without some recoil of the mind. The basin in which we floated was nearly circular, perhaps 30 yards in diameter. We were enclosed by a natural wall rising steep on every side to a height which produced the idea of insurmountable confinement. The interception of all lateral light caused a dismal gloom: round us was a perpendicular rock,—above us the distant sky,—and below an unknown profundity of water. If I had any malice against a walking spirit, instead of laying him in the Red sea, I would condemn him to reside in the Buller of Buchan. But terror without danger is only one of the sports of fancy,—a voluntary agitation of the mind that is permitted no longer than it pleases. We were soon at leisure to examine the place with minute inspection, and found many cavities, which, as the watermen told us, went backward to a depth which they had never explored. Their extent we had not time to try; they are said to serve different purposes. Ladies come hither sometimes in the summer with collations, and smugglers make them store-houses for clandestine merchandise. It is hardly to be doubted but the pirates of ancient times often used them as magazines of arms or repositories of plunder. To the little vessels used by the Northern rowers, the Buller may have served as a shelter from storms, and perhaps as a retreat from enemies; the entrance might have been stopped, or guarded with little difficulty, and though the vessels that were stationed within would have been battered with stones showered on them from above, yet the crews would have lain safe in the caverns." In the

neighbourhood is a small fishing-village; and on an adjacent crag stands Slaine's castle.

BUNAWA, a village in the district of Lorn, and shire of Argyll; 13 miles from Dalmally, and 113 west by north of Edinburgh. It is situate in the parish of Muckairn, at the confluence of the river Awe with Loch Etive. Here the Lorn furnace company, established in 1753, have erected their extensive iron manufactories; there is also a considerable salmon-fishing; and a quay built on a secure and well-sheltered bay. See **ARDCHATTAN**.

BUNKLE, anciently **BONKILE** or **BONKLE**, a parish in Berwickshire, comprehending the ancient parish of Preston; bounded on the north by Abbey St. Bathan's and Coldingham parishes; on the east by Coldingham and Chirnside; on the south by Edrom and Dunse parishes; and on the west by Dunse, a detached portion of Longformacus parish, and Abbey St. Bathan's. Measured from near East Brockholes to the paper-mill below Chirnside mill, it is about $5\frac{1}{2}$ miles from north-west to south-east; and its greatest admeasurement from east to west is about $5\frac{1}{2}$ miles. Its general outline is triangular. Bunkle Edge, a southern ridge of the Lammermoor range, runs along the north-western side of the triangle, and rises to the height of about 700 feet in some points. From the south-eastern side of this ridge a number of small streams descend to Chirnside burn, a tributary of the Whitadder, which latter stream skirts the parish on the south-west and south. Copper has been wrought within this parish, but, as we understand, only with very partial success. The superficial area of the parish is 8,900 Scots acres, of which about 6,600 are arable. The rental is about £8,000. The value of assessed property, in 1815, was £7,722. Population, in 1801, 674; in 1831, 748. Houses 132.—This parish is in the presbytery of Dunse, and synod of Merse and Teviotdale. Patron, Lord Douglas. Stipend, £279 15s. 1d. with glebe of the value of £20. Schoolmaster's salary, £34 4s. 4d. with about £26 fees. Pupils, 50.

BURDIEHOUSE, a village in the parish of Liberton, about $3\frac{1}{2}$ miles south of Edinburgh, on the road to Peebles. Its name is said to be a corruption of Bourdeaux. This place is celebrated for its lime-kilns, which manufacture about 15,000 bolls of lime annually. There is an immense deposit of limestone rock here, which has attracted much attention from geologists, on account of the fossil-remains contained in it. In 1833, a quantity of the bones, teeth, scales, and apparently part of the muscles of what was conjectured to have been a huge species of reptile were discovered here: the scales retaining their lustre, and the bones their laminated and porous appearance. These formed the subject of several communications to the Royal society of Edinburgh, by Dr. Hibbert, who, in his earlier papers, described them as the remains of reptiles. In 1834, at the meeting of the British association in Edinburgh, these fossils—which by this time had excited great interest amongst naturalists—were shown to M. Agassiz. This gentleman immediately doubted their reptilian character, and advanced the opinion that they belonged to fishes,—to that family of fishes of Ganoid order which he had denominated Sauroid, from their numerous affinities to the Saurian reptiles, and which have as their living type or representative the *Lepidosteus*. But of the truth or fallacy of this opinion no positive evidence could be adduced, for the scales and the teeth had never yet been found at Burdiehouse in connexion. A few days afterwards, M. Agassiz, in company with Professor Buckland, visited the Leeds museum, where he found some fine fossils presenting the same scales and the same teeth as those of Burdiehouse,

conjoined in the same individual. It is therefore no longer a conjecture that they might belong to the same animal. And in these self-same specimens we have the hyoid and branchiostic apparatus of bones (a series of bones connected with the gills, an indubitable character of fishes); it is therefore no longer a conjecture that the Burdiehouse fossils were the remains of fishes and not of reptiles. Thus was dissipated the illusion founded on the Burdiehouse fossils that Saurian reptiles existed in the carboniferous era. To this animal M. Agassiz assigned the name of *Megalichthys*.

BURGH-HEAD. See **BROUGH HEAD**.

BURGH-HEAD, or **BURROWHEAD**, a promontory in Wigtonshire, in the parish of Whithorn, terminating the peninsula between Luce bay and Wigton bay.

BURLEIGH CASTLE, an ancient edifice in the parish of Orwel, county of Kinross; about half a mile south-east of Millnathort. It is now incorporated with the out-buildings of a farm-stead; but a great part of the exterior walls is still entire. It seems to have originally formed a square, surrounded by a wall and ditch. The western side of this square, consisting of two towers, and an intervening curtain and gateway, still remain. The tower on the north-west angle is a large square building; that on the south-west is of a circular form, and seems to be the most modern structure of the whole. Within these few weeks it appeared to us to be still inhabited, from its glazed windows and entire roof. The castle was at one period surrounded with fine old trees, of which a few still linger in the immediate vicinity of the ruins, but exhibit the ravages of decay and age. At the distance of about 20 feet from the west wall of the north-western tower, there stood till within these few years, a large hollow ash, in which Robert, only son of the 4th Lord Burleigh, found shelter and concealment, in 1707, while an outlaw for the murder of the schoolmaster of Aberdeen. After the death of his father, this hot-headed youth engaged in the rebellion of 1715, and the title was in consequence attainted. Historical notices concerning Burleigh are very scanty. Sibbald tells us that the laird of Burghly was heritable crowner of Fife under Queen Mary; and that James Balfour of Burghly was clerk-register in 1565-6-7, and president of the session in 1567. Sir James Balfour informs us that James II., 'Anno nono regni sui,' gave the castle and barony of Burleigh, 'in liberam baroniam Johanni de Balfour de Balfourgarvie, militi,' and that James VI. honoured Sir Michael Balfour of Burleigh, son to Sir James Balfour of Montquhanny, clerk-register, and to Margaret Balfour, heiress of Burleigh, by letters patent, bearing date at Royston, in England, 7th August, 1606, with the title of Lord Balfour of Burleigh, he being then his ambassador to the Duke of Tuscany and the Duke of Lorraine. In 1644, Lord Burleigh seems to have been president of the Scottish parliament and a general of the forces. He was defeated by the Marquis of Montrose, near Aberdeen, on September 12th, 1644. He was, also, one of the committee of parliament attached to the army under General Baillie, which lost the bloody field of Kilsyth, through the dissensions of its leaders. This army was encamped near Burleigh, some time previous to that disastrous day. [See Wishart's Wars of Montrose, and Principal Baillie's interesting Letters and Journals of Affairs, between 1637 and 1662.]—About eighty years ago the castle and lands of Burleigh were purchased by General Irwin, and afterwards sold to Thomas Graham, Esq. of Kinross and Burleigh.—About a mile north of Lochleven, in this neighbourhood, are sev-

eral remarkable hollows, which, from their shape, have been denominated The Ships of Burleigh. One of these is distinguished by the designation of Lady Burleigh's jointure, and tradition thus relates its story. A Lord Burleigh, it seems, had obtained in marriage a lady less enamoured than provident. Her applications for an ample settlement becoming somewhat teasing, his lordship, in rather an angry mood, desired her to attend him early next day, when he would take her to a field not half-a-mile distant from the castle, and there settle upon her all the lands within her view. Avarice is often credulous, and it was so in this instance. The lady walked forth with elated expectations; but when, from a level road, descending a gentle slope, she was told to look round her, she beheld, with disappointed emotion, only a verdant circle of about 50 yards in diameter, finely horizoned with a lofty cope of azure. Additional interest is given to this place by its wholly consisting of arable and, and by the romantic appearance of the mountains, as they sink in the distance, while you descend the sloping sides of the dell.

BURNESSE, a parish in the island of Sanday, which has been from time immemorial united *quoad sacra* with Cross; which see. Houses in 1831, 76. Population, in 1811, 423; in 1835, 432. A curious tumulus was discovered here in 1824; a full description and drawing of it is given in the 1st vol. of 'The Edinburgh New Philosophical Journal.' See also **SANDAK**.

BURNESWARK. See **BRUNSWARK**.

BURNTISLAND, a parish in the Kirkcaldy district of Fife-shire, about 3 miles in length, and nearly the same in breadth; bounded on the north by Aberdeen and Kinghorn; on the east by Kinghorn; on the south by the frith of Forth; and on the west by Aberdeen. A plain extends inward from the sea about half-a-mile, when the ground becomes hilly and mountainous, and the soil of inferior quality and value. There are about 3 miles of coast. To the westward of the town, the shore is rocky; to the eastward it is sandy as far as Pettycur. In these sands are excellent beds of cockles and other shell-fish. The hills on the north of the town exhibit marks of volcanic fire. Dunearn is very like an extinguished volcano, the crater of which has been converted into a small lake. This hill rises to the height of 695 feet above sea-level. On the north side of these hills are basaltic columns; and on their tops are cairns and tumuli of great size. The country around Burntisland is chiefly composed of floetz rocks and alluvial strata. There is a quarry of excellent freestone; and the whole parish abounds in limestone of the very best quality, in which curious fossils occur resembling those described in our article **BURDIEHOUSE**. Starlyburn, on the western boundary, produces beautiful specimens of stalactites, and incrustations of moss and wood. Population of the parish and town, in 1801, 1,530; in 1831, 2,356, of whom 1,873 resided in the burgh, and 190 in the village of Kirkcaldy. Assessed property, in 1815, £6,660. Real rental about £5,000. Houses in 1831, 269.—This parish, formerly a vicarage, is in the presbytery of Kirkcaldy, and synod of Fife. Patron, the Crown. Stipend £185 17s. 4d., with a glebe of the value of £50. Unappropriated tithes, £70 19s. 9d. The parish-church is within the burgh of Burntisland. It was built in 1592; sittings 900. The original parish-church was at the village of Kirkcaldy.—There is also a United Secession church within the burgh. Stipend £100, with a manse.—The parochial is also the burgh school. Salary £26. There are certain lands in the parish mortified by a Mr. Watson, for behoof of the schoolmaster and three poor widows, out of which

the three widows receive 8 bolls of barley, and 2 bolls of oatmeal, with £4 12s. 6d. each; and 10 bolls of barley and £3 10s. per annum is paid for teaching the children of the poor. In 1834, the average attendance at the burgh-school was 140; and there were at the same time six private schools within the parish. In ancient times this parish was called Wester Kinghorn.

BURNTISLAND, anciently known as Wester Kinghorn, a royal burgh and sea-port in the above parish; 2½ miles west of Kinghorn; 3 east of Aberdeen, and 5½ north of Leith, being nearly opposite to the latter harbour. There is regular steam-communication with Newhaven. The town is finely situated on a peninsula of the frith of Forth, surrounded on the north by hills in the form of an amphitheatre, which afford an excellent shelter to the harbour. It consists of two streets running parallel to each other, and terminated by the harbour on the west, besides some lanes. On the east are the links, and some handsome cottages for sea-bathers. The principal street is broad and spacious, and contains a number of respectable buildings. It was fortified during the reign of Charles I., and part of the wall and east port still remain. It underwent a siege by Cromwell, but held out until it procured honourable terms of capitulation, one of which—it is said—was to pave the street and repair the harbour, which he faithfully performed. At the west end of the town, surrounded by plantations, and overlooking the harbour, is Rossend castle, built by the Duries of that ilk in the 15th century. Burntisland was constituted a royal burgh by James VI., and was governed by a provost, 3 bailies, a dean-of-guild, a treasurer, and 21 councillors. This number is much too large for the population. The municipal constituency was in fact only 21 in 1839, being just equal to the number of councillors under the new municipal act. The revenue, in 1811, was about £300; in 1838–9, £364 6s. 6d. The property of the burgh consists of the three hills, the links, about an acre of arable land, the school-house, town-house, and flesh-market, with some houses and fens. The debt, in 1834, was £4,150. The amount of cess annually raised varies from £11 to £12 on land, and £4 to £5 on trade. It joins with Kinghorn, Kirkcaldy, and Dysart, in sending a member to parliament. The parliamentary constituency, in 1839, was 53. The town has been well-supplied with excellent water since 1803. The harbour—anciently called *Portus Gratiae*—is the best on the frith of Forth, being large and capacious, easily entered, and of great depth, and affording safety let the wind blow from any quarter. The piers—one of which is said to have been erected by Cromwell—are still capable of much improvement, by carrying them farther out to where a depth of 27 feet water could be obtained at spring-tides, and vessels of easy draught could enter at any time of tide. Connected with the harbour is a large dry dock, having 16½ feet water at spring-tides, wherein a Russian ship of 1,000 tons was repaired in 1809, and also a frigate of 32 guns. Government granted £11,000 towards the improvement of the port, under the direction of trustees, appointed by act of parliament, and for improving the ferry betwixt this and Leith. On the eastern pier is a fixed light, which is seen 7 miles in clear weather. The harbour is in N. lat. 56° 4', W. long. 3° 14'. In 1833, there were 8 vessels of a joint tonnage of 900 tons belonging to this port. In 1856, there were 7 vessels, whose joint tonnage was only 114 tons. Before the Union, the commerce of Burntisland was considerable; and, in the 17th century, it carried on a considerable traffic with Holland. Tucker, however, gives a description of the place and its vicinity,

which leads to the conclusion that the extent of the trade formerly belonging to it has, in the common accounts, been overrated, by attributing to it alone what belonged to all the little ports on the coast of Fifeshire. "The trade of these ports inwards," says he, "is from Norway, the East country, and sometimes from France with wines; and outwards with coals and salt, at all times very small and worth little; for although this be the bounds of one of the best and richest countyes of Scotland, yet the goodness and riches of the country arising more from the goodness and fertility of soyle and lands than from any traffique, hath made it the residence and seate of many of the gentry of that nation, who have wholly driven out all but theyr tenants and peasants, even to the shoare side." At that period, Kinghorn, Kirkcaldy, Dysart, Wemyss, Leven, Ely, St. Monance, Pittenweem, Anstruther, Crail, St. Andrew's, and South Ferry were all counted as members of the head-port of Burntisland; and the tonnage of the whole was estimated at 1,291 tons, divided over 46 vessels. After the Union, the trade of Burntisland fell off entirely, and little business of any kind was done for a long period. Subsequently, the trade of the town again increased, but for some years back it may be considered nearly stationary. It at present is confined merely to the curing of herrings and their exportation; to the trade connected with an extensive distillery in the neighbourhood; and to the building and repairing of ships. Lately a whale-fishing company has been established with two ships: there are at present no other ships employed in foreign trade, and only a very few in the coasting trade. Fewer vessels than formerly resort to the harbour as a place of shelter, probably owing to the improvement of the other harbours on the coast, and to the custom of ships running up to the Hope—a roadstead higher up the frith—in preference to taking a harbour during a storm, or while otherwise detained, to save the harbour-dues. This place was the principal rendezvous for the herring-fishery until the northern fishing-stations were opened; but since that, coopeage and curing of herrings is the chief branch of business here, and most of the boats employed belong to other ports of the frith. In the New Statistical Account it is stated, that, for some years, there have been annually cured here from 16,000 to 18,000 barrels of herrings. There is a very extensive distillery at Grange. A fair is held on the 10th of July.—The town of Bertiland or Bryntiland belonged anciently to the abbey of Dunfermline, and was exchanged by James V., in 1541, for some lands in the neighbourhood, that he might erect it into a royal burgh. It was proclaimed as such in 1568; but a charter of erection was granted in 1541. In 1587 the different grants and charters in favour of the burgh were ratified, with consent of parliament. A charter *de novo damus* was granted by Charles I. in 1632, and ratified in 1633. The General Assembly met at Burntisland in 1601, when James VI. attended and retook the solemn oath and covenant. In 1715, the Earl of Mar's forces occupied this town. In 1746, a large body of Hessians were encamped here. Burntisland gave the title—now extinct—of Baron to the family of Wemyss.

BURRA, a small island of Shetland, about 3 miles in circumference, fertile, and affording excellent pasture. Two other small islands are near to it, Papa and Haverø. The population of the three may be estimated at about 400. See articles, BRESSAY and QUARFF.

BURRAY, one of the Orkney islands, about 4 miles long, and 1 broad. It is the property of the Earl of Zetland, and is separated from South Ronaldsay by Water sound, a ferry of a mile in breadth.

This island is composed of sandstone, sandstone-flag, and schistose clay. The inhabitants, in 1801, were 271; in 1831, 357; whose chief employment is fishing. See **SOUTH RONALDSAY**.

BURROWMUIR. See **BOROUGH-MOOR**.

BUTE,* an island in the frith of Clyde, separated from Cowal, in Argyllshire, by a very narrow channel called the **KYLES of BUTE**: see that article. It extends in length about 16 miles, and is from 3 to 5 in breadth. The general direction is from south-east to north-west. The northern parts of the island are rocky and barren, but the southern extremity is fertile, well-cultivated, and enclosed. The coast is rocky, and indented with bays, several of which form safe harbours. The bays of Rothesay, Kames, and Kilchattan, indent its eastern shore: those of Stravannan, Scalpsie, Ettrick, and Kilmichael, its western. Stravannan bay, and that of Kilchattan, run so far in as to make the south end of Bute an oval peninsula, in the centre of which rises Mount Blair, a hill whence a noble prospect may be enjoyed. The intervening space is a low sandy plain, and there is another low plain between Kames and Ettrick bay.—Near the middle of the island are several small sheets of water, viz. Lochs Fad, Ascog or Askaig, Quien, and Auchenteery. Of these, **LOCH FAD** is the most extensive and the most interesting. See that article. Pike, perch, and trout, are found in most of them. Mount Stewart, the fine seat of the Marquess of Bute, is situated on the coast, about 2 miles south-east of Rothesay. See article **MOUNT STEWART**.—Port Bannatyne, on the bay of Kames, 3 miles north-east of Rothesay, is a pleasant village, much frequented as a bathing-place. See article **PORT BANNATYNE**. A little to the north of it is Kames' castle, long a seat of the Bannatynes. At Wester Kames stands another castle, formerly belonging to the Spences. At Askaig, north of Mount Stewart, was also a castle, destroyed about the year 1646 by the Marquess of Argyll. The climate, though damp, is mild and temperate, and the soil is favourable for agriculture. Freestone of a reddish colour abounds in the island, and limestone is met with in every part of it. Coal has been discovered near Ascog; but it has not been thought worth while to work it.—This island, conjoined with the islands of Arran, the Greater and Lesser Cumbrae, and Inchmarnock, forms a county under the name of the shire of Bute. It has one royal burgh, Rothesay, which is also the chief town of the shire: see **ROTHESAY**. The island of Bute contains two parishes. See **KINGARTH** and **ROTHESAY**. There are several remains of antiquity on the island. See articles **ST. BLANE'S CHAPEL**, and **DUNGYLE**. Bute gives the title of Marquess to a branch of the family of Stuart, who is proprietor of the greater part of the island. Population of the whole island, in 1791, 6,470; in 1801, 6,106; in 1831, 6,830. Houses, in 1831, 889. Assessed property, in 1815, £13,066.—The western

isles of Scotland, Man, Shetland, and Orkney, appear to have been frequently infested by armies of Scandinavians, from the year 738 till about the year 875, when those islands fell under the dominion of Norway, to which they in general remained subject, with little interruption, for many ages. Bute and its neighbouring islands formed a subject of frequent dispute between the Scots and the Norwegians, if not during the whole time that the power of the latter subsisted in these countries, yet for a long period before the Ebudæ or Western isles were ceded to the Crown of Scotland. By their situation, so near the heart of the Scottish kingdom, descents could be made from these insular stations by the one power upon the territories of the other. They were, in this view, more particularly important to the Norwegians; as they could, from hence, more easily annoy the Scots, than from any other place where they had a regular established footing. Accordingly, it appears from monuments whereof vestiges can still be traced out, that great solicitude was shown to defend the island of Bute. The castle of Rothesay was a stronghold of such antiquity that neither record nor tradition seem even to offer a conjecture as to the time of its original erection. Malcolm II. made a grant of Bute sometime before the year 1093, to Walter, the first Lord-high-steward, who gave it to a younger son, with whom and his posterity it remained about a century, when it was re-annexed to the patrimony of the Lord-high-steward, by the intermarriage of Alexander Steward with Jean, daughter and heiress of James, Lord of Bute. In 1228, Husbec, or Ospac, the feudatory king of the Isles, laid siege to the castle of Rothesay; but, being bravely repulsed, was killed in the course of the enterprise, and his people were obliged to retire after suffering a considerable diminution of their number. Olave, his successor, procured from the Norwegian monarch a fleet and army, wherewith he proceeded against Dungad, who had set himself up as a competitor in the Isles, and having seized upon his person at Kiarara, near the sound of Mull, he from thence came to Bute with 80 ships, and laid siege to Rothesay castle. The garrison defended it bravely; and, by various methods, destroyed about 300 of the besiegers; but the force of the Norwegians and islanders was so great, that, after persevering some time, they took the castle by sapping, and found in it a rich booty. How long after this Bute remained subject to the Norwegians is not precisely known. When Haco of Norway invaded Scotland in 1263, this and the other islands in the frith of Clyde were in the hands of the Scots. These isles he reduced; but being defeated at Largs, the whole Western isles were soon afterwards ceded to Alexander III., king of Scotland. In the fatal battle fought at Falkirk betwixt the English and Scots, in 1298, the men of Buteshire—known at that time by the name of the Lord-high-steward's Brandanes—served under Sir John Stewart, where they were almost wholly cut off with their valiant leader. Edward of England having obtained possession of Bute, kept it until 1312; when Robert Bruce took the castle of Rothesay, and recovered the island. Thither Edward Baliol came in person, anno 1334, took the castle, and strengthened its fortifications. It was, however, soon retaken by the faithful Brandanes of the Lord-high-steward, and this was one of those occurrences which first gave a favourable turn to the affairs of King Robert Bruce. Next year the king of England took an opportunity of repaying the Brandanes with usury, the ills they had done him. With a view to the extending and securing his conquests in Scotland, he fitted out a fleet from Ireland, consisting of 56 ships. The most signa

* As the island itself is in Gaelic called *Oilean a' Mhoide*, or 'the Island where the Court of justice sits,' and the town of Rothesay *Baile Mhoide*,—one might suppose that this designation indicated the origin of the name *Bute*; the word *Mhoide* being pronounced, in this connection, as if it were *Voide*. But it is evident that it must have had a similar name long before we can reasonably suppose it to have been the seat of justice. For the ancient geographer Ptolemy calls it *Bæra*, which, if the Greek termination be thrown away, nearly assumes the form of the Gaelic name—which it still bears—*Boid*. The same term, when not used as a name, signifies a vow or oath. Whether, in this primary sense, it referred to any religious circumstance connected with the history of this island, perhaps in the Druidical period, we have no data whence we can form so much as a conjecture. By Norwegian writers it is written *Bot*. The learned Camden had been misinformed as to the meaning of the name *Bute*, or *Boot*, which, he says, had been denominated "from the sacred cell which Brendan erected there, a cell being thus named in Scottish." But the Gaelic *both* properly signifies a hut or cottage.—See article **ROTHESAY**.

service, however, which they did, was to lay waste Bute and Arran. On the death of David Bruce, in February, 1371, he was succeeded by his nephew, Robert, the Lord-high-steward, afterwards King Robert II., from whom the noble family of Bute is lineally descended. Robert III., son to the former, fixed his residence in the castle of Rothesay during the latter part of his life, and died there on the 29th of March, 1406. James V. had also resolved to make this place a residence, and took some steps towards putting the castle into proper order for his accommodation; but the troubles of his reign, and his death, which happened at an early period of his days, prevented this place from again becoming a royal residence. The island suffered much afterwards from factions which disturbed the public peace, or from the inroads of neighbouring clans. Cromwell in his time garrisoned the castle of Rothesay; and to this island the unfortunate Archibald, Earl of Argyle, came with his army in May, 1685, when he had engaged in concert with the Duke of Monmouth to invade the kingdom. The Earl brought with him from Holland three small ships laden with arms for 5,000 men, 500 barrels of gunpowder, a number of cannon, and other implements of war. He ordered his ships and military stores to an old castle which stood on the small rock of Eilan-greg, near the mouth of Loch Riddan, opposite to the north end of Bute. There he deposited his spare arms and ammunition under the protection of his ships and the garrison of 180 men. At this time the inhabitants of Bute were plundered of almost their whole moveable property. After Argyle had been about ten days in Bute, having received notice that a great body of forces, with three ships of war and some frigates, were coming to attack him, he hastily retreated. The naval armament arrived, and proceeded on the 15th of June to Loch Riddan, where the Earl's frigates immediately struck to them, and the castle also surrendered. After removing the arms and stores into the king's ships, the naval com-

mander caused the castle to be blown up. The Earl's army, after leaving Bute, thought only how to get to their respective homes. Argyle himself was taken prisoner at Inchinnan on the 17th of June, and being conveyed to Edinburgh, was there beheaded. Soon after, a brother of Argyle's surprised the castle, and burnt it.

BUTESHIRE, a county composed of the islands of **ARRAN**, **BUTE**, the **CUMBRAES**, and **INCHMARNOCK**. See these articles separately described. There are five parishes and one royal burgh within this shire. Population, in 1801, 11,791; in 1831, 14,200. Assessed property, in 1815, £22,541. Houses, in 1831, 2,134. Above 200 males, upwards of 20 years of age, were employed as weavers in the county of Bute in 1831. There were also 590 males employed in retail trade or in handicraft.—The number of parochial schools, in 1834, was 10; of schools not parochial, 30: total number of scholars, 2,354. The county returns one member to parliament. Parliamentary constituency, in 1839, 380. The sheriff and small-debt courts are held at Rothesay.

BUTT OF LEWIS, the northern extremity of The Lewis. It is in N. lat. 58° 35'.

BUTTERDEAN, a village in the shire of Berwick, and parish of Oldhamstocks; 6 miles west by north of Press.

BUTTERSTONE LOCH, a small lake in the parish of Cluny, in Perthshire, adjoining to the loch of the Lows, on the road from Dunkeld to Blairgowrie, 3 miles north-east of Dunkeld.

BYREBURN-FOOT. See **CANOVY**.

BYRES, in the shire and parish of Haddington, a barony which belonged for many centuries to the noble family of Lindsay, ancestors of the present Earl of Crawford, from whom it was acquired about the beginning of the 17th century by the Earl of Haddington. It is now the property of the Earl or Hopetoun. It is 3 miles north-north-west of Haddington. The Earl of Haddington is baron of Binning and Byres.

THE CHURCHYARD OF BALQUHIDDER.

C

CAAF (THE), an Ayrshire stream, a tributary of the Garnock. It rises on the boundaries of Kilbride and Largs parishes, and flows south-east through a moorish and featureless district of country, until within half-a-mile of its junction with the Garnock, a mile below Dalry, where it rushes through a deep and rocky dell, in a series of rapids, and finally forms a fine cascade above 20 feet in height.

CABRACH, a parish partly in the district of Alford, Aberdeenshire, and partly in the shire of Banff; bounded by the parishes of Mortlach and Glass on the north; by Rhynie and Kearn, and Kildrummy on the east; by Glenbucket on the south; and by Inveravan and Mortlach on the west. The Blackwater, a head-stream of the Deveron, rises on the southern skirts of that division of the parish which is in Banffshire, and flows north-east till its junction with the Deveron at Dalriach, while the Deveron itself rises in the southern skirts of the Aberdeenshire portion, to the west of the Buck of Cabrach, [see **AUCHINDOIR**,] and flows north-east through Strathdeveron. The ridge which separates the vales of these two streams is about 2 miles in breadth. The whole surface of the parish is mountainous, and the general character that of a bleak pastoral district. The extreme length of the parish is 12 miles; the extreme breadth 8; and the superficies may amount to 80 square miles. Population, in 1801, 684; in 1831, 978. Houses in 1831, 190. Assessed property, £600.—This parish, formerly a vicarage, is in the presbytery of Alford, and synod of Aberdeen. Patron, the Duke of Richmond. Stipend £158 6s. 7d., with a glebe of the value of £10. Church built in 1786; sittings 230.—There is a United Secession congregation at Altoun. Church built in 1796; sittings 210. It is occupied alternately by a congregation of Independents.—School-master's salary, £29 18s. 10d. Scholars average 40. There are also three or four private schools taught within the parish during the winter-months.

CADDER, a parish in Lanarkshire; bounded on the north by Campsie and Kirkintilloch parishes; on the east by New Monkland; on the south by Old Monkland and the Barony parish of Glasgow; and on the west by New Kilpatrick and Baldernock. It is 13 miles in length from east to west; and between 3 and 4 miles in breadth. The counties of Lanark, Dumbarton, and Stirling, all meet at its northern point. Gartingqueen hill, in this parish, is said to be at an equal distance from Hamilton, Falkirk, and Stirling. The river Kelvin, which rises on the east of Kilsyth, runs 6 miles along the northern boundary of the parish. It used to overflow its banks, in time of rain, and do considerable damage; but the proprietors on the north side have confined it by a great earthen mound. The Forth and Clyde canal runs through the parish for 5 miles in a line nearly parallel with the Kelvin. An extensive loch, which occupied the centre of this parish at the beginning of last century, was drained by a mine or drift driven a full mile in length under a hill, and, in many places, 90 feet below the surface, whereby 120 acres of fine arable ground were gained. There is another lake, partly in this parish, but chiefly in New Monkland, called the Bishop's loch, a mile in length, and one-fourth of a mile in breadth, which is at present occupied as a reservoir by the Forth and

Clyde canal company. Robroystone loch touches on the western skirts of the parish.—The post-road, from Edinburgh to Glasgow, passes 4 miles through this parish, and crosses the Forth and Clyde canal about a mile east of Cadder kirk. The Kirkintilloch railway runs for about 5 miles through the eastern part of the parish; and the Garnkirk and Glasgow railway runs for an equal distance along the southern side. There are a number of freestone quarries in the parish: the stone takes a fine polish. There are also vast quantities of whin rock, and an inexhaustible rock of limestone, which has been wrought to a considerable extent at Garnkirk, Bedlay, and Robroystone. Some coal is wrought, but to little advantage. There are extensive beds of fire-clay. The valuation of the whole parish is £6,270 Scotch; and the yearly rent, towards the end of last century, was about £6,000 sterling. It is now estimated at about £14,000. The value of assessed property, in 1815, was £14,439. The whole face of the district is generally level; yet there is considerable variety of soils: such as, light sandy till, a stiff till, deep black earth, and moss. When the first Statistical Account of this parish was written, it was stated, that "Flax is the most advantageous crop here: 200 acres are sown annually; and this year (1792), one farmer has sown 30 acres with flax seed: 32 stones of good scutched flax have been raised from one acre, and sold at a guinea the stone,—a price perhaps equal to the value of the land on which it grew. Riga flax seed, and the finest kinds of Dutch seed are mostly sown here; though some good crops of flax have been raised from Boston flax seed. On rich moist soil, the finest flax is raised from American seed." The cultivation of flax has declined here, as generally elsewhere: the number of acres devoted to it does not exceed 80. Oats are the prevailing crop. Population, in 1801, 2,120; in 1831, 3,048. Houses 416, viz. **AUCHENAIRN** and **AUCHINLOCH** [see these articles]; Bishop's bridge, with a population of 175; Cadder, with a population of 64; **CHRYSTON** [which see]; Mudiesburn, with a population of 143; **MOLLINBURN** [which see]. Muirhead, with a population of about 40.—This parish is in the presbytery of Glasgow, and synod of Glasgow and Ayr. Patrons, the heritors and kirk-session. The whole parish, excepting the barony of Cadder, and the Midtown of Bedlay, formerly belonged to the subdeanery of Glasgow. The Bishop's land was called the Baldermonoch ward, or Monk's town; and comprehended ten townships. From this ecclesiastical tenure are derived the names of several places in the parish, such as: the Bishop's bridge, the Bishop's moss, and the Bishop's loch. After the Reformation, the temporalities of the subdeanery of Glasgow—which consisted of the parishes of Cadder and Monkland—came into the possession of the noble families of Hamilton and Kilmarnock, and were by them transferred to the college of Glasgow, for a considerable sum of money, about the year 1656. The parish of Cadder, as well as that of Monkland, availing itself of the act 1690, by paying 600 merks Scotch to the college of Glasgow, obtained a renunciation of the right of patronage by that body; in consequence of which, the heritors and elders of the parish became the electors of the minister. The stipend is £280 8s. 5d.; value of glebe £17 10s

The church was built in 1829-30. Cost £2,000; sittings 740. There is another church at Chryston. There are three parochial schools, at Cadder, Chryston, and Auchenairston; besides schools at Auchinloch, Bishop's bridge, Crofthead, and Mollinburn. From 250 to 300 children attended those schools in 1834. The Roman wall, or Graham's dike, is almost the only piece of antiquity in this parish. It runs 4 miles through it, and may still be traced in Cadder wood.—At Robroystone, in this parish, Sir William Wallace was betrayed and apprehended, by Sir John Menteith. After he was overpowered, and before his hands were bound, it is said, he threw his sword into Robroystone loch. The circumstances of his apprehension are thus related by Mr. Carrick in his *Life of the hero*:—"On the night of the 5th of August, 1305, Sir William, and his faithful friend, Kerlé, accompanied by the youth before-mentioned, had betaken themselves to their lonely retreat at Robroyston; to which place their steps had been watched by a spy, who, as soon as he had observed them enter, returned to his employers. At the dead hour of midnight, while the two friends lay fast asleep, the youth, whose turn it was to watch, cautiously removed the bugle from the neck of Wallace, and conveyed it, along with his arms, through an aperture in the wall; then slowly opening the door, two men-at-arms silently entered, and, seizing upon Kerlé, hurried him from the apartment, and instantly put him to death. Wallace, awakened by the noise, started to his feet, and, missing his weapons, became sensible of his danger, but grasping a large piece of oak, which had been used for a seat, he struck two of his assailants dead on the spot, and drove the rest headlong before him. Seeing the fury to which he was roused, and the difficulty they would have in taking him alive, Menteith now advanced to the aperture, and represented to him the folly of resistance, as the English, he said, having heard of his place of resort, and of the plans he had in contemplation, were collected in too large a force to be withstood; that if he would accompany him a prisoner to Dumbarton, he would undertake for the safety of his person;—that all the English wished, was to secure the peace of the country, and to be free from his molestation;—adding, that if he consented to go with him, he should live in his own house in the castle, and he, Menteith, alone should be his keeper;—that even now, he would willingly sacrifice his life in his defence; but that his attendants were too few, and too ill-appointed, to have any chance of success in contending with the English. He concluded by assuring Wallace, that he had followed in order to use his influence with his enemies in his behalf, and that they had listened to him on condition of an immediate surrender; but that if he did not instantly comply, the house would soon be in flames about him. These, and other arguments were urged with all the seeming sincerity of friendship; and our patriot, confiding in early recollections, and the private understanding that subsisted between them, allowed himself to be conducted to Dumbarton castle. On the morrow, however, no Menteith appeared to exert his influence, in order to prevent the unfortunate hero from being carried from the fortress; and strongly fettered, and guarded by a powerful escort, under the command of Robert de Clifford and Aymer de Valence, he was hurried to the South, by the line of road least exposed to the chance of a rescue."

CAERKETAN CRAIG, one of the Pentland hills, in the parish of Colinton, Edinburghshire; elevated 1,450 feet above the level of the sea.

CAERLANRIG, a district in the upper part of the parish of Cavers, Roxburghshire, in which there has been a preaching-station in connexion with the par-

ish-church for a couple of centuries. The present chapel was built about the end of last century. The minister has a salary of £52, raised by subscription.

CAERLAVEROCK, a parish in the county of Dumfries; bounded on the north by Dumfries parish; on the east by Lochar water, which divides it from Ruthwell; and on the south and west by the Solway frith and the river Nith. It is a kind of peninsula, about 6 miles in length, and from half-a-mile to 2 miles in breadth, formed by the Nith, Lochar water, and the Solway frith. The middle and western part is hilly; but towards the east the surface becomes low and level. The superficial area is 4,640 Scotch acres, of which nearly the whole is arable. The value of assessed property, in 1815, was £5,580. The high land is generally light, dry, and fertile; interspersed however with spots of wet, moorish, and shallow soil. The whole of the parish lies on a bed of red freestone, which is quarried in many places. The greater part of the arable ground is enclosed and well-cultivated. There are two small harbours in this parish, viz., **KELTON** and **GLENCAPLE**: which see. The Nith and Lochar here abound with fish, especially excellent salmon. Lochar moss, which borders with this parish, supplies the inhabitants with fuel. Near the mouth of the Nith are to be traced the vestiges of a moated triangular castle, supposed by Camden to be the *Carbantorigum* of Ptolemy; several moats and Roman encampments may also be traced; but the most interesting relic of antiquity, Caerlaverock castle, belongs to Scottish history, and will be described at the close of our general observations on the parish. Dr. John Hutton, first physician to King William and Queen Mary, was a native of this parish. Population, in 1801, 1,014; in 1831, 1,271. Houses, in 1831, 245.—This parish is in the presbytery and synod of Dumfries. Patron, the Marquess of Queensberry. Stipend £177 5s. 9d., with a glebe of the value of £32. Church built in 1781; sittings 470. There are three schools in the parish, attended by about 200 scholars. Parish school-master's salary £35, with £40 from Dr. Hutton's bequest of £900, which appears to have been well-managed, and now produces nearly £400 per annum.

CAERLAVEROCK CASTLE lies near the shores of the Solway, about 9 miles below Dumfries, at the southern extremity of the parish. "This venerable ruin," says the writer of a very interesting notice of the castle in 'The Edinburgh Literary Gazette for 1829,' "as to its external aspect, presents much the same appearance that it did in the days of Pennant and Grose, both of whom have given a description of it. It is triangular, or shield-like, and surrounded by a wet ditch. At two of the corners had been two round towers; that on the western angle is called *Murdoch's*; the other, or eastern, is demolished. The entrance into the castle-yard lies through a gateway in the northernmost angle, machicolated, and flanked by two circular towers. Over the arch of the gate is the crest of the Maxwells, with the date of the last repairs, and the motto, 'I bid ye fair.' The residence of the family was on the east side, which measures 123 feet. It is elegantly built, and has three stories; the doors and window-cases are handsomely adorned with sculpture. On the pediments of the lower story are the coats-of-arms and initials of the Maxwells, with different figures and devices; on the windows of the second story are representations of legendary tales; and over the third are fables from Ovid's *Metamorphoses*. The opposite side of the court-yard is plain. In the front is a handsome staircase leading to the great hall, which is 90 feet by 26. The surrounding

scenery is highly picturesque, and described with tolerable accuracy in Guy Mannering. To the south lies the Solway, with its waves still 'crisping and sparkling to the moon-beams;' beyond them tower the lofty mountains of Cumberland in the vicinity of the lakes. To the east is the desolate expanse of Lochar moss; and to the west the embouchure of the Nith, forming a magnificent bay, skirted on the opposite side with the woods of Arbigland, New Abbey, and Kirkconnell. On the back ground rises Criffel, the termination of a chain of irregular hills that enclose the vale of Nith like an amphitheatre. The ships, with their white sails, passing and repassing in the frith,—the monastic ruin of New Abbey, with its Waterloo monument,—and the numerous villages 'peeping from among the trees,'—form altogether a landscape, that for beauty and variety can hardly be surpassed. To the stranger we would recommend, in visiting this ancient castle, on leaving Dumfries, to take the road along the east bank of the Nith, as both the shortest and the best, passing the village of Kelton, Conheath-house, and Glencaple; and on his return to take the eastern road by Bankend."—That the Romans possessed a station here is certain, from the remains of a camp on the hill of Wardlaw, a little to the west of the castle, but who were its masters from the 6th to the 11th century, history makes no mention. Sir Robert Douglas informs us, that Sir John Macuswell acquired the barony of Caerlaverock about the year 1220; but from a genealogy of the house of Maxwell in our possession—says the writer already quoted—probably the same cited by Grose, this castle appears to have been the principal seat of that family as early as the time of Malcolm Canmore. Herbert, the eleventh Lord Maxwell, followed the banner of Bruce, and fell in the immortal field of Bannockburn. It was in his time that the castle of Caerlaverock was besieged and taken by Edward I. in person; of which a singularly curious and minute description has been preserved in a poem written in Norman-French, and composed expressly on the occasion. It is not certain how long Caerlaverock castle continued in the hands of the English after its surrender to Edward I. in July, 1300; most probably 12 or 14 years. Maitland, in his History of Scotland, says it was retaken by the Scots the following year, but was soon repossessed by the English after a very long siege. In 1355 this fortress, with the castle of Dalswinton, was taken from the English by Roger Kirkpatrick of Closeburn, who remained faithful amidst the general defection of the nobles, and preserved the whole territory of Nithsdale in allegiance to the Scottish crown. The historian John Major says he levelled it with the ground. This, however, could not be literally true, as it continued to be inhabited by Kirkpatrick till his death in 1357. In that year the halls of Caerlaverock witnessed one of the most atrocious deeds to be found in the annals of feudal strife,—the murder of the brave Kirkpatrick by Sir James Lindsay. These two barons were the sons of the murderers of the Red Cumming, whom Bruce had poniarded for his treachery in the church of the Dominican friars at Dumfries, in 1304. No known cause of quarrel existed between them, except that Kirkpatrick, as tradition records, had married a beautiful lady to whom Lindsay was greatly attached. Lindsay expiated his crime with his life, being afterwards executed by order of David II. The castle and baronial lands of Caerlaverock again reverted to the Maxwells, and we find but little notice of it for more than two centuries. In 1425, Murdoch, duke of Albany, who was apprehended for high treason, was sent to Caerlaverock, where he remained confined in the tower, called Murdoch's

tower, until he was taken back to Stirling, where he was beheaded. The Lord Maxwell was arrested with him, but liberated, and was one of the conservators of the truce with England in 1438. Robert, the next Lord Maxwell, is mentioned as having 'completed the bartyzan of Caerlaverock,' and made some other repairs. He was slain near Bannockburn with King James III. in 1488. Several of these doughty barons made a conspicuous figure in the raids and truces of the borders. Robert, the fifth of that name, 'made a road into England, and spoiled all Cumberland, in 1526.' This celebrated statesman and warrior was taken prisoner, with his two brothers, at the rout of the Scots at Solway moss, in November, 1542, and sent to London, but ransomed next year for 1,000 merks. King James made his residence at that time in Caerlaverock castle, and was so mortified at this defeat, that he retired to Falkland, where he died of grief in about a month after. Henry VIII. was anxious to get the castles of Caerlaverock, Lochmaben, and Langholm, at this time into his possession, and instructions were given to his envoy, Lord Wharton, to examine them, 'and knowe their strength and scituations;' and in case either of them was tenable, he was 'earnestly to travaile with Robert Maxwell for the delyverie of the same into his majestie's hands, if with money and reward, or other large offers, the same may be obtayned.' Sir John Maxwell, son to the preceding, is the person known by the title of Lord Herries; he was a staunch adherent of Queen Mary, fled with her from Langside, and is the reputed author of a history of her reign. He was forfeited in parliament, but sentence was deferred; and though he did not die till 1594, his son John was served heir to his estates in 1569, and next year the castle of Caerlaverock again experienced the miseries of war. The Earl of Sussex, who was sent by Queen Elizabeth into Scotland with an army of 15,000 men to support King James VI. after the death of the Regent Murray, 'took and cast down the castles of Caerlaverock, Hoddam, Dumfries, Tinwald, Cowhill, and sundry other gentlemen's houses, dependens on the house of Maxwell; and having brunt the town of Dumfries, they returned with great spoil into England.' Though dismantled, Caerlaverock does not appear to have been entirely ruined, as Camden, in his Britannia, written about 1607, calls it a weak house of the barons of Maxwell. Robert, first Earl of Nithsdale, created in 1620, once more repaired the fortifications of Caerlaverock castle in 1638; and during the civil war under Charles I., he adhered to the royal cause, in which he expended his whole fortune. In 1640 the castle was attacked and besieged by the 'covenanted rebels,' under Lieutenant-colonel Home. The loyal owner resolutely defended the garrison for upwards of thirteen weeks; nor did he lay down his arms, till he received the king's letters, directing and authorizing him to deliver up that and the castle of Thrieve upon the best conditions he could obtain. From this time Caerlaverock castle ceased to be an object of contest, or even a place of habitation, as the Maxwells transferred their residence to the Isle of Caerlaverock, a small square tower on the margin of the Lochar, and near the parish church. Here Robert the second Earl of Nithsdale, commonly called the Philosopher, died in 1667. On the attainder of William, fifth Earl of Nithsdale, who joined in the rebellion of 1715, and made his escape from the tower of London, through the ingenious heroism of his wife, the estates were preserved from forfeiture, being disposed to his son in 1712; and on his dying without male issue, in 1776, they passed to his daughter, the late Lady Winifred, who became sole

heirss to her father's estates. Her grandson, William Constable Maxwell of Everingham Park, Esq., is the present Lord of Caerlaverock.

CAIRN, or **CAIRNRAN**, a small village in Wigtonshire, in the parish of Inch; 10 miles south of Ballantrae, and $6\frac{1}{2}$ north of Stranraer, on the coast of Loch Ryan. Population 300. It has a good harbour, and a safe bay, where vessels of any burden may anchor in the greatest safety. The Glasgow and Belfast steamers regularly call here.

CAIRN (THE), a river which has its source in the higher parts of Dumfries-shire, and, running south east, forms the boundary between that shire and the stewartry of Kirkcudbright. It joins the Glesensland water, and falls into the CLUDEN.

CAIRNAPLE, a mountain in the parish of Torphichen, Linlithgowshire, rising 1,498 feet above the level of the sea.

CAIRNCHUICHAIG, a mountain in Ross-shire, in Kincardine parish, upon which are found topazes similar to those of the Cairngorm.

CAIRNDOW, a hamlet in Argyllshire, in the parish of Lochgoilhead, near the northern extremity of Loch Fyne. It is a stage on the military road, 94 miles from Edinburgh, 36 from Dumfries, and 10 from Inverary. It is the only stage between Inverary and Argyllshire by Glencroe. There is a good inn here, and a steamer from Inverary crosses every morning in excellent time for breakfast.

CAIRN-EILAR. See ABERDEENSHIRE.

CAIRNEY-HILL, a village in the parish of Carnock, Fife-shire; 3 miles west of Dunfermline, and a mile east of Torryburn. It is situated on the burn of Pittennies, on the road leading from Dunfermline to Alloa and Stirling, and contains about 600 inhabitants, who are principally employed in the staple manufacture of Dunfermline, viz. table-linen. There is a Secession church here, built in 1752; sittings 400. Stipend £96, with manse, garden, and glebe.

CAIRNGORM, one of the loftiest of the Grampians, situated in the parish of Abernethy, betwixt the counties of Banff and Moray. Its height, by an accurate calculation, was found to be 4,095 feet above the level of the sea. It is of a conical shape; the sides and base are clothed with extensive fir-woods, while its top is covered almost all the year round with snow. The ascent from the west end of Glenmore to the top of Cairngorm is easy; and the traveller will experience little difficulty in descending upon LOCH AVEN: see that article. Cairngorm is celebrated for those beautiful rock-crystals of various tints, which are called Cairngorms, though other places in Scotland afford them in great abundance. They are a species of topaz, much admired by lapidaries. They were formerly procured in great quantities; but of late are more scarce, and are only found amongst the debris of the mountain, brought down by the currents after a storm. They are regular hexagonal crystals, with a pyramidal top; the other extremity is rough, and often a part of the rock to which it has been attached adheres to it. Some have been found weighing three or four ounces. [See Note, p. 106.] Besides these stones, fine specimens of asbestos covered with calcareous crystallizations, talc, zeolite, crystallized quartz, and spars, are frequently found on this mountain. The botanical field presented by it is not very rich. Lichen nivalis, Azalea procumbens, and Polytrichum septentrionale, are found upon it.—There is a mountain called the Easter, or Lesser Cairngorm, in Braemar.

CAIRNGOWER. See ATHOLE.

CAIRNHARRAH. See ANWOTH.

CAIRNIEMOUNT, **CAIRN-O'-MOUNT**, or **THE**

MONTH, one of the Grampian mountains in Kincardineshire, near the river Dee. Over this mountain there is an excellent road, opening a communication between the districts of Angus and Moray. See article ABERDEEN.

CAIRN-NA-CUIMHNE. See BRAEMAR.

CAIRN OF HEATHER COW. See BOWER.

CAIRNMONEARN, one of the Grampians, in Aberdeenshire, 1,020 feet above the level of the sea.

CAIRNPAT, sometimes **CAIRNPIOT**, a hill in the south-eastern part of the parish of Portpatrick, Wigtonshire, elevated 800 feet above the level of the sea. It bears all the marks of having been a military station, being surrounded by three stone-walls and intrenchments, with ample spaces between them. The summit affords a fine view of the Rhins of Galloway; and it is said, that in clear weather, the coast of Cumberland can be seen from it.

CAIRNSMUIR, a mountain in the parish of Minnigaff, Kirkcudbrightshire, one of the highest in the south of Scotland. Its elevation has never been exactly ascertained, and various accounts are given of its height. Alexander Maclean, Esq., in the old Statistical Account of Kirkcudbright, says: "It may probably be between 3,000 and 4,000 feet above the level of the Cree!" But the Rev. Mr. Maitland, in the Statistical Account of Minnigaff, says: "Cairns-muir is 1,737 feet above the level of the sea; and there are one or two neighbouring mountains which are 20 or 30 feet higher."

CAIRNIE, a parish chiefly in the county of Aberdeen, but partly in Banff, which formed part of the lordship of Strathbogie, granted by Robert Bruce to Sir Adam Gordon, after the defeat and attainder of Cumyn, Earl of Badenoch. It extends along the banks of the Bogie, in the neighbourhood of the town of Huntly. The surface is hilly, but in the low grounds the soil is deep and fertile. The hills were formerly covered with oak-forests, but now their appearance is bleak and naked. Population, in 1801, 1,561; in 1831, 1,796. Assessed property, in 1815, £4,325. Houses 384.—This parish is in the presbytery of Strathbogie, and synod of Moray; and consists of the united parishes of Botary, Rathven, and part of Drumdelgy. Patron, the Duke of Richmond. Stipend £210 0s. 3d. Value of glebe £12 15s. Unappropriated tithes £217 7s. Schoolmaster's salary £18 16s. 7d. in money, 16 bolls meal, and about £20 fees. Pupils 50. There are two private schools, attended by above 100 children.

CAIRSTON, in the island of Pomona, and parish of Stromness. It possesses a harbour, in which large vessels that require greater depth of water and more space than what the harbour of Stromness affords, usually anchor; but there is a strong tide here, and it lies more open and exposed than Stromness harbour. It gives name to a presbytery.

CAITHNESS, the most remote and northern county on the mainland of Scotland, forming its north-eastern extremity, is divided from the county of Sutherland on the south-west and west by a range of mountains and high moory hills, which extend from the Ord of Caithness on the south, to the shores of the North sea at Drumbolastan. It is bounded on the south-east and east by the Murray frith and the German ocean; on the north from Duncansby-head, in 58° 37' N. lat., and 3° W. long., to Holburn-head, by the Pentland frith, dividing it from the Southern isles of Orkney, and containing the island of Stroma which forms a portion of the shire; and westwards from Holburn-head it is bounded by the North sea. Its form is an irregular triangle, measuring 35 miles from north to south, and 22 from east to west. In Captain Henderson's

Agricultural survey of the county, its superficies is estimated at 616 square miles,—

	English Acres.	Scotch Acres.
Which is equal to	394,240,	or 315,932
To which add the island of Stroma, $2\frac{1}{2}$ square miles, or	1,440,	or 1,152
Total of the county, 618 $\frac{1}{2}$ square miles, or	395,680	= 316,544

In an agricultural view, Sir John Sinclair, in 1811, estimated the whole to consist of nearly the following divisions:—

	Scotch Acres.
1. Arable land of every description, infield and outfield,	40,000
2. Meadow, or haughs, near rivers, burns, &c.,	2,000
3. Green pasture, common down, and partly moory clay,	62,000
4. Under brushwood, and small plantations,	850
5. Sand in Dunnet bay, &c. &c.,	3,000
6. Mountains, or high moory hills, in the parishes of Latheron, Cannisbay, Halkirk, and Reay,	71,200
7. Deep mosses, or flat moors, (502 less than the first account, for the isle of Stroma,)	130,261
8. Fresh-water lakes, 7,680; rivers and burns, 743 acres,	6,731
Total,	316,042

Sir John Sinclair's 'General View of the Northern Counties,' makes the extent of Caithness 690 square miles; English acres, 441,000; or Scotch acres, 351,210, of which—

Arable,	18,000 acres.
Pasture,	36,000 do.
Moor or moss,	297,210 do.
	351,210 do.

There are no navigable rivers in this county. The principal river is the water of Thurso, which originates from springs in the mountains bounding with Sutherland, and partly from the Latheron hills; thence it passes through several lakes and small lochs—24 of which are in one flat bog in Strathmore, in the parish of Halkirk, and all send their tributary streams to this river,—and after traversing a distance of about 30 miles, discharges itself into the Pentland frith at Thurso bay. Its ancient name, in the Gaelic language, is *Avon-Horsa*,—that is, 'Horsa's river;' and the town of Thurso is called *Bal-inver-Horsa*,—that is, 'the town of Horsa's harbour.' At the village of Halkirk this river is so rapid that a fall of 14 feet could be commanded for machinery; but, in general, the Thurso is not rapid enough for falls, or deep enough for navigation, although with floods of rain it rises from 5 to 7 feet above its natural level.—The next river in point of size is the water of Wick, originating from the lochs of Watten, Toftingal, Scarmclate or Stempster, and from various springs in the moors of the parish of Watten, whence it runs eastward until it falls into the sea in the sandy bay of Wick. The tide flows up this small river for 2 miles, but it is of little depth.—The water of Forss originates from springs in the mountains between Sutherland and Caithness, and coming through Loch Kelm, Loch Shuray, &c., runs due north to Cross-Kirk bay, where it enters the Northern ocean, dividing the parishes of Reay and Thurso. In general, it is rather flat than rapid and shallow in its meandering course through Strathglaston. The water of Wester runs through the parish of Bower, from lochs and springs eastward to the loch of Wester, and thence becomes a deep stream for a short distance to Keiss bay on the German ocean. There are various burns, or small streams, besides those above-mentioned, in the northern and eastern part of this county; and on the south side of the county there are the waters of Dunbeath, Berriedale, and Langwell, with a number of small burns running from springs in the mountains, which have a rapid, rugged, and shallow course to the Murray

frith. There are salmon-fishings, besides the great one on the river Thurso, in the waters of Wick, Dunbeath, and Langwell; the fish of the latter is considered the firmest and best in Scotland. The principal lake is the loch of Calder, in Halkirk parish. It is 2 miles long, and from a mile to a quarter of a mile broad; in the north end it is about 12 fathoms deep. The second is Loch More, in the highland part of the same parish; it is about $1\frac{1}{2}$ mile long, by about half-a-mile broad, and deep. The third is the loch of Watten, about $1\frac{1}{2}$ mile long, and from one-half to a quarter of a mile broad, but in general rather shallow. Then in order are the lochs of Hempriggs, Westfield, Stempster-Bower, Rangag, Stempster-Latheron, Alterwall, Harland, Dunnet, Mey, Duren, Kelm, Shuray, Rheard, Yarrowes, and a groupe of lochlets, noticed above, in the parish of Halkirk. All these lakes, rivers, and burns abound with trout and eels; and in the loch of Calder there are char about six inches long. The western part of this county is hilly, and chiefly adapted for the rearing of cattle and sheep; but towards the east it is almost a uniform plain.

The Morven, Morbhein, or Berriedale mountains, run along the Latheron coast, to the boundary of the parish of Wick. Another range of high hills stretches from the Morven mountains along the boundary with Sutherland, through the parishes of Reay and Halkirk on the west, to the North sea. The Morven, or Berriedale mountains, are principally occupied in sheep-pasture. Morven, Scariben, and the Maiden-Pap mountains, are very high and steep; and towards their summit—which is from 1,500 to 3,000 feet above the level of the sea—there is nothing but bare rock. The other mountains are clothed with heather, ling, and deer-hair. The ridges of hills, or high ground, in the parishes of Wick, Bower, Watten, Dunnet, Olrig, Thurso, Reay, and Halkirk, are principally green pasture, except the summits of some hills and knolls covered with stunted heather, which have been, from time immemorial, used as common pasture for the horses, cattle, sheep, geese, and swine of the town-lands in their vicinity. This is the only ground to which the denomination of downs is applicable in this county. The extent of deep peat-bogs, including peat-moors of every description, is very considerable; amounting to nearly one-half the extent of the county. Large tracts of this soil, between the base of hills in the interior of the county, are flat and level; and in the parish of Canisbay, not far even from the sea-shore, they are of great depth, and so swampy that cattle cannot travel over some parts of them. The only ground known by the name of forest is the ridge of mountains dividing Caithness from Sutherland, terminating at the Ord of Caithness, which is a part of the Langwell estate. In this district red deer and roe, as well as black cattle, were formerly maintained; but it is now occupied as a sheep-farm, and stocked with the Cheviot breed of sheep. Its extent may be about 15,000 acres of mountain, covered with heather, heath, ling, deer-hair, and wild cotton.

In a common near the crown-lands of Scrabster, in the vicinity of the town of Thurso, some fragments of a coaly nature were discovered; and search was made in consequence for coal, but without success. On the Earl of Caithness's estate, near Barrogil castle, a thin stratum of coaly black stone is found on a level with the sea, which burns with a clear flame for some time, but does not consume to ashes. A seam of coal, resembling small English coal, was found in the parish of Halkirk. About 70 years ago an English company employed two men for a season at the hill of Achinnarrass, working pits

or shafts for lead-ore. They dug up several tons of it; but although it was allowed to be of good quality, the work was discontinued. In the year 1807, some ditchers, in the employ of Sir John Sinclair, found pieces of solid lead-ore in the bottom of a ditch on the east side of the hill of Skinnet. There is shell-marl in many bogs and lakes in the parishes of Halkirk, Olrig, Bower, Wick, Watten, Latheron, and Reay; and clay-marl in the parishes of Cannisbay, Latheron, and Thurso, of excellent quality. The greatest quantity of shell-marl, and the most easy of access, is in the lake or loch of Westfield, in the parish of Halkirk. Freestone is found in the greatest perfection and abundance in Caithness. The soil of the arable land and green pasture, from the east bank of the water of Forss, on the north coast to Assery; thence across by the loch of Calder, and Halkirk, on the river of Thurso; thence along that river to Dale; thence eastward by Achatubster, Toftingal, Bylbster, Bilbster, Thurster, &c. to the German ocean at Hempriggs; thence along the east coast to the water of Wester, and along that rivulet, by Bower, Alterwall, and Thurdistoft, to the sea at Castle-hill, on the north coast; abounds with clay, incumbent on a horizontal rock, in the western part, and hard till, schistus, or gravel, on the eastern part of it. In the parish of Reay, westward from the banks of the water of Forss, the arable land and green pasture is in general composed of a dark earth, mixed with a crystalline sand, which may be denominated a black loam, incumbent, in general, on a grey freestone, &c., not so tenacious of moisture as the clay district incumbent on a horizontal rock. This species of soil is productive of corn and grass, both natural and artificial. The same kind of soil, namely, a dark loam, abounds in the parishes of Dunnet and Cannisbay, and a part of the parish of Wick, to the water or river of Wester on the east coast. Near the shore it is incumbent on a red freestone, in many cases with perpendicular seams, which carry off the moisture; and at a greater distance from the shore towards the peat mosses and moors, the loam is incumbent on a gritty red gravel or schistus. The soil along the shore is deep, and capable of producing good crops. Along the sea-shore, from Hempriggs to the Ord of Caithness, comprehending the coast-side of part of the parish of Wick, and the parish of Latheron, the arable land and green pasture is chiefly composed of a dark earth, mixed with gritty sand and fragments of rock: it may be termed a stony hazel loam, sharp and productive, incumbent on a blue whin, or gritty rock of vertical seams, or seams of considerable declivity, and dry. Upon the straths or valleys of the remaining district of the county, comprehending the high-land parts of the parishes of Latheron, Halkirk, and Watten, the soil is variable; near the banks of rivers and burns there is some haugh or meadow-ground, composed of sand and clay, or soil that may be called alluvial. Farther back the soil is a dark loam, of peat-earth and gravel, and in some partial spots consists of clay.—The sea-coast of Caithness, with the exception of the bays of Sandside, Dunnet, Duncansby, and Keiss, is a bold rocky shore, from the Ord all along the coast, till you reach the point of Drumholasten. Sandside bay is about half-a-mile broad, with some sandy links a little above flood-mark, about the kirk of Reay, abounding with rabbits, and producing excellent pasture. Dunnet bay is about 3 miles across, from the Castle-hill to the hill of Dunnet on the east side, and it extends about a mile of sandy links up the country to Greenland. This tract may be computed at three square miles, principally a bare barren sand, which produces nothing but tufts of bent grass—a plant which

spreads, and thus prevents the usual drifting of the sand, if it is preserved. Reits, or Keiss bay, is a low sandy shore for 4 miles from Keiss to Ackergill, and in some parts the sand has drifted half-a-mile up the country. There is also a small extent of sandy links at Freswick bay, and at Duncansby, where there are great quantities of sea-shells driven in every stormy tide.

For three-fourths of the year the wind in Caithness blows from the west or north-west; and in the winter, spring, and autumn, there are frequent hard gales from that quarter. There being no mountains or high land on the north side of the county, where it bounds with the Northern ocean, the inclemency of the weather in the winter and spring is felt more severely here than in the neighbouring counties of Sutherland and Ross. From the beginning of May to the middle of June the prevailing wind is usually from the north-west, with a bleak cloudy sky, which checks vegetation much. From the end of June to September the wind is variable from the south-west to the south-east, and but seldom northerly. During this season vegetation makes, perhaps, a more rapid progress than it does in counties enjoying, on the whole, a better climate. This, perhaps, may be partly accounted for by the check given to vegetation in May and the beginning of June. It is the general opinion that no county in Scotland has more frequent and heavy rains than the county of Caithness,—the county of Argyre, and the western parts of Inverness, Ross, and Sutherland excepted. During the months of October, November, and December, rain is generally frequent and heavy. About the end of December, and sometimes earlier, snow and hard frost commence.

Captain Henderson furnishes the following interesting account of the trades and manufactures which existed in this remote district in the latter half of the last century:—"Exclusive of the shoemakers who resided in the towns of Thurso and Wick, there were one, two, or more itinerant shoemakers in every parish, who went to the farmers' houses, and made shoes, or rather brogues, for the whole family, including the farm-servants, at the rate of 2d. per pair; the shoemaker and his apprentice being fed in the family during the time they were so employed. The farmer found the leather, hemp, and rosin. The leather being generally tanned by himself cost him very little; and, upon the whole, all the family were furnished with shoes at from 1s. to 1s. 6d. per pair. At that time the town shoemakers sold what was called dressed or curried leather shoes, at from 2s. to 3s. per pair. Now—1809—there are few or none of these itinerant shoemakers. There are no woods or shrubberies in the county to furnish bark for the farmer; taxes are high, and tax-gatherers more vigilant. The country people, both tenants and servants, purchase their shoes—no doubt of a better quality than brogues, but not more durable—at from 7s. 6d. to 10s. per pair, for men's shoes, and 5s. 6d. to 6s. 6d. for women's shoes. Farm-servants pay from 20s. to 25s. for a pair of boots to follow the plough, whereas, in 1760, they wore rillins in the spring-season. These were made of an oval piece of raw, or untanned horse or cow-leather, drawn together round the foot by thongs of the same materials, through holes made in the margin of the skin or piece of hide; and being thus faced on the upper part of the foot, with the hair towards the foot, they were warm and flexible; and they kept the mould of the ploughed land from annoying the feet. A pair of these might be valued at 4d., and would last five or six weeks. Weavers were settled through the country for weaving the simple fabrics prepared

by the farmers' wives and servants for their own and their husbands' and children's apparel. Every farmer, and even cottager, had a small flock of sheep of the native breed; these annually supplied a fleece of good wool, which the gudewife and her family carded and spun into yarn, either for blankets, for scourens (coarse flannel), or black greys (a kind of broad-cloth), or for Highland tartan, for the wear of the gudeman, herself, and family, and perhaps some of it for sale to the servants, in part of their wages, or to others. The weaver generally charged from 2d. to 4d. per yard for weaving it; and a peck of oat-meal was given as a bounty, for warping the web, and preparing it for the loom. When the web was returned from the weaver, the gudewife got it washed in warm water, and if it was necessary to full it, that operation was thus performed:—The house-door was taken off the hinges, and laid on the floor; the web was then laid on it hot out of the water; then three or four women sat down round it, on a little straw, at equal distances, and all being ready, bare-legged, by the signal of a song, each applied her soles to the web; and they continued pelling and tumbling it on the door with their feet until the web was considered sufficiently full; then it was stretched out to dry, and was ready for the family-tailor, or for sale, as the case might be. If the tailor was wanted, he was sent for, and maintained in the family until the clothes were made; and for his trouble, he received annually a quantity of victual, bear, or oat-meal, as might have previously been agreed upon. If the cloth was for the market, blankets sold at 10d. per yard; scourens at 8d. to 9d.; cloth at 1s.; and tartan, if the dyes were good, at 1s. to 1s. 4d. per yard. The gudewife was generally competent to dye the woollen yarn, either of a blue, red, green, yellow, or black colour, as might be required. That simplicity of life and industry are now gone, and instead of these native fabrics, nothing will do but broad-cloth from Leeds, and blankets and flannels from the southern markets. In those days, coopers and tinkers were employed to make household vessels and spoons; now these in most cases are superseded by crockery ware and metal spoons. It may be proper to add, that in those days, linen was little used by the labouring class of society, and hence rheumatism was unknown. In modern times, every farm-servant wears linen; and as the heat of youth declines, rheumatism commences." Mechanics are now settled throughout the county, for making farming-utensils, as carts, ploughs, harrows, thrashing-machines, &c., &c., to supply the farmers. A considerable number of women and girls are employed in the town of Thurso, plaiting straw for ladies' bonnets. A few of them make up bonnets; but the greater part of the straw-plait is sent to London, whence the prepared straw is imported. The straw-plaiters earn at this employment, from 3s. to 5s. per week. About sixty years ago, while we were at peace with Sweden and Denmark, and Caithness virtual sold at from 8s. to 13s. 4d. per boll of bear or oat-meal, several cargoes of victual were annually exported to Norway, and in return, fir-timber and iron were imported, at an easy rate. At that time, Norway fir was retailed in this county at 8d. to 10d. per solid foot, and iron at 1d. to 1½d. per pound. At a more remote period, malt was exported from the port of Thurso to Norway, and timber, iron, hemp, and flax, imported in return; and there are even some traditional accounts that a few vessels from the port of Thurso traded to the West Indies and to the Baltic. The port of Thurso is well-calculated for foreign commerce, as it has a good and safe roadstead at Scrabster, and the access to the dry harbour in the river is capable of great

improvement. As soon as a vessel gets under weigh from this port, the German ocean, or Atlantic, is open to her, and the Pentland frith is no longer a terror to seafaring men. From 1780 to 1800, the merchants of Leith, Montrose, and Aberdeen, sent several cargoes of dressed flax annually, to agents employed by them among the Caithness shopkeepers. These agents gave out the flax to be spun, by the young women, through the county; for which they received about 10d. per spindle, or 2½d. per hank of 1,200 threads. The agents had 1s. per spindle from their employers; the difference—being ½d. per hank—was their commission for risk and trouble. This flax was commonly spun to 2 or 2½ hank of yarn from the pound of flax, and the yarn so spun was returned to the merchants of Leith, &c., and there made into coloured thread for the foreign markets. The principal branch of commerce which now exists in this county, is the herring-fishery along the coast of the parishes of Wick and Latheron, where, from 150,000 to 200,000 barrels of fish, are annually cured, and exported to the London, Bristol, Liverpool, Leith, and Irish markets. The fishing commences in July, and seldom lasts above six weeks; the number of boats sometimes amounts to 1,200. The curing is performed at Wick by women, and affords employment to 5,000. A few red herrings are also smoked. Great numbers of seals were formerly killed on the coast, but they are less sought after now. The cod-fishery has also been for many years carried on in the havens of this county. A quantity of kelp used to be made from sea-weed along the Caithness coast, and sent coastwise to Leith, Newcastle, &c., for the use of the glass-houses, soap-makers, &c. There are a few sloops, of from 40 to 70 tons burden, which sail from the harbours of Thurso and Wick, to Leith, and occasionally to Sunderland, Newcastle, and London; they export fish, kelp, and oats, but more frequently convey mechanics and labourers, in quest of work, to the southern counties. By these vessels there is imported broad-cloth to supply the want of the cloth formerly manufactured in every family from the wool of their little flocks; cotton-cloth and linens from Glasgow; tea, sugar, snuff, tobacco, and other articles from the London and Leith markets, and hardware goods from Sheffield, and Birmingham, &c., all which are retailed by the shopkeepers of the county.

By statutes of David II. the weights and measures of the county of Caithness were the standards of Scotland. By the 'Regiam Majestatem,' chap. 14. "It is statute be King David, that ane comon and equal weight, quhilk is called the weicht of Caithness—pondus Cathaniæ—in buying and selling, sall be keeped and used be all men within this realm of Scotland." The circumstance, that the weight of Caithness should be the general standard, is not at all to be wondered at, for the town of Thurso, in Caithness, was formerly the great mart for trade between Scotland and Norway, Sweden, Denmark, and the powers of the Baltic, and in consequence thereof, the weights established in that town, might, with great propriety, become the standards of the kingdom. Previous to the late act the tenantry throughout the county used a vessel—by them called a half-firlot—containing two pecks, and they gave eight fills of it for a boll of bear or oats. In measuring corn with it, the vessel was heaped; but in measuring meal, the roller was used to take off all above the stave. The regular corn-measure of the county was either by firlots or by half-bolls. The firlot contained one bushel and a half, and three quarts, Winchester measure, that is 7½ per cent. above the standard. Bear, oats, and malt, were measured by

this standard; but the boll of wheat was understood to be only two-thirds of the bear boll; oatmeal was sold by the boll of 136 lbs. Dutch, or eight stone and a half, and bear-meal at nine stone or 144 lbs. The Dutch pound was $17\frac{1}{2}$ ounces avoirdupois. All liquids, the produce of the county, were measured by the pint of 18 gills, or $\frac{1}{8}$ above the regular standard; but the pint of spirits was 16 gills. Wool was sold by the stone of 24 lbs. Dutch.

This county, and the shire of Sutherland, were, from 1756, until the year 1807, considered as one sheriffdom; but there is now a sheriff-depute for each county. Until the passing of the Reform act, Caithness was coupled with the isle of Bute on the south-west of Scotland, and each county returned a representative alternately. This half-species of franchise was felt to be a grievance that ought to be remedied. In fact, Bute and Caithness were so distant from each other that no common interest could be supposed to exist between them, more than between Cornwall and Caithness at the two extremities of the British isle. The only other instances of such political representation in Scotland, were, Kinross and Clackmannan; and Nairn and Cromarty; but these were contiguous districts, which had a common interest in every local political occurrence, and might therefore, with much more propriety, be incorporated together. The towns of Wick, Kirkwall, Dornock, Dingwall, Tain, and Cromarty, return one member to parliament. Small debt courts are held at Wick, Thurso, and Lybster. There were two county newspapers published till lately in Caithness. The county of Caithness is divided into ten parishes, forming one presbytery. The two presbyteries of Caithness and Sutherland are erected into one synod. In ancient times the two counties formed one bishopric, known under the name of the bishopric of Caithness.—Population, in 1801, 22,609; in 1811, 23,419; in 1821, 30,238; in 1831, 34,500. Value of real property as assessed in 1815, £33,469. Houses inhabited in 1831, 6,036. Families employed in agriculture in 1831, 3,580; in trade and handicrafts, 1,487; not comprised in either of these classes, 1,837. Cooperage appears to employ the greatest number of hands in the second of these classes. The number of parochial schools, in 1834, was 10, attended by 747; of schools not parochial, 86, attended by 3,480; total 4,227.—The prevailing name in Caithness is Sinclair; and the county gives the title of Earl to the family of Sinclair, descended from the French St. Clair. The English language has always been spoken in Caithness, except among the hills on the borders of Sutherlandshire, where the Gaelic is used. The names of many localities, however, are evidently Norwegian.—The most ancient castles in this county are those of Girnigoe and Sinclair, erected by the thanes of Caithness, on a bold narrow promontory separated from the coast by a channel of little breadth, on the north side of Noss-head, near Wick. Ackergill tower, half-a-mile west from castle Girnigoe, a very strong and ancient fortalice, was built by the Keiths, Earls Marshal. It is a square tower of several stories of single apartments each, with projecting turrets in the angles. There are also Mowat's castle of Freswick, Castle Sinclair of Keiss, and the castle of Old Wick, or Oliphant's castle, 2 miles south from Wick, all ruins on the east coast of Caithness. Forse castle in ruins, the castle of Dunbeath still habitable, and Berriedale castle in ruins, are on the south-east coast. Upon the north coast are: Barrogill castle, the Earl of Caithness's residence, at a small distance from the shore; Thurso castle, the seat of Sir John Sinclair, bart., built in 1616, and repaired in 1808; the ruins of a

castle at Scrabster, a mile west of Thurso, once the residence of the bishops of Caithness; a small castle at Brims, still habitable; and the ruins of a castle at Downreay. There are also the ruins of Brawl castle, and Durlat castle, on the river Thurso, in the interior of the county. The modern houses of Sandside, Westfield, Castlehill, Freswick, Keiss, Hempriggs, Stircock, Lybster, Swinzie, and Nottingham, along the coast, or near it, and of Barrock-house, Standstill, Watten, Bilbster, Hopeville, Stempster, Tister, Dale, and Calder, in the interior of the county; are commodiously built, and in some cases handsomely finished. Among the antiquities of this county are to be found a variety of those singular structures called Picts' houses. They are generally of a circular form, in the shape of a truncated cone, with walls of 9 or 10 feet in thickness, and surrounded by a deep ditch and a rampart.

CALDER (EAST), or CALDER-CLERE, an ancient rectory in the shire of Edinburgh; united in 1750 to the parish of KIRK-NEWTON: which see. The church, which is now demolished, was dedicated to St. Cuthbert. The manor of Calder was by Malcolm IV. granted to Randolph de Clere; and from him it became known by the name of Calder-Clere, to distinguish it from Calder-Comitis, the adjoining manor, the property of the Earl of Fife. The barony of Calder-Clere was forfeited during the succession-war; and was granted, in 1306, by Robert I. to James Douglas, of Lothian, the progenitor of the Earls of Morton. The Earl of Morton takes his title from the lands of Mortoune in this parish. After the Reformation, the Earl of Morton—who was now Baron of Calder-Clere—acquired the advowson of the church, and with it the right of the monks of Kelso to the tenth of the multure of the mill of Calder. In 1541, the barony of Calder-Clere was confirmed by James V. to James Earl of Morton, without the advowson of the church. In 1564, James, his successor—the well-known Morton, who fell under the axe of the law in 1581—obtained from the queen a confirmation of all his lands, with the barony of Calder-Clere, and the advowson of the churches and chapels.—The village of East-Calder lies about one mile east of Mid-Calder, the south road from Glasgow to Edinburgh passing through it.

CALDER (MID), a parish in the shire of Edinburgh. It extends from north to south about 7 miles; its greatest breadth is nowhere above 3. It is bounded on the north by Kirkliston; on the east and south-east by East-Calder and Kirk-Newton; on the south-west by West-Calder; and on the west by Livingston. The surface is generally level, and the soil fertile though light and dry. Calder wood still covers a considerable extent of ground, though far less than formerly. There are everywhere indications of coal; also plenty of freestone; and, in East-Calder, the Earl of Morton has a quarry of limestone, the stratum of which is 60 feet thick. Besides these minerals, there is excellent ironstone in this district. On the estate of Letham is a powerful sulphureous spring, similar to that of Harrowgate. To the west of the town, on Muirhousetoun water, stands Calder-house, the seat of Lord Torphichen. A portrait of John Knox—generally believed to be genuine—is hung up in the hall or gallery of this house, where, it is asserted by some, he dispensed the ordinance of the Lord's supper for the first time in Scotland after the Reformation.*—The

* On the back of Lord Torphichen's picture there is written "Mr. John Knox: The first sacrament of the supper, given in Scotland, after the Reformation, was dispensed by him in this hall." This is not true; for it is proved that the first time the sacrament of the supper was dispensed in the reformed way in Scotland, was in the castle of St. Andrew's, A. D. 1547, (M'Crie

house of Green-bank, near the village, is celebrated as the birth-place of John Spottiswood, archbishop of St. Andrews, who was born here in 1565. Population, in 1801, 1,014; in 1831, 1,489. Assessed property, in 1815, £7,500. Houses in 1831, 225.—This parish is in the presbytery of Linlithgow, and synod of Lothian and Tweeddale. Patron, Lord Torphichen. Stipend £158 6s. 8d., with glebe of the value of £64 10s. Schoolmaster's salary £34 4s. 4½d., with £150 fees; £11 2s. 2½d. yearly for teaching church-music, and other emoluments; making a total of £235 18s. 7d. Pupils 130. There were 3 private schools within the parish in 1834, attended by about 130 scholars.—The village of Mid-Calder is 11½ miles west-south-west of Edinburgh, and 8½ east of Whitburn, on the south road from Glasgow to Edinburgh. It is pleasantly situated on an eminence between the water of Linnhouse and the Almond. It has two fairs, viz., on the 2d Tuesday in March, and the 2d Tuesday of October.

CALDER (WEST), a parish in Mid-Lothian, in length 10, and in average breadth 5½ miles; bounded on the north by Mid-Calder and Livingston; on the west by Whitburn; on the south by Carnwath; and on the east by Glencross. The southern part, which borders on Lanarkshire, consists of high and moorish grounds for the most part incapable of cultivation. From the general elevation of the ground, being nearly 500 feet above the level of the sea, it is cold and moist, exposed to storms of wind and rain from the south and south-west. The greater part of the parish lies upon coal, and there is plenty of excellent limestone; ironstone also is wrought. In the southern extremity stands an old castle, said to have been fortified by Cromwell; and at Castle-Craig are the remains of a Roman camp. Population, in 1801, 1,185; in 1813, 1,617. Assessed property £7,197. Houses 311.—The village of West Calder is 4 miles south-west of Mid-Calder, and 7 north of Wilsontown, on the road from Edinburgh to Lanark.—This parish is in the presbytery of Linlithgow, and synod of Lothian and Tweeddale. Patron, John Drysdale, Esq. Stipend £153 6s. 7d., with glebe of the value of £23. Church built in 1646; sittings 331.—A United Secession church was built in 1795; sittings 498. Stipend £100, with a manse and glebe.—Schoolmaster's salary £34.—There were 3 private schools within this parish in 1835; and the total number of children at school was 197.—According to Chalmers, the present parishes of Mid-Calder and West-Calder were of old comprehended in the parish and barony of Calder-Comitis. West-Calder received this name, as lying westward of the river Calder; and it was distinguished by the name of Calder-Comitis, as early as the 12th century. This extensive manor of Calder-Comitis was possessed by the Earls of Fife as early as the reign of Malcolm IV; and by them it was enjoyed as low down as the reign of David II. It then passed to Sir William Douglas of Douglas, who gave it in free marriage, with Eleanor, his sister, to Sir James de Sandilands, in 1349. This grant was confirmed by Duncan, Earl of Fife, and by David II. From that marriage sprang the family of Sandilands, who acquired the estates of the knights of St. John, at the Reformation, with the peerage of Torphichen; and who still retain the barony of West-Calder, with the advowson of the church. Before the Reformation, there was a chapel in the upper part of this extensive district, which gave name to

Chapelton, about a mile east from West-Calder this chapel remained till the reign of Charles I. In 1637, John, Lord Torphichen, was served heir to his father in the barony of Calder, and to the patronage of the church. In 1646, this large parish was divided into two districts, which were named Mid-Calder, and West-Calder. The old church was now appropriated to Mid-Calder; while the new church was erected in the upper district, which has given rise to the kirk-town of West-Calder.

CALDER, or CAWDOR, a parish situated chiefly in the county of Nairn, but of which a small part lies in that of Inverness. Its figure is irregular; but its greatest length is 16 miles, and greatest breadth 6½. From a survey made in 1782, it contains 26,000 acres, of which 18,000 at least were moor and moss. Its superficial area has recently been estimated at 35,313 acres. The soil of the arable part is thin and sharp, but fertile. The low lands are liable to be overflowed by the rivulet of Calder and the water of Nairn. The Findhorn, abounding with salmon, runs through the upper part of the parish. A considerable part of the district is covered with natural forests of oak, ash, alder, and other trees. Population, in 1801, 1,179; in 1831, 1,184. Assessed property, in 1815, £4,975. Houses, in 1831, 266, whereof 226 were in Nairnshire.—The village of Calder is 5½ miles south-west of Nairn. A fair is held here on the 2d Tuesday in March.—This parish is in the presbytery of Nairn, and synod of Moray. Stipend £156 0s. 8d., with glebe of the value of £7. Unappropriated teinds £15 5s. 6d. Patron, the Earl of Cawdor. Church built in 1619; altered in 1830; sittings 681. Schoolmaster's salary £34 4s. 4½d. There are two private schools.

At a short distance to the eastward of the church is the house of Calder, a seat of Lord Cawdor. The Thanes of Calder, as constables of the king's house, resided in the castle of Nairn, and had a country-seat at what is now called Old Calder, half-a-mile north of the present seat, vestiges whereof still remain. But by a royal license, dated 6th of August, 1454, they built the present tower of Calder—now Cawdor—which gives the title of Baron to a branch of the ancient and noble family of Argyle.* It has formerly been a place of great strength. The walls of the tower are of great thickness, arched at the top, and surrounded with battlements. The rest of the house is of later erection, though far from modern. Mr. Fraser Tytler thus describes this interesting relic of feudal ages: "The whole of Cawdor castle is peculiarly calculated to impress the mind with a retrospect of past ages, feudal customs, and deeds of darkness. Its iron-grated doors, its ancient tapestry, hanging loosely over secret doors and hidden passages, its winding staircases, its rattling drawbridge, all conspire to excite the most gloomy imagery in the mind. It was indeed a fertile spot for the writers of our modern romances. The mysteries of Udolpho would vanish in contemplation of the less perspicuous intricacies in the castle of Cawdor. Among these must be mentioned the secret apartment which so effectually concealed Lord Lovat from the sight of his pursuers. Never was any thing so artfully contrived. It is impossible for the most discerning eye, without previous information, to discover the place of his retreat. And even after being told that a place of this nature existed in the castle, I doubt whether it could be discovered. It is placed immediately beneath the rafters in one part of the roof of the castle. By means of a ladder you are conducted

p. 50, 1st ed.) The account given by Knox, in his History of the Reformation, seems to imply that he dispensed this ordinance in the West country before he did it in Calder-house. These facts cast a degree of discredit on the authenticity of the picture, although no doubt exists of the intimacy of Sir James Sandilands, the ancestor of Lord Torphichen, with the reformer.

* In 1510, Mariella Calder, the heiress of this castle and estate, was married off by the Campbells, and married—without much deference probably to her own taste—to the second son of the Earl of Argyle.

by the side of one part of a sloping roof into a kind of channel between two, such as frequently serves to convey rain-water into pipes for a reservoir; by proceeding along this channel, you arrive at the foot of a stone-staircase, which leads up one side of the roof to the right, and is so artfully contrived as to appear a part of the ornaments of the building when beheld at a distance. At the end of this staircase is a room with a single window near the floor. It is said Lord Lovat used to be conducted to this place when his pursuers approached, the ladder being removed as soon as he ascended. When the search was over, and the inquirers gone, the ladder was replaced, by which means he lived comfortably with the family, and might long have remained secure, if he had not quitted the place of his retreat. A remarkable tradition respecting the foundation of this castle is worth notice, because circumstances still remain which plead strongly for its truth. It is said the original proprietor was directed by a dream to load an ass with gold, turn it loose, and, following its footsteps, build a castle wherever the ass rested. In an age when dreams were considered as the immediate oracles of heaven, and their suggestions implicitly attended to, it is natural to suppose the ass—as tradition relates—received its burden and its liberty. After strolling about from one thistle to another, it arrived at last beneath the branches of a hawthorn tree, where, fatigued with the weight upon its back, it knelt down to rest. The space round the tree was immediately cleared for building, the foundation laid, and a tower erected; but the tree was preserved, and remains at this moment a singular memorial of superstition attended by advantage. The situation of the castle accidentally proved the most favourable that could be chosen; the country round it is fertile, productive of trees, in a wholesome spot; and a river, with a clear and rapid current, flows beneath its walls. The trunk of the tree, with the knotty protuberances of its branches, is still shown in a vaulted apartment at the bottom of the principal tower. Its roots branch out beneath the floor, and its top penetrates through the vaulted arch of stone above, in such a manner as to make it appear, beyond dispute, that the tree stood, as it now does, before the tower was erected. For ages it has been a custom for guests in the family to assemble round it, and drink, 'Success to the hawthorn;' that is to say, in other words, 'Prosperity to the house of Cawdor!' King Duncan's chain armour is preserved here; but it is by no means established beyond controversy that it was here that monarch was murdered. There are in fact four different localities fixed on by different antiquarians and topographers as the scene of that bloody deed: viz., Glammis castle, a hut near Forres, Inverness castle, and Cawdor castle.

CALDER (THE), a small river in Renfrewshire, which has its rise in the moorlands on the borders of Ayrshire, and running an easterly course of some miles, intersects the parish of Lochwinnoch, and falls into the loch of that name, about a mile below the village.

CALDER (THE SOUTH), a small river in Lanarkshire, which rises in Elrig muir in the parish of Kilbride, and running a north-east course, falls into the Clyde, on the south bank, near Daldowie. It is in the first part of its course called Park burn; and the Rotten Calder on being joined by the Rotten burn. There are several falls or cascades in its course, and its banks are finely wooded. Mr. Montgomery, in a paper in the *Prize Essays of the Highland Society*, [vol. vi. p. 434,] says: "Greenstone dykes, in passing through the porphyry of this elevated and

hilly district, give rise to many waterfalls. The porphyry decomposes more readily than the greenstone; and the streams, crossing the course of the dykes, carry away the porphyry on their lower side, whilst the greenstone much longer resists the action of the water, and protects the porphyry above. In some places the streams run parallel to the dykes. A beautiful instance of this may be seen at Reeking Linn, a very wild and romantic fall in the Calder. The Calder here runs for several hundred yards parallel to a dyke of very fine-grained greenstone; then, suddenly bending, crosses it, and forms the linn or spout. The banks of the stream are high, and overhung by wood." The Wishaw and Coltness railway is conducted over the valley of the Calder, at the height of 120 feet above the surface of the river, by a magnificent viaduct nearly two furlongs in length, composed of stone piers and abutments, and timber beams on frame work secured in metal sockets. It was designed by Mr. Macneil of London, and executed at an expense under £13,000.

CALDER (THE NORTH), another rivulet in Lanarkshire, which issues from Black Loch in the parish of East Monkland, and falls into the Clyde, on the north bank, a little below the mouth of the South Calder.

CALDER (LOCH). See **CAITHNESS**.

CALDRON LINN. See **THE DEVON**.

CALEDONIANS, an ancient designation of the natives of the northern part of the island of Britain. The Celtic origin of the aborigines of North Britain is admitted even by Pinkerton; but he contends that the Caledonians of Tacitus were not descendants of this race, but Goths from Scandinavia, who settled in Scotland about 200 B.C. He allows the identity of the Caledonians and Picts, though he had—before he completely examined the subject—held the opinion that the Picts were a new race who had come in upon the Caledonians in the third century and expelled them, and that the Caledonians were Cumric Britons; but finding Tacitus, Eumenius, Ammianus Marcellinus, and Bede, opposed, as he imagines, to this idea, he was induced to alter his opinion, and to adopt the theory that the Picts or Caledonians were of Gothic origin. This hypothesis, however, will not bear the test of examination. It is true that Tacitus alludes to the large limbs and the red hair of the Caledonians as indications of their German origin; but such marks of resemblance are not sufficient of themselves to establish the point. The decisive evidence of speech—by which the affinity of nations can alone be clearly ascertained—is here wanting; and as Tacitus, who often refers to the difference of language when treating of the Germans, is silent respecting any similarity between the language of the Caledonians and Germans, it must be presumed that no such resemblance existed, and consequently that the Caledonians were not of German or Gothic origin. The following account of the Caledonians, and of their southern neighbours the Mæatæ, from a fragment of Dio preserved by Xiphilin, certainly coincides better with the descriptions of the Britons of the south, found in the pages of Cæsar and Tacitus, than with those given by the same writers of the Germans. "Of the (northern) Britons there are two great nations called Caledonii and Mæatæ; for the rest are generally referred to these. The Mæatæ dwell near that wall which divides the island into two parts. The Caledonians inhabit beyond them. They both possess rugged and dry mountains, and desert plains full of marshes. They have neither castles nor towns; nor do they cultivate the ground, but live on their flocks and hunting, and the fruits of some trees; not eating fish, though extremely plenteous. They live

in tents naked, and without buskins. Wives they have in common, and breed up their children in common. The general form of government is democratic. They are addicted to robbery, fight in cars, have small and swift horses. Their infantry are remarkable for speed in running, and for firmness in standing. Their armour consists of a shield and a short spear, in the lower end of which is a brazen apple, whose sound, when struck, may terrify the enemy. They have also daggers. Famine, cold, and all sorts of labour they can bear, for they will even stand in their marshes for many days to the neck in water, and in the woods will live on the bark and roots of trees. They prepare a certain kind of food on all occasions, of which taking only a bit the size of a bean, they feel neither hunger nor thirst. Such is Britain, (he had, in a previous part of his work, given a description of the island,) and such are the inhabitants of that part which wars against the Romans." [Apud Pinkerton's Enquiry, vol. i. Appendix, No. IV.]—With regard to the tradition referred to by Bede, as current in his time, that the Caledonians or Picts came from the north of Germany, it cannot, even if well-founded, prove their Gothic origin; for, as Father Innes observes,—“though we should suppose that the Caledonians or Picts had their origin from the northern parts of the European continent, as Tacitus seems to conjecture, and, as it was reported to Bede, that would not hinder the Caledonians from having originally had the same language as the Britons; since it appears that the Celtic language—whereof the British is a dialect—was in use in ancient times in the furthest extremities of the north; at least the Celts or Celto-Scyths were extended to these parts; for Strabo tells us that the ancient Greek writers called all the northern nations Celto-Scyths, or Scyths; and Tacitus assures us, that in his time the Gallic tongue was in use among some of these northern people, such as the Gothini; and the British tongue among others, as the *Estii*.” [Critical Essay, vol. i. p. 72.]—Mr. Pinkerton himself admits that the Celts were the ancient inhabitants of Europe, of which they appear, he says, to have held the most before their expulsion by the other nations of Asia; and in proof of the great extent of their possessions in the north, he refers to the *Promontorium Celticae* of Pliny, which, from the situation he gives it, and the names around, he conjectures must have been near Moscow. The appellation of *Picti*, by which the Caledonians to the north of the Clyde and the Forth came to be distinguished by the Romans in the 3d century, made Stillingfleet and other writers suppose that the Picts were a distinct people, who had then recently arrived in Scotland; but this mistake has been so fully exposed by Innes, Chalmers, Pinkerton, and others, that it is quite unnecessary to do more than barely allude to it. The names of Caledonians and Picts, as well as the appellation of Scots, by which another portion of the inhabitants of the north of Scotland came also to be distinguished, were at all times, as Mr. Grant observes, unknown to the original inhabitants as national appellations, and their descendants remain ignorant of them to this day. He thinks that the term *Caledonii*—the name by which the people living northward of the friths of Clyde and Forth were called by the Romans—was not invented by Agricola, the first Roman general who penetrated into North Britain, but was an appellation taken from the words *Na Caoillain*, signifying ‘the Men of the Woods,’—a name which he probably found given by the inhabitants of the country upon the southern sides of the Glotta and Bodotria, to the people living beyond these arms of the sea, on account of the woody nature of the

country which they possessed. [Thoughts on the Gaël, p. 271.]—The Latinized term *Caledonii* was first used by Tacitus, and—with the exception of Herodian, who, in his account of the expedition of Severus, calls these *Caledonii* of Tacitus, Britons—is the appellation by which the inhabitants northward of the friths are distinguished by all the Roman writers down to the orator Eumenius, who, for the first time, in an oration which he delivered before the Emperor Constantine, in the year 297, calls the Caledonians *Picti*. Eumenius appears, however, to have used this term in a limited sense, as from another oration which he delivered in presence of the same emperor 11 years thereafter, he alludes to the ‘*Caledones alique Picti*,’ but although it is clear from this expression that the terms *Caledonii* and *Picti* were used to denote the same people, the cause of this nominal distinction between the extra-provincial Britons is not so apparent.

The next allusion to the Picts is by Ausonius, a poet of the fourth century, and preceptor of Gratian:

—“*Viridem distinguit glareæ museum
Tota Caledoniis talis pictura Britannis.*”

Claudian, who lived about the beginning of the 5th century, also mentions the Picts.

—“*Ferroque notatas,
Perlegin exanimis Picto moriente figuras.*”

And in another place, where he gives an account of the victories of Theodosius, he says,

“*Ille leves Mauros, nec falso nomine Pictos
Edomuit.*”

About the end of the 4th, or beginning of the 5th century, the Caledonians, or Picts, were divided by Ammianus Marcellinus, the historian, into the *Deucaledones*, and *Veturiones*, a division which seems to account for the distinction of Eumenius before observed. The etyma of these two terms has been attempted by different writers, but without success, as Mr. Grant thinks. The term *Deucaledones* he however thinks, is attended with no difficulty. “*Duchaoilldoin* signifies in the Gaelic language, ‘the real or genuine inhabitants of the woods.’ *Du*, pronounced short, signifies ‘black;’ but pronounced long, signifies ‘real, genuine,’ and in this acceptance the word is in common use: *Du Erinnach*, ‘a genuine Irishman;’ *Du Albinnach*, ‘a genuine Scotchman.’ The appellation of *Deucaledones* served to distinguish the inhabitants of the woody valleys of Albinn, or Scotland, from those of the cleared country on the east coast of Albinn, along its whole extent, to certain distances westward towards the mountains in the interior parts of the country. These last were denominated, according to Latin pronunciation, *Veturiones*; but in the mouths of the Gaël, or native inhabitants, the appellation was pronounced *Uachtarich*. It may be observed, that the western division of Albinn, from the friths northwards along the range of mountains, which was anciently called *Drumalbinn*, consists of deep narrow valleys, which were in former times completely covered with closely growing woods, and which exhibited a different aspect of country from a great portion of that which falls from *Drumalbinn* in all directions towards the east coast of the country, which spreads out in larger tracts of level surface, and is generally of higher elevation than the bottoms of the deep valleys which chiefly form what is called the Highlands of Scotland at this day. The *Veturiones* appeared to possess the more level surface of the country, while the *Deucaledones* inhabited the narrow deep valleys which were universally completely covered with thickly growing woods. That a portion of the country was known in ancient

times by *Uachtar*, is evinced by the well known range of hills called *Druim-Uachtar*, from which the country descends in every direction towards the inhabited regions on all sides of that mountainous range.* [Thoughts on the Origin and Descent of the Gaël, pp. 276, 277.]

CALEDONIAN CANAL, a magnificent line of inland navigation, 60½ miles in length, running through the Great Glen of Caledonia, which extends due south-west and north-east, from the island of Lismore in Loch Linnhe, in 56° 30' N. lat., and 5° 33' W. long., to the Sutors of Cromarty on the Moray frith, in 57° 40' N. lat., and nearly 4° W. long. The general history of this canal, with its objects, difficulties, and defects, are ably stated in Mr. George May's report, addressed to the secretary of the Canal commissioners, under date November 1st, 1837, of which report chiefly the following is an abstract:—

The Caledonian canal was undertaken as one of a series of improvements which had reference to the peculiar situation of this country, and the condition of its inhabitants at the time; and which were pressed on the attention of Government by an accumulation of evidence tending to show the necessity of adopting some means of checking the tide of emigration which then threatened to depopulate the Highlands. By the gradual conversion of the whole country into extensive sheep-walks, a large proportion of the native inhabitants had been deprived of the means of subsistence; and it became an object of immediate urgency to afford employment to such of their number as might at least preserve the remnant of a population, on which, in times of need, such large and serviceable draughts had so often been made for the support of our armies and navies. It could not but happen, moreover, that, by the adoption of the proposed measures, habits of industry would be introduced among the people, which, it was expected, would have a permanent effect in ameliorating the condition of the inhabitants, and improving the face of the country, to both of which facility of intercommunication is the first and most essential requisite. And that those measures, as a whole, have been productive of such results, is now placed beyond the possibility of reasonable doubt. Of this it is unnecessary to refer to any other evidence than the rapidly increased value of property throughout the Highlands generally of late years; and although it cannot be said that in any case the outlays of Government on the public works have been, or are likely to be, refunded by the direct revenues arising from themselves, yet there is still less reason to doubt that a more than adequate return has in reality accrued from the vastly increased produce and consumption which they have been the most important instruments of bringing about. The peculiar formation of the great Caledonian valley,—long, deep, and comparatively very narrow,—and occupied for much the greater portion of its length by a regular chain of inland lakes and extensive arms of the sea,—had long suggested the idea of a canal, which by connecting the whole might afford the means of a navigable communication between the opposite sides of the island. Indeed so marked were its features in this respect, that it must have been difficult to escape the conclusion that Nature had irresistibly invited the hand of man to the completion of such an undertaking. That it should have been selected, therefore, as the most prominent of those measures which had for their leading object the improvement of the Highlands, and the training of the inhabitants to useful habits of industry, is by no means surprising; and the only doubt that appeared to exist was as to the scale on which the proposed navigation should be con-

structed, so as not merely to answer the immediate purposes alluded to, but ultimately to afford the greatest prospect of advantage in a national and commercial point of view.

In addition to the ordinary class of coasting-vessels, there was every prospect of this canal being resorted to by many of the Baltic and West Indian traders, both in their homeward and outward-bound passages to and from the opposite sides of the kingdom, and particularly to Ireland at certain seasons of the year. This consideration, when coupled with the natural facilities that appeared to present themselves in the physical condition of the valley and its extensive lakes, suggested the probable advantage of constructing it on a larger scale than any which had previously been attempted in this department. By adopting the proposed route, it was calculated that a dangerous and tedious tract of navigation, extending nearly 300 miles around the north-western coast and islands of Scotland, would be saved to all vessels having occasion to trade in this direction to the opposite sides of the kingdom; and it was considered an important addition to the saving of ordinary sea-risk, that, during a period of war, vessels might avoid the danger and loss to which they would otherwise be exposed along a line of coast peculiarly liable to be infested in the event of hostilities with America or any of the northern states of Europe. It was therefore proposed by Mr. Telford* that the intended canal should be formed of a size to admit the largest class of Baltic and American traders, or such as to pass on occasions of emergency a 32-gun frigate fully equipped, for which it was estimated that a uniform depth of 20 feet water would be necessary, with locks measuring 170 feet long by 40 feet in width. The original estimate by Mr. Telford for executing the work on this scale amounted to no more than £350,000; and the period of its completion was computed at seven years. There was nothing to prevent the possibility of its fulfilment within the specified period, provided a sufficient number of workmen had been employed, and the necessary funds afforded for overcoming every natural obstacle that occurred. It was no doubt partly, however, with a view to the saving of expense that the works were, in reality, protracted so much beyond the period calculated upon; for in order to have the advantage of canal-conveyance for the requisite materials, the buildings in the middle districts were not commenced until the eastern and western portions of the line had been so far completed at least as to be conveniently navigable. Besides, during the progress of the late war the rise which took place in the prices of all descriptions of commodities, as well as of food, and consequently of labour and workmanship, was unprecedentedly rapid; so much so, that from the year 1805, when the canal works were commenced, to the years 1812 and 1813, the difference in many articles had increased to 50, 70, and even 100 per cent. Another source of unlooked-for expenditure is to be attributed to the great extent of dredging, a process hitherto untried upon anything like so large a scale. It was on the Caledonian canal that steam-power was first applied to this operation; and although it was latterly brought to a much more effective degree of performance, yet it may easily be conceived that in its earlier stages it was attended with greater difficulties and consequent expense than the projector of a work, to which its use and application were entirely subordinate, could reasonably be expected to

* In 1774 the celebrated James Watt surveyed this line, and gave an exceedingly accurate detail of it. He proposed the execution of a smaller canal, with locks 25 feet wide and 10 feet deep.

nave calculated upon. Many unforeseen difficulties occurred to prevent the canal being opened until several years after the period originally contemplated. Year after year, during the whole progress of the work, the inaccuracy of the original estimate becoming more evident, a strong feeling was at length manifested against further advances of public money, or renewing the annual application to parliament for further grants: and under these circumstances the commissioners were led, in the year 1822, to open the canal when only partially completed. In that unfinished state, fit only for very limited use, the canal has ever since continued. This premature opening of the canal occasioned numerous accidents to the works, and entire failures of certain portions of them, the repairing of which has been the source of continual expense, and has frequently caused the navigation to be interrupted. The total cost of the canal up to the period of its being opened, amounted to the sum of £905,258; and the outlay, to the latest period to which the accounts have been made up, is £1,023,628 19s. 6d. This sum is composed of the following items:

Payments for land and damages	£48,000
Payments for management and law	43,500
Payments for timber and iron-work	205,000
Payments for quarries and masonry	200,000
Payments for labour	494,000
Shipping, houses, roads, and incidental expenses, including interest on money borrowed (about)	3,128
	£1,023,628

One of the most difficult operations that occurred in the formation of the canal was the construction of the north-east entrance or sea-lock, at Clachnaharry, on the Beaully frith. Here, on account of the flatness of the beach, it was necessary to throw out artificial mounds for about 400 yards into the sea, to attain the required depth of water; and the bottom was found to consist of a kind of soft mud or silt, which was quite unfit to bear the weight of a solid structure of masonry. The entrance to the sea-lock here, however, was effectually deepened by a steam dredging-vessel in the early part of 1838; and the whole masonry, and gates of this lock are at present in good order. From the Muirtown locks—a series of four, about a mile distant from the stone bridge of Inverness—the canal extends in a level reach for about 5 miles to the regulating lock at Dochgarroch, at which there is no rise, its purpose being merely to avert the winter-floods of Loch Ness, whenever they should rise above the standard-level of the navigation. The distance from Loch Beaully to the small loch of Dochfour, at the north-east end of Loch Ness, is 6 miles 35 chains.—The navigable channel through the shallows in Loch Dochfour and into Loch Ness was dredged to the full depth, but not sufficiently wide for the commodious passage of large vessels. Great inconvenience is also felt from the want of a regular towing-path along the north-west side of Loch Dochfour; for vessels can only be tracked along the shore at present when the lake is in a low state, and much difficulty and delay are here experienced in warping against contrary winds in other cases. In proceeding westwards, there is likewise a considerable current to contend with, when Loch Ness is much flooded. The length of the navigable channel through Loch Ness is 23 miles 56 chains. The difficulties encountered in effecting the requisite entrance from the upper end of Loch Ness, although of a very different kind, were not less formidable than those experienced in connecting the canal with the tideway at Clachnaharry. With the intervention of a short space of deep cutting, to form the entrance channel, there are five united locks at Fort Augustus.—From Fort Augustus to the north-

east end of Loch Oich is a distance of 5 miles 35 chains, in which the Kytra and Aberchalder locks occur. The ordinary summer-level of Loch Oich, in its natural state, was that calculated on for the eventual purposes of the canal; and the Aberchalder regulating lock was so adapted to it as to afford a depth of 20 feet over its upper gate-sills. The lake being in many places quite shallow, it was proposed to excavate the navigable channel by dredging to a corresponding depth; but this proved to be a far more arduous and expensive operation than was at first expected. This lake, in very dry weather, occasionally sinks much below the level required for the purposes of the navigation. It has been seen as low as 18 feet on the upper Aberchalder lock-gate: thus reducing the available depth on the shallows of Loch Oich, in extreme cases, to 12 feet,—which however only takes place after a long tract of dry weather. At other times the lake rises considerably above the present standard-level of the navigation. On the occasion of the great flood in November 1834, the water rose to a height of 27 feet 3 inches over the upper gate-sills of Aberchalder lock. This shows an extreme variation in the level of Loch Oich of upwards of 9 feet, which is far too much for the commodious working of the navigation, and indeed is such as to render it utterly impracticable in cases of very high flood. The chief inconvenience at present experienced in Loch Oich, however, is from the scarcity of water; for there are few summers in which it does not fall more or less below the standard top-level. In extreme cases, recourse has been had to supplies from Loch Quoich, in Glengarry, across the outlet of which a sluice-gate was constructed for the purpose of retaining the water and allowing it to fall into Loch Oich; but generally before it became needful to adopt such means, the water in Loch Quoich itself was so much reduced by evaporation, or had otherwise escaped in various ways, that this source of supply has not proved of any great importance. Approaching the south-western end of Loch Oich, the level of which is carried through the deep cutting along the summit-land at Laggan, there are portions of the navigable channel which have not been fully deepened, even to the extent of 15 feet below the present top-level, and other portions which, having been so deepened, appear to be in the act of gradually filling up by a species of soft mud or quicksand. The length of the navigation through Loch Oich is 3 miles 56 chains.—At the south-west termination of the summit-level are situated the two Laggan locks, descending to the level of Loch Lochy; the first operating merely as a regulating lock to meet the occasional flooding of Loch Oich; and the other having a fall of 9 feet 6 inches, to suit the difference of level between the two lakes. The length of canal-cutting between the south-west end of Loch Oich and the north-east of Loch Lochy is 1 mile 65 chains. Through the narrows at the north-eastern end of Loch Lochy, the navigable channel requires to be deepened for some hundred yards by dredging. In several places at present it wants at least 5 feet of the full complement of water; and there are portions which are liable to be filled up by the storms of the lake, as well as by the gradual accumulations caused by the streams which fall down the sides of the adjacent mountains. There is nearly a similar deficiency at the south-western end of the lake. The surface of Loch Lochy extends about 11 miles in length, and may be reckoned to have a mile and a half of average width. Its area is about 6,000 acres. It was part of the original design that this great sheet of water should be raised for the purposes of the navigation about 12 feet

above its natural level; and this was actually effected by closing up the former egress by the river Lochy—the site of which is now occupied by the canal—and forming a new outlet through the lands of Mucomer at a proportionally higher level; so that the waters of the lake are now discharged into the river Spean, which formerly joined the river Lochy about half-a-mile below. Across the new outlet a permanent wear is partly constructed of masonry, and partly excavated from the solid rock, over which the water falls into the river Spean. The object of this wear was of course to preserve and regulate the requisite level of the lake; but it would appear that the portion of the overfall which is cut out of the rock has been made somewhat too low, for in periods of extreme drought it is found to allow the surface of Loch Lochy to fall about a foot below the line of top-water, or 20 feet, as indicated upon the upper gates of the Gairloch regulating lock. There is also a considerable discrepancy between the level of the upper gate-sills of Gairloch lock and the lower gate-sills of the Laggan lock; and the discrepancy in question is either aggravated or diminished according to the state of the winds, which, when blowing anywise fresh, are found to have a very sensible effect in accumulating the waters of all the lakes towards the end to which the wind happens for the time to be directed. When Loch Lochy is in a state of calm, while there is a depth of 20 feet upon the upper gate-sills of Gairloch lock, there is somewhat less than 19 feet upon the lower gate-sills of Laggan lock. Consequently, when the surface of the lake falls a foot below top-water at Gairloch by reason of the deficient height of the overfall at Mucomer, there would barely be 18 feet over the entrance of the lower Laggan lock, which is at least 2 feet below the minimum level required for the indispensable purposes of the navigation. A far more serious evil, however, than the deficiency of water in Loch Lochy, arises from an opposite cause, namely, the excessive height to which the lake in its present state is liable to rise on occasions of very heavy floods. On the 24th November, 1834, the water rose to the height of 29 feet 3 inches, with reference to the scale which applies to the upper lock-gates at Gairloch.—The canal-reach from Gairloch to the head of Bannavie locks extends about 6 miles in length; and along this part of the line the water cannot at present be conveniently or safely maintained at a greater depth than 15 or 16 feet. At a part of this reach the navigation is likewise subject to a very troublesome and injurious obstruction, arising from the burn of Moy, which empties into the canal, and brings down during sudden floods immense quantities of gravel and rubbish, which are deposited in it.—At Bannavie there is a connected chain of eight locks, which is the greatest number united together along the line, there being only five so united at Fort Augustus, and four at Muirtown. To pass sailing-vessels through the whole series of these locks generally occupies from three to four hours, particularly if there is any wind, and even steam-boats take upwards of two hours and a half. When several vessels are proceeding in opposite directions, therefore, it is impossible to pass more than three or four sets in the course of a long day; and it is only on the supposition that all the vessels are proceeding in the same direction that a greater number could be accommodated.—The canal reach between Bannavie and Corpach is in a tolerably complete state, but the banks have subsided somewhat below top-level, and would require to be raised to admit the full complement of 20 feet water. The sea-lock at Corpach, although constructed of rubble work, is a sound, substantial piece of masonry.

The lock-gates consist entirely of oak-framing and planking, and were the earliest constructed of any on the line of the canal. Mr. May states, as an additional remark which is applicable generally to the whole line of the canal, that the banks, even although they had been finished in all places to their proper height and breadth, are not, according to their present construction, at all adapted to the wants of the navigation in respect to its being now used by steam-boats. In the event of an increased resort of steam-boats to any considerable extent, whether for the purpose of towing or for the conveyance of passengers and goods, the banks would be found unfit to withstand the violent action of the water; and indeed they have already been a good deal cut up from this cause, and the materials of the top bank forced down upon the side-slopes and bottom of the canal.

One of the most serious accidents to which canals are liable arises from the very possible circumstance of vessels, either by dint of tempestuous weather or casual mismanagement of the persons in charge of them, coming into such violent collision with any of the lock-gates as to carry them away. This danger is, moreover, enhanced very much in the case of the Caledonian canal by the peculiar arrangement of the locks, which—instead of being separated from one another by intermediate basins as in other navigations—are in several instances clustered together in a way which, however well-calculated to save expense in the original construction of the canal, is attended with certain disadvantages in its practical working, of which that under immediate consideration is none of the slightest. “In order to illustrate these positions,” says Mr. May, “we shall suppose a particular case, and examine its bearings upon the present question. At Bannavie, for instance, there are eight united locks, and nine pair of gates in successive descent, each having, when in a state of inaction, its regular head of seven or eight feet of water. Now, let us imagine a heavy vessel approaching the top of these locks after nightfall, with a strong breeze of favourable wind, and that, sufficient attention not being paid to checking its course in proper time, it comes against the upper pair of gates with such force as—aided by the pressure of water already upon them—to bear them down before it. The vessel is, of course, precipitated into the first lock with all the effect due to the sudden rush of a head of seven or eight feet of water into it; and the inevitable consequence is, that it strikes violently against the second pair of gates, which having now a head of 15 or 16 feet of water upon them, are easily broken down. In like manner the vessel is precipitated with accumulated force through all the successive locks until it falls into the reach below; thus involving the total destruction of nine pair of gates, all consequent upon the incidental failure of the upper pair. Reckoning, then, the expense of each pair of gates at the moderate computation of £1,000, we have, in the first instance, an aggregate loss of £9,000 as the immediate effect of a casualty which is liable to occur at any moment; and I do not at all exaggerate when I say that some years would necessarily elapse before the gates could be reconstructed, and the canal restored to its former state of operation. But the damage contingent upon the supposed accident would by no means end here. The instant effect of the destruction of the Bannavie lock-gates would be to empty the whole reach between that place and Gairloch lock, the gates of which being then deprived of their present counteracting support would almost to an absolute certainty yield to the pressure of the water above; and if we supposed Loch Lochy to be in a flooded

state at the time, the whole waters of that lake, to the depth of from 20 to 30 feet, would be suddenly discharged into the valley below, involving not merely the utter annihilation of the canal-works, but the most extensive ravages of life and property throughout the whole district between Loch Lochy and the sea. It will no doubt appear somewhat strange to you, but it is assuredly the fact that all these appalling consequences would almost inevitably ensue from the incidental failure of a single pair of gates, either at the Bannavie or Gairlochy locks. It is almost needless for me to say that effects of a precisely similar kind, though proportionally of less extent, would follow from any accident to the lock-gates at Fort-Augustus, where there are five united locks and six successive pair of gates; or at Muir-town, where there are four united locks and five pair of gates; and indeed there is not a situation on the line where such an occurrence could take place without necessarily involving the total interruption of the navigation from sea to sea for greater or less periods, and expenses to a very serious amount, setting aside entirely the contingent damages to which it might in all probability lead."

The rate hitherto charged has been an uniform one for all classes of vessels that use the navigation of the Caledonian canal, and is charged upon the registered tonnage of the vessel according to the distance passed, without reference to the cargoes carried or to goods loaded or shipped at any part of the line. This was the mode of charging dues originally fixed on by the commissioners, and the present rate is one farthing per ton per mile, according to the registered tonnage of the vessel; but the Canal acts authorize a charge of 2d. per ton per mile, without specifying whether it should be calculated on the registered tonnage, the actual tonnage carried, or at various rates according to the description of goods. The following is a statement of the number of vessels passing through the canal, from 1828 to 1839:—

		From West to East sea.	From East to West sea.
For the year ending 1st May, 1828		110	130
Do. 1829		150	166
Do. 1830		163	202
Do. 1831		152	171
Do. 1832		143	182
Do. 1833		155	179
Do. 1834		151	197
Do. 1835		128	160
Do. 1836		189	238
Do. 1837		216	249
Do. 1838		176	245
Do. 1839		226	328

It has to be observed that interruptions, occasioned by the repairs of the works and otherwise, occurred during some of the above years, which, of course, lessened the number of vessels that would have passed during those years; but none of these interruptions were nearly of such duration as that during the winter of 1837–38, when the navigation was rendered impracticable for about a month by a failure in the works at Fort Augustus, and two months more by the unprecedented frost that soon after set in. The following table shows the number of vessels which have navigated the Caledonian canal in each year since it was opened to the public in October 1822:—

	Passages from Sea to Sea.	Passages on parts of canal.	Passages by Steam- boats.
From Oct., 1822; to 1st May, 1823	37	—	—
In the year ending 1st May, 1824	278	566	134
Do. 1825	476	517	149
Do. 1826	338	488	119
Do. 1827	281	419	66
Do. 1828	240	483	159
Do. 1829	316	463	154

Do.	1830	365	416	221
Do.	1831	323	531	207
Do.	1832	325	778	143
Do.	1833	334	586	162
Do.	1834	328	486	165
Do.	1835	283	494	248
Do.	1836	477	502	235
Do.	1837	465	578	199

One of the temptations to make a canal at all, and particularly of this great size, from Loch Eil to the Beaully frith, was the apparent facility afforded by the three lakes which lie in almost a continuous line, and are for the most part of ample width and depth: viz. Loch Lochy, 10 miles; Loch Oich, 4 miles; and Loch Ness, 23½ miles; together 37½ miles; thus leaving of the whole length of 60½ miles, only 23 miles of canal to make. That the cost of making the canal has been much reduced, probably more than half, by the lakes, cannot be doubted; but it is equally apparent, Mr. Walker states, that they are now great hinderances to the passage of vessels. From lying in the trough or hollow between two ranges of mountains, the wind blows always parallel to the line of the canal, so as necessarily to be a foul wind in one direction. From the rocky nature of the banks, and their crooked irregular shape, tracking through the lakes is impossible. The width of Loch Lochy and Loch Ness is sufficient for vessels of about 100 tons to work when once fairly in the lakes; but there is a great difficulty in warping against a strong head-wind to reach this, and great danger also from the rocky shores in case of a vessel missing stays. Therefore, working or tacking through the lakes is seldom attempted; and the consequence is, that the passage of 60 miles, which were tracking practicable for the whole length, might be accomplished generally in three to four days, often takes as many weeks, even a month is not unusual, and cases of five weeks have been known. The evil is increased by the westerly winds which prevail for eight or nine months of the year, and are opposed to the passage of vessels proceeding from the east to the west end, which is the direction of what ought to be the greatest trade on the canal. To prevent the delay—sometimes three or four months—of going through the Pentland frith and round Cape Wrath during westerly winds, was one of the principal objects of the canal, which is thus in a great measure defeated. A very few hours of a steam-tug would have set the whole at liberty. The approaches to the canal from the estuaries at each end are subject to the same inconvenience. The want of depth in the canal and portions of the locks is another great drawback upon the use of the canal. This arises partly from the excavation of the canal never having been completed, partly from the wears at the ends of the locks not being sufficient to support the depth of water, and partly from the great leakage in parts of the canal. The average of tonnage passing through the canal, exclusive of steam-boats and local traffic, has been about 25,000 tons per annum, without much increase or diminution, during the last ten years. It would appear that the present traffic on the canal is not probably 2½ per cent. of the whole trade going through the Pentland frith; and, from what has been seen, the canal is not capable, in its present state, of receiving vessels of any considerable tonnage, which, indeed, never attempt it. During the last seven years, only one vessel of 240 tons has made the passage. The gross receipts of the canal have not exceeded £2,500 since the rates were reduced from a halfpenny to a farthing per ton per mile; the expense of repairs, working and superintendence, have exceeded £3,000,—an amount which

is considerable for the trade done; but the expense is increased by the bad repair and unfinished state of the works, the canal works are made for a trade of much larger vessels, and the expense of them is almost the same as if such vessels, to ten times the present number, were to pass. If the works were finished and put into good repair, the expense would undoubtedly be lessened. The expense of the repairs and finishing necessary, Mr. Walker estimated at £129,317. But to complete the establishment, three steam vessels should be calculated on for the canal: namely, one for Loch Lochy of 40 horses power, one for Loch Oich of 40 horses power, and one for Loch Ness of 50 horses power. To do full justice to the navigation, and add to the certainty of despatch, there ought also to be a steamer in the Murray frith, to bring vessels from Fort George to the eastern entrance, and from Corran ferry, or even the sound of Mull, to the western entrance. The amount for steam tug-boats, with 10 per cent. for contingencies, added to the repairs and improvements before stated, make a gross amount of £143,837, or, in round numbers, £150,000 for putting the canal in complete repair, making it proper for all vessels of 38 feet beam, and 17 feet draught. With these improvements and additions, the passage from Fort George to the sound of Mull might generally be depended on to be made within four days, and certainly, even in foul weather, within a week.

In addition to Mr. Walker's report, the commissioners also received a report from Sir W. E. Parry on the navigation of the canal, and the probability of its being used to very considerable extent, if the improvements recommended by Mr. Walker were carried into effect. Sir Edward reported that although, at the time of the formation of the Caledonian canal, when 40 miles of this navigation could be accomplished only by the power of the wind, with a very contracted space for "turning to windward," and very doubtful means of anchoring, it would have been most imprudent to risk a vessel of any considerable tonnage in these lakes, even if the depth of water had been sufficient throughout, he concluded that steam navigation has entirely altered the state of this question in a nautical point of view, obviating every difficulty, both as to security and speed; that if steam-tugs of moderate power were employed on the lakes, and a sufficient number of horses provided for towing in the canal, he was of opinion that the time occupied in passing from Fort George on the one side to Corran ferry on the other, need not, except in extraordinary cases, exceed 40 hours in summer and 72 hours in winter.

Sir Edward was of opinion that the amount saved, and the expense incurred, by going through the Caledonian canal, say for a vessel of 200 tons, with an insurance for £5,000, as the value of ship and cargo, and for a vessel of 300 tons, with an insurance for £10,000, might stand thus:

Amount saved.	For 200 tons.	For 300 tons.
Nine and a-half days' wages, victuals, and wear and tear,		
Difference of insurance, being the mean of summer and winter, in the proportion of 24s. 1d. to 38s.	£25 15 4	£37 9 8
	22 5 10	44 11 8
Amount saved,	48 1 2	82 1 4
Expense incurred		
Canal dues at one farthing per ton per mile,	12 18 4	19 7 6
Difference, in favour of the Caledonian canal,	35 2 10	62 13 10
Ditto, supposing the dues to be doubled,	£32 4 6	£43 6 4

In the foregoing computation, no account is taken of the saving to the merchant which a quicker and more certain passage must often produce.

Taking into consideration both these reports, the committee recommended that Mr. Walker's report of 1839 should be immediately acted upon, by the establishment of steam-tugs, and other measures therein recommended. They thought that the trade in that case would so increase as to afford a fair return for the outlay. They agreed with Sir E. Parry that such would be the saving to vessels using the canal in preference to the north about passage, that the dues may safely be doubled. The debt due from the commissioners of the canal is £51,568. If the canal were to be abandoned, it would cost at the lowest estimate £40,000 to restore the waters of Loch Lochy to their original level. But they did not think it would be expedient to sacrifice the £91,561, when a small sum—comparatively—would effect its efficient repair. The committee, therefore, recommended the completion of the canal, according to the reports of Sir E. Parry and Mr. Walker, and that the necessary steps should be taken without delay, and such changes made in the constitution of the board of commissioners, as would insure a constant superintendence of the works. These recommendations are now being carried into effect, and a contract has been entered into for the execution of the engineering works, amounting to £136,000, which will occupy a period of three years from their commencement in Oct. 1843.

CALFA, a small island of the Hebrides, near Tiree.

CALLADER (Loch), a small lake, 2 or 3 miles in circumference, in the district of Carthy, Aberdeenshire. It discharges its waters into the Clunie a tributary of the Dee.

CALLANDER, a parish in the district of Menteith, Perthshire; bounded by Balquhider and Comrie on the north; Kilmadock on the east; by Port-Menteith and Aberfoyle on the south; and by Buchanan on the west. From the banks of the Teith, the parish extends amongst the Grampian hills, about 18 miles in length; its greatest breadth is about 6. The appearance of the country towards the west and north is mountainous, and gloomy from the extent of black heath. The higher grounds are here and there clad with oak-woods and thriving plantations; and a bold stupendous rock called the Crag of Callander diversifies the scene, and forms a striking contrast to the valley and the meanderings of the rivulets below. That branch of the Teith which issues from Loch Lubnaig, unites, a few hundred yards above the village, with the branch issuing from Loch Vennachar; and forms a fine peninsula. The soil is a rich loam, in some places capable of high cultivation; but in general it is a light gravel. The arable land is mostly enclosed either with stone-dikes or hedge-rows. Callander is remarkable for the wild and romantic scenery of its prospects. Above the Trosachs, Benledi, Benvenue, and other lofty mountains, raise their rocky heads; while the valleys everywhere exhibit beautiful expanses of water formed by the Teith, which is immediately after poured over perpendicular precipices. Near Loch Lubnaig—of which one-half lies in this parish—the scenery is very grand, and finely ornamented by the woods and pleasure-grounds of Kinnaird, once the seat of Bruce, the Abyssinian traveller. There is a quarry of limestone, or rather marble, on the estate of Leny, the ground of which is a deep blue, with streaks of white. Slate is wrought in many places. In Benledi, a vein of lead ore was wrought; but the expense was found to be greater than the produce.

and it was given up. There are several remains of supposed fortifications on the hills; and near the manse are some relics of a castle, which was built or repaired, in 1596, by the Earl of Linlithgow, but mostly taken down in 1737. Population of the parish and villages, in 1801, 2,282; in 1831, 1,909. Houses, in 1831, 316. Assessed property, in 1815, £7,208.—The parish of Callander, formerly a chapelry dependent on Inchmahome, is in the presbytery of Dunblane and synod of Perth and Stirling. Patron, the Crown. Stipend £197 14s. 11d., with a glebe of the value of £20. Church built in 1773; sittings 638.—There is an Independent chapel in the village; sittings 140.—Schoolmaster's salary £34 4s. 4d., with about £40 fees. There are two schools, not parochial, supported by the society for propagating Christian knowledge.—The village of Callander, 5½ miles west-north-west of Edinburgh, 16½ north-west of Stirling, and 14 south of Lochearnhead, is beautifully situated on both sides of the Teith, over which there is here a bridge of three arches, which connects the old and new part of the village. It is built on a regular plan, and the houses are good and slated. The surrounding scenery is remarkably beautiful. A settlement for the soldiers discharged after the German war was established here by Government in 1763; and since that time Callander has been gradually increasing. The introduction of the cotton-manufacture also gave it a new impetus: in the weaving of muslin, about 100 looms used to be employed in Callander and the adjoining village of Kilmahog. There is a large and excellent inn in the village. The church stands on one side of a sort of square: it has a pavilion-roof, with a spire over the pediment. The village contained, in 1836, 1,100 inhabitants. Thursday is market-day. It has five annual fairs: viz., 10th March O. S., or 21st N. S. for black cattle; 1st Thursday in May O. S.; and 15th N. S.; 1st Thursday in August O. S.; and 9th October. There is a branch of the Bank of Scotland here.—Two miles west of the village is the celebrated PASS OF LEXY: which see. The bridge and falls of Bracklin, in the immediate neighbourhood, also deserve to be visited by the tourist: see article BRACKLIN. The distance from Callander to the first opening of the Trosachs is about 10 miles: see article THE TROSACHS.

CALLENDAR, an estate and seat in the shire of Stirling and parish of Falkirk. The house is ¼ mile south-east of Falkirk. The estate having been confiscated immediately after the rebellion in 1715, was sold about the year 1720; and such tithes as were not conveyed with it, were disposed of by the commissioners and trustees of the forfeited estates in Scotland, to Hamilton of Ditchmond, under the express stipulation that they should be subject to the stipend of a minister for the new parish of Polmont. The mansion is a fine old building with walls of great thickness. It is surrounded by a park of about 400 acres in extent, containing some fine wood. Among these, the Dool tree, on which the old barons of Callendar caused delinquents to be hanged, stood in front of the mansion-house; until, owing to the total decay of its roots, it fell in 1826. It was a huge ash, and at least four centuries old. Callendar formerly gave the title of Earl to the family of Livingstone, attained in the person of James, fifth Earl of Linlithgow, and fourth of Callendar, in 1715. On the forfeiture of that family, the estates were purchased by the York Buildings company, whose estates were afterwards sold for the benefit of their creditors. Callendar and Almond were bought, in 1783, by William Forbes, Esq., the father of the present proprietor. During the time

that Lord Errol held the lease of Callendar estate, nearly 500 acres were totally covered with furze and broom. His Lordship offered a long lease of this land to a smith in Falkirk at 2s. 6d. per acre, on condition that he would clear it from all encumbrance, and render it arable; but the offer was rejected from a conviction that it would be a losing concern! The land now lets at from £3 to £5 per acre. About 50 years ago, Lord Errol paid a rent of about £780 for the whole estate of Callendar, with power to cut down and sell as much timber as he pleased; at the present day, this estate draws at least £20,000 yearly.—Callendar-house has been the scene of important events; it was frequently visited by Queen Mary; and was stormed and taken by Cromwell, on his march to the Tor-wood to give battle to Charles II.—Nearly opposite to the house an earthen wall, of considerable height and thickness, branches off from Graham's dike, towards the old castle of Almond. From thence towards the east, there are few or no certain traces of it to be seen; but it may be presumed that it was extended to Linlithgow, where a Roman camp existed on the spot on which the palace was afterwards built. It has no fosse; and being broad at the top, was probably intended to be a road, as well as a line of defence: see article FALKIRK.

CALLIGRAY, or KILLIGRAY, one of the Western isles, in the district of Harris. It is situated about 1½ league east of Bernera, and is about two miles long, and one broad. The southern end is a deep moss, almost entirely uncultivated; the northern is an early soil, which is cultivated with care. The inhabitants are chiefly supported by fishing. In the north end of the island are faint traces of a very ancient building, called *Teampull na h' Annait*, 'the Temple of Annat,'—a goddess of the Saxon mythology who presided over young maidens.

CALTON, a suburb of Glasgow. See GLASGOW.

CALTON, a suburb of Edinburgh. See EDINBURGH.

CALTON-HILL, a rounded eminence in Edinburgh, rising abruptly from the southern termination of the ridge on which Prince's-street is built, and forming, on the south-western side, the continuation of the northern side of the valley by which the ridge of the High-street is separated from that of the New town. Between it and the Prince's-street ridge, a deep and narrow hollow is formed, which winds eastwards round the base of the hill, and is lost in the plain that extends to Leith. From the summit, it slopes gently toward the south-east. To the north-west it exhibits an abrupt and rounded face, in the same manner as the Castle-rock. Its elevation above sea-level at Leith is 344 feet. Its great mass is composed of claystone-porphry and trap-tufa. With its fissured, cracked, and crumbled appearance, the Calton-hill would present an emblem of instability and desolation, were it not partly covered with buildings, and placed in the midst of a city unrivalled for its beauty. According to Professor Henderson, the latitude of the Calton-hill observatory is 55° 57' 33" North; but in the Calton-hill Observations [Vol. I. Intro. p. xxxviii] it is stated at 55° 57' 23" North. The latitude of Greenwich observatory is, according to Mr. Airy, 51° 28' 38" North.

CAMBRAY. See CUMBRAY.

CAMBUS, a small village in the parish of Alloa, Clackmannan; 2 miles west of Alloa, and 1 south of Tullibody; at the confluence of the Devon with the Forth. There is here an extensive distillery.

CAMBUS-BARRON, a village in Stirlingshire, 2 miles west of St. Ninians. There are woollen and waulk mills here.

CAMBUSKENNETH, an abbey founded by David I., in 1147, on a sort of peninsula formed by the Forth, about a mile to the north-east of Stirling. The adjacent fields are supposed to have been the scene of some transaction in which one of those Scottish monarchs who bore the name of Kenneth was concerned; and hence the place received the name of *Camus-kenneth*, which signifies 'the Field or Creek of Kenneth.' The situation was both pleasant and convenient, in the midst of a fertile country, where the community could be supplied with all sorts of provisions, and plenty of fish from the neighbouring river. As soon as the house was fit to receive inhabitants, it was planted with a company of monks of St. Augustine, or Canons-regular, who were translated from Aroise, near Arras, in the province of Artois in France: an order afterwards so numerous in Scotland as to possess no less than twenty-eight monasteries in the kingdom. This abbey was sometimes called the Monastery of Stirling, from its vicinity to that town; and the abbots are often designed, in the subscriptions of old charters, "abbates de Striveling." The church which belonged to it was dedicated to St. Mary. Hence a lane leading from the High street in Stirling to the monastery still goes by the name of St. Mary's wynd. The first abbot of Cambuskenneth was called Alfridus; but of him and his successors, for 3 centuries, we have nothing memorable on record. In 1326, the clergy, earls, and barons, with a great number of an inferior rank, having convened in this abbey, swore fealty to David Bruce, as heir apparent to the crown, in presence of Robert his father; as also to Robert Stewart, grandson of the king, as the next heir, in the event of David's death without issue. A marriage was, at the same time, solemnized between Andrew Murray of Bothwell, and Christian Bruce, sister of King Robert. During the wars with England, in the reign of David Bruce, the monastery was pillaged of all its most valuable furniture. The books, vestments, cups, and ornaments of the altar, were carried off. In order to the reparation of this loss, William Delandell, bishop of St. Andrews, made a grant to the community of the vicarage of Clackmannan. From the beginning of the 15th century, we find the abbots of this place frequently employed in important national transactions, or advanced to the highest civil offices. Henry, abbot of Cambuskenneth, after having given proofs of his political abilities in an embassy to England, was, in 1493, raised to the office of high-treasurer of Scotland, which he held only a short time. He died in 1502, having held the abbotsip above thirty years. He was succeeded by David Arnot, formerly archdeacon of Lothian; who, after having been six years at the head of this abbey, was, in 1509, preferred to the bishopric of Galloway, to which the deanery of the chapel-royal of Stirling was annexed. The next abbot was Patrick Panther or Panter, who was reckoned one of the most accomplished scholars of that age, as well as an able statesman. He was secretary to James IV., who also raised him to the dignity of a privy-councillor. To his pen, the Latin epistles of that monarch were indebted for that purity and elegance of style which distinguished them from the barbarous compositions of the foreign princes with whom he corresponded. He was also appointed preceptor to the King's natural son, Alexander Stewart, afterwards archbishop of St. Andrew's, whose uncommon progress in literature is so much celebrated by Erasmus, under whose tuition he sometime was. David Panther—said to have been a nephew or some other near relation of the above Patrick—was commendator of this abbey in the latter end of the reign of James

V. and the minority of Queen Mary. His first office in the church was that of vicar of Carstairs, near Lanark; he was afterwards prior of St. Mary's isle in Galloway; next, commendator of Cambuskenneth; and, last of all, he was raised to the see of Ross in 1552. He was an accomplished scholar, and admirably skilled in the Latin language.—In 1559, the monastery was spoiled, and a great part of it cast down by the reformers, who, however laudable their intentions were, proceeded, in some instances, to the execution of them in a tumultuary manner. Several of the monks embraced the Reformation; and, on that account, had their portions withdrawn by the Queen-regent. David Panther was the last ecclesiastic who possessed the lucrative abbotsip of Cambuskenneth. John Earl of Marr, afterwards Regent, had the disposal of the revenues of Cambuskenneth. He had, during the reign of James V. been appointed commendator of Inchmahome. After the Reformation had taken place, one of his nephews, Adam Erskine, was commendator of Cambuskenneth. In 1562, by virtue of an order from Queen Mary, and the privy-council, an account was taken of all the revenues belonging to cathedrals, abbeys, priories, and other religious houses, that stipends might be modified to the reformed clergy, who were to have a third of the benefices. According to that account, the revenues of Cambuskenneth were: £930 13s. 4½d. Scots money; 11 chalders, 11 bolls, 2 firlots of wheat; 28 chalders, 12 bolls, 3 firlots, 3 pecks, 2 lippies of bear; 31 chalders, 6 bolls, 3 firlots, 3 pecks, 2 lippies of meal; 19 chalders, 15 bolls, 3 firlots, 3 pecks, 2 lippies of oats. In whole, 91 chalders, 15 bolls, 1 firlot, 2 pecks, 2 lippies. The barony of Cambuskenneth, in which the monastery stood, was settled by the Earl of Marr upon Alexander Erskine of Alva, whose posterity continued in possession of it till the year 1709, when it was purchased by the town-council of Stirling for the benefit of Cowan's hospital, to which it still belongs. The fabric of the abbey was once large and extensive; but nothing of it now exists, except a few broken walls, and a tower which was the belfry. Some remains of the garden are to be seen; and the burial-place, where James III. and his Queen are interred. There is no vestige of the church. Tradition reports that one of the bells was for some time in the town of Stirling, but that the finest was lost in its passage across the river.

CAMBUSLANG, a parish in Lanarkshire, on the south bank of the Clyde; and bounded by Old Monkland parish on the north; Blantyre on the east; by Kilbride on the south; and by Rutherglen on the west. The surface is beautifully diversified with hill and dale. A ridge of about half-a-mile broad is formed by the Dichmount and Turnlea hills, extending nearly 2 miles from east to west. From this central ridge the ground declines in a gradual manner to the Clyde on the north, and to the water of Calder on the south. The Clyde is from 200 to 250 feet broad at this place, and generally overflows part of the low grounds three or four times a-year. It has been known to rise here 20 feet above its mean level. The Kirk burn and Newton burn are small tributaries of the Clyde, in this parish. Coal abounds in the district, where it has been wrought for upwards of 300 years. The present output is about 30,000 tons per annum. In 1750, a cart of coals of 9 cwt. cost 9d.; on the coalhill in this parish the same quantity at present costs 2s. 11d. Vast beds of excellent freestone are also found in every part of the parish, the strata of which, as well as of the coal, dip towards the river; it is singular that, on the north side of the Clyde, the dip is also towards the river. A stru-

tum of limestone, usually called Cambuslang marble, is found in some of the coal-pits at the depth of 200 feet; it is of a beautiful dark grey or dark brown colour, with whitish streaks and spots, and receives a very high polish.—Dechmont-hill seems to have been anciently a place of strength, and must have been well-adapted for a watch-tower. Rising from a comparatively level country, to an altitude of 600 feet, it commands an extensive and varied prospect—the beauties of which have been recently celebrated in a descriptive poem, entitled ‘Dychmont,’ by John Struthers, the author of ‘The Poor Man’s Sabbath,’ and other pieces of much poetical merit. Upon the summit of Dechmont are some traces of ancient buildings.—About a mile east of the church is the castle of Drumsargard, to which an extensive barony was at one time annexed. This was the property successively of several families of great name, the Oliphants, the Murrays, the Douglasses, and the Hamiltons; and it at present makes a part of the entailed estate of Hamilton.—On the south side of Dechmont, stands Latrick, which, about the beginning of the 17th century, was the seat of a Sir John Hamilton, whose family is extinct. On the north side of the same hill, stands the turreted house of Gilbertfield, long the residence of a family of the name of Cunningham: about the beginning of the 18th century, this estate was purchased by the laird of West-Burn. Lieutenant William Hamilton, the friend and poetical correspondent of Allan Ramsay, lived many years, first at Gilbertfield, and then at Latrick, where he died on the 24th of May, 1751, at an advanced age.—Upon the banks of the Kirk burn, about a quarter of a mile below the church, there was a chapel, founded in 1379, and dedicated to the Virgin Mary, to which belonged 4 acres of land which still retain the name of Chapel-land: there was also an hospital 2 miles east from the church, to which about 130 acres, called Spital and Spital hill, seem to have been annexed: but the persons by whom, and the time when, these religious houses were founded, are equally unknown.—Population, in 1801, 1,558; in 1831, 2,697. Of this population about 500 find employment in weaving. Assessed property in 1815, £8,578. Land rental about £6,000. Houses 369. The village of Cambuslang is about 5 miles from Glasgow.—This parish is in the presbytery of Hamilton, and synod of Glasgow and Ayr. Patron, the Duke of Hamilton. Stipend £281 11s. 11d.; with a glebe of the value of £10. Unappropriated tithes £469 19s. 5d. Church built in 1743; sittings 500. An independent chapel was built at Cambuslang in 1801; sittings 200.—The parochial schoolmaster has a salary of £34 4s. 4½d., with about £40 fees. Pupils 100. There are four private schools within the parish.

Cambuslang possesses a peculiar interest in the eyes of the religious public, as having been the scene of a very remarkable revival in 1742. The following sketch of these transactions is given in the ‘New Statistical Account:’—“The religious phenomena, commonly called ‘the Cambuslang work,’ seems to have originated in circumstances apparently accidental. The kirk of Cambuslang being too small and out of repair—as is too often the case in the present day—the minister in favourable weather frequently conducted the public devotional services of the parish in the open fields. The place chosen was peculiarly well adapted for the purpose. It is a green brae on the east side of a deep ravine near the church, scooped out by nature in the form of an amphitheatre. At present it is sprinkled over with broom, furze, and sloe-bushes, and two aged thorns in twin embrace are seen growing side by side near

the borders of the meandering rivulet which murmurs below. In this retired and romantic spot Mr. M’Culloch, for about a year before the ‘work’ began, preached to crowded congregations, and on the Sabbath evenings after sermon, detailed to the listening multitudes, the astonishing effects produced by the ministrations of Mr. Whitefield in England and America, and urged with great energy the doctrines of regeneration and newness of life. The effects of his zeal soon began to evidence themselves in a striking manner among the multitudes who waited on his ministry. Towards the end of January, 1742, two persons, Ingram More, a shoemaker, and Robert Bowman, a weaver, went through the parish, and got about ninety heads of families to subscribe a petition, which was presented to the minister, desiring that he would give them a weekly lecture. This request was immediately complied with, and Thursday was fixed upon as the most convenient day of the week for that purpose. These meetings were crowded with multitudes of hearers, and at length from weekly were extended to daily exhortations, which were carried on without interruption for seven or eight months. Many people came to the minister’s house under strong convictions of sin, calling themselves ‘enemies to God, despisers of precious Christ,’ and saying ‘what shall we do to be saved?’ The first prominent symptoms of the extraordinary effects produced by these multiplied services were on the 8th February. Soon after, the sacrament was given twice in the space of five weeks; on 11th July and on 15th August. Mr. Whitefield had arrived from England in June, and many of the most popular preachers of the day hastened to join him at Cambuslang, such as Messrs. Willison of Dundee, Webster of Edinburgh, M’Knight of Irvine, M’Laurin of Glasgow, Currie of Kinglassie, Bonner of Torphichen, Robe of Kilsyth, &c. The sacrament on the 15th August was very numerously attended. One tent was placed at the lower extremity of the amphitheatre above alluded to, near the joining of the two rivulets; and here the sacrament was administered. A second tent was erected in the churchyard, and a third in a green field a little to the west of the first tent. Each of these was attended with great congregations, and it has been estimated that not less than 30,000 people attended on that occasion. Four ministers preached on the fast day, 4 on Saturday, 14 or 15 on Sunday, and 5 on Monday. There were 25 tables, about 120 at each, in all 3,000 communicants. Many of these came from Glasgow, about 200 from Edinburgh, as many from Kilmarnock, and from Irvine and Stewarton, and also some from England and Ireland. The Cambuslang work continued for six months, from 8th February to 15th August, 1742. The number of persons converted at this period cannot be ascertained. Mr. M’Culloch, in a letter to Mr. Robe, dated 30th April 1751, rates them at 400, of which number 70 were inhabitants of Cambuslang. The 18th of February, the day on which this extraordinary work began, was, long after, observed in the parish partly as a day of humiliation and fasting for misimprovement of mercies, and partly as a day of thanksgiving for the season of grace to many in the British colonies, and particularly in this small corner in 1741 and 1742.” The judicious writer of these remarks adds, “When the present venerable and learned incumbent of Cambuslang entered on the charge of the parish, a number of the converts of 1742 still lived, and gave evidence, by the piety and consistency of their conduct, of the reality of the saving change that had been wrought on their hearts. So late as July, 1818, the writer of this note heard an aged clergyman of a neighbouring parish

allude in the church of Cambuslang, on a Monday after a communion, to the revival in the following terms: He had been speaking of the time and place in which God had been pleased to afford extraordinary manifestations of his power and grace in the conversion of sinners, and in comforting and strengthening his people, and he added, 'Such was Bethel to the Patriarch Jacob, Tabor to the three disciples, and such was this place about seventy-six years ago, of whom I am told some witnesses remain to this present hour, but the greater part are fallen asleep.' If any one is still so bold as to allege that the work at Cambuslang was 'a work of the devil,' he will find no countenance from the serious part of the inhabitants of the district in which it took place. No one ever attempted to justify every thing that was said or done at that memorable period; but, on the other hand, it is hoped that the warmth of party spirit will no longer prevent good men from admitting what even the correspondent of Mr. Wishart of Edinburgh was constrained to acknowledge in regard to the revival in New England at that time, 'that an appearance so much out of the ordinary way, and so unaccountable to persons not acquainted with the history of the world, was the means of awakening the attention of many, and that a good number settled into a truly Christian temper.'

CAMBUSMICHAEL. See ST. MARTINS.

CAMBUSNETHAN, a parish in the middle ward of Lanarkshire; bounded on the north by Shotts parish; on the east by Whitburn and West Calder in Linlithgowshire; on the south by Carnwath, Carstairs, Carluke, and Dalsert parishes; and on the west by Dalsert, Hamilton, and Dalziel. It extends in a north-east direction from the Clyde on the west, nearly 12 miles in length; and is on an average about 3 miles in breadth. Its superficies is about 26,000 acres, of which nearly one-third is cultivated; and about 160 acres are laid out as orchard-grounds. The haughs on the Clyde are extensive and beautiful. On the bank, which rises above the haugh-grounds, the soil is clay, covered with extensive orchards, which are well-sheltered from the north and east winds by coppice-woods, and regular plantations. Farther up the soil becomes mossy, or mixed with a black sand peculiarly unfavourable for vegetation. The highest grounds are on the eastern side of the parish, where they attain an elevation of about 900 feet. The South Calder skirts the whole northern boundary of this parish; which is also divided from Carluke by Garrison burn, a beautiful little tributary of the Clyde. The banks of the South Calder, for a considerable way above its junction with the Clyde, are very finely wooded. There is abundance of excellent coal wrought here; also ironstone and freestone. The Shotts iron company have two blast-furnaces at Stone or Stain, in the east end of the parish. There are extensive tile-works at Wishaw and at Coltness. One, near Castlehill, turns out 8,000 tiles daily, or 2,504,000 in the year. The village of Cambusnethan or Wishawtown, is 15 miles east of Glasgow, and $4\frac{1}{2}$ west of Carluke, on the road from Glasgow to Lanark. The inhabitants—1,700 in number—are chiefly weavers employed by the Glasgow manufacturers. There is an extensive distillery here. The village of Stain has a population of about 600; and Bonkle 200. The mansion-houses of Cambusnethan, Wishaw, Coltness, Allanton, and Muirhouse within this parish, are all very handsome structures. Population of the parish in 1801, 1,972; in 1831, 3,824. Assessed property £9,271. Houses in 1831, 701.—This parish is in the presbytery of Hamilton and synod of Glasgow and Ayr. Patron, Lockhart of Castlehill. Stipend £278 15s. 8d. Unappropriated

teinds £469 19s. 5d. A new parish-church is now building; the old church, built in 1650, seated 660. —A United Secession congregation was established at Danes Dikes in 1738. Church first built in 1740; rebuilt in 1780; and the present one in 1818, at Bonkle, 2 miles westward of the original site, cost £800; sittings 560. Stipend £120, with a manse and glebe.—A Relief congregation was established at Wishawtown in 1822. Church built in 1822; seats 740. Stipend £110, with manse and glebe. —A Reformed Presbyterian congregation assembles in Wishawtown. Church seats 350. Stipend £70, with a manse and glebe.—Schoolmaster's salary £34 4s. 4 $\frac{1}{2}$ d. In 1838 there were 9 schools in the parish, attended by 476 scholars.

CAMBUS VIC-HUSTAN, a small but safe harbour, in the shire of Sutherland and parish of Assynt.

CAMBUS VIC-KER-CHIR, a safe and well-sheltered harbour, except from the north-east gales, in the parish of Assynt, in Sutherland.

CAMBUS-WALLACE, in the shire of Perth and parish of Killmaddock; 1 mile north-west of Doune. Some years ago, several ancient graves were discovered at Rosshall near this place; and tradition relates that a battle was once fought near this spot between the families of Rosshall and Craigton.

CAMELON, a village in the shire of Stirling and parish of Falkirk; at the distance of $1\frac{1}{2}$ mile north-west from Falkirk; on the line of the Forth and Clyde canal. A handsome extension church was built here in 1839, at a cost of £1,000; sittings 660. The population exceeds 1,000; nail-making is the chief employment. Old Camelon, situated about 5 furlongs without the gate where the Roman road issued from the wall of Antoninus, about half-a-mile to the north-west, was a Roman town, and a sea-port; and an anchor was dug up here in 1707. There are many circumstances which authorize us to conclude, not only that the river Carron has been navigable farther up than the site of Old Camelon, but also, that the sea at one time came very near to Falkirk, and covered the whole of that district which is now called The Carse. General Roy has given a plan of Old Camelon in the 29th plate of his 'Military Antiquities;' he supposes it to be the Roman station Ad Vallum. Boece, and some others, strangely confound this place with the Camelodunum of Tacitus, now known to be St. Maldev in Essex.

CAMERON, a parish in the county of Fife; bounded by St. Andrews on the north; by Denino on the east; by Carnbee and Kilconquhar on the south; and by Ceres on the west. It extends about 5 miles in length, by 4 in breadth; and has a superficial area of about 7,300 Scotch acres, of which nearly 4,700 are under tillage. Coal and limestone abound. At Priorletham is a remarkably fine sycamore plane, supposed to be 450 years old. The village lies about 4 miles south-west of St. Andrews. Population, in 1801, 1,095; in 1831, 1,207. Assessed property, in 1815, £8,349. Land rental, in 1838, £8,600. Houses, in 1831, 238.—This parish is in the presbytery of St. Andrews and synod of Fife. It was separated from St. Andrews in 1645. Church built in 1808; sittings 495. Stipend £199 12s. 8d., with a glebe of the value of £10. Unappropriated teinds £149 13s. 10d.—There is a Secession church at Lathones.—Parochial schoolmaster's salary £34 4s. 4 $\frac{1}{2}$ d., with about £10 fees. There are two private schools,—one at Lawhead, the other at Denhead.

CAMERON-BRIDGE, a hamlet in the parish of Libberton; $1\frac{1}{2}$ mile south of Edinburgh, on the road to Dalkeith.—There is also a village of this name in the parish of Markinch in Fifeshire.

CAMILLA (LOCH). See AUCHTERTOOL.

CAMISENDUN. See DURNES.

CAMLACHIE, a suburb of Glasgow, in the Barony parish of Glasgow; about $1\frac{1}{4}$ mile east of the cross, on the middle road to Edinburgh. Population 1,685, chiefly weavers.

CAMPBELL (CASTLE), a noble relic of feudal ages, in the parish of Dollar, and in the neighbourhood of the village of Dollar, Clackmannanshire. From a bridge over a small brook which runs through the village of Dollar, there is a fine view of the ruins of Castle Campbell, situated on the top of a round insulated mound, which seems to have been partly formed by the hand of Nature, and partly finished by art. On each side is a deep ravine or glen, clothed in thick wood, and down which run streams that unite immediately below the castle and form a considerable brook. The mound on which the castle stands is nearly perpendicular on the side next Dollar, and was formerly disjoined from the surrounding hills by a ditch shelving down to the bottom of the glen on each side, which rendered the castle inaccessible except by means of a draw-bridge; so that it was a place of very great strength. Though the castle stands upon an eminence, it is surrounded on all sides by higher hills, many of which are wooded to their summits, which gives to the whole scenery a very picturesque, but, in certain states of the weather and sky, a somewhat gloomy effect. The buildings still existing form a quadrangle. It is not known when or by whom this venerable pile of building was erected. It was formerly called the Gloume, or the Castle of Gloom, and the Celtic names of the two brooks which encircle it are supposed by some to signify the burns of Care and of Sorrow. About the year 1493—when it probably first came into the possession of the noble family of Argyle, whose property, however, it no longer is—it was called Castle Campbell, by which name it has ever since been known. This castle, with the whole territory belonging to the family of Argyle, suffered by the calamities of civil war in 1645; for the Marquis of Montrose, the enemy and rival of the house of Argyle—or rather his fierce allies the Macleans and Ogilvies—carried fire and sword through the whole estate. During this commotion the castle was destroyed, and its magnificent ruins only now remain a sad monument of the miseries of civil war.

CAMPBELLTON, a parish in Argyleshire, forming, with the parish of Southend, the southern extremity of the peninsula of Kintyre. Its length is computed at 13 miles, and its breadth varies from 6 to 12 miles. Its superficial area is about 43,750 acres. It is narrowed in the middle by the bay of Machrihanish, or Machirhanish on one side, and the loch of Kilkerran, or harbour of Campbellton, on the other. This bay runs inland a considerable way, leaving between the two oceans on the east and west a large plain of 4 miles in length, by 3 in breadth, and not 40 feet above the level of the sea. From this plain both ends of the parish—gradually rise into hills, which attain the height of 1,200 feet. Bear, barley, and potatoes, are the principal crops. There is abundance of coal at Dalvaddy, a village at the distance of 3 miles from the town of Campbellton, on the road to Machrihanish bay; and a canal has been cut to convey it to the town; but it is of an inferior quality, and the common fuel of the poorer classes is still peat or turf. Porphyry, and fuller's earth or soap-rock, exist in this parish. Population, in 1801, 7,003; in 1831, 9,472. Assessed property of parish and burgh, in 1815, £2,800.—This parish is in the presbytery of Kintyre, and synod of Argyle. It consists of four original par-

ishes united: viz., Kilkerran, Kilkivan, Kilchonchan, and Kilmichael. The charge is collegiate; and there are two parish-churches both situated in the town of Campbellton; in one of which, accommodating 1,528 persons, Gaelic is always preached; and in the other, seating 1,083, English. The two ministers officiate in the two churches, taking the forenoon and afternoon alternately. The Duke of Argyle is patron of both livings. The stipend of each minister is £146 15s. 11d.; but the annual value of the glebe, belonging to the 1st charge, is £89; that of the second £26 10s.—A United Secession church was opened in the town of Campbellton in 1833, sittings 630. Stipend £100.—An Independent chapel, seating 300, was opened in 1829. Stipend about £50.—A Relief congregation was established in 1767. In 1835 this congregation split into two; and a lawsuit as to the occupancy of the church—which is a large and handsome one, seating 1,500—was begun, which terminated in favour of the party adhering to the Relief body. The stipend of the minister, previous to the disunion, was £180.—There is a small Roman Catholic congregation; also a Baptist and a Methodist congregation.—The salary of the burgh and parochial schoolmaster is £34 4s. 4½d., with about £140 fees, and a house, and garden valued at £20. The average number of his pupils is 110. He is elected by the magistrates and town-council of the burgh of Campbellton. In 1834 there were 22 private schools within the parish, of which 13 were in the burgh and suburbs.—The chapels of St. Chouslan and St. Caomhghin, though in ruins, are in tolerable preservation, and the ground about them is still sacred to sepulture; but the chapel of St. Michael is completely demolished. Along the coast are the remains of a number of forts, supposed to be Danish.

The royal burgh of **CAMPBELLTON**, in the above parish, was originally a small fishing-village; but through the interest of the Duke of Argyle—the principal proprietor of the town and surrounding country—was erected into a royal burgh in 1700. The charter recites the statute 15^o James VI., c. 267, by which it was statute and ordained, “for the better entertaining and continuing of civility and policy within the Hielandes and Iles,” “that there be erected and builded within the bounds thereof, three burghes and burrowe-towns, in the maist conuenient and commodious partes meef for the samen; to wit, ane in Kintyre, another in Lochaber, and the third in the Lewis;”—and gives as reasons for the erection that Inverary, distant about 60 miles, was then the only royal burgh in Argyleshire; that the burgh of Campbellton was a very fit and convenient place to be erected into a royal burgh; and that the Earl of Argyle, to whom the same belonged in fee, was anxious for the erection. The boundaries of the burgh, under said charter, are the loch of Campbellton, formerly called the loch of Kilkerran, on the east; the lands of Kilkerran and Corshill on the south; the lands of Moy on the west; and the lands of Ballingregan and Drumore on the north. The royalty of the burgh lies within the above bounds, and still belongs wholly in property to the Duke of Argyle, with the exception of certain feus held under him, and granted previous to the charter. It is stated that there have been no feus granted since the date of the charter. The late Duke and his predecessors were formerly in the practice of granting building leases to the inhabitants for the term of three or four nineteen years; but latterly it has been considered that such leases are precluded by the terms of the Argyle entail. Accordingly, since 1828, no leases have been granted for a longer period than nineteen years; and it is stated, that even when

existing leases, originally for a longer endurance, fall in, no renewal is now granted for more than nineteen years. No part of the territory within burgh is held in burgage. The parliamentary boundaries of the burgh, for the election of a member of parliament, extend considerably beyond the royalty, and include the adjoining lands of Dallintober, Lochend, and Dallaruin. The proprietors of these lands are in nowise fettered, and are in the practice of selling and feuing portions of their lands. The consequence is, that the town of Campbellton is extending beyond the royalty in the direction of these lands. A considerable number of houses have been erected, and there is now a population of from 1,400 to 1,500 inhabitants on the lands of Dallintober and Dallaruin. The burgh of Campbellton was formerly governed by a provost, two or three bailies, a dean of guild, a treasurer, and 12 councillors. Under the new Municipal act it has 17 or 18 councillors. It has no incorporated trades with exclusive privileges. Population, in 1831, 4,869; but of the parliamentary burgh, in 1836, 6,558. Municipal constituency, in 1839, 215. Corporation revenue, in 1833, £668, of which £282 were from ladle and causeway customs, and £120 from anchorage and shore dues. The debts were under £500; and the annual revenue exceeded the expenditure, so as generally to leave a balance for public improvements. Its revenue, in 1838-9, was £820 3s. 11d. It joins with Ayr, Irvine, Inverary, and Oban, in sending a member to parliament. Parliamentary constituency, in 1839, 280. It received its present name at the time of its erection into a burgh; before which period it went by the name of *Ceann-Loch*,—that is, 'the Head,' or 'the End of the loch,'—which it still retains in the language of the country; but its oldest name is *Dalruadhain*, from having been the capital of the ancient Scottish or Dalreudinian kingdom. It is now a large and flourishing town, extending in a semicircular form around the head of the bay, and having a number of villas scattered at either end along the declivities. The harbour is about 2 miles long and 1 broad, in the form of a crescent; with from 5 to 13 fathoms water, and excellent anchorage. It is surrounded by high hills on each side; and an island called Davar—which may be reached at low water, dry-shod, from the south shore—shelters the entrance. It was formerly the rendezvous of the busses employed in the herring-fishery, for which it is admirably situated. In 1744, it possessed only two or three small vessels. The number of registered vessels belonging to the port, in 1835, was 54; total tonnage 2,251. Custom's revenue, in 1836, £389. Besides the fisheries—which, however, have greatly declined of late years—there is a considerable trade in the distillation of whisky, and the export of potatoes. Of the latter article about 30,000 tons are annually exported. In 1834, the export of whisky to Glasgow exceeded 300,000 gallons; and, in 1835, the duties paid here on malt and spirits, amounted to £104,455. Barley or bear has in consequence of the immense demand for it, become the staple produce of Kintyre. The Commercial bank and British Linen company have branches here. Six fairs are held during the year: viz., on the 1st Thursday in February; the 3d Thursday in May; the 2d Thursday in August; the 3d Tuesday in September; the Friday before Kilmichael fair in October; and the 3d Thursday in November. A regatta is held in September.—In the centre of the main street is a very handsome granite cross, richly ornamented with sculptures in relief. It bears on one side this inscription in Saxon letters:—"Hæc: est: crux: Domini: Yvari. M: K: Eachyrna: quondam: Rectoris: de Kyregan: et Domini: Andre: nati: ejus: Rec-

toris: de Kilcoman: qui hanc crucem fieri faciebat." That is, "This is the cross of Mr. Ivar McEachran, formerly Rector of Kyregan, and of Mr. Andrew, his son, Rector of Kilcoman, who caused this cross to be erected." Gordon—by report only—mentions this as a Danish obelisk, but does not venture its description, as he never saw it. The tradition of the town, however, is, that it was brought from Iona, or from Oronsay; although it has been stated in a lately published work, that the cross had probably not been removed far from where it was originally placed. A well of pure spring-water issues from a fountain in the cross; and around it, in general, the fish market is held. The Kintyre club has adopted the figure of this cross as one of its distinguishing badges. On the opposite side of the bay is a thriving suburb, called Dallintober.—The voyage from Campbellton to Glasgow by steam is usually made in from 9 to 12 hours; it used frequently to occupy sailing vessels as many days. The steamers betwixt Glasgow and the North of Ireland also generally touch here.—Lord Teignmouth, in his 'Sketches of the Coasts and Islands of Scotland,' [vol. ii. pp. 380-382] gives us the following amusing piece of gossip relative to this thriving town: "The trees which adorn the shore of the bay were planted about 150 years ago by a Duchess of Argyle, who was extremely partial to Cantyre, fixed her residence chiefly at Campbellton, and inhabited a house on a site now occupied by a small farm-house, to which, however, it was much inferior. This lady was mother of the great Duke John; and she is said to have adopted the following singular method of acquiring, for the Duke, possession of the estates of the different proprietors, Campbells, to whom Argyle, after his conquest of Cantyre, had granted them:—On pretence of revising, as the story goes, she got into her hands and destroyed the charters of these unsuspecting people. Thus the Argyle family revoked their original grants. Campbell of Kildalloig, ancestor of the present proprietor of this estate, pleasantly situated on the outside of the bay, owed the preservation of it to the shrewdness of a servant, who, suspecting the intentions of the Duchess, ran off, carrying away his master's charter, and restored it not to him, till the fraud became apparent. The family of this man were, till within few years, employed, in grateful recollection of his services, by the family at Kildalloig. The Duchess is said to have associated with herself, in her retreat, several young ladies of rank, whom she watched with Argus-eyed vigilance, lest they should stoop to alliance with the lairds of Cantyre. Impatient of restraint, they eluded her observation, and are said to have preferred humble freedom to splendid chains."

CAMPBELTON, a village in the parishes of Ardersier and Petty, and county of Inverness, situated about 1½ mile from Fort-George, on the coast of a picturesque bay, and containing upwards of 800 inhabitants. It possesses a strong chalybeate spring, and is much frequented as a bathing-quarter. A colony of fishermen occupies the west-end. From Cromwell's mount, behind the village, the view is very extensive, embracing parts of 8 or 9 counties.

CAMPLE (THE), a stream in the county of Dumfries, which has its rise in Wedder law, in the parish of Morton, and, running a south-west course of about 8 miles, falls into the Nith at Kirkbog.

CAMPSIE, a parish in the county of Stirling, about 8 miles in length, and 5 in breadth; containing about 35 square miles; and bounded on the north-west by Killearn; on the north-east by Fintry; on the east by Kilsyth; on the south by Kirkintilloch; and on the west by Strathblane. It consists of two ridges of hills, with a considerable valley between

them; the south ridge being a continuation of the Braes of Kilpatrick, and the north being known by the name of Campsie Fells. Some of the hills are covered with natural wood of great age and size, and others afford pasture to sheep and black cattle. The road from Kippen to Glasgow passes through the parish. Two extensive printfields for calico-printing exist here, several cotton factories, and extensive alum works, at which also prussiate of potash, and Prussian blue, are manufactured. There is an extensive distillery at Milton. Near the Lennox-mill printfield is the large village of Lennox-town. The clachan or village of Campsie, $1\frac{1}{2}$ mile west of Lennox-town, and $3\frac{1}{2}$ east of Strathblane, is beautifully situated at the foot of the Fells, near the Glassert, which falls into the Kelvin opposite Kirkintilloch. The other villages are Birdston, Milton, Kincaidfield, and Torrance. See TORRANCE. The glen of the Glassert, above Campsie, is much admired for its romantic scenery, and is often visited during summer by parties from Glasgow. Population in 1801, 2,906; in 1831, 5,109; in 1836, according to a survey by the session, 5,615, of whom 3,727 belonged to the established church; and about 500 were Irish Catholics, chiefly labourers, calico-printers, and others. Assessed property in 1815, £13,909.—The parish of Campsie is in the presbytery and synod of Glasgow. Stipend £285 3s. 7d. with a glebe of the value of £13 15s. Unappropriated tithes £720 18s. 2d. Patron, the Crown. The church is a handsome Gothic structure built in 1828; sittings 1,550.—There is a Relief church in Lennox-town. It was built in 1784; sittings 593. Stipend £106, with a manse and glebe. Here is also a Roman Catholic congregation, established in 1836, but which formerly met at Torrance. There were 3 parish-schools, and 5 private schools in this parish, attended by 275 children, in 1834.—Campsie was formerly a rectory, the parson of which was the sacristan of the cathedral of Glasgow, and one of the residential canons there; the cure at Campsie being served by a vicar. Previous to its disjunction in 1649, by the lords-commissioners for valuation of tithes, it made a particular district of country by itself, not a little marked by peculiar manners and customs. Situate in the Lennox, it formerly made the eastern division of that ancient territorial thaneship; and so late as the year 1744, the payment of Black mail was here made to Macgregor of Glengyle, for protection against the depredations of the Highland freebooters. The last instance in this district of a baron of regality exercising the jurisdiction of pit and gallows over his dependents, is said to have been exerted by the Viscount of Kilsyth, in the year 1743; when one of his own servants was hanged for stealing silver-plate from the house of Banchoich, upon a hill on the barony of Banchoich styled the Gallow hill. Mr. Bell of Antermoney, well-known by his Travels in China and Persia, was a native of this parish; where he inherited a considerable paternal estate, and died in 1780, at the venerable age of 89. Mr. James Bell, a man of very considerable literary attainments, and well-known for his extensive and profound knowledge of ancient and modern Asiatic geography, spent the latter years of a retired and unostentatious life in a small cottage in this parish; and his ashes now rest in the beautifully sequestered burying-ground at the clachan of Campsie.—Here are traces of two ancient Caledonian forts, called The Meikle Reive, and The Maiden Castle, both of them placed directly opposite to the Roman wall called Graham's Dyke, near which several urns containing ashes and burnt bones have been discovered.

CAMPSIE FELLS, a range of hills forming the southern boundary of Strathmore, and running in a

bold ridge along the whole length of the strath of Campsie. Their general direction is from east-north-east to west-south-west, between the Forth at Stirling, and the Clyde at Dumbarton. Their extreme length may be about 25 miles; their average breadth 8 miles. The face of these hills is broken with crags and glens; and on the summit and back part is a deep moor-ground interspersed with moss. The hills have the appearance of volcanic or igneous origin; and in many parts rude basaltic pillars are seen, particularly on the road which crosses the hill above the village of Campsie, and near to the village of Fintry. In many places these hills appear stratified; but the strata dip much, and are sometimes nearly perpendicular to the horizon. The secondary, or stratified mountains, abound with coal, limestone, freestone, ironstone, indurated clay, and marl. In one place a dozen or more strata of ironstone, with alternate layers of argillaceous schistus, may easily be counted. In several places there are appearances of copper and of lead. The highest ridge of the Campsie Fells occurs between the sources of the Carron and the Endrick, where they are elevated 1,200 feet from its base, the elevation of which is about 300 feet above the level of the sea, making the height in all 1,500 feet.

CAMPSIE LINN. See CARGILL.

CAMPS. See CARNOCK.

CAMSTRADDEN. See LUSS.

CAMUS-TOWN, a village in the shire of Forfar, and parish of Monikie, about a quarter of a mile south of the church. Camus Cross, a large upright stone, is said to point out the place where Camus, a Danish general, was slain and buried after the battle of Barrie, in 1010. See BARRIE.

CANAL. See articles ABERDEEN, ARDROSSAN, CALEDONIAN CANAL, CRINAN CANAL, FORTH AND CLYDE CANAL, MONKLAND CANAL, and UNION CANAL.

CANISBAY,* a parish in Caithness, bounded on the north by the Pentland frith; on the east by the German ocean; on the south by Wick parish; and on the west by Bower and Dunnet parishes. The coast-line is about 18 miles in extent. To the south of DUNCANSBY HEAD, [see that article,] for about 5 miles, the Wart or Warth hill extends its base to the sea brink. The coast is in this quarter exceedingly bold, and the wild and varied magnificence of the rocks is peculiarly striking to the eye of a stranger. Beyond this, for about a mile, the coast subsides into a beautiful sandy beach winding around the bay till it reaches the mansion-house of Freswick, where it resumes its rocky and picturesque boldness, which continues with little variation till it reaches the confines of the parish. The lands adjacent to the shore, for the last 3 miles, are all under cultivation, and the soil is luxuriant and productive. The northern coast has little of that stupendous boldness, for which the eastern one is so remarkable. Westwards from the Head, for 2 miles, the walk is extremely pleasant, and great luxuriance of growth prevails, from the shore to about a mile inland. The beach itself consists wholly of shells and shell sand of the purest white. In the middle of this delightful walk, you approach the celebrated residence of John O'Groat [see article JOHN O'GROAT'S HOUSE];

* "Canisbay has been supposed by some to have been originally written *Canonsbay*; others conjecture it to have some connection with the Latin vocable *Canis*. It is, however, more probable, that *Canute's Bay* was its first appellation, in honour of the arrival of some Norwegian chief of the name of Canute. There is indeed no account of the descent of such a chief upon the coast, nor is there any bay in the parish now denominated Canisbay; but as all the places of the least note in the parish are clearly of Norwegian derivation, it cannot be supposed that the name of the district itself should be an exception."—*Old Statistical Account*.

out, although his name be still illustrious here, and has been bequeathed to certain shells, called Johnny Groat's buckies, with which the beach is here strewn, the spot is scarcely distinguishable where he dwelt. Westwards from the burn of Duncansby to Houna, moss prevails to the sea brink; but from Houna to Gills is one of the most fertile districts in the parish. The parish-church is situated in the middle of this latter district, on a green rising ground within 200 yards of the shore, the manse being about a quarter of a mile inland from the church. Mey, part of the property of the Earl of Caithness, terminates the parish on the west. This is a populous and fertile district. In 1836, its population was estimated at 576. The bays upon the coast are those of Gills, Duncansby or Dungisbay, and Freswick; in all of which, if the weather be moderate, vessels can lie in safety and take in their cargoes, but none of them are eligible stations in rough weather. Gills bay is preferable to the rest. A celebrated tide runs near Barrogill castle, called 'The Merry men of Mey,' very noisy and obstreperous indeed, but no subject of merriment to vessels, as they have to go off their track many leagues sometimes to avoid the vortex, and, when caught, are swept back on a stream, like the rapids of a rapid river. This is said to have been the scene of Grey's 'Fatal Sisters,' translated from the Norse tongue.

Now the storm begins to lower,
(Haste, the loom of hell prepare!)
Iron sleet of arrowy shower
Hurries in the darken'd air.

The greatest length of this parish is 8 miles; greatest breadth 6. The whole surface may be computed at about 44 square miles or upwards. It is a level district. The Warth hill, on the eastern coast, is of considerable height and magnitude, but is the only one in the parish deserving the name. The loch of Mey, in the north-west corner of the parish, is about 2 miles in circumference. There is no river, and only a few rivulets, in the whole parish; but there are chalybeate mineral and fresh water springs in abundance. The valued rent of the parish amounts to £3,855 3s. 6d. Scotch. The real rent at the beginning of the present century was computed at about £1,300 sterling. The value of assessed property, in 1815, £4,264. The Earl of Caithness, Sinclair of Freswick, and the family of Brabster, are the only proprietors in the parish. Brabster is an inland property; all the other cultivated lands stretch along the coast, extending, at an average, about half a mile from the shore. There is only one farm, excepting such as are in the hands of the proprietors, which lets for more than £50 per annum. There are three popish chapels mouldering into desolation in the parish, one at Freswick, another at Brabster, and a third at St. John's Head. Some superstitious rites, now in total disuse, were wont to be performed by the ignorant vulgar, on particular days, at these sanctified ruins. St. John's Head, upon the north coast, is one of the pleasantest spots in the whole parish. It affords evident tokens of having been, in former ages, a residence of respectability; from a burying-ground, and the vestiges of an old chapel in the neighbourhood—now in total ruins:—as well as from the name it bears, it would seem to have been consecrated to religious purposes. The vestiges of a ditch and drawbridge defending it on the land side, show it to have been occupied as a place of strength and security. Betwixt Brabster and Freswick there is a deep hollow, called, in the dialect of the parish, the Wolf's geo, which must have derived its name from being the haunt of wolves in former times. There are other circum-

stances handed down by tradition, which tend to prove, that this ravenous animal was once an inhabitant of Canisbay.—Barrogill castle, belonging to the Earl of Caithness, is an old aristocratic pile. It has, says Miss Sinclair, "all the internal elegance of a house in London, and all the exterior dignity of an ancient Highland residence. Some admirable improvements have been recently made by Burn; and the staircase, which was formerly outside, as high as the drawing-room floor, is now thrown into the house, while several windows have been thrown out, which were greatly wanted. In those peaceful times, when there is no longer any necessity for a castle to be fortified, it is pleasing to see the gloomy strength of former days exchanged for a more smiling aspect; and here we found some first-rate pictures by the best masters, a haunted apartment, abundance of interesting family portraits, and a forest of the very best trees that Caithness can produce." ['The Northern Circuit,' p. 66.]—The ruins of three ancient towers or castles are still to be seen; one in Mey, another south of the present mansion-house of Freswick, and a third on the west side of the island of Stroma: they are all built upon rocks rising out of the sea, and have been occupied as places of defence. The principal public roads in the parish are those leading from Houna southwards to Wick, and westwards to Thurso. The distance from Wick to Houna is 16½ miles; and from Houna to Thurso 18 miles. From Houna the ferry-boat crosses with the mails for Orkney every Tuesday, Thursday, and Saturday. From Burwick in South Ronaldshay, the Orkney mails in like manner cross to Houna. The distance—being the shortest betwixt Caithness and Orkney—is reckoned 12 miles. If a passenger goes along with the mails, the freight is 1s.; but if he hires the ferry-boat for himself, it is 10s. Although the Pentland frith is deservedly accounted the most tempestuous piece of sea around Britain, it is remarkable how few accidents happen in crossing it. The danger it threatens suggests the means of preventing it. The time of tide is observed to a minute in putting out to sea; the boats are strong and of good construction; and the boatmen perfect masters of their business, and acquainted from their infancy with every circumstance respecting the variation of the tides they have to go through. Sometimes, however, the communication even with the adjacent island of Stroma, is suspended for weeks. In the summer-season there is almost a continued communication betwixt Caithness and Orkney in the traffic of horses. Colts from the highlands of Caithness, from Sutherland and Strathnaver, are sold to Orkney; and these very colts, when past their prime, are again brought from Orkney, and re-imported into Caithness. By far the greater number of these cross to and from the shores of Canisbay, on account of the shortness of the passage. Population, in 1801, 1,986; in 1831, 2,364. Houses 475.—This parish is in the presbytery of Caithness, and synod of Sutherland and Caithness. Stipend £205 10s. 1d., with a glebe of the value of £6. Unappropriated tithes £151 7s. 2d. Patron, Sinclair of Freswick. A part of the parish containing, in 1831, a population of 1,801, was annexed, in 1833, to the *quoad sacra* parish of Keiss. Church repaired in 1832; sittings 512.—There is a small Baptist church at the Mill of Mey; and the Independents have a place of meeting at Freswick.—Salary of parish schoolmaster £34 4s. 4½d. In 1834 there were 6 private schools within this parish, attended by about 150 children. The island of Stroma, in the Pentland frith, about 3 miles from the shore of Canisbay, with a population, in 1836, of 240, belongs to this parish. See article STROMA.

CANNA, one of the four islands of the Hebrides which form the parish of Small Isles in Argyle. It is 3 miles north-west of Rum, and 12 south-west from the nearest point of Skye. It is about $4\frac{1}{2}$ miles long and 1 broad: containing, with the contiguous island of Sanday, 429 arable acres, and 1,794 acres of green pasture. The gross rental in 1826 was £540 12s. 10d. Its surface is partly high and rocky, but in no place rising more than 800 feet above sea level;* and partly low, and tolerably fertile. The land is higher towards the west end; about the middle it subsides into a flattish neck, from which it rises again towards the east. The horned cattle of Canna grow to a larger size than any in the neighbouring islands, owing to the fineness of the grass; there is little heath. Potatoes chiefly are cultivated. Cod and ling abound on the coast, and the harbours are conveniently situated for the fishing-grounds. On the south-east side of Canna lies Sanda, or Sanday, separated by a channel which is dry at low water. See **SANDAY**. Between this island and Canna lies the well-known and much frequented harbour of Canna, 30 miles distant from that of Eigg. A great many basaltic pillars are to be seen in Canna, particularly on the southern side, where the basaltic structure appears in different ranges rising in a succession of terraces. One of the hills to the north-west of the harbour, called the Compass hill, is remarkable for its effects on the magnetic needle. Canna contained 304 inhabitants in 1796; and only 264 in 1831. The population are all Catholics. See **SMALL ISLES**. Houses, in 1831, 45.—When Dean Monroe wrote, Canna belonged to the abbot of Icolmkill. It is now the property of Mr. Macneill, who has done much for the amelioration of its population, by encouraging emigration, preventing subletting, and not allowing any public-house upon it.

CANNOR (Loch), a small lake in Aberdeenshire, in the parish of Glenmuick, about 3 miles in circumference, and containing several small islands; on the largest of which—about an acre in extent—there formerly stood a small fortress occasionally occupied as a hunting-seat by Malcolm Canmore.

CANOBY, or **CANNOBIE**,† a parish in the county of Dumfries; bounded on the north by Langholm; on the east by Castletown; on the south by Cumberland, from which it is divided by the Liddel; and on the west by Half-Morton. It is about 9 miles in length, and 6 in breadth; containing 23,000 imperial acres. It may be considered as the low lands of Eskdale; for its highest grounds—which rise gradually to the east and north-east—as contrasted with the elevated peaks in the conterminous parishes, cannot be called mountains; at the same time the surface is very uneven, and diversified by ridges and flats, excepting the haughs on the banks of the Esk. The central part is intersected by the Esk; and the great road from Edinburgh to Carlisle runs through this district in the same direction, amidst beautifully picturesque scenery. The soil is a light loam, sheltered by a profusion of wood in every part. Besides the **ESK**, this parish is watered by the **LIDDEL**, which divides it from England, and the **TARRAS**, remarkable for its rugged channel and romantic scenery, which divides it from Langholm: see these articles. The

Archerbeck and Rowanburn are tributaries of the Liddel. The number of acres occupied by wood cannot be less than 1,500, of which oak is the chief. A number of orchards were formed here about 45 years ago by the Duke of Buccleuch, and have all succeeded well. Freestone, limestone, and coal, are abundant. At Rowanburn an excellent seam of coal, 9 feet thick, is wrought; and another seam of 7 feet has recently been discovered. There are extensive lime-works at Harelawhill and Halhouse. There is a strong chalybeate spring at Heathet, on the Cumberland side of the Liddel, and a spring on the banks of the Tarras which has a petrifying quality. Population in 1801, 2,580; in 1831, 2,997; in 1836, 3,108, of whom 2,797 belonged to the Established church. This parish is in the presbytery of Langholm, and synod of Dumfries. Stipend £236 12s. 6d., with a glebe of the value of £20. Unappropriated Crown tinds £1,063 7s. 6d. Patron, the Duke of Buccleuch. Church built in 1821–22; sittings 1,000.—Schoolmaster's salary £31 6s. 6d., with about £35 fees. There were also 5 private schools within this parish in 1834.—Some ruins of a convent or priory, built before the year 1165, are still to be seen at Halgreen—or, perhaps, rather Haly or Holy-green—about half-a-mile to the east of the church. The church and convent are said to have been demolished by the English, after the battle of Solway Moss; which is not improbable, as the reason assigned in King Henry's manifesto for committing hostilities upon the Scottish borders, not long before that event, was a pretended claim to the parish of Canoby, as part of the English territory. Part of the old wall of the church still remains, to which the modern building is united; and in which is preserved a small arch that probably marks the place of sepulchre of some prior, or person of distinction. On the suppression of the parish of Morton, in 1703, one-half of it was added to the parish of Canoby.

This parish, being exposed to the incursions of the English borderers, presents many vestiges of strongholds; although there is only one whose walls are yet entire, namely, the tower of Hollows, once the residence of the famous Border chieftain, Johnnie Armstrong, in the reign of James V. It is a roofless strength, built of red sandstone, in the form of an oblong square, about 60 feet by 46. "Amongst the clans on the Scottish side, the Armstrongs were formerly one of the most numerous and potent. They possessed the greater part of Liddesdale and of the debateable land. All along the banks of the Liddel, the ruins of their ancient fortresses may still be traced. The habitual depredations of this border-race had rendered them so active and daring, and at the same time so cautious and circumspect, that they seldom failed either in their attacks or in securing their prey. Even when assailed by superior numbers, they baffled every assault, by abandoning their dwellings, and retiring with their families into thick woods and deep morasses, accessible by paths only known to themselves. One of their most noted places of refuge was the Terras-moss, a frightful and desolate marsh, so deep that two spears tied together could not reach the bottom. Although several of the Scottish monarchs had attempted to break the chain which united these powerful and turbulent chieftains, none ever had greater occasion to lower their power, and lessen their influence, than James V. During his minority, the kingdom was torn by their dissensions, the laws were disregarded, and even the rights of the sovereign were deeply infringed. But no sooner did this gallant young prince free himself from the vassalage in which he had been held by Douglas earl of Angus, and his brother, than he began to reform

* Macculloch, in his *Letters on the 'Highlands and Western Isles'* [vol. iv. p. 31,] supposes some points of Canna to attain an elevation of 800 or even 1,000 feet. We are certain that the latter admeasurement is erroneous. Indeed the same author, in his '*Western Islands*,' [vol. i. p. 445,] adopts the former of these two admeasurements, which we think is still considerably above the truth.

† We find this name also written *Cannoby*, and *Canonbie*. Chalmers considers the name to signify 'the Canon's residence': a canonry having been founded here, in the 12th century, by Turgot de Rosedale, who gave it to the monks of Jedburgh. See '*Caledonia*,' vol. iii. p. 202.

the abuses in his kingdom with such spirit and zeal, as manifested a determined resolution to suppress them. After banishing the Douglasses, and restoring order and tranquillity to the interior, he next directed his attention to the due administration of justice on the Border. He accordingly raised a powerful army, chiefly composed of cavalry, 'to danton the thieves of Tiviotdale, Annandale, Liddesdale, and other parts of the country.' Aware, however, that these depredators could never be effectually crushed, unless the chieftains who protected them were properly secured, he took the necessary precaution of forfeiting, or committing the whole of them to ward, with the exception of Cockburn of Henderland, and Scott of Tushielaw, commonly called the King of the Border, who were publicly executed. About the beginning of June, 1529, the king departed from Edinburgh at the head of his army, and marched rapidly through Ettrick Forest, and Ewsdale. During this expedition, John Armstrong of Gilnockie, the hero of the ballad, presented himself before the king with thirty-six of his followers, in expectation of obtaining pardon. This Armstrong, as we are told by Pitscottie, 'was the most redoubted chieftain that had been for a long time on the borders either of Scotland or England. He ever rode with twenty-four able gentlemen, well-horsed; yet he never molested any Scottish man.' It is said that, from the borders to Newcastle, every Englishman, of whatever state, paid him tribute. Glenockie came before the king with his foresaid number, (thirty-six,) richly apparelled, trusting that, in respect of this free offer of his person, he should obtain the king's favour. But the king, seeing him and his men so gorgeous in their apparel, frowardly turned himself about, and bade them take the tyrant out of his sight, saying, 'What wants that knave that a king should have?' John Armstrong made great offers to the king, that he should sustain himself with forty gentlemen, ever ready at his service, on their own cost, without wronging any Scottish man. Secondly, that there was not a subject in England, duke, earl, or baron, but, within a certain day, he should bring him to his majesty, either quick or dead. At length he, seeing no hope of favour, said very proudly, 'It is folly to seek grace at a graceless face: but, had I known this, I should have lived on the borders in despite of King Henry and you both; for I know that King Harry would downweigh my best horse with gold to know that I were condemned to die this day.' Lindsay of Pitscottie's History, p. 145.—This execution is also noticed by Hollinshead, who says, that, 'In the month of June, 1529, the king, with an army, went to the borders, to set order there for better rule to be kept, and to punish such as were known to be most culpable. And hereupon, he caused forty-eight of the most notable thieves, with their captain, John Armstrong, to be apprehended; the which, being convicted of murder, theft, and treason, were all hanged on growing trees, to the example of others. There was one cruel thief among the rest, who had burned a house with a woman and her children within it; he was burned to death. George Armstrong, brother to John, was pardoned, to the end he should impeach the residue, which he did; so they were apprehended by the king's commandment, and punished for their misdoings, according as they had deserved.' Hollinshead's 'Scottish Chronicle,' vol. ii. p. 182.—This historian appears, however, to have confounded John Armstrong and his party, with the whole other depredators who were executed during the march. The place where John Armstrong and his followers suffered, was at Carlenrig chapel, about 10 miles above Hawick, on the high road to Langholm.

They were buried in a desert churchyard, where their graves are still pointed out. The peasantry in these districts hold the memory of John Armstrong in high estimation, and scruple not to affirm, that the growing trees mentioned by the historians withered away as a manifest sign of the injustice of the execution. They likewise assert, that one of Armstrong's attendants, by the strength and swiftness of his horse, forced his way through the ranks of the surrounding host, and carried the tidings of the melancholy fate of his master and companions to Gilnockie castle. Although George Armstrong of Mangerton had received a pardon from the late sovereign, the death of his brother John was neither to be soon forgotten, nor the descendants of the sufferers easily to be pacified. Indeed, the hostile and turbulent spirit of the Armstrongs was never broken or suppressed, until the reign of James VI., when their leaders were brought to the scaffold, their strongholds razed to the ground, and their estates forfeited and transferred to strangers. So that, throughout the extensive districts formerly possessed by this once powerful and ancient clan, there is scarcely left, at this day, a single landholder of the name. The death of this redoubted border hero is noticed by Buchanan. It is likewise frequently alluded to by the writers of that age. Sir David Lindsay of the Mount, in his 'Satyre of the Three Estates,' introduces a pardoner, or knavish dealer in reliques, who, in enumerating his halie wares, is made to say,

Here is ane coird baith grit and lang,
Quik hangit John the Armstrong,
Of gude hemp soft and sound;
Gude halie peopill, I stand forð,
Quha ever beis hangit with this coird,
Neids never to be dround!

In the 'Complaynt of Scotland,' John Armstrong's dance is also mentioned as a popular tune. The celebrated ballad of 'Johnie Armstrong,' was first published by Allan Ramsay, in his 'Evergreen,' in 1724, who tells us, that he copied it from the mouth of a gentleman of the name of Armstrong, who was the sixth generation from the above John.* [Stenhouse's Notes to the 'Musical Museum,' vol. iv. pp. 328—332.]—Near Penton Linns, a romantic spot on the Liddel, was another Border stronghold, called Harelaw tower, once the residence of Hector Armstrong, who betrayed his guest, the Earl of Northumberland, to the regent Murray.

CANONGATE, a parish and suburb of Edinburgh, occupying the eastern district of that city, and comprehending the Canongate Proper, the Pleasance, North Leith, Coal hill, and the chapel and palace of Holyrood-house, and the adjacent parks. It is a burgh-of-barony, under the superiority of Edinburgh, since the year 1630; and is governed by a baron-bailie, nominated by the corporation of Edinburgh, and two resident bailies appointed by the inhabitants. Population in 1831, 10,175. Revenue about £400, arising chiefly from petty customs levied at the Watergate. While Edinburgh was the seat of royalty, the Canongate was the place of residence of most of the noble families who attended the court; and there are several old houses which retain the names of the noble owners; such as Milton house, Queensberry house, &c.; but it is now chiefly in-

* It was a lineal descendant of this celebrated freebooter, who, in the reign of Charles I. kidnapped the person of Lord Durie, the president of the court of session, and kept him upwards of three months in secret confinement in an old castle in Annandale, called Graham's tower. The motive for this extraordinary and daring stratagem was to promote the interests of Lord Traquair, who had a lawsuit of importance before the court, in which there was reason to believe that the judgment would be unfavourable, and decided by the casting-vote of the president.

habited by trades-people, and those of the lower order. See articles EDINBURGH and HOLYROOD.

CANONMILLS, a village, or rather a suburb, a little to the north of the new town of Edinburgh, on the water of Leith, where there are extensive flour-mills and a distillery. The Newhaven railway here enters the tunnel by which it is carried under the New town to the east end of Princes-street gardens.

CANTYRE. See KINTYRE.

CAOLISPORT, a district in the shire of Argyre, and parish of South Knapdale. It comprises the point of Knap, and a fine loch on the Atlantic ocean, which abounds with fish of various kinds. It has also a commodious harbour.

CAPELAW, one of the Pentland hills, in the parish of Collington, Edinburghshire, having an altitude of 1,550 feet above sea level.

CAPE WRATH, a celebrated head-land, in the parish of Durness in Sutherlandshire, forming the north-west point of Scotland, in 58° 37' N. lat., and 5° W. long. It is a fine promontory of granitic gneiss, towering up in a pyramidal form to the height of 300 feet, and standing boldly out into the waves. "Nothing," says Macculloch, "can exceed the elegance and majesty of its form, declining towards the sea in a second and much lower pyramidal rock; the whole forming an outline as graceful as it is unexpected, and as grand as it is appropriate. No vessels approach this shore, as the rapidity and turbulence of the tide are extreme; and as this is esteemed both a difficult and a dangerous point to double. The captain therefore thought fit to haul off and stand further out to sea; when, perceiving an aperture through the pyramid, by means of the spying glass, I proposed to the men to take the boat and stand in shore, to examine it more nearly. As we approached the cape, an arched passage appeared through each pyramid; the largest being in the highest rock, and appearing to be about seventy or eighty feet high. Nothing could now be more magnificent; the lofty cliffs on our right hand being broken into a thousand rude forms, and the cape itself, with its double pyramid, towering above them and projecting far out from the land, like a gigantic wall,—a triumphal arch worthy of Neptune. The green sea was foaming all round the foot of the rocks; and, as we drew nearer, the low sullen roar increased, adding awfulness to a scene already terrific. We were soon sensible that we had been fast falling into the most rapid stream of the tide; and could now perceive that it was running with the velocity of a torrent, through both the passages and round the point. The men held their oars in the water, for they were now useless, and there was a dead silence. I saw that they were alarmed, and uncertain what to do; but it was plain, in less than a minute, that retreat was out of the question, and that if we attempted to weather the point, we might probably fail, and be lost upon it. I proposed to the boatswain to go through the arch; since a minute's hesitation would have carried us into the breakers, and left the history of Cape Wrath untold. To propose a choice where there was none, was mere matter of policy; but it served its purpose. Not a word was answered; and as the helm in my hand was now useless, all the oars were kept in the water, to steady and steer by through the boiling current; when, almost before we had time to think what was to follow, we were whirled through, I know not how, and, in an instant, found ourselves lodged in an eddy in a deep fissure of the cliff; the first, assuredly, who had ever performed this feat. Here, with the flood, there is some smooth water; out of which it is just possible to scramble up, on a ledge of rocks within, a deep fissure, and thus to study the scene at leisure. This

situation too is very fine; the green waves surging with a hollow noise into this recess, which is only illuminated partially from without, and extends perpendicularly upwards the whole height of the cliffs, to an altitude of five or six hundred feet; just affording a glimpse of the sky. The aspect of the cape is here tremendously striking; as, from its proximity, it now towers over head, to an imaginary and unlimited height; while the turbulence and roar of the stream of tide through the arches, and the foaming of the sea against the cliffs, added indescribably to the effect. Nor was it a small addition, that this situation was attended with some anxiety, if not danger; as the rising of the wind, or the shifting of the tide from the flood to the ebb, might have rendered it impossible to get off again." ['Highlands and Western Isles,' pp. 361—363.] In 1828, a lighthouse was erected here at an expense of £14,000. It shows a white revolving light, which is elevated 400 feet above high water, and is seen at the distance of 24 miles in clear weather. In 1838, the expense of maintaining this light was £604 16s. 1½d. The Butt of Lewis on the south-west, and the Hoy-head of Orkney towards the north-east, can be seen in clear weather from the top of this lighthouse. See DURNESS.

CAPUTH, a parish in the district of Perthshire called Stormont, bounded by Dowlay and Blairgowrie on the north; Cluny and Lethendy on the east; Kinclaven and Auchteravan on the south; and Little Dunkeld on the west. It comprehends an extensive portion of Strathmore, stretching in length nearly 13 miles, and varying in breadth from 1 to 6. Its superficies is estimated at 16,000 imperial acres. There are several detached portions belonging to this parish: viz. Batholmie, locally situated in the parish of Cargill; West and Middle Gormack, in Kinloch; East and West Logie, Raemore, Cairns, Chapelton, Meadows and Crofty, in Clunie; and Craigtown of Dalrulzeon, in Kirk-Michael; all in the shire of Perth. And, South Bandirran, in Collace; Balbeuchly, in Aughterhouse; Broughty castle and fishings, and a small piece of ground at Mylnfield, near Dundee; and Fofarty in Kinnettles, where there is a field of about 4 acres, called, from time immemorial, the Minister of Caputh's glebe, and believed to belong to him, though not hitherto occupied; all in the shire of Forfar. These remote portions—with the exception of Dalrulzeon and Raemore—are now considered as belonging, *quoad sacra*, to the parishes in which they are respectively situated. The district of Dalrulzeon, containing a population of from 70 to 80, and which is 15 miles distant from the parish-church, has been annexed to the chapelry of Persie in Bendochy. The Tay, the Isla, and the Lunan, water this parish. The Lunan in its course here forms a succession of small but beautiful lakes, and at last falls into the Isla. The surface of this district is mountainous; the soil of the arable part is mostly a deep clay, except on the banks of the Tay and Isla, where it is a light loam. There are five or six small villages in the parish. The hills afford very fine blue slate. There are several antiquities, as druidical circles, cairns, &c.: of the last, one called Cairnmuir is esteemed the largest of the country. Population, in 1801, 2,097; in 1831, 2,303. Houses, in 1831, 467. Assessed property, in 1815, £8,881.—This parish is in the presbytery of Dunkeld, and synod of Perth and Stirling. Stipend £232 15s. 11d., with a glebe of the value of £22 10s. Patron, the Crown. Church built in 1798; sittings 800.—Schoolmaster's salary £34 4s. 4d., with about £30 fees. There were 6 private schools in 1834.

CARA, a small island in Argyleshire; 3½ miles

west of Kintyre, and about a mile south of Gigha, to which it is attached parochially. It is about a mile in length, and half-a-mile in breadth. The shore is high and rocky, except at the north-east end, where there is a landing-place. The south end, called the Mull of Cara, which is the highest part of the island, is a perpendicular rock 117 feet in height. From the shore to the foot of this precipice there is a steep ascent, equal to 50 feet perpendicular, which makes the whole 167 feet. This rock contains a great deal of iron-ore, and in one place—which was struck with lightning about the year 1756—large pieces of metallic-ore were thrown down, which seemed to be a mixture of copper and iron. Close by this part of the rock is a cave 40 feet long, 5 high, and 5 broad, which communicates with another 37 feet in length, 9 in breadth, and 9 in height. The north-east part of the island abounds with rabbits. Adjoining to the house of the farmer is an old chapel, 26 feet long, and 12 broad, with a Gothic arched door. See GIGHA.

CARALDSTON, or **CARESTON**, a parish in Forfarshire; about 3 miles in length, and 1 in breadth; bounded by Menmuir on the north; Brechin on the east; Aberlemno on the south; and Tannadice and Fearn on the west. The surface is well-cultivated, with a gentle slope from north to south. The soil is deep and fertile; and the banks of the South Esk and Norin, which unite in this parish, are beautifully ornamented with plantations. Population, in 1801, 229; in 1831, 252. Assessed property, in 1815, £3,280. Houses, in 1831, 55.—This parish is in the presbytery of Brechin, and synod of Angus and Mearns. Stipend £158 7s. 6d., with a glebe of the value of £8. Patron, the Earl of Fife. Schoolmaster's salary, £34 4s. 4d. with about £12 fees. There is a small private school.

CARBERRY HILL, a gently rising ground, in the parish of Inveresk, in Mid-Lothian; 2 miles south-east of Musselburgh, and 7 from Edinburgh. Here Queen Mary surrendered herself to the confederated lords, June 15, 1567, prior to her imprisonment in Lochleven castle. The transaction is thus related by Bell: "It was now between seven and eight in the evening, and a battle must have ensued, either that night or next morning, had not an unexpected step been taken by the queen. Without betraying Bothwell, she formed a resolution to rid herself from the bondage in which he kept her. She sent to desire that Kircaldy of Grange should come to speak with her, and she intimated to him her willingness to part from Bothwell as was demanded, if Morton and the other lords would undertake to conduct her safely into Edinburgh, and there return to their allegiance. This overture, on being reported by Grange, was at once accepted, provided Mary agreed to dismiss Bothwell on the field. It may be easily conceived, that, to Bothwell himself, such an arrangement was not particularly agreeable, and could never have entered the imagination, much less have been the deliberate proposal, of a loving and obedient wife. Historians, we think, have not sufficiently insisted on the strong presumption in Mary's favour, afforded by her conduct at Carberry Hill. It is true that there might have been an understanding between her and Bothwell, that as soon as she was reinstated in her power, she would recall him to a share of her throne and bed. But even supposing that, notwithstanding the alleged violence of her love, she had been willing to consent to a temporary separation, both she and Bothwell knew the spirit of the men they had to deal with too well to trust to the chance of outwitting them, after yielding to their demands. Mary must have been aware, that if she parted with Bothwell at all,

she, in all probability, parted with him for ever. Had she truly loved him, she would rather have braved all risks (as she did with Darnley when Murray rebelled) than have abandoned him just at the crisis of his fortune. But she had at no period felt more than the commonest friendship for Bothwell; and since she had been seized by him at the Bridge of Almond, she had absolutely hated him. Melville, accordingly, expresses himself regarding this transaction in these terms: 'Albeit her majesty was at Carberry Hill, I cannot name it to be her army: for many of them that were with her, were of opinion that she had intelligence with the lords; chiefly such as understood of the Earl Bothwell's mishandling of her, and many indignities that he had both said and done unto her since their marriage. He was so beastly and suspicious, that he suffered her not to pass a day in patience, or without giving her cause to shed abundance of salt tears. Thus, part of his own company detested him; and the other part believed that her majesty would fain have been quit of him, but thought shame to be the doer thereof directly herself.' Melville adds, that, so determined was Bothwell not to leave the field if he could avoid it, he ordered a soldier to shoot Grange when he overheard the arrangement which he and the queen were making. It was 'not without great difficulty,' says another contemporary writer, that Mary prevailed upon Bothwell to mount his horse, and ride away with a few followers back to Dunbar. The difficulty there would be in bringing about this consummation cannot be doubted; but that a wife of one month's standing, who is said for his sake to have murdered her former husband, should permit, nay beseech him, thus to sneak off a field he might have won, had she allowed him to fight, is a far more legitimate cause of wonder.' When Bothwell left Carberry Hill, he turned his back upon a queen and a throne;—he left hope behind, and must have seen only ruin before. As soon as her husband had departed, Mary desired Grange to lead her to the lords. Morton and the rest came forward to meet her, and received her with all due respect. The queen was on horseback, and Grange himself walked at her bridle. On riding up to the associated nobles, she said to them,—'My Lords, I am come to you, not out of any fear I had of my life, nor yet doubting of the victory, if matters had gone to the worst; but I abhor the shedding of Christian blood, especially of those that are my own subjects; and therefore I yield to you, and will be ruled hereafter by your counsels, trusting you will respect me as your born princess and queen.' ["Life of Mary, Queen of Scots," edn. 1840, pp. 101, 102.]

CARDEN, a hill in the south-west of the Kibbucho district of Broughton parish, Peebles-shire; elevated about 1,400 feet above the level of the Tweed.

CARDROSS, a parish in the county of Dumbarton; about 8 miles in length, and from 2 to 4 in breadth; bounded on the north by Luss; on the east by the river Leven, which divides it from Bonhill and Dumbarton; on the south by the frith of Clyde; and on the west by the parish of Row. The superficial extent of the parish is about 13,000 acres, of which one-half are under tillage. Assessed property in 1815, £6,390. The bed of the Clyde is here from 1 to 2 miles in width, but a considerable tract of land might be redeemed by embanking, the river itself having evidently contracted its limits in this quarter. The gains on salmon-fishings in the Clyde in this parish, were very valuable in former ages, but are now of little value. The fishings in the Leven belong to the corporation of Dumbarton. The surface rises, with a gradual ascent, from the

shore for upwards of 2 miles, till it terminates in a ridge which separates it from the lands in the neighbourhood of the Leven and Loch Lomond. On the shore, the soil is gravelly and thinly covered with mould; at a short distance, it becomes clay; the lands adjacent to the Leven are of the nature of carse. The natural wood and plantations cover about 300 acres. The printfields and bleaching-fields in this parish employ a number of hands; and the village of Renton, founded in 1782, is rapidly increasing. See RENTON. The village of Bridgend contained in 1831 a population of 635. It is properly a suburb of Dumbarton.—Near Renton, in the old mansion-house of Dalquhurn or Bonhill, was born Tobias Smollett, the well-known author of 'Roderick Random.' After a chequered life of 51 years, he died at Leghorn, whither he had gone for the recovery of his health, in 1771. Adjacent to the place of his nativity, Smollett of Bonhill, his cousin, erected a lofty Tuscan column to his memory, with a Latin inscription.—A little west of the Leven, upon a small wooded eminence called Castlehill, at the first milestone from Dumbarton, stood a residence of King Robert Bruce. In this castle—of which no vestige is now discernible—that favourite prince, as history and tradition inform us, breathed his last on June 7, 1329, at the age of 55.—Population, in 1801, 2,549; in 1831, 3,596. Houses 374.—The village of Cardross lies on the shores of the frith, is $\frac{3}{4}$ miles west of Dumbarton, and $\frac{1}{2}$ east of Helensburgh. Ferry-boats formerly used to ply regularly between this place and Port-Glasgow, on the opposite coast. It appears from a register of the weather kept at Keppoch, in this parish, from 1826 to 1832, that the average highest range of the barometer during these seven years was $30\frac{3}{100}$, and the lowest $28\frac{7}{100}$; while the highest range of the thermometer was 84° , and the average 78° . There is preserved at Keppoch an original portrait of Principal Carstairs.—This parish is in the presbytery of Dumbarton, and synod of Glasgow and Ayr. Stipend £155 8s. 9d., with a glebe of the value of £25. Patron, the Crown. Church built in 1826; sittings 800. There are a United Secession church, and a chapel-of-ease or missionary station, in the village of Renton; and a Relief congregation in Bridgend. Schoolmaster's salary £34, with about £60 fees. In 1834, there were 7 private schools in the parish attended by about 300 scholars. A considerable portion of the parochial schoolmaster's emoluments arise from a mortification in land and money, by Napier of Kilmallow, in the 17th century. In 1690, Mrs. Jane Moore bequeathed £500 for behoof of the poor in this parish. From this bequest the lands of Ballemnoch, now yielding a yearly rent of above £200, were purchased, besides £1,000 invested in the 3 per cents, under trust of the minister, heritors, and kirk-session.

CARESTON. See CARALDSTON.

CARFRAE MILL, a well-known stage on the road from Edinburgh to Kelso, by Lauder; 21 miles from Edinburgh, $20\frac{1}{2}$ from Kelso, and $5\frac{1}{2}$ from Lauder. It is pleasantly situated near the Leader, in the parish of Channelkirk.

CARGILL, a parish of Perthshire, in Strathmore; bounded by Lethendy and that part of Cupar-Angus which belongs to Perthshire, on the north; by Cupar-Angus in Forfar, and by Colace, on the east; by St. Martins on the south; and by Kinclaven on the west. It is about 6 miles in length, and from 4 to 5 in breadth. The surface is finely diversified with wood and water, and variegated by gentle ascents and declivities. Rising gradually for about a mile from the Tay, which bounds it on the west, it then forms a plain of near 2 miles in breadth,

extending to the Sidlaw hills, which form the south boundary. The soil, on the banks of the river, is a deep rich clay; towards the middle it is loamy; at the foot of the hills it becomes gravelly and unproductive. Near the west end of the parish, the Tay forms what is called the Linn of Campsie, by falling over a rugged basaltic dyke which crosses the bed of the river at this place, and extends in a right line many miles to the north and south of it. The most romantic and magnificent views on the Tay are in this parish. The Isla runs into the Tay about half-a-mile above the village of Cargill. The salmon-fisheries on both these rivers are of considerable value. In former times this parish abounded with wood: at present, there are only about 100 acres of natural coppice, and 400 of plantation. Several free-stone quarries of excellent quality and colour have been wrought here to a considerable extent. Limestone also is found, and might be wrought to good account: there is also abundance of rock marl. Near the confluence of the Tay and Isla are vestiges of a Roman encampment: the fossa are yet distinct, and the aqueduct by which they were filled from a neighbouring river is in a state of high preservation. A Roman road, about 20 feet broad, composed of rough round stones rudely laid together, passes along the high grounds.—Stobhall, formerly a seat of the Perth family, now belonging to Lord Willoughby D'Eresby, is an old fabric fancifully situated on a narrow peninsula on the banks of the Tay. It came into the possession of the family of Perth, in 1360, when Sir John Drummond, by marrying Lady Mary, the eldest daughter and co-heiress of Sir William de Montifex, justiciar of Scotland, and chief of a most ancient family, obtained with her the lands of Cargill and Stobhall, which then became promiscuously the designation of the family.—Upon a romantic rock, which rises perpendicularly over the Linn of Campsie, are the ruins of an ancient religious house, said to have been dependent on the abbey of Cupar: next to the kings of Scotland, the Hays of Errol were the principal benefactors to this monastery. The abbey of Cupar was supplied with fuel from the wood of Campsie; and the road which the abbots and monks made use of to convey it thither, is still called the Abbey road. A considerable manufacture of linen is carried on in this parish, and there are some bleach-fields. There are three villages in the parish; one of which, named Strelitz, in honour of her late majesty, was erected in 1763, as a place of residence for the discharged soldiery, at the conclusion of the German war. Population, in 1801, 1,585; in 1831, 1,628. Houses 310. Assessed property in 1815, £7,620.—This parish is in the presbytery of Dunkeld, and synod of Perth and Stirling. Stipend £224 16s. 9d., with a glebe of the value of £14. Unappropriated teinds £4 16s. 6d. Patron, the Crown. There is an extension church at the village of Burrelton.—Schoolmaster's salary £34 4s. 4½d., with about £15 fees. There are 3 private schools. This parish was formerly called the West parish, and is said to have been only a part of the parish of Cupar-Angus; but it was considered a distinct parochial district as far back as 1514.

CARINGTON. See CARRINGTON.

CARITY, a small river, which has its source in the parish of Lintrathen, Forfarshire, and, after a course of 5 miles, falls into the South Esk, at the village of Inverarity.

CARLETON HILL, a hill in the parish of Colmonell, in Ayrshire, which rises with a steep ascent to an elevation of about 520 feet* above the level of the

* The admeasurement given in the Old Statistical Account, [vol. ii. p. 60.] is 1,553 feet! The writer surely meant to say 518 feet, instead of as many yards. See our note p. 84.

sea. It is situated so near the sea, at the bottom of a bay of the same name, that at full tide there is little more than room for the traveller to pass without danger.

CARLIN SKERRY, an insulated rock, in Orkney, about $2\frac{1}{2}$ miles south of Pomona island, well-known to seamen by the name of the Barrel of Butter.

CARLINWARK. See **CASTLE-DOUGLAS**.

CARLOPS, a pleasant village in the parish of Linton in Peebles-shire; 14 miles from Edinburgh, on the road to Dumfries. It was founded in 1784; and now contains a population of nearly 200, chiefly cotton-spinners. The scenery of 'The Gentle Shepherd' is generally supposed to be in this vicinity. In the neighbourhood, on the south side of the Esk, is a lonely glen in which the covenanters are said to have found a temporary refuge after the defeat at Rullion-Green on the Pentlands, in November 1666. On the north side of this glen are some precipitous rocks—probably the "craggy beild" of Allan's drama—from one of which, called the Harbour Craig, the covenanting preachers are said to have addressed their adherents. Farther up the glen, at a place called the Howe, is a beautiful little linn, [See **HABBIE'S HOWE**,] which seems to furnish further proof that these are the very scenes

"that taught the Doric muse
Her sweetest song,—the hills, the woods, the streams,
Where beauteous Peggy stray'd, list'ning the while
Her gentle shepherd's tender tale of love."

James Forrest, the author of some pleasing poems in the Scottish dialect, died at Carllops in 1818, aged 43. He was a weaver by trade.

CARLUKE, a parish in the upper ward of the county of Lanark; about 8 miles in length, from the Clyde to its boundary on the north, and fully $4\frac{1}{2}$ miles in breadth. It is bounded on the north by Cambusnethan parish; on the east by Carnwath, Carstairs, and Lanark; on the south by the Clyde, which separates it from Lesmahagow; and on the west by Cambusnethan, from which it is separated by Garrion gill. In the New Statistical Account its superficies is estimated at 15,360 imperial acres, of which nearly the whole are under cultivation. The assessed property, in 1815, was £8,553. The present rental is nearly £30,000, exclusive of the mineral produce, which may amount to £20,000. The surface rises to a considerable height on the eastern border, where it terminates in a moorish tract of land: it has in consequence a great declivity, but almost the whole is arable. The soil, on the banks of the Clyde, is light and fertile; farther up it becomes a rich mellow clay excellently adapted for trees and generally covered with woods and orchards. In the more distant fields, the soil is in general shallow, poor, and unproductive. The banks of the Clyde, which are here low and sheltered, are famous for fruit; and in this parish, apples and pears are produced in more abundance than perhaps in any other district in Scotland. The orchards extend in length 5 miles, and are supposed to comprehend nearly 130 acres. In 1822 they produced £3,043; in 1838, only £444. The principal proprietor is Sir Norman Macdonald Lockhart of Lee and Carnwath, Baronet. There are several little hills or laws, of which the loftiest is Kilcadzow law, which has an elevation of nearly 900 feet. Coal abounds everywhere: the strata are minutely described in the New Statistical Account. Freestone, lime, and ironstone, are also abundant; and metallic calces, and calcareous petrifications, are sometimes met with. Mauldsie castle, built in 1792-3, the elegant seat of the late Earl of Hyndford, is situated near the village of

Carluke. Milton-Lockhart is a fine building in the manorial style, very beautifully situated. Hallbar, an ancient square tower in this parish, beautifully situated in a romantic dell, in a deed dated 1685, is called the 'Tower and Fortalice of Braidwood.' Ha'-hill, or Haugh-hill—an elevated mound near Mauldsie castle—rises to the height of between 60 and 70 feet, and contains the remains of the last two Earls of Hyndford. Various remains of antiquity have been dug up in the neighbourhood. This parish gave birth, in 1726, to Major-general Roy, whose abilities as a mathematician and antiquarian are well-known. Population, in 1801, 1,756; in 1831, 3,288. Houses 630. There are three villages in the parish: namely, Braidwood, Kilcadzow, and Yieldshields.—This parish—anciently called Kirk-Forest, probably from its situation in Mauldsie forest—is in the presbytery of Lanark, and synod of Glasgow and Ayr. Stipend £231 19s. 6d., with a glebe valued at £30. Unappropriated tithes £429 16s. 11d. Patron, Sir Norman Macdonald Lockhart, Bart. Church built in 1799; sittings 1,000. The manse is beautifully situated.—Schoolmaster's salary £34, with about £55 of fees. There are 6 unendowed schools. In 1814, Mr. Reid of Nellfield bequeathed £2,000 to this parish, to be expended in annuities to 12 persons in decayed circumstances.—Robert Forrest, the self-taught sculptor, is a native of this parish.

The burgh of **CARLUKE**, in the above parish, is 5 miles west of Lanark, on the road leading to Glasgow, from which it is distant 18 miles. It has increased rapidly since the introduction of the cotton manufacture. The neighbouring scenery is much admired. Population, in 1838, 2,366. Municipal constituency in 1839, 36. The Relief body have a handsome church here, erected in 1833, and seating 770; and there is also a church belonging to the Associate synod, erected in 1797, and seating 470. The stipend of the Relief minister is £110; of the Old Light or Associate synod minister £122, with a house and garden. The Glasgow and Wishaw railway might be easily prolonged to Carluke. There are 2 fairs held here: on May 21st and October 31st.

CARMICHAEL, a parish about 6 miles in length, and from 3 to 4 in breadth, situated on the banks of the Clyde, in the upper ward of Lanarkshire; bounded on the north by Lanark and Pettinain; on the east by Covington; on the south by Wiston; and on the west by Douglas and Lesmahagow. The superficial area is about 11,500 acres, of which more than a third part is arable. The value of assessed property in this parish, in 1815, was £4,326; the real rental is about £4,600. The surface is very unequal: there are several hills of considerable height, covered for the most part with short heath. The famous Tinto is partly in this parish: see article **TINTO**. The soil towards the Clyde is thin and gravelly, in the higher parts it is clayey and wet. Coal and limestone, of excellent quality, are found here. The greater part of the parish rests on old red sandstone. The late Earl of Hyndford, who was the chief proprietor, enclosed and planted a great part of this parish. Upon his death, in 1817, his estates here reverted to Sir John Carmichael Anstruther of Elie, Baronet.—The celebrated John, 3d Earl of Hyndford, who was born in 1701, and died in 1767, was a great benefactor to this parish. The period of his lordship's political life was during the troublous days of Scotland, when the last of the exiled house of Stuart made an unsuccessful struggle to regain the British throne, which convulsed the kingdom for several years. Devotedly attached to the house of Brunswick, the Earl was always high in favour with his Majesty, George II., by whom he was appointed envoy-extraordinary to the court of Russia, upon a special mission; and upon the access-

sion of George III., he was nominated Vice-admiral of Scotland. Some idea may be formed of his lordship's assiduity, from the fact that, in the library in Westray, there are 23 manuscript volumes of his political life, in his own hand-writing. Besides, during the whole of his stay abroad, he kept up a regular correspondence with his factor at Carmichael, in which he evinces an accurate knowledge of architecture, agriculture, and rural affairs in general. A few years before his death, he granted leases of 57 years' duration, in order to improve his lands; and even at that early period—when the rudest agricultural practices were transmitted from sire to son, and the most slovenly habits, both in the field and in the dairy, were in general use—the Earl introduced clauses into the new leases which have since been adopted as the most approved mode of farming. The greater part of the beautiful plantations which adorn the now deserted family-mansion of Carmichael house, and which are excelled by none in Scotland, were reared from seeds which the ambassador selected when abroad, but particularly from Russia. His remains rest in the family burying-ground in this parish.—Carmichael gave the title of Baron to the ancient and noble family of Carmichael. James Carmichael, the first Lord Carmichael, was created a Baronet by Charles I. He was also, by that monarch, promoted to be justice-clerk, deputy-treasurer, and one of the judges in the court of session; and, in the time of the civil war, having lent His Majesty considerable sums of money, he was created Baron Carmichael, in 1647. His grandson was created Earl of Hyndford in 1701. Population, in 1801, 832; in 1831, 956. Houses 183.—This parish is in the presbytery of Lanark, and synod of Glasgow and Ayr. Stipend £225 2s. 7d., with a glebe of the value of £20. Patrons, Sir W. C. Anstruther, Bart., and Sir N. M'D. Lockhart, Bart. Church built in 1750; sittings about 450. Schoolmaster's salary £32, with about £30 fees. There is one private school.

CARMUNNOCK, or CARMANNOCK, a parish in the under ward of Lanarkshire, extending, from east to west, about 4 miles in length, and $2\frac{1}{2}$ in breadth from north to south. It is bounded on the north by Cathcart; on the east by Cambuslang; on the south by Kilbride; and on the west by Eaglesham and Mearns. The greater part is elevated, and commands an extensive prospect, particularly from the summit of Cathkin braes, about 500 feet above sea-level; from which, in a clear day, Arthur's seat in the neighbourhood of Edinburgh, Benledi in Perthshire, and the peaks of Arran, are all discernible. The soil is partly a light mould, and partly a strong deep clay, which, when properly drained and manured, produces excellent crops. Of the whole extent, which is about 2,800 Scotch acres, nearly 2,400 are enclosed and cultivated. The White Cart runs along the western boundary. Its banks are here high, and in most parts covered with wood, which, together with its meanderings and the rapidity of its current, renders the scenery very picturesque and romantic. The road from Glasgow to Muirkirk passes through the eastern part of this district. In many places there are coal, ironstone, and limestone, none of which, however, has been here wrought to any extent. There is also freestone. The village of Carmunnock has a population of about 400. It is $3\frac{1}{2}$ miles distant from Rutherglen. The large village of Busby, on the Cart, belongs partly, *quoad sacra*, to this parish. See MEARNS. Many tumuli, or sepulchral cairns, are to be met with here, which, when opened, have always been found to contain human bones and instruments of war. On the estate of Castlemilk are the remains of a Roman military road, near which have been found various Roman antiquities. In the house of

Castlemilk—which is noted for its fine situation—Mary Queen of Scots is said to have lodged the night before the battle of Langside. Population, in 1801, 700; in 1831, 692. Houses 102. Assessed property, in 1815, £6,002.—This parish, formerly a vicarage, is in the presbytery of Glasgow, and synod of Glasgow and Ayr. Stipend £152 17s. 6d., with a glebe of the value of £19. Patron, Stirling of Castlemilk.—Schoolmaster's salary £34 4s. 4½d., with about £32 fees.

CARMYLE, a village in Old Monkland parish, in Lanarkshire. It is noted for the beauty of its situation, having a fine southern exposure, watered by the Clyde. This village originated in a muslin manufactory, erected about 1741, by a Glasgow merchant.

CARMYLE, a parish in Forfarshire; extending in length about 4 miles, and about 3 in breadth; bounded on the north by Kirkden and part of Dunnichen parish; on the east by Inverkeilor, Arbirlot, and St. Vigeans; on the south by Arbirlot, Panbride, and Moncrieff; and on the west by Monikie, Guthrie, and Dunnichen. It is a hilly tract of country, in the range of the Sidlaws; but the hills are capable of cultivation to their summits. Almost the whole district shows a cold wet soil, on a till or gravelly bottom. There are several moors and marshes. A part of Dilty-moss lies on the western skirts of this parish. There are inexhaustible quarries of grey slate and pavement stones, which have been wrought for centuries, and supply the neighbourhood, besides being exported to Perthshire, Fife, Leith, London, Aberdeen, and Glasgow. These quarries are the property of Lord Panmure. The stone lies in level beds, which are about 18 inches in thickness, and are found close to the surface. The principal mansion-house is that of Guynod. The small river Elliot, or Elot, or its head-stream the Black burn, which takes its rise in the east end of Dilty moss, runs through the parish from north-west to south-east. See ARBIRLOT. Population, in 1801, 892; in 1831, 1,153. Houses 247. Assessed property, in 1815, £2,226. Rental, in 1808, £2,074. This parish, erected in 1609, is in the presbytery of Arbroath, and synod of Angus and Mearns. Stipend £151 8s. 3d., with glebe valued at £30. Patron, the Crown.—Schoolmaster's salary £34, with about £20 fees. There is a private school.

CARNACH, a *quoad sacra* parish, in the shire of Ross, disjoined from the parishes of Contin, Fodderty, and Urray, by authority of the General Assembly. Its greatest length is 17 miles, and greatest breadth 10; but the inhabited part of the parish is a narrow valley about 14 miles long by one-sixth of a mile broad. In 1830, the population was 1,056; in 1836, only 711,—a decrease attributed to the introduction of sheep-farming. The population is composed of small tenants of from £5 to £10 a-year, and shepherds. Church built in 1830, chiefly at the expense of Government; sittings 320. Stipend £120, with a manse and glebe, and grass for two cows and a horse.

CARNBEE, a parish in Fifeshire; bounded by Cameron on the north; by Denino, Crail, and Kilrenny on the east; by Anstruther, Pittenweem, and St. Monance on the south; and by Kilconquhar on the west. It is about 4 miles in extent from north to south, and the same from east to west. A ridge of hills runs east and west through the middle of the parish, which, in different places, rises into fine green hills of a conical outline, one of which, Kellie Law, rises to the height of 810 feet above sea-level, and commands a fine view. On the south side of these high grounds, all the way down to the coast of the frith of Forth, is an extent of rich fertile soil; north of the hills the ground is much more adapted for pas-

ture, though, in dry seasons, even there the crops are abundant. Nearly two-thirds are subdivided and enclosed. Kelliecastle, formerly the seat of the Earl of Kellie, now belonging to the Earl of Mar, was a large building, with stately apartments, and pleasure-grounds laid out with great taste, but is now used as a farm-house. Balcaskie, the seat of Sir R. A. Anstruther, Bart., is a fine old building. Pit-corthie, the seat of James Simpson, Esq., is a magnificent modern house. There are some excellent lime and freestone quarries, and coal is extensively wrought. Population, in 1801, 1,083; in 1831, 1,379. Houses, in 1831, 233. Assessed property, in 1815, £11,502.—This parish is in the presbytery of St. Andrews, and synod of Fife. Patron, Sir R. A. Anstruther, Baronet. Stipend £238 17s. 8d., with a glebe of the value of £30. Unappropriated teinds £236 13s. 8d.—Schoolmaster's salary £34 4s. 4½d., with about £25 fees. There is one private school in the parish.

CARNIBURG, OR CAIRNBURG (GREATER and LESSER), two of the Treshinish isles, lying west of Mull. There are some remains of a fort on Cairnburg More, said to have been constructed by a party of Macleans, who here held out for some time against a detachment of Cromwell's forces.

CARN-NA-CUIMHNE. See **BRAEMAR**.

CARN-NAN-GOUR. See **BLAIR-ATHOLE**.

CARNOCK, a parish in the western extremity of the county of Fife; in the Dunfermline district. It is bounded by Saline on the north; Dunfermline on the east; Torryburn on the south; and Torryburn and part of Perthshire on the west. Superficial area 2,160 acres. The surface is level towards the east, but has a gentle declivity towards the south and west, and rises on the north and north-east into the hills of Craighuscar. The soil is partly a black loam, and partly clay or till, having in several places a mixture of gravel. The rivulets of Carnock and Pitdennies have their banks covered with plantations of fir, larch, and ash; and present very pleasing scenery in several parts, particularly at Luscar-den near Carnock. The principal villages are Carnock and Cairneyhill, both pleasantly situated, the former upon the Carnock, the latter about 2 miles to the south, upon the road leading from Dunfermline to Stirling. The population of Carnock village, in 1837, was 178. There are several excellent coal-mines in this district; ironstone and freestone are also found. From the Ink-craig of Carnock there continually drops a fluid resembling ink, which was analyzed by Dr. Black, and found to contain coal, silex, and pure clay. John Erskine, of Carnock, professor of Scots law in the University of Edinburgh, and author of the well-known *Vade mecum* of young lawyers, the 'Institutes of the Law of Scotland,' was born in Newbigging house, in this parish. The famous Thomas Gillespie, the father of the Relief body in Scotland, was minister of this parish, but was deposed by the General Assembly in 1752, for refusing to preside at the induction of a minister who was obnoxious to the people. Population, in 1801, 860; in 1831, 1,202. Houses, in 1831, 226. Assessed property, in 1815, £3,226.—This parish is in the presbytery of Dunfermline and synod of Fife. Stipend £155 7s. 7d., with a glebe of the value of £24. Patron, Erskine of Carnock. There is a Secession congregation at **CAIRNEYHILL**: which see. The old parish-church at Carnock was built in 1602. It is a very small building, seating only 240; but it is interesting as the church in which Row the historian, son of the Reformer, ministered. His tomb, with a Latin inscription and a Hebrew title, adjoins. It is interesting also as the church in which, at an after-day, Mr. Hog, and Mr. Gillespie, whose

deposition—as already noticed—was the origin of the Relief, both successively laboured. A handsome new church, in the Saxon style, has recently been built.—Salary of schoolmaster £34 4s. 4½d., with about £16 fees. There are 3 private schools in the parish, one of them a boarding-school for girls.

CARNOUSTIE, a village in the parish of Barrie, in Forfarshire. It is at the east end of the parish, about 1½ mile from the kirk-town. Population, in 1835, 1,200. There is an extension church here; an original Secession church, and a United Secession church. See article **BARRIE**.

CARNWATH, an extensive parish in the upper ward of the county of Lanark, forming an oblong square, measuring 12 miles long from north to south, and 8 in breadth. It is bounded by West Calder on the north; by Dunsyre on the east; by Pettinain and Libberton on the south; and by Carstairs on the west. The Clyde flows along its southern boundary; and when highly flooded is here forded by a float running upon a chain. Superficial area 25,193 Scots acres, of which one-half is uncultivated. The assessed property, in 1815, was £10,384; the rental, in 1822, £14,000. The soil is very various in different parts of the parish; the holms or meadows on the Clyde being of a deep clay, while on the Medwins it is inclined to sand. There is a great extent of moor land, of which the soil is a cold stiff clay mixed with moss. The general elevation of the parish is 600 feet above sea-level; but it rises in some parts to 1,200 feet.* The north and the south Medwin, and the Dippool, tributaries of the Clyde in this parish, contain trout and pike. There is a small lake, called the White loch, about a mile west from the village of Carnwath, near a mile in circuit, containing perch, and well-known to curlers as the frequent scene of their manly and invigorating pastime. Two brothers of the name of Wilson, merchants in London, in 1779, erected an extensive iron-foundry here, and built a village called Wilsonton—now containing a population of about 400—for the accommodation of the workmen and their families. These works were peculiarly happy in their situation, as ironstone, coal, limestone, and clay, are found in the greatest abundance in the immediate neighbourhood; but the failure of their projectors, in 1812, was a severe blow to the prosperity of the district. In 1821, the works were purchased by Mr. Dickson of the Calder iron-works. The other villages are Carnwath, Forth, with a population of about 300, Newbigging with about 200, and Braehead with about 120.—The ruins of the ancient castle of Cowthally, or Cow-

* The following table is curious, and will interest not a few of our agricultural readers:—

Seed-time commenced on the north banks of the Clyde, at Carnwath, at the following dates, for 21 years:

Harvest commenced for each of these years on the same farm as follows:

1796, March 1st,	September 12th,
1797, February 27th,	September 16th,
1798, March 29th,	August 16th,
1799, March 13th,	September 26th,
1800, March 21st,	September 1st,
1801, March 9th,	August 24th,
1802, March 17th,	September 16th,
1803, March 22d,	August 31st,
1804, March 12th,	September 11th,
1805, March 19th,	September 5th,
1806, March 24th,	September 6th,
1807, March 26th,	September 7th,
1808, March 7th,	August 22d,
1809, March 9th,	September 13th,
1810, March 27th,	September 12th,
1811, March 18th,	September 10th,
1812, April 3d,	September 25th,
1813, March 18th,	September 4th,
1814, March 28th,	September 6th,
1815, March 21st,	September 12th,
1816, March 26th,	September 14th,
1817, March 18th,	September 23d.

daily, a seat of the noble family of Somerville, about a mile to the north-west of Carnwath, on the edge of the moor, show it to have been of great extent and strength.* The Somervilles settled here about the middle of the 12th century. Sir John Somerville of Carnwath and Linton was the steady adherent of The Bruce. In 1603, the family of Mar purchased the barony of Carnwath, but sold it in 1634 to Robert Lord Dalziel, created Earl of Carnwath in 1639. The title was attained in 1715, but restored, in 1826, in the person of General Dalziel. Population of the parish, in 1801, 2,680; in 1831, 3,505. Houses 707.—The village of CARNWATH is 25 miles south-west of Edinburgh, 6 east of Lanark, and 7 north-west of Biggar. It consists chiefly of one street, nearly half-a-mile in length, in which a number of new houses have been built within these few years, and to which a parallel street has been added. Population, in 1831, about 800, chiefly weavers. The high road from Edinburgh to Lanark passes through it. Five fairs are held in this village annually. On the day after the lamb fair in August there is a foot-race run for a pair of red hose, given by the Lockhart family, and a variety of games are practised.—This parish is in the presbytery of Lanark, and synod of Glasgow and Ayr. Stipend £250 7s. 6d., with glebe of the value of £20. Unappropriated tithes £140 17s. 8d. Patron, Sir Norman MacDonald Lockhart, Baronet. Church built in 1798, repaired in 1833; sittings 1,021. It is built contiguous to a part of the ancient church which was founded in 1424, and was, previous to the Reformation, a provostry with six prebendaries. The aisle of the old building has been successively the burying-place of the Somervilles, the Dalziels, and the Lockharts.—There is a United Secession congregation at Braehead. Church built in 1798; sittings 500. Stipend £70, with manse and glebe.—There is another Secession church at Carnwath; and a chapel in connexion with the Establishment at Wilsonton.—Parochial schoolmaster's salary £34 4s. 4½d., with about £34 fees. Pupils 100. There were 8 private schools in 1834.

CARR ROCK (THE), the outer extremity of a reef of sunken rocks, which extend, in an almost continuous ridge, for about a mile and three quarters from Fifeness, on the northern side of the entrance of the frith of Forth. It is in lat. 56° 17', and long. 2° 35' west of London; bearing by compass S. W. by W. from the Bell-rock, distant 11 miles; and from the Isle of May lighthouse N. N. E. ¼ E. distant 6 miles. From a calculation made in 1809, it appeared that, from 1802 to that period, no fewer than 16 vessels had been lost or stranded on this dangerous reef, which forms a turning-point in the course of all northern bound ships to or from the frith of Forth. An old fisherman, who had been resident at Fifeness for above sixty years, stated that there had been, within his recollection, at least 60 vessels lost upon the Carr: "For, if she missed her mark one year, she was sure to hit twice the year following." Under these circumstances, the commissioners of the northern lighthouses were induced to erect a beacon of masonry on this rock. The rearing of this was a business of great difficulty, from the smallness of the foundation afforded by the rock, and the agitation of the waves on all half-tide rocks. The length of the beacon rock, from south

to north, is only 72 feet; but its greatest breadth, at low water of spring-tides, is only 23 feet; and it was found impracticable to obtain a base for a foundation-course of greater diameter than 18 feet; whence the impossibility of erecting any building of sufficient height to be above the reach of very weighty seas, which would at once be fatal to the effect and apparatus of a lighthouse. From the necessity of having to cut down the rock under tide-mark, a moveable cofferdam had to be used, out of which the water was pumped every tide. The building of the base of masonry alone occupied three years, so difficult was the undertaking: the operation being conducted only in good weather, and at the return of spring-tides. A year's work in such circumstances did not exceed 130 hours' working. It was eventually completed in 1818, after six years' labour. The lower part is a circular building of masonry, 18 feet in diameter, from the top of which spring six pillars of cast-iron, terminating in a point, with a hollow ball of that metal, which measures 3 feet across, and is elevated 25 feet above the medium level of the sea. The works cost altogether about £5,000.

CARRICK, the southern district of Ayrshire. It is bounded on the north by Kyle, or Ayr proper; on the east by Dumfries-shire and the stewartry of Kirkcudbright; on the south by Wigton; and on the west by the Atlantic ocean. It comprehends the parishes of Ballantrae, Barr, Colmonell, Dailly, Girvan, Kirkmichael, Kirkoswald, Maybole, and Straiton. Its extent is about 32 miles in length, by 20 in breadth; its superficial area may be estimated in round numbers at 300,000 acres. Population, in 1831, 25,536. Inhabited houses 3,845. Its surface is hilly; and the name may have originated in the Gaelic *carraig*, 'a rock.' The mountains, especially on the north-west, seem to be a continuation of that great ridge which, extending from the confines of England, through the counties of Selkirk, Peebles, Lanark, and Dumfries, meets the Western ocean between the districts of Carrick and Kyle. In the valleys between the hills, and along the sea-shore, are many stripes of level ground of a fine clay or loamy soil. The chief rivers are the Girvan and the Stinchar; the Doon forms its eastern boundary. There are several lakes, and a great part of the country is still covered with natural wood.—Our old historian, Boece, with his usual fertility of imagination, has discovered, in this district, a large city totally unknown to every other historian. Bellenden thus abridges his account of it: "In Carrick wes sum time ane riche ciété vnder the same name, quhair ruynus wallis schawis the gret magnificence thairof." Boece calls this city Carretonium; but acknowledges his hesitation whether this was the origin of the name Carrick or not. In a manuscript quoted by Dr. Jamieson, we have the following curious statement:—"No monuments of batells to be seen in this countrey, except nerr the villidge of ancient Turneburrey, alonge the coste, betwixt a litell promontorey and the sea. Ther is 3 werey grate heapes of stonnes, callid vulgarley the *Kernes of Blackinney*, being the name of the village and ground. At the suthermost of thir 3 Cairnes ar ther 13 gret tale [tall] stonnes, standing vpright in a perfyte circle, aboute some 3 ells ane distaunt from ane other, with a grate heighe stonne in the middle, wich (*sic*) is werily esteemid be the most learned inhabitants to be the byrrial place of King Caractacus; being most probable, in so far as Hector Boetius sayes, that the king wes interrid in Carricke, quherein he remained during the most part of his raigne [reign]; and that from him this countrey wes named Carricke; and that thir stonnes, his monument, are as yet standing nerr the toune of Turnberrey, wich wes questionles

* In 'The Memorie of the Somervilles'—a curious book, published in 1816 from the original MS. which was written by James Somerville, who died in 1690, and who is styled in the title-page, James Eleventh Lord Somerville—many curious notices are given of the royal visits to Cowthally; and especially of the flirtations of James V. with "Mistress Katherine Carmichael, the captain of Crawliurd's daughter, a young lady much about sixteenth years of age, admired for her beutie, handsomenes of persone, and vivacity of spirit."

the ancient Carricktonium. This same conjecture is so much the more probable in that, that King Galdus, that succeedit him, (I meane Carractake,) his buriall place is yet knawin, within 3 myles to the toune of Vigttoune, in Galloway, which is after the same forme, being 19 stonnes in compas, and 3 in the midle, wich then has beine the most honorable forme of buriall, befor churches and church yairds were designed places of sepulture. Ther is found and obserued this yeir 1632, within a myle to the castle of Turnburrey, some sandey landes, newly discovered, wich formerly had beine ouerblouen. Yet the new discovery reaches, in the ancient ground, downwards above ane elle and a halffe, as the ther standinge knowes cleirly demonstrate, exposing to the beholders numbers of coffins neatly hewin of five stonnes, with oute couer or bottome, beinge 7. foote longe, and 3. vyde, all laying east and weste, with an equal proportion of distance ane from ane vther." Carrick fell into the hands of the father of Robert Bruce, by his marriage with Margaret, Countess of Carrick, daughter of Neill, the Earl of Carrick. See article TURNBERRY. King Robert granted the earldom to his brother David. It afterwards reverted to the Crown; and the title is still retained in the royal family, the Prince of Wales, as prince and steward of Scotland, being born Earl of Carrick. John Steward is not only designed 'Comes de Carryk,' but the first-born of King Robert II. This can be no other than that prince who, on his accesion, changed his name to Robert, and thence obtained the ludicrous soubriquet of John Fairyear, i. e. 'John of the last year,' or 'formerly John.' David, the first-born of this King Robert, is designed 'Comes de Carrie,' A. D. 1397, when, with some others, nominated for settling disputes about the marches with Richard, "our adversary of England." This was that unfortunate prince who was afterwards starved to death by his inhuman uncle, who is named, in the same deed, as one of his associates, under the designation of 'Robertus Comes de Fyf, Frere du Roy.' The "lands and barony of Turneberrie" are mentioned as part of the hereditary property of the Earl of Cassillis, A. D. 1616. The Duke of Argyll is hereditary keeper of the palace of Carrick, as well as of those of Dunstaffnage and Dunoon. It may be viewed as a vestige of the ancient honours of this palace, although now in ruins, that one of the pursuivants (*signiferi*) employed in making royal proclamations, and in summoning those accused of treason, bears the name of Carrick. Among the original Melrose charters are several of the old earls of Carrick. Their seals bear a winged griffin, but no armorial charge. There is an interesting one, by 'Margeria, Comitissa de Karick,' and her husband, 'R. de Brus, Comes de Karick.' Both seals are entire, and identical,—only the countess's is a great deal larger than her lord's. This Bruce's father, the competitor, bore the arms of Annandale, a saltier, with a chief, plain. Marjory and her husband bear the saltier and chief; but the latter charged with what might perhaps be considered as the Carrick griffin, though its wings are rather scanty,—and it is very like a lion passant.

CARRICK CASTLE. See LOCH-GOIL.

CARRICK PALACE. See TURNBERRY.

CARRIDEN, a parish in the county of Linlithgow, bounded by the frith of Forth on the north; by Abercorn parish on the east; Linlithgow on the south; and Borrowstounness on the west. It is about 2½ miles in length, and 1½ in breadth. The soil is light and early, producing plentiful crops, and the whole surface is arable and enclosed. There are four villages in the parish: viz., Grangepans, Carri-den, Brigness or Bridgeness, and Blackness, the two last of which have tolerable harbours. There is

plenty of excellent freestone, and the whole parish lies on coal of the best quality. A considerable manufacture of salt used to be carried on here. Colonel James Gardiner, who was killed at the battle of Prestonpans, in 1745, was a native of this parish. Population, in 1801, 1,493; in 1831, 1,261. Houses 184. Assessed property, in 1815, £4,430.—This parish is in the presbytery of Linlithgow, and synod of Lothian and Tweeddale. Stipend £249 17s. with glebe of the value of £25, and a vicarage teind of 48 threaves of straw. Unappropriated teinds £137 17s. 5d. Patron, the Duke of Hamilton.—Schoolmaster's salary £34 5s. There are 3 private schools. The wall of Antoninus is supposed to have had its termination in this parish. See article BLACKNESS. Several years ago, when digging stones to build a park-wall, a number of axes, pots, and vases, evidently of Roman workmanship, were discovered at a place called Waltoon, and sent to the Advocates' library in Edinburgh. In the reign of William the Lion, Carriden was the property of William de Vetereponte, with baronial rights. David II. conveyed this barony to Alexander de Cockburn; because John de Vetereponte had alienated his rights, without the King's license first obtained.

CARRINGTON, a parish in the shire of Edinburgh, about 3½ miles in length, measured from north-east to south-west, by about 2 in breadth. It is bounded by the parishes of Lasswade and Cockpen on the north; by Borthwick parish on the east; by Temple and Pennicuik on the south; and by Lasswade on the west. The South Esk separates it from Temple and Borthwick parishes. The district is hilly, and the soil generally moorish. The village of Carrington, or Primrose, is about 10 miles south-east of Edinburgh. The Earl of Roseberry has a seat near this village; and a splendid mansion is now erecting by R. W. B. Ramsay, Esq., at Whitehall in this parish. Population, in 1801, 409; in 1831, 561. Houses, in 1831, 107. Assessed property £4,474.—This parish is in the presbytery of Dalkeith, and synod of Lothian and Tweeddale. Stipend £158 7s. 5d., with glebe valued at £15. Patron, the Earl of Roseberry.—Schoolmaster's salary £34 4s. 4½d. with about £10 fees.

CARRON, a village in the parish of Larbert, Stirlingshire; on the northern bank of the Carron, about 3 miles from its entrance into the Forth, and 2 miles north of the town of Falkirk. It is celebrated as the most extensive iron-foundry in Europe; though, of late years, a greater quantity of pig-iron has been manufactured at some other works. These works employ about 2,000 workmen. There are 5 blast or smelting furnaces, 4 cupola-furnaces, and 20 air-furnaces; with mills for grinding fire-clay, boring cylinders, and grinding and polishing cast metal; and besides the machinery which is driven by water, there is a steam-engine of 90 horses power, which is used entirely in the production of blast. All kinds of cast-iron goods are manufactured here; not only instruments of war, such as cannon, mortars and carronades, shot and shells, but implements of agriculture, of the arts, and for domestic use, pipes, boilers, ovens, vats, pots, grates, and smith and machinery of all kinds. To a stranger, the approach to the works is very curious and striking, especially if made under the shade of night. The perpetual illumination of the atmosphere,—the roaring of the immense bellows,—the rushing of water,—and the noise of the weighty hammers striking upon resounding anvils,—suggest to the imagination the idea of Vulcan and his Cyclops occupied in preparing thunder-bolts. Two kinds of ore are employed in these works together, in regular proportions. The first is a species of decomposed hematites brought from

Cumberland, which stains the hand of a blood-red colour; the second is the common argillaceous ironstone, of a yellowish brown colour, and of a rocky hardness. From the proper proportions of these ores, an iron is procured, equal, if not superior, to the sable iron imported from Russia. The Carron-works were first projected by Dr. Roebuck of Sheffield, in 1760; are carried on by a chartered company, with a capital of £150,000 sterling, divided into 600 shares, which are now in a few hands. The company hold and work for themselves extensive mines of iron, coal, and lime, besides possessing an immense stock of all materials requisite for carrying on the establishment. There are two large collieries immediately adjoining the works. The company have about 20 vessels for exporting their manufactures to London, and other ports, and for conveying ironstone and limestone to their works.

CARRON (THE), a small but remarkable river in Stirlingshire. It rises in or near the Carron bog, and falls into the Forth at Grangemouth, about 3 miles north-east of Falkirk, after a course of 14 miles. The Carron bog is a meadow of about 360 acres, partly in the parishes of St. Ninian and Kilsyth, but chiefly in Fintry. Its length is about 3 miles, and medium breadth 400 yards. Considerably elevated above the ocean, it occupies part of the table-land between the east and west coasts. The Carron, passing through the eastern end, flows into the frith of Forth; while a stream tributary to the Endrick, issuing from the west, has its waters conveyed by the last-mentioned river to Lochlomond, which discharges itself into the frith of Clyde. The bog has, probably, been a lake at no very distant period, and gradually filled by the brooks washing down earth from the hills. Part, indeed, is a swamp, hardly passable in summer; and the whole is nearly inundated by every heavy rain. [See article FINTRY.] The Carron, after it leaves its source, flows for one-half of its course amongst bleak hills and rocks. After emerging from the Carron bog, it rushes over the Auchinlilly linn spout. From this it continues its course eastward, giving motion to several paper-mills above Denny, and watering some large printfields below it, and then winding through "the bonny banks of Carron water," long since famed in song, it passes near the hill of Dunipace, and the site of the ancient Roman structure called Arthur's Oven: see article ARTHUR. At Larbert a dam is built across the river, which, with the lead, supplies the great reservoir at the Carron works; into this reservoir almost the whole water of the river goes in summer. The Carron is a small stream, yet there is no river in Scotland, and few in Britain, whose banks have been the scene of so many memorable transactions. When the Roman empire was in its glory, this river—according to some antiquaries—formed the boundary of its conquests in Britain; for the wall of Antoninus runs parallel to it for several miles. Hence Buchanan in his 'Epithalamium,'

—"Gentesque alias cum pelleret armis
Sedibus, aut victas viliem servaret in usum
Servitii, hic contenta suos defendere fines
Roma securigeris præterdit mœnia Scotis:
Hic, spe progressus posita, Carronis ad undam,
Terminus Ausonii signat divortia regni."

Nennius derives the name of this river from Carausius, who is commonly styled the usurper. The translator of Ossian's poems informs us, that it is of Gaelic origin, and that *Carraon* signifies 'the Winding river.' This fully expresses one quality of its stream, which, in former times, before it had forced a new channel to itself in some places, and been straightened by human industry in others, fetched many serpentine sweeps in its passage through the

carses. Nevertheless, if we say that the original name was *Caeravon*, that is, 'the River upon the Caers, or Castles,' alluding to the Roman fortifications upon its banks, we shall perhaps give an etymology just as probable, though equally uncertain. Historians notice a bloody battle fought near this river between the Romans and the confederate army of the Scots and Picts, about the beginning of the 5th century. About half-a-mile from the river, and the same distance from Falkirk, lies the field where a battle was fought between Sir William Wallace and the English, under Edward I., in 1298. Not far distant from the same spot, the second battle of Falkirk was fought in 1745, betwixt Prince Charles Edward and the troops of the family of Hanover, in which the latter were defeated. [See FALKIRK.] The Carron is famed in ancient Celtic song. Dyer alludes to this circumstance in the following lines:

"Where is the king of songs? He sleeps in death;
No more around him press the warrior-throng;
He rolls no more the death-denouncing song;
Calmed is the storm of war, and hushed the poet's breath.
Yes! Anderson, he sleeps; but Carron's stream
Still seems responsive to his awful lyre."

Hector Macneil, a native poet of Stirlingshire, has thus expressed himself in the Doric strain:

"Round Carun's stream, O classic name!
Whar Fingal fought, and ay ow'reame;
Whar Ossian wak'd, wi' kindling flame,
His heaven-taught lays,
And sang his Oscar's deathless fame
At Duin-na-bais."

The river Carron, though it has ceased to roll its stream amidst the din of arms, yet preserves its fame by lending its aid to trade and manufactures. [See CARRON.] The great canal enters from the Forth at this river, which is navigable for a few miles near its mouth.—During the heavy rains in September 1839, the Carron suddenly rose 12 feet above its usual level; and scaling its shelving banks, converted into a watery plain the circumjacent pasturage. At Dorrator, the Carron is bounded by eminences on its eastern bank, which it is impossible to overtop; but taking here a circling course, a great expanse lying between, made a double stream; a rising ground in the distance curving with the river on the same side, obstructed the gush, and joining with the waters on the opposite side, formed a beautiful bay.

CARRON (THE), a fine rivulet in Nithsdale. It rises at the foot of the Lowther hills, and, after a course of about 9 miles through the parish of Durisdeer, falls into the Nith at Carronfoot, near Carron-bridge, on the road from Thornhill to Sanquhar.

CARRON (THE), a small river in Ross-shire, which flows in a south-west direction through a chain of small lakes, and falls into Loch-Carron. It used to abound with salmon; but they are now scarce in it. See article LOCH-CARRON.

CARRON (THE), a rivulet in Kincardineshire, which rises in Glenbervie, and falls into the sea at the town of Stonehaven, forming a fine natural harbour.

CARRONSHORE, a village lying partly in the parish of Larbert, and partly in that of Bothkennar, 2 miles below Carron-works. Here the Carron company had wharfs, and a dry dock for repairing their vessels: but Grangemouth is now the company's port. There is a school here for the benefit of the children of the workmen at Carron.

CARRUTHERS. See MIDDLEBIE.

CARSE OF FALKIRK (THE), a tract of land lying along the south shore of the frith of Forth, from Bo'-ness westwards as far as Airth. It is watered by the Carron, and comprehends a great part of the parishes of Polmont, Falkirk, and Bothkennar.

and is mostly a fine rich clay soil, producing abundant crops. See STIRLINGSHIRE.

CARSE OF GOWRIE (THE), a district of Perthshire, extending 15 miles in length, and from 2 to 4 in breadth, between the north bank of the Tay, and the foot of the Sidlaw hills. This tract of land, which is a rich plain, cultivated like a garden, seems to have been at one period covered with water; nay, in the remembrance of several people still alive, many parts were a morass which at this day are extensive fields of arable ground. The Tay is supposed to have formed a circuit round the carse, washing the foot of the Sidlaw hills, and entering its present channel at Invergowrie. Staples for holding cables have been found at the foot of the Sidlaw hills, to the north of the flat land; and the parish of St. Madois, now in the carse of Gowrie, is said to have been once on the southern side of the river. Such parts of the carse as are called inches, are elevated above the flat ground which has been covered with water. The soil of these eminences is very different from that of the low ground; that of the former being a red till, approaching to the nature of loam; while that of the latter, like all land which has been immersed under water, is a blue clay of a very rich quality. Previous to 1760, the carse was disfigured with many large pools of water; but these have been all drained. Lying on the banks of the Tay, the carse of Gowrie possesses a few tolerable harbours, the chief of which is at Errol, nearly in the centre of the district.

CARSE OF STIRLING (THE), that tract of low ground, extending from the moss of Kincardine to the mouth of the Devon, on both sides of the Forth; or as viewed by some, from Bucklyvie, along the banks of the Forth, to the eastern extremity of Stirlingshire,—a tract about 28 miles in length, by 2 in average breadth, and comprehending 30,000 acres. The soil is everywhere a fine clay, and reaches to a depth of 30 feet in some places. The highest elevation of the surface is about 25 feet above high water. "If," says Dr. Graham, "all the carse lands, which skirt the Forth on both sides, be taken into the account, it may be computed at the average length of 34 miles, by 6 in breadth; amounting to 204 square miles, or 103,800 Scots acres nearly, and unquestionably constituting the richest and most important district of Scotland, in an agricultural point of view. This soil is evidently alluvial; and the substances which are found in it, as well as the aspect of the higher grounds by which it is bounded, indicate that, at some former period, it was covered by the sea. The soil itself consists of the finest particles of earth, without the smallest stone or pebble except what may have been accidentally carried thither. The soil of the best quality, when first taken up from its bed, is of a bluish colour, and of a soapy or mucilaginous consistence. That which has been long exposed to the sun, and to the elements, by cultivation, assumes a darker hue, or hazle colour; and, in point of friability, approaches to the character of loam. Beds of shells, particularly oysters, and others which are usually found in the frith, occur from time to time, from a few inches to four feet in thickness. Throughout the whole of these carses, patches of till occur, especially in the district to the westward of Stirling. Indeed, as we ascend the Forth towards the west, this soil becomes gradually of inferior quality. These carses are elevated from 12 to 20 or 25 feet above the level of the sea at high-water. At the same time it is evident that this soil is alluvial, there seems to be room to question whether this deep and extensive tract of clay, stretching along both sides of the Forth, is to be attributed solely to the deposit of that river through the course of ages. The cause appears to

be altogether inadequate to such a prodigious effect. The Clyde, which runs through a course at least as long, and carries an equal body of water to the sea, has formed no alluvial land at its embouchure; and it will probably be found that no river that runs westward has, by its alluvion, formed any considerable deposit of soil. The quantity of earthy particles that are carried down by rivers and streams from the mountains is much less than has been generally imagined. It would seem, that at some distant period, the waters of the German ocean had regurgitated to the westward, and covered, for a considerable time, those plains, depositing there the rich particles of soil with which they were, in consequence of some revolution of nature, copiously impregnated. If any stress could be laid on the universal tradition of the country, it would lead to the belief that this whole plain, as far west as Gartmore, was formerly covered by the sea." ['View of the Agriculture of Stirling,' Edin. 1812. 8vo. pp. 33—35.]

CARSPHAIRN, or **CARSEFERN**, a large parish in the stewardry of Kirkcudbright; bounded on the north by Ayrshire; on the east by Dalry; on the south by Dalry and Kells; and on the west by Ayrshire, from which it is in part separated by **LOCH DOON**: which see. Measured from the Gallowrigg, on the north-east, to the head streams of Dee water on the south-west, it is upwards of 20 miles in extent; and its average breadth is about 10 miles. The Deugh water intersects it from north-west to south-east, and after receiving numerous tributaries, joins the Ken—which separates Carsphairn from Dalry—at the south-east extremity of the parish. The surface is mountainous, with the exception of a small plain towards the centre, on which the church is situated, and a few spots on the sides of the rivulets. The hills are in general green, interspersed with moss. Formerly there were extensive forests of natural wood, and iron mines are said to have been wrought in this district. About two years ago, the Hon. Colonel Macadam Cathcart began to work a lead-mine at Woodhead or Craigengillan, in this parish. The daily produce, at an early stage of the workings, was estimated at 30 bars of fused lead, each bar weighing 10 stones. The ores are said to contain a considerable admixture of silver. Many of the springs contain iron dissolved by means of carbonic acid, and are esteemed for their tonic quality. Population, in 1801, 496; in 1831, 542. Houses 89. Assessed property in 1815, £4,201.—This parish is in the presbytery of Kirkcudbright, and synod of Galloway. Stipend £182 10s., with glebe of the value of £27. Unappropriated teinds £94 7s. 7d. The sum of £9 19s. 6d. of the Crown lands of this parish is paid to the minister of Kells, out of which parish Carsphairn was formed. Patrons, the Crown, and Forbes of Callender.—Schoolmaster's salary £34 4s. 4½d., with about £14 fees.—The celebrated Mr. Macadam, engineer and road-constructor, was born at Waterhead in Carsphairn. His father shortly afterwards sold the greater part of his estate, and went to live at Lagwine, a few miles farther down the river Deugh. His residence there was unfortunately consumed by fire, and he left Scotland at the time his son was about six years old, for America, where he embarked in mercantile speculations. He was succeeded in his business by his son. On what account he returned to Britain we are not informed; but, in consequence of some chemical discoveries, he made an advantageous government contract, which ultimately led him—perhaps accidentally—to suggest the improvements upon the roads to which he is principally indebted for celebrity.

CARSTAIRS, anciently **CASTLETERRES**, a parish in the upper ward of the county of Lanark. The

length of this parish from north to south is 6 miles; and its breadth from east to west about 3. It is bounded on the north by Carluke and Cambusnethan; on the east by Carnwath; on the south by the Clyde, which separates it from Pettinain; and on the west by Lanark. Superficial area about 12,000 acres; of which about 10,000 are under cultivation. It is divided into two districts by a ridge of rising ground so uniform that it appears from the Lanark road to have been artificially formed. The higher ground is a mixture of clay and mossy earth, and the lower a sharp sandy soil: both divisions are of good quality, and capable of producing excellent crops. The Mouse traverses the centre of the parish. Near the village is the magnificent mansion of Carstairs, the seat of Henry Montearth, Esq., the principal heritor. There is a Roman camp on a rising ground near the Clyde, at Corbiehall, of which—notwithstanding the depredations of the plough—the prætorium and walls of circumvallation are still very visible. Several Roman antiquities, as coins, instruments of war, and culinary utensils, have been dug up here. Population, in 1801, 899; in 1831, 981. Houses, in 1831, 183. Assessed property, in 1815, £4,022.—The village of Carstairs is 3 miles west of Carnwath, and 3 east of Lanark, on the road from the latter to Edinburgh. Population 420. It has been greatly improved in aspect of late years. The parish-church is in the centre of the village.—About $1\frac{1}{2}$ mile to the west is the village of Ravensworth. Population 120.—This parish is in the presbytery of Lanark, and synod of Glasgow and Ayr. Stipend £233 18s. 7d., with glebe of the value of £35. Unappropriated teinds £305 7s. 4d. Patron, Montearth of Carstairs.—Schoolmaster's salary £32, with above £30 fees.

CART (THE BLACK), a river in Renfrewshire, which taking its rise in Castle-Semple loch, may be considered as a continuation of the Ayrshire Calder. On issuing from the loch it runs eastward, giving motion to the cotton-mills at Johnston and Linwood. It is joined by the Gryfe at Walkinshaw, and by the White Cart at Inchinnan bridge, about half-a-mile above the confluence of the united streams with the Clyde, 7 miles below Glasgow.

CART (THE WHITE), a river in Renfrewshire, which takes its rise in the moors in the parish of Eaglesham, and, after a circuitous course of about 20 miles, joins the Black Cart at Inchinnan bridge, which consists properly of two bridges, the one thrown across the Gryfe, and the other across the White Cart. In its course it gives motion to a vast quantity of machinery, and waters the populous village of Pollokshaws, and the town of Paisley, where it is navigable for vessels of 80 tons burden; the navigable communication with the Clyde being completed by a canal, by which the shallows at Inchinnan bridge are avoided. On the 29th of May, 1840, a branch canal from the Forth and Clyde canal, to the Clyde opposite the mouth of the Cart, was opened under the name of the Cart and Forth Junction canal. It is about three-fourths of a mile in length.—The Levern joins the Cart near Crookston castle.

CARTERHAUGH, a fine green holm lying in the angle formed by the junction of the Ettrick and Yarrow, the scene of the fairy ballad of 'Tamlane.'

CARTLAND CRAGS, a vast chasm in the sandstone rocks forming the bed of the Mouse, immediately above Lanark; formed by the lower part or projecting shoulder of a great mountain-mass, detached from the body or upper part, and extending more than three quarters of a mile in a curved line from south-west to north-east, with a depth of several hundred feet. To ascertain how this enormous and striking fissure has been produced is a

curious geological problem; the more interesting, as the phenomena of Cartland crags are such as to furnish a remarkable test for trying the merits of the two theories which divide the geological world. According to the principles of the igneous theory, a vein of trap, which traverses the strata in a direction almost perpendicular to the course of the chasm near its centre, renders it an example on a great scale of disruption and dislocation by explosion from below. On the other hand, Cartland crags evidently possess all the data requisite to form a case of what is called in the aqueous theory, subsidence; an explanation which Dr. Macknight is inclined to prefer, because the trap, from the smallness of its mass, seems totally inadequate, as a mechanical power, to the effect produced. The direction of the rent, instead of following the course of the vein—which it must have done had it owed its existence to this cause—is very nearly at right angles to that course; and it appears that the trap itself had been originally a part of the formation or mountain-mass, previous to the time when the rent took place. The Cartland sandstone belongs to the oldest of the floetz rocks. In the under part of this formation, it alternates with grey wacke, and contains lime in calc-spar veins. Some varieties are good specimens of what Mr. Jameson considers as chemical depositions. The trap consists of compact greenstone; basalt including olivin and augit; and a substance intermediate between basalt and clinkstone. At the lower part of the ravine, the road from Glasgow to Lanark is carried across on a bridge of three arches. A few yards above this bridge is Wallace's cave, whose name is attached to various localities here; and a little below, there is an old bridge of one arch, supposed to be of Roman construction.

CARTSDIKE, or **CRAWFURDSDIKE**, a village in Renfrewshire, adjoining to the town of Greenock; from which it is separated by the Cart's burn; erected a free burgh of barony in 1633, by charter from Charles I. It has a small quay, but is now quite a suburb of Greenock, and included within the parliamentary boundaries of that burgh. See **GREENOCK**.

CASSILLIS CASTLE, a noble old mansion, the property of the Marquess of Ailsa, on the left bank of the Doon, about a mile from the village of Dalrymple, in Ayrshire. David, 3d Lord Kennedy, was created Earl of Cassillis in 1510, and this castle was the principal residence of the family till the extinction of the male-line in 1759.—About a quarter of a mile to the south of the castle are three or four small green hills, known as Cassillis Dounans, and long regarded as the frequent scene of fairy revelry.—There is a well-known ballad* of which the first stanzas run thus:

"The gypsies they came to my Lord Cassillis' yett,
And O! but they sang bonnie;
They sang sae sweet, and sae complete,
That doun cam our fair lady.
She cam tripping doun the stairs,
Wi' a her maids before her;
As soon as they saw her weel-far'd face,
They coost their glamourie owre her."

Of the transactions sung in this ballad the following account is usually given. John, 6th Earl of Cassillis, commonly termed "the grave and solemn Earl," married as his first wife, Lady Jean Hamilton, daughter of Thomas, 1st Earl of Haddington. It is said, that this match took place contrary to the inclinations of the young lady, whose affections had been previously engaged by a certain Sir John Faa of

* First printed in the 4th vol. of the 'Tea-table Miscellany,' which was published about the year 1733; and given in Finlay's collection, under the title of 'The Gypsie Laddie.' [Ballads, vol. ii. p. 39.]—See also Chambers's Ballads, p. 143; and Coulston's Magazine, vol. i.

Dunbar—in the neighbourhood of which was her paternal seat of Tynninghame—who was neither grave nor solemn, and moreover, much handsomer than his successful rival. While Lord Cassillis was absent on some mission from the Scottish parliament to that of England, Sir John, with his followers, repaired to Cassillis, where the young lady then resided, and persuaded her to elope with him to England. As ill luck would have it, the Earl returned home before the lovers could cross the Border,—pursued and overtook them,—and in the conflict all the masquerade gypsies were slain save one, and the weeping Countess brought back to her husband's mansion, where she remained till a dungeon was prepared for her near the village of Maybole, wherein she languished for the short remainder of her life in humble sorrow and devotion. This is one edition of the story, still very current in the county where the elopement took place; but it is not supported by the tenor of the ballad, which was composed by the only surviving ravisher, and is contradicted by a number of those who still recite the verses. Indeed, a very numerous jury of matrons, “spinsters and knitters in the sun,” pronounce the fair Countess guilty of having eloped with a genuine gypsy, though compelled in some degree to that low-lived indiscretion by certain wicked charms and philtres, of which Faa and his party are said to have possessed the secret. It is not now possible to fix the precise date of Lady Cassillis's elopement with ‘the Gypsy laddie,’ or the identity of the frail one herself. Lady Jean Hamilton, of the Haddington family, was born in the year 1607, and died in 1642. Moreover there is a letter extant from her husband to the Rev. Robert Douglass, written shortly after her death, in which he expresses a respect and tenderness for his wife's memory quite inconceivable had she been guilty of such a misdemeanour as that supposed. It is alleged that she lived long enough in her confinement at Maybole to work a piece of tapestry, still preserved at Colzean House, in which she represented her unhappy flight, but with circumstances unsuitable to the details of the ballad, and as if the deceits of ‘glamourie’ had still bewildered her memory; for she is mounted behind her lover, gorgeously attired, on a superb white courser, and surrounded by a groupe of persons who bear no resemblance to a herd of gypsies.*

CASSLEY (THE), a small river which rises in the hills in the north-west extremity of Creich, in Sutherland, and, taking a course nearly south, falls into the frith of Tain, about 12 miles from its source. The salmon of this river are small and white, and highly esteemed. There is a fine salmon-leap about a mile above the bridge of Cassley, which is 7 miles distant from the bridge of Oyckell.

CASTLECARY, a hamlet in the shire of Stirling, and parish of Falkirk; 8 miles west-south-west of Falkirk, on the line of the Forth and Clyde canal. Castle Cary, according to General Roy, was one of the *præsidia*, or principal stations on the wall of Antoninus, as is evident from its dimensions, and the number of antiquities discovered there. A Roman way led out from it towards the south; and it seems probable that this place was the *Coria Damnorum* of Ptolemy, and the same which Nennius calls *Caer Ceri*. General Roy has preserved a plan of the ancient fort, and of the antiquities discovered

* A portrait of the frail countess is shown at Holyrood; but its authenticity is by no means well-established. Mr. Sharpe, and many others, regard it as a portrait of Lady Sunderlan, the *Sacharissa* of Waller. There is another shown at Colzean; and of which an engraving is given in *Constable's Magazine* for 1817. Mr. Sharpe suspects that the tapestry at Colzean is only a fragment representing a man and woman riding on a white horse, and a group of attendants, and “rebaptized by house-keepers who have heard the old tradition.”

here. The fort itself is now nearly effaced by agricultural operations.

CASTLE-DOUGLAS, a thriving little town in the parish of Kelton, and stewartry of Kirkcudbright; on the road from Kirkcudbright to Dumfries; 89 miles south-south-west of Edinburgh, 18 west by south of Dumfries, and 10 north-east of Kirkcudbright. Population, in 1833, 1,885. Its name is derived from Threave castle, the ruins of which stronghold stand on the south-west of the town. Prior to 1792, it was called Carlinwark, from a lake in the vicinity; when it was erected into a burgh-of-barony, under its present title, by royal charter in 1790. A new and extended charter was obtained in 1829. The magistracy and council consist of a provost, 2 bailies, 17 councillors, who are elected triennially on the 1st Wednesday of September. All persons resident within the boundaries of the burgh, and having right by feu to a piece of ground within the same, are entitled to elect or be elected. The property of the burgh, in 1833, was £573 15s. 11d.; the debts £167 10s. 7d. The average annual revenue £20; expenditure £13 5s. Circuit small debt courts are held here. It consists of one principal street lying along the public road, from Dumfries to Portpatrick, and some back streets laid out in a neat manner. It has a modern town-house, and some other public buildings. Its consequence has been increased by the transfer of Keltonhill annual horse fair to its bounds. It has a large grain market every Monday. Carlinwark loch is now connected by a canal with the river Dee, and since this was done its dimensions have been much limited. It contains abundance of perch and pike, and has yielded a considerable quantity of shell-marl. There are two dissenting meeting-houses in the town, besides a parish-school. The burgh-school is a good one, and is attended on an average by about 160 scholars. Sir William Douglas, by deed of mortification in 1831, left a sum, now producing £41 annually, to the magistrates and council of Castle-Douglas, to be divided among six schools, and the poor of the parish, according to a scale of proportion pointed out in the deed. See **KELTON**.

CASTLE-KILLCHURN. See **KILLCHURN CASTLE**.

CASTLE LAW, one of the most northerly range of the Lammermuir hills, in the parish of Gifford or Yester, in Haddingtonshire; rising to the height of 940 feet above sea-level. On the summit of this hill there is a circular camp, the circuit of which contains nearly 4 Scots acres. It measures, within the ramparts, 370 feet from east to west; and 337 feet from south to north. About three quarters of a mile to the east of this hill, is another hill, 860 feet in height, on the top of which also is an ancient camp called The Castles, of somewhat smaller dimensions; and about two furlongs south of the Castle Law, on a smaller hill called The Witches' Knowe, is a third camp. See the 3d vol. of the *Archæologia Scotica*.

CASTLE-LEOD. See **FODDERTY**.

CASTLE-MENZIES. See **WEEM**.

CASTLEMILK. See **CARMUNNOCK**.

CASTLEPHAIRN. See **GLENCAIRN**.

CASTLE-SEMPLE LOCH, a fine sheet of water in the parish of Lochwinnoch in Renfrewshire, sometimes called Loch Winnoch. It is chiefly fed by the waters of the Calder, which, flowing in a

south-east direction from the borders of Ayrshire, and fetching a circuit round the village of Lochwinnoch, turns east and falls into this loch on the western side. The Dubbs connects it with Kilbirnie loch. Castle-Semple loch was originally between 4 and 5 miles in length, and rather more than 1 in breadth; but it has been considerably lessened by draining. It would appear, from the description of Hamilton of Wishaw, that Lord Semple, then proprietor of this lake and the adjoining lands, commenced to drain it in 1680, or 1700. The estate was sold by Hew, Lord Semple, in 1727, to Colonel M'Dowall, a younger son of M'Dowall of Garthland, who continued the plan of draining the lake, and, in 1735, had made great progress in doing so. Subsequent proprietors have directed their attention to the same object; and the effect has been the recovery of a great extent of fine rich meadow land. In 1773, and in 1774, a canal was constructed of nearly 2 miles in length, at an expense of £2,000, by which above 400 acres of a very deep rich soil was recovered. The loch still covers about 200 acres; but considerably extends itself when flooded, and during winter. The family of Semple was very early in possession of the lands around this loch. Robert Sympil was vassal in Elziotstoun on the south side of the lake, under the high-steward of Scotland, about 1220; and previous to 1309, Robert Sympil of Elziotstoun was seneschal of Strathgrife. In 1474, Sir William Sympil, Lord of Elziotstoun, obtained a charter of the baronies of Elziotstoun and Castle-toun—now Castle-Semple—from James III. Sir John Sympil was raised to the dignity of the peerage, with the title of Lord Sympil, by James IV., in 1488. Elliotstoun and Castle-Semple continued in possession of this ancient family till sold, as above-mentioned, in 1727, after having been their property for about 500 years. In 1813, William M'Dowall of Garthland and Castle-Semple, sold his estate of Castle-Semple to John Harvey, Esquire, of Jamaica. Eastward of the lake, and on the south side, are the remains of the old tower of Elliotstoun, the residence of the Semple family previous to 1550. Its length is 42 feet, and its breadth 33 feet over the walls. Between 1547 and 1572, Robert, commonly called the great Lord Semple, built a tower, called the Peel—the ruins of which still exist—on a small island on the lake, now forming part of the mainland. This tower was in the form of an irregular pentagon, having a sharp end towards the head of the loch. "It was built," says Dr. Caldwell, "over a strong arch, with bulwarks, gun-ports, &c., and is environed with an immense cairn of stones round all its foundations, to a considerable height above high water."* The castle at Castletoun, or Castle-Semple, near the eastern end of the lake, was erected or more probably rebuilt by the first Lord Semple, who died in 1513. He changed its name from Castletoun to Castle-Semple. In Bleau's Atlas, published in 1654, this castle is represented by a mark denoting the largest size of castles. Crawford—who wrote in 1710—says, "Upon the brink of the loch stands the castle of Sempill, the principal messuage of a fair lordship of the same denomination, which consists of a large court, part of which seems to be a very ancient building, adorned with pleasant orchards and gardens." In 1735 this ancient house was demolished by Colonel M'Dowall, who erected an elegant modern house on its site. Some workmen repairing drains in 1830 found part of the foundations of the castle still existing below ground. In 1504,

John Lord Semple founded a collegiate church near the lake, having a provost, six chaplains or prebendaries, two boys, and a sacristan. A stone in the outer wall bears the letters R. L. S., and the arms of Sempill and Montgomery. It was found, about 25 years ago, near the site of the castle of Semple, and was placed in its present situation by the late Mr. Harvey. The church is 71 feet 6 inches in length; 24 feet 3 inches in breadth; and 15 feet 6 inches in height. A portion at the east end, separated from the rest, was used as a place of burial by the Semple family, as it now is by Colonel Harvey the present proprietor. Dr. Caldwell describes its walls as being covered with ivy, and surrounded by a fine tall horn-bean hedge. The roof was taken off about forty years ago, and the ivy has penetrated into the interior. In ancient times there appears to have been a village at this place, and a chapel in its neighbourhood dedicated to St. Bride. A small burn, which here falls into the lake, is still named St. Bride's burn; and the residence of Colonel Harvey's factor, St. Bride's mill. On the hill of Kenmure, which is of secondary trap rock, there is an imitation of a Chinese temple, from which a very fine view of the lake and surrounding scenery can be obtained. It is supposed to have been erected about the middle of last century by one of the family of M'Dowall who succeeded the Semples.—The Glasgow and Ayr railway passes through the estate of Castle-Semple, and in the immediate neighbourhood of the loch.

CASTLE-SPYNIE. See SPYNIE.

CASTLE-TIORAM. See ARDNAMURCHAN.

CASTLETON, or CASTLETOWN, a village in the parish of Olrick in Caithness, at the head of Dunnet bay, 5 miles east of Thurso, on the post-road to Houna. There are extensive quarries of flag or paving-stone here. Population, in 1836, 311.

CASTLETON OF BRAEMAR, a small village in the district of Braemar, parish of Crathy, Aberdeenshire, on the eastern bank of the rapid Clunie, a little above its junction with the Dee; 57 miles west of Aberdeen, and 15 from the Spittal of Gleneshe, on the road to Perth. There are two excellent inns here; and the place is well-known to tourists as forming convenient head-quarters while visiting the Cairngorm mountains, the Linn of Dee, Mar forest, or Strath Dee. See articles BRAEMAR, and CRATHIE.

CASTLETOWN, a parish forming the southern extremity of the shire of Roxburgh, having the form of an irregular triangle, and including a more extensive area than any other parish in the south of Scotland. It is bounded on the north by the parishes of Cavers, Hobkirk, and Southdean; on the east and south by Northumberland and Cumberland; and on the west by Dumfries-shire. Its greatest length, from Fanna hill, or from Needs Law, on the north-east, to its southern extremity at the confluence of Mare burn with Kershope water is $17\frac{1}{2}$ miles; and its greatest breadth from Peel fell on the east to Tudhope hill on the west, is 14 miles. In history and poetry, and very frequently still in conversation, its name is Liddesdale, from the river Liddel, which runs through it from east to south.† The upper or northern part is mountainous and bleak; but is generally dry, and affords good sheep-pasturage. Some of the mountains both here, and along the western and eastern boundaries, are very high and precipitous. Millenwood Fell, and Windhead, are each nearly 2,000 feet in height; and

† In the old histories, and geographical descriptions of Scotland, it is called 'The County of Liddisale'; and, in old writs, it is styled 'The Lordship' of that name. In December 1540, the lands and lordship of the forest of Jedburgh, with the lands and lordship of Liddisale, were annexed to the Crown, by Act of Parliament. And, on the 2d of January, 1648, the lands and dominion of Liddisale appear to have been granted to Francis, Earl of Buccleuch.

* A very fine copper cannon, having the arms of Scotland, and J. R. S. engraved on it, was found in the loch near the Peel. This relique is preserved at Castle-Semple. Tradition reports that other six guns were lost at the place where this one was found.

Tudhope hill is 1,830, and, being seen from a great distance at sea, serves as a landmark for ships. The lower extremity of the parish, and all parts of it distant from the streams, are wild and bleak. Along the banks of the Hermitage and the Liddel, however, it is luxuriant, full of rural beauty, and occasionally picturesque. The valley of the Hermitage, stretching from the rugged mountains on the north-west, 10 miles eastward till the junction of the stream with the Liddel, is tufted with natural wood, and abounds in the rich scenes of pastoral life. Near the head of the parish on the east, the rivers Tyne and Liddel take their rise in the midst of a vast bog, which, on account of its stagnant appearance, is called Dead Water. For 10 miles, the banks of the Liddel are entirely naked; but on its junction with the Hermitage, it is fringed with plantation, and, throughout the rest of its course, it flows through a valley opulent in the beauties of landscape. Its tributaries, besides the Hermitage, are the Tweeden, the Tinnis, the Blackburn, and the Kershope, the last of which forms the boundary with England. All these streams abound in trout; on some of them are fine cascades; and all, through the Liddel, send their waters—in a direction different from all the other streams of Roxburghshire—toward the Solway frith. Limestone is abundant in this district; coal is obtained to some extent on the estate of Liddel bank: and excellent freestone is everywhere found, except at the head of the Hermitage. Mineral springs, possessing medicinal properties, and in considerable repute for their virtues, exist at Thorneshope, in the morass called the Dead Water,—at Lawston,—at Flat,—and on the Tweeden,—the last of these is petrificative, and exhibits, in an interesting manner, the various stages of the petrifying process,—fog or moss, at the edge of the spring, about 8 inches high, soft and flourishing at the top, half-petrified at the middle, and converted into solid stone at the root. The climate, owing to the attraction of the mountains and the coldness of the soil, is very moist; yet, compared with that of many other districts, it is exceedingly salubrious. Toward the close of last century, one native attained, in the full possession of all her faculties, the advanced age of 113. The soil of the holm land is occasionally of a light but often of a very deep and fine loam, and, when judiciously cultivated, bears luxuriant crops. Land under tillage, however, is found chiefly on the banks of the rivers; many hundred acres which were formerly subjected to the plough, having been thrown into pasture in consequence of the high price of sheep and wool. Even mossy ground, though apparently useless, affords considerable nourishment for both black cattle and sheep. Different species of grass rise in constant succession in their respective seasons; and the particular plant called 'the moss,' which springs before any other at the close of winter, is carefully sought after by the flocks.—This secluded district was, at a former period, inhabited by tribes of freebooters, the chief of whom were the Elliotts and the Armstrongs, who acknowledged the civil authority of neither Scotland nor England, and maintained a precarious but very abundant subsistence by predatory excursions upon all the districts around. Their castles, or peel-houses, where they stored their booty and rallied at a moment of danger, still, in some quarters, lift their ruined heights before the eyes of a traveller as memorials of a lawless age.*

* There is a minute inserted in the session-records, of date 17th January 1649, which mentions that "the English army, commanded by Colonels Bright and Pride, and under the conduct of General Comwells, on their return to England, did lie at the kirk of Castletown several nights, in which time they brake down and burnt the communion-tables, and the seats of the kirk; and at their removing, carried away the minister's

Castletown derives its name from a village,—no longer in existence, though some of its hearth-stones were at a recent date dug up—which was built under the shelter of one of these strongholds. This castle, which stood on the summit of a precipice 100 feet in height, on the east bank of the river Liddel, and the rampart and force of which still remain entire, is said to have been founded by Ranulph de Soulis in the reign of David I. In the village of Castletown, stood a church which was dedicated to St. Martin, and was a vicarage of the priory of Jedburgh. Besides this, there were in the district, two other churches, three chapels, and a monastery: the men of lawlessness and general plunder, attempting, in the superstitious spirit of their times, to atone for the injuries which they pertinaciously inflicted on their fellow-men, by liberally building, endowing, or supporting sacred edifices. Ruins of the religious structures may still be seen in sequestered spots where now the human foot rarely treads, and where undisturbed repose invites the solitary sheep to luxuriate on the wild pasture. One of the churches was called the Wheel church; because it stood in the vicinity of the Roman causeway leading from Stanmore across the north-east corner of the district into Liddesdale, and constituting the only path in that part of Scotland which admitted the passage of wheeled carriages.—The most celebrated antiquity of Liddesdale is Hermitage castle, which consists of a tall, massive, gloomy-looking double tower, protected by a ditch and strong rampart, and rising aloft from the centre of an extensive waste, overlooking the limpid, murmuring waters of the Hermitage river, amid a scene of barrenness and desolation. This fortress was one of the largest and strongest on the border; and, remaining entire in its walls, was lately put into a state of nearly complete repair. Within a few yards of it, are the ruins of the baronial chapel, surrounded by a burying-ground still partially in use. The castle was built, in the 13th century, by Comyn, Earl of Menteith. It afterwards became the property of the once potent family of Soulis; it next, by forfeiture, went into the possession of the Douglasses; it was then made over by Archibald, the sixth Earl of Angus, and the representative of the Douglasses, to Hepburn, Earl of Bothwell, in exchange for the castle and lordship of Bothwell in Clydesdale; and, the possessions and title of the Hepburns having become the property of Francis Stewart, it passed, on the forfeiture of the latter, into the hands of the Buccleuch family, who still possess it. When Hermitage castle was in the possession of the Douglasses, the brave Sir Alexander Ramsay of Dalhousie was starved to death within its walls; and, when in the possession of the storied Earl of Bothwell—who had been severely wounded in an attempt to seize Elliot of the Parke, a desperate freebooter—it was visited by Queen Mary. In order to attain her purpose, she penetrated the mountainous and almost trackless region which lies between Teviotdale and Liddesdale, attended by only a few followers: returning on the same day to Jedburgh whence she started, and performing a journey of upwards of 48 miles through almost all conceivable varieties of difficulty and obstruction. Other antiquities besides Hermitage castle consist chiefly of cairns, Picts works, and camps. The most remarkable is a camp, entirely circular, about 100 feet diameter, and consisting of a series of concentric walls, all penetrated by a door or opening toward the east: this camp occupies the whole summit of Carby hill, which stands

books to the value of 1,000 marks and above, and also the books-of-session—with which they lighted their tobacco-pipes—the baptism, marriage, and examination-rolls, from October 1612 to September 1648, all which were lost and destroyed."

detached from other elevations, and commands an extensive view of part of Cumberland.—At Milnholm there is an ancient cross of one stone, 8 feet 4 inches high. A sword 4 feet long is cut out on the south side of the cross, and immediately above several letters. The tradition concerning it is this:—One of the governors of Hermitage castle—some say Lord Soulis, others Lord Douglas—having entertained a passion for a young woman then residing in the lower part of the parish, went to her house, and was met by her father, who, wishing to conceal his daughter, was killed by the governor. The murderer was pursued, and took refuge with Armstrong of Mangerton, who had influence enough to prevail on the people to desist from the pursuit, and by this means saved his life. Seemingly with a view to make a return for this favour, but secretly jealous of the power and influence of Armstrong, the ungrateful wretch invited him to Hermitage castle, where he was basely murdered. The governor himself, in his turn, was killed by Jock of the Side, of famous memory, brother to Armstrong. The cross was erected in memory of this transaction, near to Ettleton churchyard, where he was buried, and almost opposite to Mangerton. Liddesdale has been much improved by its intersection with new roads. In the centre of its more arable part, on a haugh on the right bank of the Liddel, stands the large modern village of New Castletown. It owes its origin to Henry, Duke of Buccleuch, and has entirely superseded the ancient Castletown, situated a little farther up the river. It consists of two long streets of new, tidy houses,—every house having attached to it a plot of ground; but, though it has a weekly market and three annual fairs or hiring-days, it enjoys little trade, no manufacturing pursuit, and but a modicum of general prosperity. It stands on the road which wends along the banks of the Liddel; and is 5 miles east from Cannobry, 20 south from Hawick, and 26 from Jedburgh. In addition to the parish-church, it is the site of a meeting-house, belonging to the United Secession; and it is enriched with two subscription libraries and a friendly society. Population, in 1801, 1,109; in 1821, 2,038; in 1831, 2,227. Houses 305. Assessed property £13,217.—This parish is in the presbytery of Langholm and synod of Dumfries. Patron, the Duke of Buccleuch. Stipend £249 19s. 11d.; value of glebe £20. Unappropriated tithes £150 8s. 11d.—There are four parochial schools. The salary of the four schools amounts to £51 6s. 6½d., of which the principal teacher has £30, and the remaining sum is equally divided among the other three. The fees of the four schools amount to £72 annually. There are two private schools.—This parish gave birth to the celebrated John Armstrong, M.D., whose father and brother were ministers of it; and who has sung the beauties of his native vale, in his highly finished Poem on Health, Book III:

— Such the stream,
On whose Arcadian banks I first drew air,
Liddel, till now—except in Doric lays,
Tun'd to her murmurs by her love-sick swains—
Unknown in song; though not a purer stream
Through meads more flow'ry,—more romantic groves,
Rolls toward the western main. Hail, sacred flood!
May still thy hospitable swains be blest
In rural innocence; thy mountains still
Teem with the fiery race; thy tuneless woods
For ever flourish, and thy vales look gay,
With painted meadows, and the golden grain!

CATERLINE, an ancient parish, now comprehended in the parish of Kinneff, Kincardine. The village of the same name is 5 miles north-north-east of Bervie, on the German ocean. A convenient and safe harbour for coasting-vessels of light burden might be made here at small expense.

CATERTHUN, a hill in the parish of Menmuir, in Forfarshire, 5 miles north of Brechin; so called from the British *cader*, 'a fortress;' and *dun*, 'a hill.' It is remarkable for a strong fortification on its summit. This building consists of an immense quantity of loose stones ranged around the summit in an oval form. Round the external base is a deep ditch; and 100 yards below are the vestiges of another surrounding the hill. The area within the first or highest mound is flat; the length of the oval is 436 feet, and the transverse diameter 200. This area is covered with a fine soft grass, while, without the ring, the surface of the hill is covered with heath and moss. Within the area is a spring of the coldest water; and near the east side are the remains of a rectangular building, of which the dyke and ditch are yet to be easily traced. The ascent of the hill is very steep, and the summit can only be approached in one direction. There is another fortification of inferior strength in the neighbourhood, on a lower hill, to the northward, called Brown Caterthun, from the colour of its ramparts which are composed of earth; that previously described being known as White Caterthun. It is of a circular figure, and consists of several concentric circles. As White Caterthun at a distance has a resemblance to the frustum of a cone, from the heap of stones at its summit, it has been considered by some to have been a volcano, the crater of which is extinct. But there neither is the appearance of lava, nor of any other volcanic matter, in the neighbourhood; and there is evidently a systematic arrangement of the stones which compose its fortification. Pennant thinks that these hill-forts may have been occupied by the Caledonians, previous to their engagement at the foot of the Grampians with Agricola.*

CATHCART,† a parish partly in the county of Lanark, but chiefly in that of Renfrew; bounded on the north by Govan, a part of the Gorbals parish, and Rutherglen; on the east by Rutherglen and Carmunnock; on the south by Carmunnock and Mearns; and on the west by Eastwood. Its extent, from north to south, may be estimated at 6 miles; its mean breadth at 2½; and its superficies at 3,000 Scots acres. Assessed property, in 1815, £10,638. The surface is very agreeably diversified with hill and dale, presenting to the eye those alternate risings and falls which constitute picturesque beauty. Many of the hills bear the marks of the plough to the very summit, and none are so steep as to prevent cultivation. Through these hills the White Cart winds its romantic course. Towards the southern part of the parish, the country is more bleak and barren, and the hills of greater height. Mr. Ramsay says: "Sluggish and unadorned though the river White Cart be in the lower part of its course, it exhibits much beauty in its progress through the parish of Cathcart, the banks being frequently elevated and clothed with a rich drapery of wood. Such is the warmth and shelter in some of the sequestered spots on its banks, that an almost perpetual verdure is to be found. In the midst of this scenery 'the Bard of Hope,' and the amiable author of 'The Sabbath,' were, in their childhood, accustomed to pass the summer-months and feed their young fancies, removed from the smoke and noise of their native city. The latter, in his 'Birds of Scotland,' says:

* In King's 'Munimenta Antiqua' [Vol. i. Pl. I. and II.] there are accurate drawings of White Caterthun. Pennant has also given a view of White Caterthun.

† The etymology of this name usually adopted is *Caer-cart*, 'the Castle on the Cart.' Mr. Ramsay, in his very accurate sketches of Renfrewshire [Edin. 1839, 4to. p. 75.] prefers the etymology *Cath-cart*, 'the Strait of Cart,' the river here running in a narrow channel.

'Forth from my low-roofed home I wandered blithe
Down to thy side, sweet Cart! where, cross the stream,
A range of stones, below a shallow ford,
Stood in the place of the now spanning arch.'

And Campbell, in his 'Lines on revisiting Cathcart,' thus tenderly apostrophizes the pleasant fields which he had so often traversed 'in life's morning march, when his bosom was young:'

'Oh! scenes of my childhood, and dear to my heart,
Ye green waving woods on the margin of Cart,
How blest in the morning of life I have stray'd
By the stream of the vale and the grass-covered glade!'

There are five villages in the parish: viz. the two Cathcarts, Langside, Clarkston Toll, and Westfield. The parish gives name, and the title of Earl, to the ancient family of Cathcart, whose hereditary estates here were alienated by Alan, 3d Lord Cathcart, in 1546. The family within the present century, repurchased the lands on which the castle of Cathcart stands, and another portion named Synchron. Population, in 1801, 1,059, of whom only 55 resided in Lanarkshire; in 1831, 2,228. Houses, in 1831, 284, of which 31 were in Lanarkshire.—This parish is in the presbytery of Glasgow, and synod of Glasgow and Ayr. Stipend £274 4s. 1d.; glebe £16. Unappropriated tithes £15 19s. 5d. Patron, Gordon of Aikenhead. Church built in 1832; sittings 750.—Schoolmaster's salary £30, with about £15 fees. There were 3 private schools in 1834.—The field of Langside, remarkable as the scene, on the 13th of May, 1568, of the last fruitless effort of the unfortunate Mary to regain her crown, is in this parish. An eminence is yet pointed out, near the old castle of Cathcart, called the Court knowe, where the queen stood during the engagement; and a hawthorn bush—commonly known by the name of 'Queen Mary's Thorn'—marks the spot. The castle of Cathcart, 1½ mile south-east of Langside, has been a very strong building. "The time when the castle of Cathcart was reared," says Mr. Ramsay, "is unknown. From the remains it appears to have been a place of great strength. Two of its sides are completely defended by the river, to which there is an almost perpendicular descent of tremendous height. The access on the other side—except by a narrow entry which might have been secured by a ditch and drawbridge—is pretty steep and difficult, so that, in times when the art of attack was not so well understood, it might have made a considerable defence. The original edifice consisted of a square tower, 'to which,' says Hamilton of Wishaw, writing about the year 1710, 'severall new buildings have been added.' This more modern portion was 'completely removed' by the end of that century. From Wishaw we also learn that the castle 'had fruitfull gardens about it.' This edifice was inhabited till about the year 1750, when it was given up for demolition by the proprietor of that day, Maxwell of Williamwood, upon his removing to another dwelling. The materials were sold to a tradesman in Glasgow, who, having taken off the roof, was proceeding to demolish the rest of the building, when he found himself obliged to stop by the resistance he met with from the strength and thickness of the walls. Since that time the edifice has remained in a dismantled state, without, however, suffering much farther injury from the influence of the weather. Upon the bank of the river, and adjacent to the castle, stands Cart-side cottage, the modern mansion of the family. Upwards of twenty years ago there was built into the front wall of this house a stone, on which are sculptured the arms of Cartcart, quartered with those of Stair, indicating the connection of these families through the marriage of Alan, 7th Lord Cathcart, to a daughter of Viscount Stair, the eminent lawyer."

CATHERINE (Loch). See KATRINE.

CATHERINE'S (ST.), a ferry on Loch Fyne, opposite to Inverary, and equidistant from the northern terminations of the Strachur and Ardnoe roads. There is a small pier here, 90 yards in length.

CATHKIN. See CARMUNNOCK.

CATLAW, one of the Grampians, in the northern part of the parish of Kingoldrum, in the county of Angus; the elevation of which by barometrical mensuration has been found to be 2,264 feet above the level of the sea. [Old Statistical Account, vol. ix. p. 131.] At the base, towards the north-east, is a chalybeate spring. See KINGOLDRUM.

CATRAIL (THE), a remarkable trenched fortification which may be traced from near the junction of the Gala and Tweed to the mountains of Cumberland. Its general breadth is from 20 to 24 feet, and it is supported by hill-forts scattered in the line of its course. "It is known in the country," says Chalmers in his 'Caledonia,' [vol. i. pp. 239-242,] "by the several names of the Catrail, and of the Pictworkditch. The Catrail is the British name of ancient times; and signifies, in the British language—what distinctly intimates the purposes for which it was made—the Dividing fence, or 'the Partition of Defence.' The name of the Pictworkditch was applied to this remarkable fence, in more modern times, by the same people who called Severus's wall the Pictswall, and other objects by the same well-known name. The Catrail, consisting of a fosse, and a double rampart, runs through the shires of Selkirk and Roxburgh, from Galashiels on the north, to the Peel-fell, at the eastern extremity of Lidsdale, on the south. The Pictworkditch first appears, on the north, at a farm called Mosalee, a mile westward from Galashiels, near the obvious remain of a British fort. From Mosalee, it runs, southward, by the west side of Boghall; and, at the end of 2 miles, arrives at the Rink-hill, on the summit of which, there are the remains—as the name implies—of a British hill-fort, that is of an elliptical form, and defended by two ditches, and two ramparts of earth and stone. From the Rink-hill, the Pictworkditch proceeds, in a south-west direction, across the Tweed, near the influx of the Howden-pot-burn; and continues its course to a British fort on the west side of this stream. From this fort, the Pictworkditch passes Cribshill; and is again discovered several miles, westward, passing along the south-east declivity of Minchmoor, whence it passes Henhillhope, where it is distinctly seen, in its obvious course, for a quarter of a mile. It afterwards clearly appears as it ascends the Swinebraehill above Yarrow kirk; and passing the Yarrow river, near Redhawse, it is again observable several miles southward, near Delorain burn, on the south side of Ettrick river. From this position, it has been traced across Coplaw; and thence, southward, by the base of Stanhopelaw, where its singular remains are pretty distinct. For some distance, southward, of Stanhopelaw, it cannot now be traced, owing to the swampiness of the country; but the Pictworkditch again appears on Hendwoody common; whence it proceeds, in a south-west direction, across Borthwick water, past a farmstead called Broadlee, where the remains of it become very distinct for the course of a mile-and-a-half, till it reaches Slatehillmoss. From this position, it proceeds forwards, in a south-east direction, across Teviot river, through the farm of North-house to Dockcleugh-hill, where its remains are very distinct: from Dockcleugh-hill it continues a south-east course, in a slanting form, across Allan water, to a place named Dod, passing two hill-forts on the left. From Dod, where its remains are distinct, the Pictworkditch proceeds

eastward, past another British fort called Whitehillbrae; and it there ascends the Carriage-hill, on which its remains are very perfect. From Carriage-hill it proceeds across a rivulet, called Langside burn; and here, says Gordon, the tourist, 'it becomes the landmark betwixt the Duke of Buccleuch's estate, and Sir Gilbert Elliot of Stobs.' From Langside burn its remains appear very distinct, as they pass along the northern base of the Maiden Paps to the Leapsteel; and thence passing Robertslin, it traverses a tract of boggy ground called Cockspart. Crossing the hills into the upper parts of Lidsdale, the remains of it again appear on Dawstane-burn; and thence passing the abbey, it goes on to Dawstane-rig. From this position, faint vestiges of it were traced nearly to the Peel-fell, which is one of the chain of mountains that forms a natural barrier between Northumberland, on the south, and Teviotdale, and Lidsdale, on the north. Gordon—who has the merit of having first brought this curious remain into notice—absurdly supposes it to have been a *lines*, or boundary, which the Caledonians established after their peace with the Emperor Severus. He ought to have recollected that this work is in the country of the Romanized Britons of Valentia, and lies far from the land of the Mæatæ and Caledonians. Maitland, with equal absurdity, has converted the Catrail into a Roman road. If he had only examined it, he would have seen that it is as different from a Roman road as a crooked is from a straight line, or as a concave work is from a convex. The able and disquisitive Whitaker was the first who applied the Catrail to its real purpose, by referring it to its proper period. There can hardly be a doubt whether the Catrail was once a dividing fence, between the Romanized Britons of the Cumbrian kingdom, and their Saxon invaders on the east. It cannot, indeed, be fitly referred to any other historical period of the country, which is dignified by the site of this interesting antiquity. The Britons and the Saxons were the only hostile people whose countries were separated by this warlike fence, which seems to have been exactly calculated to overawe the encroaching spirit of the Saxon people."

CATRINE, a village beautifully situated on the north side of the river Ayr, in the western extremity of the parish of Sorn, 15 miles east of the town of Ayr, and 2 east by south of Mauchline. It is of a regular form, having in the middle a square of 300 feet, with streets leading from it on the east, south, and west; these are intersected with other cross streets at right angles. In 1787, Claude Alexander, Esq. of Ballochmyle, the proprietor, in partnership with the well-known Mr. David Dale of Glasgow, established extensive spinning machinery here, and built this village for the accommodation of their work-people; since which time it has increased greatly, and in 1836 contained 2,645 inhabitants. In 1838, the 2 cotton-mills here employed 750 hands, and 290 horse power. A chapel-of-ease was built here by Mr. Alexander, in 1792, which was purchased in 1829 by the feuars of Catrine for £400; sittings 754. The feuars of Catrine are bound by their feus to maintain this chapel and a burying-ground; but the obligation does not extend to the payment of the stipend.—A United Secession church has recently been erected here; sittings 580.

CAVA, a small island of Orkney, 2 miles south of Pomona, and belonging to the parish of Orphir. It is about a mile long, and a quarter of a mile broad; and in 1796 was inhabited by 3 families. There is a ruinous chapel on the island.

CAVERS, a parish of very irregular figure and considerable extent, in the county of Roxburgh. It consists of two detached portions, both lying on the

southern side of the Teviot. The upper and larger portion is separated from that lying lower down the river by the intervention of Hawick and Kirkton parishes; and is bounded on the north by these last-mentioned parishes; on the east by Hobkirk; on the south by Castletown parish, and Dumfriesshire; and on the west and north-west by Hawick. The western part of this division is hilly and rugged; but towards the east it becomes flat, with a rich fertile soil. It is watered by the Teviot, Allan water, and the Slitrig, with their tributaries. These all rise on the northern side of the mountainous range, from the southern slopes of which the Hermitage and the Liddel descend in an opposite direction. The loftiest mountain is the Wisp, to the west of Mossypaul inn, which has an altitude of 1,830 feet, and commands a noble prospect, embracing both the eastern and western seas. Tudhope, or Tutop, to the east of Mossypaul, belongs partly to this parish, and partly to CASTLETOWN: see the latter article. On advancing northwards we meet with a number of detached conical hills, amongst which are the Maiden paps, at the head of the Slitrig; Shelf-hill pen, near the head of the Allan; and Pencerst pen to the north of both these.—The northern or lower division of the parish is bounded on the north by Minto and Bedrule parishes; on the east by Bedrule and Hobkirk; on the south by Kirkton and Hawick; and on the west by Wilton and Minto. The Rule separates it from Bedrule. In this division is a village called Denholm, on the estate of Mr. Douglas of Cavers. See DENHOLM. Population, in 1835, 500. Denholm was the birth-place, in 1775, of John Leyden. Here is an independent chapel. Cavers, the residence of James Douglas, Esq., is the only mansion of note in the parish. Population, in 1801, 1,382; in 1831, 1,625. Houses, in 1831, 262. Assessed property, in 1815, £11,503.—This parish is in the presbytery of Jedburgh, and synod of Merse and Teviotdale. Stipend £250 6s. Unappropriated tithes £1,134 12s. 7d. Patron, Douglas of Cavers. Church built in 1822; sittings 500. It is in the lower division of the parish; the upper division has a chapel at Carlenrig.—There is one principal parish-school, and two side-schools, in this parish. Salary of principal master £30; 2d master £15 13s. 1½d.; 3d, £12. There is also a private girls' school.

CAVERTON, a village in the parish of Eckford, Roxburghshire; 4½ miles south of Kelso, near which is an extensive moor, called Caverthorpe Edge, on which the Kelso races were formerly held. It was burnt by the English in 1544, and again in 1553. The vicinity of Moss tower, an important border-stronghold, about a furlong to the north-east, seems to have drawn upon it these visitations. The barony of Caverthorpe belonged to the Lord Soules, who, according to tradition, was boiled alive at the Ninestane rigg in the parish of Castletown, near his castle of Hermitage.

CAWDOR. See CALDER.

CAYLE (THE). See KALE.

CELLARDYKES, a village in Fifeshire, in the parish of Kilrenny, so called from the fishers of Kilrenny having here cellars or storehouses for lodging their fish. It is immediately adjoining Anstruther-Easter, but is united as a burgh with Kilrenny, situated about half-a-mile inland. See KILRENNY. Municipal and parliamentary constituency, in 1839, 48. Revenue £40.—The principal trade is fishing for the Edinburgh market; and the Cellardykes fishermen are proverbial for their dexterity and hardihood. The take of herrings by the fishermen of this place, in 1839, was 25,000 barrels. The number of boats was 80, of an average burden of 16 tons each. Cod and haddocks are also exten-

sively exported from this place in a fresh, dried, and pickled state. There are two boys' schools here, a female school, and an infant school. Population, in 1811, 805; in 1836, 1,800, of whom 300 were fishermen.

CERES, a parish in the county of Fife, extending in length about $7\frac{1}{4}$ miles, and in breadth from 1 to 4 miles; bounded by St. Andrews, Kemback, and Cupar on the north; by St. Andrews, Kemback, and Cameron on the east; by Cameron, Kilconquhar, and Largo on the south; and by Cults, Kettle, and Scoonie, on the west. This parish forms a beautiful valley, lying to the south of Tarvet hill. Its superficial area amounts to about 8,000 acres, of which four-tenths are in tillage, five-tenths in pasture, and one-tenth is planted as muirland. The average rent is £1 10s. per acre. Valued rental £8,248 1s. 1d. Scots. Assessed property, in 1815, £12,753. There are about 500 looms within this parish employed in the manufacture of linen; and there are 3 spinning-mills for the manufacture of linen yarn, which, Mr. Leighton states, produce 119,600 spyndles yearly. Limestone is abundant, and extensively wrought; coal and freestone are also found here. The parish contains 4 other villages besides that of Ceres. The second village in point of extent is Craighrothie; the others are Chance-Inn, Pitscottie, and Coaltown. The Eden and Ceres, with two or three smaller rivulets, water this parish. The Ceres is formed by the union of five streams near the village of Ceres. It flows through the beautiful den of Dura, and joins the Eden near Kemback.—The ruins of Craighall house, built by the celebrated Scottish juriconsult Sir Thomas Hope, are situated about a mile to the south-east of the village of Ceres; and to the south-west are the ruins of Struthers' house, now the property of the Earl of Glasgow. Upon the estate of Scotstarvet, is a beautiful tower of jointed freestone, 24 feet square, and about 50 feet high. The walls are very thick, and the windows small; the whole is surmounted by a battlement. Magnus muir, the scene of Archbishop Sharp's murder, is partly in this parish, partly in that of St. Andrews. Lindsay of Pitscottie, author of a well-known history of Scotland, was a native of this parish: see PITSOTTIE. Population, in 1801, 2,352; in 1831, 2,740. Houses 423.—This parish is in the presbytery of Cupar, and synod of Fife. Stipend £229 13s. 4d. Unappropriated teinds £5 9s. 4d. Church built in 1806; sittings 1,100. Patron, the Earl of Glasgow. Schoolmaster's salary £34 4s. 4½d. with about £40 fees. Prior to the Reformation, there was a chapel in this parish dedicated to St. Ninian; and the schoolmaster of Ceres receives a presentation to be chaplain of the chapel of St. Ninian, within the church of Ceres, and to be reader of that parish: a small salary of £3 Scots was formerly payable to the chaplain, from certain houses in Cupar, but these houses cannot now be discovered, and the chaplainry has become a title without a benefice. The parish school-house is a handsome building. There are also schools at Craighrothie and Baldinny.—The village of Ceres is situated $2\frac{1}{2}$ miles south of Cupar-Fife. It contains several streets, and some good houses. It carries on a considerable trade in brown linen. It has 2 fairs annually, viz. on the 24th of June, and 20th of October. Besides the parish-church, there are here a Relief church built in 1798, and a Secession meeting-house built in 1744. The old fees in this village are held of the proprietors of Craighall. In the churchyard is the tombstone of John, 5th Lord Lindsay.

CESSFORD, a small village in the parish of Eckford, Roxburghshire; $6\frac{1}{2}$ miles north-east of Jedburgh. There is a school here. Near it, on the

south, is the ancient castle of Cessford, which gives the title of Baron to the Duke of Roxburgh. The first proprietor of this castle, mentioned in history, was Andrew Ker of Attonburn, who obtained the title of Baron Cessford, and got a charter of confirmation from Archibald, Earl Douglas, dated 1446. In 1570 the laird of Cessford was made warden of the Scottish middle marches. Cessford castle, being only 4 or 5 miles from the English confines, was necessarily rendered a place of security; and according to tradition, there was a subterraneous vault for concealing both persons and goods within its walls to which access was only got by one aperture which was opened or shut by a large stone with an iron ring in it. "This stone and ring," says the writer of the Old Statistical Account, "have been seen by some persons still alive; but the entrance to the peel or dungeon is now choked up with rubbish." In the recent Statistical Account it is stated that this vault is about 17 feet long, 10 broad, and 9 deep. No date is discernible to fix the period of the erection of this castle; but from those parts of the walls yet entire, it appears to have been a place of considerable strength, both from the thickness of the walls, which are 12 feet at an average,—the vestiges of the battlements on the top,—the embrasures on the sides,—and the remains of a surrounding moat which was probably furnished with water from a spring above the present farm-house, about 2 furlongs distant. The roof is entirely gone. The area within the walls is 39 feet in length, and 20 in breadth. See ECKFORD.

CESSNOCK. See GALSTON.

CHANCE INN. See INVERKEILOR; also CERES.

CHANNELKIRK,* a parish in Berwickshire, nearly of a circular form, having a diameter of $5\frac{1}{2}$ miles; bounded by Fala and Humbie on the north; Lauder on the east and south; and Stow on the west. It is a pastoral district, situated amongst the Lammermoor hills, where they border with the counties of East and Mid-Lothian. The principal village is that of Oxtown, with a population of 220. On the banks of the streamlets, which united form the Leader, are about 3,000 acres in tillage, having a light thin soil on a bed of sandy gravel. The hills are mostly bleak, and covered with heath. A great many Pictish or Scottish military encampments are to be seen in this neighbourhood. They are called rings by the common people. General Roy has preserved a plan of a Roman camp here. About a quarter of a mile west of the kirk is a fine spring called 'The Well of the Holy Water cleugh.' The Girthgate, or road by which the monks travelled from Melrose to Edinburgh, passes through the western boundary of the parish; and on this road, a few miles due west of the church, are the ruins of an old building commonly called Restlaw Ha', at which, tradition says, the monks and pilgrims used to stop for refreshment. Population, in 1801, 640; in 1831, 841. Houses 148. Assessed property, in 1815, £5,827. Real rental £5,400.—This parish, formerly a rectory, with the chapels of Glengelt and Carfrae annexed, is in the presbytery of Lauder, and synod of Merse and Teviotdale. Stipend £190 5s. 6d.; glebe £15. Patron, Sir H. P. H. Campbell, Baronet. Church built in 1817; sittings 300.—Schoolmaster's salary £30. The school is attended by about 100 children.

CHANONRY, a village in the county of Ross, about a mile from the burgh of Rosemarkie, to which it was united by a charter granted by James II.,

* The ancient name of this parish was Childer-kirk, or Children's kirk, the church having been dedicated to the Innocents. In old records it is written Jingle-kirk, and is usually pronounced so at this day.

under the common name of Fortrose. It was called Chanonry, from being the canonry of Ross, and the residence of the bishop; it is now the seat of a presbytery. See FORTROSE and ROSEMARKIE.

CHAPEL-HILL. See TRINITY-GASK.

CHAPEL OF GARIOCH, a parish in the district of Garioch, Aberdeenshire; bounded by the parishes of Rayne and Daviot on the north; by Daviot, Inverury, and Kemnay on the east; by Kemnay and Monymusk on the south; and by Monymusk, Oyne, and Rayne on the west. Its greatest length is 11 miles; greatest breadth 5. The river Don runs on the southern boundary, dividing it from Kemnay; the Urie intersects the northern and broadest part of the parish, and divides it from Inverury. There is a considerable extent of plantations. In several parts are indications of limestone, but none has yet been discovered. Near the old castle of Balquhain, on a small branch of the Urie, is a Druidical temple; a remarkably fine echo is observable here. About half-a-mile west of the church is a large upright stone, 10 feet high, 4 broad, and 1 foot thick, called the Maiden stone. Pennant has given an engraving of the hieroglyphics cut upon it. Near the kirk-town, in 1411, was fought the battle of Harlaw, between Alexander, Earl of Mar, and Donald, Lord of the Isles. See HARLAW. Population, in 1801, 1,224; in 1831, 1,873; in 1836, 1,928, of whom 1,793 belonged to the Established church. Houses 380. Assessed property, in 1815, £4,313. —This parish is in the synod of Aberdeen, and Garioch is the seat of a presbytery. It was formerly called Logie-Durno, but about the beginning of the 17th century was united to the parsonage of Fetternear, and erected into the present parish. The lands of Lethinty are annexed *quoad sacra* to Daviot. Minister's stipend £217 11s. 8d; glebe £22 10s. Unappropriated tithes £173 19s. 9d. Patron, Sir R. D. H. Elphinstone, Baronet. Church built in 1813; sittings 722.—Salary of parish schoolmaster £27, exclusive of the Dick bequest, with about £20 fees. There are 3 private schools in the parish.

CHARLESTON, a village in the parish of Dunfermline, Fifeshire; $3\frac{1}{2}$ miles south of that place, and the same distance west of Inverkeithing; pleasantly situated on the north coast of the frith of Forth. It was founded by the Earl of Elgin in 1778, for the accommodation of the workmen at the extensive lime-works on his estate. It is in the form of a square, enclosing an area containing a bleaching-green. It has a tolerable harbour. The number of vessels belonging to Limekilns and Charleston, in 1828, was 75, averaging 80 tons burden. Coal is conveyed to the works from the Earl of Elgin's collieries by a railroad about 6 miles in length. There are 9 drawkilns here. In 1811 there were sold at these works 132,563 bolls of lime, 2,400 chalders slacked, 77,200 tons limestone, and 600 tons of ironstone. The present export is about 400,000 bushels of shells, and about 15,000 tons of raw stone. The working of ironstone has been discontinued of late years; but the export of coals is immense. Adjoining to Charleston, on the east, is the populous village of LIMEKILNS: which see. The Earl of Elgin's mansion of Broomhall is in the vicinity. Charleston contained, in 1831, 891 inhabitants.

CHARLESTON OF ABERLOUR. See ABERLOUR.

CHARLESTON OF ABOYNE, a pleasant little town, on the north bank of the Dee, in the parish of Aboyne, Aberdeenshire; $30\frac{1}{2}$ miles west of Aberdeen, and 26 east of Castleton of Braemar. The Dee is here crossed by a suspension-bridge. In the neighbourhood is Aboyne castle, the seat of the

Marquess of Huntly. The surrounding scenery is very magnificent. It is a burgh-of-barony. It has six fairs in the year; viz. on the 3d Wednesday in February; 2d Wednesday in April; 3d Wednesday in June; Friday of Paldy fair week; 1st Tuesday in October, O. S.; and 2d Wednesday in November.

CHARLOTTE (FORT), a small fortification near the north end of the town of Lerwick, in Shetland, said to have been built in the days of Oliver Cromwell. It commands the entrance to Bressay sound, and was repaired in 1781.

CHATELHERAULT. See HAMILTON.

CHARTERS-HALL, or CHATERS HALL, a hamlet in the shire of Stirling, and parish of St. Ninian's; near the southern bank of the Bannock, $3\frac{1}{2}$ miles south from Stirling.

CHEVIOT HILLS (THE), a range of mountains in the south of Scotland; separating, throughout a considerable portion of its extent, the kingdoms of Scotland and England. Some regard this chain as commencing at Loch Ryan on the west, and extending, with occasional interruptions, to the head of the Northumberland Beaumont; but the Cheviots, commonly so called, lie on the borders of Roxburgh and Northumberland, and may be regarded as commencing, on the east, with Cheviot hill, in N. lat. $55^{\circ} 29'$, 19 miles from Sunderland Point. This hill, the highest in the range, has an altitude of 2,684 feet, according to Sir Thomas Brisbane.* From this point, the Cheviots run in a south-west direction, by Carter fell, altitude 2,020 feet, to Peel fell, in N. lat. $55^{\circ} 17'$ and W. long. $2^{\circ} 35'$. The principal pass in the range is that known by the name of Carter bar, by which the road from Jedburgh to Newcastle enters England.

CHIRNSIDE,† a parish in the county of Berwick, district of the Merse. It is bounded by Coldingham on the north; by Ayton and Foulden on the east; by Hutton and Edrom on the south; and by Buncle on the west. The Whitadder separates it from Edrom and Hutton parishes; and a deep ditch which has been executed for the purpose of draining the Bilymire morass, separates it from Buncle and Coldingham. The extent of this parish is about $3\frac{1}{2}$ by 3 miles; superficial area, upwards of 5,000 acres. Assessed property, in 1815, £9,667. Among the several eminences which project from the Lammermoor hills into the low country of Berwickshire, Chirnside hill is a remarkable one. It is distinguished by its elevation and semicircular aspect to the south, joined with the great expansion of its summit, and its gradual declination to the Whitadder. It commands the view of a country, the richest perhaps in soil—with the exception of the Carse—of any in Scotland. The landscape is that of a plain, waved with long ridges, running chiefly in one direction, and of more than 25 miles extent, from the bay of Berwick to the Teviotdale hills, on the west; while directly south, and at almost the same distance, the famed hills and chaces of Cheviot form a very striking boundary. "About 60 or 70 years ago," says the writer of the Old Statistical Account, in 1794, "this prospect, although striking and noble, was a naked one, and had little or nothing of the beauty arising from extensive agriculture, enclosed fields, or plantations. If some groves or strips of trees marked, here and there, the seats of the gentry or nobles,

* Another barometric measurement, by Messrs. Adie & Galbraith, gave 2,695 feet. See 'Edinburgh New Philosophical Journal,' vol. xiv. p. 72. Mr. C. Smith estimated its height at 2,657 feet.

† In discussing the etymology of this name, the writer of the Old Statistical Account—who derives it from *chern*, 'a cairn,' with the Saxon adjunct *side*—says that the common people of the district universally pronounce *ch* as *sh*. Thus they pronounce Chirnside, Shiirnside.

besides these, and a few enclosures joined with them, hardly any thing but waste land, or the poorest culture, was discoverable. Nature, indeed, wore a robe that indicated a deep soil. The uncultivated grounds produced immense tracks of heath, overspread with thick furze, or tall whins, and, in some drier places, with broom; which, in the spring, and through the summer, shed the golden gleam of their flowers, and their fragrance, all around. The eye of a spectator, on Chirnside hill, now has in prospect a country, of the extent described, all of it in remarkable cultivation; the corn-fields and pasture-lands, almost everywhere, enclosed and divided by hedges and ditches. Large plantations not only appear around the gentlemen's seats, but reach, in several places, to the extremities of their lands; so that they seem to be conjoined to each other." The progress of agriculture has added greatly to this richness of prospect since the commencement of the present century. The writer of the Old Statistical Account justly thought that a rise from 3s. to 12s. per acre in the rent of some lands within the parish, and from 5s. to 20s. of others, within a period of 45 years, indicated a vast improvement; but these rents have within the like space of the last 45 years, been again trebled, and, in some instances, quadrupled. Population, in 1801, 1,147; in 1831, 1,248; in 1835, 1,200; of whom 800 belonged to the Established church, and 380 to other denominations. Houses, in 1831, 219.—The village of Chirnside is 9 miles north-west of Berwick, and 6 east of Dunse; on the road from Dunse to Ayton. It consists of two streets nearly in the form of the letter T; the longer of which runs from west to east, about three quarters of a mile. At the junction of the two streets is an open space, called the Cross-hill, where a fair is held, chiefly for the sale of sack-cloth and linen yarn, on the last Thursday of November. It contains upwards of 600 inhabitants.—This parish is in the presbytery of Chirnside, and synod of Merse and Teviotdale. Stipend £247 8s. 6d.; glebe £29 8s. Unappropriated tithes £509 2s. 3d. Patron, Sir John Hall, Baronet. The church is a very old building; sittings 359.—There is a Reformed Presbyterian congregation. Church built in 1781; sittings 500. Minister's stipend £105, with a manse and a garden.—A United Secession church was recently built in the village.—Schoolmaster's salary £34 4s. 4½d., with £30 fees. There are 2 private schools.—The Rev. Henry Erskine, father of the well-known founders of the Secession, was the first minister of this parish after the Revolution. He died in 1696. In 1586, the Earl of Dunbar and March, along with Lord Douglas, met the English warden of the marches, Lord Neville, at Billynair, for the purpose of concluding a truce. The fact, as recorded in Border history, "gives occasion to observe why the place of a bog was appointed for such a meeting. It is accounted for, by considering the violent and particular animosity with which the parties at war in the borders were inflamed against each other. Their constant and mutual defiances and incursions kept up resentment; so that when the wardens were to meet for negotiating a truce, infraction of it among their armed trains was always to be apprehended. To prevent their coming to blows or scuffles, they were kept at some distance from each other by a slough or intersection of the ground chosen for their meeting, until at least all the preliminaries were settled between the wardens. Hence, Hauden-stank and the Bounden-road are often mentioned as the places of conventions for treaties; and yet, even those precautions did not always insure their peaceable termination."

CHRIST'S KIRK, an ancient parish, now annexed to the parish of Kinnethmont, in the shire of Aber-

deen. The church is in ruins, but the burial-ground is still in use. It is 4 miles east of Clatt. A fair was formerly kept here on the Green, in the month of May, and in the night; from which circumstance, it was commonly called Sleepy market. Several years ago, the proprietor, General Hay of Rannes, changed it from night to day; but so strong was the prepossession of the people in favour of the old custom, that rather than comply with the alteration, they chose to neglect it altogether. The scene of the celebrated poem of 'Chryst's-Kirk on the Grene,' commonly ascribed to James I., is supposed by some antiquaries to have been here.

CHRYSTON, a *quoad sacra* parish in Lanarkshire, divided from Cadder by authority of the Assembly, in 1834. It is 4½ miles in length by 3¼ in breadth, and contains about 11 square miles. Population, in 1836, 1,782, chiefly located in the villages of Chryston, Mollingburn, Moodiesburn, and Auchinloch. Church built in 1780; sittings 564. Stipend £70, with a manse and garden valued at £10. The minister of Cadder used to officiate every third Sunday here; but in 1780 the Chryston end of the parish was made a distinct chapelry. See CADDER.

CILLCHUIMAN. See BOLESKINE.

CILLIECHRIST, or KILCHRIST, an ancient chapelry in the parish of Urray in Ross, the scene of one of the bloodiest acts of Highland ferocity and revenge that history has recorded, commonly known as the Raid of Cilliechrist. In the early part of the 17th century, a party of Glengarry's men surprised a numerous body of the Mackenzies, while assembled at prayer within the walls of Cilliechrist chapel, on a Sunday morning; shut them up within the building, and then set fire to it; whilst the piper of the Macdonalds marched round the church, playing a pibroch, until the shrieks of the miserable victims were hushed in death. The Macdonalds returned home in two bands, one of which was overtaken by the Mackenzies near the burn of Altsay, and nearly extirpated; while a still more severe retribution overtook the other party, who, having fled by Inverness, were overtaken near Torbreck, and shut up in a public-house in which they had been refreshing themselves, which was set fire to, and the whole party, 37 in number, perished by the same death they had inflicted on the hapless Mackenzies. The solitary and beautiful burying-ground of the chapelry is still in use.

CLACHNAHARRY, a fishing-village in the parish of Inverness, at the mouth of the Caledonian canal, about a mile to the west of the town of Inverness, so called from the vicinity of a rock—in Gaelic *Clach-na-herry*, that is, 'the Watchman's stone'—on which sentinels used to be placed to give notice to the burghers of Inverness of the approach of any body of marauders. It has a population of about 300. In 1333, according to Sir Robert Gordon, but according to Shaw in 1454, and according to Anderson in 1378, John Monroe, the tutor of Foulis, in travelling homeward, on his journey from Edinburgh to Ross, stopped on a meadow in Stratherdale that he and his servants might get some repose. While they were asleep, the owner of the meadow cut off the tails of their horses. Being resolved to wipe off this insult, he, immediately on his return home to Ross, summoned his whole kinsmen and followers, and, after informing them how he had been used, craved their aid to revenge the injury. The clan, of course, complied; and, having selected 350 of the best and ablest men among them, he returned to Stratherdale, which he wasted and spoiled; killed some of the inhabitants, and carried off their cattle. In passing by the isle of Moy, on his return home, Mackintosh, the chief of the clan Chattan, being urged by some person who bore Monroe a grudge,

sent a message to him demanding a share of the spoil. This was customary among the Highlanders when a party drove cattle which had been so taken through a gentleman's land, and the part so exacted was called a *Staoig rathaid*, or *Staoig creich*, that is, 'a Road collop.' Monroe, not being disposed to quarrel, offered Mackintosh a reasonable share, but this he was advised not to accept, and demanded the half of the booty. Monroe refused to comply with such an unreasonable demand, and proceeded on his journey. Mackintosh, determined to enforce compliance, immediately collected his clansmen, and went in pursuit of Monroe, whom he overtook in the vicinity of Clach-na-Harry. As soon as Monroe saw Mackintosh approaching, he sent home five of his men to Ferrindonald with the cattle, and prepared for action. But Mackintosh paid dearly for his rapacity and rashness, for he and the greater part of his men were killed in the conflict. Several of the Monroes also were slain, and John Monroe himself was left for dead in the field of battle, and might have died if the predecessor of Lord Lovat had not carried him to his house in the neighbourhood, where he was cured of his wounds. One of his hands was so mutilated, that he lost the use of it the remainder of his life, on which account he was afterwards called John Bac-laimh, or Ciotach. The Monroes had great advantage of the ground by taking up a position among rocks, from which they annoyed the Mackintoshes with their arrows.

CLACKMANNANSHIRE, a county forming part of a territory anciently denominated Ross. That tract was bounded on the south by the frith of Forth; on the east by the German ocean; by the frith of Tay on the north; and on the north-west by the Montes Ocellani, or Ochil hills, sweeping in a north-eastern direction from the neighbourhood of Stirling to the mouth of the Tay. The principal part of it was in Fife; Kinross and Clackmannan shires were formed out of the north-western part. A narrow part of Perthshire crosses the hills between these two small counties, and encroaches upon this district.* Clackmannanshire is bounded on the south and west by the frith of Forth, which separates it from Stirlingshire; and on the north and east by Perthshire, excepting at one point, where in joins the county of Fife. This county contains only 4 parishes. Along the Ochil hills lie Tillicoultry and Dollar; Alloa and Clackmannan stretch along the shores of the Forth. Alva, although belonging to Stirlingshire, is remarkably cooped up in this county. Part of the parish of Logie, too, lies in Clackmannanshire. The only towns are ALLOA and CLACKMANNAN: which see. The county contains about 30,720 English acres, of which 22,000 are cultivated, 5,000 uncultivated, and 3,720 nearly unprofitable. Assessed property, in 1815, £37,978. Population, in 1801, 10,858; in 1831, 14,729. Inhabited houses, in 1831, 2,391. Population, in 1841, 19,116, being an increase of 29.7 per cent. on that of 1831. Inhabited houses, in 1841, 3,593. Parliamentary constituency, in 1839, 812. It is conjoined with the shire of Kinross, and the two parishes of Tulliallan and Cuross, in returning a member to parliament. The sheriff and small debt courts are held at Alloa. Stirling is the common gaol of the county of Clackmannan; but there is a lock-up house at Alloa.—In 1834, there were 5 parochial, and 26 not parochial schools in this

county; superintended by 45 instructors, and attended by about 1,800 children.

The surface rises gradually from the shores of the frith to the Ochil hills, the highest of which, Ben-cloch, is in the parish of Tillicoultry; see BEN-CLOCH. On the banks of the Forth the country is flat and rich; and the Ochils afford pasturage for sheep not to be surpassed in Scotland. The Forth upon the south, and the Ochil hills upon the north, run in a direction diverging from each other. To the southward of the mountains lies the beautiful vale of Devon, through the middle of which flows the sweetly winding stream of that name. Betwixt this vale and the foot of the mountains, the soil is in general light and of a fine quality, but not very deep, being of a gravelly bottom. The haughs of the Devon are rich and fertile; of a deep soil, but with a mixture of sand. South from the Devon the country begins to rise, and the soil is less valuable, as it possesses much of that clay scarcely penetrable by water which is so generally found in districts containing coal and freestone. The country descends gradually from this to the shores of the Forth, along the whole of which is a most enchanting level tract, consisting of rich carse lands of the finest sort of alluvial soil, being a part of the carse of Stirling. These lands form the most beautiful part of the foreground in the extensive view from Stirling castle towards the east. The climate of this district is various. Snow seldom lies on the low grounds of Logie, or in the vale of Devon; although the case is very different upon the hills. There is a remarkable spot in the Ochils, above the house of Alva, so much shaded that snow sometimes lies on it until the month of June. The rain that falls is seldom copious, and, on account of the gravelly bottom in the parishes of Tillicoultry and Dollar, does little hurt. The climate of the high lands is considerably colder and wetter than that of the valleys; and the moisture is likewise more severely felt, as the bottom is a retentive till. In the parishes of Alloa and Clackmannan, the climate is pleasant and dry, as well as warm.

Every modern improvement in agriculture has been adopted here; and the high state of cultivation over the whole face of the country is a proof of the skill and industry of the farmers. Beans are much cultivated, and are generally planted in drills; sometimes they are sown broad cast, with a mixture of pease. In this district and its neighbourhood are a considerable number of small feus held in perpetuity. About the time of the reformation from popery, it became, in many parts of the country, a sort of fashion for great proprietors to grant feus of considerable portions of their estates. Some proprietors did this to conciliate the attachment of their vassals; others, from generosity, were willing to deprive their successors of the power to expel from around them the faithful adherents to the fortunes of their family; while a third class were tempted by a considerable pecuniary payment which the vassals had found means to accumulate. The family of Argyle, in particular, possessed property in this neighbourhood, and made perpetual grants to their vassals in the manner alluded to. One feu in the parish of Dollar, extending to no less than 200 Scottish acres, is held under this condition, that the feuar or tenant shall be bound to slaughter all the cattle that may be wanted for the use of the family of Argyle in their residence of Castle-Campbell. About the end of the 16th, or beginning of the 17th century, Lord Colvil, then proprietor of the estate of Tillicoultry, divided about four-fifths of the arable land into 40 feus, each of which contained, on an average, about 30 Scotch acres. Most of these tenures were con-

* In this part of Scotland the local intermixture of the civil divisions is very inconvenient. For example: before a witness residing in any of the detached portions of Perthshire, situated within a few miles of Kinross or Alloa, can be effectually cited to appear at the courts held in these towns, the warrant must be indorsed by the sheriff-clerk of Perthshire; and the same occurs with regard to the detached portions of Stirlingshire.

verted into feus in the year 1605. What was called the Mains of Dollar was divided into 8 oxengates, each of which contained from 30 to 45 Scotch acres. In the carse, the farms are not large, containing only about 80 or 100 acres each.

There is no county in Scotland better supplied with water than Clackmannan. The Devon, from its source in the parish of Blackford in Perthshire, to where it falls into the Forth, at the village of Cambus, presents a succession of delightful scenery. After running a course of more than 26 miles, it mingles its pure and limpid waters with the Forth, not more than 6 miles in a straight line from its source. See article THE DEVON. In the lower part of the county is another river called the South Devon, and sometimes the Black Devon, from the gloomy density of its waters. This stream rises in the hills of Saline, in the county of Fife, and flowing westward, in a direction nearly parallel to the Devon, falls into the Forth in the parish of Clackmannan.—There is a small stream which runs into the Devon, called Gloomingside burn, in which no trouts have ever been discovered, although it has fine streams and pools. Live trouts have been put into it; but it does not appear that they were capable of living there.—There is rather a deficiency of wood in the county. The ancient forest of Clackmannan has long since disappeared. About sixty years ago, attempts to cover the hills to a considerable height were made, which, in time, may probably succeed, and prove a great ornament to the country; but, on account of its elevated situation, the progress of vegetation is here remarkably slow. Clackmannan-shire abounds with coal in every part; freestone and granite are also abundant. In the Ochils have been wrought at various times valuable ores of silver, lead, copper, cobalt, ironstone, and antimony. Many rich specimens of septaria have also been found. Coal is very extensively wrought. Pebbles, agates, and a few topazes, are sometimes discovered amongst the rubbish which is washed from the hills.—The principal seats in this district are Tullibody, Kennet or Clackmannan, Shaw-park, and Alloa. The principal feudal remains are Castle-Campbell, Alloa tower, and Clackmannan tower.—In this county the weights and measures are the same as those of Stirling-shire.

CLACKMANNAN, a parish in the above county; extending in length about 6, and in breadth 4 miles; bounded on the north by Tillicoultry and Dollar; on the east by Tulliallan; on the south by the Forth; and on the west by Alloa. The superficial area is about 7,000 acres; the whole is arable; the greater part carse ground, and highly productive. Assessed property, in 1815, £14,026. It is watered by the two Devons. The Black Devon rose to an immense height in this quarter during the rains in September 1839, and choked one of the Devon company's pits. The Devon Iron company have extensive furnaces and machinery here; and near to their works the thriving village of Newtonshaw has been built. Coal and limestone abound; and there is plenty of freestone fit for building. Near the town stands the beautiful modern mansion of Bruce of Kennet. Population of the town and parish in 1801, 2,961; in 1831, 4,266; in 1836, 4,485; of whom 3,109 belonged to the Established church, and 1,342 were dissenters.—This parish is in the presbytery of Stirling, and synod of Perth and Stirling. Patron, the Earl of Zetland. Stipend £284 0s. 9d.; glebe £16. Unappropriated tithes £241 16s. 3d. Church built in 1815; sittings 1,250.—A Relief church was built in the town of Clackmannan in 1790; sittings 450. Stipend £75.—There is also a Dissenting chapel at Sauchie.—Schoolmaster's salary £34 4s. 4½d., with

£11 fees. In 1834 there were 8 private schools within this parish.

CLACKMANNAN, a town in the above parish, formerly the county-town; 2 miles east of Alloa, and 3½ west of Kincardine. It is situated on an eminence gently rising out of a plain to the height of 190 feet above the level of the Forth. On each side of the town the ground has a gradual descent; but, towards the west where the old tower of Clackmannan is placed, it is bold and rocky. The surrounding scenery, as beheld from this tower, is exceedingly picturesque and beautiful. To the west is seen Alloa, Stirling, St. Ninians, and all the country as far as Ben Lomond; on the north the prospect is bounded by the Ochils; on the south and east are the fertile fields of Stirlingshire, and the towns of Falkirk, Linlithgow, and Kincardine; while the foreground is filled by the Forth, here a mile in breadth, and 3 miles farther down expanding into a wide sheet of water resembling a large inland lake. The tower or keep—now the property of the Earl of Zetland—is all that now remains of the castle or palace of Robert Bruce, in which that monarch is said to have resided sometime previous to the battle of Bannockburn. Grose has preserved a view of it. It has been surrounded by a strong wall, and by a fosse on the side next the town. Till very lately the sword and helmet of the illustrious Bruce were kept here; they are now in the possession of the Earl of Elgin, at Broomhall, in Fifehire, to whom the widow of Henry Bruce, Esq. bequeathed them.* The principal street of the town is broad and spacious; but many of the houses are mean. In the middle of the street stands a ruin which was once the prison and town-house. The harbour, or Clackmannan pow, is formed by the confluence of the South Devon with the Forth. Its mean depth of water is 10 feet, at the usual shipping-place, and 20 feet at the mouth of the harbour. It was much improved, in 1772, by Sir Lawrence Dundas. The town is situated on the estate of Clackmannan, and pays feu-duty to the proprietor of that estate. It has two fairs annually, in June and September. Population 1,300.

CLASHMORE, a hamlet in the parish of Dornoch, in Sutherlandshire. It is the nearest point to the Mickle ferry, which, before the existence of Bonar bridge, was the only practicable mode of reaching Sutherland and Caithness from the south. The mail-coach here leaves the Skibo road for Dornoch. There is a good inn here.

CLATT, a parish in the western part of the district of Garioch, Aberdeenshire; bounded by the parish of Kinnethmont on the north; by Leslie on the east; Tullynestle on the south; and Auchindore and Rhynie parishes on the west. It is a rugged district, and the climate is severe and unfavourable to agriculture, although the soil is in general good. Granite and marble occur here. A small stream, called the Gaudie, rises in the western extremity of the parish, flows nearly due east, dividing the parish into two nearly equal parts, and falls into the Urie. The village of Clatt is 10 miles south of Huntly. It was erected into a burgh-of-barony by James IV. in 1501. Population, in 1801, 433; in 1831, 535. Houses 100. Assessed property, in 1815, £866.—This parish—formerly a rectory, and a prebend belonging to the chapter of Aberdeen—is in the presbytery of Alford, and synod of Aberdeen. Patron, the Crown. Stipend £134 16s. 6d.; glebe £9. Schoolmaster's salary £25 13s. 4d.

CLAYHOLE, a village in Wigtonshire in the

* This venerable lady died at the age of 95, in 1796. Her husband, who died in 1772, was generally considered the chief of the Bruces. The estate of Clackmannan had remained in the direct line from the days of David II. till that year.

parish of Leswalt, so near Stranraer as to be a suburb of that town, and included within its parliamentary boundary.

CLEISH, a parish in Kinross-shire; bounded on the north by Perthshire, and by Fossaway and Kinross parishes; on the east by the parishes of Portmoak and Ballingry; on the south by the parishes of Beath and Dunfermline; and on the west by the parish of Saline. It is of an oblong form, stretching nearly due west from the low heights on the east which divide Kinross-shire from Fifeshire; and is $6\frac{1}{2}$ miles in length, by about 1 in average breadth; and contains about $7\frac{1}{2}$ square miles. A range of green but moorish hills, bearing the name of the parish, and of considerable elevation, divide it from Dunfermline. Dumglow, the highest, is 1,215 feet above the level of the sea, and commands a very extensive and beautiful prospect; and three others, called the Ingans, are respectively 1,060, 1,048, and 1,030. The higher lands are in pasturage; and the lower, though of only middle-rate soil, and from 380 to 500 feet above the level of the sea, are in tillage. Springs and rills are abundant and good, pouring their grateful treasures past the door of nearly every dwelling. Four lakes, the largest about $1\frac{1}{2}$ mile in circumference, enrich the hill-country with a store of perches, pikes, and eels, and with a few trouts. The Gairney carries the waters of these lakes to Loch Leven. It flows along the northern boundary of the parish for about $2\frac{1}{2}$ miles, separating it from Fossaway and Kinross. Excellent freestone exists in great plenty; and affords material for the best houses and bridges in Kinross-shire and its coterminal districts. Limestone also is found; but except at Scarhill, on the estate of Cleish, it lies at so great a depth as not to be an object of importance. Coal was formerly wrought to a considerable extent on the estate of Blair-Adam; but for many years past has been neglected. On the top of Dumglow, and of other hills, are traces of ancient forts or camps, which are supposed to have been part of a chain of posts for defending the Roman conquests; and near these fortifications have been found several urns containing human bones and pieces of charcoal. A short distance from the parish-church stands a rock called 'The Lecture stane,' which was used, in the days of popery, as a support for the coffin during the reading of the burial-service at funerals. At the east end of the parish, a stone, inserted in a bridge, bears an inscription indicating the road beneath it to have been that by which Queen Mary fled from Lochleven castle. Formerly, on what is now the farmstead of Gairney-bridge, stood the school-house in which Michael Bruce, the Kirke White of Scotland, taught a school; and within a few yards of the same spot stood the public-house in which the fathers of the Secession held their first meeting. The great road from Queensferry to Perth passes through nearly the centre of the parish, in a direction from south to north. Population, in 1801, 625; in 1831, 681. Houses 138. Assessed property, in 1815, £3,063. —This parish is in the presbytery of Dunfermline, and synod of Fife. Patron, Young of Cleish. Stipend £156 16s. 4d.; glebe £14. Schoolmaster's salary £34 4s. 4d. The church was built in 1832, and is remarkably neat, and in a beautiful situation, embosomed in plantations at the base of the southern hills, and looking down over sylvan slopes upon the vale of Kinross.
